Please join us for a neighborhood meeting to discuss our plans for a proposed 255 Unit Residential Development to be located at 125 Thompson's Point Road. The proposed Multi-Family Residential Building with structured parking and outdoor living amenities will be located in the northwestern most portion of The Forefront at Thompson's Point Subdivision lots 17 thru 19, an area anecdotally referred to as the "panhandle". Cathartes, a prominent developer in the northeast with a driven focus on quality of life, has entered into an agreement with Forefront Partners I, LP to bring a vibrant and transformative residential development to Thompson's Point as contemplated in the approved Master Development Plan.

Meeting Location: **20 Van Aken Way – Halo at the Point – Portland, ME 04101**
Meeting Date: **October 16th, 2024**
Meeting Time: **5:30 PM**

(The City code requires that property owners within 500 feet (1000 feet for proposed industrial subdivisions and industrial zone changes) of the proposed development and residents on an "interested parties list", be invited to participate in a neighborhood meeting. A sign-in sheet will be circulated, and minutes of the meeting will be taken. Both the sign-in sheet and minutes will be submitted to the Planning Board.)

If you have any questions, please call 207-747-5288 Ext 5.

Sincerely,

PLACEMAKER PARTNERS, LLC

Bo Kennedy, P.E.
Project Manager/Engineer

Note:
Under the City of Portland land use code, an applicant for a major site plan, master development plan, subdivision of over five lots, or zoning map amendment is required to hold a neighborhood meeting within 30 days of an application being deemed complete and no less than seven calendar days before a public hearing. Should you wish to offer additional comments on this proposed development, you may forward them by email to planning@portlandmaine.gov or by mail to the Planning and Urban Development Department, Planning Division, 4th Floor, 389 Congress Street Portland, ME 04101.

Minutes from Neighborhood Meeting
Major Site Plan Application (PL-003090-2024)

Cathartes / Forefront Partners Residential Project

Date: **October 16, 2024**

Start Time: **5:30pm EST**
End Time: **6:15 pm EST**

Location: **Halo at the Point,20 Van Aken Way, Thompson's Point, Portland ME 04102**

Meeting was called to order at 5:35pm by Bo Kennedy, P.E., of Placemaker Partners (BK), who represents the applicant.

BK reminded participants to please sign in.

There were two members of the public. One was a neighbor who lives on Powsland Street and is a member of the Libbytown Neighborhood Association. The other was the station manager for Concord Coach Lines.

BK introduced himself and the project team at Cathartes (residential developer/applicant), Embarc (architect) and Carroll Associates (landscape architect), and invited attendees to interrupt at any time with questions or requests for clarification.

BK presented a thorough overview of project, beginning with the aerial view of entire campus and noting proximity to the Portland Transportation Center, Portland Trails, and the Libbytown neighborhood.

BK then presented the residential project site plan, first focusing on orientation, access, and vehicular/pedestrian circulation, noting that it is a 255-unit multi-family residential building with common space and amenities on first floor and a 463-car parking garage with 24 EV charging stalls and adjacent surface parking.

BK gave a detailed overview of the project's common areas/amenity spaces, fire/emergency access lanes, and trail areas.

BK then introduced Matt Phillips from Carroll Associates (MP).

MP walked the attendees through the landscape plan, focusing especially on the attention to planting plan and buffer treatment, and describing the relation of landscape plan design elements to project components, particularly the entry areas, exterior programming areas, and

adjacencies to the trail. He noted that the site is to be heavily planted, in addition to the already extensive growth on the westerly and northwesterly portions of the site, and underscored the developer's attempt to create a thoughtful design that integrates the building with the natural landscape and also with the urban campus it is connected to.

At this point, the design team received the first question from the residential neighbor (Neighbor), who asked if there would be a fence.

MP replied that there will be fenced areas following the trail and grade change areas, and along the rail corridor on northerly border.

The Neighbor asked about the height of the fence along the northerly property line.

BK replied that the fence would be a typical 6' fence.

The Concord Coach employee asked what type of fence would be used.

BK answered that it would be chain link; and further noted that there is significant vegetation along north and northwest portions of the site, including the Central Maine Power corridor which he pointed to on the aerial, explaining that this forested area will stay intact.

Embarc then presented the building plans and elevations, and emphasized the guiding design principle being to break down the mass of the building, get away from the look of an unbroken wall façade and work to create a more dynamic façade that feels more welcoming and integrated with the site.

Embarc shared the rendered elevations, noting that the building is a 6-story structure as well as the outdoor walkway areas and amenity spaces, front entrance/dropoff views, and the elevation including the front and corner of the parking structure. Finally, they shared the view of the building from the water on southerly edge, and samples of building material choices.

The Neighbor offered up several questions that had been generated by Libbytown residents and shared through the Libbytown Neighborhood Association.

These were as follows:

1. Is the garage the same height as the building?

   Embarc answered in the affirmative.

2. Will neighbors only see garage?

   Embarc noted that one elevation of the garage would be visible from the north, and further explained that this would be seen as an integrated façade together with the

northerly and northwesterly facades of the building. He referred to a rendering view by way of example, noting that the view, which will also be buffered by vegetation, will not be a stark look at the wall of a parking garage.

3. Why is the garage so large? A more pedestrian and bike-centric approach would be nice.

   BK noted that the project includes significant indoor and outdoor space for bike storage, and it is anticipated that many residents will take advantage of this. He also noted that the parking spaces provided by the residential project in excess of those required for the use of residents will also be available for their invited guests and will be part of the managed parking supply of the Thompson's Point campus.

4. Is there a plan for a hotel?

   BK replied that the hotel is on track to break ground in 2024. He then took a few minutes to pull up the master existing campus plan and walk the audience through the hotel orientation and basic scope.

5. Are there options to make the building more green by having solar?

   Embarc replied that the roof is indeed being designed to handle solar.

6. Will there be condos?

   BK replied that there are no condos, only apartments.

7. Most of the people in the neighborhood are comfortable with wanting more residential density. There's the recent Avesta project nearby, which was generally well-received by the neighborhood. And I should have prefaced my comments by saying that I personally love the idea of more residential, and am in support of the project.

8. What will you do if a train is crossing and emergency services need to access the site?

   BK noted that as this is a public rail crossing as designated by MaineDOT, the crossing is rarely blocked, and when it is, it is usually for no more than a few minutes (compared with a private crossing, where there can be virtually no limit on length of time for a crossing to be blocked). The representative from Concord Coach explained that freight train passage through the crossing is very infrequent (once/twice weekly) and that Amtrak service operates such that trains stop at the platform to the east of the crossing. BK further outlined the ways in which the crossing was designed for emergency vehicles to still get through via the center lane, showing how even when the crossing gates drop, they do not obstruct the travel lanes. He noted that the public crossing had been designed and approved with the full buildout of the master plan in mind, in coordination with city, state, and federal rail and public safety guidelines.

9. I think it's a cool project! That's the full list of questions I had from folks in the neighborhood. Actually, just one more: what is the timing of construction start?

   BK replied that the project aims to break ground next fall.

10. Actually, just one more. What is the apartment mix?

    Embarc walked through the mix of apartment types (studio, one- and two-bedroom, and some three-bedroom).

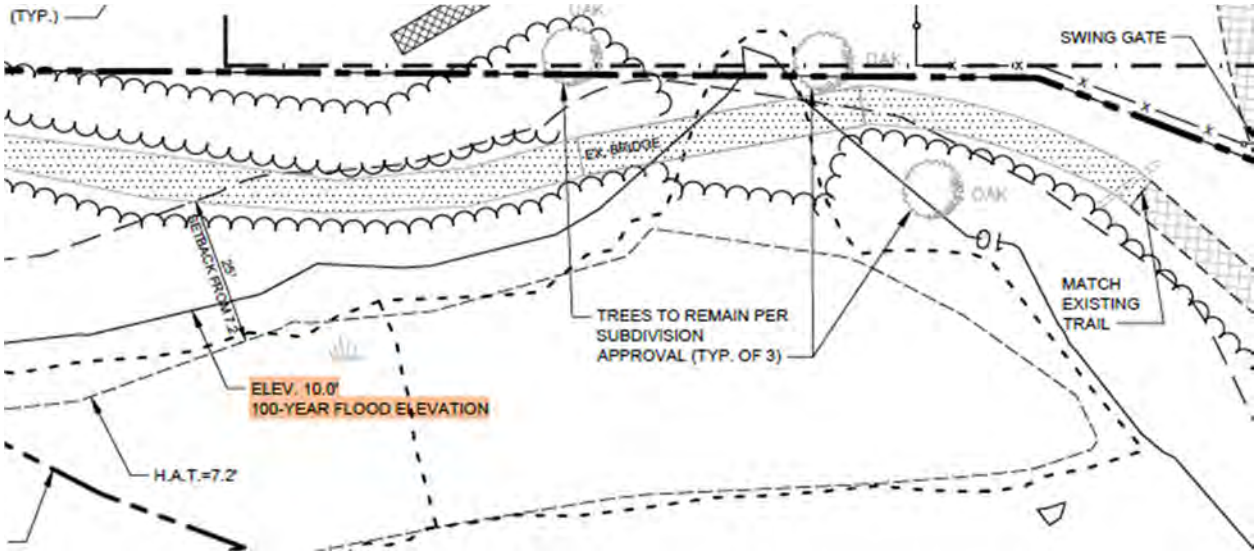
At this point, there were no further questions or comments and the meeting was adjourned.

PLACEMAKER PARTNERS, LLC
18 Van Aken Way
Portland, ME 04102

December 23, 2024

Ms. Natasha Kypfer, Senior Planner
Planning and Development Department
City of Portland, Maine
389 Congress Street
Portland, Maine 04101-3509

Subject: **The Forefront at Thompson's Point – 125 Thompson's Point Rd** (PL-003090-2024)
Major Site Plan Application – Review Comment Letter of Response # 1



Dear Natasha:

We have received and reviewed staff and peer review comments submitted to date and offer our responses to these comments. For ease of reference, we have repeated each comment in *italics* with our response following.

GENERAL COMMENTS FROM PLANNING STAFF

Comment 1:
Please add the AE flood zone on the current FEMA map as an overlay on the site plan.

Response:
The AE Flood Zone is currently shown on site plans as shown below. Zone AE flood elevation for the Thompson's Point Area has been listed on FEMA mapping as Elevation 10.0 until the most recent updated effective date 6/20/2024. Enclosed (Attachment A) with this letter is a current FIRMETTE map downloaded 11/21/2024 and shows a Zone AE flood elevation of 9.0 based on NAVD88 vertical datum. When converted to the project datum, Elevation 9.0 (NAVD88 vertical datum) converts to elevation 9.79 (NGVD29 vertical datum). Whereas this updated elevation is lower (than 10.0), a more conservative assumption, and easier to depict in plan, the applicant would prefer to use the 10 ft contour as the assumed flood elevation. A note has been added to the existing conditions plan to document the origin of these elevations.

Comment 2:
Please update the title of the supporting narrative to Major Site Plan, instead of Minor (Att. B).

Response:
This Attachment has been updated and reloaded to the CSS Portal and city's eplan.

Comment 3:
A number of permits have been received throughout the development of the Master Development Plan from State and Federal agencies and it is unclear what is relevant to this phase and which permits may still be active. Submit a summary of what permits are relevant specifically to this project, including the agency, permit, the date of original issue, dates of expirations, and dates of extensions or notifications as applicable. For example, it is noted that an Army Corps of Engineers self-verification form was included that was submitted for work to be completed for 2023 into 2024, which will likely need to be resubmitted unless the Army Corps has noted that it will remain valid.

Response:
The project summary of applicable permits is noted as follows and listed on the cover sheet C-1.0.

Permit	Agency	Date of Original Issue	Date of Updated Approval
Master Development Plan	City of Portland	2014-03-11	2020-04-02
Subdivision Plan	City of Portland	2016-01-12	2020-04-02
NRPA Individual Permit	Maine DEP	2012-07-01	2023-06-15
Site Location of Development	Maine DEP	2012-06-05	2016-01-01 (Overall) Updated Each Site Plan Application
Maine VRAP - NAAL	Maine DEP	2012-03-06	2019-12-17
General Permit	ACOE	2012-08-24	2023-10-24
Traffic Movement Permit	MDOT	2012-06-13	2024-03-01

- Master Development Plan approval remains in effect with active development pursuant to letter from Director of Planning Authority. An updated Master Plan with this project reflected has been submitted for review by the Planning Authority. As this multi-family project complies with the approved Master Plan, any individual reviews will occur as a separate application.
- Subdivision Plans have been recorded in the Cumberland County Registry of Deeds and modified by minor amendments as development requires. This project requires minor amendments to Sectional Subdivision Plats 2 & 4 to consolidate lots 17-19. The updated subdivision plats have been submitted for review and approval.
- NRPA Individual Permit approval covers the multi-family proposed stormwater discharges in the shoreland zone. The final plan will be provided to the MeDEP as part of the Maine Construction General Permit 14-day notification prior to the start of construction.
- The Site Location of Development permit update for this project is being reviewed and approved by the City of Portland as part of their delegated review authority.
- Maine VRAP letter is an ongoing plan that the owner will comply with to maintain all the beneficial coverages the No Action Assurance Letter provides. The active work plan never expires and does not require modification for this project.
- The ACOE General permit covers the proposed wetland fill associated with the proposed stormwater outfalls for this phase of the project. This permit was just updated in late 2023 and is authorized for work until October 14, 2025, and can be extended for a year afterwards with contract

to commence work. The signed Maine General Permit conditions are enclosed with this letter in Attachment B and included in the revised Attachment D of the application submission.

- Traffic Movement Permit is within the active permit extension granted on March 10, 2024 and extends through March 1, 2027.

REVIEW COMMENTS – TRANSPORTATION (SECTION 14.6.1) STANDARDS:

Comment 1:
Staff would like to review the trip generation calculations for all of the uses, regardless if previously approved from a documentation perspective. However, one initial comment on the trip generation estimate is as follows:

- *The Brewery & Sit-Down Restaurant (14,644 SF) noted in the table should match the area used in the trip generation calculation (4,624 SF).*

Response:
Trip generation for the "Brewery & Sit-Down Restaurant" was based on previously accepted "Bissell Brewery & Restaurant" methodology, where the restaurant trip generation is based on LUC 932 – High Turnover (Sit Down) Restaurant (4,624 SF), and trip generation for the brewery portion (10,020 SF) is based on the 7 employees. An updated Trip Generation and Parking Demand Summary is included with this letter.

Additionally, Gorrill Palmer has prepared a "Traffic Supplemental Package" which includes the backup documentation supporting the Trip Generation and Parking Demand Summary. This package is included in Attachment C of this letter.

Comment 2 – Access and Circulation :

- *Show limits of removal and replacement of sidewalk/pavement for Utility trenching on site plan.*
- *Update application documents to include current Technical Manual details or reference to each of the City standard details (figure # and name). CAD files can be obtained upon request.*
- *Update the plan set to replace the detectable warning ramps in ROW at drive entrance to align with Standard Detail I-7 of the Technical Manual.*
- *Update the plan set to include dimensions for all interior and exterior parking areas and roadways.*
- *Submit sight distance measurements for the access road intersection with Thompson's Point Road.*

Response:

- The limits of sidewalk and roadway trench repair have been shown on sheet C-3.1A Site Layout Plan Without Easements. This plan has been uploaded to the City's eplan project site.
- The project plans have been updated to include the relevant city details required by the Technical Manual.
- The Site Layout Plan has a call-out for detectable warning panels per the city's detail I-7. The Detectable Warning Panel Detail B on sheet C-8.1 Curbing and Sidewalk Details has been replaced with the city's detail shown on Figure I-7.
- Plan Sheet C-3.1 Site Layout Plan shows typical and specific layout dimensions for all exterior parking spaces and roadways. A revised Plan Sheet A1.1-A1.4 Floor Plan Views show typical dimensions for parking spaces inside the garage structure. These 4 sheets have been uploaded to the project eplan.
- Sight distances have been added to the plan view sheet C-3.1 Site Layout Plan and noted herein to be as follows: Looking left 334 ft -Horizontal Obstruction; Looking right – 542' Horizontal Obstruction

Comment 3 -Parking :

- *Update project documents to list a consistent number of proposed parking spaces for the parking garage structure.*

- *The applicant has conducted a parking analysis for the proposed residential use. City Staff find the estimate of 334 parking spaces per ITE methods to be reasonable, but would also request that the applicant provide a parking management plan if the proposed parking spaces are to be shared with other uses on Thompson's Point.*
- *The applicant also conducted a parking demand analysis for the entire Thompson's Point site, without an outdoor concert/event. The estimate is based upon a mix of methodologies: methods from ITE, client supplied information, and customized calculations. Similar to the trip generation comment above, all back up information shall be provided for documentation purposes. Staff would further note that a parking supply analysis should also be provided with this submission.*

Response:

- All plan view labels have been updated to the correct number of parking spaces in the garage. There are four hundred sixty-three (463) proposed spaces in the garage. Plan Sheets C-3.1A, 3.1B, 4.0, 5.0, 5.2, & 6.0 have been updated for consistency with the project documents.
- The parking demand analysis included in Gorrill Palmer's design memo is derived from the ITE Parking Generation Manual and was taken into careful consideration when evaluating the maximum parking demand for the residential project. The applicant has evaluated and scrutinized their project parking needs based their long history of residential project delivery and management. The proposed garage parking supply breaks down as follows:
    - 463 Total Parking Stalls
        - 377 Residential Stalls (Gated Access 2nd-6th Floors)
        - 86 Managed Stalls (Gated Access 1st Floor)

  The applicant will enter into a private parking agreement with Forefront Partners I, LP or its assigns ("Forefront") to allow for the use of 110 total managed parking stalls (86 garage spaces & 24 surface spaces). The 110 designated spaces will be used at Forefront's discretion as part of the managed parking supply for the Thompson's Point Campus and primarily considered for uses such as, but not limited to, valet parking and employee parking.
- Pursuant to the reviewer's request, the backup to the parking demand study is included in the supplied "Supplemental Package" Dated December 12th, 2024. A Parking Supply Summary Table has been added to sheet C-3.0 Overall Campus Plan and demonstrates that the parking supply meets the maximum parking demand with events in Brick South and Halo.

Comment 4 - TDM:
In satisfying this standard, the applicant shall update their Transportation Demand Management Plan and incorporate data, as well as updated data, on concerts and other significant events that occur on the Thompson's Point campus, so that the City can better understand current parking demand and assess whether the mitigation strategies in place are sufficient.

Response:
See enclosed letter in Attachment D with a summarized update to the Forefront's TDM regular reporting and implemented strategies. All reports, numerical updates, and survey data is on file with the city as part of our annual reporting requirements.

REVIEW COMMENTS - ENVIRONMENTAL QUALITY STANDARDS (SECTION 14.6.2) :

Comment 1 – Landscape Preservation:

Submit a tree survey for the site that meets the standards of Section 4.3.1. of the Technical Manual.

Response:
On November 14, 2024, the project civil engineer and landscape architect performed a site visit to inventory existing trees 10" and greater DBH on the subject property. The trees that qualify were identified and their location, size, and species have been added to the site plans. The enclosed figure (Attachment E) shows the trees larger than 10" on the property and which will be preserved.

Comment 2 – Site Landscape and Buffers:
Identify what street tree alternatives are proposed to meet the standards of Section 4.6.4. of the Technical Manual.

Response:
The Technical Manual requires that "multi-family residential developments shall provide a minimum of one tree per unit, planted in the City right of way and/or along private roadways unless otherwise approved and spaced twenty-five (25) to thirty-five (35) feet on center". This results in 255 trees being required. There is not enough frontage to achieve this nor do the existing conditions allow for any street tree planting in the right-of-way due to the high density of underground utilities that are located in that zone. In the past the Arborist has allowed us to take credit for any trees that could be reasonably seen from the right-of-way to count towards the project street tree requirement. We presume that standard still applies, in which case we would propose to provide 17 trees around the driveway and arrival/entry to count, thus needing to provide a fee in lieu for 238 trees, for a total of $95,200, paid into the Tree Fund by the applicant.

Comment 2 – WQ, SWM and Erosion Control:

- *The project is required to comply with MaineDEP Chapter 500 and City of Portland Technical Manual Section 5 standards for stormwater management, including to be reviewed for a Site Location of Development (SLOD) Permit. As was noted as part of the MDP, this can be reviewed by the City of Portland, but requires evaluation of the site as a whole. This would modify how the amount of required treatment is evaluated, and it is expected based on what information has been provided that the project will meet the requirements for SLOD.*
    - *Basic Standards – The Applicant has provided plans and details as required for erosion and sedimentation controls.*
        - *Double rows of sediment barrier should be provided adjacent to any resources, including coastal wetlands.*
        - *Temporary sediment barrier will also be required downstream of any outfall installations during construction in addition to any of the permanent erosion control measures that have been shown.*
    - *General/Redevelopment Standards – The Applicant has provided a detailed description of stormwater treatment for this project, and has related it to the overall site. Based on the information provided, it appears that the project will meet the required thresholds for the State for Stormwater and Site requirements, and the City's thresholds for redevelopment as well. As noted above, the project should provide documentation for the Site Location of Development Permit. Comments on the proposed stormwater systems are provided separately below as well.*
- *Flooding Standards – The Applicant has noted that the Flooding Standard has previously been waived due to the site's discharge to a tidal water body. This remains valid for this phase of the project.*
- *We did not see structure information, including rims and inverts, for stormwater or utility structures included on any of the plans provided. This should be provided as part of the site plan submission.*

- *The site grading should be checked with the proposed stormwater systems. With variations in fill over the tops of the stormwater storage systems, and the need for emergency vehicular access over one of the systems, the layout and inverts of the systems and connecting structures should be reviewed to ensure there are no concerns with cover (either too much or too little). This will require providing invert information for the associated manholes as well.*
- *The Applicant should review the proposed HydroCAD model, specifically, the way that the diversion structures are modeled may not accurately represent what is happening on the site. The models include a 1.4" vertical orifice/grate as part of the model, but this is not shown on the diversion manhole details. In addition, the way the model is routed, with all flow primary, it does not appear to show how flow is diverted into the Jellyfish filters. In addition, the model should be checked to make sure that it matches with other features on the plans, including pipe materials, inverts, and the number of chambers within the storage systems.*
- *The Applicant has noted that the intent of the Inspection and Maintenance Manual has remained the same since approval in June 2012. The Applicant should confirm that the systems proposed as part of this phase of work are specifically included in their O&M plan, and these systems should be added to the Stormwater Maintenance Agreement.*
- *Any floor drains located within the lower levels of the parking garage should be directed through an oil-water separator and be discharged into the sanitary sewer system. It is unclear if any such internal drains are being proposed. The stormwater management plans clearly show that stormwater runoff from the uncovered top parking level will be directed into the storm drain system, which makes sense.*

Response:

The Forefront development received SLOD approval in 2014 with the MDP and Subdivision approvals. The SLOD has been updated and revised with each Site Plan Application reviewed by the city. This Major Site Plan application includes information required for the new development area as well as the cumulative evaluation of the entire campus to date.

- Basic Standards: Plan Sheet C-6.0 Erosion Control and Construction Management Plan shows multiple rows of temporary sediment barrier on all slopes and in larger tributary areas. The project details and plan notes require additional measures as required by the contractor, engineer of record, or third-party inspector in order to meet the MeDEP Basic Standards. Plan Sheet C-6.0 has been updated to show a temporary Sediment Barrier on the down-stream side.
- General Standards: Attachment J – Supplemental Stormwater Memo for Multi-Family Residential submitted with the application provides the information demonstrating how the project and campus continues to meet the General Standards requirements of the SLOD.
- Flooding Standard: The applicant concurs.
- The structure and pipe information for the storm drainage and utility systems have been shown on plan sheets C-11.0 and C-12.0 thru C-12.2. Plan sheets have been uploaded to the eplan website.
- The site grading has been checked in relationship to the subsurface chamber systems and the cover depth is detailed on plan sheet C-7.1 Stormwater Details – Subsurface Water Quality Volume Storage Details. Additional details have been added to make the cover restrictions clearer.
- Detailed orifice information has been added to the details on plan sheet C-7.0 Stormwater Details – Jellyfish Systems to reflect the HydroCAD model and stormwater quality volume drawdown requirements
- The proposed stormwater systems for this phase of the project are located on multiple lots across the campus. These existing systems are being maintained in accordance with the

aforementioned Stormwater O&M manual. A copy of the Manual is on file with the city and recorded in the Cumberland County Registry of Deeds as an attachment to the Stormwater agreement between Forefront Partners I, LP and The City of Portland.

- The review is correct that the intent of runoff from garage roof deck is that it be drained to the stormwater management systems. The floor drains to the lower levels of the garage are plumbed to the sanitary sewer system as shown on the plan sheet C-4.0 Utility Plan. The city's oil/grit separator detail on Figure II-20 of the Technical Manual has been added to the project plan sheet C-8.4 Stormwater and Sanitary Sewer Details and C-4.0 Utility Plan.

REVIEW COMMENTS - INFRASTRUCTURE AND COMMUNITY SAFETY STANDARDS (SECTION 14.6.3) :

Comment 1 -Public Safety and Fire Prevention:
Submit a feasibility analysis of establishing a fire lane from Hobart Street and Powsland Street that meets the standards of Section 3 of the Technical Manual. Based on the materials submitted, additional information and/or implementation of a fire lane may be requested by City Staff.

Response:
This suggestion is infeasible, and further review is not warranted. Forefront worked hand in hand with city and state agencies to fully and exhaustively vet adequate access and public safety infrastructure appropriate to support the full build out of the Master Development Plan and overall Subdivision. In partnership with the City of Portland, State of Maine, and Federal government, all supporting infrastructure was installed in totality in 2015 in anticipation of the complete build out of the Master Development Plan and in satisfaction of all its appurtenant requirements.

Comment 2- Public Utilities :

- *Submit a written response documenting if consideration has been made in installing backflow preventers on the private sanitary lines.*
- *Submit a written response documenting the feasibility of relocating the two transformers to a less obtrusive location, including, but not limited to plan left of the parking structure in the landscaped area.*
- *When available, submit copies of ability to serve letters from utility providers.*

Response:

- The applicant has reviewed the existing city infrastructure and believes the private sewer lines are elevated enough that backflow prevention is not needed. The building is substantially higher than the 100-yr flood elevation and well above the overflow weir discharging to the CSO outfall line. The system should flow into the gravity public sanitary sewer system as it typically does around the city.
- The proposed transformer location has been carefully selected to maximize distance (and consequently visibility) from the street and front entrance while keeping the length of secondaries to the utility room as close as feasibly possible. Additionally, Central Maine Power (CMP) does not permit transformers to be located behind parking without alternative vehicular access to with-in 15 ft. The transformers will have vegetative screening between them and site access.
- Forefront has received an Ability To Serve ("ATS") letters from all utility agencies for the overall development. However, the applicant has submitted project specific ATS letters from Unitil (gas) and CMP (power) in the previously submitted Attachment K – Utility Correspondence. The applicant has been notified an ABS letter from PWD (water and sewer) is imminent and will be forwarded to the city upon receipt.

REVIEW COMMENTS - SITE DESIGN STANDARDS (SECTION 14.6.4) :

Comment 1 – NOISE AND VIBRATION :
When available, provide an updated roof plan that includes selected HVAC equipment with screening details.

Response:
The plan sheet A1.4 Roof Plan shows that HVAC equipment is centrally located on the roof and either screened from view by a parapet or located far enough away from the roof edge that a parapet is not needed to block the view of equipment from the entry to the site. Three site line studies demonstrate this point and are shown on sheet A1.7 Site Lines to Mechanical Equipment. This sheet has been uploaded to the eplan portal.

The majority of the roof top mounted HVAC equipment, which includes electric heat pumps for each dwelling unit, are low in height and average between 57" above the roof. A select number of units will be 69" above the roof. There will be no cooling towers, chillers or generators that could create unwarranted noise to emanate from the site.

Comment 2 – Design Standards:
Provide revisions based on the attached Design Review Memo, dated October 28, 2024.

Excerpt of October 28, 2024 Letter
Comment 2a – Master Development Plan:
Staff suggests that the applicant consider an increase to the proposed building height, as shown in figure 1, to add vertical scale towards the center of the proposed building footprint.

Response:
A taller building would place it under a different building code category and require a change in construction type, which would significantly increase costs and make the project financially unfeasible. Maintaining the current height is essential to keeping the project viable.

Comment 2b – Urban Commercial Business Zone – Standard 1a:
Staff recommends a reduction in angled parking spaces to provide prioritization of the pedestrian facilities into the primary building entrance. To encourage the drop-off court as a pedestrian plaza that only allow infrequent vehicular drop-off that is more conducive with a transit-oriented and walkable development.

Response:
The visitor parking is essential for prospective tenants and visitors, as it provides the convenience and accessibility needed to support leasing operations and the overall success of the development. Removing these spaces could negatively impact the project's ability to attract and retain tenants, which is critical to its long-term viability.

Comment 2c – Urban Commercial Business Zone – Standard 1b:
Staff recommends that the applicant provide additional ground-floor activation and pedestrian oriented uses (eg. articulated building entries or active use) to achieve an architectural presence and focus at the street.

Response:
We explored numerous layouts for the building footprint but were unable to position the building closer to the street due to the bottleneck design, which made it challenging to accommodate the

access drive and navigate the numerous utility easements. Additionally, positioning the building's leasing and amenity spaces more centrally was essential for the success of the project, as it provides direct access to the courtyards and ensures better proximity to all units, creating a more functional and cohesive design for residents.

Comment 2d – Urban Commercial Business Zone – Standard 1c:
Staff suggests the applicant create a more pedestrian scaled façade and building orientation towards the Thompson Point roadway. Staff recommends a more cohesive arrangement of exterior façade materials that respond to the existing character of buildings, particularly at the street-facing facades of Brick North & South buildings. Staff suggest a replacement of exterior material at the ground level facing the street for brick and detailing around fenestrations to provide greater articulation at the pedestrian scale.

Response:
When developing the architectural language and material palette for the proposed building, the design team carefully considered the distance, use types, and forms of the existing brick buildings on Thompson's Point. While Brick North and South possess historic merit and architectural quality, replicating their materials on a new building of a significantly different typology and scale did not seem appropriate. For example, despite its proximity to Brick North and South, the Children's Museum is clad in metal panels and represents a stylistic departure from the historic structures. Similarly, our approach aims to respect the context while ensuring the building's materials and design are aligned with its contemporary use and scale.

Comment 2e – Urban Commercial Business Zone – Standard 1d:
Staff finds that the structured parking will be visible from abutting properties at the north and recommends that the applicant provide additional screening as appropriate (eg. architectural perforation, vertical landscaping or other façade-fixed material).

Response:
While the garage will have limited visibility due to its location behind the train tracks, the electrical sub-station, and the wooded areas along the rail corridor which naturally obscure views from the neighborhood to the northwest, we have nevertheless designed what we consider to be an attractive façade for the garage which is complementary to the design of the surrounding residential wings of the building. Furthermore, we believe that many of the screening options available tend to magnify the visual presence of the structure rather than mitigate it, making them unsuitable for this context.

Comment 2f – Urban Commercial Business Zone – Standard 1d:
In addition, Staff finds the head-in parking spaces after the garage entrance to be unnecessary and recommends this driveway extension function for emergency access only with either a change of surface material (eg. grasscrete) or narrowing of drive aisle with mountable curb. Narrowing the drive aisle may allow for additional screening adjacent to the parking garage façade to reduce the visual impact to abutting properties with views towards Thompson Point.

Response:
We feel the head-in parking along the garage is critical for not only the project but the strategic overall parking management plan. These spaces contribute to the necessary overall managed parking supply. These spaces do not fit in the proposed garage structure and maximize the development area with a necessary use. The roadway width and pavement surface design are both required by the City of Portland Technical Manual for parking areas, Central Maine Power access easement agreement, and the City of Portland Fire Department safety review.

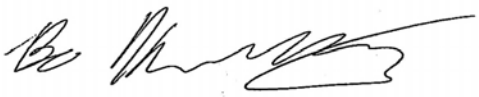
Comment 2g – Multi- Family :
Staff observes building form variation with roof line expression at several building wings and suggest that the applicant explore additional building height that increases building massing height towards the center of the proposed building footprint.

Response:
A taller building would place it under a different building code category and require a change in construction type, which would significantly increase costs and make the project financially unfeasible. Maintaining the current height is essential to keeping the project viable.

Comment 2h – Multi- Family :
Staff suggest that the applicant consider greater pedestrian activation at the transition space between the sidewalk and building façade fronting the street that includes an articulated building entry for residents, in addition to potential outdoor space programming (eg. retail use component, outdoor plaza and pedestrian amenities within close proximity to the street).

Response:
The challenges with making substantive revisions to the building layout are addressed in our response to Comment 2(c) above.

Comment 2i – Multi- Family :
Staff recommends a pathway connection directly from the Thompson Point roadway to the existing Portland Trail shoreline path.



Response:
The applicant proposes a stone dust trail connection to from the Portland Trails "Thompson's Point Trail" to Thompson's Point Road from the Portland Trails trailhead along the northerly side of the proposed access driveway at the north end of development Lot 5 as shown on the revised plan sheet C-3.1 Site Layout Plan.

End of Comments.

If you have any questions regarding these materials, please contact this office.

Sincerely,

PLACEMAKER PARTNERS, LLC

ACOE Maine General Permit Conditions

Applicant: General Public, State of Maine

Effective Date: October 14, 2020
Expiration Date: October 14, 2025

DEPARTMENT OF THE ARMY
GENERAL PERMITS FOR
THE STATE OF MAINE

The New England District of the U.S. Army Corps of Engineers (Corps) hereby issues 23 General Permits (GPs), listed below, for activities subject to Corps jurisdiction in waters of the United States within the boundaries of the State of Maine including tribal lands, and in adjacent ocean waters to the seaward limit of the outer continental shelf. These GPs are issued in accordance with Corps regulations at 33 CFR 320 – 332 and specifically 33 CFR 325.2(e)(2). These GPs will protect the aquatic environment and the public interest while effectively authorizing activities that have no more than minimal individual and cumulative adverse environmental effects.

This document contains the following sections:		Pages
I.	CORPS JURISDICTION	1
II.	GENERAL CRITERIA	2
III.	PROCEDURES	3 – 4
IV.	GENERAL CONDITIONS	5 – 19
V.	MAINE GENERAL PERMITS	20 – 35
VI.	SELF-VERIFICATION NOTIFICATION FORM	36
VII.	CONTENT OF A PRE-CONSTRUCTION NOTIFICATION	37 – 42
VIII.	AGENCY CONTACTS	43 – 45
IX.	DEFINITIONS	46 – 51

I. CORPS JURISDICTION

1. Permits are required from the Corps for the following work:

a. The construction of any structure in, over, or under any navigable water of the U.S. (see 33 CFR 328), the excavating or dredging from or depositing of material in such waters, or the accomplishment of any other work affecting the course, location, condition, or capacity of such waters. The Corps regulates these activities under Section 10 of the Rivers and Harbors Act of 1899 (see 33 CFR 322);

b. The discharge of dredged or fill material and certain discharges associated with excavation into waters of the U.S. including wetlands. The Corps regulates these activities under Section 404 of the Clean Water Act (see 33 CFR 323); and

c. The transportation of dredged material for the purpose of disposal in the ocean. The Corps regulates these activities under Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 (see 33 CFR 324).

2. Related laws: Section 408 of the Rivers and Harbors Act of 1899, Section 401 of the Clean Water Act, Section 402 of the Clean Water Act, Section 307(c) of the Coastal Zone Management Act of 1972, Section 106 of the National Historic Preservation Act of 1966, Section 7 of the Endangered Species Act, the Fish and Wildlife Coordination Act of 1956, the Magnuson-Stevens Fishery Conservation and Management Act, Section 302 of the Marine Protection, Research and Sanctuaries Act of 1972, and Section 7(a) of the Wild and Scenic Rivers Act.

II. GENERAL CRITERIA

1. In order for activities to qualify for these General Permits (GPs), they shall meet the GPs terms and eligibility criteria on pages 1-4, all applicable general conditions (GCs) in Section IV, and terms of the Maine General Permits in Section V. Any activity not specifically listed may still be eligible for authorization under these GPs; prospective permittees are advised to contact the Corps for specific eligibility determination.

2. Under these GPs, activities may qualify for the following:

- **SELF-VERIFICATION (SV)**: Notification to the Corps is required at least two weeks before work commences; the Corps will acknowledge receipt and GP eligibility of the SV activity in writing.
- **PRE-CONSTRUCTION NOTIFICATION (PCN)**: Notification to and written verification from the Corps is required. *No work under PCN may proceed until written verification from the Corps is received.*

The thresholds for activities eligible for SV and PCN are defined in the general conditions in Section IV and Maine General Permits in Section V.

3. Prospective permittees shall review:

a. Section I to determine if the activity requires Corps authorization.

b. Sections III , IV, and V to determine if the activity is eligible for authorization under these GPs, and specifically whether it is eligible for SV, or whether a PCN is required.

4. Prospective permittees are encouraged to contact the Corps with questions at any time (U.S. Army Corps of Engineers, Maine Project Office, 442 Civic Center Drive, Suite 350, Augusta, Maine 04330, ph. 207-623-8367). Pre-application meetings, whether arranged by the Corps or requested by a prospective permittee, are encouraged to facilitate the review of projects. Pre-application meetings and/or site visits help streamline the authorization process by alerting the prospective permittee to potentially time-consuming factors that are likely to arise during the evaluation of their project (e.g. avoidance, minimization and compensatory mitigation requirements, historic properties, endangered species, essential fish habitat, vernal pools, and dredging of contaminated sediments).

5. Permittees shall ensure compliance with all applicable GCs in Section IV and GPs in Section V. Non-compliance with these GPs and GCs may subject the permittee to criminal, civil, or administrative criminal penalties, and/or an ordered restoration, and/or the permit may be modified, suspended or revoked by the Corps.

III. PROCEDURES

1. State Approvals. Applicants are responsible for applying for and obtaining any required state or local approvals. Federal and state jurisdiction and review criteria may differ in some instances. State permits may be required for specific projects regardless of the GP category.

In order for authorizations under these GPs to be valid, when any of the following state approvals or statutorily-required reviews is also required, the approvals shall be obtained prior to the commencement of work in Corps jurisdiction:

- Maine Department of Environmental Protection (DEP): Natural Resources Protection Act (NRPA) permit, including permit-by-rule (PBR) and general permit authorizations; Site Location of Development Act permit; Maine Waterway Development and Conservation Act permit; and Maine Hazardous Waste, Septage, and Solid Waste Management Act license.
- Maine Department of Agriculture, Conservation and Forestry: Land Use Planning Commission (LUPC) permit.
- Maine Department of Marine Resources: Aquaculture Leases and Licenses.
- Maine Department of Agriculture, Conservation and Forestry, Bureau of Parks and Lands, Submerged Lands: Submerged Lands Lease.

2. How to Obtain/Apply for Corps Authorization.

a. **Self-Verification (SV)**: Prospective permittees shall confirm that the activity meets all the applicable terms and conditions of SV. Consultation with the Corps and/or other relevant federal and state agencies may be necessary to ensure compliance with the applicable general conditions (GCs) and related federal laws such as the National Historic Preservation Act (GC 15), the Endangered Species Act (GC 16), the Magnuson-Stevens Fishery Conservation and Management Act (GC 17), and the Wild and Scenic Rivers Act (GC 13). Activities that are eligible for SV are authorized under these GPs provided the prospective permittee has:

i. Confirmed that the activity meets all applicable terms and conditions of SV.

ii. Provided notifications to the State Historic Preservation Officer (SHPO) (the SHPO in the State of Maine is the Maine Historic Preservation Commission, or MHPC) and all five federally-recognized tribes in the State of Maine (Tribal Historic Preservation Officers, or THPOs) listed in Section VIII before submitting the SV to the Corps in order to be reviewed for the presence of historic, archeological, architectural, or tribal resources in the action area that the activity may affect (see GC 15). Prospective permittees are not required to wait for a response to their notifications before submitting the SV to the Corps.

iii. At least two weeks before work is to commence, submitted to the Corps a Self-Verification Notification Form (SVNF, page 36) with all of the following attachments: location map, project plans, and an Official Species List of federally threatened and endangered species that may occur in the activity's action area and the email address of the person who generated the list (see GC 16).

NOTE: A copy of a state permit application form may be an acceptable surrogate for the SVNF itself; however, the applicant shall not rely on the state permitting agency to provide the Corps a copy of their state permit application.

b. **Pre-Construction Notification (PCN)**: Notification to, and written verification from the Corps is required. For activities that do not qualify for SV or where otherwise required by the terms and conditions of the GPs, the prospective permittee shall submit a PCN and obtain written verification from the Corps before starting work in Corps jurisdiction. The Corps will coordinate review of all PCN activities with other federal and state agencies, as appropriate. The Corps will attempt to issue written verification of the PCN within 60 days of receiving a complete application.

All prospective permittees for PCN activities shall follow the instructions on found on pages 37 – 42, and in particular:

i. Submit directly to the Corps application form *ENG Form 4345* (pages 40 – 42), or the surrogate state permit application form as noted above.

ii. Provide project information outlined on pages 37 – 42 (Content of a Pre-Construction Notification).
iii. Submit an Official Species List of federally threatened and endangered species that may occur in the activity's action area and the email address of the person who generated the list (GC 16).
iv. Provide notifications to the SHPO (MHPC) and all five THPOs in the State of Maine listed in Section VIII before submitting the PCN to the Corps in order to be reviewed for the presence of historic, archeological, architectural, or tribal resources in the action area that the activity may affect (see GC 15). The PCN shall include documentation that MHPC and all of the THPOs were notified (a copy of the prospective permittee's cover letter or emails to MHPC and the THPOs is acceptable). Prospective permittees are not required to wait for a response to their notifications before submitting a PCN to the Corps.

c. **Individual Permit (IP):** Projects that are not eligible for these GPs require an IP (33 CFR 325.5(b)) and prospective permittees shall submit an application directly to the Corps. These GPs do not affect the Corps IP review process or activities exempt from Corps regulation. For general information regarding IPs prospective permittees are encouraged to contact the Corps. ***In addition, the Corps retains discretionary authority on a case-by-case basis to elevate GP-eligible activities to an IP based on concerns for the aquatic environment or for any other factor of the public interest (33 CFR 320.4(a)). Whenever the Corps notifies a prospective permittee that an IP is required, no work in Corps jurisdiction may be conducted until the Corps issues the required authorization in writing indicating that the work may proceed.***

d. **Emergency Situations:** Contact the Corps immediately in the event of an emergency situation for information on the verification process. Emergency situations are limited to sudden, unexpected occurrences that could potentially result in an unacceptable hazard to life, a significant loss of property, or an immediate, unforeseen, and significant economic hardship if corrective action requiring a permit is not undertaken within a time period less than the normal time needed to process an application under standard procedures. Emergency work is subject to the same terms and conditions of these GPs as non-emergency work, and similarly, must qualify for authorization under these GPs; otherwise an IP is required. The Corps will work with all applicable agencies to expedite verification according to established procedures in emergency situations.

IV. GENERAL CONDITIONS

An activity is authorized under the General Permits (GPs) only if that activity and the permittee satisfy all of the applicable GPs terms and following general conditions (GCs):

1. Federal Jurisdiction.
2. Minimal Direct, Secondary and Cumulative Effects.
3. Other Permits.
4. Water Quality and Coastal Zone Management.
5. Fills Within 100-Year Floodplains.
6. Discretionary Authority.
7. Single and Complete Project.
8. Use of Multiple General Permits.
9. Mitigation (Avoidance, Minimization, and Compensatory Mitigation).
10. Corps Projects and Property.
11. Navigation.
12. National Lands.
13. Wild and Scenic Rivers.
14. St. John/St. Croix Rivers.
15. Historic Properties.
16. Federal Threatened and Endangered Species.
17. Essential Fish Habitat.
18. Aquatic Life Movements and Management of Water Flows.
19. Spawning, Breeding, and Migratory Areas.
20. Vernal Pools.
21. Restoration of Special Aquatic Sites (Including Wetland Areas).
22. Invasive and Other Unacceptable Species.
23. Soil Erosion, Sediment, and Turbidity Controls.
24. Time-of-Year Work Windows/Restrictions.
25. Pile Driving and Pile Removal in Navigable Waters.
26. Temporary Fill.
27. Heavy Equipment in Wetlands or Mudflats.
28. Bank and Shoreline Stabilization Including Living Shorelines.
29. Stream Work and Crossings, and Wetland Crossings.
30. Utility Line Installation and Removal.
31. Storage of Seasonal Structures.
32. Aquaculture.
33. Permit(s)/Authorization Letter On-Site.
34. Inspections.
35. Maintenance.
36. Federal Liability.
37. Property Rights.
38. Previously Authorized Activities.
39. Transfer of GP Verifications.
40. Modification, Suspension, and Revocation.
41. Special Conditions.
42. False or Incomplete Information.
43. Abandonment.
44. Enforcement Cases.
45. Duration of Authorization.

1. Federal Jurisdiction.

a. Applicability of these GPs shall be evaluated with reference to federal jurisdictional boundaries (e.g. mean high water mark, high tide line, ordinary high water mark, and wetland boundary). Activities shall be evaluated with reference to "waters of the U.S." under the Clean Water Act (33 CFR 328) and "navigable waters of the U.S." under Section 10 of the Rivers and Harbors Act of 1899 (33 CFR 329). Prospective permittees are responsible for ensuring that the boundaries used satisfy the federal criteria defined at 33 CFR 328 – 229. These sections prescribe the policy, practice and procedures to be used in determining the extent of the Corps jurisdiction. Note: Waters of the U.S. includes all waters pursuant to 33 CFR 328.3(a), and in adjacent wetlands as that term is defined in 33 CFR 328.3(c).

b. Permittees shall identify on project plans wetlands, other special aquatic sites (SAS) including vegetated shallows (or submerged aquatic vegetation, SAV) and mudflats, and other waters, such as lakes and ponds, and perennial and intermittent streams on the project site. Wetlands shall be delineated in accordance with the Corps of Engineers Wetlands Delineation Manual and the most recent regional supplement pertaining to the State of Maine. GP-eligible activities may utilize wetland determinations conducted by State of Maine staff in-lieu of a wetland delineation. For activities located in Essential Fish Habitat (GC 17), permittees shall also identify on project plans natural rocky habitats and shellfish areas in order to satisfy the Magnuson-Stevens Fishery Conservation and Management Act.

2. Minimal Direct, Secondary and Cumulative Effects. To be eligible and subsequently authorized by these GPs, an activity shall result in no more than minimal individual and cumulative effects on the aquatic environment as determined by the Corps in accordance with the criteria listed within these GPs and GCs. This may require project modifications involving avoidance, minimization, or compensatory mitigation for unavoidable impacts to ensure that the net adverse effects of an activity are no more than minimal.

3. Other Permits. Permittees shall obtain other Federal, State, or local authorizations as required by law. Permittees are responsible for applying for and obtaining all required State of Maine or local approvals including a Flood Hazard Development Permit issued by the town/city. Work that is not regulated by the State of Maine, but is subject to Corps jurisdiction, may still be eligible for authorization under these GPs.

4. Water Quality and Coastal Zone Management.

a. Permittees shall satisfy any conditions imposed by the State of Maine and EPA, where applicable, in their Clean Water Act Section 401 Water Quality Certification (WQC) for these GPs, or in any Individual Section 401 WQC. See Section VIII for state-specific contact info and to determine if any action is required to obtain a 401 WQC. The Corps may require additional water quality management measures to ensure that the authorized activity does not cause or contribute to a violation of water quality standards. All projects authorized by these GPs shall be designed, constructed and operated to minimize or eliminate the discharge of pollutants.

b. Permittees shall satisfy any additional conditions imposed by the State of Maine in their Coastal Zone Management (CZM) Act of 1972 consistency concurrences for these GPs, or in any Individual CZM consistency concurrences. The Corps may require additional measures to ensure that the authorized activity is consistent with state coastal zone management requirements.

5. Fills Within 100-Year Floodplains. The activity shall comply with applicable Federal Emergency Management Agency (FEMA) approved State of Maine or municipal floodplain management requirements. Permittees should contact FEMA and/or the State of Maine Floodplain Management Program regarding floodplain management requirements (see Section VIII for Federal and state-specific contact info).

6. Discretionary Authority. Notwithstanding compliance with the terms and conditions of these GPs, the Corps retains discretionary authority to require a PCN or IP review based on concerns for the aquatic environment or for any other factor of the public interest (see 33 CFR 320.4(a)). This authority is invoked on a case-by-case basis whenever the Corps determines that the potential consequences of the proposal warrant a higher level of review based on the concerns stated above. This authority may be invoked for projects that may contribute to cumulative environmental impacts that are more than minimal or if there is a special resource or concern associated with a particular project.

7. Single and Complete Project. The term "single and complete project" is defined at 33 CFR 330.2(i) as the total project proposed or accomplished by one owner/developer or partnership or other association of owners/developers. These GPs shall not be used for piecemeal work and shall be applied to single and complete projects and as such, the same GP shall not be used more than once for the same single and complete project.

a. For non-linear projects, a single and complete project shall have independent utility. Portions of a multi-phase project that depend upon other phases of the project do not have independent utility. Phases of a project that would be constructed even if the other phases were not built can be considered as separate single and complete projects with independent utility.

b. Unless the Corps determines the activity has independent utility, all components of a single project and/or all planned phases of a multi-phased project (e.g., subdivisions should include all work such as roads, utilities, and lot development) shall be treated together as constituting one single and complete project. If any component of a single and complete project requires a PCN, the entire single and complete project shall be reviewed under PCN.

c. For linear projects such as power lines or pipelines with multiple crossings, a "single and complete project" is all crossings of a single water of the U.S. (i.e. single waterbody) at a specific location. For linear projects crossing a single waterbody several times at separate and distant locations, each crossing is considered a single and complete project. However, individual channels in a braided stream or river, or individual arms of a large, irregularly-shaped wetland or lake, etc., are not separate waterbodies, and crossings of such features cannot be considered separately.

8. Use of Multiple General Permits. The use of more than one GP for a single and complete project is prohibited, except when the acreage loss of waters of the U.S. authorized by the GPs does not exceed the acreage limit of the GPs with the highest specified acreage limit. For example, if a road crossing over waters is constructed under GP 10, with an associated utility line crossing authorized by GP 9, if the maximum acreage loss of waters of the U.S. for the total project is ≥3 acres it shall be evaluated as an IP.

9. Mitigation (Avoidance, Minimization, and Compensatory Mitigation).

a. Activities shall be designed and constructed to avoid and minimize adverse effects, both temporary and permanent, to waters of the U.S. to the maximum extent practicable to ensure that adverse effects to the aquatic environment are no more than minimal.

b. Compensatory mitigation for unavoidable impacts to waters of the U.S., including direct, secondary and temporal loss, will generally be required for permanent impacts that exceed the SV limits (SV limits are detailed in Section V), and may be required for temporary impacts that exceed the SV limits, to offset unavoidable impacts which remain after all appropriate and practicable avoidance and minimization has been achieved and to ensure that the adverse effects to the aquatic environment are no more than minimal. Proactive restoration projects or temporary impact work with no secondary effects may generally be excluded from this requirement.

c. Mitigation proposals shall follow the guidelines found in the Compensatory Mitigation for Losses of Aquatic Resources; Final Rule April 10, 2008; 33 CFR 332 (which can be found at: *www.nae.usace.army.mil/Missions/Regulatory/Mitigation* under "Compensatory Mitigation for Losses of Aquatic Resources, 33 CFR 332 (Compensatory Mitigation Rule)") and any other regulation. Permittees considering the use of a monetary payment *in-lieu* of permittee-responsible mitigation as compensation for unavoidable impacts to waters of the U.S. in the State of Maine may utilize the Maine Natural Resources Conservation Program (MNRCP). Information regarding this compensatory program can be found at: *www.mnrcp.org* For unavoidable jurisdictional impacts affecting federally-endangered Atlantic salmon and/or its critical habitat, permittees may be required to compensate for the impacts by utilizing the Maine Atlantic Salmon Restoration and Conservation Program. Information regarding this *in-lieu-fee* compensatory program can be found at: *www.maine.gov/dmr/science-research/searun/programs/ilffacts.html*

10. Corps Projects and Property.

a. Corps projects and property can be found at: *www.nae.usace.army.mil/Missions/Civil-Works*

b. In addition to any authorization under these GPs, prospective permittees shall contact the Corps Real Estate Division at (978) 318-8585 for work occurring on or potentially affecting Corps properties and/or Corps-controlled easements to initiate reviews and determine what real estate instruments are necessary to perform work. Permittees may not commence work on Corps properties and/or Corps-controlled easements until they

have received any required Corps real estate documents evidencing site-specific permission to work.

c. Any proposed temporary or permanent modification or use of a Federal project (including but not limited to a levee, dike, floodwall, channel, anchorage, breakwater, seawall, bulkhead, jetty, wharf, pier, or other work built or maintained but not necessarily owned by the United States), which may obstruct or impair the usefulness of the Federal project in any manner, is not eligible for SV and requires review and approval by the Corps pursuant to 33 USC 408 (Section 408).

d. A PCN is required for all work in, over, under, or within a distance of three times the authorized depth of a Corps Federal Navigation Project (FNP) and may require permission under Section 408.

e. Any structure or work that extends closer to the horizontal limits of any FNP than a distance of three times the project's authorized depth shall be subject to removal at the owner's expense prior to any future Corps dredging or the performance of periodic hydrographic surveys.

f. Where a Section 408 permission is applicable, written verification for the PCN will not be issued prior to the decision on the Section 408 permission request.

11. Navigation

a. There shall be no unreasonable interference with general navigation by the existence or use of the activity authorized herein, and no attempt shall be made by the permittee to prevent the full and free use by the public of all navigable waters at or adjacent to the activity authorized herein.

b. Work in, over, under, or within a distance of three times the authorized depth of an FNP shall specifically comply with GC 10.

c. Any safety lights and/or signals prescribed by the U.S. Coast Guard, State of Maine or municipality, through regulations or otherwise, shall be installed and maintained at the permittee's expense on authorized facilities in navigable waters of the U.S.

d. The permittee understands and agrees that, if future operations by the U.S. require the removal, relocation, or other alteration, of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, the permittee will be required, upon due notice from the Corps, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the U.S. No claim shall be made against the U.S. on account of any such removal or alteration.

12. National Lands. Activities that impinge upon the value of any National Lands or Federal Properties including but not limited to a National Wildlife Refuge, National Forest, or any area administered by the National Park Service , U.S. Fish and Wildlife Service or U.S. Forest Service are not eligible for SV and require PCN.

13. Wild and Scenic Rivers.

a. The following activities in designated rivers of the National Wild and Scenic River (NWSR) System, or in a river designated by Congress as a "study river" for possible inclusion in the system, require a PCN unless the National Park Service has determined in writing to the prospective permittee that the proposed work will not adversely affect the NWSR designation or study status:

i. Activities that occur in NWSR segments, in and 0.25 miles up or downstream of NWSR segments, or in tributaries within 0.25 miles of NWSR segments.
ii. Activities that occur in wetlands within 0.25 miles of NWSR segments.
iii. Activities that have the potential to alter free-flowing characteristics in NWSR segments.

b. As of October 14, 2020, National Wild and Scenic Rivers and congressional study rivers in Maine include: the Allagash River beginning at Telos Dam continuing to Allagash checkpoint at Eliza Hole Rapids, approximately 3 miles upstream of the confluence with the St. John River (length = 92 92.5 miles); and 11.25 miles of the York River, in the State of Maine, from its headwaters at York Pond to the mouth of the river at York Harbor, plus tributaries (the York River is currently under study).

14. St. John/St. Croix Rivers. A PCN is required for any work within the Saint John and Saint Croix River basins that requires approval of the International Joint Commission. In addition, a PCN is required if any temporary or permanent use, obstruction or diversion of international boundary waters could affect the natural flow or levels of waters on the Canadian side of the line; or if any construction or maintenance of remedial works,

protective works, dams, or other obstructions in waters downstream from boundary waters could raise the natural level of water on the Canadian side of the boundary.

15. Historic Properties.

a. No undertaking shall cause effects (as defined at 33 CFR 325 Appendix C and 36 CFR 800) on properties listed on, determined to be eligible for listing on, or potentially eligible for listing on the National Register of Historic Places, including previously unknown historic properties within the permit area, unless the Corps or another federal action agency has satisfied the consultation requirements of Section 106 of the National Historic Preservation Act (NHPA). The majority of historic properties are not listed on the National Register of Historic Places and may require identification and evaluation by qualified historic preservation and/or archeological consultants in coordination with the Corps and the State Historic Preservation Officer (SHPO) (the SHPO in the State of Maine is the Maine Historic Preservation Commission, MHPC) and/or the five federally-recognized tribes in the State of Maine (Tribal Historic Preservation Officers, or THPOs). The MHPC, the THPOs, and the National Register of Historic Places can assist with locating information on:

i. Previously identified historic properties; and

ii. Areas with potential for the presence of historic resources, which may require identification and evaluation by qualified historic preservation and/or archaeological consultants in consultation with the Corps and MHPC and/or the THPO(s).

b. For activities eligible for these GPs, permittees shall ensure that the activity will not cause effects as stated above in 15(a). In order to comply with this condition, both SV and PCN prospective permittees shall notify MHPC and all five THPOs for their identification of historic properties. MHPC and the THPOs will generally respond within 30 days of receiving the notification if they believe that the activity may have an adverse effect to historic properties. A PCN is required if an activity may have an adverse effect to historic properties. The PCN shall be submitted as soon as possible if a proposed activity may cause effects as stated above in 15(a) a to ensure that the Corps is aware of any potential effects of the proposed activity on any historic property to ensure all Section 106 requirements are met.

c. All PCNs shall:

i. Show notification to MHPC and all five THPOs for their identification of historic properties;

ii. State which historic properties may be affected by the proposed work or include a vicinity map indicating the location of the historic properties or the potential for the presence of historic properties; and

iii. Include any available documentation from MHPC or the THPO(s) indicating that there are or are not historic properties affected.

d. The requirements to comply with Section 106 of the NHPA may be satisfied by a Programmatic Agreement (PA) or Programmatic Consultation (PC) with the Corps, New England District or another federal agency. New England District PAs and PCs are found at *www.nae.usace.army.mil/Missions/Regulatory*

e. If the permittee discovers any previously unknown historic, cultural or archeological remains and artifacts while accomplishing the activity authorized by these permits, the permittee shall immediately notify the district engineer of what was found, and avoid construction activities that may affect the remains and artifacts until the required coordination has been completed. The district engineer will initiate the Federal, Tribal and state coordination required to determine if the items or remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places.

f. Federal agencies should follow their own procedures for complying with the requirements of Section 106 of the NHPA. Federal permittees shall provide the Corps with the appropriate documentation to demonstrate compliance with those requirements.

g. Federal and non-federal applicants should coordinate with the Corps before conducting any onsite archeological work (reconnaissance, surveys, recovery, etc.) requested by MHPC or the THPOs, as the Corps will determine the Permit Area for the consideration of historic properties based on 33 CFR 325 Appendix C. This is to ensure that work done is in accordance with Corps requirements.

16. Federal Threatened and Endangered Species.

a. No activity is authorized by these GPs which:

i. Is likely to directly or indirectly jeopardize the continued existence of a threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act (ESA), or which will directly or indirectly destroy or adversely modify the critical habitat or proposed critical habitat of such species;

ii. "May affect" a listed species or critical habitat, unless Section 7 consultation addressing the effects of the proposed activity has been completed;

iii. Is "likely to adversely affect" a listed species or critical habitat unless Section 7 consultation has been completed by the Corps or another lead action agency in coordination with the Corps under the provisions of a Programmatic Agreement (PA) or Programmatic Consultation (PC); or

iv. Violates the ESA.

b. All prospective permittees shall attach to their SVNF or PCN an Official Species List obtained from the U.S. Fish and Wildlife Service's Information for Planning and Consultation (IPaC) found at: *https://ecos.fws.gov/ipac* and provide the email address of the person who generated the list.

c. For proposed activities in tidal waters, prospective permittees should also refer to the National Oceanic and Atmospheric Administration (NOAA) Fisheries' Section 7 Mapper for federally-listed species found at: *https://noaa.maps.arcgis.com/apps/webappviewer/index.html*

d. A PCN is required if a threatened or endangered species, a species proposed for listing as threatened or endangered, or designated or proposed critical habitat (all hereinafter referred to as "listed species or habitat"), as identified under the ESA, may be affected by the proposed work. An activity may remain eligible for SV if the only listed species affected is the northern long-eared bat (*Myotis septrionalis*), and only after Section 7 consultation has been completed by the Corps under the 4(d) Rule Streamlined Consultation.

e. Federal agencies shall follow their own procedures for complying with the requirements of the ESA while ensuring that the Corps and any other federal action agencies are included in the consultation process.

f. Non-federal representatives designated by the Corps to conduct informal consultation or prepare a biological assessment shall follow the requirements in the designation document(s) and the ESA. Non-federal representatives shall also provide the Corps with the appropriate documentation to demonstrate compliance with those requirements. The Corps will review the documentation and determine whether it is sufficient to address ESA compliance for the GP activity, or whether additional ESA consultation is necessary.

g. The requirements to comply with Section 7 of the ESA may be satisfied by a Programmatic Agreement (PA) or Programmatic Consultation (PC) with the Corps, New England District or another federal agency. New England District PAs and PCs are found at: *www.nae.usace.army.mil/Missions/Regulatory*

17. Essential Fish Habitat (EFH).

a. PCN activities in tidal waters and the following rivers and streams, including all tributaries to the extent that they are currently or were historically accessible for salmon migration, shall be reviewed for the potential to adversely affect EFH (activities meeting SV criteria have been determined to result in no more than minimal adverse effects to EFH and therefore need no additional review):

Androscoggin River	Aroostook River	Boyden River	Dennys River
Ducktrap River	East Machias River	Hobart Stream	Kennebec River
Machias River	Narraguagus River	Orland River	Passagassawaukeag River
Patten Stream	Penobscot River	Pleasant River	Presumpscot River
Saco River	Sheepscot River	St. Croix River	Tunk Stream
Union River			

b. Prospective permittees may be required to describe and identify potential adverse effects to EFH and should refer to the NOAA Fisheries' EFH Mapper found at: *www.fisheries.noaa.gov/resource/map/essential-fish-habitat-mapper*

c. The requirements to comply with the Magnuson-Stevens Fishery Conservation and Management Act may be satisfied by a Programmatic Agreement (PA) or Programmatic Consultation (PC) with the Corps, New England District or another federal agency. New England District PAs and PCs are found at: *www.nae.usace.army.mil/Missions/Regulatory*

18. Aquatic Life Movements and Management of Water Flows.

a. No activity may substantially disrupt the necessary life cycle movements of those species of aquatic life indigenous to the waterbody, including those species that normally migrate through the area, unless the activity's primary purpose is to impound water. Unless otherwise stated, activities permanently impounding water in a stream require a PCN to ensure impacts to aquatic life species are avoided and minimized. All permanent and temporary crossings of waterbodies and wetlands shall be:

i. Suitably spanned, bridged, culverted, or otherwise designed and constructed to maintain low flows to sustain the movement of those aquatic species; and

ii. Properly aligned and constructed to prevent bank erosion or streambed scour both adjacent to and inside the crossing.

b. To avoid adverse impacts on aquatic organisms, the low flow channel/thalweg shall remain unobstructed during periods of low flow, except when it is necessary to perform the authorized work.

c. For work in tidal waters, in-stream controls (e.g. cofferdams) should be installed in such a way as to not obstruct fish passage.

d. To the maximum extent practicable, the preconstruction course, condition, capacity, and location of open waters must be maintained for each activity, including stream channelization, storm water management activities, and temporary and permanent road crossings, except as provided below. The activity must be constructed to withstand expected high flows. The activity shall not restrict or impede the passage of normal or high flows, unless the primary purpose of the activity is to impound water or manage high flows. The activity may alter the pre-construction course, condition, capacity, and location of open waters if it benefits the aquatic environment (e.g. stream restoration or relocation activities).

e. Activities that temporarily or permanently adversely impact upstream or downstream flood conditions require a PCN.

19. Spawning, Breeding, and Migratory Areas.

a. Jurisdictional activities in waters of the U.S. such as certain excavations, discharges of dredged or fill material, and/or suspended sediment producing activities that provide value as fish migratory areas, fish and shellfish spawning or nursery areas, or amphibian and migratory bird breeding areas, during spawning or breeding seasons shall be avoided and minimized to the maximum extent practicable.

b. Jurisdictional activities in waters of the U.S. that provide value as breeding areas for migratory birds must be avoided to the maximum extent practicable. The permittee is responsible for ensuring their action complies with the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act. The permittee is responsible for contacting the U.S. Fish and Wildlife's Maine Field Office (see Section VIII for contact info) to determine applicable measures to reduce impacts to migratory birds or eagles, including whether "incidental take" permits are necessary and available under the Migratory Bird Treaty Act or Bald and Golden Eagle Protection Act for a particular activity.

20. Vernal Pools.

a. A PCN is required if a discharge of dredged or fill material is proposed within a vernal pool depression located within waters of the U.S.

b. GC 20(a) above does not apply to projects that are within a municipality that meets the provisions of a Corps-approved vernal pool Special Area Management Plan (SAMP) and are otherwise eligible for SV, and the applicant meets the requirements to utilize the vernal pool SAMP.

21. Restoration of Special Aquatic Sites (Including Wetland Areas).

a. In areas of authorized temporary disturbance, if trees are cut they shall be cut at or above ground level and not uprooted in order to prevent disruption to the wetland soil structure and to allow stump sprouts to revegetate the work area, unless otherwise authorized.

b. The introduction or spread of invasive plant species in disturbed areas shall be controlled. If construction mats are to be used in areas of invasive plant species, they shall be thoroughly cleaned before re-use.

c. Wetland areas where permanent disturbance is not authorized shall be restored to their original condition and elevation. Original condition means protection and/or removal of existing soil and vegetation, and replacement back to the original location such that the original soil layering and vegetation schemes are

approximately the same, unless otherwise authorized. Restoration shall typically commence no later than the completion of construction.

d. Upon completion of construction, all areas of authorized disturbed wetland area shall be stabilized with a wetland seed mix containing only plant species native to New England and shall not contain any species listed in the "Invasive and Other Unacceptable Plant Species" Appendix K in the "New England District Compensatory Mitigation Guidance" found at: *www.nae.usace.army.mil/Missions/Regulatory/Mitigation*

22. Invasive and Other Unacceptable Species.

a. The introduction or spread of invasive or other unacceptable plant or animal species on the project site or areas adjacent to the project site caused by the site work shall be avoided to the maximum extent practicable. For example, construction mats and equipment shall be thoroughly cleaned and free of vegetation and soil before and after use. The introduction or spread of invasive plant or animal species on the project site caused by the site work shall be controlled.

b. No cultivars, invasive or other unacceptable plant species may be used for any mitigation, bioengineering, vegetative bank stabilization or any other work authorized by these GPs. However, non-native species and cultivars may be used when it is appropriate and specified in a written verification, such as using *Secale cereale* (Annual Rye) to quickly stabilize a site. All PCNs shall justify the use of non-native species or cultivars.

c. For the purposes of these GPs, plant species that are considered invasive and unacceptable are provided in Appendix K "Invasive and Other Unacceptable Plant Species" of the most recent "New England District Compensatory Mitigation Guidance" and is found at: *www.nae.usace.army.mil/Missions/Regulatory/Mitigation* The June 2009 "U.S. Army Corps of Engineers Invasive Species Policy" provides policy, goals and objectives and is located at *www.nae.usace.army.mil/Missions/Regulatory/Invasive-Species* If an Invasive Species Control/Management Plan has been prepared it should be included with any SV or PCN.

23. Soil Erosion, Sediment, and Turbidity Controls.

a. Adequate sedimentation and erosion control management measures, practices and devices, such as phased construction, installation of sediment control barriers (i.e. silt fence, vegetated filter strips, geotextile silt fences, erosion control mixes, hay bales or other devices) downhill of all exposed areas, retention of existing vegetated buffers, application of temporary mulching during construction, and permanent seeding and stabilization shall be installed and properly maintained to reduce erosion and retain sediment on-site during and after construction. They shall be capable of preventing erosion; of collecting sediment, suspended and floating materials; and of filtering fine sediment.

b. Temporary sediment control barriers shall be removed upon completion of work, but not until all disturbed areas are permanently stabilized. The sediment collected by these sediment barriers shall be removed and placed at an upland location and stabilized to prevent its later erosion into a waterway or wetland.

c. All exposed soil and other fills shall be permanently stabilized at the earliest practicable date.

24. Time-of-Year Work (TOY) Windows/Restrictions. In-water work shall be conducted during the following TOY work windows (work allowed) under SV and any in-water work proposed during the following TOY restrictions (no work) shall be reviewed under PCN (and shall contain written justification for deviation from the work allowed windows). The term "in-water work" does not include conditions where the work site is "in-the-dry" (e.g. intertidal areas exposed at low tide). The term also does not include work contained in a cofferdam so long as the cofferdam was installed and subsequently removed within the work allowed window.

	TOY Restriction (***no work***)	TOY Work Window (***work allowed***)
Non-tidal waters	Oct. 1st to Jul. 14th	Jul. 15th to Sep. 30th
Tidal waters	Apr. 10th to Nov. 7th	Nov. 8th to Apr. 9th

Alternate work windows proposed under PCN will generally be coordinated with the U.S. Fish and Wildlife Service, National Marine Fisheries Service, Maine Department of Inland Fisheries and Wildlife, and/or Maine Department of Marine Resources and resulting written verifications may include species-specific work allowed windows.

25. Pile Driving and Pile Removal in Navigable Waters.

a. Derelict, degraded, or abandoned piles and sheet piles in the project area shall be removed in their entirety as practicable and properly disposed of in an upland location and not in wetlands. In areas of fine-grained substrates, piles/sheets shall be removed by direct, vibratory, or clamshell pull method in order to minimize potential turbidity and sedimentation impacts. If removal is not practicable, said piles/sheets shall be cut off or driven to a depth of at least one foot below substrate.

b. Work involving pile installation and/or removal should adhere to one of the five methods below:

i. "In-the-dry", or

ii. In-water between Nov. 8th to Apr. 9th, or

iii. Drilled and pinned to ledge, or

iv. Vibratory hammers used to install any size and quantity of wood, concrete, or steel, or impact hammers limited to one hammer and <50 piles installed/day with the following: wood piles of any diameter, concrete piles ≤18-inches diameter, steel piles ≤12-inches diameter if: (1) the hammer is ≤3,000 pounds and a wood cushion or equivalent is used between the hammer and steel pile, or (2) a soft start is used. Soft starts require an initial set of three strikes from the impact hammer at 40% energy, followed by a 1-minute waiting period between subsequent three-strike sets. The soft-start procedure shall be conducted any time hammering ceases for more than 30 minutes.

26. Temporary Fill.

a. Temporary fills, including but not limited to construction mats and corduroy roads shall be entirely removed as soon as they are no longer needed to construct the authorized work. Temporary fill shall be placed in its original location or disposed of at an upland site and suitably contained to prevent its subsequent erosion into waters of the U.S.

b. All temporary fill and disturbed soils shall be stabilized to prevent its eroding into waters of the U.S. where it is not authorized. Work shall include phased or staged development to ensure only areas under active development are exposed and to allow for stabilization practices as soon as practicable. Temporary fill shall be placed in a manner that will prevent it from being eroded by expected high flows.

c. Unconfined temporary fill authorized for discharge into waters of the U.S. shall consist of material that minimizes impacts to water quality (e.g. washed stone, stone, etc.).

d. Appropriate measures shall be taken to maintain normal downstream flows and minimize flooding to the maximum extent practicable when temporary structures, work, and discharges of dredged or fill material, including cofferdams, are necessary for construction activities, access fills, or dewatering of construction sites. Materials shall be placed in a location and manner that does not adversely impact surface or subsurface water flow into or out of the wetland. Temporary fill authorized for discharge into wetlands shall be placed on geotextile fabric or other appropriate material laid on the pre-construction wetland grade where practicable to minimize impacts and to facilitate restoration to the original grade. Construction mats are excluded from this requirement.

e. Construction debris and/or deteriorated materials shall not be placed or otherwise located in waters of the U.S.

27. **Heavy Equipment in Wetlands or Mudflats.** Operating heavy equipment (drill rigs, fixed cranes, etc.) within wetlands shall be minimized, and to the maximum extent practicable such equipment shall not be stored, maintained or repaired in wetlands. Where construction requires heavy equipment operation in wetlands, the equipment shall: a) have low ground pressure (typically <3 psi); b) be placed on swamp/construction/timber mats (herein referred to as "mats") that are adequate to support the equipment in such a way as to minimize disturbance of wetland soil and vegetation; or c) be operated on adequately dry or frozen wetlands such that shear pressure does not cause subsidence of the wetlands immediately beneath equipment and upheaval of adjacent wetlands. Mats are to be placed in the wetland from the upland or from equipment positioned on mats if already working within a wetland. Other support structures that are capable of safely supporting equipment may be used with written Corps authorization. Similarly, the permittee may request written authorization from the Corps to waive use of mats during frozen or dry conditions. Construction mats should be managed in accordance with construction mat best management practices (BMPs) found at:
www.nae.usace.army.mil/Missions/Regulatory/State-General-Permits/Maine-General-Permit

28. Bank and Shoreline Stabilization Including Living Shorelines.

a. Projects involving construction of or repair, replacement, and maintenance of bank or shoreline stabilization structures including living shorelines within Corps jurisdiction shall be designed to minimize environmental effects, effects to neighboring properties, scour, etc. to the maximum extent practicable.

b. Prospective permittees shall design and construct these stabilization projects using this sequential avoidance and minimization process: avoidance of aquatic resource impacts, diversion of overland flow, vegetative stabilization, living shorelines, stone-sloped surfaces, and walls/bulkheads. New vertical walls/bulkheads shall only be used in situations where reflected wave energy can be tolerated. Prospective permittees proposing new vertical walls/bulkheads shall provide written justification demonstrating why other methods of stabilization are not practicable and how the surrounding area would be affected by the resulting reflected wave energy.

Additional conditions to meet SV eligibility criteria for *non-tidal* bank and shoreline stabilization activities:

a. Fill shall be ≤500 linear feet in total length as measured below the plane of the ordinary high water mark (OHWM), includes total if more than one stream bank.
b. Fill placed below the plane of the OHWM shall be ≤1 cubic yard per linear foot.
c. Fill shall not be angled steeper than 1H:1V.
d. No discharge of fill in special aquatic sites other than wetlands.
e. Stone revetment shall be comprised of angular material.
f. No material shall be of the type, or placed in any location, or in any manner, to impair surface water flow into or out of any water of the U.S.
g. No material shall be placed in a manner that will be eroded by normal or expected high flows (properly anchored trees and treetops may be used in low energy areas).
h. The activity shall not be a stream channelization activity.

Additional conditions to meet SV eligibility criteria for *tidal* bank and shoreline stabilization activities:

a. All in-water work shall be conducted "in-the-dry".
b. Fill shall be ≤500 linear feet in total length as measured below the plane of the high tide line (HTL) and shall be ≤200 linear feet in total length as measured below the plane of the mean high water mark (MHWM), includes total for more than one bank. Vertical structures shall be ≤200 linear feet in total length as measured below the plane of the MHWM and shall be ≤18 inches waterward of the existing vertical face.
c. Fill placed below the plane of the HTL shall be ≤1 cubic yard per linear foot.
d. Stone revetment shall be comprised of angular material.
e. Shall not impact special aquatic sites (SAS, incl. submerged aquatic vegetation, SAV), impacts to natural rocky habitats are ≤100 square feet, and impacts to intertidal and shellfish areas are ≤1,000 square feet).
f. No structures/fill shall be steeper than 1H:1V.
g. No new groins, breakwaters, or jetties.

29. Stream Work and Crossings, and Wetland Crossings.

a. A PCN is required for all new and replacement crossings in navigable waters.

b. In order to effectively size and configure crossings in navigable waters, new and replacement crossings shall consider factors including but not limited to: local tidal elevations over the range of tidal heights, basin topography and bathymetry, existing and proposed road elevations. Flood risk tolerance, conditions of habitat and natural community types present, and sea level rise during the useful life of the crossing.

c. A PCN is required for activities that result in unavoidable impacts to wetlands in excess of SV thresholds.

d. In-stream work and crossings and wetland crossings shall adhere to all applicable GCs including but not limited to:

i. GC 16 (Federally Threatened and Endangered Species)
ii. GC 17 (Essential Fish Habitat)
iii. GC 18 (Aquatic Life Movements and Management of Water Flows)

iv. GC 23 (Soil Erosion, Sediment and Turbidity Controls)
v. GC 24 (Time-of-Year Work Windows/Restrictions)
vi. GC 26 (Temporary Fill)
vii. GC 28 (Bank Stabilization)

e. Slip Lining. Work resulting in a decreased width, height, or diameter of an existing crossing (e.g. slip lining and invert lining) is discouraged and requires PCN. Written justification shall be provided for this activity.

f. Culvert Extensions. A PCN is required for any extension to an existing culvert.

g. Scour protection or armoring of the inlet and/or outlet of a crossing shall not disrupt normal flow patterns or substantially disrupt the necessary life cycle movements of those species of aquatic life indigenous to the waterbody, including those species that normally migrate through the area (see GC 18).

h. The permittee shall maintain the work authorized herein in good condition and in conformance with the terms and general conditions of this permit to facilitate aquatic life passage as stated in GC 18. Culverts that develop "hanging" inlets or outlets, result in bed washout, or a stream that doesn't match the characteristics of the substrate in the natural stream channel such as mobility, slope, stability confinement will require maintenance or repair to comply with this GC (this does not apply to temporary stream crossings).

Additional conditions to meet SV eligibility criteria for Stream Work and Crossings:

a. Crossings shall be designed and constructed using the techniques and principles outlined in Stream Simulation, Stream Smart, Habitat Connectivity Design.
b. Crossings shall be designed to be at least 1.2 times bankfull width. Any footings, abutments, and/or abutment armoring shall also be at least 1.2 times bankfull width.
c. Crossings shall have a natural bottom substrate under or within the structure matching the characteristics of the substrate in the natural stream channel. Crossings shall be designed and constructed with appropriate streambed forms and streambed characteristics so that water depths and velocities are comparable to those found in the adjacent natural channel at a variety of flows.
d. Crossings shall include a bank on both sides of the stream matching the horizontal profile of the existing stream and banks in order to allow terrestrial passage for wildlife and to prevent undermining of the footings as applicable.
e. Closed bottom culverts shall be embedded at least 25 percent of the maximum height of the culvert.
f. No unconfined fill or excavation in flowing waters is allowed. In-stream construction work shall be conducted "in-the-dry" under no-flow conditions or by using cofferdams, temporary flume pipes, culverts, etc. Downstream flows shall be maintained during in-stream construction. It is recommended that project plans include pertinent details for working in-the-dry and maintaining downstream flows.
g. Conditions (a) thru (e) immediately above do not apply to temporary stream crossings; however, in addition to conditions (f) immediately above, temporary stream crossings shall adhere to the following:
    i. Be placed on geotextile fabric or other material where practicable to ensure restoration to the original grade. Soil may not be used to construct or stabilize these structures and rock shall be large enough to allow for easy removal without disrupting the streambed.
    ii. Be designed and maintained to withstand and pass high flows. Water height shall be no higher than the top of the culvert's inlet. A minimum culvert diameter of two feet is required to pass debris. Culverts shall be aligned to prevent bank erosion or streambed scour.
    iii. Be equipped with energy dissipating devices installed downstream if necessary to prevent scour.
    iv. Be designed and maintained to prevent soil from entering the waterbody.
    v. Be removed upon the completion of work. Impacts to the streambed or banks requires restoration to their original condition using the methods in (a) above.

PCN Conditions for Stream Work and Crossings:

a. Crossings are recommended to meet the conditions for SV; written justification shall be provided for any deviation from SV conditions.

b. Crossings shall be designed using the least intrusive and environmentally damaging method following this sequential minimization process: 1) spans with no stream impacts, 2) spans with stream impacts, and 3) embedded culverts with Stream Simulation, Stream Smart, or Habitat Connectivity.

Additional Conditions for Wetland Crossings:

a. New and replacement wetland crossings that are permanent shall be constructed in such a manner as to preserve hydraulic and ecological connectivity, at its present level, between the wetlands on either side of the road. Crossing structures commonly include but are not limited to spans and culverts. To meet this condition, spans or culverts should be placed at least every 50 feet with an opening at least 2 feet high and 3 feet wide at ground level. Closed bottom culverts should be embedded at least 6 inches and should have a natural bottom substrate within the structure. Alternative crossing designs that preserve wetland hydraulic and ecological connectivity (e.g. "rock sandwiches) may also be considered.

b. Any work that results in flooding, or impacts to wetland drainage from the upgradient side of the wetland crossing does not qualify for SV.

c. In the case of non-compliance, the permittee shall take necessary measures to correct wetland damage due to lack of hydraulic and ecological connectivity.

30. Utility Line Installation and Removal.

a. Utility lines in jurisdictional waters should be installed subsurface and shall be maintained in such a way so that they remain subsurface. If it is necessary to discharge dredged or filled material to keep such utility lines buried or restore them to their original subsurface condition, a PCN and written verification from the Corps may be required (e.g., in the case of side casting into wetlands from utility trenches).

b. For subsurface utility lines the bottom and side slope cover associated with the initial installation under Federal Navigation Projects (FNPs) is a technical determination. The depth requirement varies based on geotechnical (composition of bottom materials and layering), hydraulic (current, or wave induced scour depth), navigation (propeller induced scour depth and ships' anchor penetration), maintenance dredging (penetration of barge spuds), construction factors (energy from blasting potentially transmitted to utility crossings), physical conditions (exposed open water conditions or sheltered/harbor conditions), and the proposed location of the utility crossing within any FNP or within navigable waters, including areas dredged by others. On a case-by-case basis, the Corps will determine the depth and cover requirements for each proposed utility crossing. Additional conditions to the GP will be attached to address pre and post installation requirements. In waterways that do not have existing FNPs, this depth should be taken as two feet below the existing bottom or maximum depth of proposed dredging, as applicable.

c. Aerial utility lines crossing navigable waters require PCN and shall meet minimum clearances per 33 CFR 322.5(i).

d. For horizontal directional drilling work, returns of drilling fluids to the surface (i.e., frac-outs) are not authorized and require restoration to the maximum extent practicable in accordance with the terms and conditions of these GPs. The permittee and its contractor shall have onsite and shall implement the procedures detailed in a frac-out contingency plan for monitoring drilling operations and for the immediate containment, control and recovery/removal of drilling fluids released into the environment should a discharge of material occur during drilling operations.

e. For new installations within waters of the U.S., any abandoned or inactive utility lines should be removed and faulty lines (e.g., leaking hazardous substances, petroleum products, etc.) shall be removed or repaired to the extent practicable. A PCN is required if they are to remain in place, e.g., to protect sensitive areas or ensure safety.

f. No work shall drain a water of the U.S. by providing a conduit for water on or below the surface. Trench plugs installed along pipelines may be effective.

g. Trenches should be backfilled with native sediment immediately after completion of work.

h. Pre-construction elevations should be re-established. Any additional material needed to accomplish this should be of consistent type and grain-size as the existing substrate sediment.

i. Utility line activities in non-tidal waters adjacent to special aquatic sites, and all work in tidal waters should utilize horizontal directional drilling as practicable.

31. Storage of Seasonal Structures. Seasonal or recreational structures such as pier sections, floats, aquaculture structures, etc. that are removed from the waterway for a portion of the year shall be stored in an upland location and not in wetlands, tidal wetlands, their substrate, or on mudflats. These seasonal structures may be stored on the fixed, pile-supported portion of a structure that is waterward of the mean high water mark or the ordinary high water mark, e.g. the storage of a ramp or gangway on the pile-supported pier. Seasonal storage of structures in navigable waters, e.g., in a protected cove, requires prior Corps approval and local harbormaster approval.

32. Aquaculture. Activities involving the cultivation of Atlantic salmon and other salmonids, or other federally-listed threatened or endangered species are not eligible for authorization under these GPs. All other aquaculture activities shall adhere to all applicable GCs including but not limited to:

a. GC 3 (Other Permits) In particular, permittees shall maintain a current State of Maine Department of Marine Resources lease or license.
b. GC 10 (Corps Projects and Property)
c. GC 11 (Navigation)
d. GC 16 (Federal Threatened and Endangered Species)
e. GC 17 (Essential Fish Habitat)
f. GC 18 (Aquatic Life Movements and Management of Water Flows)
g. GC 31 (Storage of Seasonal Structures)

Additional conditions to meet SV eligibility criteria for Tidal Aquaculture:

a. Shall not exceed 400 square feet in area.
b. Shall receive signed approval from Harbormaster or appropriate Town Official.
c. Shall not include enclosures or impoundments.
d. Shall not be located in or within a distance of three times the authorized depth of a FNP.
e. Shall not be located in or impinge upon the value of National Lands and Federal Properties including but not limited to National Parks and National Wildlife Refuges.
f. Shall not impact special aquatic sites (SAS, incl. submerged aquatic vegetation, SAV), impacts to natural rocky habitats are ≤100 square feet, and impacts to intertidal and shellfish areas are ≤1,000 square feet.
g. No structures, cages, gear, or shell hash shall be located in/within 25 feet of SAV.
h. All gear, except for mooring tackle, when not in use on the site shall be stored in an upland location above the mean high water mark and not on wetland (incl. salt marsh).

33. Permit(s)/Authorization Letter On-Site. The permittee shall ensure that a copy of the terms and conditions of these GPs and any accompanying authorization letter with attached plans are at the site of the work authorized by these GPs whenever work is being performed and that all construction personnel performing work which may affect waters of the U.S. are fully aware of the accompanying terms and conditions. The entire permit authorization shall be made a part of any and all contracts and subcontracts for work that affects areas of Corps jurisdiction at the site of the work authorized by these GPs. This shall be achieved by including the entire permit authorization in the specifications for work. The term "entire permit authorization" means all terms and conditions of the GPs, the GPs, and the authorization letter (including its drawings, plans, appendices and other attachments) and subsequent permit modifications as applicable. If the authorization letter is issued after the construction specifications, but before receipt of bids or quotes, the entire permit authorization shall be included as an addendum to the specifications. If the authorization letter is issued after receipt of bids or quotes, the entire permit authorization shall be included in the contract or subcontract. Although the permittee may assign various aspects of the work to different contractors or subcontractors, all contractors and subcontractors shall be obligated by contract to comply with all environmental protection provisions contained within the entire GP authorization, and no contract or subcontract shall require or allow unauthorized work in areas of Corps jurisdiction.

34. Inspections. The permittee shall allow the Corps to make periodic inspections at any time deemed necessary in order to ensure that the work is eligible for authorization under these GPs, is being, or has been performed in accordance with the terms and conditions of these GPs. To facilitate these inspections, the permittee shall

complete and return to the Corps the Work-Start Notification Form and the Compliance Certification Form when either is provided with an authorization letter. The Corps may also require post-construction engineering drawings and/or photographs for completed work or post-dredging survey drawings for any dredging work to verify compliance.

35. Maintenance. The permittee shall maintain the activity authorized by these GPs in good condition and in conformance with the terms and condition of these permits. This does not include maintenance dredging, related disposal, or beach nourishment projects, which are subject to review thresholds for GP 5 on page 30, unless specified in written authorization from the Corps.

36. Federal Liability. In issuing these permits, the Federal Government does not assume any liability for the following:

a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes;

b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the U.S. in the public interest;

c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit;

d. Design or construction deficiencies associated with the permitted work; or

e. Damage claims associated with any future modification, suspension, or revocation of this permit.

37. Property Rights. Per 33 CFR 320.4(g)(6), these GPs do not convey any property rights, either in real estate or material, or any exclusive privileges, nor does it authorize any injury to property or invasion of rights or any infringement of federal, state, or local laws or regulations.

38. Previously Authorized Activities.

a. Projects that received prior authorization from the Corps (via Category 1 or 2) and that completed authorized work under the previous nationwide permits, programmatic permits, regional general permits or letters of permission, shall remain authorized in accordance with the original terms and conditions of those authorizations, including their terms, general conditions, expiration date, and any special conditions provided in a written verification.

b. Activities authorized pursuant to 33 CFR Part 330.3 ("Activities occurring before certain dates") are not affected by these GPs.

c. Any work not commenced, not under contract to commence, nor completed that was originally authorized by the Corps under the GP in effect between October 13, 2015 and October 13, 2020 remains authorized subject to the terms and general conditions of this GP along with any special conditions included in written authorizations. Exception: if previously authorized work has not commenced or not under contract to commence and a new federally-listed threatened or endangered species may be affected, the Corps shall consult with the U.S. Fish and Wildlife Service or NOAA Fisheries prior to re-authorizing the work under these GPs. Requests for re-authorization shall include an Official Species List per GC 16.

39. Transfer of GP Verifications. If the permittee sells the property associated with a GP verification, the permittee may transfer the GP verification to the new owner by submitting a letter to the Corps to validate the transfer. A copy of the GP verification shall be attached to the letter, the letter shall contain the name, address, phone number and email of the transferee (new owner), shall include the following statement and signature, and be mailed to: U.S. Army Corps of Engineers, Maine Project Office, 442 Civic Center Drive, Suite 350, Augusta, Maine 04330:

> "When the structures or work authorized by these GPs are still in existence at the time the property is transferred, the terms and conditions of these GPs, including any special conditions, will continue to be binding on the new owner(s) of the property."
>
> _____
> Transferee Printed Name
>
> _____
> Transferee Signature Date

40. Modification, Suspension, and Revocation. These GPs and any individual authorization issued thereof may be either modified, suspended, or revoked, in whole or in part, pursuant to the policies and procedures of 33 CFR 325.7, and any such action shall not be the basis for any claim for damages against the U.S.

41. Special Conditions. The Corps may independently or in coordination with federal resource agencies impose special conditions on a project authorized pursuant to these GPs that are determined necessary to minimize adverse navigational and/or environmental effects, or based on any other factor of the public interest. Failure to comply with all terms and conditions of the authorization, including special conditions, constitutes a permit violation and may subject the permittee to criminal, civil or administrative penalties and/or an ordered restoration.

42. False or Incomplete Information. If the Corps makes a determination regarding the eligibility of a project under these GPs and subsequently discovers that it has relied on false, incomplete or inaccurate information provided by the permittee, the Corps may determine that the GP authorization is not valid; modify, suspend or revoke the authorization; and the U.S. Government may institute legal proceedings.

43. Abandonment. If the permittee decides to abandon the activity authorized under these GPs, unless such abandonment is merely the transfer of property to a third party, he/she may be required to restore the area to the satisfaction of the Corps.

44. Enforcement cases. These GPs do not apply to any existing or proposed activity in Corps jurisdiction associated with an ongoing Corps or EPA enforcement action, until such time as the enforcement action is resolved or the Corps or EPA, as appropriate, determines that the activity may proceed independently without compromising the enforcement action.

45. Duration of Authorization.

a. These GPs expire on October 14, 2025 unless otherwise specifically indicated in an individual authorization letter. Activities authorized under these GPs that have either commenced or are under contract to commence in reliance upon this authorization will have an additional year from the expiration date to complete the work. The permittee must be able to document to the Corps' satisfaction that the activity commenced or was under contract to commence by the expiration date of these GPs. If work is not completed within the one year extended timeframe, the permittee must contact the Corps. The Corps may issue a new authorization, provided the activity meets the applicable terms and conditions of the Maine GPs that are in effect at the time.

b. Activities authorized under these GPs will remain authorized until these GPs expire, unless discretionary authority has been exercised on a case-by-case basis to modify, suspend, or revoke the authorization in accordance with 33 CFR 325.2(e)(2). Activities completed under the SV or PCN authorizations of these GPs will continue to be authorized after its expiration date.

Tammy R. Turley
Chief, Regulatory Division

V. MAINE GENERAL PERMITS

An activity is authorized under General Permits 1 through 23 listed below only if that activity and the permittee satisfy all of the applicable GP terms and general conditions. Any activity not specifically listed may still be eligible for authorization under these GPs; prospective permittees are advised to contact the Corps for specific eligibility determination.

1. Repair, Replacement, and Maintenance of Authorized Structures and Fills;
Repair, rehabilitation, or replacement of any previously authorized, currently serviceable structure, or fill and minor expansions thereof.

2. Moorings
New moorings and mooring fields, the relocation of previously authorized moorings, expansions, boundary reconfigurations or modifications of previously authorized mooring fields, conversion of mooring types (e.g. private to rental), and maintenance and replacement of moorings. Moored floats, lobster cars, rafts, and similar float structures are not included in this GP.

3. Structures, Floats and Lifts
New, expansions, reconfigurations or modifications of structures for navigational access in waters of the U.S. including but not limited to temporary/seasonal or permanent pile and crib-supported piers, floats, stairs, shore outhauls, and boat and float lifts/ways. Floats may include lobster cars, work floats, moored floats, swim floats, and shellfish upweller floats.

4. Aids to Navigation, and Temporary Recreational Structures
Aids to navigation and regulatory markers which are approved by and installed in accordance with the requirements of the U.S. Coast Guard (see 33 CFR, chapter I, subchapter C, part 66) and temporary buoys, markers, small floating docks, and similar structures placed for recreational use during specific events such as fireworks displays, water skiing competitions, and boat races or seasonal use.

5. Dredging, Disposal of Dredged Material, Beach Nourishment, and Rock Removal and Relocation
New, maintenance, and improvement dredging, including: a) Disposal of dredged material at a confinedaquatic disposal, beach nourishment, near shore, designated open water or ocean water disposal site(s), provided the Corps finds the dredged material to be suitable for such disposal; (b) Beach nourishment not associated with dredging; (c) Rock removal and relocation for navigation.

6. U.S. Coast Guard Approved Bridges and Causeways
Discharges of dredged or fill material incidental to the construction and modification of bridges across navigable waters of the U.S., including cofferdams abutments, foundation seals, piers, approach fills, and temporary construction and access fills provided that the USCG authorizes the construction of the bridge structure under Section 9 of the Rivers and Harbors Act of 1899 or other applicable laws.

7. Bank and Shoreline Stabilization Including Living Shorelines
Bank stabilization activities necessary for erosion protection along the banks of lakes, ponds, streams, and marine/tidal waters. Includes bulkheads, seawalls, riprap, revetments or slope protection & similar structures as well as vegetative planting, soil bioengineering or alternative techniques that are a combination of the two (i.e. living shorelines), specifically for the purpose of shoreline protection.

8. Residential, Commercial and Institutional Developments, and Recreational Facilities
Discharges of dredged or fill material into waters of the U.S for the construction or expansion of: residences and residential subdivisions; commercial and institutional buildings or subdivisions; and recreational facilities; and attendant features including but not limited to roads, parking lots, garages, stormwater management facilities, yards, and utilities.

9. Utility Line Activities

Activities required for (a) the construction, maintenance, relocation, repair, & removal of utility lines, including outfall and intake structures, and the associated excavation, backfill, or bedding for utility lines; (b) the construction, maintenance or expansion of utility line substation facilities associated with a power/utility line in non-tidal waters; and (c) the construction and maintenance of foundations for overhead utility line towers, poles, and anchors provided the foundations are the minimum size necessary and separate footings for each tower leg (rather than a larger single pad) are used where feasible. This GP authorizes the construction of access roads to facilitate construction of the above activities provided the activity, in combination with all other activities included in one single and complete project.

10. Linear Transportation Projects

Activities required for the construction, expansion, modification, or improvement of linear transportation projects (e.g., driveways, roads, highways, railways, trails, airport runways, and taxiways) and attendant features.

11. Mining Activities

Temporary or permanent discharges of dredged or fill material into waters of the U.S. for mining activities.

12. Boat Ramps and Marine Railways

Temporary or permanent discharges of dredged or fill material, excavation and other work in waters of the U.S. required for the construction of temporary or permanent boat ramps and marine railways.

13. Land and Water-Based Renewable Energy Generation Facilities and Hydropower Projects

Structures and work and discharges of dredged or fill material into waters of the U.S. for the construction, expansion, modification or removal of: (a) land-based renewable energy production facilities (e.g. solar and wind) and their attendant features; (b) water-based wind or hydrokinetic renewable energy generation pilot projects and their attendant features; and (c) discharges of dredged or fill materialassociated with hydropower projects. Attendant features may include, but are not limited to, land-based collection and distribution facilities, control facilities, and parking lots.

14. Reshaping Existing Drainage Ditches and Mosquito Management

Discharges to modify the cross-sectional configuration of currently serviceable drainage ditches constructed in waters of the U.S., for the purpose of improving water quality by regrading the drainage ditch with gentler slopes, which can reduce erosion, increase growth of vegetation, and increase uptake of nutrients and other substances by vegetation. Also authorized are mosquito reduction activities.

15. Response Operations for Oil or Hazardous Substances

Activities conducted in response to a discharge or release of oil and hazardous substances that are subject to the National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR 300) including containment, cleanup, and mitigation efforts, provided activities are done under either (i) The Spill Prevent, Control & Countermeasure Plan require by 40 CFR 112.3; (ii) The direction or oversight of the Federal on-site coordinator designated by 40 CFR 300; or (iii) Any approved existing State, regional or local contingency plan provided that the Regional Response Team (if one exists in the area) concurs with the proposed response efforts or does not object to the response effort. Activities required for the cleanup of oil releases in waters of the U.S. from electrical equipment that are governed by EPA's polychlorinated biphenyl (PCB) spill response regulations at 40 CFR 761. Booms placed in tidal waters. Use of temporary structures & fills for spill response training exercises.

16. Cleanup of Hazardous and Toxic Waste

Specific activities to effect the containment, stabilization or removal of hazardous or toxic waste materials, including court ordered remedial action plans or related settlements which are performed, ordered or sponsored by a government agency with established legal or regulatory authority.

17. Scientific Measurement Devices
Scientific devices for measuring and recording scientific data, such as staff gauges, tide and current gauges, meteorological stations, water recording and biological observation devices, water quality testing and improvement devices, and similar structures.

18. Survey Activities
Survey activities such as soil borings, core sampling, seismic exploratory operations, plugging of seismic shot holes and other exploratory-type bore holes, exploratory trenching and historic resources surveys (but not recovery).

19. Agricultural Activities
Regulated discharges of dredged or fill material in non-tidal waters of the U.S. for agricultural activities, including the construction of building pads for farm buildings. Authorized activities include: (a) installation, placement, or construction of drainage tiles, ditches, or levees; mechanized land clearing; land leveling; the relocation of existing serviceable drainage ditches; and similar activities; (b) construction of farm ponds, excluding perennial streams, provided the farm pond is used solely for agricultural purposes; and (c) discharges of dredged or fill material to relocate existing serviceable drainage ditches constructed in non-tidal streams.

20. Fish and Wildlife Harvesting, Enhancement, and Attraction Devices
Activities in waters of the U.S. associated with fish and wildlife harvesting devices including pound nets, crab and lobster traps, crab dredging, eel pots, duck blinds, and clam and oyster digging, fish aggregating devices, and small fish attraction devices such as open water fish concentrators (sea kites, etc.). This GP does not include aquaculture activities.

21. Habitat Restoration, Establishment and Enhancement Activities
Activities in waters of the U.S. associated with the restoration, enhancement and establishment of non-tidal and tidal wetlands and riparian areas, including invasive, non-native or nuisance species control; the restoration and enhancement of non-tidal streams and other non-tidal open waters; the relocation of non-tidal waters, including non-tidal streams & associated wetlands for reestablishment of a natural stream morphology and reconnection of the floodplain; the restoration and enhancement of shellfish, finfish and wildlife; and the rehabilitation or enhancement of tidal streams, tidal wetlands and tidal open waters; provided those activities result in net increases in aquatic resource functions and services. Also included are shellfish enhancement measures including but not limited to “brushing”, clam pots, boxes, and netting.

22. Stream and Wetland Work and Crossings
Activities required for the construction, expansion, modification, or improvement of linear transportation projects that cross waters of the U.S. (e.g., driveways, roads, highways, railways, trails, airport runways, and taxiways) and attendant features. Crossing structures include, but are not limited to temporary or permanent jurisdictional spans, bridges, culverts, and fords. Any stream channel modification is limited to the minimum necessary to construct or protect the project; such modifications must be in the immediate vicinity of the project.

23. Aquaculture
The installation of buoys, floats, racks, trays, nets, lines or other structures in waters of the U.S. for the containment and cultivation of fish, shellfish and seaweed/kelp. Also authorized are anchored upweller floats, small-scale shellfish hatchery seawater intake/discharge structures, and discharges of dredged or fill material associated with cultivation such as the placement of cultch or spatted-shell on bottom.

USER NOTE: All Self-Verification and Pre-Construction Notification activities shall comply with all applicable terms (pages 1 - 4), General Conditions (pages 5 - 19), and additional terms below.

GENERAL PERMITS FOR THE STATE OF MAINE		
A. INLAND WATERS AND WETLANDS	Inland Waters and Wetlands are defined as waters that are regulated under Section 404 of the Clean Water Act, including rivers, streams, lakes, ponds, and wetlands, and ***excludes Section 10 Navigable Waters of the U.S.*** The jurisdictional boundaries are the ordinary high water mark (OHWM) in the absence of adjacent wetlands; beyond the OHWM to the limit of adjacent wetlands when adjacent wetlands are present; and the wetland limit when only wetlands are present. For the purposes of these GPs and designated activities, fill placed in the area between the mean high water mark (MHWM) and the high tide line (HTL), and in the bordering and contiguous wetlands to tidal waters are reviewed in the Navigable Waters section below beginning on page 28.	
	Activities not meeting the Self-Verification terms below require Pre-Construction Notification and activities not meeting the Pre-Construction Notification terms below require an application for an Individual Permit (IP).	
GENERAL PERMIT #	**SELF-VERIFICATION (SV)**	**PRE-CONSTRUCTION NOTIFICATION (PCN)**
1. Repair, Replacement, and Maintenance of Authorized Structures and Fills *(for stream crossings see GP 22)*	Repair, replacement, and maintenance of existing, currently serviceable, authorized fills with no expansion or change in use, provided: • Conditions of the original authorization apply. • Minor deviations in fill design allowed. • The repair, rehabilitation, or replacement of those structures or fills destroyed or damaged by storms, floods, fire or other discrete events is authorized, provided the work is commenced, or is under contract to commence, within two years of the date of their destruction or damage. • Drawdown of impoundments for dam/levee repair does not exceed 18 months and one growing season (Apr-Sept).	Repair, replacement, and maintenance of existing authorized fills not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
2. Moorings	Not Applicable – these activities in non-navigable inland waters do not require Corps authorization.	Not Applicable – these activities in non-navigable inland waters do not require Corps authorization.
3. Structures, Floats, and Lifts	Pile-supported structures, floats and lifts located in non-navigable inland waters do not require Corps authorization. Solid fill or crib-supported structures with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.	Fill activities associated with structures, floats, and lifts not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
4. Aids to Navigation and Temporary Recreational Structures	Not Applicable – these activities in non-navigable inland waters do not require Corps authorization.	Not Applicable – these activities in non-navigable inland waters do not require Corps authorization.
5. Dredging, Disposal of Dredged Material, Beach Nourishment, and Rock Removal and Relocation	Those activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No stream channelization, relocation, or loss of streambed including impoundments or discharges of tailings into streams.	Those activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
6. U.S. Coast Guard Approved Bridges and Causeways	Not applicable in inland waters and wetlands; see B. Navigable Waters on page 31 below.	Not applicable in inland waters and wetlands; see B. Navigable Waters on page 31 below.
7. Bank and Shoreline Stabilization Including Living Shorelines (see also GC 28)	Bank and shoreline stabilization activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • Fill is ≤500 LF in total length as measured below the plane of the OHWM, includes total if more than one stream bank. • Fill placed below the plane of the OHWM is ≤1 CY per linear foot. • There is no discharge in special aquatic sites other than wetlands. • Revetment is comprised of angular material. • In-stream work is limited to Jul. 15th to Sep. 30th • No structures angled steeper than 1H:1V.	Bank and shoreline stabilization activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
8. Residential, Commercial and Institutional Developments, and Recreational Facilities	Those developments and facilities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts. Fill area includes all temporary and permanent fill, and regulated discharges associated with excavation. Provided: • The historic fill and proposed fill area <15,000 SF specifically complies with GC 5 Single and Complete Projects. • No work in special aquatic sites other than wetlands.	Those developments and facilities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts. *Mechanical clearing of areas within Corps jurisdiction without grubbing or other soil disturbance >3 acres as a secondary impact may still be eligible for PCN at the discretion of the Corps.*
9. Utility Line Activities (see also GC 30)	Utility line activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill (excluding mats), and associated secondary impacts, provided: • There is no permanent change in pre-construction contours in waters in the U.S. • Material resulting from trench excavation is temporarily side cast into waters of the U.S. for <3 months and is placed in such a manner that is not dispersed by current or other forces. • The line does not run parallel to, or along a streambed. • No stream channelization, relocation, or loss of streambed including impoundments. • There is no discharge in special aquatic sites other than wetlands. • Construction mats of any area necessary to conduct activities provided mats are removed as soon as work is completed and shall be in place no longer than one single growing season. • In-stream work is limited to Jul. 15th to Sep. 30th • In-water work is conducted in-the-dry. • Intake structures that are dry hydrants used exclusively for firefighting activities with no stream impoundments. • Construction mats of any area necessary to conduct activities provided mats are removed as soon as work is completed and shall be in place no longer than one single growing season.	Utility line activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts. *Mechanical clearing of areas within Corps jurisdiction without grubbing or other soil disturbance >3 acres as a secondary impact may still be eligible for PCN at the discretion of the Corps.*

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
10. Linear Transportation Projects *(for stream crossings refer to GP 22)*	Linear transportation activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill (excl. mats), and associated secondary impacts, provided: • The historic fill and proposed fill area <15,000 SF specifically complies with GC 5 Single and Complete Projects. • There is no discharge in special aquatic sites other than wetlands. • Construction mats of any area necessary to conduct activities provided mats are removed as soon as work is completed and shall be in place no longer than one single growing season.	Linear transportation activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts. *Mechanical clearing of areas within Corps jurisdiction without grubbing or other soil disturbance >3 acres as a secondary impact may still be eligible for PCN at the discretion of the Corps.*
11. Mining Activities	Mining activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No stream channelization, relocation, or loss of streambed including impoundments.	Mining activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
12. Boat Ramps	Boat ramps with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, and temporary fills.	Boat ramps not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
13. Land and Water-Based Renewable Energy Generation Facilities and Hydropower Projects	Those facilities and projects with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No stream channelization, relocation, or loss of streambed including impoundments. • No new water-based facilities are eligible.	Those facilities and projects not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts. *Mechanical clearing of areas within Corps jurisdiction without grubbing or other soil disturbance >3 acres as a secondary impact may still be eligible for PCN at the discretion of the Corps.*
14. Reshaping Existing Ditches and Mosquito Management	Not applicable in inland waters and wetlands; see B. Navigable Waters on page 33 below.	Not applicable in inland waters and wetlands; see B. Navigable Waters on page 33 below.
15. Response Operations for Oil or Hazardous Substances	The SVNF or a surrogate state reporting form may be submitted after-the-fact for response operations. This GP also authorizes the use of temporary structures and fills in waters of the U.S. for spill response training exercises with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts (*SVNF is required prior to the activity*).	Those response operations not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
16. Cleanup of Hazardous and Toxic Waste	Those cleanup activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No stream channelization, relocation, or loss of streambed including impoundments. • The activity does not involve establishing new disposal sites or expanding existing sites used for the disposal of hazardous or toxic waste.	Those cleanup activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts. • The activity does not involve establishing new sites for the disposal of hazardous or toxic waste.
17. Scientific Measurements Devices	Those devices with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No biological sampling devices. • Devices do not restrict or concentrate movement of aquatic organisms. • Upon completion of use, the devices and any associated fills shall be removed in their entirety.	Those devices not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
18. Survey Activities	Those survey activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • Exploratory trenches are restored in accordance with GC 21. • No discharge of excavated material from test wells for oil and gas exploration (the plugging of such wells is authorized).	Those survey activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
19. Agricultural Activities	Those agricultural activities subject to Corps jurisdiction with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No stream channelization, relocation, or loss of streambed including impoundments.	Those agricultural activities subject to Corps jurisdiction not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
20. Fish and Wildlife Harvesting, Enhancement and Attraction Devices and Activities	Not applicable in inland waters and wetlands; see B. Navigable Waters on page 34 below.	Not applicable in inland waters and wetlands; see B. Navigable Waters on page 34 below.
21. Habitat Restoration, Establishment, and Enhancement	Those activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No water impoundments allowed. • No conversion of a stream to wetland or vice versa, a wetland to a pond or uplands, or one wetland type to another. • No dam removal.	Those activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
22. Stream and Wetland Work and Crossings (see also GC 29)	Stream work and crossings with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No work in designated or proposed critical habitat for endangered species. • Crossings are designed and constructed using the techniques and principles outlined in Stream Simulation, Stream Smart, or Habitat Connectivity Design. • Crossings are designed to be 1.2 times bankfull width. • Crossings have a natural bottom substrate. • Crossings include a bank on both sides of the channel. • Closed bottom culverts are embedded at least 25% of the maximum width of the culvert. • In-stream work is limited to Jul. 15th to Sep. 30th • In-stream work is conducted "in-the-dry". • No slip lining. • No culvert extensions. • No stream channelization, relocation, or loss of streambed including impoundments. Wetland work and crossings, provided: • No flooding or impacts to wetland drainage from the upgradient side of the crossing.	Stream and Wetland Work and Crossings not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.
23. Aquaculture (see also GC 32)	Aquaculture activities with <15,000 SF of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts, provided: • No water impoundments allowed. • No conversion of i) a stream to wetland or vice versa, a wetland to a pond or uplands, and ii) one wetland type to another.	Aquaculture activities not eligible for SV, provided: • <3 acres of permanent and/or temporary inland waterway and/or wetland fill, and associated secondary impacts.

USER NOTE: All Self-Verification and Pre-Construction Notification activities shall comply with all applicable terms (pages 1 - 4), General Conditions (pages 5 - 19), and additional terms below.

B. NAVIGABLE WATERS	**Navigable Waters of the U.S. are defined as** those waters that are subject to the ebb and flow of the tide in addition to the non-tidal portions of the following federally-designated waters in Maine (the Kennebec River to Moosehead Lake, the Penobscot River to the confluence of the East and West Branch at Medway and, Lake Umbagog within the State of Maine) (Section 10 Rivers and Harbors Act of 1899). The jurisdictional limits are the mean high water mark (MHWM) in tidal waters and the ordinary high water mark (OHWM) in non-tidal portions of the federally-designated navigable rivers. For the purposes of these GPs, fill placed in the area between the mean high water mark (MHWM) and the high tide line (HTL), and in the bordering and contiguous wetlands to tidal waters are also reviewed in this Navigable Waters section.	
	Activities not meeting the Self-Verification terms below require Pre-Construction Notification and activities not meeting the Pre-Construction Notification terms below require an application for an Individual Permit.	
GENERAL PERMIT #	**SELF-VERIFICATION**	**PRE-CONSTRUCTION NOTIFICATION**
1. Repair, Replacement, and Maintenance of Authorized Structures and Fills **See GC 25 for pile driving and removal conditions.*	Repair, replacement, or maintenance of previously authorized, currently serviceable structures or fills, provided: • Conditions of the original authorization apply. • No expansion or change in use. Shall be rebuilt in same footprint, however minor deviations in design allowed. • The repair, rehabilitation, or replacement of those structures or fills destroyed or damaged by storms, floods, fire or other discrete events is authorized, provided that work is commenced, or is under contract to commence, within two years of the date of their destruction or damage. • In-water work is conducted "in-the-dry" (see GC 24). • No impacts to special aquatic sites (SAS) (incl. submerged aquatic vegetation, SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal area ≤1,000 SF • Slope stabilization is ≤500 LF in total length as measured below the plane of the HTL and is ≤200 LF in total length as measured below the plane of the MHWM or OHWM. Vertical structures are ≤200 LF in total length as measured below the plane of the MHWM or OHWM and are ≤18 inches waterward of existing face. • Dam and flood control, or levee work does not alter water levels or flood elevations. • Discharge of accumulated bottom sediments from or through a dam is not more than *de minimus*. • Tide gate work has a Corps-approved operation and maintenance plan and no effect to hydraulic regime, or tide gates that solely convey stormwater and/or Maine National Pollutant Discharge Elimination System-permitted discharges.	Repair, replacement, or maintenance of previously authorized structures or fills not eligible for SV, provided: • ≤0.5 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
2. Moorings	Private, non-commercial, non-rental, single-boat moorings, provided: • Authorized by the local harbormaster/town. • Not associated with any boating facility (e.g. marinas). • Not located within a Federal Navigational Project (other than in a Federal Anchorage) or within a distance of three times the authorized depth of a Federal Navigation Project. Moorings in a Federal Anchorage must not be associated with a boating facility and must not be for rent. • No interference with navigation. • Mooring is not located in SAS (incl. SAV) or intertidal areas. Minor relocation of previously authorized moorings, provided: • Authorized by the local harbormaster/town. • Relocation is not within a Federal Navigational Project (other than in a Federal Anchorage) or within a distance of three times the authorized depth of a Federal Navigation Project. • No interference with navigation. • Relocated mooring is not located in SAS (incl. SAV) or intertidal areas. **SV Moorings above do not require a SVNF.*	Moorings not eligible for SV and don't require an IP. This includes private moorings with no harbormaster or means of local approval or moorings associated with a boating facility (e.g. marina). *Locating new moorings in SAS (incl. SAV) shall be avoided to the maximum extent practicable. If SAS cannot be avoided, consideration shall be given to alternative mooring systems that prevents mooring chains from resting or dragging on the bottom substrate at all tides.* An IP is required for moorings located within the horizontal limits, or with moored vessels that extend into the horizontal limits of a Federal Navigation Project (other than in a Federal Anchorage).
3. Structures, Floats, and Lifts *Cont'd below on page 30*	Reconfiguration of such existing authorized structures with all intertidal work conducted "in-the-dry" (see GC 24). Minor relocation of previously authorized floats provided: • Relocation is not into a Federal Navigation Project or within a distance of three times the authorized depth of a Federal Navigation Project (other than a Federal Anchorage). • No interference with navigation. • Not relocated in or within 25 feet of SAV. • Seasonal floats are stored above the MHWM and not on wetland (incl. salt marsh). New private, non-commercial ramp and float structures attached to land (no piers) or new floats provided: • Not located in or within a distance of three times the authorized depth of a Federal Navigation Project. • No interference with navigation. • No structure extends across >25% of the waterway width at mean low water. • Not located in or within 25 feet of SAV. • Ramp is <150 LF over salt marsh waterward of the MHWM and is ≥1:1 height:width ratio over salt marsh.	New structures, floats, and/or lifts including floatways/skidways, built to access waterway (both seasonal and permanent). Includes pile-supported, solid fill-supported, and crib-supported structures. Also includes expansions to existing authorized boating facilities (e.g. marinas). Provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF **See GC 25 for pile driving and pile removal conditions.* Compliance with the following is recommended: • *Lowermost part of floats are ≥18 inches above the substrate during all tides.* • *Structures are ≥1:1 height:width ratio over salt marsh.* • *Structures and floats are not located in or within 25 feet of SAV.* • *Moored vessels are not positioned over SAV.* • *Structures attached to land are located ≥ 25 feet from the property line (The Corps may require a letter of no objection from the abutter if located within 25 feet of the property line.)*

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
Cont'd from page 29	• Ramp and floats attached to land are located ≥25 feet from the property line. • Seasonal ramp and floats are stored above the HTL and not on wetland (incl. salt marsh). Compliance with the following is recommended: • *Lowermost part of floats is ≥18 inches above the substrate during all tides.*	• *No structure extends across >25% of the waterway width at mean low water.* • *Not located within a distance of three times the authorized depth of a Corps Federal Navigation Project.* An IP is required for structures, floats, and/or lifts including floatways/skidways, located in such that they and/or vessels docked or moored at them are within the horizontal limits of a Corps Federal Navigation Project. An IP is also required for structures and floats associated with a new or previously unauthorized boating facility (e.g. marinas).
4. Aids to Navigation and Temporary Recreational Structures	Aids to navigation and regulatory markers which are approved by and installed in accordance with the requirements of the U.S. Coast Guard. (See 33 CFR 66, Chapter I, subchapter C). **These SV Aids do not require a SVNF.* Temporary buoys, markers, floats, etc. for recreational use during specific events, provided: • They are removed within 30 days after the specific event has concluded. • No interference with navigation. • No impact to SAV.	Aids and temporary structures not eligible for SV.
5. Dredging, Disposal of Dredged Material, Beach Nourishment, and Rock Removal and Relocation	Maintenance dredging of <1,000 CY for navigational purposes with upland disposal including return water from upland contained disposal area, provided: • Proper siltation controls are used. • No expansion of footprint. • No dredging in or within a distance of three times the authorized depth of a Federal Navigation Project. • Dredging operation is limited to Nov. 8th to Apr. 9th (it is recommended that in areas populated by winter flounder, dredging should cease by March 15th). • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal area ≤1,000 SF • No dredging within 25 feet of SAV. • No dredging in or within 100 feet of shellfish areas. • No blasting. • No dredging in designated or proposed critical habitat for endangered species.	Maintenance dredging not eligible for SV and new dredging <25,000 CY Includes return water from upland contained disposal areas. Disposal includes: • Upland. • Beach nourishment (above MHW line) of any area provided the dredging's primary purpose is navigation or the sand is from an upland source. • Open water & confined aquatic disposal if Corps finds the material suitable. Beach nourishment associated with dredging when the primary purpose is not navigation requires at least a PCN. Temporary and/or permanent fill or excavation in SAV <1,000 SF and Permanent fill or excavation in other SAS <4,300 SF

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
6. U.S. Coast Guard Approved Bridges and Causeways	Discharges of dredged or fill material associated with U.S. Coast Guard Approved Bridges and Causeways, provided: • In-water work is conducted "in-the-dry" (see GC 24). • Discharge of dredged or fill material <15,000 SF • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal area ≤1,000 SF Compliance with the following is recommended: • *Discharge of dredged or fill material should not occur within 100 feet of SAV or within 25 feet of natural rocky habitat or other SAS.* *Note: new causeways and approach fills are not eligible for SV.*	Discharges of dredged or fill material associated with U.S. Coast Guard Approved Bridges and Causeways not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
7. Bank and Shoreline Stabilization Including Living Shorelines (see also GC 28)	Bank and shoreline stabilization activities, provided: • In-water work is conducted "in-the-dry" (see GC 24). • Fill is ≤500 LF in total length as measured below the plane of the HTL and is ≤200 LF in total length as measured below the plane of the MHWM or OHWM (includes total for more than one bank). Replacement vertical structures are ≤200 LF in total length as measured below the plane of the MHWM or OHWM and are ≤18 inches waterward of existing face. • Fill placed below HTL is ≤1 CY per linear foot. • Stone revetment is comprised of angular material. • No fills angled steeper than 1H:1V. • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal or shellfish areas ≤1,000 SF • No new groins, breakwaters, or jetties.	Bank and shoreline stabilization activities not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts, provided: • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
8. Residential, Commercial and Institutional Developments, and Recreational Facilities	Not Eligible	Residential, commercial and institutional developments and recreational facilities, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts, provided: • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF Conversions of previously authorized pile-supported buildings over navigable waters to residences, offices, or other non-water dependent uses require PCN. Floating house boats or businesses on floats require PCN.

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
9. Utility Line Activities (see also GC 30)	Repair, replacement, or maintenance of previously authorized, currently serviceable utilities with no expansion or change in use, provided: • Conditions of the original authorization apply. • In-water work limited to Nov. 8th to Apr. 9th. • Trenching or filling confined to existing footprint and <100 LF; trenches shall be backfilled immediately. • Jet-plow, fluidization, or other direct burial methods confined to existing footprint and <200 LF • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal or shellfish areas ≤1,000 SF • No work in designated or proposed critical habitat for endangered species. New work in, over, or under navigable waters including new outfalls and any intake structure work requires PCN. Aerial utility lines over navigable waters requires PCN.	Those utility activities not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
10. Linear Transportation Projects *(for stream crossings refer to GPs 6 and 22)*	Not Eligible	Linear transportation projects, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
11. Mining Activities	Not Eligible	Not Eligible
12. Boat Ramps and Marine Railways	No new boat ramps or marine railways. In-water work is conducted "in-the-dry" (see GC 24). No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal or shellfish areas ≤1,000 SF Boat ramp and marine railway work not eligible for maintenance (i.e. not currently serviceable) may be replaced "in-kind" with minor deviations provided: • Work is confined to the intertidal zone. • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal or shellfish areas ≤1,000 SF	Those ramps and railways not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts, provided: • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
13. Land and Water-Based Renewable Energy Generation Facilities and Hydropower Projects	Not Eligible	Work associated with those facilities and projects, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF For each single and complete project, no more than 10 generation units (e.g., wind turbines or hydrokinetic devices) may be authorized. No new impoundments.
14. Reshaping Existing Ditches and Mosquito Management	≤500 LF of drainage ditch will be modified. The reshaping of the ditch cannot increase drainage capacity beyond the original as-built capacity nor can it expand the area drained by the ditch as originally constructed (i.e., the capacity of the ditch shall be the same as originally constructed and it cannot drain additional wetlands or other waters of the U.S.). No new ditches or relocation of drainage ditches constructed in waters of the U.S.; the location of the centerline of the reshaped drainage ditch shall be approximately the same as the location of the centerline of the original drainage ditch. No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal or shellfish areas ≤1,000 SF	Those activities not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
15. Response Operations for Oil or Hazardous Substances	The SVNF or a surrogate state reporting form may be submitted after-the-fact for spill response activities. This GP also authorizes the use of temporary structures and fills in waters of the U.S. for spill response training exercises (*SVNF is required prior to the activity*), provided: • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, impacts to intertidal or shellfish areas ≤1,000 SF, and impacts to tidal resources <0.5 acre	Those response operations not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
16. Cleanup of Hazardous and Toxic Waste	Only booms placed for hazardous and toxic waste containment and absorption and prevention are eligible for SV. *A SVNF is not required for these eligible containment booms.*	Cleanup activities not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF An IP is require for the establishment of new disposal sites or expanding existing sites used for the disposal of hazardous or toxic waste.

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
17. Scientific Measurements Devices	Those scientific measurements devices, provided: • Devices do not restrict or concentrate movement of aquatic organisms. • No interference with navigation. • No blasting. • No biological sampling devices. • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, impacts to intertidal areas ≤1,000 SF, and impacts to tidal resources ≤0.5 acre • Upon completion of use, the devices and any associated structures or fills are removed in their entirety.	Those scientific measurements devices not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
18. Survey Activities	Those survey activities, provided: • No blasting. • No interference with navigation. • No seismic exploratory operations. • No oil and gas exploration. • No trenching or other silt-producing activities. • No fill for roads or construction pads. • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, impacts to intertidal areas ≤1,000 SF, and impacts to tidal resources <0.5 acre • No blasting. • No biological sampling devices. *A SVNF is not required for required sediment sampling for Corps-regulated dredge proposals.*	Those survey activities not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
19. Agricultural Activities	Not Eligible	Not Eligible
20. Fish and Wildlife Harvesting, Enhancement and Attraction Devices and Activities *(for aquaculture refer to GP 23)*	Those devices and activities, provided: • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, impacts to intertidal areas ≤1,000 SF, and impacts to tidal resources ≤0.5 acre • No interference with navigation. • No artificial reefs or enclosures • No impoundments or semi-impoundments for the culture or holding of motile species such as lobster, or the use of covered oyster trays or clam racks. • Structures and shell hash should not be located within 25 feet of SAV. • All gear, except for mooring tackle, when not in use on the site is stored in an upland location above the MHWM and not on wetland (incl. salt marsh). *A SVNF is not required for these eligible devices and activities.*	Those devices and activities not eligible for SV, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF Impoundments or semi-impoundments of waters of the U.S. for the culture or holding of motile species such as lobster and new fish weirs with an impounded area <0.5 acre

	SELF-VERIFICATION (SV)	PRE-CONSTRUCTION NOTIFICATION (PCN)
21. Habitat Restoration, Establishment, and Enhancement	Those activities, provided: • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, impacts to intertidal areas ≤1,000 SF, and impacts to tidal resources <0.5 acre • No thin layer deposition for salt marsh restoration. • SAS planting and transplanting is <100 SF • No artificial or living reefs. • The activity is authorized in writing by a local, state, or non-Corps federal environmental agency. Water impoundments require PCN. • No conversion of i) a stream to wetland or vice versa, wetland to a pond or uplands, and ii) one wetland type to another. • No dam removal.	Those activities not eligible for SV provided those activities are proactive and result in net increases in aquatic resource functions and services.
22. Stream and Wetland Work and Crossings (see also GC 29) (*see GP 6 for bridges & causeways*)	Not Eligible	Those crossings of tidal navigable water not including bridges and causeways, provided: • <1 acre temporary or permanent impacts, fill, excavation, and/or secondary impacts. • Temporary and/or permanent fill or excavation in SAV <1,000 SF • Permanent fill or excavation in other SAS <4,300 SF
23. Aquaculture* (see also GC 32)	Shellfish and marine algae installations that do not exceed 400 SF in area, provided: • Signed approval from Harbormaster or appropriate Town Official. • No enclosures or impoundments. • Not located in or within a distance of three times the authorized depth of a Federal Navigation Project. • Not located in or impinge upon the value of any National Lands or Federal Properties. • No impacts to SAS (incl. SAV), impacts to natural rocky habitat ≤100 SF, and impacts to intertidal and shellfish areas ≤1,000 SF • No structures, cages, gear, or shell hash located in/within 25 feet of SAV. • All gear, except for mooring tackle, when not in use on the site is stored in an upland location above the MHWM and not on wetland (incl. salt marsh).	Shellfish, finfish, and marine algae aquaculture (with the exception of Atlantic salmon and any other salmonid, or other federally-listed endangered or threatened species), or other aquaculture facilities with no more than minimal individual and cumulative impacts to environmental resources or navigation. This is inclusive but not limited to cages, nets, bags, racks, long lines, fences, posts, poles, predator screening, etc. ***State of Maine Aquaculture guidelines are provided at: *www.maine.gov/dmr/aquaculture/index.html***

Section VI: Self-Verification Notification Form

(for all tidal and non-tidal projects in Maine subject to Corps jurisdiction)

At least two weeks before work commences, complete all fields (write "none" if applicable) below or use the fillable form found at www.nae.usace.army.mil/Missions/Regulatory/State-General-Permits/Maine-General-Permit/ The two-week lead time is not required for emergency situations. **Send this form, an Official Species List, and project plans to the following email address: cenae-r-me@usace.army.mil**

Maine Project Office
U.S. Army Corps of Engineers
442 Civic Center Drive, Suite 350
Augusta, Maine 04330

State Permit #: _____
Date of State Permit: _____
State Project Manager: _____

Permittee: _____

Address, City, State, Zip: _____

Email, Phone: _____

Agent: _____

Address, City, State, Zip: _____

Email, Phone: _____

Contractor: _____

Address, City, State, Zip: _____

Email, Phone: _____

Project Name: _____

Address, City, State, Zip: _____

Lat °N, Long °W: _____ Tax Map/Lot: _____

Waterway Name: _____

Description of Work: _____

Proposed Starting Date: _____ Proposed Finish Date: _____

Area of wetland impact (SF): Permanent: _____ Temporary: _____
Area of waterway impact (SF): Permanent: _____ Temporary: _____

Work will be done under the following Section V General Permits (circle all that apply):

I. Inland Waters and wetlands: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23
II. Navigable Waters: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23

Have MHPC and all five federally-recognized tribes in Maine been notified of the proposed work? _____Yes _____No

Your signature below, as permittee, indicates that you accept and agree to comply with the terms, eligibility criteria, and general conditions for Self-Verification under the Maine General Permit.

Section VII: Content of a Pre-Construction Notification

In addition to the following required information, the applicant must provide additional information as the Corps deems essential to make a public interest determination including, where applicable, a determination of compliance with the Section 404(b)(1) guidelines or ocean dumping criteria. Such additional information may include environmental data and information on alternate methods and sites as may be necessary for the preparation of the required environmental documentation. For a more comprehensive checklist, go to *www.nae.usace.army.mil/missions/regulatory* >> Forms >> Application and Plan Guideline Checklist. Please check with the Corps for project-specific requirements.

Information required for all projects:

- □ DIGITAL SUBMISSIONS ARE ENCOURAGED (email PCN to **cenae-r-me@usace.army.mil**)
- □ Completed Corps application form (ENG Form 4345 attached below or found electronically at *www.usace.army.mil/Missions/Civil-Works/Regulatory-Program-and-Permits/Obtain-a-Permit*) or appropriate state application form. Forms may need to be supplemented to include the information noted below.
- □ Proof of notification to MHPC and all five federally-recognized tribes (see Section VIII for contact info).
- □ Official Species List for any federally-listed endangered or threatened species and email address of the person who generated the list.
- □ Drawings, sketches, or plans (detailed engineering plans and specifications are not required) that are legible, reproducible (color is encouraged, but features must be distinguishable in black and white), no larger than 8.5”x11”, with bar scale (plans overlaid on aerial photos are discouraged). Wetland area impact sheets shall have the highest resolution possible to show work within Corps jurisdiction (do not just reduce project overview or cut large-scale plan into quadrant sheets). Provide locus map and a plan overview of the entire property with a key index to the individual impact sheets. A locus map be on a section of color USGS topographic map.
- □ Include:
  - □ All direct, secondary, permanent and temporary effects the project would cause, including the anticipated amount of impacts to waters of the U.S. expected to result from the activity, in acres, linear feet, or other appropriate unit of measure.
  - □ Any historic permanent fill associated with each single and complete project.
  - □ Cross-section views of all wetland and waterway fill areas and wetland replication areas.
  - □ Document on project plans wetlands, other special aquatic sites (SAS) including vegetated shallows (or submerged aquatic vegetation, SAV) and mudflats, natural rocky habitat, shellfish areas, vernal pools, and other waters, such as lakes and ponds, and perennial, and intermittent streams on the project site (GC1).
  - □ MLW line, MHW mark, and HTL elevations in tidal waters. Show OHWM elevation in lakes and non-tidal streams.
  - □ **Existing and proposed conditions.**
- □ Volume, type, and source of fill material to be discharged into waters and wetlands, including the area(s) (in square feet or acres) of fill in wetlands, below OHWM in inland waters and below the HTL in coastal waters.
- □ If applicable, a restoration plan showing how all temporary fills and structures will be removed and the area restored to pre-project conditions (see GC 21).

Information that may be required:

- □ Photographs of wetland/waterway to be impacted. Photos at low tide are preferred for work in tidal waters.
- □ For drawings, sketches, or plans:
  - □ The vertical datum for all coastal projects and projects in towns bordering coastal waters shall be in U.S. survey feet and referenced to MLLW and include current tidal epoch, with a reference chart showing conversion factor to the North American Vertical Datum of 1988. Do not use local datum. See *www.nae.usace.army.mil/missions/regulatory* >> Forms and Publications >>Vertical Datum - FEMA (Jul 2007);
  - □ The horizontal state plane coordinates shall be shown on plan and elevation views and shall be in the North American Datum of 1983 (NAD83) State Plane Coordinate System in U.S. survey feet.
- □ For the construction of a filled area or pile or float-supported platform, the use of, and specific structures to be erected on, the fill or platform.
- □ For the discharge of dredged or fill material into waters of the U.S. or the transportation of dredged material for the purpose of disposing of it in ocean waters, the source of the material; the purpose of the discharge, a description of the type, composition and quantity of the material; the method of transportation and disposal of the material; and the location of the disposal site.
- □ For the discharge of dredged or fill material into waters of the U.S., include a statement describing how impacts to waters of the U.S. are to be avoided and minimized. Include either a statement describing how impacts to waters of the U.S. are to be compensated for or a statement explaining why compensatory mitigation should not be required for the proposed impacts.
- □ Purpose and need for the proposed activity;
- □ Limits and coordinates of any Federal Navigation Project in the vicinity of the project area.
- □ Limits and coordinates of any proposed mooring field, reconfiguration zone or aquaculture activity. Provide coordinates for all corners;
- □ Schedule of construction/activity;
- □ Names and addresses of adjoining property owners;
- □ Location and dimensions of adjacent structures;
- □ Alternatives analysis;
- □ Wetland delineation data sheets;
- □ List of authorizations required by other federal, interstate, state, or local agencies for the work, including all approvals received or denials already made.
- □ Identification and description of potential impacts to Essential Fish Habitat (see GC 17).
- □ Identification of potential discharges of pollutants to waters, including potential impacts to impaired waters, in the project area.
- □ Invasive Species Control Plan (see GC 22). For sample control plans, see *www.nae.usace.army.mil/Missions/Regulatory/Invasive-Species*
- □ Wildlife Action Plan (WAP) maps. Contact the Maine Department of Inland Fisheries & Wildlife (Section VIII) or online at *www.maine.gov/ifw/wildlife/conservation/action_plan.html*

Information for dredging projects that may be required:

- □ Sediment testing, including physical (e.g., grain-size analysis), chemical and biological testing. For projects proposing open water disposal, applicants must contact the Corps as early as possible regarding sampling and testing protocols. Sampling and testing of sediments without such contact should not occur and if done, would be at the applicant's risk.
- □ The area in square feet and volume of material to be dredged below mean high water.
- □ Existing and proposed water depths.
- □ Type of dredging equipment to be used.
- □ Nature of material (e.g., silty sand).
- □ Any existing sediment grain size and bulk sediment chemistry data for the proposed or any nearby projects.
- □ Information on the location and nature of municipal or industrial discharges and occurrence of any contaminant spills in or near the project area.
- □ Shellfish survey.
- □ Location of the disposal site (include locus sheet).
- □ Identification and description of any potential impacts to Essential Fish Habitat.
- □ Delineation of submerged aquatic vegetation (e.g., eelgrass beds).

Information for tidal crossing projects that may be required:

- □ A graphic longitudinal elevation profile plot of the tidal stream channel thalweg, both up and downstream of the proposed project site. Thalweg elevations shall extend from the crossing to beyond the zone of scour, channel widening, or other channel alteration resulting from the present or pre-existing crossings. The profile plot should include labeled elevations for the:
  - □ crossing invert and top of the inlet and outlet
  - □ roadbed crown
  - □ lowest and highest recorded tides at the site
  - □ reference datums, such as MLLW, MHHW, and astronomical high tide
  - □ hydraulic controls and nearest crossings that could influence or be influenced by the proposed crossing
- □ A graphic plot of continuous tidal water levels recorded up and downstream, simultaneously, of the proposed crossing for an entire lunar cycle. The water level plot should include labeled elevations for the:
  - □ crossing invert and crossing top at the inlet and outlet
  - □ roadbed crown
  - □ reference datums, such as MLLW, MHHW, and astronomical high tide
- □ A map showing projected extents of maximum flooding within the area influenced by the crossing under current conditions and as a result of sea level rise. The present minimum sea level rise scenario suggested for planning purposes by the Maine Climate Council Scientific and Technical Subcommittee is the Intermediate Scenario, which projects an increase of 3.0-4.6 feet by 2100.

Information for aquaculture projects that may be required:

- □ Maine Aquaculture guidelines and joint Corps/Maine DMR applications may be found at: *www.maine.gov/dmr/aquaculture/index.htm*
- □ In addition to the information required above, applications should also include:
  - □ Results of coordination with Harbor Master and U.S. Coast Guard
  - □ Whether canopy predator nets are being used.

U.S. Army Corps of Engineers (USACE)

APPLICATION FOR DEPARTMENT OF THE ARMY PERMIT

33 CFR 325. The proponent agency is CECW-CO-R.

Form Approved - OMB No. 0710-0003 Expires: 02-28-2022

The public reporting burden for this collection of information, OMB Control Number 0710-0003, is estimated to average 11 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or burden reduction suggestions to the Department of Defense, Washington Headquarters Services, at whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR APPLICATION TO THE ABOVE EMAIL.

PRIVACY ACT STATEMENT

Authorities: Rivers and Harbors Act, Section 10, 33 USC 403; Clean Water Act, Section 404, 33 USC 1344; Marine Protection, Research, and Sanctuaries Act, Section 103, 33 USC 1413; Regulatory Programs of the Corps of Engineers; Final Rule 33 CFR 320-332. Principal Purpose: Information provided on this form will be used in evaluating the application for a permit. Routine Uses: This information may be shared with the Department of Justice and other federal, state, and local government agencies, and the public and may be made available as part of a public notice as required by Federal law. Submission of requested information is voluntary, however, if information is not provided the permit application cannot be evaluated nor can a permit be issued. One set of original drawings or good reproducible copies which show the location and character of the proposed activity must be attached to this application (see sample drawings and/or instructions) and be submitted to the District Engineer having jurisdiction over the location of the proposed activity. An application that is not completed in full will be returned. System of Record Notice (SORN). The information received is entered into our permit tracking database and a SORN has been completed (SORN #A1145b) and may be accessed at the following website: http://dpcld.defense.gov/Privacy/SORNsIndex/DOD-wide-SORN-Article-View/Article/570115/a1145b-ce.aspx

Section IX: Definitions

Action Area: The "Endangered Species Consultation Handbook – Procedures for Conducting Consultation and Conference Activities Under Section 7 of the ESA," defines action area as "all areas to be affected directly or indirectly by the federal action and not merely the immediate area involved in the action. [50 CFR 402.02]."

Agricultural Activities: The Clean Water Act exempts certain discharges associated with normal farming, ranching, and forestry activities such as plowing, cultivating, minor drainage, and harvesting for the production of food, fiber, and forest products, or upland soil and water conservation practices (Section 404(f)(1)(A)). Prospective permittees are strongly advised to contact the Corps for a determination of whether their activity is exempt or requires a permit.

Attendant Features: Occurring with or as a result of; accompanying.

Aquatic Habitat Restoration, Establishment and Enhancement: The Corps will decide if a project qualifies and must determine in consultation with federal and state agencies that the net effects are beneficial. The Corps may refer to Nationwide Permit 27 published in the January 6, 2017 Federal Register. Activities authorized here may include, but are not limited to: the removal of accumulated sediments; the installation, removal, and maintenance of small water control structures, dikes, and berms; the installation of current deflectors; the enhancement, restoration, or establishment of riffle and pool stream structure; the placement of in-stream habitat structures; modifications of the stream bed and/or banks to restore or establish stream meanders; the backfilling of artificial channels and drainage ditches; the removal of existing drainage structures; the construction of small nesting islands in inland waters**;** the construction of open water areas; the construction of native shellfish species habitat over unvegetated bottom for the purpose of habitat protection or restoration in tidal waters; shellfish seeding; activities needed to reestablish vegetation, including plowing or discing for seed bed preparation and the planting of appropriate wetland species; mechanized land clearing to remove non-native invasive, exotic, or nuisance vegetation; and other related activities. Only native plant species shall be planted at the site.

Biodegradable: A material that decomposes into elements found in nature within a reasonably short period of time and will not leave a residue of plastic or a petroleum derivative in the environment after degradation. Examples of biodegradable materials include jute, sisal, cotton, straw, burlap, coconut husk fiber (coir) or excelsior. In contrast, degradable plastics break down into plastic fragments that remain in the environment after degradation.

Boating facilities: These provide, rent or sell mooring space, such as marinas, yacht clubs, boat yards, dockominiums, town facilities, land/home owners, etc. Not classified as boating facilities are piers shared between two abutting properties or town mooring fields that charge an equitable user fee based on the actual costs incurred.

Bordering and Contiguous Wetlands: A bordering wetland is immediately next to its adjacent waterbody and may lie at, or below, the ordinary high water mark (mean high water mark in navigable waters) of that waterbody and is directly influenced by its hydrologic regime. Contiguous wetlands extend landward from their adjacent waterbody to a point where a natural or manmade discontinuity exists. Contiguous wetlands include bordering wetlands as well as wetlands that are situated immediately above the ordinary high water mark and above the normal hydrologic influence of their adjacent waterbody.

Brushing: The placement of tree boughs, wooden lath structure, or small-mesh fencing on mudflats, or any bottom disturbance (e.g., discing, plowing, raking, etc.), to enhance recruitment of shellfish.

Buffer Zone: The buffer zone of an FNP is equal to three times the authorized depth of the FNP.

Construction mats: Constructions, swamp and timber mats (herein referred to as "construction mats") are generic terms used to describe structures that distribute equipment weight to prevent wetland damage while facilitating passage and providing work platforms for workers and equipment. They are comprised of sheets or mats made from a variety of materials in various sizes. A timber mat consists of large timbers bolted or cabled together. Corduroy roads, which are not considered to be construction mats, are cut trees and/or saplings with the

crowns and branches removed, and the trunks lined up next to one another. Corduroy roads are typically installed as permanent structures. Like construction mats, they are considered as fill whether they are installed temporarily or permanently.

Cumulative effects: See "Direct, secondary, and cumulative effects."

Currently Serviceable: Useable as-is or with some maintenance, but not so degraded as to essential require reconstruction.

Direct, secondary, and cumulative effects:
Direct Effects: The loss of aquatic ecosystem within the footprint of the discharge of dredged or fill material. Direct effects are caused by the action and occur at the same time and place.
Secondary Effects: These are effects on an aquatic ecosystem that are associated with a discharge of dredged or fill materials, but do not result from the actual placement of the dredged or fill material. Information about secondary effects on aquatic ecosystems shall be considered prior to the time final Section 404 action is taken by permitting authorities. Some examples of secondary effects on an aquatic ecosystem are a) aquatic areas drained, flooded, fragmented, or mechanically cleared, b) fluctuating water levels in all impoundment and downstream associated with the operation of a dam, c) septic tank leaching and surface runoff from residential or commercial developments on fill, and d) leachate and runoff from a sanitary landfill located in waters of the U.S. See 40 CFR 230.11(h).
Cumulative Effects: The changes in an aquatic ecosystem that are attributable to the collective effect of a number of individual 1) discharges of dredged or fill material, or 2) structures. Although the impact of a particular discharge may constitute a minor change in itself, the cumulative effect of numerous such piecemeal changes can result in a major impairment of the water resources and interfere with the productivity and water quality of existing aquatic ecosystems. See 40 CFR 230(g).

Dredging:
Maintenance Dredging: Includes areas and depths previously authorized by the Corps and dredged.
The Corps may require proof of authorization. Maintenance dredging typically refers to the routine removal of accumulated sediment from channel beds to maintain the design depths of navigation channels, harbors, marinas, boat launches and port facilities. Routine maintenance dredging is conducted regularly for navigational purposes (typically at least once every ten years) and does not include any expansion of the previously dredged area or depth. The Corps may review a maintenance dredging activity as new dredging if sufficient time has elapsed to allow for the colonization of SAS, shellfish, etc. The main characteristics of maintenance dredging projects are variable quantities of material; soft, uncompacted soil; contaminant content possible; thin layers of material; occurring in navigation channels and harbors; repetitive activity
New Dredging: Dredging of an area or to a depth that has never been authorized by the Corps or dredged.

Dredged material & discharge of dredged material: These are defined at 323.2(c) and (d). The term dredged material means material that is excavated or dredged from waters of the U.S.

Essential Fish Habitat (EFH): This is broadly defined to include those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity.

Fill material & discharge of fill material: These are defined at 323.2(e) and (f). The term fill material is defined as material placed in waters of the U.S. where the material has the effect of either replacing any portion of a water of the U.S. with dry land or changing the bottom elevation of any portion of a water of the U.S.

Fill area: Fill area includes all temporary and permanent fill (including mats), and regulated discharges associated with excavation.

Federal navigation projects (FNPs): These areas are maintained by the Corps; authorized, constructed and maintained on the premise that they will be accessible and available to all on equal terms; and are comprised of Federal Anchorages, Federal Channels and Federal Turning Basins. The buffer zone is equal to three times the authorized depth of a FNP. More information on the following FNPs is provided at *www.nae.usace.army.mil/missions/navigation.aspx* >> Navigation Projects.

Flume: An open artificial water channel, in the form of a gravity chute that leads water from a diversion dam or weir completely aside a natural flow. A flume can be used to measure the rate of flow.

Frac out: During normal drilling operations, drilling fluid travels up the borehole into a pit. When the borehole becomes obstructed or the pressure becomes too great inside the borehole, the ground fractures and fluid escapes to the surface.

Habitat Connectivity Design: projects designed and constructed for consistency with natural stream dimensions, profiles, and dynamics, in accordance with the following technical references: U.S. Forest Service guide (Forest Service Stream-Simulation Working Group 2008), augmented by documents published by the states of Washington (Barnard et al. 2013), Vermont (Bates and Kirn 2009) and California (Love and Bates 2009).

Independent utility: A test to determine what constitutes a single and complete non-linear project in the Corps regulatory program. A project is considered to have independent utility if it would be constructed absent the construction of other projects in the project area. Portions of a multi-phase project that depend upon other phases of the project do not have independent utility. Phases of a project that would be constructed even if the other phases were not built can be considered as separate single and complete projects with independent utility.

Individual Permit: A Department of the Army authorization that is issued following a case-by-case evaluation of a specific structure or work in accordance with the procedures of 33 CFR 322, or a specific project involving the proposed discharge(s) in accordance with the procedures of 33 CFR 323, and in accordance with the procedures of 33 CFR 325 and a determination that the proposed discharge is in the public interest pursuant to 33 CFR 320.

Living Shoreline: Living shorelines stabilize banks and shores in coastal waters along shores with small fetch and gentle slopes that are subject to low-to mid-energy waves. A living shoreline has a footprint that is made up mostly of native material. It incorporates vegetation or other living, natural "soft" elements alone or in combination with some type of harder shoreline structure (e.g., oyster or mussel reefs or rock sills) for added protection and stability. Living shorelines shall maintain the natural continuity of the land-water interface, and retain or enhance shoreline ecological processes. Living shorelines must have a substantial biological component, either tidal or lacustrine fringe wetlands or oyster or mussel reef structures.

Maintenance:

a. The repair, rehabilitation, or replacement of any previously authorized, currently serviceable structure or fill, or of any currently serviceable structure or fill authorized by 33 CFR 330.3 – "Activities occurring before certain dates," provided that the structure or fill is not to be put to uses differing from those uses specified or contemplated for it in the original permit or the most recently authorized modification.

- Minor deviations in the structure's configuration or filled area, including those due to changes in materials, construction techniques, or current construction codes or safety standards that are necessary to make repair, rehabilitation, or replacement are authorized.
- Currently serviceable means useable as is or with some maintenance, but not so degraded as to essentially require reconstruction.
- No seaward expansion for bulkheads or any other fill activity is considered SV maintenance.
- Only structures or fills that were previously authorized and are in compliance with the terms and condition of the original authorization can be maintained as a non-regulated activity under 33 CFR 323.4(a)(2), or in accordance with the SV or PCN thresholds in Section V.

b. The state's maintenance provisions may differ from the Corps and may require reporting and written authorization from the state.

c. Contact the Corps to determine whether stream crossing replacements require a PCN.

d. Exempted Maintenance. In accordance with 33 CFR 323.4(a)(2), any discharge of dredged or fill material that may result from any of the following activities is not prohibited by or otherwise subject to regulation under Section 404 of the CWA: "Maintenance, including emergency reconstruction of recently damaged parts, of currently serviceable structures such as dikes, dams, levees, groins, riprap, breakwaters, causeways, bridge abutments or approaches, and transportation structures. Maintenance does not include any modification that changes the character, scope, or size of the original fill design."

The following definition is also applicable:

Minor deviations: Deviations in the structure's configuration or filled area, including those due to changes in materials, construction techniques, or current construction codes or safety standards, which are necessary to make repair, rehabilitation, or replacement are permitted, provided the adverse environ-mental effects resulting from such repair, rehabilitation, or replacement are minimal.

Marina reconfiguration zone: A Corps-authorized area in which permittees may rearrange pile-supported structures and floats without additional authorizations. A reconfiguration zone does not grant exclusive privileges to an area or an increase in structure or float area.

Natural Rocky Habitats: Natural rocky habitats are intertidal and subtidal substrates composed of pebble-gravel, cobble, boulder, or rock ledge and outcrops. Manufactured stone (e.g. cut or engineered rip-rap) is not considered a natural rocky habitat. Natural rocky habitats are either found as pavement (consolidated pebble-gravel, cobble, or boulder areas) or as a mixture with fines (i.e. clay and sand) and other substrates.

Navigable waters of the U.S.: See Waters of the U.S. below.

Overall project: See "single and complete linear project" below.

Practicable: Available and capable of being done after taking into consideration cost, existing technology, and logistics in light of overall project purposes.

Permanent impacts: Permanent impacts means waters of the U.S. that are permanently affected by filling, flooding, excavation, or drainage because of the regulated activity. Permanent impacts include permanent discharges of dredged or fill material that change an aquatic area to dry land, increase the bottom elevation of a waterbody, or change the use of a waterbody.

Pre-construction notification (PCN): A request submitted by a prospective permittee to the Corps for confirmation that a particular activity is authorized by this GP. The request may be a permit application, letter, or similar document that includes information about the proposed work and its anticipated environmental effects. Pre-construction notification may be required by the terms and conditions of these GPs. A PCN may be voluntarily submitted in cases where PCN is not required and the project proponent wants confirmation that the activity is authorized under this GP.

Re-establishment: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural/ historic functions to a former aquatic resource. Re-establishment results in rebuilding a former aquatic resource and results in again in aquatic resource area and functions.

Rehabilitation: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural/historic functions to a degraded aquatic resource. Rehabilitation results in a gain in aquatic resource function, but does not result in a gain in aquatic resource area. Restoration: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural/historic functions to a former or degraded aquatic resource. For the purpose of tracking net gains in aquatic resource area, restoration is divided into two categories: re-establishment and rehabilitation.

Restoration: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural/historic functions to a former or degraded aquatic resource. For the purpose of tracking net gains in aquatic resource area, restoration is divided into two categories: re-establishment and rehabilitation.

Riffle and pool complexes: Riffle and pool complexes are special aquatic sites under the 404(b)(1) Guidelines. Riffle and pool complexes sometimes characterize steep gradient sections of streams. Such stream sections are recognizable by their hydraulic characteristics. The rapid movement of water over a course substrate in riffles results in a rough flow, a turbulent surface, and high dissolved oxygen levels in the water. Pools are deeper areas associated with riffles. A slower stream velocity, a streaming flow, a smooth surface, and a finer substrate characterize pools.

Secondary effects: See "Direct, secondary, and cumulative effects."

Shellfish Areas: Areas that currently support molluscan shellfish. Information regarding these locations can be obtained from the State of Maine GeoLibrary Data Catalog at: *www.maine.gov/geolib/catalog.html*

Shellfish seeding: The placement of shellfish seed and/or suitable substrate to increase shellfish production. Shellfish seed consists of immature individual shellfish or individual shellfish attached to shells or shell fragments (i.e., spat on shell). Suitable substrate may consist of shellfish shells, shell fragments, or other appropriate materials placed into waters for shellfish habitat.

Single and complete linear project: A linear project is a project constructed for the purpose of getting people, goods, or services from a point of origin to a terminal point, which often involves multiple crossings of one or more waterbodies at separate and distant locations. The term "single and complete project" is defined as that portion of the total linear project proposed or accomplished by one owner/developer or partnership or other association of owners/developers that includes all crossings of a single water of the U.S. (i.e., a single waterbody) at a specific location. For linear projects crossing a single or multiple waterbodies several times at separate and distant locations, each crossing is considered a single and complete project for the purposes of this GP. However, individual channels in a braided stream or river, or individual arms of a large, irregularly shaped wetland or lake, etc., are not separate waterbodies, and crossings of such features cannot be considered separately.
The overall project, for purposes of this GP, includes all regulated activities that are reasonably related and necessary to accomplish the project purpose.

Single and complete non-linear project: For non-linear projects, the term "single and complete project" is defined at 33 CFR 330.2(i) as the total project proposed or accomplished by one owner/developer or partnership or other association of owners/developers. For non-linear projects, the single and complete project shall have independent utility (see definition).

Special aquatic sites (SAS): These are defined at 40 CFR 230 Subpart E. They include sanctuaries and refuges, wetlands, mud flats, vegetated shallows (submerged aquatic vegetation, SAV), coral reefs, and riffle and pool complexes.

Stream: The term "stream" in the document means rivers, streams, brooks, etc.

Stream bed: The substrate of the stream channel between the ordinary high water marks. The substrate may be bedrock or inorganic particles that range in size from clay to boulders. Wetlands contiguous to the stream bed, but outside of the ordinary high water marks, are not considered part of the stream bed.

Stream channelization: The manipulation of a stream's course, condition, capacity, or location that causes more than minimal interruption of normal stream processes. A channelized stream remains a water of the United States.

Stream Simulation: A method for designing and building road-stream crossings intended to permit free and unrestricted movements of any aquatic species. Reference:
https://www.nae.usace.army.mil/Missions/Regulatory/Stream-and-River-Continuity/

Stream Smart Design: projects designed to allow the stream to act like a stream by passing fish and wildlife as well as the higher flows that come with large infrequent storms while protecting the stability of the road and public safety. Stream Smart Design follows the "Four S's": The culvert must SPAN the stream, allowing for passage of aquatic and terrestrial wildlife. The culvert has to be SET at the right elevation. The SLOPE of the culvert must match the stream. There must be SUBSTRATE (natural sediment) in the crossing. Reference:
www1.maine.gov/mdot/publications/docs/brochures/pocket_guide_stream_smart_web.pdf

Temporary impacts: Temporary impacts include waters of the U.S. that are temporarily filled, flooded, excavated, drained or mechanically cleared because of the regulated activity.

Temporal loss: The time lag between the loss of aquatic resource functions caused by the permitted impacts and the replacement of aquatic resource functions at the compensatory mitigation site(s) (33 CFR 332.2).

Utility line: Any pipe or pipeline for the transportation of any gaseous, liquid, liquescent, or slurry substance, for any purpose, and any cable, line, or wire for the transmission for any purpose of electrical energy, telephone, and telegraph messages, and radio and television communication. The term 'utility line' does not include activities that drain a water of the U.S., such as drainage tile or French drains, but it does apply to pipes conveying drainage from another area.

Vegetated shallows/Submerged Aquatic Vegetation (SAV): Permanently inundated areas that under normal circumstances support communities of rooted aquatic vegetation, such as eelgrass in marine systems as well as a number of freshwater species in rivers and lakes. Note: Eelgrass surveys should be conducted be conducted between May and October unless otherwise directed.

Vernal pools (VPs): The State of Maine, Department of Environmental Protection has specific protections for VPs. For the purposes of these GPs, VPs are depressional wetland basins that typically go dry in most years and may contain inlets or outlets, typically of intermittent flow. Vernal pools range in both size and depth depending upon landscape position and parent material(s). In most years, VPs support one or more of the following obligate indicator species: wood frogs (*Rana sylvatica*), spotted salamanders (*Ambystoma maculatum*), blue-spotted salamanders (*Ambystoma laterale*), and fairy shrimp (*Eubranchipus* sp.). However, they should preclude sustainable populations of predatory fish.

Water dependency: activity requiring access or proximity to or siting within a special aquatic site (SAS) to fulfill its basic project purpose.

Water diversions: Water diversions are activities such as bypass pumping (e.g., "dam and pump") or water withdrawals. Temporary flume pipes, culverts or cofferdams where normal flows are maintained within the stream boundary's confines aren't water diversions. "Normal flows" are defined as no change in flow from pre-project conditions.

Weir: A barrier across a river designed to alter the flow characteristics. In most cases, weirs take the form of a barrier, smaller than most conventional dams, across a river that causes water to pool behind the structure (not unlike a dam) and allows water to flow over the top. Weirs are commonly used to alter the flow regime of the river, prevent flooding, measure discharge and help render a river navigable.

Waters of the United States (U.S.)

Waters of the U.S.: The term waters of the U.S. and all other terms relating to the geographic scope of jurisdiction are defined at 33 CFR 328. Also see Section 502(7) of the Federal CWA [33 USC 1352(7)]. Waters of the U.S. include jurisdictional wetlands. Not all waters and wetlands are jurisdictional. Contact the Corps with any questions regarding jurisdiction.

Navigable waters: Refer to 33 CFR 329. These waters include the following federally-designated navigable waters in New England. This list represents only those waterbodies for which affirmative determinations have been made; absence from this list shall not be taken as an indication that the waterbody is not navigable: In Maine, navigable waters are those waters that are subject to the ebb and flow of the tide in addition to the non-tidal portions of the following federally-designated waters in Maine (the Kennebec River to Moosehead Lake, the Penobscot River to the confluence of the East and West Branch at Medway and, Lake Umbagog within the State of Maine).

Non-tidal wetland: A non-tidal wetland is a wetland that is not subject to the ebb and flow of tidal waters. Non-tidal wetlands contiguous to tidal waters are located landward of the high tide line (i.e., spring high tide line).

Tidal wetland: A tidal wetland is a jurisdictional wetland that is inundated by tidal waters. Tidal waters rise and fall in a predictable and measurable rhythm or cycle due to the gravitational pulls of the moon and sun. Tidal waters end where the rise and fall of the water surface can no longer be practically measured in a predictable rhythm due to masking by other waters, wind, or other effects. Tidal wetlands are located channelward of the high tideline.

Trip Generation and Parking Demand Summary
Thompson's Point
September 2024 – (Revised 12-10-24)

Date: September 4, 2024 (Revised 12-10-24)
Subject: Updated Trip Generation and Parking Demand
Thompson's Point
To: Bo Kennedy, Placemaker Partners, LLC
From: Randy Dunton / Kyle Brennan, Gorrill Palmer (JN 4346)

Gorrill Palmer (GP) has prepared this updated trip generation and parking demand summary for the Thompson's Point development in Portland, Maine. The full build out of the project received a MaineDOT Traffic Movement Permit (TMP) in 2012 (Reg. 01-00155-A-N) for 734 trip ends during the AM peak hour and 1,091 trip ends during the PM peak hour. The Traffic Movement Permit received an extension in 2024 out to March 1, 2027. The documentation for the extension is attached. The project is being constructed in phases and each phase must be evaluated to ensure that the total site trip generation does not exceed the permitted trip generation. The following is a summary of the forecast trip generation and parking demand for the existing and previously approved uses, and the proposed residential development on site. A site plan is attached showing the location of each building.

Existing and Previously Evaluated Trip Generation Summary

The trip generation for the existing Thompson's Point site is based on discussions with Bo Kennedy, project manager/engineer for the site. The trip generation was calculated using the same methodology as that used in previous trip generation evaluations for the site, including using the Institute of Transportation Engineers' publication, *Trip Generation*, 7th Edition, except where otherwise noted, and applying a 10% reduction to the total site trip generation to account for other modes of transportation and shared uses on the site. The following table summarizes the trip generation for the existing site:

Existing and Approved Site Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building A Brick North				
	Halo (Event Space) – Previously approved	400 attendees	16	31
	Office Space – 7 Emp.	7 Employees	7	7
	Brewery & Sit-Down Restaurant – LUC 932 + 7 Emp.	14,644 sf (4,624 sf Rest. & 10,020 sf Brewery)	7	49 (42+7)
	Brewery Tap Room – LUC 932 + 5 Emp.	5,284 sf	16 (11+5)	16 (11+5)
	Color Me Mine – Previously Approved	2,136 sf	2	6
	International Cryptozoology Museum – Previously approved (doubled in size)	1919 sf	2	2
	Leisure Time Cocktails – LUC 975	1725 sf	N/A	20

	Coffee Roasting – Assumed (Employee only)	675 sf	1	1
	Brick North Total		**51**	**132**
Building C Brick South				
	Event/Assembly Space – Previously approved	2,500 Seats	100	195
	Annex	7,384 sf	--*	--*
	Brick South Total		**100**	**195**
Building F1				
	Warehouse – Previously approved	14,200 sf	11	9
	Building F1 Total		**11**	**9**
Building F2				
	Artist Studio Space – Previously approved	1,940 sf	3	4
	Building F2 Total		**3**	**4**
Building L				
	Office Space – Previously forecasted potential future development	4,000 sf	7	9
	Event Space – Previously forecasted potential future development	100 Attendees	4	8
	Existing Storage – Previously forecasted potential future development	1,760 sf	0**	0**
	Existing Office Space (Credit)	4,000 sf	(-7)	(-9)
	Building L Total		**4**	**8**
Building B2				
	Concession Building – Previously approved	960 sf	4	4
	Building B2		**4**	**4**
Building D				
	Proposed Hotel (2024 Construction Start) – Previously proposed development	148 Rooms	68	87
	Hotel Total		**68**	**87**
Building I Children's Museum and Theatre of Maine (CMTM)				
	CMTM– Previously approved	29,096 sf	33	33
	Children's Museum Total		**33**	**33**
Existing Subtotal			**274**	**472**

*Maximum of 2,500 people in the building for events. Highest trip generation would be an event in the Event space, not the Annex.
**Trip generation assumed to be negligible.

Since initially approved, there have been some minor changes to the uses. The "Rosemont Market" (2,724 sf) and Brewery & Sit-Down Restaurant (11,920 sf) have been combined and identified as "Brewery & Sit-Down Restaurant" (14,644 sf). For the purposes of this evaluation, the previously individual square footages have been combined. Trip generation for the "Brewery & Sit-Down Restaurant" was based on previously accepted "Bissell Brewery & Restaurant" methodology, where the restaurant trip generation is based on LUC 932 – High Turnover (Sit Down) Restaurant (4,624 SF) and trip generation for the brewery portion

(10,020 SF) is based on the 7 employees.

The previously approved coffee shop "Rwanda Bean" (2,400 sf) has been split with "Leisure Time Cocktails". "Rwanda Bean" (675 sf) is still occupying part of the space for coffee roasting, but the remaining space is now occupied by "Leisure Time Cocktails" (1725 sf).

The previously approved "Big Room Studios" (3,461 sf) has been replaced with an "Office Space". The square footage of the area is the same, but because the office space only has 7 employees, trip generation was based on employee trips.

The previously approved "Distillery" (5,284 sf) has been replaced with a "Brewery Tap Room" (5,284 sf). For the purposes of this evaluation due to similar use the previously approved individual square footage and trip generation will be used for the "Brewery Tap Room". Trip generation for the "Brewery Tap Room" is based on 1,200 SF of restaurant space (LUC 932) and 4,084 SF of brewery space (5 employees).

The previously approved "International Cryptozoology Museum" (993 sf) has doubled in size. Due to the "International Cryptozoology Museum" (1919 sf) doubling in size the trip generation will double from the previous report.

The site has moved onto its next phase of development, which includes Building's L, B2, and D. Building's L and B2 were identified as proposed development in the previous report. Building D was identified as potential future development in the previous report. Building's L, B2, and D will contribute 76 & 99 trip ends in the AM & PM peak hours respectively.

As shown in the table, the existing site is forecast to generate 274 trip ends during the AM peak hour and 472 trip ends during the PM peak hour.

Proposed Site Trip Generation

Our understanding is that the site is now moving into its next phase of development, which will include a 255-unit six story apartment building (identified as Building G on the enclosed site plan).

Trip generation for the proposed use has been based on the following:

- 255 Units of Residential Development – New Construction

The trip generation for the proposed use was calculated using the updated Institute of Transportation Engineers' publication, *Trip Generation*, 11th Edition (LUC 221 – Mid-Rise Apartment). It should be noted that LUC 221 provides two different trip generations, "not close to rail transit" and "close to rail transit". It is our understanding that ITE refers "close to rail transit" as more local transit, such as subways. The Amtrak located near Thompson's point, in our opinion, does not meet the intent for "close to rail transit". The following table summarizes the trip generation for the proposed uses:

Forecast Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building G Residential				
	Apartments – LUC 221	255 Units	101	100
Forecast Trip Generation			**101**	**100**

As shown in the table, the proposed residential use is forecast to generate an additional 101 trip ends and 100 trip ends during the AM and PM peak hours of the adjacent street, respectively.

Site Trip Generation

The trip generation for the existing site has been combined with the trip generation for the proposed new and remodeled buildings to yield the total site trip generation.

Total Site Trip Generation Summary

Site	Building	AM Peak Hour	PM Peak Hour
Existing			
	Building A – Mixed Used (Brick North)	51	137
	Building C – Events (Brick South)	100	195
	Building F1 – Warehouse	11	9
	Building F2 – Artist Studio	3	4
	Building L – Office	4	8
	Building B2 – Concessions	4	4
	Building D – Hotel	68	87
	Building I – Children's Museum and Theatre of Maine	33	33
	Existing Total	**274**	**472**
Proposed			
	Market Rate Apartments	101	100
	Forecast Total	**101**	**100**
Site Subtotal		**375**	**572**
Reduction (10%) for Bus / Train / Shared Use		(-37)	(-57)
Proposed Site Trip Generation		**338**	**515**
Permitted Trip Ends		734	1091
Difference Between Permitted and Proposed Site		**396**	**576**

As shown in the table, the site inclusive of the proposed residential development is forecast to generate 338 trip ends during the AM peak hour and 515 trip ends during the PM peak hour. This yields an overall trip generation that is 396 trip ends **less** than the permitted trip generation during the AM peak hour and 576 trip ends **less** than the permitted trip generation during the PM peak hour.

Parking Demand

Proposed Apartments: Parking for the new apartments is based on the ITE Parking Generation Manual, 5th Edition. The parking demand rate (1.31 spaces/unit) is based on Land Use Code (LUC) 221 – Multifamily

Housing (Mid-Rise). Because of the nature of the housing use, the peak parking demand (334 spaces) occurs overnight with the lowest parking demand (164 spaces) occurring during the day (1:00 – 2:00 PM). This complements the other uses on site well, since they will have the highest demand around noon time, with little to no demand (approximately 26-70 spaces) overnight.

Overall Site: The overall site parking demand is based on a combination of shared and designated parking methodologies. The shared methodology (majority of the site) assumes there are parking spaces not designated for specific uses and can be shared between the uses. There are some spaces on site such as the panhandle/residential garage that are proposed to use designated parking and be specifically residential or non-public Thompson's Point managed supply spaces. The attached parking demand calculations show the detailed time of day distribution for each use and the forecast demand. Based on the calculations the peak parking demand is between 6:00 PM and 10:00 PM for the overall site. The peak parking demand (without an event in Brick South or Halo) is 475 spaces and is anticipated to occur at 10:00 PM, of which 405 is the parking demand for the hotel and apartments which have designated spaces. Excluding the hotel and apartments, the peak parking demand is 165 spaces and occurs around noon. As identified in the approval for the master development plan, when special events of a certain attendance threshold occur, additional parking measures will be implemented on an as needed basis.

Conclusions

The following is a summary of the conclusions:

1. The site (including existing and proposed uses) is forecast to generate a total of 338 trip ends during the AM peak hour and 515 trip ends. This trip generation is 396 trip ends less than the permitted trip generation during the AM peak hour and 576 trip ends less than the permitted trip generation during the PM peak hour.

2. The peak parking demand for the proposed apartments (334 spaces) occurs overnight after 10:00 PM, when there is little to no demand from the other on-site uses, with the exception of the hotel demand (110 spaces). Excluding the hotel and apartments, the overall site parking demand peaks around noon, when the hotel and apartments are near their lowest parking demand.

TMP Extension – Dated 3/1/24 & 3/12/24

Planning and Urban Development
Christine Grimando, AICP
Director

City of portland

Applicant:	Chris Thompson Forefront Partners I, LP 501 Danforth Street Portland, Maine 04102
Project Location:	1 Thompson's Point Rd. Portland, Maine 04102
Parcel #	201 A005001
Project:	Thompson's Point/Mixed-use Development
Identification #:	Reg. 01-00155-A-N
Permit Category:	200 Plus PCE
Traffic Engineer:	Thomas Gorrill/Randy Dunton Gorrill-Palmer Consulting Engineers 300 Southborough Dr., #200 South Portland, ME 04106

Pursuant to the provision of 23 M.R.S.A. § 704-A and Chapter 305 of the Maine Department of Transportation's (MaineDOT) Regulations, the City of Portland and MaineDOT have determined that a one-time extension of the Traffic Movement Permit issued for Thompson's Point is warranted. The permit will be considered expired if construction of the project has not been completed by March 1, 2027, unless a modification is approved prior to this date.

In the event the permit expires prior to construction being completed by the end of the one-time extension date, the Applicant shall submit a new permit, with information pertaining to Sections 1 thru 6 of the General Submission Requirements and a Notice of Intent to File, as outlined in Chapter 305, and address any changes in facts since the initial analysis and approval. Consistent with Section 8 of Chapter 305, in the event the Applicant completes all mitigation required for the Development, but cannot complete the Project within the one-time extension date, the Developer will be required to submit a TMP Modification that includes any programmatic changes to the Development for review and approval. An applicant may be required to provide additional mitigation of permitted trips as a result of changes to the Development program increase beyond the initial approval. Additionally, the Developer may be required to attend a Scoping Meeting, unless the Maine Department of Transportation waives this requirement.

All required terms and mitigation of the original TMP approval remain in effect.

Trip Generation Evaluation & Summary
Thompson's Point
June 13, 2022

Date: June 13, 2022
Subject: Updated Trip Generation
Thompson's Point
To: Bo Kennedy, P.E. - Placemaker Partners, LLC
From: Randy Dunton, P.E., PTOE

Gorrill Palmer (GP) has prepared this updated trip generation summary for the Thompson's Point development in Portland, Maine. The full build out of the project received a MaineDOT Traffic Movement Permit (TMP) in 2012 (Reg. 01-00155-A-N) for 734 trip ends during the AM peak hour and 1,091 trip ends during the PM peak hour. The project is being constructed in phases and each phase must be evaluated to ensure that the total site trip generation does not exceed the permitted trip generation. The following is a summary of the forecast trip generation for the existing and previously approved uses, currently proposed and potential future development and the total site trip generation. A Thompsons Point Campus Directory is attached showing the location of each building for the existing conditions. Exact location of proposed and potential future buildings is still being refined.

Existing Trip Generation Summary

The trip generation for the existing Thompson's Point site has been based on discussions with your office and previously approved uses. Where relevant, trip generation that was previously approved was maintained in this evaluation. Trip generation for change in tenants permitted under current approvals is based on ITE Trip Generation, 11th Edition or through observations at the site. As previously approved for this site, a 10% reduction has been applied to the total site trip generation to account for other modes of transportation and shared uses on the site. The following tables summarize the trip generation for the existing site:

Table 1 – Existing Site – Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Brick North				
	Rosemont Market – Based on observations	2,724 sf	0	29
	Rwanda Bean – Based on observations	2,400 sf	18	21
	Halo (Event Space) – 3.5 people / car – Night Event	400 attendees	16	31
	Big Room Studios – LUC 712	3,461 sf	6	7
	Bissell Brewery & Restaurant – LUC 932 + 7 Emp.	11,920 sf	25 (18+7)	24 (17+7)
	Distillery – LUC 932 + 5 Emp.	5,284 sf	16 (11+5)	16 (11+5)
	Color Me Mine – previously approved	2,136 sf	2	6
	International Cryptozoology Museum - assumed	993 sf	1	1
	Brick North Total		**84**	**135**

Brick South				
	Event/Assembly Space – 3.5 people / car – Night Event	2,500 Seats	100	195
	Annex	7,384 sf	--*	--*
	Brick South Total		**100**	**195**
Building F1				
	Warehouse – LUC 110	14,200 sf	11	9
	Building F1 Total		**11**	**9**
Building F2				
	Proposed Artist Studio – LUC 712	1,940 sf	3	4
	Building F2 Total		**3**	**4**
Satellite Building				
	Children's Museum – provided by Museum – previously approved	29,096 sf	33	33
	Satellite Building Total		**33**	**33**
	Existing Site Subtotal		**228**	**376**
	Reduction for Existing Site Shared Trips		**(-23)**	**(-38)**
Total			**205**	**338**

*Maximum of 2,500 people in the building for events. Highest trip generation would be an event in the Event space, not the Annex.

Since initially approved, there has been some minor changes to the uses. The "Locally Sauced (formerly Big J's Chicken) and the Bissell "Brewery" have been combined and identified above as "Bissell Brewery & Restaurant". For the purposes of this evaluation, the previously approved individual square footages and trip generations have been combined.

The previously approved Cellardoor "Winery" (5,890 sf) has been replaced with a Rosemont Market with wine bar (2,724 SF) and a Rwanda Bean (2,400 SF). The difference between the square footages is a bathroom area that is shared between the two uses. The Rosemont Market and Rwanda Bean are described in more detail as follows:

Rosemont Market – this is a boutique type store with approximately 12 seats in the café area and 15 seats at the wine bar. The store hours during a weekday are 10AM – 8PM for the store & café area and 2PM-8PM for the wine bar. Since the use is unique, it does not fit into a typical ITE category for the purpose of determining trip generation. Since the use is not open during the AM peak hour of adjacent street traffic, the trip generation for the AM peak hour was assumed to be none. To estimate the PM peak hour of adjacent street traffic, the use was counted on Thursday, April 21, 2022 from 4PM – 6PM. Both of the accesses to the facility were observed, and it was estimated who may have arrived in their own car. Based on our observations, the peak hour occurred from 4PM – 5PM with an estimated total of 11 vehicles entering and 18 vehicles exiting, for a total of 29 vehicles.

Rwanda Bean – similar to the market, this is a boutique type store with approximately 25 seats, with areas for both cooking goods and a relatively large area for the roasting and packaging of the coffee. The store hours during a weekday are 8AM – 4PM. Since the use is unique, it does not fit into a typical ITE category. The use was counted on Thursday, April 21, 2022 from 7AM – 9AM and again from 3:30PM – 4:30 PM. Similar to the market, all of the accesses to the facility were observed, and it was estimated who may have arrived in their own car. Based on our observations, the AM peak hour occurred from 8AM – 9AM. There was only one hour counted for the PM since they close at 4PM. Based on our observations, the AM experienced a total of 18 vehicles (11 entering and 7 exiting) and the PM experienced a total of 21 vehicles (11 entering and 10 exiting). Even though the PM adjacent street peak hour typically occurs between 4PM – 6PM, to be conservative we used the 3:30PM – 4;30PM counts.

As shown in the table, the existing site subtotal is forecast to generate 228 trip ends during the AM peak hour and 376 trip ends during the PM peak hour. Based on observations at the site, there are significant shared trips between the activities on site (such as Children's Museum) and the food establishments such as Rwanda Bean & Rosemont Market. Additional significant shared trips would also be expected between activities on site and Bissell Brewery & Restaurant and potentially the Distillery. Although a 10% reduction is applied to the site as a whole, that 10% also includes those taking other modes of transportation, so only a portion of that reduction is shared trips. Given the significant shared use that has been observed on site, an additional 10% was subtracted from the existing site traffic to reflect the existing shared use. Therefore, the resulting trip generation for the existing site is forecast to be 205 trip ends during the AM peak hour and 338 trips ends during the PM peak hour.

Proposed Site Trip Generation

Our understanding is that the site is now moving into its next phase of development, which will include an approximately 148 room hotel and a concession building (Building B2). A smaller Hotel (125 room) was included in the original TMP with a trip generation of 70 and 74 trips ends during the AM & PM peak hours of adjacent street traffic respectively. We understand that the final number of rooms is still being refined and may be something less than the 148.

The currently proposed concession building is intended to supplement existing uses on site and not generate significant trips from off-site. For the purposes of this evaluation, we have considered trip generation to be 4 employees during both the AM and PM peak hours.

The following Table 2 summarizes the forecast trip generation for the hotel and concession building.

Table 2 - Currently Proposed Development - Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Hotel				
	Hotel – LUC 310	148 Rooms	68	87
	Hotel Total		**68**	**87**
Building B2				
	Concession Building	960 sf	4	4
	Building B2 Total		**4**	**4**
Currently Proposed Development Trip Generation			**72**	**91**

As shown in the Table 2, the proposed uses are forecast to generate an additional 72 trip ends and 91 trip ends during the AM and PM peak hours of the adjacent street, respectively.

Potential Future Development Trip Generation

In addition to the existing and currently proposed development, there is potential future development that could occur on-site and bring the site to its full potential as envisioned in the Master Development Plan. Those potential future uses were also described in the previous May 14, 2020 evaluation and are repeated here:

"Building K – New Construction
- *Proposed Inn: 61 rooms + potential 22 room expansion*
- *The Inn is proposed to include a bar that is intended to serve primarily hotel guests and potentially guests of other Thompson's Point uses. However, it is not anticipated to draw significant outside traffic, so the trip generation for the bar is forecast to be negligible."*

"Building L – Renovation
- *Existing Office: 4,000 sf*
- *Existing Storage: 1,760 sf*
- *Proposed Office: 5,760 sf"*

The 344 apartments that are currently identified as potential future development were originally approved in the "Revised Master Plan" as J1-(160 units), J2-(160 units) and 24 units on the top of the hotel. The trip generation for the apartments is based on the ITE Trip Generation 11th Edition for Land Use Code 221 – Multifamily Housing (Mid-Rise) – between 4 & 10 stories.

The following table summarizes the trip generation for the potential future development uses:

Table 3 - Potential Future Development - Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building K				
	Inn – LUC 310	61 Rooms	28	36
	Inn Expansion – LUC 310	22 Rooms	10	13
	Building K Total		**38**	**49**
Building L				
	Proposed Office – LUC 712	4,000 sf	7	9
	Proposed Event Space	100 attendees	4	8
	Existing Office (Credit)	4,000 sf	(-7)	(-9)
	Existing Storage	1,760 sf	0*	0*
	Building L Total		**4**	**8**
Apartments				
	Market Rate Apartments – LUC 221	344 Units	127	134
	Apartments		**127**	**134**
Potential Future Development Trip Generation			**169**	**191**

*Trip generation assumed to be negligible.

Site Trip Generation

The trip generation for the existing site has been combined with the trip generation for the currently proposed development and the potential future development to yield the site trip generation upon full development of the uses identified herein. The total site trip generation has been compared to the permitted trip generation to identify remaining available permitted trips for other approved uses within the master plan.

Table 4 - Total Site Trip Generation Summary

Condition	AM Peak Hour	PM Peak Hour
Existing Site	205	338
Currently Proposed Development	72	91
Potential Future Development	169	191
Site Subtotal	446	620
Reduction (10%) for Bus / Train / Shared Use	(-45)	(-62)
Revised Site Trip Generation	**401**	**558**
Permitted Trip Ends (2012 TMP – Reg. 01-00155-A-N)	734	1091
Difference Between Permitted and Proposed Site	**333**	**533**

As shown in Table 4, the total site uses after consideration of other modes of transportation are forecast to generate 401 trip ends during the AM peak hour and 558 trip ends during the PM peak hour. This yields an overall site trip generation that is 333 trip ends less than the permitted trip generation during the AM peak hour and 533 trip ends less than the permitted trip generation during the PM peak hour.

Trip Generation and Parking Demand Summary – April 2020

GORRILL PALMER

707 Sable Oaks Drive, Suite 30
South Portland, Maine 04106
207.772.2515

Trip Generation and Parking Demand Summary
Thompson's Point
April 2020

Date: May 14, 2020
Subject: Updated Trip Generation and Parking Demand
Thompson's Point
To: Bo Kennedy, Placemaker Partners, LLC
From: Randy Dunton / Emily Leighton, Gorrill Palmer (JN 3646)

Gorrill Palmer (GP) has prepared this updated trip generation and parking demand summary for the Thompson's Point development in Portland, Maine. The full build out of the project received a MaineDOT Traffic Movement Permit (TMP) in 2012 (Reg. 01-00155-A-N) for 734 trip ends during the AM peak hour and 1,091 trip ends during the PM peak hour. The project is being constructed in phases and each phase must be evaluated to ensure that the total site trip generation does not exceed the permitted trip generation. The following is a summary of the forecast trip generation and parking demand for the existing and previously approved uses, the proposed Buildings K and F1, the renovation of Buildings L and F2, and the proposed Building B2 that replaces existing mobile stations. A site plan is attached showing the location of each building. Additionally, the following includes a comparison of the total trip generation to the permitted trip generation.

Existing and Previously Evaluated Trip Generation Summary

The trip generation for the existing Thompson's Point site has been based on information provided by Bo Kennedy in an email dated August 22, 2017. The trip generation was calculated using the same methodology as that used in previous trip generation evaluations for the site, including using the Institute of Transportation Engineers' publication, *Trip Generation*, 7th Edition and applying a 10% reduction to the total site trip generation to account for other modes of transportation and shared uses on the site. The following table summarizes the trip generation for the existing site:

Existing Site Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Brick North				
	Winery	5,890 sf	4	16
	Halo (Event Space)	400 attendees	16	31
	Big Room Studios	3,461 sf	13	20
	Locally Sauced (formerly Big J's Chicken)	1,852 sf	21	20
	Brewery	10,068 sf	7	7
	Distillery	5,284 sf	4	4
	Color Me Mine	2,136 sf	2	6
	International Cryptozoology Museum	993 sf	1	1
	Brick North Total		**68**	**105**

Brick South				
	Event/Assembly Space	2,500 Seats	100	195
	Annex	7,384 sf	--*	--*
	Brick South Total		**100**	**195**
Hotel				
	Hotel	148 Rooms	83	87
	Proposed Total		**83**	**87**
Under Construction				
	Children's Museum	29,096 sf	33	33
	Under Construction Total		**33**	**33**
Approved Subtotal			**284**	**420**

*Maximum of 2,500 people in the building for events. Highest trip generation would be an event in the Event space, not the Annex.

As shown in the table, the existing site is forecast to generate 284 trip ends during the AM peak hour and 420 trip ends during the PM peak hour.

Proposed Site Trip Generation

The trip generation for the proposed uses has been based on the following:

- Building K – New Construction
  - Proposed Inn: 61 rooms + potential 22 room expansion
- Building F1 – New Construction
  - Proposed Warehouse: 14,200 sf
- Building L – Renovation
  - Existing Office: 4,000 sf
  - Existing Storage: 1,760 sf
  - Proposed Office: 4,000 sf
  - Proposed Event Space: 1,760 sf / 100 attendees maximum
- Building F2 – Renovation
  - Existing Garage Workspace: 1,940 sf
  - Proposed Artist Studio Space: 1,940 sf
- Building B2 – Replacement of Temporary Structures
  - Existing: Seasonal concession stands
  - Proposed Concession Building: 2,800 sf

The trip generation has also been based on the following assumptions:

- Building K:
  - The Inn is proposed to include a bar that is intended to serve primarily guests of the inn and potentially guests of other Thompson's Point uses. However, it is not anticipated to draw significant outside traffic, so the trip generation for the bar is forecast to be negligible.
- Building F2:
  - The proposed artist studio space in Building F2 is anticipated to operate most similarly to a shared office space, although this is likely a conservative assumption, since all users are not expected to enter and exit the site during the AM and PM peak hours and are more likely to be distributed throughout the day. It may be used as meeting or assembly space for less than 100 people, however the trip generation as an event space would be less than the trip generation forecast as an office.

- Building B2:
    - This building replaces existing temporary facilities and is intended to supplement existing uses on site. The proposed building will be open daily independently of the licensed seasonal uses. The building as proposed is consistent, albeit slightly smaller, than the building included in the approved Master Development Plan. For the purposes of trip generation and parking demand, it has been assumed that this use will often serve as a supplemental use to the existing activity on site, that will generate its own site traffic and parking demand.

The trip generation for the proposed uses was calculated using the same methodology as that used to calculate the trip generation in the original master plan. It should be noted that MaineDOT allows trip generation credit to be taken for existing uses on the site that have been operational within the last 10 years, so the trip generation for the existing building uses has been subtracted from the trip generation for the proposed building uses. The following table summarizes the trip generation for the proposed uses:

Proposed Site Addition Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building K				
	Inn	61 Rooms	34	36
	Inn Expansion	22 Rooms	12	13
	Building K Total		**46**	**49**
Building F1				
	Warehouse	14,200 sf	6	7
	Building F1 Total		**6**	**7**
Building F2				
	Proposed Artist Studio	1,940 sf	8	8
	Existing Garage Space (Credit)	1,940 sf	(-6)	(-7)
	Building F2 Total		**2**	**1**
Building L				
	Proposed Office	4,000 sf	14	13
	Proposed Event Space	100 attendees	4	8
	Existing Office (Credit)	4,000 sf	(-14)	(-13)
	Existing Storage	1,760 sf	0*	0*
	Building L Total		**0**	**0**
Building B2				
	Concession Building	2,800 sf	32	31
	Building B2 Total		**32**	**31**
Proposed Addition Trip Generation			**90**	**96**

*Trip generation assumed to be negligible.

As shown in the table, the proposed uses are forecast to generate an additional 90 trip ends and 96 trip ends during the AM and PM peak hours of the adjacent street, respectively.

Site Trip Generation

The trip generation for the existing site has been combined with the trip generation for the proposed new and remodeled buildings to yield the site trip generation. The total site trip generation after the construction of the Inn has been compared to the permitted trip generation to identify the remaining available permitted trips.

Site Trip Generation Summary

Site	Building	AM Peak Hour	PM Peak Hour
Existing			
	Brick North	68	105
	Brick South	100	195
	Hotel	83	87
	Children's Museum	33	33
	Existing Total	**284**	**420**
Proposed			
	Building K (Including Future Expansion)	46	49
	Building F1	6	7
	Building F2	2	1
	Building L	4	8
	Building B2	32	31
	Proposed Total	**90**	**96**
Proposed Site Subtotal		**374**	**516**
Reduction (10%) for Bus / Train / Shared Use		(-37)	(-52)
Proposed Site Trip Generation		**337**	**464**
Permitted Trip Ends		734	1091
Difference Between Permitted and Proposed Site		**397**	**627**

As shown in the table the proposed site uses are forecast to generate 337 trip ends during the AM peak hour and 464 trip ends during the PM peak hour. This yields an overall trip generation that is 397 trip ends less than the permitted trip generation during the AM peak hour and 627 trip ends less than the permitted trip generation during the PM peak hour.

Parking Demand

The parking demand for the site with the proposed additions added has been calculated using the same methodology as that used in the Master Development Plan. The parking demand is based on shared parking methodology, which assumes that parking spaces are not designated for specific uses or businesses, and can be used by any vehicles visiting the site. This methodology is very beneficial for mixed use developments with complementary uses such as office, whose parking demand is higher during the day, and hotel, whose parking demand is higher overnight. The attached parking demand calculations show the detailed time of day distribution for each use and the forecast shared demand. Based on the calculations the peak parking demand for the site (without an event in Brick South or Halo) is 193 spaces and is anticipated to occur at 5:00 PM. As identified in the approval for the master development plan, when special events of a certain attendance threshold occur, additional parking measures will be implemented on an as needed basis.

Conclusions

The following is a summary of the conclusions:

1. The site (including existing and proposed uses) is forecast to generate a total of 337 trip ends during the AM peak hour and 464 trip ends. This trip generation is 397 trip ends less than the permitted trip generation during the AM peak hour and 627 trip ends less than the permitted trip generation during the PM peak hour.

2. The peak parking demand for the site after the additional development is forecast to be 193 parking spaces and is forecast to occur at 5:00 PM.

COMMISSIONER

Applicant:	Thompson's Point Development Company Inc.
Project Location:	Thompson's Point Rd, Portland, ME Portland Tax Map 201Lot(s) 8, 9 and 10 and Map 202 Lots 2, 4 and 5
Project:	Mixed use Development
Identification #:	Reg. 01-00155-A-N
Permit Category:	200 Plus PCE
Traffic Engineer:	Thomas Gorrill Gorrill-Palmer Consulting Engineers PO Box 1237 15 Shaker Rd. Gray, ME 04039

Pursuant to the provision of 23 M.R.S.A. § 704-A and Chapter 305 of the Department's Regulations, the Maine Department of Transportation (MaineDOT) has considered the application of Thompson's Point Development Company Inc with supportive data, agency review and other related materials on file.

PROJECT DESCRIPTION

The applicant proposes to construct a 97,697 sf event center/convention hall/exhibit hall; 32,000 sf concert hall plus outdoor venue for up to 4,800 attendees; 378,000 sf of office space; 4,000 sf of medical office space; 20,000 sf gym and rehabilitation center; 125 room hotel; 6,000 sf of restaurant space (high-turnover sit down). The site is forecast to generate 734 AM and 1,091 PM weekday peak hour trip ends.

Findings

Based on a review of the files and related information, MaineDOT approves the Traffic Movement Permit Application of Thompson's Point Development Company Inc. subject to the following conditions:

MITIGATION

On-Site Mitigation

All Site Entrances

All entrances shall have overhead illumination provided, if not existing, to illuminate the intersections per MaineDOT standards at a minimum. Overhead lighting shall have an average of

0.6 to 1.0 foot candles, with the maximum to minimum lighting ratio of not more than 10:1 and an average to minimum light level of not more than 4:1.

Thompson's Point Road

Thompson's Point Road shall be widened to accommodate an 8 foot shared bike/pedestrian path, a 3 foot wide grass esplanade, a 3 foot shoulder with granite curb, an 11 foot wide outbound lane, and 11 foot wide flush concrete median, an 11 foot wide inbound lane and a 3 foot shoulder with granite curb. This section will be constructed from the site driveway to the Fore River Parkway. The 250 feet of flush median closest to Fore River Parkway shall be designated as an exclusive left turn lane outbound. The shared bike/pedestrian path shall have a crossing built at the Sewall Street cul de sac and the path extended to the existing sidewalk on Sewall Street. Another pedestrian crossing shall be installed where the current pedestrian crossing is at the bus/train station. Both crossings shall have solar powered/radio interconnected pedestrian activated rectangular rapid flashing beacon lights installed.

Thompson's Point Development

No sporting events or concerts shall begin between 4 pm and 7pm Monday through Friday.

During large sporting and concert events, the applicant shall ensure that there are flaggers and uniformed police officers present to ensure that there will be two inbound lanes prior to the event and two exit lanes after the event. Flaggers/uniformed police officers shall be stationed to ensure that pedestrians are able to cross at either of the two crosswalks, at the Transportation Center Entrance to let busses in or out and also at the transportation center parking lot entrances to ensure that transportation center patrons leaving the parking lots are merged into the out-bound flow. Uniformed police officers shall be present after an event to direct traffic at the Thompson's Point Road/Fore River Parkway intersection. Retro-reflective traffic cones shall be used by the development to create the reversible lane. Flaggers will direct vehicles into the proper lanes.

Off-Site Mitigation

Fore River Parkway/Thompson's Point Road/I-295 Exit 5A off-ramp

The Southbound off ramp at Exit 5 A shall be reconstructed to have a separate 13 foot wide left turn lane and 13 foot wide through lane. The widths include the

required curb offset. The left lane shall extend back 200 feet. Install Queue detector at the ramp gore area to act as pre-emption for the signal should the queue spill back that far.

Modify traffic signal timing and phasing accordingly.

Fore River Parkway/Congress St/I-295 Exit 5 B off-ramp

Widen the southbound off-ramp to accommodate a 5 foot wide right shoulder, two 12 foot wide right turn lanes and a 2 foot curb offset for a distance of 125 feet with an appropriate taper. Install Queue detector at the ramp gore area to act as pre-emption for the signal should the queue spill back that far.

Re-stripe Congress Street Westbound to accommodate a longer westbound left turn lane, extend back to the end of the island (to the slip lane from Park Ave to Congress St).

Modify traffic signal timing and phasing accordingly.

Congress St/Stevens Ave

Restripe Steven's Avenue to an exclusive left and a shared left/thru/right and modify traffic signal timing and phasing accordingly.

The developer shall pay an impact fee in the amount of $15,000 for inlaid thermoplastic paint skips, retro-reflective back plates and overhead lane usage signage. This money will be put towards improvements funded by PIN 19078.00.

Congress St/Westbrook St

The developer shall pay an impact fee in the amount of $15,000 for inlaid thermoplastic paint skips, retro-reflective back plates and overhead lane usage signage. This money will be put towards improvements funded by PIN 19078.00.

Congress/Frost St

The developer shall pay an impact fee in the amount of $15,000 for inlaid thermoplastic paint skips, retro-reflective back plates and overhead lane usage signage. This money will be put towards improvements funded by PIN 19078.00.

Transportation Demand Management

In lieu of additional mitigation, Transportation Demand Management shall be used to offset the traffic impacts on the roadway network. The City has implemented a Transportation Oriented Development Tax Increment Financing District for the Thompson's Point Development. This development would benefit from some increased transit connections to the airport and Old Port, funding for handicap accessible taxis or for increase in parking at the Transportation Center.

Overall

A. Provide all necessary auxiliary signs, striping and pavement markings to implement the improvements described herein according to State of Maine and/or National standards.

B. All plantings and signs (existing and/or proposed; permanent and/or temporary) shall be placed and maintained such that they do not block available sight distances and do not violate the State's "Installations and Obstructions" law. No signage or plantings shall be allowed within the "clear zone" if they constitute a deadly fixed object as determined by MaineDOT. All signs shall meet MRSA Title 23, Chapter 21, Section 1914: "On-Premise Signs".

C. If any of the supporting data or representations for which this permit is based changes in any way or is found to be incorrect / inaccurate, the applicant shall request in writing from MaineDOT a decision of what impacts those changes will have on the permit. The applicant will then be required to submit those changes for review and approval and additional mitigation as a result of those changes may be required at the expense of the applicant.

D. Because the proposed project affects the state highway and drainage systems and requires improvement to that system, the applicant must obtain approval of the design plans and coordinate work through MaineDOT's State Traffic Engineer, who can be reached at (207)-624-3620 in Augusta.

RE: PL – 003090-2024
Thompson's Point Transportation Demand Management update

Dear Natasha,

Pursuant to the City's Project Review Letter (11/06/2024), please find below our response to the portions of the letter concerning Thompson's Point's Transportation Demand Management Plan.

Comment #1 (pp. 2-3):

> *A TDM Plan is required for this project, as it exceeds the thresholds detailed in LUC Section 14.6.1.E.1. The project has an approved Thompson's Point campus-wide Transportation Demand Management Plan (TMD) for managing and reducing traffic trips and parking demand in place as part of the Master Development Plan (MDP). The provided Attachment P summarizes TMD initiatives and references previously prepared TDM strategy reports which was approved in 2011, and subsequently updated in 2015 and 2018.*
>
> *[…]*
>
> *In satisfying this standard, the applicant shall update their Transportation Demand Management Plan and incorporate data, as well as updated data, on concerts and other significant events that occur on the Thompson's Point campus, so that the City can better understand current parking demand and assess whether mitigation strategies in place are sufficient.*

Response:

In addition to the updates to the 2011 plan noted above (2015 and 2018 respectively), Thompson's Point provided data reports to the City regularly until the reporting requirement

was suspended during COVID. In the absence of these regular reports, although it was not requested by the City, Thompson's Point took the proactive step of submitting a TDM update narrative report in July 2021 summarizing the previous two years of activity on campus.

That 2021 update included mention of Thompson's Point having received a "Best Workplaces for Commuters" designation from the National Center for Transit Research and the US Environmental Protection Agency in 2019 – one of only two sites in the state at the time to have received this designation.

Subsequently, in May 2022, the City launched their streamlined formal online reporting system.

We provided regular and consistent reports and updates using that system since that time. This data captures all Thompson's Point activities, from regular tenant visitors to events and concerts.

We also maintain a TDM survey on our website. In addition to being available to the public at any time, we also send this link out to various event clients where applicable.

https://www.thompsonspoint.com/tdm

Following the 2024 summer concert season, our concert partners at the State Theatre circulated this survey link to their ticketholders.

We have included the data and results as Exhibit A.

In our previous submittal (Attachment P to same), we provided TDM details for the proposed residential project. One of the factors that led Cathartes to select Thompson's Point as a partner for their project is Thompson's Point's history of commitment to smart urban growth and neighborhood building and transit planning; as a Transit Oriented Development which has been awarded Best Workplaces for Commuters status, the opportunities for use of METRO, Portland Trails for walking and biking, Amtrak, Concord Coach, and various carpool/rideshare mobilizations has been a compelling feature for them and their future residents and guests. Cathartes also intends to participate individually as well as at the broader site-wide level in any efforts to encourage their staff to carpool, bike, walk, and ride METRO to work.

To further elaborate on the plans outlined in Attachment P, Cathartes plans to follow the proposed timeline in terms of its TDM measures:

<u>Convene kickoff meeting with TDM coordinator to review strategies:</u>

- 6 months after groundbreaking

<u>Team meeting with CMTM staff and TDM coordinator:</u>

- 1 month before opening

Provide tenant and staff surveys:

- 12 months after opening

Establish Initial Residential "Micro TDM":

- 18 months after opening

Evaluate Initial Micro TDM and report to City:

- 36 months after opening

We hope that this update meets your needs, and we thank you again for your detailed review and thorough comments.

If you have any questions or would like more information, please do not hesitate to contact me.

Sincerely,

Bo Kennedy

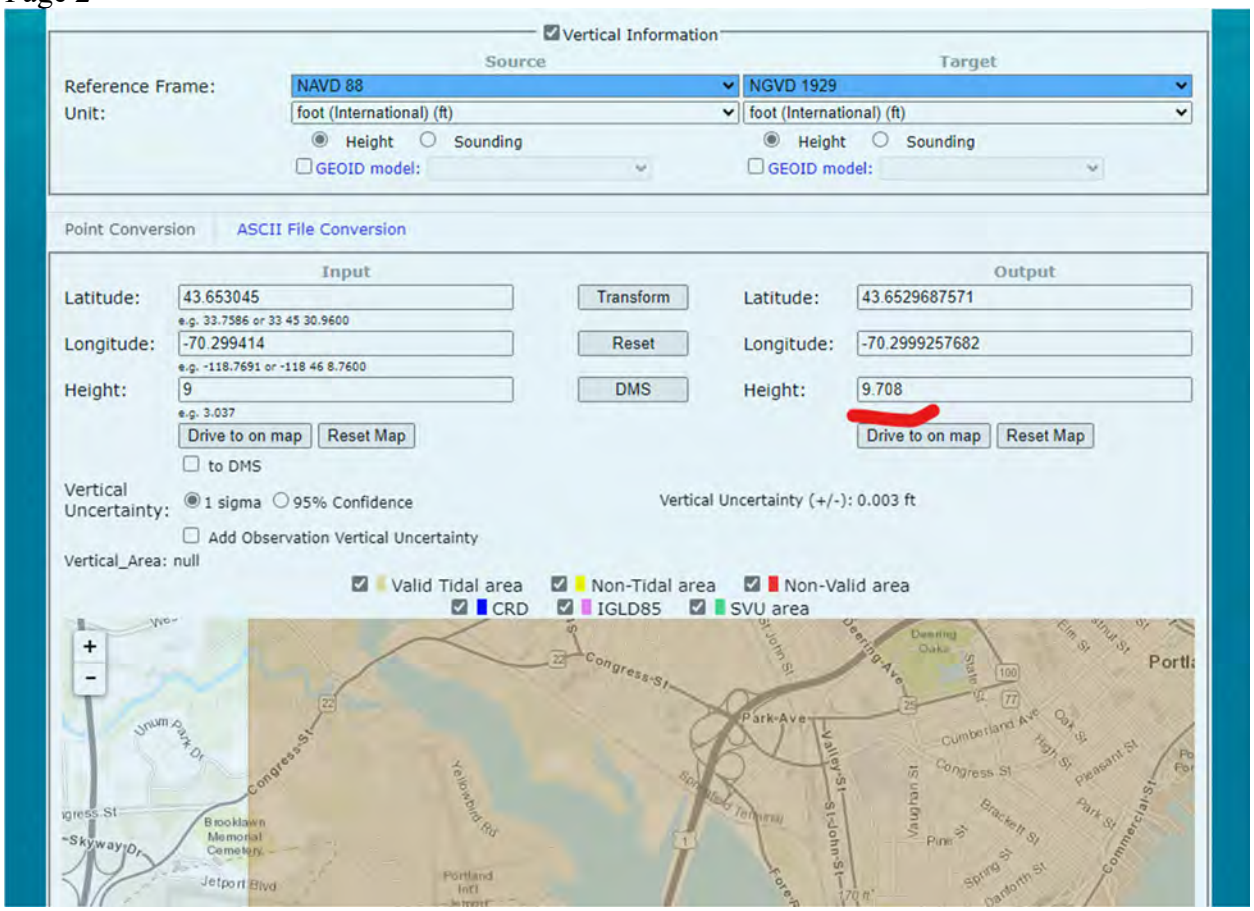
Subject: **The Forefront at Thompson's Point – 125 Thompson's Point Rd** (PL-003090-2024)
Major Site Plan Application – Review Comment Letter of Response # 2

Dear Natasha:

We have received and reviewed staff and peer review comments submitted to date and offer our responses to these comments. For ease of reference, we have repeated each comment in *italics* with our response following.



GENERAL COMMENTS FROM PLANNING STAFF

Comment 1:
Regarding the AE Flood Zone, while the Firmette map for the Flood zone was provided in the resubmission, we are requesting these be added as an overlay to the Site Plan, which will then show exactly where the Flood Zone is located on the property. Further, Staff requests not rounding up to Elevation 10.0', NGVD1929.

Response:
The AE Flood Zone has been overlaid with the current site plan as shown on the attached Exhibit A. The Flood Zone elevation 9.71 has been updated on the site plan set and shown in red for ease of visibility.

Comment 2:
The Floodplain Administrator requests to see how the conversion from NAVD88 to NGVD29 was calculated.

Response:
The project surveyor used an online conversion tool on the NOAA Website. (https://www.ngs.noaa.gov/NCAT/). The screen shot of the input/output is shown here:

Comment 3:
On the Existing Conditions Plan (Sheet C-2.0) and the Site Layout Plan without Easements (Sheet C-3.1A), the Flood Zone line is not clear. Staff requests it be shown in a different color than black, for ease of visibility.

Response:
This comment has been addressed; refer to comment 1 response.

REVIEW COMMENTS – TRANSPORTATION (SECTION 14.6.1) STANDARDS:

Comment 1:
Staff would like to review the trip generation calculations for all of the uses, regardless if previously approved from a documentation perspective. However, one initial comment on the trip generation estimate is as follows:

- *The Brewery & Sit-Down Restaurant (14,644 SF) noted in the table should match the area used in the trip generation calculation (4,624 SF).*

- *Relative to current uses at the Thompson Point campus, the applicant shall provide backup information for the trip generation estimate for:*
- *Halo Event Space*
- *the Office Space with 7 employees; the trip estimate does not match prior trip generation estimates for potential uses*
- *the 4,624 SF or restaurant space associated with Bissell Brewery*
- *Color Me Mine*
- *Cryptozoology Museum*
- *Leisure Time Cocktails*
- *the Brick South Event Space (2,500 Seats)*

- *Building L; data is provided for the office space but it does not match what is noted in the table*

Response:
Gorrill Palmer has revised the traffic study to include all currently proposed and/or existing with more clear labels. The report is enclosed with this letter in Attachment B.

Comment 2 – Access and Circulation :

- *General note: Some of the proposed site work that is proposed falls outside of the development tract, please include the abutting site as part of the larger project boundary on the applicable plan sheets.*
- *Proposed improvements and existing conditions in the City ROW shall be identified and dimensioned on the plan view sheets. For example, ROW, street, lanes sidewalk, esplanade driveways (and other improvements) widths as well as when a width changes.*
- *Provide detailed grading plan for the drive entrance onto Thompson's Point Road. The applicant shall update the plans to label and or provide spot grades and slopes for the proposed sidewalk improvements at grade breaks.*
- *Reconstruct the Drive Apron and restripe the crossing.*
- *Realign the ADA ramp and landing area to be within the public ROW. Adjust the development onsite sidewalk to tie into the public sidewalk.*

Response:
- The project work limit line has been expanded to include the new fire lane driveway on the adjacent lot. A new plan sheet C-3.1A Site Layout Plan with this limit line has been uploaded to the eplan website.
- Dimensions have been added to the site plan view C-3.1A Site Layout Plan Without Easements
- The grading of ADA ramps and driveway aprons are dictated by the existing roadway match line (top of existing curb, gutter line, etc). The contractor will be required to grade this area in strict accordance with the city's details for sidewalk cross slopes and ramp details found in the Technical Manual. The grading plan has been labeled with maximum slopes to be followed based on existing grades as a match line. It is in my professional opinion that the addition of proposed spot grades in this area would be speculative and inaccurate.
- Plan Sheet C-3.1A Site Layout Plan Without Easements has been updated to indicate the contractor shall sawcut the existing pavement at the gutter line and reconstruct and restripe the driveway apron.
- The Plan views have been updated to show the entire ramp inside the ROW.

Comment 3 -Parking :

- *Please provide a parking management plan, as the proposed parking spaces are to be shared with other uses on Thompson's Point.*
- *The remaining parking spaces (86 spaces on the first floor of the garage and 24 surface parking spaces) are indicated to be used for overall Thompson's Point campus parking needs. These spaces will be managed by Forefront Partners, like all other parking spaces on the campus. The applicant should provide details on how these spaces will be regulated. Will they function like existing spaces and be "Pay to Park"? Will signage, etc. be installed? How will the garage gate system be managed (based on the plans it appears two gate systems are proposed – staff is looking for clarification on how they will operate).*

- *The overall campus parking analysis should be updated to reflect the land use information used in the updated trip generation estimate. The parking generation estimate should be based on the most recent edition of the ITE Parking Generation Manual.*
- *The applicant should document the number of existing and proposed parking spaces on campus and note what spaces are allocated to specific businesses/uses.*
- *Staff has reviewed the revised plan, and the exterior parking layout is acceptable. Parking aisle widths shall be provided for the interior garage.*

Response:

- The plan Sheet C-3.0 Overall Campus Plans has a campus parking supply table outlining all the available parking and maximum parking demand as calculated by Gorrill Palmer, project traffic engineer and stated in their parking study matrix. Campus wide parking is actively managed by Forefront Parking, LLC or its assigned and will manage the new shared spaces on the residential property.

  Most of the proposed designated-managed parking stalls are located inside the proposed gated garage and will require a key card to pass the gate. The remaining surface spaces along the access road will be signed accordingly and enforced using the same or equivalent parking management systems used currently (i.e. Passport software via license plate registration). The proposed parking for this project will not be open to the public but rather used for contracted uses such as but not limited to Thompson's Point employees and valet parking. Existing parking spaces used for these purposes will be signed and open to the public for "Pay and Display" parking supply.
- The parking analysis matrix has been updated to reflect the current land uses and is included in the full traffic memorandum included with this submission. The parking analysis uses a combination of custom parking demand based on the approved methodology at the time of site plan approval and the most current ITE Parking Generation Manual for this project.
- The applicant has documented the number of existing and proposed parking spaces on campus as indicated above. Except for the proposed designated residential parking spaces, the campus parking supply is actively managed and shared amongst all businesses on campus.
- The Floor plans have been updated to show the garage aisle widths and uploaded to the eplan portal.

Comment 4 - TDM:

- *The 2011 MaineDOT Traffic Movement Permit notes that "No sporting events or concerts shall begin between 4pm and 7pm Monday through Friday". The project does not appear to comply with this requirement. The assumption for trip generation associated with concert events was that if the start time is at 7pm or later, there would be minimal impact to the commuter PM peak hour. If concerts begin at 6pm, impacts to the peak hour may occur.*
- *City staff has concerns about parking in the Libbytown neighborhood during events. The applicant should address this concern through possible actions/strategies in the TDM Plan.*
- *City staff has observed traffic congestion on Fore River Parkway extending into Congress Street. The applicant should address this concern through their site monitoring efforts and identify possible mitigation strategies to address this issue.*

Response:

- The applicant acknowledges this requirement of the MDOT TMP and intends to strictly comply.
- The applicant has, and will continue, to work directly with the Libbytown Association and the City of Portland to implement measures acceptable to all parties to mitigate the impact of parking from large events at Thompson's Point. All parties acknowledge there are other large events in the neighborhood that are out of the applicant's control. Thompson's Point is committed to implementing thoughtful measures such as deploying "No Event Parking" signage throughout the neighborhood before each event as well as promoting the substantial TDM strategies at the applicant's disposal such as walking and biking travel through the improved and robust Portland Trails network, local and regional bus routes, train, and ride share trips. Prior to every large-scale show, Thompson's Point promotes the ease and convenience of strategies through our multiple social media pages (see examples below). Thompson's Point works with their concert partner (State Theatre) to encourage carpooling and alternate modes of transportation at the time of ticket purchase, giving the attendee lots of time to plan their preferred mode of transportation in advance.

- The parking management staff acknowledges the city's observation and always takes these reports into consideration for future events. Large scale events at Thompson's Point require active traffic management with traffic control personnel spanning from the campus through Thompson's Point Road up to Fore River Parkway to ensure entering offsite traffic congestion is minimized to the extent practicable. They respond quickly and in real time to address varying traffic conditions to minimize the duration of short periods of traffic congestion to the extent possible. There are occasions when outside influences, such as but

not limited to construction, traffic accidents, emergency vehicle interruption, and multiple simultaneous large events around the neighborhood that create congestion outside of Thompson's Point control. Whenever applicable, traffic issues within their control are documented by staff and addressed with a change of strategies for future events.

REVIEW COMMENTS - ENVIRONMENTAL QUALITY STANDARDS (SECTION 14.6.2) :

Comment 1 – Landscape Preservation:

- *General note: Update the Landscape Plan to use the most current version of the Site Plan.*
- *Please include on the landscape plan the species/size/location of the existing large trees to be preserved near the stormwater installation in the SW corner of the project; as while trees are present on Existing Conditions and Demolition plans but were left off landscape plan.*
- *Regarding Landscape Details, Sheet L-200:*
    - *#1, Tree Protection detail: If any of the existing trees to be preserved grow with a pronounced lean such that fencing in the dripline would place the stem of the tree near the edge or outside of the tree protection zone (TPZ):*
    - *An alternative TPZ based on the critical root zone spread should be implemented with a target radius of 12" per 1" of stem diameter at DBH*
    - *If space constraints prohibit the target of 12" per 1" DBH, reductions down to 9" per 1" DBH are acceptable*
    - *If more than 30% of the CRZ is impacted by trenching and/or grade changes of more than 4" then post construction remediation (decompaction, organic matter amendments) is warranted for preserved trees*
- *#3, Deciduous Tree in Lawn or Esplanade*
    - *If fertilizer packets are to be included when planting landscape trees, please refer to City Code, Chapter 34: Landcare in order to ensure a compliant application*

Response:

- The Landscape Plan has been updated to reflect the current Site Plan.
- Labels regarding existing tree species and size to remain have been added to the Landscape Plan.
- Notes regarding tree protection have been coordinated with the City Arborist and have been added to the Landscape Plans.
- See above response
- See above response.
- See above response.
- The note has been revised to specify that an organic starter fertilizer is required and incorporated into the top 2-3" of the planting zone as coordinated with City Arborist and the City Code.

Comment 2 – WQ, SWM and Erosion Control:

- *The applicant is depicting a drainage easement within the City's right of way in the Thompson's Point connector road (Sheet C3.1b) to account for a short storm drain extension and connection from the private onsite drainage system. The drainage easement is unnecessary in this situation. The storm drain extension section in the right of way shall be constructed to City standards and will be turned over to the City at the conclusion of the project. The City does not grant easements for private storm drain or sewer lateral connections into the City's infrastructure located in public right of ways. Accordingly, please remove the proposed easement from the plans.*

- *Please add a backflow preventer to sanitary sewer profile 'A' line downstream of SMH-1 as discussed via email on 1/17/2025.*
- *Add a note to the plans stating that EX. SMH -1 shall be jointly inspected by the applicant's engineer, contractor, and the City to confirm a final plan to modify the structure to the rim elevation indicated on the plans.*
- *Notes should be added to the utility and grading plans indicating that several City and PWD sewer manholes will need to be adjusted to grade in the southerly access road area demarcated as Access Road profile 'C' on the plan set. It appears that a few of these structure adjustments may exceed the maximum adjustment height of 8 brick courses. The applicant should look into this and provide further information.*
- *The applicant should relocate the proposed light pole/base located near Access road 'A' station 20+40 to provide more horizontal clearance with the 30" CSO line.*

Response:

- All proposed easements inside the City's ROW have been eliminated. New versions of the applicable Site Plans have been uploaded to the city's eplan portal.
- A backflow prevention device is called out on the profile 'A' and the utility plan.
- This note has been added to the Utility Plan and uploaded to the city's eplan portal.
- The contractor will be required to adjust all existing manhole covers to proposed finished grade in accordance with the City's Technical Manual. The applicant proposes the contractor and the city review all the manholes in the field at the pre-construction meeting.
- The light pole has been relocated closer to the driveway opening to provide greater separation from the CSO line. The updated Site Plans have been uploaded to the city's eplan portal.

REVIEW COMMENTS - INFRASTRUCTURE AND COMMUNITY SAFETY STANDARDS (SECTION 14.6.3) :

Comment 1 -Public Safety and Fire Prevention:
While City staff continues to have concerns regarding emergency access to the site, we also acknowledge that prior discussions during the MDP approval process allowed for the single roadway access site-wide. We will look forward to having a more robust discussion on this item at our meeting scheduled for February 5, 2025, wherein representatives from the applicant team and the City will be present.

Response:
The applicant met with city and peer review staff on February 5, 2025, to discuss the issues outlined in this review letter. During this meeting the applicant further explained that alternate routes onto Thompson's Point were found to be infeasible due to significant natural resource, land acquisition, major existing utility infrastructure, and financial constraints. Furthermore, it was determined during the Master Development Plan (MDP), Overall Subdivision Plan, and multiple Site Plan Application reviews that the, now constructed, gated access from Sewall Street onto a widened Thompson's Point road with third lane for emergency vehicles and public rail crossing is sufficient to satisfy regulatory access requirements to the fully constructed MDP.

Comment 2- Public Utilities:

- *Please forward on the Ability to Serve letter from PWD, once received.*

Response:
The applicant has forwarded the PWD ability to serve letter to the city planning office via email to Natasha Kypfer.

REVIEW COMMENTS - SITE DESIGN STANDARDS (SECTION 14.6.4) :

Comment 1 – Design Standards :

- *Staff requests that the applicant prepare additional renderings to illustrate the parking garage as viewed from Thompson Point roadway and adjacent properties, particularly from the north side of existing railway tracks. Staff is concerned that the sloped parking decks at the structured garage are not properly screened as visible from the street and from adjacent properties. As outlined in the design review memo, dated October 18, 2024, Staff recommends additional architectural and/or landscape screening elements, such as perforated facade screening to reinforce a horizontal datum, vertical landscaping with vine-trellis systems or other appropriate vegetation.*
- *Staff suggest greater ground-floor activation along building facades oriented towards the Thompson Point roadway. Staff recommends incorporating a pedestrian scaled entry for residents (potentially at the termination of the Level 1 corridor) to allow direct access from the sidewalk and more connectivity to the street. Alternatively, Staff suggests additional architectural articulation that orient the building towards the street with the incorporation of facade materials and organization of materials at a pedestrian scale found throughout the Thompson's Point development.*

Response:

- The applicant has prepared the views requested by planning staff and presented them at our February 5, 2025 meeting. The staff indicated that they were happy with the renderings and should be submitted for inclusion in the Planning Department's presentation to the Planning Board. The additional renderings are included in Attachment C of this letter and uploaded to the City's eplan Portal.

- The applicant has revised the ground level façade to a brick material in response to city's comments noted above. The change of material brings a welcoming and more appropriate pedestrian scale to the street side of the proposed residential building. During our February 5, 2025 meeting with City Staff the applicant explained why the amenities have been centralized to the building such as accessibility and security for the residence being a high priority. Further, the applicant explained the engineering solutions required to overcome significant site grading and parcel shape challenges. Site grading combined with large publicly owned utilities along the frontage of the property prohibit pedestrian access to the street end of the building. The additional renderings showing the new façade are included in Attachment C of this letter and uploaded to the City's eplan Portal.

End of Comments.

If you have any questions regarding these materials, please contact this office.

Sincerely,

PLACEMAKER PARTNERS, LLC

Bo Kennedy, P.E.

Trip Generation and Parking Demand Summary
Thompson's Point
September 2024 – (Revised 12-10-24)

Date: September 4, 2024 (Revised 12-10-24)
Subject: Updated Trip Generation and Parking Demand
Thompson's Point
To: Bo Kennedy, Placemaker Partners, LLC
From: Randy Dunton / Kyle Brennan, Gorrill Palmer (JN 4346)

Gorrill Palmer (GP) has prepared this updated trip generation and parking demand summary for the Thompson's Point development in Portland, Maine. The full build out of the project received a MaineDOT Traffic Movement Permit (TMP) in 2012 (Reg. 01-00155-A-N) for 734 trip ends during the AM peak hour and 1,091 trip ends during the PM peak hour. The Traffic Movement Permit received an extension in 2024 out to March 1, 2027. The documentation for the extension is attached. The project is being constructed in phases and each phase must be evaluated to ensure that the total site trip generation does not exceed the permitted trip generation. The following is a summary of the forecast trip generation and parking demand for the existing and previously approved uses, and the proposed residential development on site. A site plan is attached showing the location of each building.

Existing and Previously Evaluated Trip Generation Summary

The trip generation for the existing Thompson's Point site is based on discussions with Bo Kennedy, project manager/engineer for the site. The trip generation was calculated using the same methodology as that used in previous trip generation evaluations for the site, including using the Institute of Transportation Engineers' publication, *Trip Generation*, 7th Edition, except where otherwise noted, and applying a 10% reduction to the total site trip generation to account for other modes of transportation and shared uses on the site. The following table summarizes the trip generation for the existing site:

Existing and Approved Site Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building A Brick North				
	Halo (Event Space) – Previously approved	400 attendees	16	31
	Office Space – 7 Emp.	7 Employees	7	7
	Brewery & Sit-Down Restaurant – LUC 932 + 7 Emp.	14,644 sf (4,624 sf Rest. & 10,020 sf Brewery)	7	49 (42+7)
	Brewery Tap Room – LUC 932 + 5 Emp.	5,284 sf	16 (11+5)	16 (11+5)
	Color Me Mine – Previously Approved	2,136 sf	2	6
	International Cryptozoology Museum – Previously approved (doubled in size)	1919 sf	2	2
	Leisure Time Cocktails – LUC 975	1725 sf	N/A	20

	Coffee Roasting – Assumed (Employee only)	675 sf	1	1
	Brick North Total		**51**	**132**
Building C Brick South				
	Event/Assembly Space – Previously approved	2,500 Seats	100	195
	Annex	7,384 sf	--*	--*
	Brick South Total		**100**	**195**
Building F1				
	Warehouse – Previously approved	14,200 sf	11	9
	Building F1 Total		**11**	**9**
Building F2				
	Artist Studio Space – Previously approved	1,940 sf	3	4
	Building F2 Total		**3**	**4**
Building L				
	Office Space – Previously forecasted potential future development	4,000 sf	7	9
	Event Space – Previously forecasted potential future development	100 Attendees	4	8
	Existing Storage – Previously forecasted potential future development	1,760 sf	0**	0**
	Existing Office Space (Credit)	4,000 sf	(-7)	(-9)
	Building L Total		**4**	**8**
Building B2				
	Concession Building – Previously approved	960 sf	4	4
	Building B2		**4**	**4**
Building D				
	Proposed Hotel (2024 Construction Start) – Previously proposed development	148 Rooms	68	87
	Hotel Total		**68**	**87**
Building I Children's Museum and Theatre of Maine (CMTM)				
	CMTM– Previously approved	29,096 sf	33	33
	Children's Museum Total		**33**	**33**
Existing Subtotal			**274**	**472**

*Maximum of 2,500 people in the building for events. Highest trip generation would be an event in the Event space, not the Annex.
**Trip generation assumed to be negligible.

Since initially approved, there have been some minor changes to the uses. The "Rosemont Market" (2,724 sf) and Brewery & Sit-Down Restaurant (11,920 sf) have been combined and identified as "Brewery & Sit-Down Restaurant" (14,644 sf). For the purposes of this evaluation, the previously individual square footages have been combined. Trip generation for the "Brewery & Sit-Down Restaurant" was based on previously accepted "Brissell Brewery & Restaurant" methodology, where the restaurant trip generation is based on LUC 932 – High Turnover (Sit Down) Restaurant (4,624 SF) and trip generation for the brewery portion

(10,020 SF) is based on the 7 employees.

The previously approved coffee shop "Rwanda Bean" (2,400 sf) has been split with "Leisure Time Cocktails". "Rwanda Bean" (675 sf) is still occupying part of the space for coffee roasting, but the remaining space is now occupied by "Leisure Time Cocktails" (1725 sf).

The previously approved "Big Room Studios" (3,461 sf) has been replaced with an "Office Space". The square footage of the area is the same, but because the office space only has 7 employees, trip generation was based on employee trips.

The previously approved "Distillery" (5,284 sf) has been replaced with a "Brewery Tap Room" (5,284 sf). For the purposes of this evaluation due to similar use the previously approved individual square footage and trip generation will be used for the "Brewery Tap Room". Trip generation for the "Brewery Tap Room" is based on 1,200 SF of restaurant space (LUC 932) and 4,084 SF of brewery space (5 employees).

The previously approved "International Cryptozoology Museum" (993 sf) has doubled in size. Due to the "International Cryptozoology Museum" (1919 sf) doubling in size the trip generation will double from the previous report.

The site has moved onto its next phase of development, which includes Building's L, B2, and D. Building's L and B2 were identified as proposed development in the previous report. Building D was identified as potential future development in the previous report. Building's L, B2, and D will contribute 76 & 99 trip ends in the AM & PM peak hours respectively.

As shown in the table, the existing site is forecast to generate 274 trip ends during the AM peak hour and 472 trip ends during the PM peak hour.

Proposed Site Trip Generation

Our understanding is that the site is now moving into its next phase of development, which will include a 255-unit six story apartment building (identified as Building G on the enclosed site plan).

Trip generation for the proposed use has been based on the following:

- 255 Units of Residential Development – New Construction

The trip generation for the proposed use was calculated using the updated Institute of Transportation Engineers' publication, *Trip Generation*, 11th Edition (LUC 221 – Mid-Rise Apartment). It should be noted that LUC 221 provides two different trip generations, "not close to rail transit" and "close to rail transit". It is our understanding that ITE refers "close to rail transit" as more local transit, such as subways. The Amtrak located near Thompson's point, in our opinion, does not meet the intent for "close to rail transit". The following table summarizes the trip generation for the proposed uses:

Forecast Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building G Residential				
	Apartments – LUC 221	255 Units	101	100
Forecast Trip Generation			**101**	**100**

As shown in the table, the proposed residential use is forecast to generate an additional 101 trip ends and 100 trip ends during the AM and PM peak hours of the adjacent street, respectively.

Site Trip Generation

The trip generation for the existing site has been combined with the trip generation for the proposed new and remodeled buildings to yield the total site trip generation.

Total Site Trip Generation Summary

Site	Building	AM Peak Hour	PM Peak Hour
Existing			
	Building A – Mixed Used (Brick North)	51	137
	Building C – Events (Brick South)	100	195
	Building F1 – Warehouse	11	9
	Building F2 – Artist Studio	3	4
	Building L – Office	4	8
	Building B2 – Concessions	4	4
	Building D – Hotel	68	87
	Building I – Children's Museum and Theatre of Maine	33	33
	Existing Total	**274**	**472**
Proposed			
	Market Rate Apartments	101	100
	Forecast Total	**101**	**100**
Site Subtotal		**375**	**572**
Reduction (10%) for Bus / Train / Shared Use		(-37)	(-57)
Proposed Site Trip Generation		**338**	**515**
Permitted Trip Ends		734	1091
Difference Between Permitted and Proposed Site		**396**	**576**

As shown in the table, the site inclusive of the proposed residential development is forecast to generate 338 trip ends during the AM peak hour and 515 trip ends during the PM peak hour. This yields an overall trip generation that is 396 trip ends **less** than the permitted trip generation during the AM peak hour and 576 trip ends **less** than the permitted trip generation during the PM peak hour.

Parking Demand

Proposed Apartments: Parking for the new apartments is based on the ITE Parking Generation Manual, 5th Edition. The parking demand rate (1.31 spaces/unit) is based on Land Use Code (LUC) 221 – Multifamily

Housing (Mid-Rise). Because of the nature of the housing use, the peak parking demand (334 spaces) occurs overnight with the lowest parking demand (164 spaces) occurring during the day (1:00 – 2:00 PM). This complements the other uses on site well, since they will have the highest demand around noon time, with little to no demand (approximately 26-70 spaces) overnight.

Overall Site: The overall site parking demand is based on a combination of shared and designated parking methodologies. The shared methodology (majority of the site) assumes there are parking spaces not designated for specific uses and can be shared between the uses. There are some spaces on site such as the panhandle/residential garage that are proposed to use designated parking and be specifically residential or non-public Thompson's Point managed supply spaces. The attached parking demand calculations show the detailed time of day distribution for each use and the forecast demand. Based on the calculations the peak parking demand is between 6:00 PM and 10:00 PM for the overall site. The peak parking demand (without an event in Brick South or Halo) is 475 spaces and is anticipated to occur at 10:00 PM, of which 405 is the parking demand for the hotel and apartments which have designated spaces. Excluding the hotel and apartments, the peak parking demand is 165 spaces and occurs around noon. As identified in the approval for the master development plan, when special events of a certain attendance threshold occur, additional parking measures will be implemented on an as needed basis.

Conclusions

The following is a summary of the conclusions:

1. The site (including existing and proposed uses) is forecast to generate a total of 338 trip ends during the AM peak hour and 515 trip ends. This trip generation is 396 trip ends less than the permitted trip generation during the AM peak hour and 576 trip ends less than the permitted trip generation during the PM peak hour.

2. The peak parking demand for the proposed apartments (334 spaces) occurs overnight after 10:00 PM, when there is little to no demand from the other on-site uses, with the exception of the hotel demand (110 spaces). Excluding the hotel and apartments, the overall site parking demand peaks around noon, when the hotel and apartments are near their lowest parking demand.

Planning and Urban Development
Christine Grimando, AICP
Director

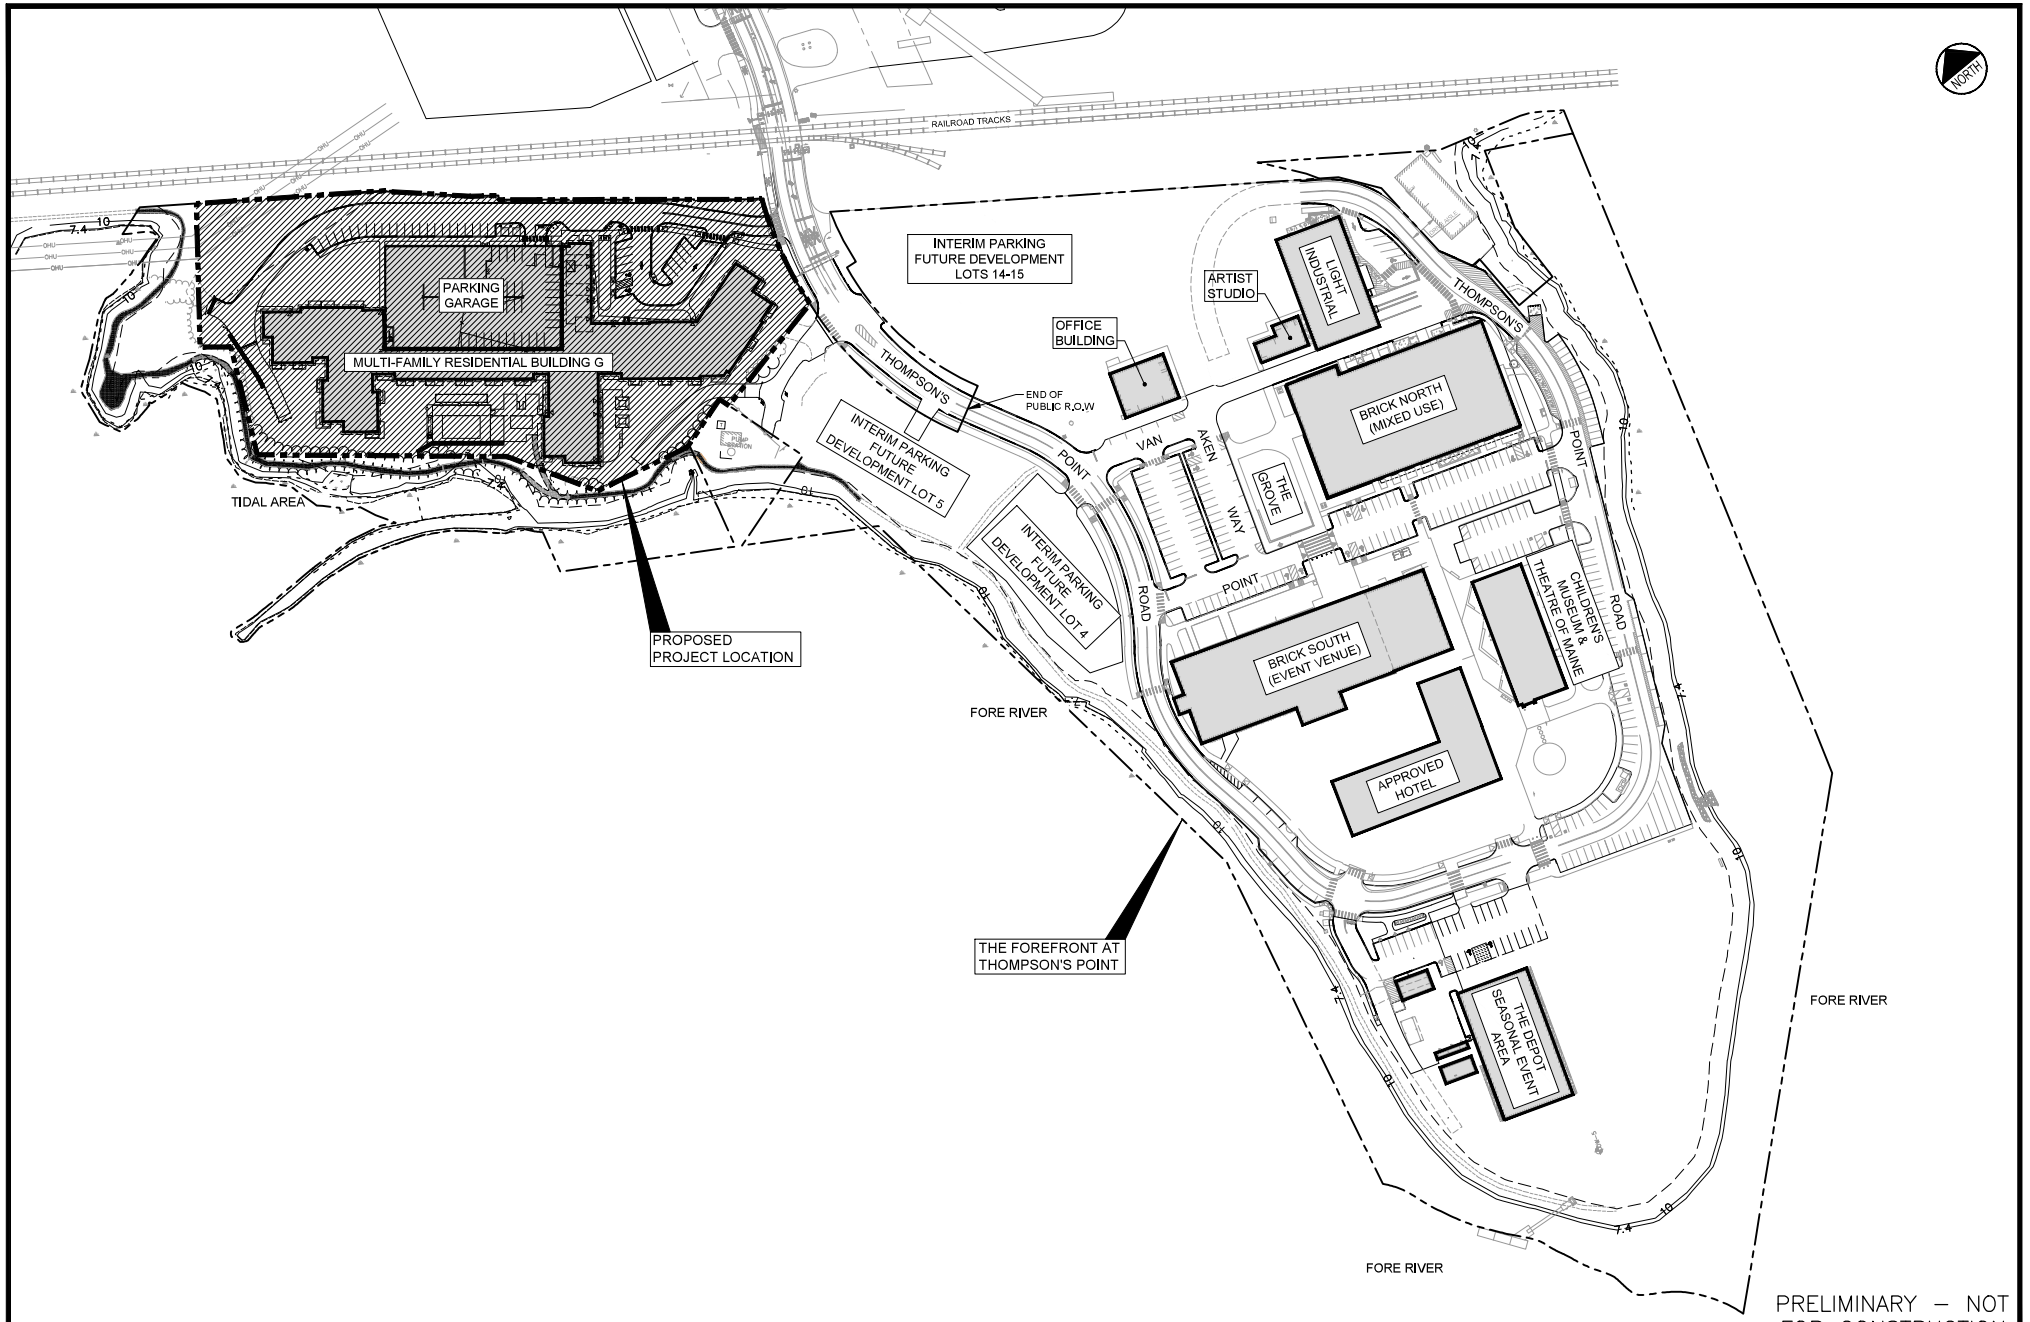
City of portland

Applicant:	Chris Thompson Forefront Partners I, LP 501 Danforth Street Portland, Maine 04102
Project Location:	1 Thompson's Point Rd. Portland, Maine 04102
Parcel #	201 A005001
Project:	Thompson's Point/Mixed-use Development
Identification #:	Reg. 01-00155-A-N
Permit Category:	200 Plus PCE
Traffic Engineer:	Thomas Gorrill/Randy Dunton Gorrill-Palmer Consulting Engineers 300 Southborough Dr., #200 South Portland, ME 04106

Pursuant to the provision of 23 M.R.S.A. § 704-A and Chapter 305 of the Maine Department of Transportation's (MaineDOT) Regulations, the City of Portland and MaineDOT have determined that a one-time extension of the Traffic Movement Permit issued for Thompson's Point is warranted. The permit will be considered expired if construction of the project has not been completed by March 1, 2027, unless a modification is approved prior to this date.

In the event the permit expires prior to construction being completed by the end of the one-time extension date, the Applicant shall submit a new permit, with information pertaining to Sections 1 thru 6 of the General Submission Requirements and a Notice of Intent to File, as outlined in Chapter 305, and address any changes in facts since the initial analysis and approval. Consistent with Section 8 of Chapter 305, in the event the Applicant completes all mitigation required for the Development, but cannot complete the Project within the one-time extension date, the Developer will be required to submit a TMP Modification that includes any programmatic changes to the Development for review and approval. An applicant may be required to provide additional mitigation of permitted trips as a result of changes to the Development program increase beyond the initial approval. Additionally, the Developer may be required to attend a Scoping Meeting, unless the Maine Department of Transportation waives this requirement.

389 Congress Street, Portland, Maine 04101 | ph: 207.874.8608 | cdg@portlandmaine.gov



All required terms and mitigation of the original TMP approval remain in effect.

Building A (Brick North)
Halo (Event Space) – 400 Attendees

Originally Approved: 5-14-2020 Final Memo with Attachments

Source: Based on approved calculation method of Brick South Event/Assembly Space. (TripGen Summary Memo 3-3-14)

2500 Occupants = 100 AM Trips
195 PM Trips

Based on City and MaineDOT reviewed and approved rates used in the original approved study. They originate from a study from the Bayside Expo and Executive Conference Center in Boston, MA.

Halo Event Space (400 Attendees) Calculations:

400 Occupants / 2500 Occupants = 0.16

AM = 0.16 X 100 AM Trips = **16 AM Trips**
PM = 0.16 X 195 PM Trips = **31 PM Trips**

Building L

Event Space – 100 Attendees

Originally Approved: 5-14-2020 Final Memo with Attachments

Source: Based on approved calculation method of Brick South Event/Assembly Space. (TripGen Summary Memo 3-3-14)

2500 Occupants = 100 AM Trips
195 PM Trips

Based on City and MaineDOT reviewed and approved rates used in the original approved study. They originate from a study from the Bayside Expo and Executive Conference Center in Boston, MA.

Event Space (100 Attendees) Calculations:

100 Occupants / 2500 Occupants = 0.04

AM = 0.04 X 100 AM Trips = **4 AM Trips**
PM = 0.04 X 195 PM Trips = **8 PM Trips**

Building B2

Trip Generation and Parking Demand Summary
Thompson's Point
September 2024 – (Revised 12-10-24)

Date: September 4, 2024 (Revised 12-10-24)
Subject: Updated Trip Generation and Parking Demand
Thompson's Point
To: Bo Kennedy, Placemaker Partners, LLC
From: Randy Dunton / Kyle Brennan, Gorrill Palmer (JN 4346)

Gorrill Palmer (GP) has prepared this updated trip generation and parking demand summary for the Thompson's Point development in Portland, Maine. The full build out of the project received a MaineDOT Traffic Movement Permit (TMP) in 2012 (Reg. 01-00155-A-N) for 734 trip ends during the AM peak hour and 1,091 trip ends during the PM peak hour. The Traffic Movement Permit received an extension in 2024 out to March 1, 2027. The documentation for the extension is attached. The project is being constructed in phases and each phase must be evaluated to ensure that the total site trip generation does not exceed the permitted trip generation. The following is a summary of the forecast trip generation and parking demand for the existing and previously approved uses, and the proposed residential development on site. A site plan is attached showing the location of each building.

Existing and Previously Evaluated Trip Generation Summary

The trip generation for the existing Thompson's Point site is based on discussions with Bo Kennedy, project manager/engineer for the site. The trip generation was calculated using the same methodology as that used in previous trip generation evaluations for the site, including using the Institute of Transportation Engineers' publication, *Trip Generation*, 7th Edition, except where otherwise noted, and applying a 10% reduction to the total site trip generation to account for other modes of transportation and shared uses on the site. The following table summarizes the trip generation for the existing site:

Existing and Approved Site Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building A Brick North				
	Halo (Event Space) – Previously approved	400 attendees	16	31
	Office Space – 7 Emp.	7 Employees	7	7
	Brewery & Sit-Down Restaurant – LUC 932 + 7 Emp.	14,644 sf (4,624 sf Rest. & 10,020 sf Brewery)	7	49 (42+7)
	Brewery Tap Room – LUC 932 + 5 Emp.	5,284 sf	16 (11+5)	16 (11+5)
	Color Me Mine – Previously Approved	2,136 sf	2	6
	International Cryptozoology Museum – Previously approved (doubled in size)	1919 sf	2	2
	Leisure Time Cocktails – LUC 975	1725 sf	N/A	20

	Coffee Roasting – Assumed (Employee only)	675 sf	1	1
	Brick North Total		**51**	**132**
Building C Brick South				
	Event/Assembly Space – Previously approved	2,500 Seats	100	195
	Annex	7,384 sf	--*	--*
	Brick South Total		**100**	**195**
Building F1				
	Warehouse – Previously approved	14,200 sf	11	9
	Building F1 Total		**11**	**9**
Building F2				
	Artist Studio Space – Previously approved	1,940 sf	3	4
	Building F2 Total		**3**	**4**
Building L				
	Office Space – Previously forecasted potential future development	4,000 sf	7	9
	Event Space – Previously forecasted potential future development	100 Attendees	4	8
	Existing Storage – Previously forecasted potential future development	1,760 sf	0**	0**
	Existing Office Space (Credit)	4,000 sf	(-7)	(-9)
	Building L Total		**4**	**8**
Building B2				
	Concession Building – Previously approved	960 sf	4	4
	Building B2		**4**	**4**
Building D				
	Proposed Hotel (2024 Construction Start) – Previously proposed development	148 Rooms	68	87
	Hotel Total		**68**	**87**
Building I Children's Museum and Theatre of Maine (CMTM)				
	CMTM– Previously approved	29,096 sf	33	33
	Children's Museum Total		**33**	**33**
Existing Subtotal			**274**	**472**

*Maximum of 2,500 people in the building for events. Highest trip generation would be an event in the Event space, not the Annex.
**Trip generation assumed to be negligible.

Since initially approved, there have been some minor changes to the uses. The "Rosemont Market" (2,724 sf) and Brewery & Sit-Down Restaurant (11,920 sf) have been combined and identified as "Brewery & Sit-Down Restaurant" (14,644 sf). For the purposes of this evaluation, the previously individual square footages have been combined. Trip generation for the "Brewery & Sit-Down Restaurant" was based on previously accepted "Brissell Brewery & Restaurant" methodology, where the restaurant trip generation is based on LUC 932 – High Turnover (Sit Down) Restaurant (4,624 SF) and trip generation for the brewery portion

(10,020 SF) is based on the 7 employees.

The previously approved coffee shop "Rwanda Bean" (2,400 sf) has been split with "Leisure Time Cocktails". "Rwanda Bean" (675 sf) is still occupying part of the space for coffee roasting, but the remaining space is now occupied by "Leisure Time Cocktails" (1725 sf).

The previously approved "Big Room Studios" (3,461 sf) has been replaced with an "Office Space". The square footage of the area is the same, but because the office space only has 7 employees, trip generation was based on employee trips.

The previously approved "Distillery" (5,284 sf) has been replaced with a "Brewery Tap Room" (5,284 sf). For the purposes of this evaluation due to similar use the previously approved individual square footage and trip generation will be used for the "Brewery Tap Room". Trip generation for the "Brewery Tap Room" is based on 1,200 SF of restaurant space (LUC 932) and 4,084 SF of brewery space (5 employees).

The previously approved "International Cryptozoology Museum" (993 sf) has doubled in size. Due to the "International Cryptozoology Museum" (1919 sf) doubling in size the trip generation will double from the previous report.

The site has moved onto its next phase of development, which includes Building's L, B2, and D. Building's L and B2 were identified as proposed development in the previous report. Building D was identified as potential future development in the previous report. Building's L, B2, and D will contribute 76 & 99 trip ends in the AM & PM peak hours respectively.

As shown in the table, the existing site is forecast to generate 274 trip ends during the AM peak hour and 472 trip ends during the PM peak hour.

Proposed Site Trip Generation

Our understanding is that the site is now moving into its next phase of development, which will include a 255-unit six story apartment building (identified as Building G on the enclosed site plan).

Trip generation for the proposed use has been based on the following:

- 255 Units of Residential Development – New Construction

The trip generation for the proposed use was calculated using the updated Institute of Transportation Engineers' publication, *Trip Generation*, 11th Edition (LUC 221 – Mid-Rise Apartment). It should be noted that LUC 221 provides two different trip generations, "not close to rail transit" and "close to rail transit". It is our understanding that ITE refers "close to rail transit" as more local transit, such as subways. The Amtrak located near Thompson's point, in our opinion, does not meet the intent for "close to rail transit". The following table summarizes the trip generation for the proposed uses:

Forecast Trip Generation

Building	Description	Size	AM Peak Hour	PM Peak Hour
Building G Residential				
	Apartments – LUC 221	255 Units	101	100
Forecast Trip Generation			**101**	**100**

As shown in the table, the proposed residential use is forecast to generate an additional 101 trip ends and 100 trip ends during the AM and PM peak hours of the adjacent street, respectively.

Site Trip Generation

The trip generation for the existing site has been combined with the trip generation for the proposed new and remodeled buildings to yield the total site trip generation.

Total Site Trip Generation Summary

Site	Building	AM Peak Hour	PM Peak Hour
Existing			
	Building A – Mixed Used (Brick North)	51	137
	Building C – Events (Brick South)	100	195
	Building F1 – Warehouse	11	9
	Building F2 – Artist Studio	3	4
	Building L – Office	4	8
	Building B2 – Concessions	4	4
	Building D – Hotel	68	87
	Building I – Children's Museum and Theatre of Maine	33	33
	Existing Total	**274**	**472**
Proposed			
	Market Rate Apartments	101	100
	Forecast Total	**101**	**100**
Site Subtotal		**375**	**572**
Reduction (10%) for Bus / Train / Shared Use		(-37)	(-57)
Proposed Site Trip Generation		**338**	**515**
Permitted Trip Ends		734	1091
Difference Between Permitted and Proposed Site		**396**	**576**

As shown in the table, the site inclusive of the proposed residential development is forecast to generate 338 trip ends during the AM peak hour and 515 trip ends during the PM peak hour. This yields an overall trip generation that is 396 trip ends **less** than the permitted trip generation during the AM peak hour and 576 trip ends **less** than the permitted trip generation during the PM peak hour.

Parking Demand

Proposed Apartments: Parking for the new apartments is based on the ITE Parking Generation Manual, 5th Edition. The parking demand rate (1.31 spaces/unit) is based on Land Use Code (LUC) 221 – Multifamily

Housing (Mid-Rise). Because of the nature of the housing use, the peak parking demand (334 spaces) occurs overnight with the lowest parking demand (164 spaces) occurring during the day (1:00 – 2:00 PM). This complements the other uses on site well, since they will have the highest demand around noon time, with little to no demand (approximately 26-70 spaces) overnight.

Overall Site: The overall site parking demand is based on a combination of shared and designated parking methodologies. The shared methodology (majority of the site) assumes there are parking spaces not designated for specific uses and can be shared between the uses. There are some spaces on site such as the panhandle/residential garage that are proposed to use designated parking and be specifically residential or non-public Thompson's Point managed supply spaces. The attached parking demand calculations show the detailed time of day distribution for each use and the forecast demand. Based on the calculations the peak parking demand is between 6:00 PM and 10:00 PM for the overall site. The peak parking demand (without an event in Brick South or Halo) is 475 spaces and is anticipated to occur at 10:00 PM, of which 405 is the parking demand for the hotel and apartments which have designated spaces. Excluding the hotel and apartments, the peak parking demand is 165 spaces and occurs around noon. As identified in the approval for the master development plan, when special events of a certain attendance threshold occur, additional parking measures will be implemented on an as needed basis.

Conclusions

The following is a summary of the conclusions:

1. The site (including existing and proposed uses) is forecast to generate a total of 338 trip ends during the AM peak hour and 515 trip ends. This trip generation is 396 trip ends less than the permitted trip generation during the AM peak hour and 576 trip ends less than the permitted trip generation during the PM peak hour.

2. The peak parking demand for the proposed apartments (334 spaces) occurs overnight after 10:00 PM, when there is little to no demand from the other on-site uses, with the exception of the hotel demand (110 spaces). Excluding the hotel and apartments, the overall site parking demand peaks around noon, when the hotel and apartments are near their lowest parking demand.

Planning and Urban Development
Christine Grimando, AICP
Director

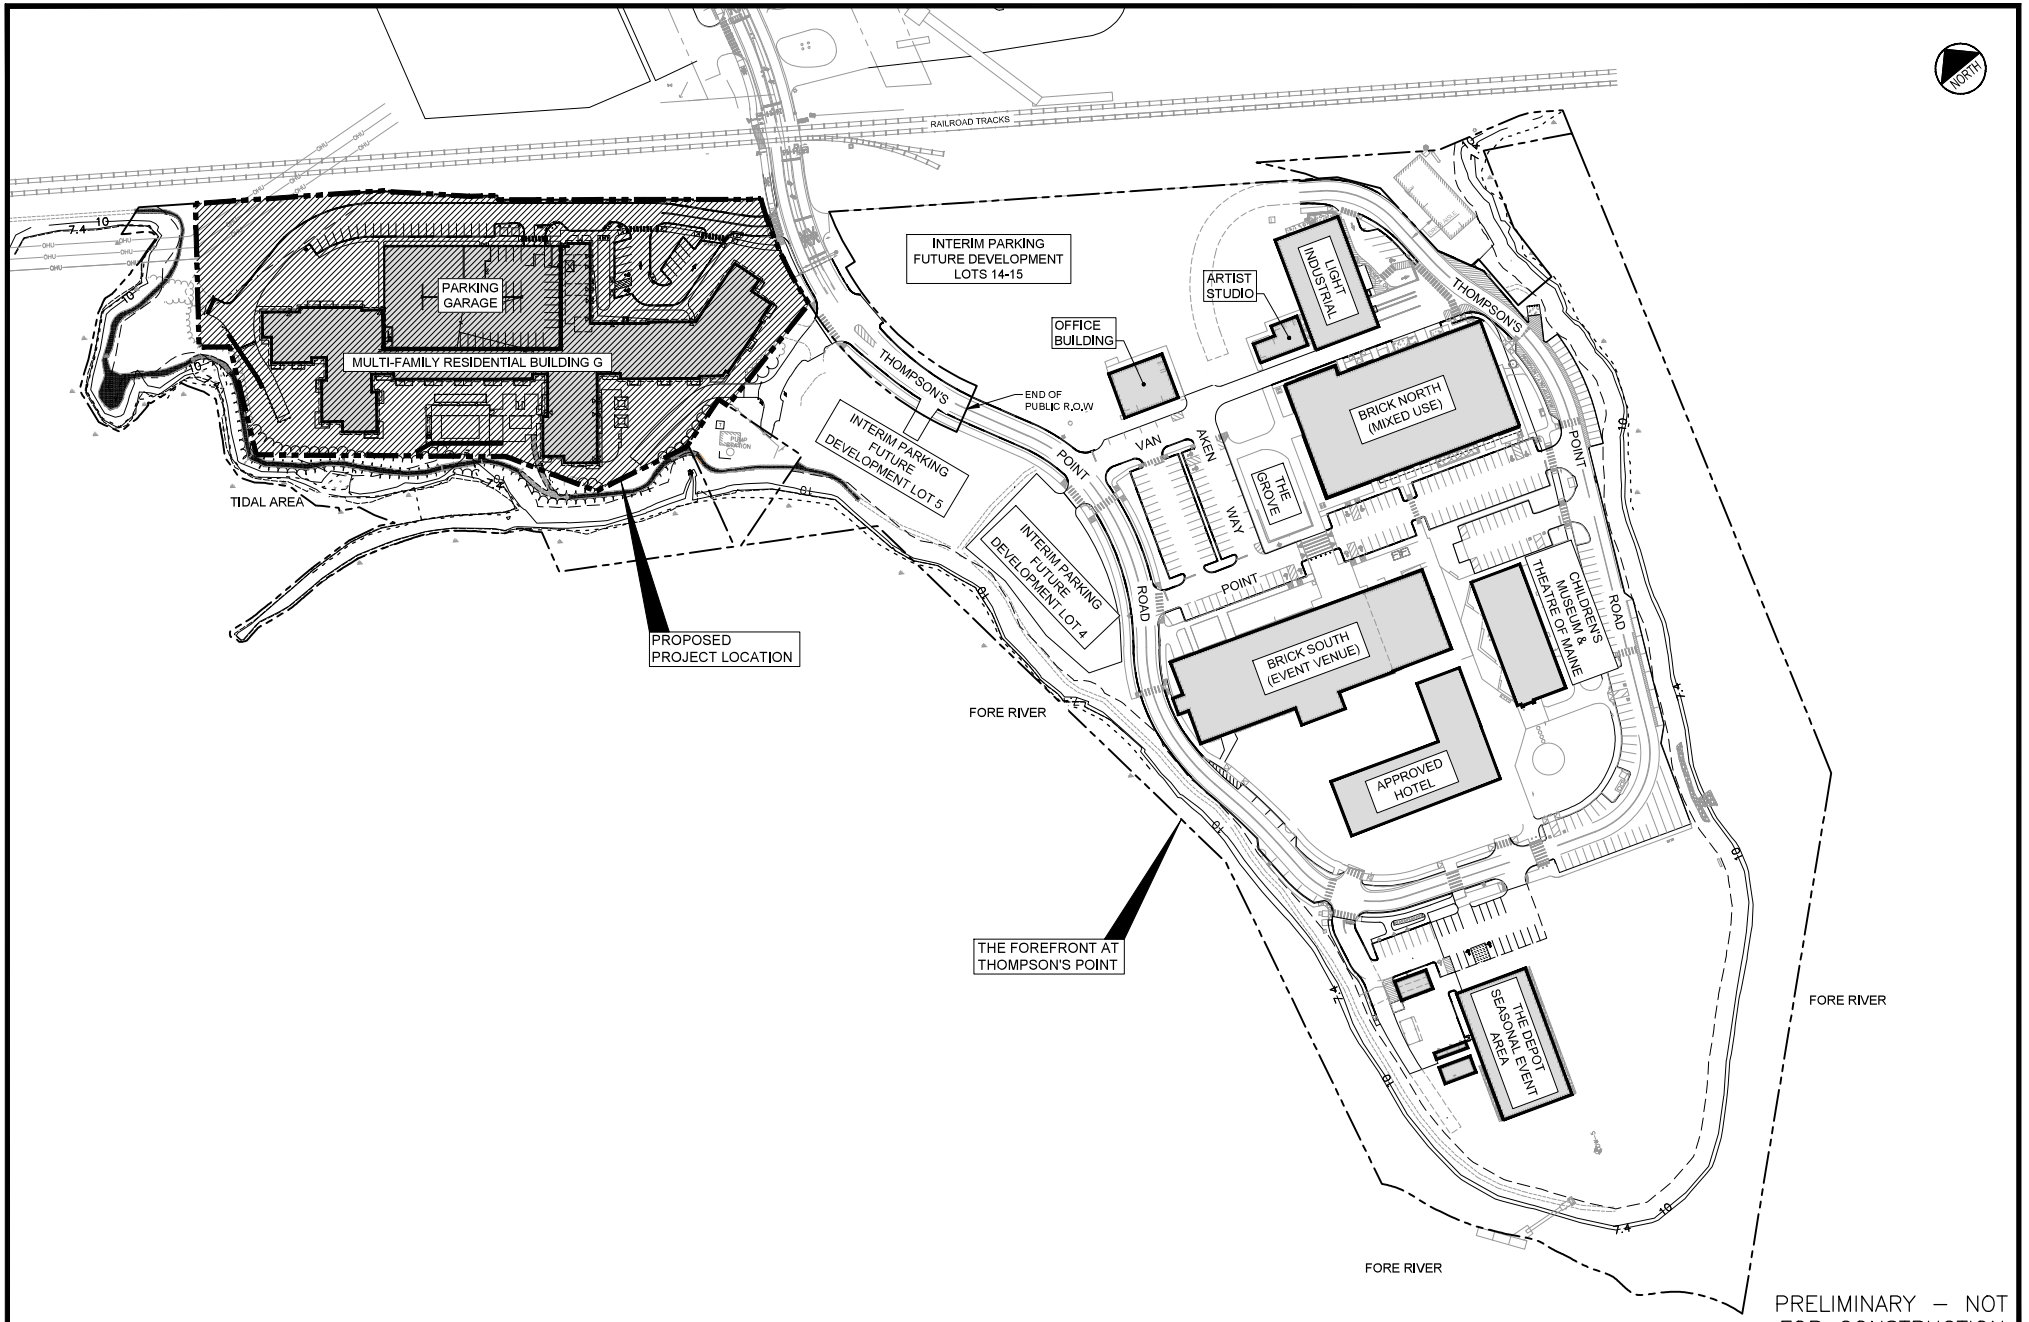
City of portland

Applicant:	Chris Thompson Forefront Partners I, LP 501 Danforth Street Portland, Maine 04102
Project Location:	1 Thompson's Point Rd. Portland, Maine 04102
Parcel #	201 A005001
Project:	Thompson's Point/Mixed-use Development
Identification #:	Reg. 01-00155-A-N
Permit Category:	200 Plus PCE
Traffic Engineer:	Thomas Gorrill/Randy Dunton Gorrill-Palmer Consulting Engineers 300 Southborough Dr., #200 South Portland, ME 04106

Pursuant to the provision of 23 M.R.S.A. § 704-A and Chapter 305 of the Maine Department of Transportation's (MaineDOT) Regulations, the City of Portland and MaineDOT have determined that a one-time extension of the Traffic Movement Permit issued for Thompson's Point is warranted. The permit will be considered expired if construction of the project has not been completed by March 1, 2027, unless a modification is approved prior to this date.

In the event the permit expires prior to construction being completed by the end of the one-time extension date, the Applicant shall submit a new permit, with information pertaining to Sections 1 thru 6 of the General Submission Requirements and a Notice of Intent to File, as outlined in Chapter 305, and address any changes in facts since the initial analysis and approval. Consistent with Section 8 of Chapter 305, in the event the Applicant completes all mitigation required for the Development, but cannot complete the Project within the one-time extension date, the Developer will be required to submit a TMP Modification that includes any programmatic changes to the Development for review and approval. An applicant may be required to provide additional mitigation of permitted trips as a result of changes to the Development program increase beyond the initial approval. Additionally, the Developer may be required to attend a Scoping Meeting, unless the Maine Department of Transportation waives this requirement.

389 Congress Street, Portland, Maine 04101 | ph: 207.874.8608 | cdg@portlandmaine.gov



All required terms and mitigation of the original TMP approval remain in effect.

GORRILL PALMER
An LJB Engineering Company

Building L

Event Space – 100 Attendees

Originally Approved: 5-14-2020 Final Memo with Attachments

Source: Based on approved calculation method of Brick South Event/Assembly Space. (TripGen Summary Memo 3-3-14)

2500 Occupants = 100 AM Trips
195 PM Trips

Based on City and MaineDOT reviewed and approved rates used in the original approved study. They originate from a study from the Bayside Expo and Executive Conference Center in Boston, MA.

Event Space (100 Attendees) Calculations:

100 Occupants / 2500 Occupants = 0.04

AM = 0.04 X 100 AM Trips = **4 AM Trips**
PM = 0.04 X 195 PM Trips = **8 PM Trips**

Building B2

GORRILL PALMER
An LJB Engineering Company

Building B2

Concession Building – 960 SF

Originally Approved: Final Trip Gen Evaluation-06-13-22

Source: As stated in the previous report "For the purposes of this evaluation, we have considered trip generation to be 4 employees during both the AM and PM Peak Hours."

AM: 4 Trips
PM: 4 Trips

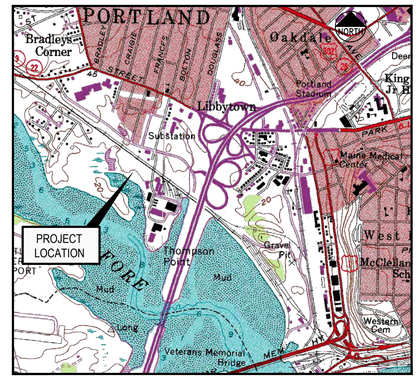
Notes:

1. Land Use Codes (LUC) are all from ITE Parking Generation 5th Edition
2. This Spreadsheet does not take "practical capacity" into consideration
3. This Spreadsheet does not take shared internal parking into consideration

Custom 1 - Based on 20 trips generated in the PM Peak Hour, assumes 1 space for each 2 trip ends during the peak hour.
Custom 2 - Based on assumption of one person coffee roasting.
Custom 3 - The 3.5 people per car for a special event was reviewed and approved by the City as part of a prior parking study for Thompsons Point
Custom 4 - These uses had an assumed parking need of 10 spaces that were held throughout the day
Custom 5 - This use is assumed to supplement existing on-site uses and and attract significant generation from off-site



*Assumes Evening Event
**Based on ITE Parking Generation for LUC 221 - Weekday (Mon-Fri) - Dwelling Units

GENERAL NOTES

1. IN ADDITION TO THESE PLANS AND NOTES, THE CONTRACTOR SHALL REFER TO AND ADHERE TO CONTRACT DOCUMENTS WHICH INCLUDE BUT ARE NOT LIMITED TO ALL LOCAL, STATE, AND FEDERAL PERMITS APPLICABLE TO THE THOMPSON'S POINT SITE IN ADDITION TO ALL LOT 6 DEVELOPMENT PERMITS, THE MAINE DEP VRAP WORK PLAN, LEED SILVER DOCUMENT RECORDING, AND MAINE DEPARTMENT OF TRANSPORTATION SPECIFICATIONS.

2. THIS PROJECT WILL BE SUBJECT TO THE TERMS AND CONDITIONS OF ALL PERMITS ISSUED BY THE MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION, MAINE DEPARTMENT OF TRANSPORTATION, THE U.S DEPARTMENT OF THE ARMY CORPS OF ENGINEERS, LOCAL UTILITY COMPANIES AND THE CITY OF PORTLAND.

3. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL PLANS FOR EXACT LOCATIONS AND DIMENSIONS OF THE ENTRANCE, PAVING, PRECISE BUILDING DIMENSIONS, AND EXACT BUILDING UTILITY ENTRANCE POINTS. ENTRANCES IN MOST LOCATIONS REQUIRE STRUCTURAL SLABS. REFER TO THE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR INFORMATION ON THE STRUCTURAL SLAB ENTRANCES.

4. ALL REQUIRED AND NECESSARY INSPECTIONS AND OR CERTIFICATIONS REQUIRED BY CODES AND/OR UTILITY SERVICE COMPANIES SHALL BE PERFORMED PRIOR TO ANNOUNCED BUILDING POSSESSIONS AND THE FINAL SERVICE CONNECTIONS.

5. THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT THE LOCATION AND/OR THE ELEVATION OF THE EXISTING UTILITIES AS SHOWN ON THESE PLANS IS BASED ON RECORDS OF THE VARIOUS UTILITY COMPANIES AND, WHERE POSSIBLE, MEASUREMENTS TAKEN IN THE FIELD. THIS INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR MUST CALL THE APPROPRIATE UTILITY COMPANY AND DIG SAFE AT LEAST 72 HOURS PRIOR TO ANY EXCAVATION TO REQUEST EXACT FIELD LOCATION OF UTILITIES. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO RELOCATE ALL EXISTING UTILITIES WHICH CONFLICT WITH THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS, AT ITS SOLE COST.

6. MAINTENANCE OF EROSION CONTROL MEASURES IS OF PARAMOUNT IMPORTANCE TO THE APPLICANT AND THE CONTRACTOR IS RESPONSIBLE FOR COMPLYING WITH ALL EROSION CONTROL MEASURES SHOWN ON THE PLANS. ADDITIONAL EROSION CONTROL MEASURES SHALL BE INSTALLED IF DEEMED NECESSARY BY ONSITE INSPECTIONS OF THE OWNER, THEIR REPRESENTATIVES, OR THE CITY, AT NO ADDITIONAL COST TO THE OWNER.

7. ALL MATERIAL SCHEDULES SHOWN ON THE PLANS ARE FOR GENERAL INFORMATION ONLY. THE CONTRACTOR SHALL PREPARE HIS OWN MATERIAL SCHEDULES BASED UPON HIS PLAN REVIEW. ALL SCHEDULES SHALL BE VERIFIED IN THE FIELD BY THE CONTRACTOR PRIOR TO ORDERING MATERIALS OR PERFORMING WORK.

8. ALL MATERIALS AND CONSTRUCTION METHODS SHALL CONFORM TO THE PROJECT SPECIFICATIONS, THE CITY OF PORTLAND AND SERVICING UTILITY REQUIREMENTS, IN CASES WHERE THESE CONFLICT THE MOST STRINGENT SHALL APPLY AT NO EXTRA COST TO THE OWNER.

9. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING RECORD DRAWINGS THROUGHOUT THE PROJECT AND PROVIDING THE OWNER WITH A SET OF ELECTRONIC FINAL RECORD DRAWINGS WHEN THE PROJECT IS COMPLETE.

10. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING ACCESS TO THOMPSON'S POINT AND ALL ADJACENT PROPERTIES INCLUDING THE RAILROAD R.O.W. AT ALL TIMES. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL TEMPORARY MARKINGS, SIGNAGE AND INCIDENTALS TO MAINTAIN SAFE VEHICLE AND PEDESTRIAN ACCESS THROUGH OUT THE LIFE OF THE PROJECT. THE CONTRACTOR SHALL NOTIFY THE PORTLAND PUBLIC SAFETY DIVISION ROUTINELY REGARDING TEMPORARY IMPACT OR CHANGES TO EMERGENCY SITE ACCESS CONDITIONS.

SITE LAYOUT NOTES

1. ALL HANDICAP PARKING SPACES ARE TO RECEIVE HANDICAP SIGNS AND PAVEMENT MARKINGS AS ILLUSTRATED ON THE DETAIL SHEETS.

2. BITUMINOUS CONCRETE CURB, SLIPFORM CONCRETE CURB AND GRANITE CURB SHALL MEET THE REQUIREMENTS OF MDOT 702.001, 703.07 AND 609.04.

3. ALL DIMENSIONING, UNLESS NOTED OTHERWISE, IS TO THE FACE OF CURB OR THE FACE OF THE BUILDING.

4. EXCEPT WHERE INDICATED OTHERWISE, THE PAVEMENT IS TO BE STANDARD DUTY PAVEMENT. SEE DRAWINGS C-3.5 SURFACE TREATMENT PLAN FOR PAVEMENT TYPE.

5. ALL TRAFFIC CONTROL SIGNS INDICATED ON THE SITE LAYOUT PLAN ARE TO MEET ALL REQUIREMENTS & STANDARDS OF THE MAINE DEPARTMENT OF TRANSPORTATION, AND THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, LATEST EDITIONS AND THE AMERICANS WITH DISABILITIES ACT REQUIREMENTS.

6. STRIPE PARKING AREAS, DRIVES AND ROADWAY AS SHOWN, INCLUDING PARKING SPACES, STOP BARS, CROSSWALKS, HANDICAP SYMBOLS, PAINTED ISLANDS AND FIRE LANES. (ALL MARKINGS EXCEPT MEDIAN ISLANDS AND CENTERLINES TO BE CONSTRUCTED USING WHITE TRAFFIC PAINT). ALL TRAFFIC PAINT SHALL MEET THE REQUIREMENTS OF AASHTO M248 TYPE "F". MEDIAN ISLANDS AND CENTERLINES TO BE CONSTRUCTED USING YELLOW TRAFFIC PAINT.

7. SEE DETAILS FOR PARKING STALL DIMENSIONS, HANDICAP SYMBOLS, SIGNS AND SIGN POSTS.

8. STOP BARS SHALL BE 12" WIDE.

9. PAINTED ISLANDS SHALL BE 4" WIDE DIAGONAL LINES @ 3'-0" O.C. BORDERED BY 4" WIDE LINES.

GRADING & DRAINAGE NOTES:

1. ALL STORM DRAIN PIPE SHALL BE SMOOTH BORE INTERIOR PROVIDING A MANNINGS ROUGHNESS COEFFICIENT OF N = 0.012 OR LESS.

2. PROVIDE TURF REINFORCEMENT IN AREAS INDICATED ON THE PLANS.

3. AS "AS-BUILT" CERTIFICATION AND PLANS OF THE STORMWATER DRAINAGE SYSTEM IS REQUIRED PRIOR TO THE OWNER ACCEPTING ANY BUILDINGS AND PROPERTY. THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT ANY DEVIATION FROM THE PLANS MAY DELAY THE ACCEPTANCE OF THE PROJECT, WITH CONTRACTOR RESPONSIBLE FOR ANY ASSOCIATED COSTS.

4. A DETAILED O&M MANUAL FOR STORMWATER MANAGEMENT SYSTEMS IS (WILL BE) FILED WITH THE CITY OF PORTLAND DURING THE PERMIT REVIEW PROCESS. A SPECIFIC MANUAL HAS BEEN PREPARED FOR O&M OF THE DRAINAGE SYSTEM.

5. SEE EXISTING CONDITIONS FOR BENCHMARK INFORMATION.

6. SEE GRADING, DRAINAGE AND EROSION/SEDIMENT CONTROL FOR PROPOSED GRADING AND EROSION CONTROL MEASURES.

7. ALL DISTURBED AREAS NOT TO BE PAVED, SODDED OR OTHERWISE TREATED SHALL RECEIVE 6" LOAM, SEED, FERTILIZER AND MULCH.

8. COMPACTION REQUIREMENTS:

LOCATION	MINIMUM COMPACTION*
SUBBASE AND BASE GRAVEL BELOW PAVED OR CONCRETE AREAS	95%
SUBGRADE FILL BELOW PAVED AREAS	90%
TRENCH BEDDING MATERIAL AND SAND BLANKET BACKFILL	95%
BELOW LOAM AND SEED AREAS	90%
STRUCTURAL FILL WITHIN PROPOSED BUILDING AREA	95%
SELECT FILL ADJACENT BUILDING FOUNDATIONS, EXTERIOR FOUNDATIONS AND WITHIN 8 INCHES OF THE SLAB-ON-GRADE	95%

*ALL PERCENTAGES OF COMPACTION SHALL BE OF THE MAXIMUM DRY DENSITY AT THE OPTIMUM MOISTURE CONTENT AS DETERMINED AND CONTROLLED IN ACCORDANCE WITH ASTM-D-1557.

9. ADJUST ALL MANHOLES, CATCH BASINS, CURB BOXES, ETC. WITHIN LIMITS OF WORK TO FINISH GRADE.

10. CONTRACTOR SHALL PROVIDE A FINISH PAVEMENT SURFACE FREE OF LOW SPOTS AND PONDING AREAS. CRITICAL AREAS INCLUDE BUILDING ENTRANCE AND EXIT RAMPS ADJACENT TO THE BUILDING AND ALONG NEW CURBED AREAS.

11. PROVIDE STABILIZATION OR SEPARATION GEOTEXTILE FABRIC OVER UNSTABLE SOILS AS DIRECTED BY THE OWNER'S REPRESENTATIVE AND IN ACCORDANCE WITH THE FINAL GEOTECHNICAL RECOMMENDATIONS.

12. NATIVE SOILS RANGE FROM GRANULAR TO CLAYEY AND SILTY. CARE MUST BE EXERCISED TO LIMIT DISTURBANCE OF THE BEARING SOILS. THE NATIVE CLAYEY OR SILTY SOILS SHOULD NOT BE PROOF-ROLLED. SHOULD THE SUBGRADE BECOME YIELDING OR DIFFICULT TO WORK, DISTURBED AREAS SHOULD BE EXCAVATED AND BACKFILLED WITH COMPACTED SELECT FILL OR CRUSHED STONE AT NO EXTRA EXPENSE TO THE OWNER. ALL SUBGRADE PREPARATION IS SUBJECT TO THE RECOMMENDATIONS OF THE PROJECT GEOTECHNICAL ENGINEER.

LOCAL APPROVALS, WAIVERS AND VARIANCES

THE CONSTRUCTION PLANS ARE TO BE SUBMITTED TO THE CITY OF PORTLAND FOR THEIR REVIEW, APPROVAL AND RECORDS PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.

UTILITY NOTES

1. ALL REQUIRED UTILITIES SERVING THE PROJECT SHALL BE COORDINATED AND CONSTRUCTED BY THE DIVISION SITE CONTRACTOR TO WITHIN 5 FEET OF THE BUILDINGS, AT A LOCATION COORDINATED WITH THE MEP CONTRACTOR(S) AND THE BUILDING PLANS. SITE WORK WITHIN 5 FEET OF UNDERSLAB UTILITIES SHALL CONSIST OF TRENCHING AND BACKFILLING. ACTUAL UTILITY INSTALLATION SHALL BE BY THE MEP CONTRACTOR. ALL REQUIRED CONNECTION FEES SHALL BE PAID BY THE OWNER.

2. THE CONTRACTOR SHALL COORDINATE THE INSTALLATION OF AND/OR RELOCATION OF OVERHEAD AND UNDERGROUND TELEPHONE WITH FAIRPOINT COMMUNICATIONS. CONTRACTOR SHALL BE RESPONSIBLE FOR CONDUITS, PULL WIRES, TRENCHING AND BACKFILLING NECESSARY TO COMPLETE THE WORK.

3. ALL SANITARY SEWER WORK SHALL MEET THE STANDARDS OF THE MAINE STATE PLUMBING CODE AND CITY OF PORTLAND PUBLIC SERVICES DIVISION.

4. THE CONTRACTOR SHALL COORDINATE THE INSTALLATION OF ELECTRIC SERVICE WITH CENTRAL MAINE POWER.

5. COORDINATE ALL UTILITY WORK WITH THE APPROPRIATE UTILITY COMPANY. ALL UTILITY WORK SHALL CONFORM TO THE STANDARDS OF THE UTILITY COMPANY AND PROJECT SPECIFICATIONS, WHICHEVER IS MORE STRINGENT.

6. THE LOCATIONS OF THE NEW UTILITY SERVICES AND CONNECTIONS SHALL BE COORDINATED WITH THE SERVING UTILITY COMPANY, PROJECT ARCHITECTS AND MEP DESIGNERS.

7. UNDERGROUND ELECTRICAL, CONDUIT MATERIAL AND INSTALLATION SHALL CONFORM TO UTILITY COMPANY STANDARDS AND PROJECT SPECIFICATIONS, WHICH EVER IS MORE STRINGENT.

8. ADJUST ALL MANHOLES, CATCH BASINS, CURB BOXES, ETC. WITHIN LIMITS OR WORK TO FINISH GRADE.

9. ALL UNDERGROUND CONDUITS SHALL HAVE NYLON PULL ROPES TO FACILITATE PULLING CABLES.

10. THE CONTRACTOR SHALL OBTAIN, AND COMPLY WITH ALL REQUIRED PERMITS, ARRANGE FOR ALL INSPECTIONS, AND SUBMIT COPIES OF ACCEPTANCE CERTIFICATES TO THE OWNER PRIOR TO COMPLETION OF THE PROJECT.

11. THE CONTRACTOR SHALL PROVIDE AND INSTALL ALL BOXES, FITTINGS, CONNECTORS, COVER PLATES AND OTHER MISCELLANEOUS ITEMS NOT NECESSARILY DETAILED ON THE DRAWINGS TO RENDER INSTALLATION OF UTILITIES COMPLETE AND OPERATIONAL, AT NO EXTRA EXPENSE TO THE OWNER.

12. A 10 FOOT MINIMUM EDGE TO EDGE HORIZONTAL SEPARATION SHALL BE PROVIDED BETWEEN ALL WATER AND SANITARY SEWER LINES. AN 18 INCH OUTSIDE TO OUTSIDE VERTICAL SEPARATION SHALL BE PROVIDED AT ALL WATER AND SANITARY SEWER CROSSINGS.

13. THE CONTRACTOR SHALL PHASE UTILITY CONSTRUCTION AND PROVIDE TEMPORARY SERVICES AS REQUIRED TO PROVIDE CONTINUOUS SERVICE TO THE JOB SITE, SUBURBAN PROPANE AND NNEPRA TEMPORARY SERVICES SHALL COMPLY WITH ALL FEDERAL, STATE, LOCAL AND UTILITY COMPANY STANDARDS. COORDINATE ALL TEMPORARY SERVICES WITH UTILITY COMPANY, OWNER AND AFFECTED BUSINESSES.

LANDSCAPE NOTES

(SUBJECT TO COORDINATION WITH LANDSCAPE DRAWINGS. IN CASE OF CONFLICT BETWEEN THIS SECTION AND THE LANDSCAPE DRAWINGS, THE LANDSCAPING DRAWINGS SHALL GOVERN)

1. ALL PLANTS SHALL BE NURSERY GROWN AND WORKMANSHIP SHALL CONFORM TO THE AMERICAN ASSOCIATION OF NURSERYMEN, STANDARDS AND SHALL BE SUBJECT TO THE APPROVAL OF THE OWNERS REPRESENTATIVE BEFORE AND AFTER PLANTING.

2. PLANTS SHALL BE GUARANTEED FOR A PERIOD OF ONE (1) YEAR AFTER INSPECTION AND ACCEPTANCE, AND SHALL HAVE AT LEAST 80% HEALTHY GROWTH AT THE END OF THE GUARANTEED PERIOD.

3. ALL DISTURBED AREAS NOT TO BE PAVED OR OTHERWISE TREATED SHALL RECEIVE 6" LOAM AND SEED AND 6" CLEAN COMMON BORROW AS DEFINED IN VRAP WORK PLAN BY CREDERE ASSOCIATES, DATED MARCH 6, 2013.

4. THREE (3) INCH BARK MULCH IS TO BE USED AROUND THE TREE AND SHRUB PLANTING AS SPECIFIED IN THE DETAILS. WHERE BARK MULCH IS USED IN A CURBED ISLAND, THE BARK SHALL MEET THE TIP INSIDE EDGE OF THE CURB. ALL OTHER AREAS SHALL RECEIVE 6" LOAM AND SEED.

5. THE CONTRACTOR SHALL SUPPLY ALL PLANT MATERIALS IN QUANTITIES SUFFICIENT TO COMPLETE THE PLANTING AS SHOWN.

6. PARKING AREA PLANTED ISLANDS TO HAVE A MINIMUM OF 6" TOPSOIL. REMOVE ALL CONSTRUCTION DEBRIS BEFORE TOPSOILING. TOPSOIL SHALL BE PLACED TO TOP OF CURB.

7. ALL PLANT MATERIAL SHALL BE APPROVED BY THE OWNER OR THE OWNERS REPRESENTATIVE PRIOR TO ARRIVAL ON THE SITE.

8. PLANT MATERIAL SHALL BEAR THE SAME RELATIONSHIP TO FINISHED GRADE AS TO THE ORIGINAL PLANTING GRADE PRIOR TO DIGGING.

9. THE CONTRACTOR SHALL LOCATE, VERIFY, AND MARK ALL EXISTING AND NEWLY INSTALLED UNDERGROUND UTILITIES PRIOR TO ANY LAWN WORK OR PLANTING. ANY CONFLICTS WHICH MIGHT OCCUR BETWEEN PLANTINGS AND UTILITIES SHALL BE IMMEDIATELY REPORTED TO THE OWNER SO THAT ALTERNATE PLANTING LOCATIONS CAN BE DETERMINED.

10. NO SUBSTITUTION OF PLANT MATERIALS SHALL BE ALLOWED WITHOUT THE PRIOR WRITTEN APPROVAL OF THE OWNER.

11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING ALL PLANTING AND LAWNS AGAINST DAMAGE FROM ONGOING CONSTRUCTION. THIS PROTECTION SHALL BEGIN AT THE TIME THE PLANT IS INSTALLED AND CONTINUE UNTIL THE FORMAL ACCEPTANCE OF ALL THE PLANTINGS.

12. SEE PLANTING DETAILS FOR WEED BARRIER INFORMATION.

13. ALL PLANTING LOCATED AT THE ENTRANCE TO THE PROJECT OR AT INTERSECTIONS WITHIN THE SITE WILL BE MAINTAINED AND WILL NOT EXCEED 3 FEET IN HEIGHT WITHIN A TRIANGLE FORMED 25' INTO THE DRIVEWAY AND 25' ALONG THE TRAVEL WAY.

EROSION CONTROL NOTES:

1. PRIOR TO BEGINNING ANY LAND DISTURBING ACTIVITIES, CLEARING AND GRADING LIMITS SHALL BE STAKED BY THE CONTRACTOR BASED ON THE LIMITS OF GRADING SHOWN ON THE DRAWINGS AND ACCEPTED BY THE OWNER'S REPRESENTATIVE IN THE FIELD. AFTER THE CLEARING AND GRADING LIMITS HAVE BEEN ACCEPTED, THE CONTRACTOR SHALL INSTALL THE PERIMETER SILT FENCES, SEDIMENT BARRIERS AND THE CONSTRUCTION ENTRANCES ASSOCIATED WITH THE PROJECT.

2. ALL GROUND AREAS GRADED FOR CONSTRUCTION SHALL BE GRADED, LOAMED, SEEDED AND MULCHED AS SOON AS POSSIBLE. TEMPRORARY/PERMANENT SEED MIXTURES SHALL CONFORM TO THE SEEDING PLAN CONTAINED IN THE EROSION CONTROL PROJECT PREPARED FOR THIS PROJECT.

3. PRIOR TO PAVING, THE CONTRACTOR SHALL REMOVE SILT FROM ALL STORM LINES AND APPURTANCES.

4. ALL STORM DRAIN INLETS AND OUTLETS NOT IN PAVED AREAS ARE TO RECEIVE RIPRAP PROTECTION APRONS DURING CONSTRUCTION.

5. SILT FENCES SHALL BE INSPECTED, REPAIRED AND CLEANED AS NOTED IN THE EROSION CONTROL NOTES SHOWN ON THE EROSION CONTROL DETAIL SHEET.

6. THE CONTRACTOR SHALL REPAIR AND ADD STONE TO THE CONSTRUCTION ENTRANCE AS IT BECOMES SATURATED WITH MUD TO ENSURE THAT IT FUNCTIONS TO CAPTURE MUD FROM THE TIRES OF CONSTRUCTION VEHICLES DURING CONSTRUCTION. THE PURPOSE OF THE CONSTRUCTION ENTRANCE IS TO KEEP ADJACENT STREETS CLEAR OF DIRT AND MUD. SWEEPING OF THE ROADWAYS SHALL BE PERFORMED BY THE CONTRACTOR ON AN AS NEEDED BASIS, BUT AT A MINIMUM ONCE A WEEK.

7. SILT REMOVED FROM AROUND INLETS AND BEHIND THE SILT FENCES SHALL BE PLACED ON A TOPSOIL STOCKPILE AND MIXED INTO TOPSOIL FOR USE IN LANDSCAPING OPERATIONS.

8. LAND DISTURBING ACTIVITIES SHALL BE ACCOMPLISHED IN A MANNER AND SEQUENCE WHICH CAUSE THE LEAST PRACTICAL UNPROTECTED DENUDED AREAS ON THE SITE DURING CONSTRUCTION.

9. THE CONTRACTOR IS CAUTIONED THAT FAILURE TO COMPLY WITH THE SEQUENCE OF CONSTRUCTION, EROSION/SEDIMENT CONTROL PLAN, AND OTHER PERMIT REQUIREMENTS MAY RESULT IN MONETARY PENALTIES AS ENFORCED BY THE MEDEP OR LOCAL AGENCIES. THE CONTRACTOR SHALL BE ASSESSED ALL SUCH PENALTIES AT NO COST TO THE OWNER OR PERMITTEE.

10. A FULL EROSION/SEDIMENTATION CONTROL PLAN ACCOMPANIES THIS DRAWING SET AND IS ALSO CONTAINED IN THE DIV 312513 SPECIFICATIONS.

11. PROVIDE INLET PROTECTION BARRIERS AROUND ALL EXISTING AND PROPOSED STORM DRAINAGE INLETS AS SHOWN AND MAINTAIN FOR THE DURATION OF THE PROJECT UNTIL PAVEMENT HAS BEEN INSTALLED.

12. INSPECT EROSION AND SEDIMENT CONTROL DEVICES AFTER EACH RAIN STORM OF 0.25 INCHES OR GREATER. REPAIR/MODIFY PROTECTION AS NECESSARY TO MAXIMIZE EFFICIENCY FILTER. REPLACE ALL FILTERS WHEN SEDIMENT IS 1/3 OF THE STRUCTURE HEIGHT.

13. INSTALL CURLEX EROSION CONTROL MAT OR EQUAL ON ALL SLOPES STEEPER THAN 3:1.

14. THE CONTRACTOR SHALL INSTALL ALL EROSION CONTROL MEASURES IN ACCORDANCE WITH THE "MAINE EROSION AND SEDIMENT CONTROL HANDBOOK FOR CONSTRUCTION: BEST MANAGEMENT PRACTICES, CUMBERLAND COUNTY SOIL AND WATER CONSERVATION DISTRICT AND MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION, MARCH 2003".

PLAN REFERENCES:

1. BOUNDARY AND TOPOGRAPHIC DATA PROVIDED BY SEBAGO TECHNICS AS SHOWN ON A PLAN TITLED ALTA/ACSM LAND TITLE SURVEY OF 1 THOMPSON'S POINT, DATED MAY 27, 2011 AND LAST REVISED ON NOVEMBER 23, 2011. THIS PLAN HAS BEEN UPDATED TO REFLECT A NEW TOPOGRAPHIC SURVEY COMPLETED BY SEBAGO TECHNICS ON AUGUST 4, 2022.
2. GEOTECHNICAL EXPLORATION BORINGS AND TEST PIT LOCATIONS NOT SHOWN. AVAILABLE UPON REQUEST.
3. ADDITIONAL UTILITY DATA TAKEN FROM CITY AND UTILITY COMPANY RECORD DRAWINGS. AS WELL AS OBSERVATIONS BY PLACEMAKER PARTNERS, LLC PERSONNEL DURING SITE VISITS.
4. THIS PLAN HAS BEEN PREPARED BY PLACEMAKER PARTNERS, LLC THROUGH SOURCES NOTED ABOVE AND FIELD OBSERVATIONS OF ABOVE GROUND FEATURES. PLACEMAKER PARTNERS, LLC DOES NOT CERTIFY ITS ACCURACY AND NOTES CHANGES MAY HAVE OCCURRED SINCE THIS PLAN WAS APPROVED. ALL CONTRACTORS SHALL BE RESPONSIBLE FOR FIELD VERIFYING ALL CONDITIONS PRIOR TO CONTRACT SIGNING.
5. FEMA 100 YEAR FLOOD ELEVATION AE AS PUBLISHED IN 2023 IS NOTED TO BE ELEVATION 9 FEET, NAVD 1988 VERTICAL DATUM. THESE PLANS ARE BASED ON VERTICAL DATUM NGVD 1929. ELEVATION 9 FEET CONVERTS TO 9.76 FEET AND THEREFORE SLIGHTLY LOWER THAN THE ELEVATION 10 FEET SHOWN HERE IN. ELEVATION 10 FEET IS SHOWN FOR CLARITY AS PREVIOUSLY ASSUMED BASED ON PAST FEMA PUBLISHINGS.

DEMOLITION AND REMOVALS NOTES:

1. INFORMATION ON THIS PLAN WAS OBTAINED FROM A SURVEY NAMED "ALTA/ACSM LAND TITLE SURVEY OF 1 THOMPSON'S POINT, PORTLAND, MAINE" DATED MAY 27, 2011 BY SEBAGO TECHNICS OF WESTBROOK, MAINE AND MORE RECENTLY UPDATED WITH A TOPOGRAPHIC SURVEY DATED AUGUST 4, 2022.
2. DEMOLITION WORK INCLUDED WITH THIS CONTRACT IS DEFINED IN THE PROJECT SPECIFICATIONS, DRAWINGS AND ENVIRONMENTAL ASSESSMENT REPORT PREPARED BY CREDERE ASSOCIATES, LLC. IT SHALL INCLUDE BUT NOT BE LIMITED TO:
   a. BUILDING DEMOLITION
   b. LEAD PAINT ABATEMENT
   c. UNIVERSAL / HAZARDOUS WASTE REMOVAL
   d. CONCRETE FOUNDATION OFFSITE DISPOSAL
   e. UTILITY DISCONNECTION AT EACH RAZED BUILDING
   f. INSTALLATION OF EROSION AND SEDIMENT CONTROLS
   g. DUST CONTROL
3. THE CONTRACTOR SHALL REMOVE CONCRETE FOUNDATIONS TO A MINIMUM OF 2 FEET BELOW GRADE AND TRANSPORTED OFFSITE FOR DISPOSAL. FOUNDATION HOLES SHALL BE LEFT WITH OSHA COMPLIANT SIDEWALLS WITH A SLOPE NOT MORE THAN 3:1.
4. THE CONTRACTOR SHALL BE RESPONSIBLE TO PROVIDE TEMPORARY FACILITIES INCLUDING AN OFFICE TRAILER AND BATHROOM FACILITIES.
5. THE CONTRACTOR MUST OBTAIN ALL PERMITS REQUIRED BY THE CITY OF PORTLAND TO PERFORM CONTRACTED WORK INCLUDING BUT NOT LIMITED TO A CITY CONNECTION PERMIT (UTILITIES IN THE RIGHT-OF-WAY) PRIOR TO THE START OF WORK.
6. EROSION, SEDIMENT AND DUST CONTROL IS OF PARAMOUNT IMPORTANCE TO THE OWNER AND A CRITICAL COMPONENT OF THE PERMIT DOCUMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE TO REFER TO THE PROJECT DOCUMENTS FOR ALL REQUIREMENTS AS DETAILED IN THE ENVIRONMENTAL ASSESSMENT REPORT AND ITS APPENDED REPORTS PREPARED BY CREDERE ASSOCIATES, LLC. THE DEMOLITION CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTENANCE OF ALL EROSION AND SEDIMENT MEASURES UNTIL CLOSE OUT OF THE DEMOLITION CONTRACT.
7. THE CONTRACTOR IS REQUIRED TO SUBMIT A WRITTEN LOGISTICS PLAN A MIN. OF 48 HOURS PRIOR TO THE MOBILIZATION OF EQUIPMENT TO THE SITE. THE PLAN SHALL DETAIL LAYDOWN AREAS, ACCESS AREAS, STOCKPILE AREAS, SCHEDULE, ETC. THE OWNER RESERVES THE RIGHT TO MODIFY THE LOGISTICS PLAN TO BE CONSISTENT WITH THE PROJECT DOCUMENTS AT NO ADDITIONAL COST TO THE OWNER. THE PLAN SHALL BE CONSISTANT WITH THE APPROVED CONSTRUCTION MANAGEMENT PLAN.
8. THE CONTRACTOR SHALL HANDLE ALL DISTURBED SOILS IN ACCORDANCE WITH THE SOIL MANAGEMENT PLAN PREPARED BY CREDERE ASSOCIATES, LLC.
9. THE CONTRACTOR IS RESPONSIBLE FOR ALL DOCUMENTATION APPLICABLE TO THE GROUNDWATER AND SOIL REMOVAL AND DISPOSAL ACTIVITIES AS DETAILED IN THE GROUNDWATER MANAGEMENT PLAN AND SOIL MANAGEMENT PLAN BY CREDERE ASSOCIATES, LLC. AT NO EXTRA EXPENSE TO THE OWNER.
10. THE CONTRACTOR SHALL REMOVE, DISPOSE AND DOCUMENT ALL UNIVERSAL AND HAZARDOUS WASTE, LEAD-BASED PAINT AND SUB SLAB SOIL IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS INCLUDING THE PHASE II ENVIRONMENTAL ASSESSMENT REPORT AND MEDEP VRAP PLAN.
11. THE PROJECT SITE INCLUDES ONGOING TENANT ACTIVITIES, INCLUDING BUT NOT LIMITED TO RETAIL, EVENTS, OFFICE, AND NNEPRA, THAT SHALL REMAIN THROUGHOUT THE COURSE OF DEMOLITION AND CONSTRUCTION. CONSTRUCTION WORK SHALL BE CONDUCTED IN A MANNER TO MINIMIZE DISRUPTION TO THESE OPERATIONS.
12. SITE ACCESS TO THE CAMPUS, NNEPRA, CMP AND THE PORTLAND WATER DISTRICT MUST BE MAINTAINED AT ALL TIMES.
13. SITE ACCESS IS CURRENTLY THROUGH A PUBLIC RAILROAD CROSSING. NO EXTRA PAYMENT WILL BE MADE FOR TEMPORARY SHUTDOWNS RESULTING FROM RAILROAD OPERATIONS.
14. THE CONTRACTOR SHALL MAINTAIN CLEAR FIRE LANES ACCESS THE SITE THROUGHOUT THE DURATION OF WORK.
15. APPROXIMATE LOCATION OF HISTORICAL BUILDING PREVIOUSLY RAZED AS SHOWN ON THE SANBORN MAPS ATTACHED TO THE CREDERE ASSOCIATES ENVIRONMENTAL ASSESSMENT REPORT. THE CONTRACTOR SHOULD BE AWARE THAT REMNANTS OF THESE BUILDINGS MAY STILL BE PRESENT WHEN ENCOUNTERED DURING WORK OF THIS CONTRACT. WORK ASSOCIATED WITH REMOVAL OF BURIED FOUNDATIONS, SLABS OR OLD UTILITIES AND BACK FILL WITH CLEAN GRANULAR BORROW (MDOT 703.19) OF EXISTING VOIDS OR AS A RESULT OF REMOVAL SHALL BE CONSIDERED INCIDENTAL TO THE PROJECT AND COMPLETED AT NO ADDITIONAL COST TO THE OWNER.
16. THE PORTLAND FIRE DEPARTMENT SHOULD BE NOTIFIED PRIOR TO ANY SHUTDOWN OF ONSITE WATER MAINS AND HYDRANTS. IT IS THE OWNER'S INTENT TO MAINTAIN THE HYDRANT SERVICES UPON COMPLETION OF THE DEMOLITION PHASE ACTIVITIES SO THE CONTRACTOR SHALL INCLUDE ALL NECESSARY MEASURES TO SATISFY THIS REQUIREMENT.
17. THE CONTRACTOR SHALL MAINTAIN RECORD DRAWINGS; DOCUMENTING ALL UTILITY STUBS LOCATION, DEPTH, SIZE, TYPE AND CONDITION USING MEANS AND METHODS FOR CAPTURING DATA FOR DISPLAY IN AUTOCAD FORMAT.

DEMOLITION AND REMOVALS LEGEND

1-6 VACANT

7 STRIP AND STOCK PILE EXISTING GRAVEL FOR ONSITE REUSE

8 WOODS CLEARING AND GRUB AREA

9 REMOVE CHAIN LINK FENCE

10 CENTRAL MAINE POWER TO REMOVE UTILITY POLES AND OVERHEAD OR UNDERGROUND UTILITY WIRES AT A TIME WHEN TEMPORARY OR PERMANENT POWER CAN TAKE IT'S PLACE. ADJACENT PROPERTY OWNERS SUCH AS (BRICK NORTH, BRICK SOUTH, CMTM AND DEPOT) AND ON SITE TENANTS SHALL HAVE ACCESS TO POWER AT ALL TIMES. THE CONTRACTOR IS REQUIRED TO COORDINATE WITH THE UTILITY COMPANIES TO DISCONNECT POWER AT A TIME APPROVED BY THE OWNER.

11 EXISTING BITUMINOUS ASPHALT OR CONCRETE SURFACE TO BE REMOVED. THE CONTRACTOR MAY PROCESS (<4" DIA.) AND BLEND WITH GRAVEL FOR USE AS SUBBASE GRAVEL MATERIAL.

12 CONCRETE SLABS AND FOUNDATIONS TO BE DEMOLISHED - SALVAGEABLE MATERIAL INCLUDING BRICK AND CONCRETE BLOCK MAY BE PROCESSED ONSITE BUT MUST BE PROPERLY DISPOSED OF OFFSITE.FOUNDATIONS TO BE REMOVED A MINIMUM OF 2 FEET BELOW EXISTING GRADE. ALL UTILITY SERVICES SHALL BE CUT AND CAPPED 10'-0" FROM THE BUILDING WITH A WITNESS STAKE CLEARLY MARKED. THE CONTRACTOR IS RESPONSIBLE TO IDENTIFY AND DISCONNECT ALL UTILITIES CONNECTED TO THE BUILDING. SOME UTILITY CONNECTIONS MAY NOT BE SHOWN ON THIS PLAN AND SHALL BE DISCONNECTED AT NO ADDITIONAL COST TO THE OWNER. CONTRACTOR SHALL PROVIDE AN ALLOWANCE AND A PER CUBIC YARD PRICE TO REMOVE AND DISPOSE OF MATERIAL IN APPROVED OFF-SITE FACILITY. ALL TRUCKING SLIP VOLUMES SHALL BE TRACKED AND APPROVED BY OWNER OR ITS ASSIGNED REPRESENTATIVE PRIOR TO INVOICING.

13 EXISTING SANITARY SEWER OR STORM DRAINAGE STRUCTURE TO BE PROTECTED OR ALTERED

14 REMOVE SOIL STOCKPILE

15 EXISTING SANITARY SEWER OR DRAINAGE STRUCTURES AND PIPING TO BE REMOVED. ALL EXISTING SERVICE LEADERS SHALL REMAIN IN SERVICE UNTIL TEMPORARY OR PERMANENT SERVICE IS PROVIDED.

16 EXISTING WATER SUPPLY SYSTEM TO BE REMOVED INCLUDING ALL VALVES, SUPPLY MAINS, SERVICES AND BLOW OFFS TO THE LIMITS SHOWN ON PLANS.

17 PROTECT EXISTING WATER SUPPLY SYSTEM

EXISTING STORM DRAIN SEWER LINE WHICH IS BELIEVED TO DISCHARGE DIRECTLY TO THE FORE RIVER. ALL GROUNDWATER DISCHARGED TO THESE LINES SHALL BE TREATED IN ACCORDANCE WITH "SECTION 4.3 COLLECTION, TREATMENT, AND ON-SITE DISPOSAL" OF THE "GROUNDWATER MANAGEMENT PLAN" PREPARED BY CREDERE ASSOCIATES, LLC

EXISTING SANITARY SEWER LINES WHICH ARE TRIBUTARY TO THE PORTLAND WATER DISTRICT PUMP STATION. ALL GROUNDWATER DISCHARGED TO THESE LINES SHALL BE TREATED IN ACCORDANCE WITH "SECTION 4.2 COLLECTION AND DISPOSAL AT TREATMENT FACILITY OF THE GROUNDWATER MANAGEMENT PLAN PREPARED BY CREDERE ASSOCIATES, LLC. THE WATER DISCHARGED TO THIS SYSTEM WILL BE SUBJECT TO A MONETARY FEE PER VOLUME OF WATER AS SET FORTH BY THE CITY OF PORTLAND FOR ANY WATER DISCHARGED TO THIS SYSTEM DURING A RAIN EVENT WHEN THE COMBINED SYSTEM OVERFLOW LINE HAS BEEN ACTIVATED THE CONTRACTOR SHALL BE RESPONSIBLE TO TREAT THE DISCHARGE IN ACCORDANCE WITH SECTION 4.3 OF THE GROUNDWATER MANAGEMENT PLAN AND DIVERTED TO THE EXISTING STORM DRAIN SYSTEM.

NOTE TO CONTRACTOR:

1. THE CAMPUS IS A PUBLICLY ACTIVE SITE WITH OPEN BUSINESS ABUTTERS AND ON SITE TENANTS WITH RIGHTS TO ACCESS AND OPERATE THEIR FACILITIES AT ALL TIMES. THE CONTRACTOR SHALL MAINTAIN REASONABLE VEHICULAR AND PEDESTRIAN ACCESS TO, BUT NOT LIMITED TO THE FOLLOWING:
   ALL EXISTING BUILDINGS, HYDRANTS / FIRE PROTECTION APPURTENANCES, AND PUBLIC RIGHT-OF-WAY.
2. THIS PLAN MAY REQUIRE THE REMOVAL OR ALTERING OF EXISTING UTILITY SERVICES (ELECTRIC, COMMUNICATION, SANITARY SEWER, WATER AND DRAINAGE). ALL EXISTING USERS SHALL BE PROVIDED WITH TEMPORARY OR PERMANENT UTILITY CONNECTIONS PRIOR TO REMOVAL OR DISCONNECTION OF ANY UTILITY LINE WITH NO ADDITIONAL COST TO THE OWNER. THE CONTRACTOR SHALL COORDINATE ALL SHUT DOWNS WITH OWNER AND USERS 72 HOURS IN ADVANCE WITH A PLAN TO PROVIDE A REPLACEMENT SERVICE.

PRELIMINARY – NOT FOR CONSTRUCTION

L.) Total Net Impervious Area Treated (SF) = G+K	420,019.14	**9.64**	

atment Breakdown	Required	Provided
% of Net	80.00%	86.21%
npervious Area Treated = L/I	95.00%	95.51%

Development Projects Included in Cumulative Review (inorder of input):

Brick North and Brick South (Lots 1, 2, 3)
West Loop Rd (Common)
Hotel Portland (Lot 6)
East Loop Rd (Common)
CMTM (Lot 7)
Warehouse (Lot 11)
Concessions (Lot 9)
Multi-Family (Lot 17)

NOTES AND ASSUMPTIONS:

dated Sept 2024.
Sections 7.4, 7.5 and 7.6 of the Maine DEP Volume III BMP's Technical Design Manual. The volume is computed to be 1" times the method. The rainfall intensities are derived from the Cumberland chamber system. All isolator rows have been computed per a 7/29/2016 letter from State of Maine to Stormtech re: Pretreatment computed based on Contech Sizing requirements. The water quality provided it has been approved by the Maine DEP Chapter 500 delegated computed using 61.38 CF of storage per chamber based on Storm Tech 8.Vacant
9. According to Chapter 500 Maine DEP stormwater rules Dated 2015; the department allows applicants to take credit for the treatment of existing impervious areas on site. For existing roofs the credit can be calculated by multiplying the total treated area by 0.6. The overall project was approved using this methodology.
10. The MEDEP will now accept a Filterra tree box filter as a stand alone treatment unit and does not require an Isolator Row for eligible projects. This project meets the eligibility criteria noted in a letter dated June 27th, 2014 from the MEDEP and updated February 2, 2017.

- INLET PROTECTION (STONE OR HAY SEDIMENT BARRIER)
- FILTERRA INLET PROTECTION (PER MANUFACTURERS REQUIREMENTS)
- RIPRAP OUTLET PROTECTION
- CURLEX BLANKET
- PERMANENT REINFORCED TURF MAT
- EROSION CONTROL BLANKET
- WASH DOWN AREA
- STONE CONSTRUCTION ENTRANCE
- DIRTBAG DEWATERING
- POTENTIAL SEDIMENT SETTLEMENT POND
- STONE CHECK DAM

Summary of Storm Water Discharges

Discharge ID	Approximate Drainage Area (Ac)	Full Build Out 25 Yr Peak Flow (CFS)	Outlet Pipe Size (In)	Description	*Minimum Required Riprap D50 (IN)
HB-0	1.86	8.89	24	RCP Flared End W/ Bar Rack, Riprap Slope Apron	12
HC-0	0.87	4.62	15	RCP Flared End W/ Bar Rack, Riprap Slope Apron	12

* D50 is a median rock size. Riprap should be a well graded mix of angular rock from about 1.5 to 0.25 times the size of the D50. The contractor shall protect existing riprap slope or replace rock to the meet the minimum required D50 stone size.

SCHEDULE OF SILT BARRIER REQUIREMENTS

SILT BARRIER	TYPE PURPOSE	TIME OF INSTALLATION
SB1 TYPE 1 SILT BARRIER	TO TRAP SEDIMENT ALONG THE GRADING EDGE WHERE THE NEW CONTOURS NEARLY PARALLEL THE EXISTING CONTOURS	AT INITIAL SITE PREPARATION; PRIOR TO OTHER WORK

NOTES:

1. EXISTING PAVEMENT TO REMAIN AS TRACKING PAD. SWEEP CLEAN DAILY OR MORE FREQUENTLY AS REQUIRED TO PREVENT TRACKING SEDIMENT ALONG THOMPSON'S POINT ROAD. SHOULD SEDIMENT BE TRACKED OFFSITE, CONTRACTOR IS RESPONSIBLE FOR SWEEPING/CLEARING PAVEMENT AS NECESSARY TO PROTECT EXISTING STORMWATER COLLECTION INLETS. CONTRACTOR MAY BE REQUIRED TO INSTALL WASHING STATION OR OTHER TRACKING PREVENTATIVE MEASURE AT NO ADDITIONAL COST TO OWNER.
2. DISCHARGE OF EXCAVATION DEWATERING MAY BE DIRECTED TO EXISTING DRAINAGE STRUCTURES IF ALL TREATMENT REQUIREMENTS ARE MET. REFER TO ENVIRONMENTAL ASSESSMENT REPORT BY CREDERE ASSOCIATES, LLC AND PROJECT SPECIFICATIONS FOR ALL DEWATERING REQUIREMENTS.
3. ALL RUNOFF FROM DISTURBED AREAS SHALL BE DIRECTED TO A FILTERING DEVICE DESIGNATED TO LIMIT TURBIDITY IN ALL DISCHARGE TO THE FORE RIVER. THE FILTERING DEVICE MAY BE BUT IS NOT LIMITED TO SAND FILTERS, EROSION CONTROL MIX, STRAW WHATTLES, FLOCCULATION CHEMICALS, DIRT GLUE AND SILT FENCE.
4. ALL CATCH BASINS TO HAVE 4" UNDERDRAIN PER DETAIL 'L' ON SHEET C-8.5.
5. ALL SUBSURFACE DETENTION AREAS ARE NOT TO BE PLACED "ON-LINE" UNTIL TRIBUTARY AREA IS STABILIZED WITH PAVEMENT OR 75% VEGETATION COVERAGE
6. STOCKPILES TO BE TEMPORARILY SEEDED AND MULCHED AS REQUIRED BY THE PROJECT SPECIFICATIONS.
7. THE CONTRACTOR SHALL TREAT DISTURBED AREAS AND CONSTRUCTION HAUL PATH WITH DUST CONTROL BMPS TO LIMIT ALL FUGITIVE DUST.
8. ALL EXCESS COMMON BORROW SHALL BE PLACE IN DESIGNATED STOCKPILE ON PANHANDLE DETAILS INCLUDED IN SEPARATE PLAN SET BY REFERENCE.

CONSTRUCTION OVERSIGHT NOTES:
FILTERRA UNITS SHALL ONLY BE ACTIVATED BY THE SUPPLIER. ACTIVATION INCLUDES THE INSTALLATION OF THE PLANTS AND MULCH LAYERS. ACTIVATION CANNOT BEGIN UNTIL THE PROJECT SITE IS FULLY STABILIZED AND CLEANED (FULL LANDSCAPING, GRASS COVER, FINAL PAVING AND SWEEPING COMPLETE). THE ONLY BOARDS WHICH SHOULD BE REMOVED ARE THE 2X4 WOODEN PLANKS SET BETWEEN THE FILTERRA BOX AND TOP SLAB. ALL REMAINING BOARDS SHALL REMAIN IN TACT DURING INSTALLATION AND WILL BE REMOVED DURING ACTIVATION OF THE UNIT BY AN AUTHORIZED FILTERRA REPRESENTATIVE.

ALL MANUFACTURED SYSTEMS SHALL BE INSPECTED BY A PROFESSIONAL ENGINEER APPROVED BY THE MANUFACTURER AND SHALL CONSIST OF AN APPROPRIATE NUMBER OF SITE VISITS TO THE SITE TO INSPECT SUBGRADE PREPARATION, GENERAL CONSTRUCTION, STONE PLACEMENT, CHAMBER PLACEMENT, FABRIC LAYMENT, AND STORMWATER OVERFLOW BYPASS CONSTRUCTION FROM INITIAL GROUND DISTURBANCE TO FINAL STABILIZATION.

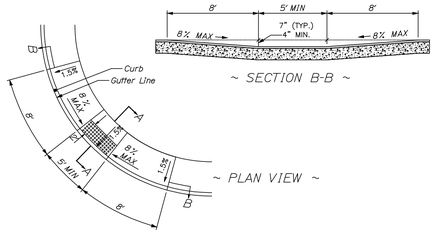
GENERAL NOTES



1. DESIGN OF ACCESSIBLE RAMPS AND ASSOCIATED FACILITIES ARE GOVERNED BY THE 2010 AMERICANS WITH DISABILITIES ACT (ADA) STANDARDS FOR ACCESSIBLE DESIGN, WHICH IS DETAILED IN DOJ SECTION 28 CFR 35.151. ADDITIONAL GUIDANCE AND INFORMATION CAN BE FOUND IN THE PROPOSED PUBLIC RIGHTS-OF-WAY ACCESSIBILITY GUIDELINES PUBLISHED BY THE U.S. ACCESS BOARD. IN ANY CASE WHERE THE DESIGN REQUIREMENTS ARE MORE STRINGENT BETWEEN ADA STANDARDS AND CITY REQUIREMENTS, THE ADA STANDARDS SHALL GOVERN.
2. SIDEWALKS SHALL BE CONSTRUCTED IN BRICK, CONCRETE, OR BITUMINOUS, ACCORDING TO THE SIDEWALK & DRIVEWAY APRON MATERIALS POLICY, UNLESS DIRECTED OTHERWISE BY THE CITY ENGINEER.
3. SIDEWALKS AND RAMPS SHALL BE BUILT ACCORDING TO THE FOLLOWING DIMENSIONS AND GRADES:
   SIDEWALK RUNNING SLOPE: MATCH ADJACENT STREET GRADE
   SIDEWALK CROSS SLOPE: 1.0% MINIMUM, 2.0% MAXIMUM
   SIDEWALK WIDTH: 5'-0" MINIMUM, WIDER PREFERRED
   ESPLANADE (WHERE PROVIDED) 2'-0" MINIMUM, 4'-0" OR GREATER PREFERRED IF LANDSCAPED.
4. TWO CURB RAMPS ARE REQUIRED AT EACH SIDEWALK CORNER. EACH CURB RAMP SHALL CONNECT THE PEDESTRIAN ACCESS ROUTE AT EACH PEDESTRIAN STREET CROSSING. IN ALTERATIONS WHERE PHYSICAL CONSTRAINTS PREVENT TWO CURB RAMPS FROM BEING INSTALLED AT A STREET CORNER, A SINGLE PEDESTRIAN CURB RAMP MAY BE PERMITTED.
5. OPPOSING CURB RAMPS AT A SINGLE CROSSING SHALL ALIGN TO PROVIDE A STRAIGHT PATH OF TRAVEL FROM THE TOP OF THE RAMP TO THE CURB RAMP ON THE OPPOSITE SIDE OF THE ROADWAY TO THE MAXIMUM EXTENT FEASIBLE.
6. ALL SIDEWALKS AND RAMPS SHALL DRAIN TOWARD THE STREET, DRIVEWAY, OR PARKING AREA, WITH A MAXIMUM CROSS SLOPE OF 2.0%.
7. LEVEL LANDINGS (NO GREATER THAN 2.0% SLOPE IN ANY DIRECTION) AT THE BOTTOM OF PERPENDICULAR RAMPS SHALL BE WHOLLY CONTAINED WITHIN MARKED CROSSWALKS.
8. PONDING SHALL NOT BE PERMITTED WITHIN THE CURB RAMP LIMITS. RAMPS SHALL NOT ALTER ROADWAY DRAINAGE PATTERNS.
9. TRANSITION FROM RAMPS TO WALKS OR STREET SURFACE SHALL BE FLUSH AND FREE OF ABRUPT CHANGES. PAVEMENT AT THE STREET SURFACE SHALL BE MILLED AND REPAVED TO ACHIEVE FLUSH CONDITION.
10. CURB RAMP AND FORM WORK SLOPES SHALL BE CHECKED WITH A DIGITAL LEVEL OF AN APPROPRIATE LENGTH. NO PORTION OF A RAMP RUN SHALL EXCEED THE MAXIMUM SLOPE REQUIREMENT.
11. THE COUNTER SLOPE WITHIN 2' OF THE CURB RAMP SHALL BE 5% MAXIMUM. IN ALTERATIONS, IF THE COUNTER SLOPE OF 5% MAXIMUM CANNOT BE ACHIEVED, THE SLOPE ELEVATION MAY BE ADJUSTED SO THAT THE COMBINED COUNTER SLOPE AND RAMP SLOPE DO NOT EXCEED 13.3%
12. VERTICAL DROP-OFF EDGES TO RAMPS SHALL NOT BE BUILT UNLESS THE RAMP ABUTS AN ESPLANADE OR OTHER AREA NOT TO BE USED BY PEDESTRIANS.
13. AT MARKED CROSSWALKS, THE FULL WIDTH OF THE RAMP OR LANDING SHALL BE CONTAINED WITHIN THE PAVEMENT MARKINGS.
14. DETECTABLE WARNING PANELS SHALL BE PROVIDED ON ALL RAMPS AS PER FIGURE I–7 OF THESE STANDARD DETAILS.
15. RAMP FLARES SHOULD BE LOCATED OUTSIDE THE DIRECT LINE OF TRAVEL MOST LIKELY TO BE FOLLOWED BY THE VISUALLY IMPAIRED.
16. SIGNS, POLES, PLANTERS, MAILBOXES, ETC. SHALL NOT BE LOCATED WHERE THEY WILL INTERFERE WITH THE USE OF SIDEWALK RAMPS.
17. SIDEWALK RAMPS SHALL NOT BE LOCATED WHERE USERS MUST CROSS DROP INLET GRATES, MANHOLE COVERS, OR OTHER ACCESS LIDS. IF THIS CANNOT BE AVOIDED, THEN GRATE DESIGN AND PLACEMENT SHALL CONFORM TO ADA REQUIREMENTS.
18. THE PUBLIC-SIDEWALK CURB RAMP STANDARDS DEPICTED HERE MAY NOT BE APPROPRIATE FOR ALL LOCATIONS. FIELD CONDITIONS AT INDIVIDUAL LOCATIONS MAY REQUIRE SPECIFIC DESIGNS. RAMP DESIGNS THAT ARE COMPLIANT WITH ADA BUT NOT LISTED IN THESE DETAILS MAY BE APPROVED BY THE CITY ENGINEER.
19. DESIGNS MUST BE CONSISTENT WITH THE PROVISIONS OF THESE DETAILS AND TO ADA GUIDELINES TO THE MAXIMUM EXTENT FEASIBLE ON ALTERATION PROJECTS, AND WHEN STRUCTURALLY PRACTICABLE ON NEW CONSTRUCTION PROJECTS AS REQUIRED BY THE ADA ACCESSIBILITY GUIDELINES.
20. MAXIMUMS AND MINIMUMS DO NOT HAVE TOLERANCES AND ARE NOT TO BE EXCEEDED OR UNMET.
21. THE STANDARD TURNING SPACE (LEVEL LANDING) IS 4'–0" X 4'–0" SLOPING NO MORE THAN 2.0% WHERE THE TURNING SPACE SHALL BE 4'–0" MINIMUM BY 5'–0" MINIMUM. THE 5'–0" DIMENSION SHALL BE PROVIDED IN THE DIRECTION OF THE RAMP RUN.
22. DETECTABLE WARNINGS SHALL BE INSTALLED AT ALL SIGNED OR SIGNALIZED INTERSECTIONS. THEY SHALL HAVE A TRUNCATED DOME SURFACE. THE DOMES SHALL BE IN A SQUARE PATTERN AND ALIGNED WITH PEDESTRIAN TRAFFIC WHERE POSSIBLE.
23. DETECTABLE WARNINGS SHALL SPAN THE WIDTH OF THE PEDESTRIAN RAMP. SEE STANDARD DETAIL FIGURE I–7.
24. ALL DETECTABLE WARNING FIELDS PLACED AT THE SAME INTERSECTION SHALL BE MADE UP OF THE SAME UNIFORM MATERIAL TYPE. DETECTABLE WARNINGS SHALL BE CONTRASTING IN COLOR TO THE ADJACENT WALKWAY.
25. A RAMP WITH A RUNNING SLOPE LESS THAN 5.0% IS DEFINED AS A "BLENDED TRANSITION". BLENDED TRANSITIONS DO NOT REQUIRE A LEVEL LANDING AT THE TOP OF THE RAMP.
26. THE RAMP LENGTH SHALL NOT EXCEED 15 FEET. ADJUST RAMP LENGTH OR SLOPE AS NEEDED TO PROVIDE ACCESS TO THE MAXIMUM EXTENT FEASIBLE.
27. ALL CURB RAMP JOINTS AND GRADE BREAKS SHALL BE FLUSH.
28. RAMP GRADE BREAKS SHALL BE PERPENDICULAR TO THE RUNNING SLOPE.
29. THERE SHALL BE A MINIMUM OF 12" AGGREGATE SUBBASE COURSE – GRAVEL UNDER THE SIDEWALK SURFACE ON PEDESTRIAN RAMPS.
30. DRAINAGE STRUCTURES, UTILITY POLES, TRAFFIC SIGNAL EQUIPMENT OR OTHER OBSTRUCTIONS SHALL NOT BE INSTALLED IN THE CURB RAMP OR TURNING SPACE AREAS.
31. BEFORE RETROFITTING RAMPS, THE CONTRACTOR SHALL VERIFY REMOVAL LIMITS ARE SUFFICIENT TO PROVIDE POSITIVE DRAINAGE, MAINTAIN EXISTING DRAINAGE PATTERNS AND AVOID PONDING IN THE FINAL CONFIGURATION.
32. A TEMPORARY PEDESTRIAN ACCESS ROUTE SHALL BE PROVIDED WHENEVER THE EXISTING PEDESTRIAN ACCESS ROUTE IN THE PUBLIC RIGHT OF WAY IS BLOCKED BY CONSTRUCTION, ALTERATION, MAINTENANCE OR OTHER TEMPORARY CONDITIONS. REFER TO MUTCD FOR GUIDANCE.

DRAWN: DB	DATE: AUGUST 2024
DESIGNED: BEK	SCALE: N.T.S.
FILE NAME: PANHANDLE-DET.dwg	
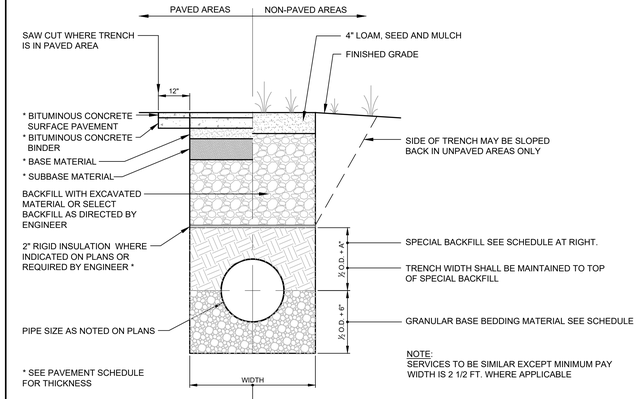
SHEET	C-8.3

DESIGN NOTES:
1. ALL CONCRETE TO HAVE A MIN. OF 4,000 PSI COMPRESSIVE STRENGTH AT 28 DAYS OR AS MAY BE REQUIRED BY UTILITY COMPANY.
2. DESIGN LOAD FOR H-20 WHEEL LOAD.
3. CATCH BASIN TO CONFORM TO ASTM-C478 SPECIFICATIONS.
4. REINFORCE TO 0.12 IN SQ./L.F.

Ⓐ 4'-0" OR 5'-0" PRECAST CATCH BASIN
N.T.S.



NOTES:
1. A FLEXIBLE PIPE TO MANHOLE CONNECTOR SHALL BE EMPLOYED IN THE CONNECTION OF ALL PIPE TO MANHOLE JUNCTIONS.
2. THE CONNECTOR SHALL BE KOR-N-SEAL AS MANUFACTURED BY NPC SYSTEMS, INC., OF MILFORD, NH OR EQUAL.
3. THE CONNECTOR SHALL BE THE SOLE ELEMENT RELIED ON TO ASSURE A FLEXIBLE WATERTIGHT SEAL OF THE PIPE TO MANHOLE. NO ADHESIVES OR LUBRICANTS SHALL BE EMPLOYED IN THE INSTALLATION OF THE CONNECTOR TO THE MANHOLE. THE RUBBER FOR THE CONNECTOR SHALL COMPLY TO ASTM C443 AND ASTM C923 AND CONSIST OF EPDM AND ELASTOMERS KNOWN TO BE RESISTANT TO OZONE, WEATHER ELEMENTS, CHEMICALS, INCLUDING ACIDS, ALKALIS, ANIMAL AND VEGETABLE FATS, OILS AND PETROLEUM PRODUCTS FROM SPILLS.
4. ALL STAINLESS STEEL ELEMENTS OF THE CONNECTOR SHALL BE TOTALLY NON-MAGNETIC SERIES 304 STAINLESS, EXCLUDING THE WORM SCREW USED FOR TIGHTENING THE STEEL BAND AROUND THE PIPE WHICH SHALL BE SERIES 305 STAINLESS. THE WORM SCREW USED FOR TIGHTENING THE STEEL BAND SHALL BE TORQUED BY A BREAK-AWAY TORQUE WRENCH AVAILABLE FROM THE PRECAST MANHOLE SUPPLIER, AND SET AT 60/70 in/lbs..
5. THE CONNECTOR SHALL BE INSTALLED IN THE MANHOLE WALL BY ACTIVATING THE EXPANDING MECHANISM IN STRICT ACCORDANCE WITH THE RECOMMENDATION OF THE CONNECTOR MANUFACTURER.
6. THE CONNECTOR SHALL BE OF A SIZE SPECIFICALLY DESIGNED FOR THE PIPE MATERIAL AND SIZE BEING UTILIZED ON THE PROJECT.
7. ALL CONNECTORS WHICH ARE CAPPED AWAITING PIPE INSTALLATION AT A LATER DATE MUST BE RESTRAINED.

Ⓔ PIPE CONNECTION TO PRECAST CONCRETE SANITARY SEWER AND STORM DRAINAGE STRUCTURE

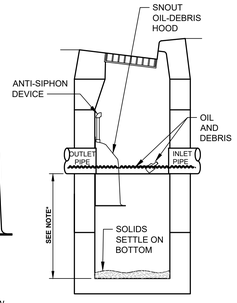
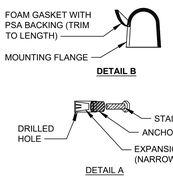
NOTES:



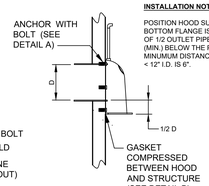
1. ALL HOODS AND TRAPS FOR CATCH BASINS AND WATER QUALITY STRUCTURES SHALL BE AS MANUFACTURED BY:
   BEST MANAGEMENT PRODUCTS, INC.
   9 MATHEWS DRIVE, UNIT A1-A2.
   EAST HADDAM, CT 06423
   TOLL FREE: (800) 504-8008 OR (888) 434-0277, FAX: (877) 434-3197
   WEB SITE: www.bmpinc.com
   OR PRE-APPROVED EQUAL
2. ALL HOODS SHALL BE CONSTRUCTED OF A GLASS REINFORCED RESIN COMPOSITE WITH ISO GEL COAT EXTERIOR FINISH WITH A MINIMUM 0.125" LAMINATE THICKNESS.
3. ALL HOODS SHALL BE EQUIPPED WITH A WATERTIGHT ACCESS PORT, A MOUNTING FLANGE, AND AN ANTI-SIPHON VENT PIPE AND ELBOW AS DRAWN. (SEE CONFIGURATION DETAIL)
4. THE SIZE AND POSITION OF THE HOOD SHALL BE DETERMINED BY OUTLET PIPE SIZE AS PER MANUFACTURER'S RECOMMENDATION (SNOUT SIZE ALWAYS LARGER THAN PIPE SIZE).
5. THE BOTTOM OF THE HOOD SHALL EXTEND DOWNWARD A MINIMUM DISTANCE EQUAL TO 1/2 THE OUTLET PIPE DIAMETER WITH A MINIMUM DISTANCE OF 6" FOR PIPES <12" I.D.
6. THE ANTI-SIPHON VENT SHALL EXTEND ABOVE HOOD BY MINIMUM OF 3" AND A MAXIMUM OF 12" ACCORDING TO STRUCTURE CONFIGURATION.
7. THE SURFACE OF THE STRUCTURE WHERE THE HOOD IS MOUNTED SHALL BE FINISHED SMOOTH AND FREE OF LOOSE MATERIAL AND PIPE SHALL BE FINISHED FLUSH TO WALL.
8. ALL STRUCTURE JOINTS SHALL BE WATERTIGHT.
9. THE HOOD SHALL BE SECURELY ATTACHED TO STRUCTURE WALL WITH 3/8" STAINLESS STEEL BOLTS AND OIL-RESISTANT GASKET AS SUPPLIED BY MANUFACTURER. (SEE INSTALLATION DETAIL)
10. INSTALLATION INSTRUCTIONS SHALL BE FURNISHED WITH MANUFACTURER SUPPLIED INSTALLATION KIT.
    INSTALLATION KIT SHALL INCLUDE:
    A. INSTALLATION INSTRUCTIONS
    B. PVC ANTI-SIPHON VENT PIPE AND ADAPTER
    C. OIL-RESISTANT CRUSHED CELL FOAM GASKET WITH PSA BACKING
    D. 3/8" STAINLESS STEEL BOLTS
    E. ANCHOR SHIELDS

CONFIGURATION DETAIL



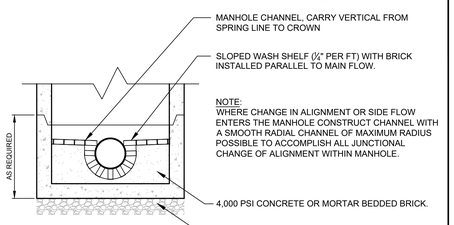
FRONT VIEW SIDE VIEW

TYPICAL INSTALLATION



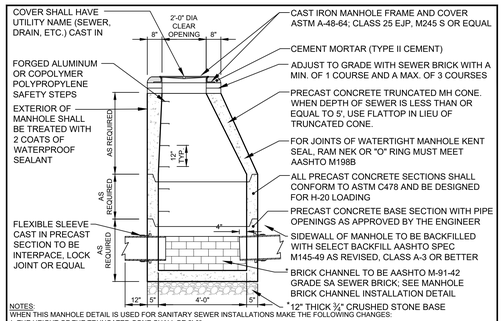
*NOTE:
SUMP DEPTH OF 36" MIN. FOR UP TO 12" ID PIPE. OUTLET. FOR PIPES 15" ID AND ABOVE SUMP DEPTH OF 2.5 TO 3 TIMES PIPE ID RECOMMENDED (E.G. 5' DEEP FOR 24" PIPE)

SNOUT OIL-WATER-DEBRIS SEPARATOR



INSTALLATION DETAIL

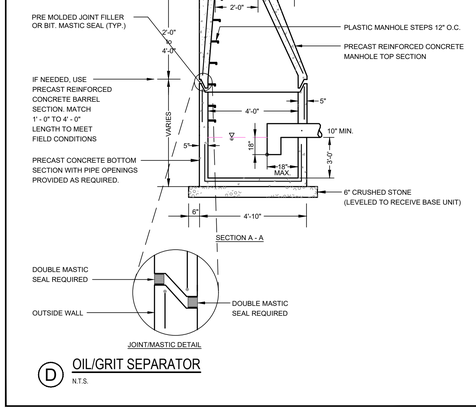
INSTALLATION NOTE:
POSITION HOOD SUCH THAT BOTTOM FLANGE IS A DISTANCE OF 1/2 OUTLET PIPE DIAMETER (MIN.) BELOW THE PIPE INVERT. MINIMUM DISTANCE FOR PIPES < 12" I.D. IS 6".



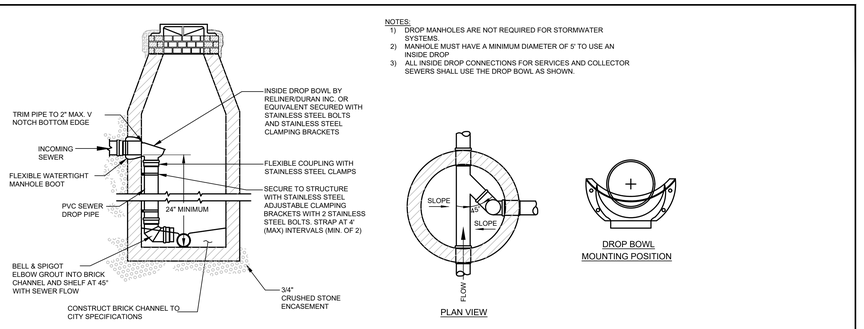
Ⓑ HOODED OUTLET DETAIL
N.T.S.

NOTE:
MANHOLE TEST TO BE ACCOMPLISHED AFTER CHANNEL INSTALLATION IS COMPLETE.

NOTES:
1. BRICK CHANNEL TO BE AASHTO M-91-42 GRADE AS SEWER BRICK OR, IF APPROVED BY ENGINEER, A PREFABRICATED FIBERLINER 2000 CHANNEL, AS MANUFACTURED BY GDT, INC, ESSEX, CT OR EQUAL MAY BE USED.
2. SLOPE CHANNEL DOWN FROM INLET TO OUTLET.
3. TOOL ALL JOINTS IN CHANNEL AND ON TABLE.



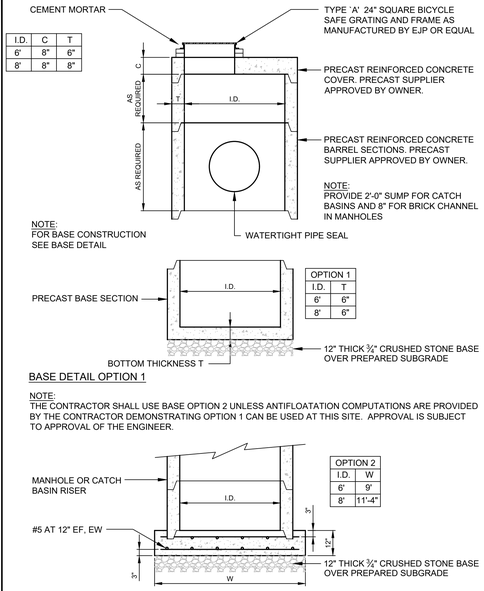
Ⓕ STORM AND SANITARY MANHOLE CHANNEL DETAIL
N.T.S.



NOTES:
WHEN THIS MANHOLE DETAIL IS USED FOR SANITARY SEWER INSTALLATIONS MAKE THE FOLLOWING CHANGES:
1. THE HEIGHT OF THE TRUNCATED CONE SHALL BE 2'-0"
2. A POLYFROST BARRIER CONSISTING OF A MIN. OF 4 LAYERS, (EACH 6 MIL) SHALL BE PLACED AROUND THE STRUCTURE FROM THE SURFACE TO 5'-0 MIN. BELOW GRADE.
3. THE BACKFILL AROUND THE MANHOLE SHALL BE COMPACTED GRAVEL, A MIN. OF 24" OUTSIDE THE STRUCTURE.
4. THE CASTING SHALL BE GASKETED.

Ⓒ 4'-0" PRECAST SANITARY SEWER AND STORM DRAIN MANHOLE
N.T.S.

NOTES:
- FOR USE IN PARTIALLY OR TOTALLY ENCLOSED PARKING GARAGES, AUTOMOTIVE REPAIR FACILITIES OR ANY OTHER PROPOSED STRUCTURE WHERE DEEMED APPROPRIATE BY THE CITY ENGINEER.
- DISCHARGE SHALL BE TO SANITARY SEWER.
- A VENT PIPE MAY BE REQUIRED THAT HAS A VERTICAL OUTLET OFF TO THE SIDE OF THE STRUCTURE.
- AN OIL ABSORBENT BOOM IS REQUIRED TO BE PLACED WITHIN THE MANHOLE ON THE WATER SURFACE AND REPLACED AT A MINIMUM ANNUALLY.



Ⓓ OIL/GRIT SEPARATOR
N.T.S.

NOTES:
1) DROP MANHOLES ARE NOT REQUIRED FOR STORMWATER SYSTEMS.
2) MANHOLE MUST HAVE A MINIMUM DIAMETER OF 5' TO USE AN INSIDE DROP.
3) ALL INSIDE DROP CONNECTIONS FOR SERVICES AND COLLECTOR SEWERS SHALL USE THE DROP BOWL AS SHOWN.

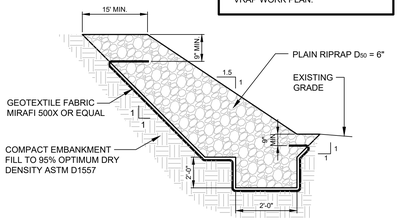
1. STONE - USE COARSE AGGREGATE (2 - 3 INCH STONE).
2. LENGTH - AS EFFECTIVE, BUT NOT LESS THAN 100 FEET.
3. THICKNESS - NOT LESS THAN EIGHT (8) INCHES.
4. WIDTH - NOT LESS THAN FULL WIDTH OF ALL POINTS OF INGRESS OR EGRESS.
5. WASHING - WHEN NECESSARY, WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHT-OF-WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH CRUSHED STONE WHICH DRAINS INTO AN APPROVED SEDIMENT TRAP OR SEDIMENT BASIN. ALL SEDIMENT SHALL BE PREVENTED FROM ENTERING ANY STORM DRAIN, DITCH, OR WATERCOURSE THROUGH USE OF SAND BAGS, GRAVEL, BOARDS OR OTHER APPROVED METHODS.
6. MAINTENANCE - THE ENTRANCES SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHT-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
7. 12' X 24' METAL GRATE MAY BE USED. GRATE SHALL BE 25' AWAY FROM PAVEMENT AND APPROPRIATE SEDIMENT CONTROL TRAPPING DEVICE SHALL BE USED AT GRATE OUTLET POINT.

(A) STABILIZED CONSTRUCTION ENTRANCE

N.T.S.

EMBEDDING DETAIL

ANCHORING DETAIL

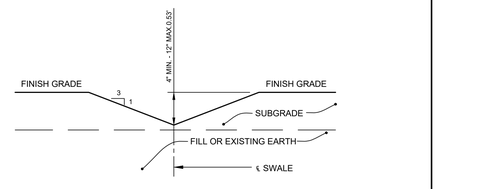


CONSTRUCTION SPECIFICATIONS

1. BALES SHALL BE PLACED IN A ROW WITH ENDS TIGHTLY ABUTTING THE ADJACENT BALES.
2. EACH BALE SHALL BE EMBEDDED IN THE SOIL A MINIMUM OF 4".
3. BALES SHALL BE SECURELY ANCHORED IN PLACE BY STAKES OR RE-BARS DRIVEN THROUGH THE BALES. THE FIRST STAKE IN EACH BALE SHALL BE ANGLED TOWARD PREVIOUSLY LAID BALE TO FORCE BALES TOGETHER.
4. INSPECTION SHALL BE FREQUENT AND REPAIR OR REPLACEMENT SHALL BE MADE PROMPTLY AS NEEDED.
5. BALES SHALL BE REMOVED WHEN THEY HAVE SERVED THEIR USEFULNESS SO AS NOT TO BLOCK OR IMPEDE STORM FLOW OR DRAINAGE.

(E) STRAW OR HAY BALE BARRIER

N.T.S.



NOTE:
1. DETAIL HAS BEEN DESIGNED TO MEET THE ENGINEERED BARRIER SPECIFICATIONS NOTED IN MEDEP VRAP WORK PLAN.

NOTE:
INSTALL RIPRAP SLOPE PROTECTION AS DIRECTED BY THE OWNER'S REPRESENTATIVE OR GEOTECHNICAL ENGINEER IF REQUIRED, DUE TO DISCOVERED FIELD CONDITIONS, AT NO EXTRA EXPENSE TO THE OWNER.

N.T.S.

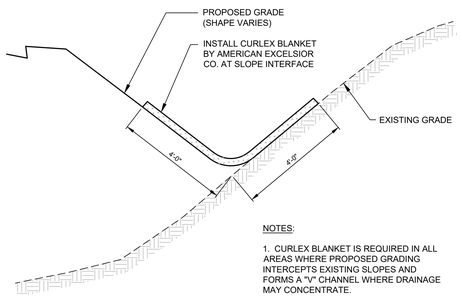
SPECIFIC APPLICATION



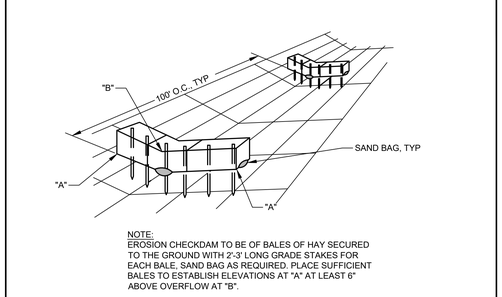
THIS METHOD OF INLET PROTECTION IS APPLICABLE WHERE HEAVY FLOWS ARE EXPECTED AND WHERE AN OVERFLOW CAPACITY IS NECESSARY TO PREVENT EXCESSIVE PONDING AROUND THE STRUCTURE.

NOTES:

1. PLACE CONCRETE BLOCKS LENGTHWISE ON THEIR SIDES IN A SINGLE ROW AROUND THE PERIMETER OF THE INLET, WITH THE ENDS OF ADJACENT BLOCKS ABUTTING. THE HEIGHT OF THE BARRIER CAN BE VARIED, DEPENDING ON DESIGN NEEDS, BY STACKING COMBINATIONS OF 4", 8" AND 12" WIDE BLOCKS. THE BARRIER OF BLOCKS SHALL BE AT LEAST 12 INCHES HIGH, AND NO GREATER THAN 24" HIGH.
2. WIRE MESH SHALL BE PLACED OVER THE OUTSIDE VERTICAL FACE (WEBBING) OF THE CONCRETE BLOCKS TO PREVENT STONE FROM BEING WASHED THROUGH THE HOLES IN THE BLOCKS. HARDWARE CLOTH OR COMPARABLE WIRE MESH WITH ½" OPENINGS SHALL BE USED.
3. STONE SHALL BE PILED AGAINST THE WIRE TO THE TOP OF THE BLOCK BARRIER, AS SHOWN IN DETAIL. THE STONE FILTER SHALL BE ¾" CRUSHED STONE.
4. IF THE STONE FILTER BECOMES CLOGGED WITH SEDIMENT SO THAT IT NO LONGER ADEQUATELY PERFORMS ITS FUNCTION, THE STONE MUST BE PULLED AWAY FROM THE BLOCKS, CLEANED AND REPLACED.
5. PREMANUFACTURED SILT-SACKS™ MAY BE USED AS AN EQUIVALENT TO STONE SEDIMENT BARRIERS.

(D) STONE SEDIMENT BARRIER

N.T.S.



NOTES:

1. CURLEX BLANKET IS REQUIRED IN ALL AREAS WHERE PROPOSED GRADING INTERCEPTS EXISTING SLOPES AND FORMS A "V" CHANNEL WHERE DRAINAGE MAY CONCENTRATE.

2. STAPLE SIZE AND DISTRIBUTION PER MANUFACTURERS SPECIFICATION.

(G) CURLEX BLANKET DETAIL

N.T.S.

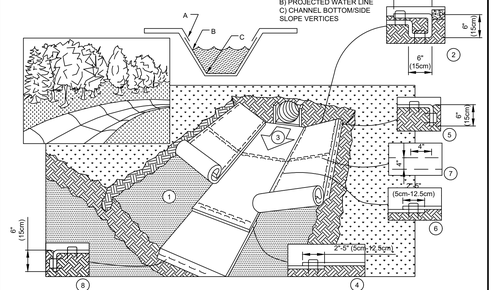
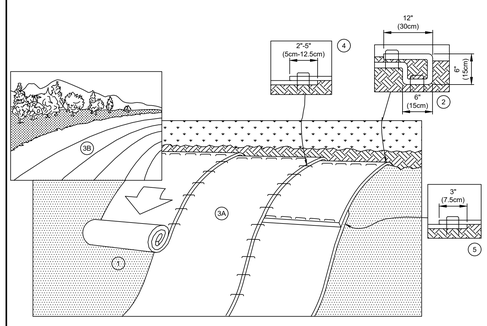
PLAN



WASHOUT SIGN

NOTES:
1. CONTAINMENT MUST BE STRUCTURALLY SOUND AND LEAK FREE AND CONTAIN ALL LIQUID WASTES.
2. CONTAINMENT DEVICES MUST BE OF SUFFICIENT QUANTITY OR VOLUME TO COMPLETELY CONTAIN THE LIQUID WASTES GENERATED.
3. WASHOUT MUST BE CLEANED OR NEW FACILITIES CONSTRUCTED AND READY TO USE ONCE WASHOUT IS 75% FULL.
4. WASHOUT AREA(S) SHALL BE INSTALLED IN A LOCATION EASILY ACCESSIBLE BY CONCRETE TRUCKS.
5. ONE OR MORE AREAS MAY BE INSTALLED ON THE CONSTRUCTION SITE AND MAY BE RELOCATED AS CONSTRUCTION PROGRESSES.
6. AT LEAST WEEKLY REMOVE ACCUMULATION OF SAND AND AGGREGATE AND DISPOSE OF PROPERLY.

TYPICAL SECTION

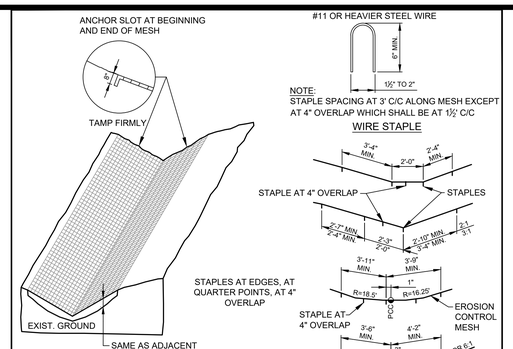


B CONCRETE WASHOUT AREA
N.T.S.

1. PREPARE SOIL BEFORE INSTALLING BLANKETS, INCLUDING ANY NECESSARY APPLICATION OF LIME, FERTILIZER, AND SEED.
2. BEGIN AT THE TOP OF THE CHANNEL BY ANCHORING THE BLANKET IN A 6" (15CM) DEEP X 6" (15CM) WIDE TRENCH WITH APPROXIMATELY 12" (30CM) OF BLANKET EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE BLANKET WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30CM) APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO COMPACTED SOIL AND FOLD REMAINING 12" (30CM) PORTION OF BLANKET BACK OVER SEED AND COMPACTED SOIL. SECURE BLANKET OVER COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED APPROXIMATELY 12" (30CM) APART ACROSS THE WIDTH OF THE BLANKET.
3. ROLL CENTER BLANKET IN DIRECTION OF WATER FLOW IN BOTTOM OF CHANNEL. BLANKETS WILL UNROLL WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL BLANKETS MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES/STAKES IN APPROPRIATE LOCATIONS LOCATIONS AS SHOWN IN THE STAPLE PATTERN GUIDE. WHEN USING THE DOT SYSTEM, STAPLES/STAKES SHOULD BE PLACED THROUGH EACH OF THE COLORED DOTS CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. PLACE CONSECUTIVE BLANKETS END OVER END (SHINGLE STYLE) WITH A 4"-6" (10CM-15CM) OVERLAP. USE A DOUBLE ROW OF STAPLES STAGGERED 4" (10CM) APART AND 4" (10CM) ON CENTER TO SECURE BLANKETS.
5. FULL LENGTH EDGE OF BLANKETS AT TOP OF SIDE SLOPES MUST BE ANCHORED WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30CM) APART IN A 6" (15CM) DEEP X 6" (15CM) WIDE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING.
6. ADJACENT BLANKETS MUST BE OVERLAPPED APPROXIMATELY 2"-5" (5CM-12.5CM)(DEPENDING ON BLANKET SIZE) AND STAPLED.
7. IN HIGH FLOW CHANNEL APPLICATIONS, A STAPLE CHECK SLOT IS RECOMMENDED AT 30' TO 40' (9M-12M) INTERVALS. USE A DOUBLE ROW OF STAPLES STAGGERED 4" (10CM) APART AND 4" (10CM) ON CENTER OVER ENTIRE WIDTH OF THE CHANNEL.
8. THE TERMINAL END OF BLANKETS MUST BE ANCHORED WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30CM) APART IN A 6" (15CM) DEEP X 6" (15CM) WIDE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING.

NOTE:
* HORIZONTAL STAPLE SPACING SHOULD BE ALTERED IF NECESSARY TO ALLOW STAPLES TO SECURE THE CRITICAL POINTS ALONG THE CHANNEL SURFACE.
** IN LOOSE SOIL CONDITIONS, THE USE OF STAPLE OR STAKE LENGTHS GREATER THAN 6" (15cm) MAY BE NECESSARY TO PROPERLY ANCHOR THE BLANKETS.

EROSION CONTROL BLANKET DETAIL FOR CHANNEL INSTALLATION



1. PREPARE SOIL BEFORE INSTALLING BLANKETS, INCLUDING ANY NECESSARY APPLICATION OF LIME, FERTILIZER, AND SEED. NOTE: WHEN USING CELL-O-SEED DO NOT SEED PREPARED AREA. CELL-O-SEED MUST BE INSTALLED WITH PAPER SIDE DOWN.
2. BEGIN AT THE TOP OF THE SLOPE BY ANCHORING THE BLANKET IN A 6" (15cm) WIDE TRENCH WITH APPROXIMATELY 12" (30cm) OF BLANKET EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE BLANKET WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30cm) APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO COMPACTED SOIL AND FOLD REMAINING 12" (30cm) PORTION OF THE BLANKET BACK OVER SEED AND COMPACTED SOIL. SECURE BLANKET OVER COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED APPROXIMATELY 12" (30cm) APART ACROSS THE WIDTH OF THE BLANKET.
3. ROLL THE BLANKETS (A.) DOWN OR (B.) HORIZONTALLY ACROSS THE SLOPE. BLANKETS WILL UNROLL WITH THE APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL BLANKETS MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES/STAKES IN APPROPRIATE LOCATIONS AS SHOWN IN THE STAPLE PATTERN GUIDE. WHEN USING OPTIONAL DOT SYSTEM, STAPLES/STAKES SHOULD BE PLACED THROUGH EACH OF THE COLORED DOTS CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. THE EDGES OF PARALLEL BLANKETS MUST BE STAPLED WITH APPROXIMATELY 2'-5" (5cm-12.5cm) OVERLAP DEPENDING ON BLANKET TYPE. TO ENSURE PROPER SEAM ALIGNMENT, PLACE THE EDGE OF THE OVERLAPPING BLANKET (BLANKET BEING INSTALLED ON TOP) EVEN WITH THE COLORED SEAM STITCH ON THE PREVIOUSLY INSTALLED BLANKET.
5. CONSECUTIVE BLANKETS SPLICED DOWN THE SLOPE MUST BE PLACED END OVER END (SHINGLE STYLE) WITH AN APPROXIMATE 3" (7.5cm) OVERLAP. STAPLE THROUGH OVERLAPPED AREA, APPROXIMATELY 12" (30cm) APART ACROSS ENTIRE BLANKET WIDTH.

3. CODE SUMMARY PER NFPA 1 AND FIRE DEPT. TECHNICAL STANDARDS FOR PROPOSED MULTI-FMILY HOUSING

FIRE/BUILDING CODES:

-THE BUILDING WILL BE DESIGNED IN ACCORDANCE WITH THE CITY BUILDING CODE, AS WELL AS ALL APPLICABLE LOCAL, STATE, AND FEDERAL CODES/LAWS. THE BUILDING WILL BE FULLY SPRINKLERED IN ACCORDANCE WITH NFPA 13, AND WILL HAVE FIRE DETECTION/ALARM SYSTEMS AS DICTATED BY NFPA 72 AND THE UNDERLYING CODES.

TECHNICAL STANDARD 3.2 - FIRE HYDRANTS:

-THERE IS (1) MUNICIPAL FIRE HYDRANT AND (2) PROPOSED PRIVATE HYDRANT LOCATED WITHIN 500 FEET RADIUS OF THE BUILDING. PLEASE SEE THE ATTACHED FIRE SAFETY COMPLIANCE PLAN C-9.0.

TECHNICAL STANDARD 3.3 - SINGLE AND TWO FAMILY RESIDENTIAL DEVELOPMENT:

-MULTI-FAMILY BUILDING WILL BE FULLY SPRINKLERED

TECHNICAL STANDARD 3.4 - SITE ACCESS STANDARDS:

3.4.1. - PRIVATE ROAD PROVIDES TURNAROUND DESIGNED TO ACCOMODATE 45' LADDER TRUCK

3.4.2. - FIRE DEPARTMENT ACCESS IS PROVIDED VIA THOMPSON'S POINT ACCESS ROAD AND A PRIVATE DRIVE FOR ACCESS TO 2 SIDES OF THE BUILDING.

3.4.3. - ZONING DOES NOT REQUIRE BUILDING SETBACKS

3.4.4. - FIRE DEPARTMENT ACCESS ROADS EXTEND TO WITHIN 50' OF ENTRANCES TO BUILDING

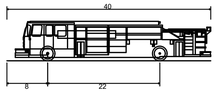
3.4.5. - ALL SITE ACCESS PROVIDES NO LESS THAN 9 FEET IN CLEARANCE HEIGHT.

3.4.6. - ALL ELEVATORS WILL ACCOMMODATE AN 80 X 24 STRETCHER.

3.4.7. - THE STREET NUMBERING AND 911 ADDRESS HAS BEEN REVIEWED AND APPROVED BY THE CITY OF PORTLAND PUBLIC WORKS.

3.4.8. - THE BUILDING WILL DISPLAY THE ASSIGNED STREET NUMBERS. ANTICIPATED 911 ADDRESS IS 125 THOMPSON'S POINT ROAD.

TECHNICAL STANDARD 3.5 - STANDARDS FOR EMERGENCY ACCESS LANES AND GATES:



ALL ACCESS ROADS EXCEED 16' IN WIDTH AND ROAD RADIUS CAN ACCOMMODATE A 45' LONG FIRE TRUCK

TECHNICAL STANDARD 3.6 - SUBDIVISION STANDARDS:

APPROVED SUBDIVISION WITH 1 ACCESS ROAD

TECHNICAL STANDARDS 3.7 THROUGH 3.11 - STANDARDS FOR BLASTING AND REGULATION OF EXPLOSIVES:

-GEOTECHNICAL EXPLORATIONS WERE PERFORMED AND THE SUBSURFACE CONDITION DOES NOT CONTAIN BEDROCK. BASED ON THE FINDINGS, LARGE BLAST OPERATIONS ARE NOT ANTICIPATED.

Pumper Fire Truck	
Overall Length	40.000ft

12.3. GENERAL STANDARDS

Outdoor lighting standards listed below apply to all new developments.

1. Uniformity: As measured in foot candles at grade, maximum to minimum illumination levels shall not exceed a ratio of twenty (20) to one (1.)

2. Illumination Levels: Minimum, Maximum, and Average illumination levels for areas intended to be lighted, as measured at grade, shall be:

Minimum	0.2 foot candles (fc)
Maximum	5.0 foot candles (fc)
Average	1.25 foot candles (fc)

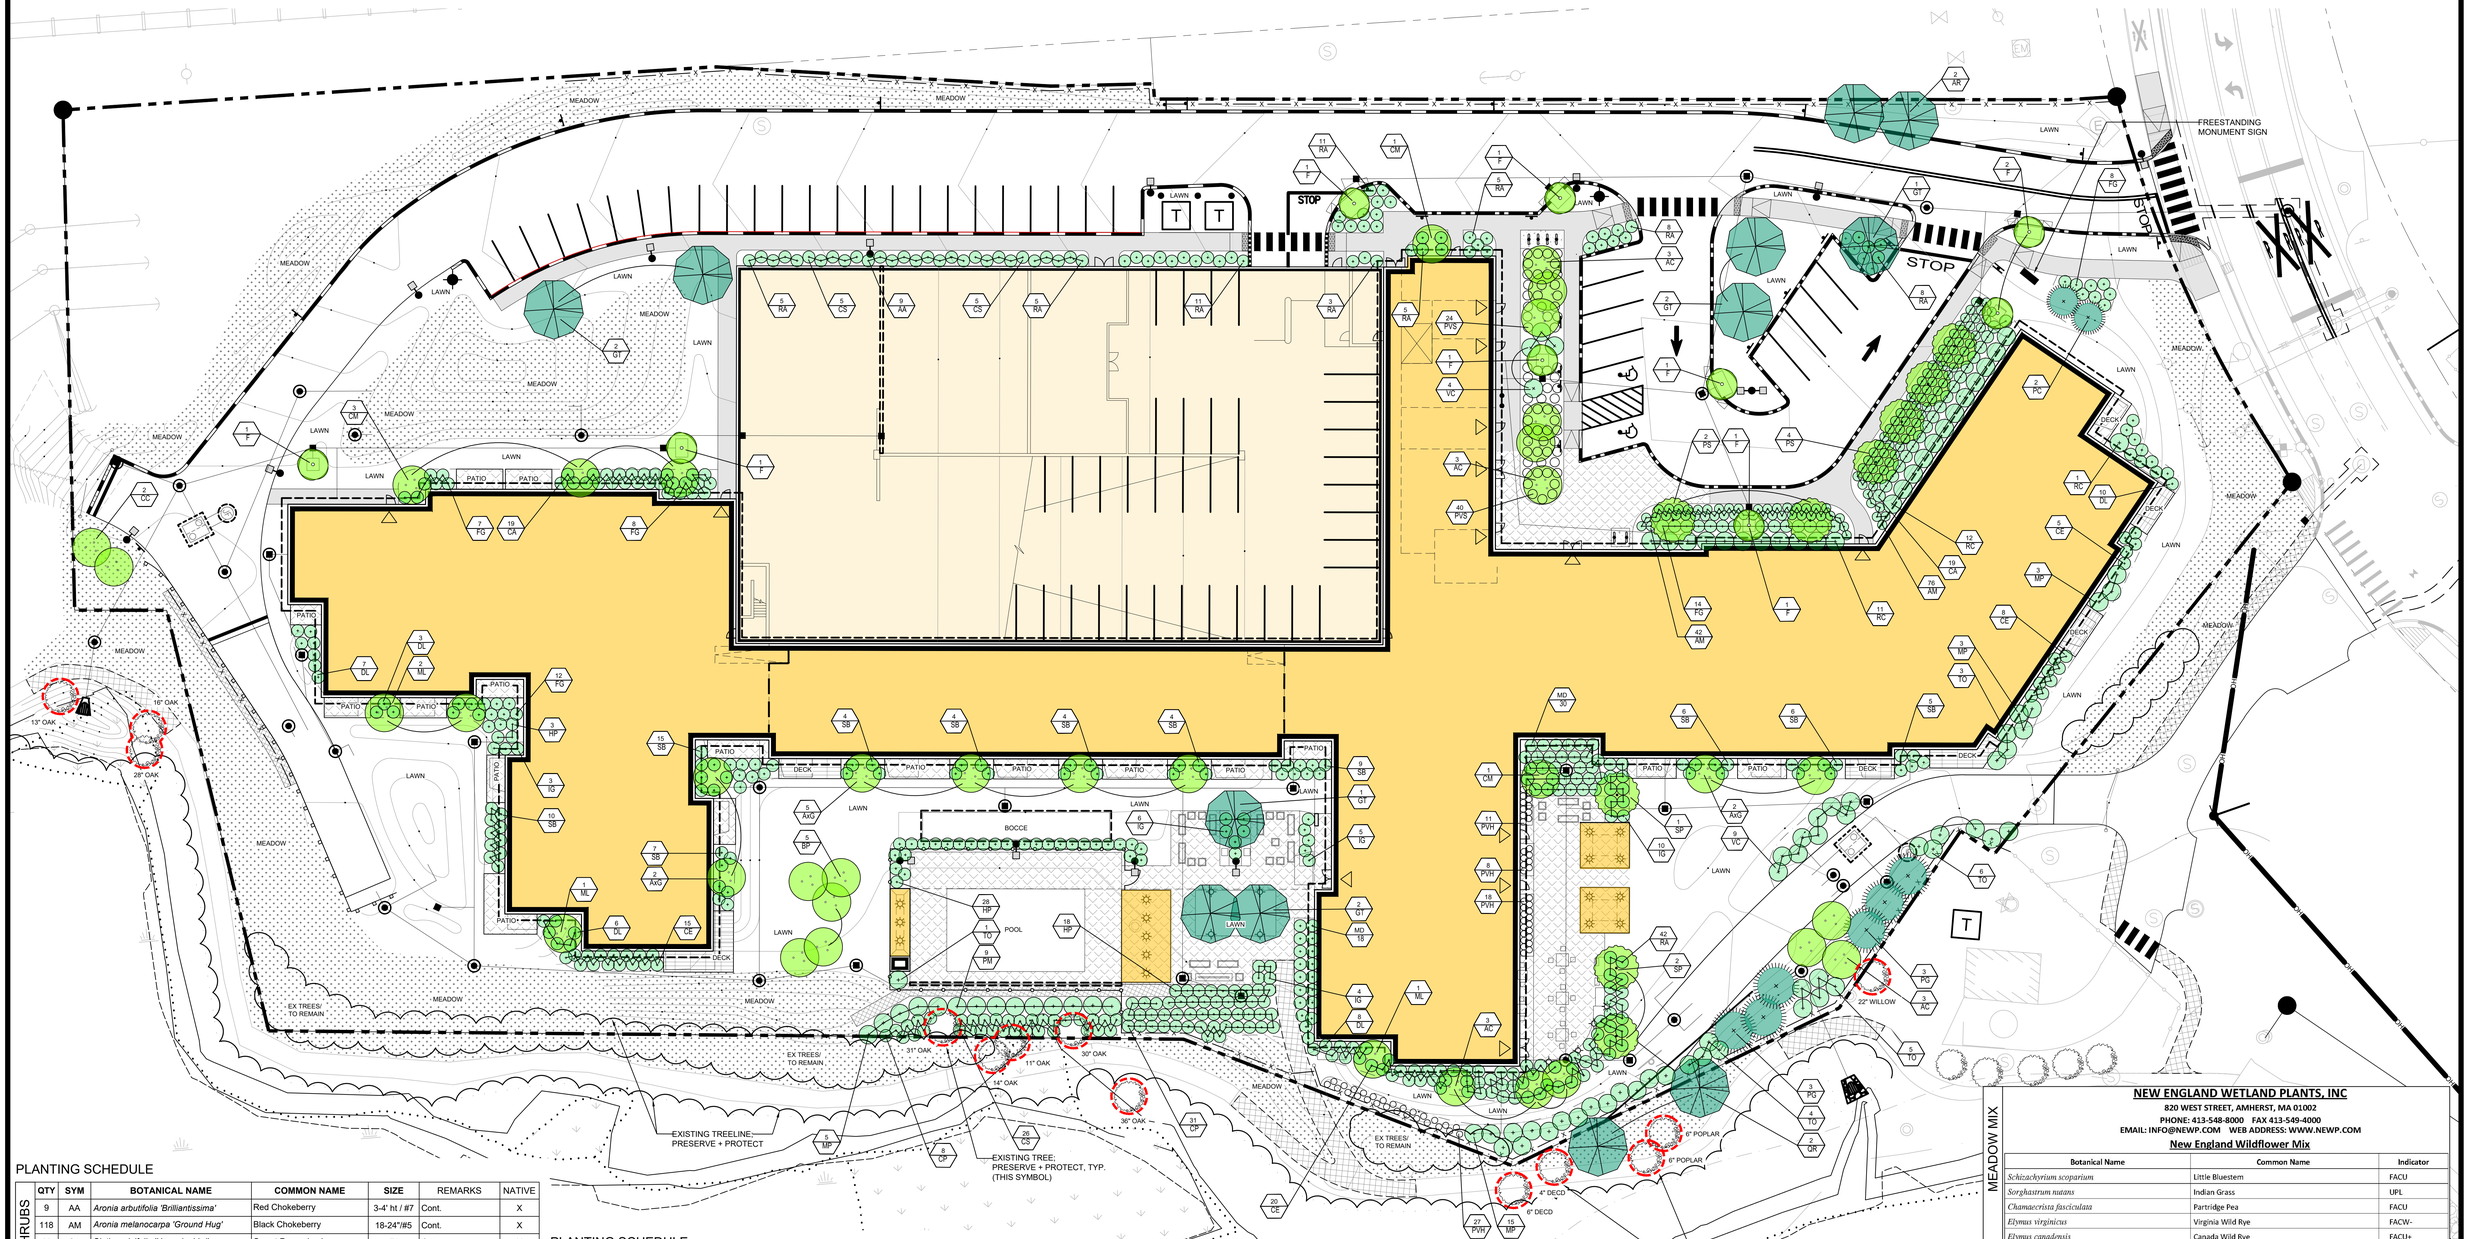
Summary
1 of 1



PLANTING NOTES:

1. CONTRACTOR SHALL BEGIN MAINTENANCE IMMEDIATELY AFTER PLANTING AND SHALL CONTINUE UNTIL FINAL ACCEPTANCE. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF WATERING AND MAINTENANCE.
2. CONTRACTOR SHALL SUPPLY PLANTS IN QUANTITIES SUFFICIENT TO COMPLETE WORK SHOWN ON THE PLAN. ANY DISCREPANCY BETWEEN THE QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED ON THE PLAN SHALL NOT ENTITLE THE CONTRACTOR TO ADDITIONAL RENUMERATION. ANY DISCREPANCIES SHALL BE CLARIFIED WITH THE LANDSCAPE ARCHITECT PRIOR TO ORDERING PLANT MATERIAL.
3. ALL MATERIALS SHALL CONFORM TO SPECIFICATIONS OF THE AMERICAN STANDARDS FOR NURSERY STOCK (LATEST EDITION) AS SET FORTH BY THE AMERICAN ASSOCIATION OF NURSERYMEN.
4. ALL PLANTS SHALL BEAR THE SAME RELATIONSHIP TO FINISH GRADE AS THE ORIGINAL GRADES BEFORE DIGGING.
5. THE LANDSCAPE CONTRACTOR SHALL GUARANTEE ALL PLANT MATERIALS FOR ONE (1) FULL YEAR FROM DATE OF SUBSTANTIAL COMPLETION.
6. ALL PLANT MATERIALS ARE SUBJECT TO THE APPROVAL OF THE LANDSCAPE ARCHITECT AT THE NURSERY AND AT THE SITE.
7. ALL PLANT BEDS SHALL MEET MINIMUM TOPSOIL REQUIREMENTS (SEE SPECIFICATIONS).
8. NO PLANT MATERIAL SHALL BE INSTALLED UNTIL GRUBBING, BED PREPARATION, AND FINISH GRADING HAS BEEN COMPLETED IN THE IMMEDIATE AREA.
9. ALL PLANTS BEDS AND TREE WELLS SHALL HAVE A MINIMUM OF 3" OF UNIFORMLY DISTRIBUTED, DARK, SHREDDED BARK MULCH.
10. CONTRACTOR SHALL SUBMIT SOIL SAMPLE AND TEST OF TOPSOIL TO LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. SOIL ADMIXTURE SHALL BE ADDED TO EXISTING SOIL (BY CONTRACTOR) IF DEEMED NECESSARY BY SOIL TEST RESULTS.
11. ROUGH GRADING AND BED PREPARATION SHALL BE APPROVED BY LANDSCAPE ARCHITECT PRIOR TO PLANT INSTALLATION. CONTRACTOR SHALL NOTIFY LANDSCAPE ARCHITECT 48 HOURS PRIOR TO REQUIRED SITE VISIT.
12. ALL PLANTS SHALL BE BALLED AND WRAPPED OR CONTAINER GROWN AS SPECIFIED. ALL ROOT WRAPPING AND CONTAINER MATERIAL MADE OF SYNTHETICS OR PLASTICS SHALL BE REMOVED AT THE TIME OF PLANTING.
13. ALL BROAD LEAF EVERGREEN PLANTS SHALL BE SPRAYED WITH AN ANTI-DESSICANT AT THE BEGINNING OF THEIR FIRST WINTER.
14. ALL PLANTS SHALL BE INSTALLED AS PER DETAILS AND THE CONTRACT SPECIFICATIONS. THE LANDSCAPE CONTRACTOR SHALL REFER TO THE CONTRACT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
15. ALL PLANTS SHALL BE WATERED BY THE CONTRACTOR, AS NECESSARY TO INSURE HEALTH UNTIL FINAL ACCEPTANCE.
16. CONTRACTOR SHALL STAKE TREES IF DEEMED NECESSARY BY THE LANDSCAPE ARCHITECT.
17. THE LANDSCAPE CONTRACTOR SHALL PROVIDE PREPARED SOIL PLANTING MIX AS PER THE CONTRACT SPECIFICATIONS.
18. THE LANDSCAPE CONTRACTOR SHALL REFER TO THE PLANT LIST AND PLANTING SPECIFICATIONS FOR SEASONAL REQUIREMENTS AND OTHER RESTRICTIONS RELATED TO THE TIME AND SEASON OF PLANTING.
19. PLANTING SOIL MIX: 1 PART COMPOST, 8 PARTS TOPSOIL, 3 PARTS HUMUS.
    TOPSOIL: FERTILE, FRIABLE, NATURAL TOPSOIL OF LOAMY CHARACTER, WITHOUT ADMIXTURE OF SUBSOIL MATERIAL, FREE FROM CLAY, LUMPS, COARSE SANDS, STONES, PLANTS, ROOTS, STICKS, AND OTHER FOREIGN MATERIALS GREATER THAN 1" IN ANY DIMENSION, PH RANGE 5.0-7.0 , AND SHALL CONTAIN NOT LESS THAN 6% ORGANIC MATTER BY WEIGHT. SANDY LOAM OR LOAM SOIL AS DEFINED BY THE USDA SOIL CONSERVATION SERVICE, AND HAVE THE FOLLOWING MECHANICAL ANALYSIS:

TEXTURAL CLASS	% OF TOTAL WEIGHT	AVERAGE %
SAND (0.05- 2.0 MM)	45 TO 75%	60%
SILT (0.002- 0.05 MM)	15 TO 35%	25%
CLAY (< 0.002 MM)	5 TO 25%	15%

20. LAWN SEED MIX: "YARDSCAPING / BAYSCAPING MIX" BY ALLEN STERLING LOTHROP, FALMOUTH, MAINE

NAME	PROPORTION BY WEIGHT	% GERMINATION
CREEPING RED FESCUE (ENDOPHYTE ENHANCED)	40%	80
TRIFECTA PERENNIAL RYEGRASS (ENDOPHYTE ENHANCED)	30%	80
KENBLUE KENTUCKY BLUEGRASS	20%	85
CHEWINGS FESCUE	10%	90

9. REFER TO "SUBDIVISION PLAN EASEMENTS AND ENCUMBRANCES SHEET 2.0A" RECORDED IN CCRD (CCRD BOOK 223, PAGE 133).
10. "COMMON AREAS" ARE THE AREAS DEFINED AS SUCH IN THE DECLARATION OF EASEMENTS, COVENANTS AND RESTRICTIONS REFERRED TO IN NOTE 5 ABOVE, AND THE USE OF WHICH IS GOVERNED BY THE TERMS OF SAID DECLARATION.

SECTIONAL RECORDING NOTES:

1. THIS PLAN WAS APPROVED BY THE CITY OF PORTLAND PLANNING BOARD ON JANUARY 12, 2016, WITH AN AMENDMENT APPROVED BY THE CITY OF PORTLAND PLANNING AUTHORITY ON OCTOBER 19, 2017 AND MOST RECENTLY AMENDED ON SEPTEMBER 20, 2018. THIS PLAN IS INTENDED TO SUPPLEMENT THE PREVIOUSLY RECORDED "AMENDED SUBDIVISION PLAN - SECTIONAL 1 RECORDING PLAT" RECORDED ON NOVEMBER 21, 2018, BOOK 218, PAGE 501 OR SUBSEQUENT REVISION THERETO.
2. LOTS 1-5, 7, 10, 11-13 AND 17-19 HAVE BEEN PREVIOUSLY APPROVED (SEE SPECIAL CONDITIONS OF PLANNING BOARD APPROVAL NOTES ON THIS SHEET) AND SHOWN ON THIS PLAN FOR REFERENCE PURPOSES ONLY, BUT WILL NOT BE CREATED UNTIL A FUTURE SECTIONAL RECORDING PLAT.
3. FUTURE PHASE INFRASTRUCTURE OR OTHER WORK WILL REQUIRE A SEPARATE RECORDING PLAT AND POSTING OF A FURTHER PERFORMANCE GUARANTEE.

LOCATION MAP
N.T.S.

SPECIAL CONDITIONS OF PLANNING BOARD APPROVAL DATED JAN. 12, 2016

On January 12, 2016, the Planning Board considered a Level III Site Plan and Subdivision application for an amended subdivision plan consisting of 19 lots, an amended Site Location of Development Act approval, a Level III site plan for the renovation of an existing building (Brick South) for use as a flexible 2,500 person event/assembly space with associated parking, utilities and stormwater management within the 34,000 square foot building. Included in this site plan is coordination with a previous approval of Brick North and adjacent site work. Both the site plan and subdivision application are applications towards fulfillment of the previously approved Master Development Plan for this site. The Planning Board reviewed the proposal for conformance with the standards of the: Shoreland Zoning Regulations, Floodplain Management Regulations, Traffic Movement Permit, Subdivision Ordinance and Site Plan Ordinance, including the Site Development of Location Act. The Planning Board voted 5-0 (Elizabeth Boepple absent) to approve the application with the following waivers and condition(s) as presented below.

WAIVERS

On the basis of the application, plans, reports and other information submitted by the applicant, findings and recommendations, contained in the Planning Board Report for the public hearing on January 12, 2015 for applications #2015-133 and #2015-159 relevant to Portland's Technical and Design Standards and other regulations, and the testimony presented at the Planning Board hearing, the Planning Board voted 5-0 (Boepple absent) to waive the following Technical Manual standards regarding City street design:

1. 1. 7 .2.1, requiring a perpendicular driveway connection to the street, to allow for an alternative angle for the proposed Parking Garage Entrance (Lot 14/Building F 1).
2. 1.7.2.9, requiring that vehicular circulation to be contained off-site and to not utilize the adjacent street system, to allow for anticipated delivery truck maneuvers.
3. 10.8, requiring a minimum aggregate base course thickness of 3 inches for collector roads, to allow for alternative road design specifications as noted on Sheet C7-0 ..
4. Figure I-2 (Collector Street Cross-Section), requiring continuous sidewalks on both sides of the collector road to allow for sidewalk not to be built on an easterly portion of the road, as shown on the Site Layout Plan, sheet C-3.0, for the purposes of the Level III site plan (2015-159) subject to a condition of approval for completion of full sidewalk design as shown on Sheet C-3.0, *Overall Site Plan* is (2015-133) at a future phase.
5. Figure I-2 (Collector Street Cross-Section), requiring a minimum roadway width of 40 feet for collector roads, to allow for a variable width of 30-39 feet.
6. Figure 1-2 (Collector Street Cross-Section), requiring a minimum esplanade width of 5feet for collector roads, to allow for a 4ft wide esplanade.

SUBDIVISION REVIEW

The Planning Board voted 5-0 (Boepple absent) that the plan is in conformance with the subdivision standards of the Land Use Code and the Site Location of Development Act, subject to the following condition(s) of approval:

1. The applicant shall finalize the subdivision plat for review and approval by Corporation Counsel, the Department of Public Works, and the Planning Authority. The subdivision plats shall note all conditions of public access, all relevant easements including any for city vehicle access and turning, language regarding rights of lot ingress/egress/egress, and final street turnaround easement location and design in accordance with City of Portland Technical Manual section 1.3.
2. Prior to the issuance of certificates of occupancy, the applicant shall provide a revised Declaration of Easements, Covenants and Restrictions document for review and approval by Corporation Counsel;
3. Street Lighting: The proposed street lights on the 1st segment of the public portion of the Sewell Street extension are to be privately owned, metered and maintained by the Forefront at Thompson's Point. The City shall grant a license for such a purpose at the time of street acceptance.

SPECIAL CONDITIONS OF PLANNING AUTHORITY APPROVAL DATED JUNE 26, 2017

THE SECTIONAL 2 RECORDING PLAN WILL BE RECORDED IN THE CUMBERLAND COUNTY REGISTRY OF DEEDS PRIOR TO A CERTIFICATE OF OCCUPANCY PERMIT BEING ISSUED FOR NEW CONSTRUCTION ON LOT 7.

APPROVED LOT TO BE RECORDED UNDER SUBSEQUENT SECTIONAL RECORDING PLAT SEE SECTIONAL RECORDING NOTE 2

LAND TO BE RETAINED BY FOREFRONT PARTNERS I, LP. EXCLUDED FROM SUBDIVISION OF LAND FOR CONVEYANCE TO NNEPRA (0.028 AC)

1. THIS PLAN WAS APPROVED BY THE CITY OF PORTLAND PLANNING BOARD ON JANUARY 12, 2016. THIS PLAN IS INTENDED TO SUPPLEMENT THE PREVIOUSLY RECORDED SUBDIVISION PLAN - SECTIONAL 1 RECORDING PLAT, SUBDIVISION PLAN - SECTIONAL 2 RECORDING PLAT AND SUBDIVISION PLAN - SECTIONAL 3 RECORDING PLAT.

LOCATION MAP
N.T.S.

SPECIAL CONDITIONS OF PLANNING BOARD APPROVAL DATED JAN. 12, 2016

On January 12, 2016, the Planning Board considered a Level III Site Plan and Subdivision application for an amended subdivision plan consisting of 19 lots, an amended Site Location of Development Act approval, a Level III site plan for the renovation of an existing building (Brick South) for use as a flexible 2,500 person event/assembly space with associated parking, utilities and stormwater management within the 34,000 square foot building. Included in this site plan is coordination with a previous approval of Brick North and adjacent site work. Both the site plan and subdivision application are applications towards fulfillment of the previously approved Master Development Plan for this site. The Planning Board reviewed the proposal for conformance with the standards of the: Shoreland Zoning Regulations, Floodplain Management Regulations, Traffic Movement Permit, Subdivision Ordinance and Site Plan Ordinance, including the Site Development of Location Act. The Planning Board voted 5-0 (Elizabeth Boepple absent) to approve the application with the following waivers and condition(s) as presented below.

WAIVERS

On the basis of the application, plans, reports and other information submitted by the applicant, findings and recommendations, contained in the Planning Board Report for the public hearing on January 12, 2015 for applications #2015-133 and #2015-159 relevant to Portland's Technical and Design Standards and other regulations, and the testimony presented at the Planning Board hearing, the Planning Board voted 5-0 (Boepple absent) to waive the following Technical Manual standards regarding City street design:

1. 1. 7 .2.1, requiring a perpendicular driveway connection to the street, to allow for an alternative angle for the proposed Parking Garage Entrance (Lot 14/Building F 1).
2. 1.7.2.9, requiring that vehicular circulation to be contained off-site and to not utilize the adjacent street system, to allow for anticipated delivery truck maneuvers.
3. 10 .8, requiring a minimum aggregate base course thickness of 3 inches for collector roads, to allow for alternative road design specifications as noted on Sheet C7-0 ..
4. Figure I-2 (Collector Street Cross-Section), requiring continuous sidewalks on both sides of the collector road to allow for sidewalk not to be built on an easterly portion of the road, as shown on the Site Layout Plan, sheet C-3.0, for the purposes of the Level III site plan (2015-159) subject to a condition of approval for completion of full sidewalk design as shown on Sheet C-3.0, *Overall Site Plan* is (2015-133) at a future phase.
5. Figure I-2 (Collector Street Cross-Section), requiring a minimum roadway width of 40 feet for collector roads, to allow for a variable width of 30-39 feet.
6. Figure 1-2 (Collector Street Cross-Section), requiring a minimum esplanade width of 5feet for collector roads, to allow for a 4ft wide esplanade.

SUBDIVISION REVIEW

The Planning Board voted 5-0 (Boepple absent) that the plan is in conformance with the subdivision standards of the Land Use Code and the Site Location of Development Act, subject to the following condition(s) of approval:

1. The applicant shall finalize the subdivision plat for review and approval by Corporation Counsel, the Department of Public Works, and the Planning Authority. The subdivision plats shall note all conditions of public access, all relevant easements including any for city vehicle access and turning, language regarding rights of lot ingress/egress/regress, and final street turnaround easement location and design in accordance with City of Portland Technical Manual section 1.3.
2. Prior to the issuance of certificates of occupancy, the applicant shall provide a revised Declaration of Easements, Covenants and Restrictions document for review and approval by Corporation Counsel;
3. Street Lighting: The proposed street lights on the 1st segment of the public portion of the Sewell Street extension are to be privately owned, metered and maintained by the Forefront at Thompson's Point. The City shall grant a license for such a purpose at the time of street acceptance.

Institutional Overlay Zone, Zone Map and Text Amendment
ZN-003059-2024
University of New England

Submitted to:	Portland Planning Board	**Prepared By:**	Natasha Kypfer
Public Hearing Date:	February 25, 2025	**Date:**	February 21, 2025

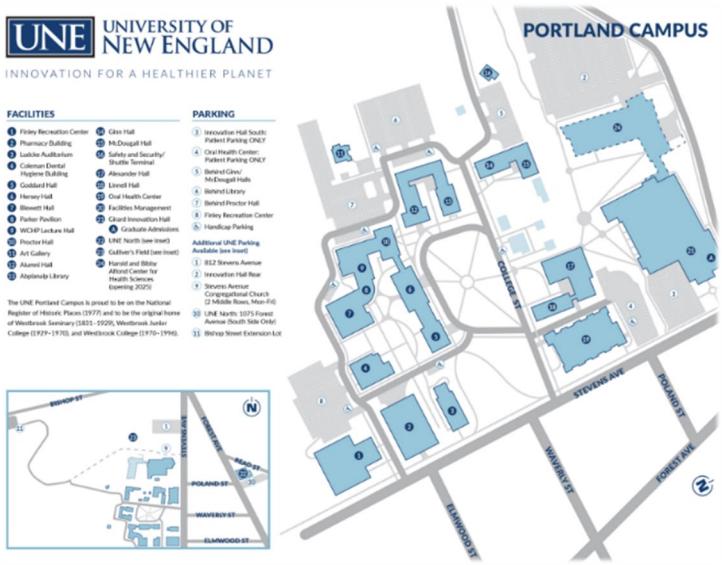

Figure 1: Image of the UNE Portland campus map, provided by the applicant.

I. INTRODUCTION

The University of New England (UNE) has submitted a zoning map and text amendment application to establish an Institutional Overlay Zone (IOZ) for UNE's Portland Campus and to rezone the campus from a mixture of residential (RN-1 and RN-3), commercial (B-2), and industrial (I-M and I-H) zones, to B-2 Community Business, with certain environmentally sensitive areas being proposed as OS-P Open Space. This application is intended to establish zoning regulations that are conducive to the University's long-term development plans and would allow for on-campus housing, academic buildings, and athletic facilities.

In the process of designating the IOZ, the Planning Board is tasked with reviewing the proposal and its associated components, including: 1) the Institutional Development Plan (IDP), a proactive planning document utilized to guide the anticipated growth for the institution and inform the Regulatory Framework, and 2) the Regulatory Framework, which establishes zoning requirements intended to facilitate future growth as outlined in the IDP. The Planning Board reviews these documents for consistency against the standards found within Section 8.5 of the Land Use Code, ultimately resulting in a recommendation to the City Council to adopt the IOZ boundaries and the Regulatory Framework.

Review of the UNE IOZ has spanned across multiple Planning Board workshops. The first Planning Board workshop on this item, which was held on November 12, 2024, served as an initial introduction to the project and the IOZ process. The second Planning Board workshop, which was held on January 28, 2025, focused on the proposed Regulatory Framework language and the proposed rezoning of the campus to B-2 Community Business and OS-P

Open Space. This report is intended to summarize the application's consistency with the applicable review standards for an institutional overlay zone, listed under Section 8.3.4.D and 8.3.5.E in the Land Use Code, and with *Portland's Plan 2030*.

The Planning and Urban Development Department mailed 191 notices advertising this meeting to property owners within 500 feet of the site. A legal advertisement ran in the February 13, 2025 and the February 14, 2025 editions of the *Portland Press Herald*.

Applicant: University of New England, Alan Thibeault

Representatives: Woodard & Curran, Caitlin Suhr
Bernstein Shur, Mary Costigan
Sewall Infrastructure, Diane Morabito

II. THE PURPOSE AND COMPONENTS OF AN IOZ

Section 8.5.1 of the Land Use Code describes the Institutional Overlay Zone (IOZ) as a regulatory mechanism, available solely to the five major medical and higher educational institutions within Portland, wherein an improved regulatory structure can be sought in order to facilitate a consistent, predictable, and clear growth management process. The five institutions are: Maine Medical Center, Mercy Hospital, the University of Southern Maine, the University of New England, and The Roux Institute at Northeastern University. Maine Med piloted the first IOZ back in 2017, with Roux following suit in 2022, therefore making UNE the third institution to pursue an IOZ.

The Land Use Code requires the following three components as part of the IOZ submission:

- The *Institutional Development Plan* (*IDP*) serves as a background document, or comprehensive plan, which is developed specifically by the eligible institution and is intended to guide development over the life cycle of the plan through its short-, medium-, and long-term growth. The IDP is intended to function as a stand-alone document and is envisioned as a fundamental component of the IOZ itself. The IDP would be approved by the Planning Board and is subject to meeting the content and review standards listed under Section 8.5.4, C&D.

- The *Regulatory Framework*, establishes supplemental zoning and land-use regulations, specific to the institution, that are directly informed by the IDP, and which are intended to allow for orderly growth and manage off-site impacts. The regulatory framework is first considered by the Planning Board, which makes a recommendation to the City Council around its adoption. If adopted by the Council, the regulatory framework would be added directly into the Land Use Code.

- The *IOZ Zoning Map* depicts the boundaries of an institution's IOZ, and is a geographic element intended as an amendment to the City's official zoning map. As with the regulatory framework, the IOZ map would require City Council adoption, following a recommendation by the Planning Board.

III. PROJECT SITE DATA

Property Size	72± acres
Property Address	716 Stevens Avenue
Existing Zoning	R-3, R-5, B-2, I-M, and I-H
Existing Use	UNE Portland Campus

Proposed Zoning	B-2, Community Business OS-P, Open Space Preservation

IV. BACKGROUND AND EXISITING CONDITIONS

The University of New England is Maine's largest private university, with campuses here in Portland, in Biddeford, in Tangier, Morocco, as well as online. The IOZ application is exclusively for the Portland campus. Beginning as the Westbrook Seminary in 1831, today the campus occupies a roughly 72-acre site (see Figure 2), situated within the Deering Center neighborhood. UNE's campus includes the College of Dental Medicine, the Westbrook College of Health Professions, the College of Graduate and Professional Studies, Innovation Hall, and other fixtures like the Oral Health Center and Dental Hygiene Center clinics, and the UNE Art Gallery and Maine Women Writers Collection.

UNE's Portland campus is comprised of 25 separate buildings, 11 off-street parking areas, extensive forested open space areas, and other campus green spaces. The campus is centered around a historic campus core; the locally designated Westbrook College Historic District, which occupies the southeastern corner of the campus and includes several historic academic buildings organized around a campus quad. With regard to the surrounding campus context, Warren Avenue, Bishop Street Extension, and Bishop Street are to the north; Stevens Avenue is to the east; and the Evergreen Cemetery and Central Maine Power Utility Corridor are positioned to the south. Within the campus are several privately-owned residential properties that are situated along College Street (see Figure 1). Additionally, three UNE-owned parcels are located proximate to the campus proper but not directly on-site, with these being the properties at 1075 Forest Avenue, 798 Stevens Avenue, and 812 Stevens Avenue.

Prior to this application, the University had submitted a separate application (ZN-001549-2021) with the same aim of establishing an IOZ for UNE's Portland Campus. UNE worked closely with City staff and other stakeholders to develop a draft IDP and Regulatory Framework, and came before the Planning Board for a single workshop, which was held on January 25, 2022. This application was ultimately withdrawn, as the University prioritized the permitting of the Center for Health Sciences, Application PL-002017-2022, which was approved by the Planning Board on September 27, 2022.

V. REVIEW OF ZONE CHANGE TO B-2 AND OS-P

This application requests that the City rezone UNE's campus from RN-1, RN-3, B-2, I-M, and I-H to a combination of B-2 Community Business and OS-P Open Space Preservation, in order to create a more uniform underlying zoning framework for the university. As detailed in the application, the B-2 zone permits post-secondary schools by-right (definition included below), with this use being conditional in the RN-3, and not permitted within the other zones found within the campus. Rezoning the campus to B-2 would permit a range of activities and uses across the entire UNE Portland campus and would provide a more predictable permitting pathway for the University to grow as outlined in their draft IDP.

> Post-secondary school Definition
> A Post-secondary school is: *A facility for postsecondary higher learning that grants associate or bachelor's degrees. The institution may also have research facilities and/or professional schools that grant master and doctoral degrees. Post-secondary schools may also include additional uses as part of the principal use, such as dormitories, cafeterias, restaurants, retail sales, indoor or outdoor recreational facilities, preschool facilities, and similar uses.*

In examination of the zoning context, UNE is located just south of Morrill's Corner, which is anchored by a cluster of properties zoned TOD-1 Transit Neighborhood zone, which allows a diverse array of uses, and permits higher intensity development, to support high-frequency transit activity in this location. South of Morrill's Corner along Steven's Avenue, the zoning transitions from TOD-1 to B-2 Community Business, with various commercial, institutional (including outparcels owned and operated by UNE), and residential uses. Immediately across from UNE's campus is a large parcel zoned RN-5, which is the site of Park Danforth; a large-scale senior assisted living facility. The zoning then transitions to RN-3 along the east side of Stevens Avenue as one moves towards Deering Center, and these properties feature a mixture of small- and mid-scale residential development, a childcare facility (The Children's Center), a private school (St. Brigid School) and St. Joseph's Catholic Church. Beyond these properties, the zoning again transitions to B-1 Neighborhood Business and RN-5 at the site of the former St. Joseph's Convent, which has since been converted into age-restricted housing with additional on-site amenities and other commercial leased space. Along the west side of Steven's Avenue, property is predominantly zoned OS-R, which encompasses Evergreen Cemetery.

As stated above, the applicant is requesting that the UNE Portland Campus be rezoned to B-2 Community Business and OS-P Open Space Preservation. The purpose statements for these two zones are provided below.

> B-2 Purpose Statement
> The purpose of the B-2 zone is: *To provide locations for a mixture of commercial, service, and residential uses in a comfortable pedestrian environment that is easily accessible and well-connected to surrounding neighborhoods. Such a mixture may serve the daily needs of nearby residents within walking distance, as well as surrounding neighborhoods via multiple modes of transportation. The zone provides a broad range of goods and services with a mixture of large and small buildings, such as grocery stores, shops and services located in shopping centers and along arterial streets. The B-2 zone's multi-modal orientation accommodates all modes of transportation, and the standards of the zone require that development relate to surrounding neighborhoods by design, orientation, and circulation patterns. The zone encourages mixed-use development, and provides locations for moderate to high-density housing, including three-family, four-family, townhouse, and multi-family structures in urban neighborhoods along arterials.*

> OS-P Purpose Statement
> The purpose of the OS-P zone is: *To preserve and protect open space as a limited and valuable resource, and to further the City of Portland's goals related to climate adaptation and resiliency. The OS-P zone prioritizes preservation and protection of Portland's critical conservation and natural resource areas. Very limited development may be allowed for sustainable energy generation, passive recreation and educational purposes, but must be compatible with and cause little impact to these areas.*

In assessing the appropriateness of the B-2 use and dimensional provisions, Staff would note that the B-2 is generally more permissive than the current RN-1 and RN-3 zones, which constitute the majority of the University's land area, and all of the core upper campus area. As noted previously, the RN-3 zone does permit post-secondary schools as a conditional use, however the dimensional restrictions for the RN-3 are geared towards small-scale residential development, and are not well-suited for larger-scale institutional development. For example, building heights are limited to 35 feet, and lot coverage is limited to 50% for non-residential uses. The B-2 meanwhile permits building heights of up to 75 feet, and allows for more intensive development, with a requirement that just 10% of the lot be landscaped open space. From a use perspective, the B-2 zone permits a wide variety of different uses as detailed in Table 6-C in the Land Use Code, with a mixture of residential, institutional, commercial and light-industrial uses. These permitted uses encompass the vast majority of uses anticipated to occur at UNE's campus, as

indicated within the IDP under their 10± year development plan, including: student housing, an athletic facility, and future academic buildings and renovation/expansions to existing academic buildings.

In reviewing this application and the proposed zoning, City staff encouraged the Applicant to consider formally rezoning the applicant's proposed designated open space areas to OS-P, Open Space Preservation. As depicted in Figures 2 and 3 below, the evolution of the open space areas can be seen. In the first submission of this application, these areas were not defined. Based upon feedback from City staff, which encouraged the University to preserve high-value natural areas on campus within the Capisic Brook Watershed area, the applicant revised their height map to delineate open space or no-build areas as seen in Figure 3. The City then recommended that these areas be rezoned to OS-P, as this is an already defined zone with clear use and dimensional restrictions, and a purpose statement that aligns with the City's goals for the preservation of these critical natural resource areas on UNE's campus.

Figure 2: Rendering of original Height Overlay Map, provided by the applicant with their 11/08/2024 submittal.

Figure 3: Rendering of current Open Space and Height Map, provided by the applicant with their 2/7/2025 submittal.

VI. UPDATES BASED ON PREVIOUS WORKSHOPS AND FURTHER DISCUSSION

At the November 12, 2024 workshop, the Planning Board indicated support for the creation of the IOZ by UNE, and through discussions, highlighted several areas that deserved further study. In response, the Applicant provided revisions with their resubmission. Further, in light of the adoption of Recode, effective December 4, 2024, and in response to comments from the Board, Staff, and the public, UNE made significant revisions to their IOZ height map, by: plotting three OS-P areas (i.e. effectively 'no build areas' or 0-foot maximum height zones) and aligning the three outparcels along Forest and Stevens Avenues with the B-2 maximum height of 75-feet (in addition to the areas not within either the Open Space, or the two areas marked with 85-feet maximum height allowances). These changes are depicted above in Figures 2 and 3 above, as previously detailed.

At the January 28, 2025 workshop, the Planning Board largely focused on the following topics:

- Reducing the allowable building height between the proposed residential development and open space area/25-foot transition zone. This area was proposed to have a maximum building height of 75 feet, and the City had recommended that this be reduced to either 50 feet, as is permitted within the transition zone, or to be mapped as additional open space, in order to provide additional buffer in this location. This area abuts numerous homes along Mayfield Street. Minimizing activity in this location and reducing building heights would curtail numerous potential impacts to these abutters, including noise, light, and visual impacts.
- Reducing allowable building heights within the proposed transition zones, or establishing these zones as no-build areas.
- Consider expanding upon the required community engagement.
- Rezoning proposed open space areas to OS-P. Staff sought the Board's feedback on the appropriateness of this, and the extent of the identified area(s).

VII. REVIEW OF INSTITUTIONAL DEVELOPMENT PLAN

A primary function of the IDP is to identify likely future development and identify whether such development is a short-term (1-5 years), medium-term (5-10 years) or long-term (10+ years) priority for the institution, as detailed in Section 8.5.4.B. The IDP itself is subject to several review standards, which are intended to ensure that the IDP comprehensively details the institution's development plans, necessary infrastructure improvements, and strategies for mitigating development impacts and engaging with the surrounding neighborhood. Table 1 below provides an overview of each content category, listing whether or not the required information has been provided, and where within the IDP document the materials can be found.

TABLE 1: Section 8.3.4.C, Required Content of the Institutional Development Plan (IDP)			
	Content Category	Provided	Resource
1.	Context Information: Mission, vision, or purpose statement	✓	Provided as Chapter 1, on Pages 4-6. *UNE's mission, vision, and core values are identified.*
2.	Context Information: Relevant baseline data	✓	Provided as Chapter 1, on Pages 7-22.
3.	Context Information: Baseline characteristics of the existing campus & context of UNE	✓	Provided as Chapter 1, on Pages 22-27.
4.	Context Information:	✓	Provided as Chapter 1, on Pages 27-28.

	Summary of public involvement		*The information is provided here, and supplemented by the neighborhood meeting packets included as Attachments H and I to this memo.*
5.	Assessment of future institutional growth & change	✓	Provided as Chapter 2, on Pages 29-36.
6.	Analysis and associated plans for: Transportation & Access	✓	Material provided as Chapter 3, on Pages 37-53.
7.	Analysis and associated plans for: Environment	✓	Material provided as Chapter 4, on Pages 54-70.
8.	Analysis and associated plans for: Infrastructure	✓	Material provided as Chapter 5, on Pages 71-74.
9.	Analysis and associated plans for: Design	✓	Material provided as Chapter 6, on Pages 75-84.
10.	Analysis and associated plans for: Neighborhood Engagement	✓	Material provided as Chapter 7, on Pages 85-93.

Attached to this report, are both the first and second round of review comments generated by the City (*see* Attachments 1 & 2), providing a summary matrix which demonstrates the status of the requirements, and sub-requirements, of the IDP. As further evidenced in the table above, the Applicant has provided all of the necessary requirements within each document. The section below provides an overview of how the IDP complies with each review standard:

Institutional Development Plan: Standards of Review

Based on LUC Section 8.3.4.D, staff has found:

1. Address all content requirements, unless explicitly modified by the Planning Authority or Planning Board.

   Staff Findings: As demonstrated in Table 1 above and Attachments 1 & 2 (included), the Applicant has addressed all content requirements. No content requirements have been modified by the Planning Authority or the Planning Board.

2. Reflect the issues/topics identified in the required public process.

   Staff Findings: Through the course of the multiple neighborhood meetings and Planning Board workshops, three predominant topics emerged: parking, environmental sensitivity, and proposed height. In response to these identified issues, the applicant provided additional documentation in the Transportation & Access section of the IDP, by the inclusion of designated OS-P zones on campus, and by modifying the proposed Height Map based on Planning Board, City staff, and public comment.

   With respect to concerns around on-street parking in adjacent neighborhoods, the applicant has provided documentation demonstrating that the University has adequate parking supply to serve faculty, staff, students and visitors. Certain users elect to park on-street, primarily along Steven's Avenue, which is a public facility. As discussed in prior Planning Board workshops, the authority to establish and enforce on-street parking restrictions lies with the City, and the City. In evaluating current on-street parking demand in the vicinity of UNE, the City would note that this demand can be accommodated on Stevens Avenue, and

that the City's preference would be to maintain free on-street parking on Stevens Avenue, in order to provide additional traffic calming along this street.

3. Demonstrate consistency with the City's Comprehensive Plan and the purpose of this ordinance.

   Staff Findings: *Portland's Plan 2030* establishes a goal of having the City support sustainable growth in our community's educational institutions, noting the fact that such institutions are central to workforce development, employment, and the health of the local and regional economy. *Portland's Plan 2030* also establishes a goal of having the City's educational institutions incorporated into Portland's urban fabric through the use of high-quality design, through the management of impacts, through community partnerships, and innovative planning. Each of these adopted land-use goals are discussed at length within the IDP, and would be further facilitated through the proposed regulatory framework, and rezoning of the property to B-2 and OS-P.

4. Demonstrate how the property ownership, proposed growth, and requested regulatory framework relate to the institution's mission.

   Staff Findings: Within the IDP, UNE documents their campus master planning process, wherein they have worked to evaluate their existing and future programming needs and facility capacity to deliver educational programs to their students, including: a current facility assessment, current and future program requirements, and key institutional needs. Further, this is enumerated visually into the provided Figure 2.1: Campus Master Plan, on Page 33 of the IDP. UNE's mission statement states: "UNE prepares students to thrive in a rapidly changing world and, in so doing, to improve the health of people, communities, and our planet."

   In assessing future institutional needs, the University prepared a list of short- mid- and long-term priority projects, which includes student housing, a new athletic facility, and potential future academic buildings. The University also prioritizes being a good steward of the land and a good neighbor within the community. In order to achieve these aims, the University proposes rezoning the property to B-2 and OS-P, in order to accommodate the above-listed uses, and preserve critical natural areas on campus. The regulatory framework supplements this work by increasing allowable heights in key locations, to allow for taller buildings with a smaller building footprint, in order to minimize impacts to natural resource areas. Further, the regulatory framework establishes transition zones to minimize the impact of new development on abutting property.

5. Demonstrate that traffic and parking impacts have been anticipated and that the proposed parking provision is justified as based on an assessment of options for reducing traffic and parking demands.

   Staff Findings: As documented in the IDP, UNE's Portland campus is serviced by a variety of transportation infrastructure, which includes several arterial highways in close proximity, with convenient access to the Maine Turnpike (via Riverside Street, Warren Avenue and Bishop Street) and access to I-295 via Forest Avenue; it is further served by metro transit bus service, pedestrian infrastructure, EV charging stations, and a bicycle network. The IDP details available off-street parking supply and the anticipated demand for off-street parking as future planned development occurs. This information supports the University's position that there is an adequate supply of off-street parking available at present, and that this supply will be sufficient to serve future demand. Additionally, the University outlines numerous transportation demand management (TDM) strategies that are currently being utilized, such as subsidized transit passes, support

of carpooling and ridesharing, provision of extensive bicycle infrastructure on-campus, and the use of a variety of other incentives for users who do not commute using a single occupancy vehicle. These strategies are anticipated to continue reducing parking demand for the campus.

6. Outline an approach to open space, natural, and historic resources that supports preservation and enhancement.

   Staff Findings: The UNE Portland campus occupies approximately 72 acres of land in Deering Center, however much of the campus is undeveloped or minimally developed, with the campus containing large tracts of undeveloped woodland and wetlands, which lie within the Capisic Brook Watershed, along with an active use recreational field, Gulliver's Field. The most intensively developed area is located at the southeast corner of the University's contiguous campus, and is centered around the historic core of the campus, the Westbrook College Historic District, a locally designated historic district with buildings dating back to the early 19th century, which are organized around the main campus quad. Preservation of the University's historic resources remains a prominent goal of the University, and is spoken to in detail within IDP. Furthermore, as a locally designated historic district, the review of any construction activity or exterior building modifications within the district, is subject to historic preservation review by the City. With respect to the University's critical natural resources and existing open spaces, the University details numerous strategies for minimizing impacts or even enhancing these resources, as was demonstrated under the University's Intermodal Transportation Facility project, which revegetated former impervious areas. The University is also proposing to rezone certain areas of the campus to OS-P, which would prevent future development in these locations particularly along the Capisic Brook. Rezoning natural areas of the campus to OS-P provides clarity on where future growth will be directed on the campus, ensuring predictability while minimizing potential impact on natural resources in the future.

7. Demonstrate that potential cumulative environmental impacts have been anticipated and can be minimized or satisfactorily mitigated.

   Staff Findings: The IDP explicitly states that future development will not impact existing environmentally sensitive areas, such as streams on campus, and that minimum setbacks will be maintained for all future projects. *Table 4.1: Open Space Area Calculations* on Page 61, documents the commitment to preserve approximately 14% of UNE's total campus area as OS-P Open Space Preservation, or roughly 10.3 acres of the 72-acre campus. Furthermore, any future development projects subject to Site Plan review would still need to comply with all local standards, including those related to environmental and stormwater impacts.

8. Demonstrate that utility impacts have been anticipated and can be minimized or satisfactorily mitigated.

   Staff Findings: The draft IDP includes a detailed infrastructure plan for the University which documents current utility demands related to water, wastewater, electricity, telephone & data, and natural gas and heating fuels, with listed strategies for ensuring adequate capacity for future development, for limiting or reducing demand for these services to the extent possible. This includes for example commitments to use low-flow fixtures, to design future buildings using high-efficiency building envelopes and mechanical systems to reduce energy demand, and to site development to maximize passive solar exposure and limit disturbance to on-site natural features to protect water quality.

9. Reflect a comprehensive design approach that ensures appropriate transitions with the existing or future scale and character of the neighboring urban fabric.

Staff Findings: Within the Open Space and Height Map, a transition zone buffer (shown in aqua), has been included and is noted along the campus edges, where the campus is located adjacent to residential and open space zones. The transition zone is generally 25 feet deep, however the zone increases in depth adjacent to the proposed residential building, which under the proposed height map, could be as tall as 85 feet from the average post-development grade. Within the transition zone, buildings would be required to step down to no more than 50 feet from the average post-development grade. By designating over 10 acres of the campus as OS-P Open Space Preservation and reducing building heights near existing residential neighborhoods, UNE creates a gradual transition from lower-scale structures to larger institutional and residential buildings appropriate for the campus. The proposed increased height in strategic locations enables vertical growth rather than horizonal expansion, promoting a more compact development footprint within the constrained urban campus while minimizing impacts on natural resources or abutting neighborhoods.

10. Promote compatibility with existing or future uses in adjacent neighborhoods, maintain housing, and support local amenities.

    Staff Findings: Within the IDP, the University prioritizes minimizing impacts to abutting properties, and providing opportunities for the surrounding community to come on campus and enjoy campus amenities and open space. The proposed regulatory framework establishes a transition zone around much of the exterior of the campus, which limits building heights to 50 feet. Additionally, the University contemplates the construction of student housing on-campus, which would relieve some of the housing pressure on the surrounding neighborhood. Lastly, significant open space on-campus would be preserved under this proposal, and the University continues to work with Portland Trails to extend the local trail network across the University's campus.

11. Anticipate future off-site improvements that would support the integration of the institution into the community and citywide infrastructure.

    Staff Findings: As detailed in their IDP, UNE has established strategies for assuring the acquisition or disposition of any property by the University is clearly communicated to abutters.

12. Conform with the standards of Article 16 for designated landmarks or for properties within designated historic districts or designated historic landscapes, if applicable. When proposed adjacent to or within 100 feet of designated landmarks, historic districts, or historic landscapes, the IDP shall be generally compatible with the major character-defining elements of the landmark or portion of the district in the immediate vicinity.

    Staff Findings: As noted prior, the UNE Portland campus contains the Westbrook College Historic District. As detailed in the IDP, the character defining components of the buildings located within the historic district are identified within the IDP, and are used to inform the proposed design standards for new development on campus, to ensure a cohesive campus identity, while simultaneously ensuring that new development is a product of its time.

13. Incorporate strategies to support clear communication and ongoing public engagement between institutions and nearby neighbors.

Staff Findings: According to the IDP, the University prioritizes being a good neighbor and having meaningful engagement, which UNE states is critical to its success. The IDP details ongoing community engagement strategies, which include providing: monthly project updates for all current and active projects published in a publicly accessible format to their web page, and the creation of a dedicated email address that allows neighbors to direct questions, concerns, and feedback directly to UNE's Planning Department and its project team members.

VIII. REVIEW OF REGULATORY FRAMEWORK

Stemming from the IDP, the proposed regulatory framework (zoning) works to codify the institutional use(s) and related activities in line with UNE's stated mission to: *prepare students to thrive in a rapidly changing world and, in so doing, to improve the health of people, communities, and our planet*. UNE provided initial regulatory framework text (Attachment E), which the City amended and inserted into the draft updated Article 8 within the City's Land Use Code (Attachment 3). Table 2 below was created to provide an overview of each content category, listing whether or not the required information has been provided, and an overview of content details. Further, Figure 4 below depicts the Maximum Building Heights map proposed with the UNE IOZ.

TABLE 2: Section 8.3.5.D, Required Content of the Regulatory Framework

	Content Category	Provided	Resource
1.	Zoning boundary of the IOZ	✓	Figure 6, shown below, identifies the zoning boundary clearly in the form of a map displaying the overlay zone, and a table, included within the IDP, lists all properties, identified by both CBL and address.
2.	Phasing and schedules	✓	UNE shall file monitoring reports every five (5) years with the Planning Authority, and at the time of submission of future site plan applications, UNE shall identify any required updates to the IDP, to allow the document to remain current.
3.	Uses	✓	In addition to those uses permitted within the B-2 and OS-P zones, the IOZ would also permit the following uses by right: • Laboratory and research facilities • Off-street parking
4.	Dimensional requirements	✓	The proposed IOZ would supplement the dimensional restrictions of the underlying zones as follows: • Transition zones to extend twenty-five feet (25') from the lot boundary and, within transition zones, the maximum building height shall be fifty feet (50'), as depicted by the UNE IOZ Height Map, Figure 3 provided above in the memo. • Maximum building heights for new principal buildings in the IOZ shall be governed by the UNE IOZ Height Map, Figure 3 provided above in the memo.
5.	Transportation	✓	TDM and parking requirements are highlighted in this section.
6.	Environment	✓	UNE's approach to the inclusion of open space and preservation of environmentally-sensitive areas.
7.	Mitigation measures	✓	A broad approach to identified mitigation measures are included here.

8.	Design	✓	The Regulatory Framework provides five (5) standard of design for the IOZ.
9.	Neighborhood integration	✓	Thresholds and requirements for neighborhood engagement are summarized here.
10.	Monitoring	✓	As noted above under 2., the applicant will prepare and file monitoring reports with the City every five (5) years.

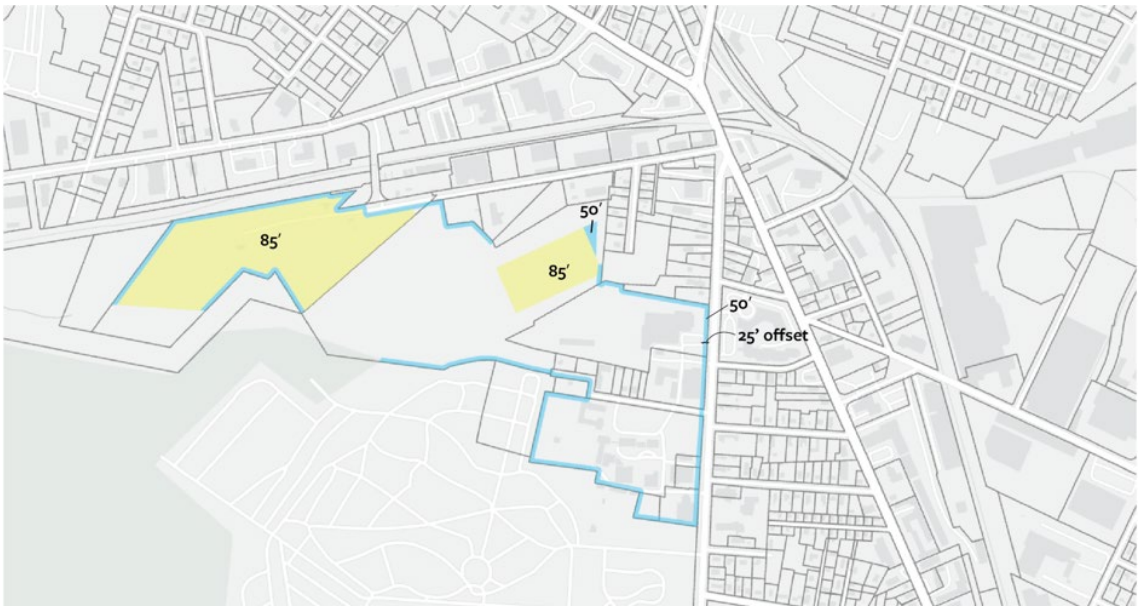

Figure 4: The proposed Maximum Building Heights map, created by PUD, and included in the drafted Regulatory Framework.

Attached to this report, in the first round of review comments generated by the City (*see* Attachments 1), provided is a summary matrix which demonstrates the status of the requirements, and sub-requirements, of the Regulatory Framework. In the creation of finalizing this text (Attachment #3), City staff lead the drafting. As further evidenced in the table above, all of the necessary requirements within the document have been provided. Below delves into the Regulatory Framework standards of review:

Regulatory Framework: Standards of Review

Based on LUC Section 8.3.5.E, staff has found:

1. Be consistent with the Comprehensive Plan and the Institutional Development Plan.

   Staff Finding: The drafted Regulatory Framework is consistent with both *Portland's Plan 2030* and the drafted Institutional Development Plan. Throughout the formation of the proposed IOZ, City staff has worked with the Applicant to revise the documents to not only include all required content, but also to strengthen the connection between the proposed land use regulations, and both Portland's Plan 2030 and the drafted IDP.

   Specifically, Portland's Plan 2030 emphasizes the importance of prioritizing sustainable land use and transportation policies that enhance connectivity, walkable neighborhoods, and multimodal transportation while protecting the city's critical natural resources (pg. 19). It also emphasizes the need to balance continuity and change as Portland grows (pg. 27), and supporting sustainable growth in educational,

medical, and cultural institutions, while fostering a strong workforce by attracting and retaining human capital (pg. 43). Additionally, the plan encourages contextually appropriate housing density near neighborhood centers, service hubs, and transit corridors to support complete neighborhoods (pg. 50). Specifically, the Comprehensive Plan acknowledges the need for the City to support the orderly expansion of institutional uses—including educational, cultural, and medical campuses—recognizing their essential role in workforce development, employment, and the broader regional economy. Based on the goals and objectives of the Comprehensive Plan, the Regulatory Framework aligns with the plan's vision and will guide UNE's future growth in a manner that reflects the shared priorities outlined in the plan.

2. Provide a clear zoning framework, using graphics and tables as appropriate, to apply to future site plan reviews.

   Staff Finding: The submitted Regulatory Framework is a concise yet functional set of supplemental development regulations that were drafted to help facilitate build-out of UNE's Portland campus in alignment with the draft IDP, while ensuring that impacts associated with such development is satisfactorily mitigated. The applicant has delineated the IOZ boundary and provided supplemental use and dimensional standards to complement and expand upon the underlying zoning regulations.

3. Provide specific regulatory statements as appropriate that respond to concerns raised during the required public involvement.

   Staff Finding: The University has amended their IDP and the regulatory framework in response to feedback from both City staff and the Planning Board. Notably, this includes the mapping of more than 10 acres of OS-P across the UNE Portland Campus, to preserve critical natural resources, and the extension of the transition zone adjacent to the proposed residential development, proximate to the residential neighborhood along Mayfield Street.

4. Outline measurable goals and thresholds for improvements or other actions identified in the IDP to be advanced in subsequent site plan applications

   Staff Finding: The drafted Regulatory Framework has outlined specific design-related language that expands upon the IDP and that would apply to future site plan and TDM Plan reviews, working to create a cohesive campus and integrate with baseline characteristics.

IX. NEIGHBORHOOD MEETINGS & PUBLIC COMMENT

The applicant has held two neighborhood meetings to-date, the first was held on June 13, 2024 at 6:00 PM at UNE in the Hannaford Lecture Hall, with the meeting documentation included under Attachment H. The total recorded attendance at the meeting was thirteen (13) members of the public, and the feedback centered on questions and/or concerns about property acquisitions, traffic/parking, and environmental impacts. The second meeting was held on October 30, 2024 at 6:00 PM at UNE in the Hannaford Lecture Hall, with the meeting documentation included under Attachment I. The total recorded attendance at the meeting was twelve (12) members of the public, and the feedback centered on questions and/or concerns about parking, building height, and the future student housing building.

The Planning and Urban Development Department has received zero written public comment at the time of publication of this memo.

X. REQUISITE CITY COUNCIL ACTION

Any proposed rezoning, regardless of whether it is favorably or negatively recommended by the Planning Board, must be approved by City Council vote in order to take effect.

XI. PROPOSED MOTIONS

1. On the basis of materials submitted by the applicant, the City of Portland Land Use Code, Portland's Comprehensive Plan, public comment, and the information provided in the public hearing on February 25, 2025 for the application ZN-003059-2024, and/or other findings, the Planning Board finds that the proposed B-2 and OS-P zoning map amendment [is/is not] consistent with the Comprehensive Plan for the City of Portland; and therefore, the Planning Board [recommends/does not recommend] to the City Council adoption of the zoning map amendment for the area of land as shown:

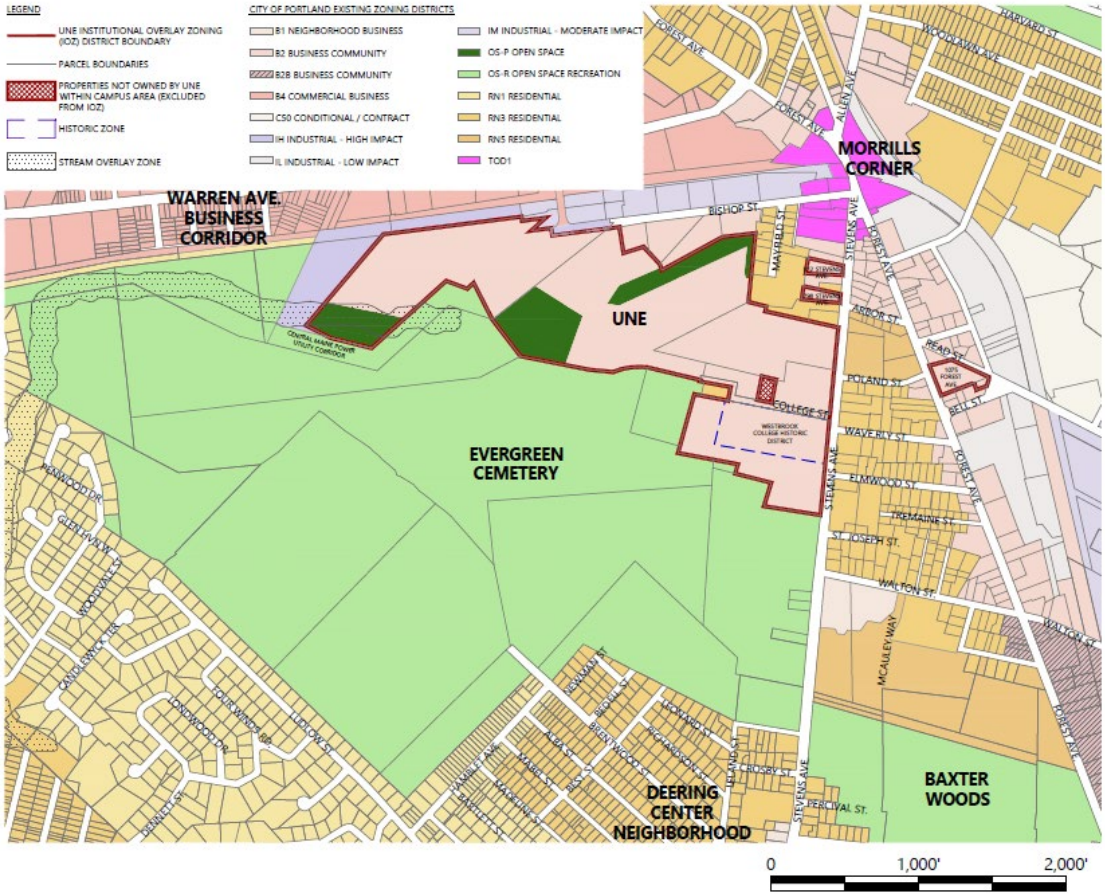

Figure 5: Proposed zoning map, provided by the applicant.

2. On the basis of materials submitted by the applicant, the City of Portland Land Use Code, Portland's Comprehensive Plan, public comment, and the information provided in the public hearing on February 25, 2025 for the application ZN-003059-2024, and/or other findings, the Planning Board [finds/does not find] that the proposed Institutional Development Plan (IDP), as included in Attachment D, is consistent with the Institutional Development Plan standards of Section 8.3.4 of the Land Use Code.

3. On the basis of materials submitted by the applicant, the City of Portland Land Use Code, Portland's Comprehensive Plan, public comment, and the information provided in the public hearing on February 25, 2025 for the application ZN-003059-2024, and/or other findings, the Planning Board finds that the proposed IOZ zoning map amendment **[is/is not]** consistent with the Comprehensive Plan for the City of Portland; and therefore, the Planning Board **[recommends/does not recommend]** to the City Council adoption of the zoning map amendment for the area of land identified as UNE's Portland Campus as shown:

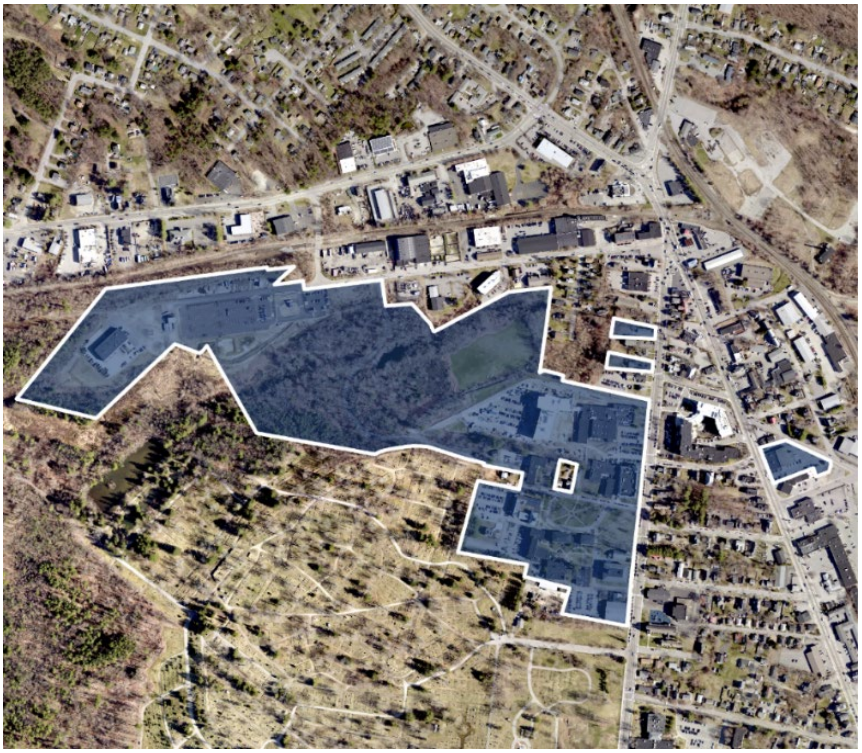

Figure 6: Proposed IOZ boundary map, created by Planning and Urban Development.

4. On the basis of materials submitted by the applicant, the City of Portland Land Use Code, Portland's Comprehensive Plan, public comment, and the information provided in the public hearing on February 25, 2025 for the application ZN-003059-2024, and/or other findings, the Planning Board finds that the proposed regulatory framework **[is/is not]** consistent with the standards of Section 8.3.5 of the Land Use Code; and therefore, the Planning Board **[recommends/does not recommend]** to the City Council adoption of the Regulatory Framework as included in Attachment 3.

Project Title: University of New England Institutional Overlay Zone (UNE IOZ)
Project File No.: ZN-003059-2024
Project Address: 716 Stevens Avenue
Project Planner: Natasha Kypfer, Senior Planner

Att. 1

Dear Caitlin Suhr, Alan Thibeault, and Mary Costigan:

We have completed our initial review of your application (ZN-003059-2024), a Map and Text Amendment, proposing a new Institutional Overlay Zone (IOZ) for the University of New England (UNE) at approximately 684 Stevens Avenue, proposed to be zoned: B-2 Community Business. This development triggers review by the Planning Board and City Council, and is subject to the following regulations: Amendments – Article 1.10 and Institutional Overlay (IOZ) – Article 8.5.

An overview of the City's review can be viewed in the below worksheet(s) and review comments.

Next Steps
Please review all feedback and reach out to me, as the lead project review manager, if you have any questions. We will look forward to our upcoming meeting, scheduled for Tuesday, October 22nd at 11AM. Further, we have preliminarily scheduled your item for a workshop before the Planning Board for Tuesday, November 12th.

Sincerely,

Natasha M. Kypfer

Natasha Kypfer
Senior Planner

Partially Provided on Page # = *Requirement Not Fully Satisfied*
Not Provided = *Requirement Not Satisfied*

Institutional Development Plan (IDP): Content Land Use Code, Section 8.5.4.C					
Category	**Sub-category**	**Requirement**	**Sub-requirement**	**Location, IDP Page #**	**Review Comments: Overview & Updates Requested**
1. Context information	*a. The institution's adopted mission, vision, or purpose statement*			Pages 4-5	As stated and provided for on pages 4-5, UNE is guided by its Mission, Vision, and Core Values, as well as its own strategic plan ("Our World, Our Future").
	b. A summary of relevant baseline data on the institution, including:	*i. A neighborhood context plan.*		Pages 11-12, Figure 1.1	The UNE's approximately 72-acre campus is bounded by Warren Ave., Bishop St. Extension, and Bishop St. to the north; Stevens Ave. to the east; and, Evergreen Cemetery and CMP's Utility Corridor to the south, as depicted in provided Figure 1.1.
		ii. An inventory of current programs and services.		Page 7-9	The UNE Portland campus houses three academic colleges: the Westbrook College of Health Professions (WCHP), the College of Dental Medicine, and the College of Graduate and Professional Studies. In addition, UNE operates two health clinics on campus: the Oral Health Center and the Dental Hygiene Center, as well as UNE North, the Center for Global Humanities, and cultural institutions that include the Maine Women Writers Collection and the UNE Art Gallery.
		iii. A current census of the number of people using the institution (e.g., employees, enrollment, patients), with an indication of maximums and minimums over time.		Page 18, Table 1.3	Table 1.3 titled "FTE Student, Faculty, and Professional Staff Data", includes population data from 2016-2023 for student, faculty and professional staff, and campus population. Please also add an additional column to Table 1.3 that includes patient figures visiting the campus (for example, dental patients to the Oral

				Health Center), further, consider incorporating part-time data, as the provided table only documents FTE.
		iv. An inventory and/or plan of all existing property holdings within the main campus and within the City of Portland, including an indication of functional land use links between off-campus properties and the main campus (e.g. remote parking).	Page 17, Table 1.2	Table 1.2 titled "UNE Owned Properties in the City of Portland", documents UNE's total of 17 parcels, the majority of which are contiguous in the campus core, while several are outparcels. Please speak to the functional land use links between off-campus properties and the main campus (e.g. remote parking and the Bishop Street shuttle service).
		v. An inventory and/or plan of existing facilities, including data on use, floor area, and any existing functional connections between facilities.	Page 16, Figure 1.5 Pages 21-22	The UNE campus map is provided on page 16 as Figure 1.5, depicting the 25 distinct facilities and 11 parking areas, with an inset map centered around the Campus Quad. Please supplement Figure 1.5 Campus Map with a table listing the 25 facilities and 11 parking areas identified in Figure 1.5, organized chronologically by facility number. Please also incorporate the parking spaces data from Table 3.5 here as well. The table should include columns for facility name, total floor area, and use. For parking areas, organize chronologically by parking area # and include columns for total square footage, total number of existing spaces, and a breakdown of ADA and EV spaces.
	c. A summary of the baseline characteristics of the existing campus and	*i. A summary of existing resources, such as historic, open space, and natural resources.*	Page 19-20	UNE's campus is the site of the Westbrook College Historic District, which includes six buildings built between 1834 and 1952. Further, existing open space and natural

	context of the institution, based on identified study areas, including:			resources are summarized, and include notation of the Portland Trails Forest City Trail connection and the Capisic Brook watershed area.
		ii. A summary of the existing transportation system, including vehicular, pedestrian, transit, bicycle, and parking supply, demand, and utilization.	Page 41-44, Table 3.5	Table 3.5 titled "UNE Portland Campus - Parking Spaces" details the currently 11 parking lots located on campus, plus the on-street parking along two principle campus roadways, which amounts to 882 spaces total, plus the 182 permitted spaces presently at the COM building. Please include a quick summary of the existing transportation system within the Context chapter, to incorporate what is detailed on pages 41-44.
		iii. A summary of existing public infrastructure supporting the institution, including demand, utilization and any capacity issues.	Page 20	Existing stormwater management systems utilize on-site infiltration systems, with secondary use of conveyance to the Stevens Ave. and Bishop St. CSO. Existing wastewater infrastructure for the campus is discharged to a CSO in College St. and Stevens Ave. Other public utilities include: PWD, CMP, and Unitil.
		iv. Relevant municipal plans, projects, and studies that may influence the IDP study area and opportunities for integrating institutional growth.	Page 21	A breakdown of the City's Comprehensive Plan, with tie in to the eight policy guide topics as they relate to UNE's work is provided with excerpts from Portland's Plan that UNE works to promote and advance are underscored and include the: environment, economy, historic resources, and housing. Please include additional studies that should be referenced in this section, such as the: Portland-South Portland Smart Corridor Plan (final report dated June 2018), the One Climate Future

				Plan, and the Forest Avenue Redesign Project. For example, within the Smart Corridor Plan on Page 143 it states: "[The] University of New England (UNE) office at 1075 Forest Avenue, shown in Figure 142 is a parcel that addresses the street well, and would be enhanced by the recommended planting palette and materials design guidelines found later in this section."
	d. A summary of public involvement in the development of the IDP, including major areas of public concern.		Page 22	UNE has worked to involve the public in the creation of the IDP during the IOZ submission process, this includes holding one of two required neighborhood meetings, which took place on June 13, 2024. Please be sure to update this section with the 10/30 neighborhood meeting date. Additionally, it may be beneficial to include a few sentences on the required review by both the Planning Board and City Council, as these will also be opportunities for public involvement.
2. Assessment of future institutional growth and change, including:	*a. A description of institutional needs and areas of future institutional growth and change, with:*	*i. A projected census of users (e.g., enrollment /employment/patient/ visitor figures and anticipated variations over time).*	Page 25, Table 2.2	Table 2.2 titled "Projected Growth of FTE Student, Faculty, and Professional Staff" provides a snapshot of data for the years of 2025, 2028, and 2033. Please include data on campus visitors, i.e. visiting faculty, prospective students, guests, etc.; to incorporate as a column in Table 2.2. Please also add patients seen for on-campus health visits.
		ii. Institutional objectives for property both within and outside the IOZ boundary (e.g. acquisition and/or disposition), including an indication of any functional land use connection for sites outside the IOZ boundary to the main campus.	Pages 26-28	UNE identifies five categories for key current and future institutional needs: campus reorganization, new building and renovation, educational/pedagogy

					improvements, campus infrastructure, and housing.
		iii. A development plan addressing anticipated or potential institutional needs and physical improvements, including the proposed boundary of the IOZ and any phasing of the development.		Pages 28-30, Table 2.3	A development plan is shown in Table 2.3, titled "10 +- Year Development Program", which identifies three core priority timelines: the short-term (0-5 years), medium-term (5-10 years), and long-term (10+ years).
	b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:	*i. Transportation and access, with:*	*a) An analysis of the projected changes in parking demand, supply, and impacts to the off-street and on-street parking capacity, including an explanation of the proposed parking plan.*		Please provide an analysis of the projected changes in parking demand, supply, and impacts, and a review of current parking conditions. The previous TDM plan could be utilized to assist in completing this section. Further, a discussion on how to mitigate neighborhood impact by reducing on-street parking usage by UNE students and personnel should be included here.
			b) An analysis of the projected changes in vehicular, pedestrian, transit, and bicycle access routes and facilities, their capacity, and safety.	Page 36-37, Tables 3.2 & 3.3	Table 3.2 titled "Trip Generation Analysis" provides a snap shot of vehicular usage projections for the student population in the years 2025, 2028, and 2033. Please provide more details, as it relates to pedestrian and bicycle usage in this section, which largely focuses on vehicular travel.
			c) A transportation, access, and circulation plan, representing the synthesis of the analysis, and including a program of potential improvements or set of guidelines to address access deficiencies to and within the IOZ. The plan should outline proposed mechanisms and potential strategies to meet transportation objectives, including transportation	Pages 38-44	UNE's original TDM plan was created in 2010, and is routinely updated, most recently in April 2022. Strategies that emerged from the plan include: education and promotion, carpooling & ridesharing, transit service, incentives, EV charging infrastructure, bicycle infrastructure, and pedestrian & bicycle access. Please provide a more detailed transportation, access, and circulation

			demand management, phasing, and when a Traffic Movement Permit (TMP) may be required.		plan, that expands beyond the strategies identified in the TDM. As an example, perhaps providing a circulation plan of the core campus as a visual could then highlight potential opportunities for connections to the existing and future trail network. Please also speak to the existing Traffic Movement Permit (TMP) in this section, whether UNE envisions surpassing the threshold for a new TEMP under your build-out plans, i.e. indicate when a revised TMP may be required, or triggered, in the future.
		ii. Environment, with:	*a) An analysis of potential cumulative impacts on natural resources and open spaces.*	Page 52	Please provide an expanded analysis under the 'Proposed Future Development and the Environment' paragraph, which should detail potential cumulative impacts to the existing natural resources and open spaces on campus. For example, perhaps some good data to capture here could be existing vs. proposed impervious lot coverage, the existing open space on campus vs. proposed loss or gain of open space over time, and the existing square footage of wetlands vs. potential impacts or gains in the future.
			b) An analysis of projected energy consumption, hazardous materials generation, noise generation, and similar issues as relevant.	Pages 57-60	UNE's operational sustainability is detailed within the categories of energy conservation, waste management practices, biomedical waster best practices, sustainable landscaping, and noise generation.
			c) An environmental plan, representing the synthesis of the analysis and including a proposed program or set of guidelines for future	Page 56, Figure 4.8	Figure 4.8 titled "Natural Resources and Campus Master Plan" shows proposed campus improvements in locations aimed to mitigate impact to natural resources.

			preservation, enhancement, conservation, and/or mitigation.		
		iii. Infrastructure, with:	*a) An analysis of projected public utility demand and the capacity of associated infrastructure.*	Pages 62-63	Utility demand and capacity are detailed through the lens of the various providers: water services supplied by PWD, electricity supplied by CMP, telephone & data services by Consolidated Communications and Spectrum, natural gas and heating fuels supplied by Unitil, and existing wastewater infrastructure.
			b) An analysis of projected public safety needs and projected impacts to the capacity of these services.	Page 64	UNE has security officers who provide 24/7 patrol and dispatch coverage of the campus, in addition, an emergency notification service (Rave Mobile Safety), provides faculty, staff, and students with timely updates during emergencies, speaking to the capacity of public safety as the campus grows.
			c) An infrastructure plan, representing the synthesis of the analysis and including a proposed program or set of guidelines to support sustainable growth.	Page 61-62, Figure 5.1	Figure 5.1 titled "Existing Stormwater Infrastructure and Campus Master Plan" illustrates existing City sanitary sewer and stormwater infrastructure surrounding and within the campus, as well, future stormwater run-off flows are detailed. Please include a set of guidelines to support sustainable growth at the conclusion of this chapter.
		iv. Design, with:	*a) An analysis of projected impacts to neighboring properties and public spaces, including potential shadow, wind, and lighting impacts, impacts of height and massing, and impacts to historic resources.*	Pages 65-72 Figures 6.1, 6.2, 6.3, & 6.4	The City wants to ensure UNE is adequately addressing potential impacts to the surrounding parcels, including: Evergreen Cemetery, the isolated parcels within the Campus, and properties on Mayfield Street. Please provide spot elevations on the buildings shown in Figure 6.2 to better dedicate heights. Provide rendering of

					proposed development looking from Mayfield Street towards proposed student housing building (west). Additionally, as UNE considered alternative building layouts and parking configurations for the conceptual student housing on the Gulliver's Field site?
			b) An analysis of transition areas between the institution and adjoining neighborhoods, including identification of key character defining components of the surrounding context.	Page 71-72, Figure 6.4	Figure 6.4 titled "Proposed Maximum Heights" has identified transition zones along the edges of the IOZ boundary. Please provide the design rationale for the proposed 50 ft height within the 25 ft-wide transition zone—was there any consideration of varying the maximum height to better align with the surrounding context? Did UNE consider mapping lower maximum heights along Capisic Brook, and what is the rationale for mapping 65 ft on the two outparcels fronting Stevens Avenue? Additionally, the parcel on Forest Avenue, under ReCode, would allow a height of up to 75 ft. We recommend removing the height limitation for that parcel should ReCode pass as proposed.
			c) An analysis of existing Crime Prevention Through Environmental Design issues and identification of how these principles would be addressed as part of the proposed campus development.	Page 72	UNE's Campus Safety and Security Department monitors through in-person patrols and CCTV cameras and provides response 24/7, which contribute to low crime statistics on campus.
			d) A conceptual built environment/public realm plan, representing the synthesis of the analysis and including a set of guidelines for urban design,	Pages 71-75	Figure 6.4 titled "Proposed Maximum Heights" could be expanded on as a conceptual built environment/public realm plan for this section. Has there been consideration for a more

			landscape, open space, and streetscape treatments, with particular attention to the treatment of edges (both within and abutting the IOZ boundary) to achieve compatible transitions.		targeted contextual set of heights throughout the campus to address varying building typologies in adjacent neighborhoods?
		v. Neighborhood engagement, with:	*a) A plan for ongoing community engagement that represents best practices, promotes collaborative problem solving around community concerns, fosters transparency, and identifies mechanisms for neighborhood feedback and institutional accountability.*	Pages 76-77	UNE outlines four steps in their effort to provide ongoing community engagement, which include: -Developing a comprehensive CMP -Providing monthly project updates for all current/active projects -Creating a dedicated email address to allow neighbors to forward questions, concerns, and feedback -Attendance as local community neighborhood association meetings
			b) A property management framework that identifies the institution's process for handling operational property issues with neighbors.	Page 76	UNE directly oversees the maintenance and care of its facilities; it does not inspect or approve any off-campus housing.
			c) Strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods.	Page 77	UNE has established strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods, including alerting abutting properties of the transition of ownership and providing the appropriate contact information.
			d) A set of construction management principles to apply to all institutional construction, that represent best practice, aim to minimize short- and long-term construction impacts on surrounding residents and businesses, and ensure a clear communication strategy is in place in advance of construction.	Pages 82-84, + Attachment A	UNE has identified construction management principles that will be implemented to minimize impacts to its surrounding neighborhoods from noise, vibrations, ground movement, truck traffic, dust control and other construction related factors.

Regulatory Framework: Content Land Use Code, Section 8.5.5.D			
Category	**Requirement**	**Location, R.F. – PDF Page # & Document Section**	**Review Comments**
1. Zoning boundary of the IOZ	*The area to which the regulations apply, as shown on the zoning map, subject to other provisions of this ordinance (i.e. the map amendment to the City's zoning map)*	Page 144, Figure 8-H	General comment: Please add page numbers to the Regulatory Framework document itself.
2. Phasing and schedules	*Requirements that relate to particular proposed phases*	N/A - No phasing or scheduling proposed (imminent site plan) at this time.	
	A chart showing the schedule or thresholds for submitting an amended IDP (or elements of an IDP, such as a Transportation Demand Management (TDM) Plan)		
3. Uses	*Clarification, as necessary, on permitted uses*	Page 146, Section C., Table 8-H	
4. Dimensional requirements	*Graphics, sketches, or standards, including details for transition zones within the IOZ boundary*	Pages 146-147, Section D., Figure 8-I	Staff requests further discussion regarding the proposed height map and how to consider the surrounding context. See attached comments.
5. Transportation	*Elements such as Transportation Demand Management Plan (TDM) trip reduction targets or contribution to area-wide TDM measures*	Page 148, Section E.	
	Broad parameters for ensuring pedestrian, vehicular, bicycle and transit access and safety		*City Staff is working with the applicant to draft language for this requirement section.*
	Parking ratios and management strategies		
	Thresholds for access improvements		
6. Environment	*The approach to the inclusion of open space and preservation of environmentally-sensitive areas*	Page 148, Section F.	
7. Mitigation measures	*The broad approach to identified mitigation measures, which would be addressed in greater detail in the site plan review process*	Page 148, Section G.	

	Thresholds for addressing deficiencies		*City Staff is working with the applicant to draft language for this requirement section.*
	Goals for preservation/protection		*City Staff is working with the applicant to draft language for this requirement section.*
8. Design	*Graphics and standards to clarify building placement and envelope (height and massing)*		*City Staff is working with the applicant to draft language for this requirement section.*
	Guidelines for integration of site features		
	Required treatments for transition zones and treatment for all edges (both within and abutting the IOZ boundary)		
	Guidelines for establishing campus identity		
9. Neighborhood integration	*Thresholds and strategies for neighborhood engagement*	Page 150, Section I.	
	Mitigation of impacts on neighboring properties, including construction impacts		*City Staff is working with the applicant to draft language for this requirement section.*
	Buffering requirements		
	Objectives for pedestrian linkages and safety		
	Other requirements that address community concerns		
10. Monitoring	*A schedule for regular monitoring reports on IDP implementation in accordance with the IDP*		This section should simply address monitoring, stating that updates will be provided to the Planning Authority every five years.

Project Review Comments: Round 2
Comments Distributed on: January 17, 2025

Project Title: University of New England Institutional Overlay Zone (UNE IOZ)
Project File No.: ZN-003059-2024
Project Address: 716 Stevens Avenue
Project Planner: Natasha Kypfer, Senior Planner

Att. 2

Dear Caitlin Suhr, Alan Thibeault, and Mary Costigan:

We have completed our second round of review of your application (ZN-003059-2024), a Map and Text Amendment, proposing a new Institutional Overlay Zone (IOZ) for the University of New England (UNE) at approximately 716 Stevens Avenue, proposed to be zoned: B-2 Community Business. This development triggers review by the Planning Board and City Council, and is subject to the following regulations: Amendments – Article 1.10 and Institutional Overlay (IOZ) – Article 8.5.

An updated overview of the City's review can be viewed in the below worksheet and review comments. Only the IDP content table has been included for review in this second round, as the Regulatory Framework is being drafted by City staff, and will be presented at the second workshop.

Next Steps
Please review all feedback and reach out to me, as the lead project review manager, if you have any questions. We will look forward to our upcoming virtual meeting, scheduled for Thursday, January 23rd at 2:00PM. Further, we have scheduled your item for a second workshop before the Planning Board, for Tuesday, January 28th.

Sincerely,

Natasha M. Kypfer

Natasha Kypfer
Senior Planner

Not Provided = *Requirement Not Satisfied*

Review comments found in bold, in the below table's far right column, indicate new comments added following the previous review round.

Institutional Development Plan (IDP): Content Land Use Code, Section 8.5.4.C					
Category	**Sub-category**	**Requirement**	**Sub-requirement**	**Location, IDP Page #**	**Review Comments: Overview & Updates Requested**
1. Context information	*a. The institution's adopted mission, vision, or purpose statement*			Pages 4-5	As stated and provided for on pages 4-5, UNE is guided by its Mission, Vision, and Core Values, as well as its own strategic plan ("Our World, Our Future").
	b. A summary of relevant baseline data on the institution, including:	*i. A neighborhood context plan.*		Pages 11-12, Figure 1.1	The UNE's approximately 72-acre campus is bounded by Warren Ave., Bishop St. Extension, and Bishop St. to the north; Stevens Ave. to the east; and, Evergreen Cemetery and CMP's Utility Corridor to the south, as depicted in provided Figure 1.1.
		ii. An inventory of current programs and services.		Page 7-9	The UNE Portland campus houses three academic colleges: the Westbrook College of Health Professions (WCHP), the College of Dental Medicine, and the College of Graduate and Professional Studies. In addition, UNE operates two health clinics on campus: the Oral Health Center and the Dental Hygiene Center, as well as UNE North, the Center for Global Humanities, and cultural institutions that include the Maine Women Writers Collection and the UNE Art Gallery.
		iii. A current census of the number of people using the institution (e.g., employees, enrollment, patients), with an indication of maximums and minimums over time.		Page 21, Table 1.3	Table 1.3 titled "FTE Student, Faculty, and Professional Staff Data", includes population data from 2016-2023 **for student, faculty and professional staff, campus population, and patient visits. Note, UNE does not keep track of general campus visitors.**
		iv. An inventory and/or plan of all existing property holdings within the main campus and within the City of Portland, including an indication of		Page 20, Table 1.2	Table 1.2 titled "UNE Owned Properties in the City of Portland", documents UNE's total of 17 parcels,

		functional land use links between off-campus properties and the main campus (e.g. remote parking).		the majority of which are contiguous in the campus core, while several are outparcels. **An additional section speaks to the functional land use links between off-campus properties (outparcels) and the main campus.**
		v. An inventory and/or plan of existing facilities, including data on use, floor area, and any existing functional connections between facilities.	Page 16, Figure 1.5 Pp. 17-19, Table 1.1	The UNE campus map is provided on page 16 as Figure 1.5, depicting the 25 distinct facilities and 11 parking areas, with an inset map centered around the Campus Quad. **A campus facilities table has been provided detailing each facility, their location, name, total floor area, building height, and use. Further, the table includes each parking facility, a lot description, total parking area, total number of spaces including those ADA and EV charging compliant.**
	c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:	*i. A summary of existing resources, such as historic, open space, and natural resources.*	Pages 22-23	UNE's campus is the site of the Westbrook College Historic District, which includes six buildings built between 1834 and 1952. Further, existing open space and natural resources are summarized, and include notation of the Portland Trails Forest City Trail connection and the Capisic Brook watershed area.
		ii. A summary of the existing transportation system, including vehicular, pedestrian, transit, bicycle, and parking supply, demand, and utilization.	Pages 41-53, Table 3.5 & 3.6 Page 50, Figure 3.6	Table 3.5 titled "UNE Portland Campus - Parking Spaces" details the currently 11 parking lots located on campus, plus the on-street parking along two principle campus roadways, which amounts to 882 spaces total, plus the 182 permitted spaces presently at the COM building. **Table 3.6 details parking occupancy at the UNE Portland campus data and assumptions from 2015-2033. The chapter concludes with three main parking goals for the campus.**

		iii. A summary of existing public infrastructure supporting the institution, including demand, utilization and any capacity issues.	Page 24	Existing stormwater management systems utilize on-site infiltration systems, with secondary use of conveyance to the Stevens Ave. and Bishop St. CSO. Existing wastewater infrastructure for the campus is discharged to a CSO in College St. and Stevens Ave. Other public utilities include: PWD, CMP, and Unitil.
		iv. Relevant municipal plans, projects, and studies that may influence the IDP study area and opportunities for integrating institutional growth.	Page 24-27	A breakdown of the City's Comprehensive Plan, with tie in to the eight policy guide topics as they relate to UNE's work is provided with excerpts from Portland's Plan that UNE works to promote and advance are underscored and include the: environment, economy, historic resources, and housing. **Additional studies also referenced, are: One Climate Future, the Smart Corridor Plan, and the Forest Avenue Redesign Project.**
	d. A summary of public involvement in the development of the IDP, including major areas of public concern.		Pages 27-28	UNE has worked to involve the public in the creation of the IDP during the IOZ submission process, **this includes holding two required neighborhood meetings, which took place on June 13, 2024 and October 30, 2024, as well as the necessary Planning Board and City Council meetings during the adoption of the IOZ.**
2. Assessment of future institutional growth and change, including:	*a. A description of institutional needs and areas of future institutional growth and change, with:*	*i. A projected census of users (e.g., enrollment /employment/patient/ visitor figures and anticipated variations over time).*	Page 31, Table 2.2	Table 2.2 titled "Projected Growth of FTE Student, Faculty, and Professional Staff, **and Patient Visits" provides a snapshot of data assumptions for the years of 2025, 2028, and 2033. Note, UNE does not keep track of general campus visitors.**
		ii. Institutional objectives for property both within and outside the IOZ boundary (e.g. acquisition and/or disposition), including an indication of	Pages 32-34	UNE identifies five categories for key current and future institutional needs: campus reorganization, new building

		any functional land use connection for sites outside the IOZ boundary to the main campus.			and renovation, educational/pedagogy improvements, campus infrastructure, and housing.
		iii. A development plan addressing anticipated or potential institutional needs and physical improvements, including the proposed boundary of the IOZ and any phasing of the development.		Pages 34-35, Table 2.3	A development plan is shown in Table 2.3, titled "10 +- Year Development Program", which identifies three core priority timelines: the short-term (0-5 years), medium-term (5-10 years), and long-term (10+ years).
	b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:	*i. Transportation and access, with:*	*a) An analysis of the projected changes in parking demand, supply, and impacts to the off-street and on-street parking capacity, including an explanation of the proposed parking plan.*	Page 24, Pages 51-53	**The context section notes: "A campus parking analysis, based upon the historical count data, projects a maximum occupancy rate per university population to be at 0.39 from 2025 to 2033. This rate is similar to the Institute of Transportation Engineers (ITE) 85th percentile parking rate." Further, provided within the Transportation Plan section, UNE includes a parking analysis based upon the historical parking counts.**
			b) An analysis of the projected changes in vehicular, pedestrian, transit, and bicycle access routes and facilities, their capacity, and safety.	Pages 43-45, Tables 3.2 & 3.3	Table 3.2 titled "Trip Generation Analysis" provides a snap shot of vehicular usage projections for the student population in the years 2025, 2028, and 2033. **Based upon the most recent TDM survey UNE reports, of total trips to campus, approximately: 1% are transit trips, 1% are bicycle trips, and 3% are walking trips.**
			c) A transportation, access, and circulation plan, representing the synthesis of the analysis, and including a program of potential improvements or set of guidelines to address access deficiencies to and within the IOZ. The plan should outline proposed mechanisms and potential strategies to meet transportation objectives,	Pages 45-53, Figure 3.6	UNE's original TDM plan was created in 2010, and is routinely updated, most recently in April 2022. Strategies that emerged from the plan include: education and promotion, carpooling & ridesharing, transit service, incentives, EV charging infrastructure, bicycle infrastructure, and pedestrian & bicycle access. **Figure 3.6 titled "Core Campus Bicycle and Pedestrian Connectivity", shows the primary**

			including transportation demand management, phasing, and when a Traffic Movement Permit (TMP) may be required.		campus sidewalks, bike facilities, and off-site connections. UNE notes, opportunities to expand this network (as visualized in Fig. 3.6), and to increase these alternative commuting modes, will continue to be explored. Details regarding the Traffic Movement Permit (TMP) have also been included in this section.
		ii. Environment, with:	*a) An analysis of potential cumulative impacts on natural resources and open spaces.*	Page 61 Page 80, Figure 6.4	Provided under the 'Proposed Future Development and the Environment' section, UNE details their commitment to preserving 10± acres on campus as dedicated open space, which is also depicted in Figure 6.4 titled "Proposed Open Space and Maximum Height Map". Staff suggests an additional table be added to this section, breaking down the acreage on campus, and providing the dedicated open space calculations.
			b) An analysis of projected energy consumption, hazardous materials generation, noise generation, and similar issues as relevant.	Pages 67-70	UNE's operational sustainability is detailed within the categories of energy conservation, waste management practices, biomedical waster best practices, sustainable landscaping, and noise generation.
			c) An environmental plan, representing the synthesis of the analysis and including a proposed program or set of guidelines for future preservation, enhancement, conservation, and/or mitigation.	Page 66, Figure 4.8	Figure 4.8 titled "Natural Resources and Campus Master Plan" shows proposed campus improvements in locations aimed to mitigate impact to natural resources.
		iii. Infrastructure, with:	*a) An analysis of projected public utility demand and the capacity of associated infrastructure.*	Pages 72-73	Utility demand and capacity are detailed through the lens of the various providers: water services supplied by PWD, electricity supplied by CMP, telephone & data services by Consolidated Communications and

					Spectrum, natural gas and heating fuels supplied by Unitil, and existing wastewater infrastructure.
			b) An analysis of projected public safety needs and projected impacts to the capacity of these services.	Page 74	UNE has security officers who provide 24/7 patrol and dispatch coverage of the campus, in addition, an emergency notification service (Rave Mobile Safety), provides faculty, staff, and students with timely updates during emergencies, speaking to the capacity of public safety as the campus grows.
			c) An infrastructure plan, representing the synthesis of the analysis and including a proposed program or set of guidelines to support sustainable growth.	Pages 71-74, Figure 5.1	Figure 5.1 titled "Existing Stormwater Infrastructure and Campus Master Plan" illustrates existing City sanitary sewer and stormwater infrastructure surrounding and within the campus, as well, future stormwater run-off flows are detailed. **At the conclusion of this chapter, a set of guidelines to support sustainable growth was added.**
		iv. Design, with:	*a) An analysis of projected impacts to neighboring properties and public spaces, including potential shadow, wind, and lighting impacts, impacts of height and massing, and impacts to historic resources.*	Pages 75-84 Figures 6.1, 6.2, 6.3, & 6.4	The City wants to ensure UNE is adequately addressing potential impacts to the surrounding parcels, including: Evergreen Cemetery, the isolated parcels within the Campus, and properties on Mayfield Street. **Figure 6.1 was updated to include spot elevations on campus current and future buildings, in order to better delineate height. Further, Figure 6.3 was updated to provide a 3D view from Mayfield Street towards proposed student housing building (west). With regard to the future development of the Gulliver's Field site, UNE notes they are evaluating alternatives for building footprints and parking configurations within the general area depicted on the Campus Master Plan (Figure 2.1, P. 33). The**

					general area for development will be within the existing Gulliver's Field site, however final design will be developed in the future and reviewed as part of site plan application
			b) An analysis of transition areas between the institution and adjoining neighborhoods, including identification of key character defining components of the surrounding context.	Page 79-81, Figure 6.4	Figure 6.4 titled "Proposed Open Space and Maximum Height Map" depicts open space (i.e. "no build" areas), as well, a 25-ft-wide transition zone around the interior perimeter of the contiguous campus, with a maximum height in that transition zone of 50-ft. UNE indicates the design rationale of which is to provide a stepback of building heights from the campus edges and adjacent properties, with the intent to focus densification and greater building heights internal to the campus. Further, the open space areas added to the plan will provide added buffering of neighboring properties, and will preserve existing wetland and open space areas, including along Capisic Brook and adjacent to the Mayfield Street neighborhood.
			c) An analysis of existing Crime Prevention Through Environmental Design issues and identification of how these principles would be addressed as part of the proposed campus development.	Page 81	UNE's Campus Safety and Security Department monitors through in-person patrols and CCTV cameras and provides response 24/7, which contribute to low crime statistics on campus.
			d) A conceptual built environment/public realm plan, representing the synthesis of the analysis and including a set of guidelines for urban design, landscape, open space, and streetscape treatments, with particular attention to the treatment of edges (both within	Pages 79-84, Figure 6.4	Figure 6.4 titled "Proposed Open Space and Maximum Height Map" was revised to include open space (i.e., "no build", areas). The open space areas added to the plan provide further buffering of neighboring properties, and will preserve existing wetland and open space areas, such as along Capisic Brook and adjacent to the Mayfield

			and abutting the IOZ boundary) to achieve compatible transitions.		Street neighborhood, and Evergreen Cemetery. UNE notes, the proposed maximum height areas have been selected to facilitate future development in portions of the campus that will not impact natural resources and will enhance campus engagement and safety.
		v. Neighborhood engagement, with:	*a) A plan for ongoing community engagement that represents best practices, promotes collaborative problem solving around community concerns, fosters transparency, and identifies mechanisms for neighborhood feedback and institutional accountability.*	Pages 85-86	UNE outlines four steps in their effort to provide ongoing community engagement, which include: -Developing a comprehensive CMP -Providing monthly project updates for all current/active projects -Creating a dedicated email address to allow neighbors to forward questions, concerns, and feedback -Attendance as local community neighborhood association meetings
			b) A property management framework that identifies the institution's process for handling operational property issues with neighbors.	Page 86	UNE directly oversees the maintenance and care of its facilities; it does not inspect or approve any off-campus housing.
			c) Strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods.	Page 86	UNE has established strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods, including alerting abutting properties of the transition of ownership and providing the appropriate contact information.
			d) A set of construction management principles to apply to all institutional construction, that represent best practice, aim to minimize short- and long-term construction impacts on surrounding residents and businesses, and ensure a clear communication strategy is in	Pages 91-93, + Attachment A	UNE has identified construction management principles that will be implemented to minimize impacts to its surrounding neighborhoods from noise, vibrations, ground movement, truck traffic, dust control and other construction related factors.

			place in advance of construction.		

8 OVERLAY ZONES

8.1 COASTAL FLOOD RESILIENCE OVERLAY (CFROZ)

8.1.1 Purpose

The purpose of the Coastal Flood Resilience Overlay Zone (CFROZ) is to protect persons and structures from the adverse effects of sea level rise and storm surge associated with climate change by:

A. Advancing adaptation strategies for long-term resilience.

B. Complementing public realm resilience measures by guiding development on private property.

C. Mitigating flood risks in a way that is specific to Portland's unique hydrological conditions and affected uses, particularly in areas that are not currently recognized as flood zones but are vulnerable to future sea level rise.

D. Providing a balanced framework in which flood protection requirements are proportional to the vulnerability and risks of various occupancies.

8.1.2 Applicability

The provisions of the CFROZ shall apply to property or proposed projects wholly or partially within the boundaries of the Coastal Flood Resilience Overlay Zone as depicted on the City of Portland Zoning Map. However, property or proposed projects within the CFROZ boundary that are also located wholly or partially within special flood hazard areas with a BFE of 13 feet or higher as defined in Article 12 shall be exempt from the provisions of the CFROZ.

8.1.3 Relationship to underlying zoning

The CFROZ constitutes an overlay zone. The provisions of the underlying zoning, as they may be amended from time to time, continue to apply, except as expressly superseded by this Section. Where conflicts exist between this Section and the remainder of this Code, the more restrictive provision shall govern.

8.1.4 Use classifications

A. For the purposes of this Section, uses in the CFROZ shall be classified as follows:

1. *Critical uses.* Critical uses generally include residential, governmental, educational, medical, emergency, and related high-risk uses.

2. *Non-critical uses.* Non-critical uses generally include retail, restaurant, commercial, and related medium-risk uses.

3. *Exempt uses.* Exempt uses generally include low risk and low occupancy uses such as parking, construction yards, and storage.

B. Table 8-A shall determine whether a use is classified as critical, non-critical, or exempt. For uses not listed in Table 8-A, the Building Authority or the Planning Authority shall determine the classification based upon the most nearly comparable land use. Water-dependent uses shall be considered exempt.

C. All accessory uses shall be considered non-critical, with the following exceptions:

1. Accessory dwelling units.

2. Child care centers and small child care facilities greater than 1,000 square feet in floor area.

3. Clinics greater than 1,000 square feet in floor area.

TABLE 8-A: CLASSIFICATION OF USES AS CRITICAL, NON-CRITICAL, OR EXEMPT

		Critical	Non-Critical	Exempt
Residential	Single-family dwellings	●		
	Two-family dwellings	●		
	Three-family dwellings	●		
	Four-family dwellings	●		
	Townhouse dwellings	●		
	Multi-family dwellings	●		
	Live/work dwellings	●		
	Group homes	●		
	Lodging houses	●		
Institutional	Child care centers + small child care facilities	●		
	Clinics	●		
	Cultural facilities	●		
	Elementary, middle, and secondary schools	●		
	Emergency shelters	●		
	Governmental uses	●		
	Hospitals	●		
	Places of assembly	●		
	Post-secondary schools	●		
	Residential care facilities (small)	●		
	Residential care facilities (large)	●		
Commercial	Adult business establishments		●	
	Animal-related services		●	
	Auto, boat, and related dealerships		●	
	Auto service stations			●
	Bars		●	
	Bed and breakfasts	●		
	Exhibition, meeting, and convention halls		●	
	Funeral homes		●	
	General offices		●	
	General services		●	
	Greenhouse/Nursery, retail			●
	Hostels	●		
	Hotels	●		
	Marijuana retail store		●	
	Market garden			●

TABLE 8-A: CLASSIFICATION OF USES AS CRITICAL, NON-CRITICAL, OR EXEMPT

		Critical	Non-Critical	Exempt
Commercial	Neighborhood nonresidential reuse		●	
	Office park		●	
	Recreation and amusement centers		●	
	Registered marijuana dispensary		●	
	Restaurants		●	
	Retail		●	
	Small-scale marijuana caregiver		●	
	Specialty food service		●	
	Theaters and performance halls		●	
	Veterinary services		●	
Industrial	Communication studios		●	
	Construction & engineering services		●	
	Dairies			●
	Fish waste processing		●	
	Food & seafood processing, packing, and distribution		●	
	High-impact industrial uses		●	
	Impound lots			●
	Intermodal transportation facilities		●	
	Laboratory and research facilities		●	
	Low-impact industrial		●	
	Lumber yards			●
	Marijuana cultivation facility (<2,000 SF plant canopy)			●
	Marijuana cultivation facility (2,000-7,000 SF plant canopy)		●	
	Marijuana cultivation facility (>7,000 SF plant canopy)		●	
	Marijuana manufacturing facilities		●	
	Marijuana testing facilities		●	
	Printing and publishing		●	
	Recycling facilities			●
	Self-storage		●	
	Solid waste disposal facilities			●
	Studios for artists and craftspeople		●	
	Telecommunication towers (ground-mounted)			●
	Warehousing and distribution		●

		Critical	Non-Critical	Exempt
Other	Agriculture			●
	Boathouses and storehouses for fishing equipment			●
	Campgrounds			●
	Cemeteries			●
	Marinas and yacht clubs			●
	Marine uses			●
	Off-street parking			●
	Parks and open spaces			●
	Social service centers	●		
	Solar energy system (minor)			●
	Solar energy system (major)			●
	Utility substations	●		
	Wharves, piers, docks, and landing ramps			●
	Wind energy system (minor)			●
	Wind energy system (major)			●

8.1.5 Projects subject to the standards of the CFROZ

A. Any development located within the established boundary of the CFROZ, and which meets the thresholds listed below, shall be subject to the standards of the CFROZ.

1. All new construction containing a critical use or uses.
2. New construction of greater than 1,000 square feet containing non-critical uses only.
3. Any addition of greater than 1,000 square feet containing critical or non-critical uses.

B. Where a change of use occurs within the CFROZ, all portions of a building containing a critical use and the critical systems supporting such use shall meet the CFROZ standards. Changes of use to non-critical uses shall not require compliance with the CFROZ standards.

C. Structures within the CFROZ that are 50,000 square feet or greater in gross floor area and undergoing substantial improvement are required to meet the CFROZ standards when they contain a critical use or uses. For the purposes of this subsection, substantial improvement shall be as defined in Article 12.

8.1.6 Use and dimensional requirements

A. Sea level rise design flood elevation (SLR-DFE). The required SLR-DFE shall be determined by use classification. For mixed-use developments that contain uses in different classifications sharing a ground floor, each use shall be addressed independently.

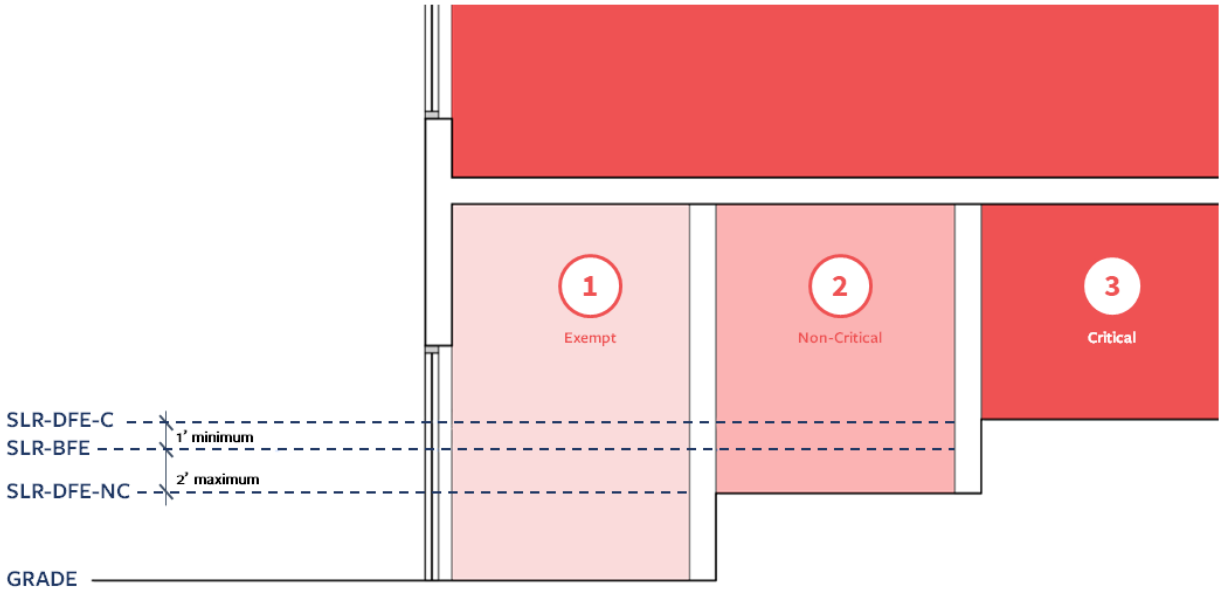

FIGURE 8-A: CFROZ USE CLASSIFICATIONS AND DESIGN FLOOD ELEVATION

1. *Critical uses.* The SLR-DFE for all critical uses (SLR-DFE-C), including the critical systems serving such uses, shall be a minimum of one foot above SLR-BFE, as defined in Article 3. In a proposed project containing critical uses, the following building and site elements are permitted to be located below the SLR-DFE:
   a. Lobbies, entries, egress stairs, and elements required for vertical circulation from the SLR-DFE to grade, such as elevators, ramps, and stairs.
   b. Parking.
   c. Storage.
   d. Flood protection equipment.
2. *Non-critical uses.* The SLR-DFE for non-critical uses (SLR-DFE-NC), including the critical systems serving those uses, shall be no lower than two feet below SLR-BFE, as defined in Article 3. The minimum elevation of the underside of the beams supporting the second floor in a multi-story building, or the roof in a one-story building, shall be no less than 13 feet above SLR-BFE. In a proposed project containing non-critical uses, the following building and site elements are permitted to be located below SLR-DFE:
   a. Lobbies, entries, egress stairs, and elements required for vertical circulation from the SLR-DFE to grade, such as elevators, ramps, and stairs.
   b. Parking.
   c. Storage.
   d. Flood protection equipment.
3. *Exempt uses.* Exempt uses shall not be subject to dimensional requirements with respect to SLR-BFE.

B. **Building height.** Within the CFROZ, if a proposed project contains principal critical or non-critical uses on the ground floor, height shall be measured from the SLR-DFE or from

average grade, whichever is higher.

C. **Exemptions for required ramping and stairs.** Ramping and stairs necessary to meet any required SLR-DFE may be included within the calculation of area required to meet landscaped open space ratio requirements, and shall not be included within the calculation of lot coverage. Ramping and stairs necessary to meet any required SLR-DFE may be located in any required front yard, interior or corner side yard, or rear yard, and in cases where build-to requirements apply, shall be considered to meet the build-to percentage.

D. **Hazardous materials.** Any hazardous materials shall be fully contained and elevated a minimum of two feet above SLR-DFE.

8.2 FORT SUMNER PARK HEIGHT OVERLAY

8.2.1 Purpose

The purpose of the Fort Sumner Park Height Overlay is to protect the public interest by limiting the impact of development on the quintessential views of natural resources and the changing Portland skyline from Fort Sumner Park.

8.2.2 Applicability

A key apex point is established in Fort Sumner Park at 43° 40' 2.3359" N. 70° 15' 4.3687" W . The Fort Sumner Park Height Overlay includes all land within 200 feet to the west of this key apex point as indicated on the City of Portland Zoning Map.

8.2.3 Standards

Notwithstanding any other section of this Land Use Code, development in the Fort Sumner Park Height Overlay shall be subject to the following additional provisions:

A. The top of structures, including rooftop appurtenances, within the overlay shall not exceed the baseline vertical height of the apex point (160.27' City of Portland Datum (Mean Tide)). For each 25' radially away from the apex point, the vertical height permitted in the overlay is reduced by 1 foot. (See Figure 8-B.)

B. The minimum building setback from the park property shall be 15 feet.

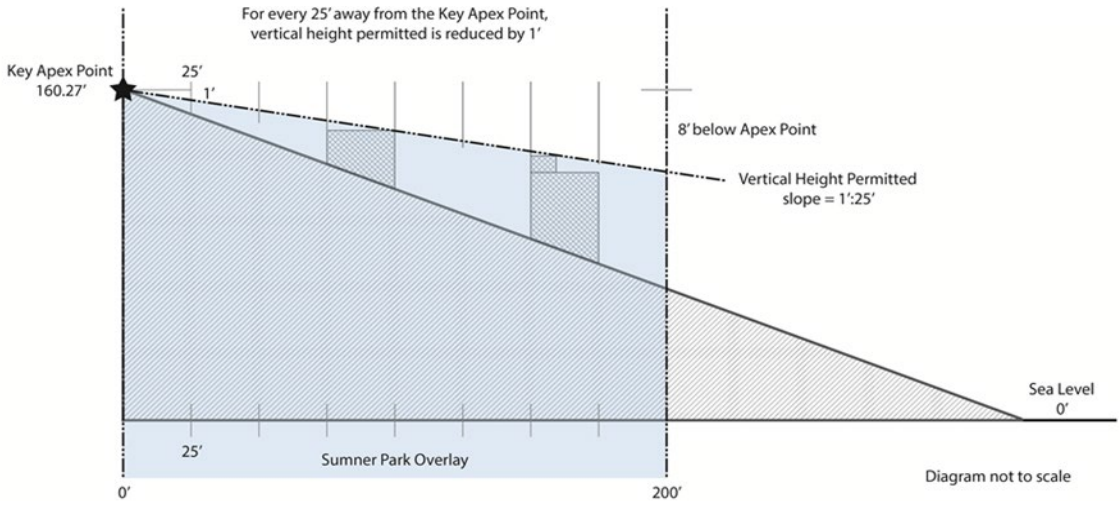

FIGURE 8-B: FORT SUMNER PARK OVERLAY PERMISSIBLE HEIGHT

8.2.4 Review process

Any project within the Fort Sumner Park Overlay shall go before the Parks Commission for a recommendation to the Planning Board regarding potential impacts on Fort Sumner Park.

8.3 INSTITUTIONAL OVERLAY (IOZ)

8.3.1 Purpose

The Institutional Overlay Zone (IOZ) provides a regulatory tool available to the city's major medical and higher education campuses where an alternative regulatory structure is needed to facilitate a consistent, predictable, and clear growth management process. The purposes of the Institutional Overlay Zone are to:

A. Acknowledge that the city's major academic and medical institutions play a prominent role in the health and well-being of the local and regional community, and to sustain that role, these institutions need flexibility to change and grow.

B. Encourage proactive planning for institutional change and growth which identifies and addresses likely long-term institutional needs and cumulative impacts while leveraging potential benefits at the neighborhood, city, and regional level.

C. Ensure that institutional change and growth both complements and, as appropriate, integrates adjacent or surrounding neighborhoods through carefully planned transitions.

D. Support the formation and continuation of mutually beneficial public-private cooperation.

E. Support an ongoing public engagement process that benefits both the institutions and nearby neighborhoods.

F. Reflect Comprehensive Plan and other policy objectives.

G. Provide a regulatory tool for Portland's major institutions that includes the flexibility required to balance the particular needs of institutions with the needs of the surrounding neighborhood and wider community.

8.3.2 Location and applicability

The city's major medical and higher education institutions are eligible to apply for designation as Institutional Overlay Zones. Use of an Institutional Overlay Zone is encouraged for these institutions, particularly where proposed future development may be inconsistent with current base zoning.

8.3.3 Establishment

A. Application for an Institutional Overlay Zone. Where an eligible institution seeks designation as an IOZ, they shall submit a zone change application consisting of two components:

1. An Institutional Development Plan (IDP) in accordance with Subsection 8.3.4.
2. A regulatory framework in accordance with Subsection 8.3.5. If adopted, this framework shall serve as the text and map amendment to the City's Land Use Code and zoning map.

B. Required public involvement. At least two neighborhood meetings shall be required to establish designation as an IOZ. The first shall be held prior to the formal submission of a zone change application, and the second shall be held during the City's review. Meetings shall identify the concerns, if any, of affected residents and property owners, and should solicit feedback to inform the Institutional Development Plan (IDP) and regulatory framework proposed. Meetings shall be held in

a convenient location proximate to the institution. The applicant shall provide written notification to property owners of record within 500 feet of the proposed IOZ boundary at least ten days prior to the meeting dates, and shall maintain written records of the meetings.

C. Required scoping meeting. The eligible institution shall meet with the Planning Authority after the first required neighborhood meeting and prior to submission of the zone change application to confirm the focus of the Institutional Development Plan (IDP) and regulatory framework, including associated study areas that may be outside of the proposed IOZ boundary. The IDP and regulatory framework will vary in detail and focus depending on the eligible institution and its context. The content requirements in Subsections 8.3.4 and 8.3.5 and the recorded comments from neighborhood meeting(s) shall provide direction for the content of the IDP. The Planning Authority or Planning Board may require additional information or modify content requirements as is relevant to the eligible institution.

D. Reviewing authority. The Planning Board shall review the zone change application, including the IDP and regulatory framework. At least one public workshop and a public hearing before the Planning Board are required. Upon recommendation of the Planning Board, the City Council shall review and consider adoption of the Institutional Overlay Zone and the accompanying regulatory framework as an amendment to the City's Code of Ordinances.

E. Future institutional development. All new development shall be compliant with the established IOZ and accompanying regulatory framework. It shall also be consistent with the IDP, consistent with the Comprehensive Plan, and shall meet applicable site plan standards, unless such standards are superseded by the regulatory framework. Any development proposed by an eligible institution outside the established IOZ boundary shall be reviewed under the standards of the applicable zone , unless such development is proposed in a residential zone and is functionally related to the operations within the IOZ, in which case it shall be addressed by the IDP and require an amendment to the IDP as applicable.

8.3.4 Institutional Development Plan (IDP)

A. Purpose. Any use conducted by an eligible institution and any construction by an eligible institution in an Institutional Overlay Zone shall be consistent with an Institutional Development Plan (IDP) approved by the Planning Board in accordance with this section. The purpose of the IDP is to establish baseline data about institutional land uses, facilities, and services, and to measure, analyze, and address the anticipated or potential impacts of planned institutional growth and change. The IDP shall serve as a background document that supports the proposed regulatory framework and informs subsequent site plan review(s).

B. Planning horizon. An IDP shall provide the City and abutting neighborhoods with a clear outline of the anticipated or potential growth and change of the eligible institution for the short- to medium-term (e.g. 1-5 and 5-10 years respectively), as well as a conceptual growth plan for the long-term (e.g. 10 years or more). However, the specific planning horizons for each institution will be determined as part of

the IDP approval process.

C. Content. The IDP submission shall address the following elements unless specifically modified by the Planning Authority or Planning Board, with the scope and level of detail to be clarified at the required scoping meeting:

1. Context information, including:

a. The institution's adopted mission, vision, or purpose statement.

b. A summary of relevant baseline data on the institution, including:

i. A neighborhood context plan.

ii. An inventory of current programs and services.

iii. A current census of the number of people using the institution (e.g., employees, enrollment, patients), with an indication of maximums and minimums over time.

iv. An inventory and/or plan of all existing property holdings within the main campus and within the City of Portland, including an indication of functional land use links between off-campus properties and the main campus (e.g. remote parking).

v. An inventory and/or plan of existing facilities, including data on use, floor area, and any existing functional connections between facilities.

c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:

i. A summary of existing resources, such as historic, open space, and natural resources.

ii. A summary of the existing transportation system, including vehicular, pedestrian, transit, bicycle, and parking supply, demand, and utilization.

iii. A summary of existing public infrastructure supporting the institution, including demand, utilization and any capacity issues.

iv. Relevant municipal plans, projects, and studies that may influence the IDP study area and opportunities for integrating institutional growth.

d. A summary of public involvement in the development of the IDP, including major areas of public concern.

2. Assessment of future institutional growth and change, including:

a. A description of institutional needs and areas of future institutional growth and change, with:

i. A projected census of users (e.g., enrollment /employment/patient/ visitor figures and anticipated variations over time).

ii. Institutional objectives for property both within and outside the IOZ boundary (e.g. acquisition and/or disposition), including an indication of any functional land use connection for sites outside the IOZ boundary to the main campus.

iii. A development plan addressing anticipated or potential institutional needs and physical improvements, including the proposed boundary of the IOZ and any phasing of the development.

b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:

i. Transportation and access, with:

a) An analysis of the projected changes in parking demand, supply, and impacts to the off-street and on-street parking capacity, including an explanation of the proposed parking plan.

b) An analysis of the projected changes in vehicular, pedestrian, transit, and bicycle access routes and facilities, their capacity, and safety.

c) A transportation, access, and circulation plan, representing the synthesis of the analysis, and including a program of potential improvements or set of guidelines to address access deficiencies to and within the IOZ. The plan should outline proposed mechanisms and potential strategies to meet transportation objectives, including transportation demand management, phasing, and when a Traffic Movement Permit (TMP) may be required.

ii. Environment, with:

a) An analysis of potential cumulative impacts on natural resources and open spaces.

b) An analysis of projected energy consumption, hazardous materials generation, noise generation, and similar issues as relevant.

c) An environmental plan, representing the synthesis of the analysis and including a proposed program or set of guidelines for future preservation, enhancement, conservation, and/or mitigation.

iii. Infrastructure, with:

a) An analysis of projected public utility demand and the capacity of associated infrastructure.

b) An analysis of projected public safety needs and projected impacts to the capacity of these services.

c) An infrastructure plan, representing the synthesis

of the analysis and including a proposed program or set of guidelines to support sustainable growth.

iv. Design, with:

a) An analysis of projected impacts to neighboring properties and public spaces, including potential shadow, wind, and lighting impacts, impacts of height and massing, and impacts to historic resources.

b) An analysis of transition areas between the institution and adjoining neighborhoods, including identification of key character defining components of the surrounding context.

c) An analysis of existing Crime Prevention Through Environmental Design issues and identification of how these principles would be addressed as part of the proposed campus development.

d) A conceptual built environment/public realm plan, representing the synthesis of the analysis and including a set of guidelines for urban design, landscape, open space, and streetscape treatments, with particular attention to the treatment of edges (both within and abutting the IOZ boundary) to achieve compatible transitions.

v. Neighborhood engagement, with:

a) A plan for ongoing community engagement that represents best practices, promotes collaborative problem solving around community concerns, fosters transparency, and identifies mechanisms for neighborhood feedback and institutional accountability.

b) A property management framework that identifies the institution's process for handling operational property issues with neighbors.

c) Strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods.

d) A set of construction management principles to apply to all institutional construction, that represent best practice, aim to minimize short- and long-term construction impacts on surrounding residents and businesses, and ensure a clear

communication strategy is in place in advance of construction.

D. Standards of review. The IDP shall:

1. Address all content requirements, unless explicitly modified by the Planning Authority or Planning Board.
2. Reflect the issues/topics identified in the required public process.
3. Demonstrate consistency with the City's Comprehensive Plan and the purpose of this ordinance.
4. Demonstrate how the property ownership, proposed growth, and requested regulatory framework relate to the institution's mission.
5. Demonstrate that traffic and parking impacts have been anticipated and that the proposed parking provision is justified as based on an assessment of options for reducing traffic and parking demands.
6. Outline an approach to open space, natural, and historic resources that supports preservation and enhancement.
7. Demonstrate that potential cumulative environmental impacts have been anticipated and can be minimized or satisfactorily mitigated.
8. Demonstrate that utility impacts have been anticipated and can be minimized or satisfactorily mitigated.
9. Reflect a comprehensive design approach that ensures appropriate transitions with the existing or future scale and character of the neighboring urban fabric.
10. Promote compatibility with existing or future uses in adjacent neighborhoods, maintain housing, and support local amenities.
11. Anticipate future off-site improvements that would support the integration of the institution into the community and city-wide infrastructure.
12. Conform with the standards of Article 16 for designated landmarks or for properties within designated historic districts or designated historic landscapes, if applicable. ~~When proposed adjacent to or within 100 feet of designated landmarks, historic districts, or historic landscapes, the IDP shall be generally compatible with the major character-defining elements of the landmark or portion of the district in the immediate vicinity.~~
13. Incorporate strategies to support clear communication and ongoing public engagement between institutions and nearby neighbors.

E. Approval. Upon finding that an eligible institution's IDP meets the standards of review, the Planning Board shall approve, approve with conditions, or deny an IDP.

F. Monitoring. The IDP shall establish a schedule for reporting on IDP implementation at regular intervals of not more than ten years from the date of approval of the initial or amended IDP, and identify thresholds for IDP amendments.

G. Amendments. An approved IDP shall guide campus development unless and until amended. If at any time the eligible institutions request minor amendments to an approved IDP, the Planning Authority may approve such minor amendments, provided that they do not constitute a substantial alteration of the IDP and do not affect any condition or requirement of the Planning Board. The applicant shall apply

with a written statement of the proposed amendment and proposed amended IDP to the Planning Authority, whose decision as to whether the amendment is minor shall be final. Major amendments shall be reviewed by the Planning Board. When the IDP is amended, the baseline data in the IDP shall be updated as appropriate.

8.3.5 Regulatory framework

A. Purpose. The regulatory framework translates the IDP into a set of clear and specific zoning requirements for the IOZ that constitute the text and map amendments to the City's Land Use Code and zoning map. The zoning requirements are anticipated to include parameters that guide the growth and change of the institution as well as broad strategies to address potential impacts, with plans and details to be developed under site plan review.

B. Applicability. The regulatory framework shall apply only to properties that are within the IOZ boundary and to which the eligible institution holds right, title, or interest. For these properties, the Institutional Overlay Zone shall supersede the underlying zoning, and all new institutional development shall be conducted in compliance with the regulatory framework and the approved Institutional Development Plan. Properties located within the Institutional Overlay Zone not subject to right, title, or interest of the eligible institution shall continue to be governed by the regulations of the underlying zoning designation.

C. Uses. Institutional uses, including hospitals and higher education facilities, shall be permitted, as shall uses that are functionally integrated with, ancillary to, and/or substantively related to supporting the primary institutional use, consistent with the applicable approved IDP.

D. Content. The regulatory framework shall reflect the information and analysis of the IDP. The content shall be tailored to address the issues associated with the institution and its neighborhoods. The regulatory framework should be succinct and use tables and graphics to address the following, if applicable:

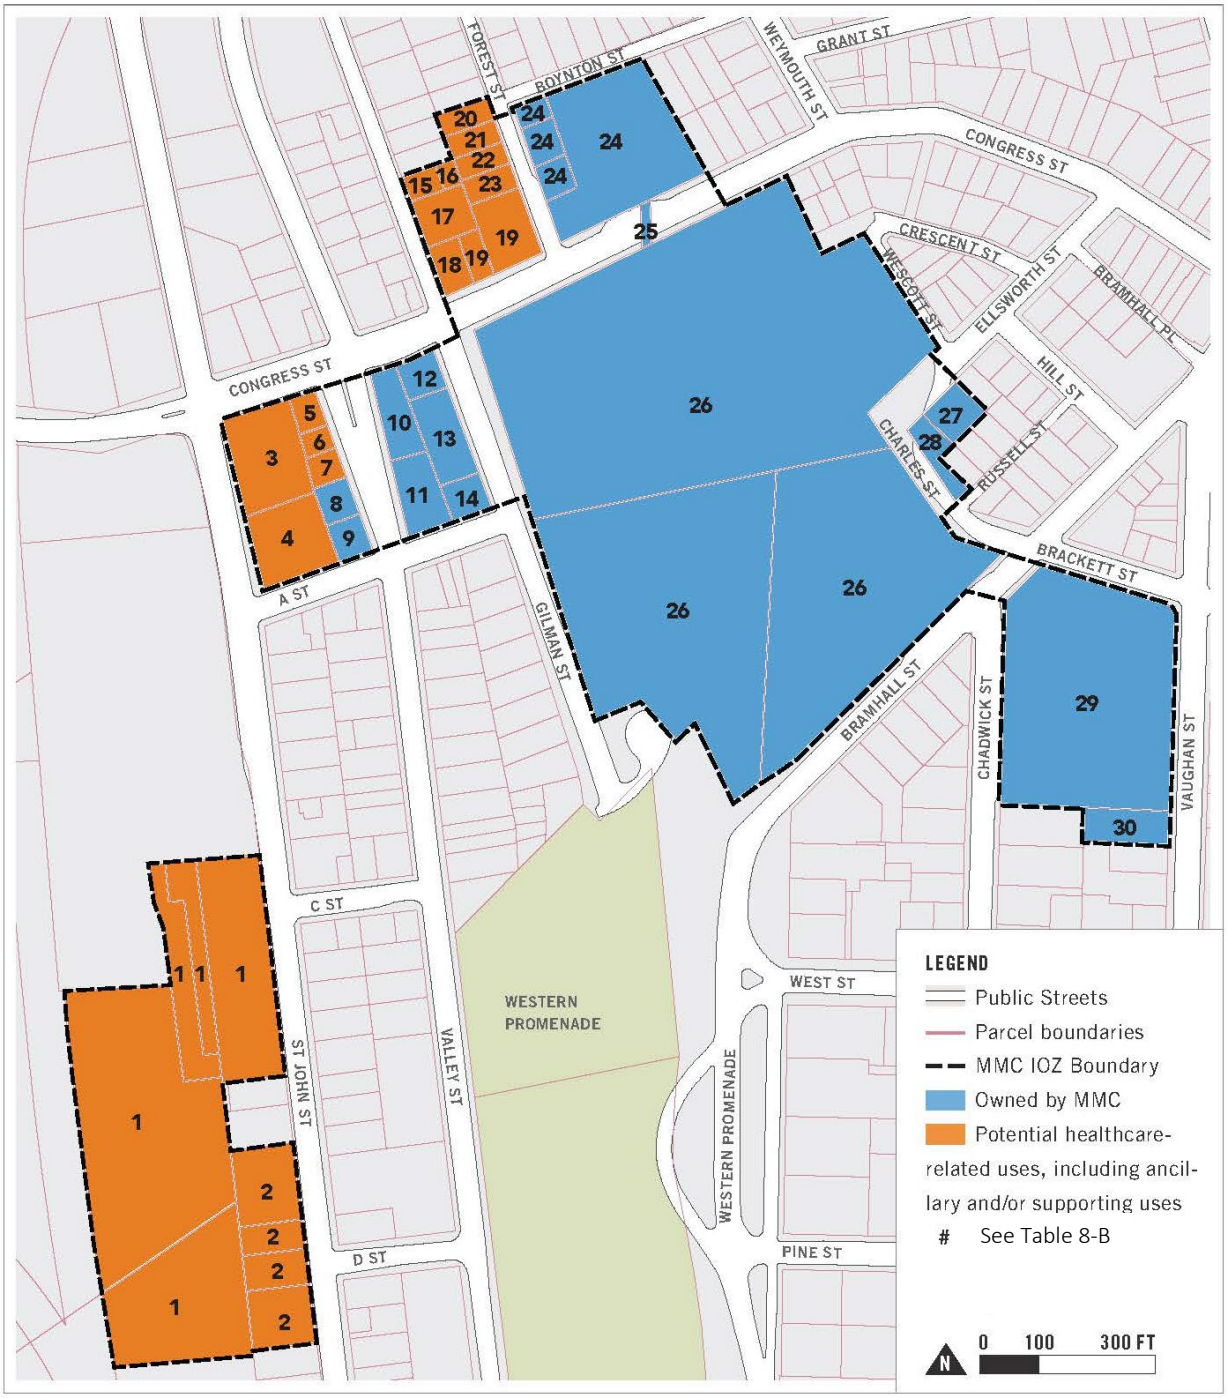
1. *Zoning boundary of the IOZ.* The area to which the regulations apply, as shown on the zoning map, subject to other provisions of this ordinance (i.e. the map amendment to the City's zoning map).
2. *Phasing and schedules.* Requirements that relate to proposed phases; a chart showing the schedule or thresholds for submitting an amended IDP (or elements of an IDP, such as a Transportation Demand Management (TDM) Plan).
3. *Uses*. Clarification, as necessary, on permitted uses.
4. *Dimensional requirements.* Graphics, sketches, or standards, including details for transition zones within the IOZ boundary.
5. *Transportation.* Elements such as Transportation Demand Management Plan (TDM) trip reduction targets or contribution to area-wide TDM measures; broad parameters for ensuring pedestrian, vehicular, bicycle and transit access and safety; parking ratios and management strategies; thresholds for access improvements.
6. *Environment.* The approach to the inclusion of open space and preservation of environmentally-sensitive areas.
7. *Mitigation measures.* The broad approach to identified mitigation measures, which

would be addressed in greater detail in the site plan review process; thresholds for addressing deficiencies; goals for preservation/protection.

8. *Design.* Graphics and standards to clarify building placement and envelope (height and massing); guidelines for integration of site features; required treatments for transition zones and treatment for all edges (both within and abutting the IOZ boundary); guidelines for establishing campus identity.
9. *Neighborhood integration.* Thresholds and strategies for neighborhood engagement; mitigation of impacts on neighboring properties, including construction impacts; buffering requirements; objectives for pedestrian linkages and safety; other requirements that address community concerns.
10. *Monitoring.* A schedule for regular monitoring reports on IDP implementation in accordance with the IDP.

E. Standards of review. The regulatory framework shall:

1. Be consistent with the Comprehensive Plan and the Institutional Development Plan.
2. Provide a clear zoning framework, using graphics and tables as appropriate, to apply to future site plan reviews.
3. Provide specific regulatory statements as appropriate that respond to concerns raised during the required public involvement.
4. Outline measurable goals and thresholds for improvements or other actions identified in the IDP to be advanced in subsequent site plan applications.



F. Approval/adoption. The Planning Board shall review the proposed regulatory framework against the standards of review and make a recommendation on the institution's IOZ designation and regulatory framework to the City Council for adoption as part of this Land Use Code.

G. Amendments. A regulatory framework and IOZ boundary as adopted by the City Council shall remain in force unless and until amended. Amendments to a regulatory framework and/or IOZ boundary may be brought forth by the City or eligible institution. Proposed amendments to the IOZ boundary or regulatory framework shall be reviewed by the Planning Board and adopted by the City Council subject to the provisions of this ordinance.

8.3.6 Maine Medical Center Institutional Overlay Zone Regulatory Framework

A. Applicability. All development proposed by Maine Medical Center (MMC) within the boundary of the MMC Institutional Overlay Zone (IOZ) shall be consistent with the approved Institutional Development Plan (IDP), consistent with the Comprehensive Plan, and meet applicable standards of the Land Use Code, unless such standards are superseded by the following regulatory framework. This regulatory framework shall govern future development by MMC within the IOZ unless amended by the Portland City Council upon formal application of MMC. The MMC Institutional Overlay Zone shall have the boundaries depicted in Figure 8-C, and shall include the properties listed in Table 8-B.

B. Updates and amendments. It is intended that the IDP will be updated on a regular basis to

Note: Refer to Table 8-C for a list of permitted uses.

FIGURE 8-C: MMC IOZ BOUNDARY

TABLE 8-B: LIST OF PROPERTIES INCLUDED IN THE MMC IOZ

Map#	Legal Description	Address	Acreage	Ownership
1	64-A-2-8-9-11/74-A-7/75-A-6	222 St John St.	4.6516	Owned by others

30	63-B-8	214 Vaughan St.	0.1983	MMC

Properties owned by MMC are listed under MMC or MMC Realty Corp.
MMC will not extend its functionally-related Bramhall campus hospital operations beyond the boundary of the IOZ within the City of Portland without further amendment to the IDP. This includes any expansion of functionally-related operations that displace residential uses outside of the IOZ boundary. A functional relationship is defined as uses or activities that are traditionally or customarily linked to the day-to-day operations of the MMC Bramhall Campus that would relocate a significant proportion of the total employee population or activities.

ensure that the data is current and that the document remains accurate. Accordingly, monitoring reports will be filed every three years and shall include a summary of progress on IDP implementation and of acquisitions and divestment since the date of IDP approval. At the time of the submission of the monitoring report, MMC shall identify any updates to the IDP which may result from updated master planning, changes in baseline information, or changes in the adjacent neighborhoods which affect MMC, to allow the IDP to remain current. Updates and minor amendments not described below shall be reviewed administratively by the Planning Authority.

1. Minor amendments that impact phasing of the long-term development blocks or change the approach to parking, transportation, neighborhood engagement or design shall be reviewed by the Planning Board for consistency with the objectives of the IDP. In addition to consistency with the objectives of the IDP, review of phasing and development program amendments shall focus on integration with the campus and impacts on transportation or infrastructure. This review may occur simultaneously with the site plan review of an anticipated project.
2. Major amendments shall be reviewed by the Planning Board and are required under the following circumstances:
   a. A change to the regulatory framework is required.
   b. The IDP is no longer representative of the institutional mission or approach to community as a result of redevelopment in the area or City upgrades to neighborhood planning (such as roadway changes, infrastructure upgrades, community design, lighting).
   c. Development proposed by MMC is inconsistent with the master facility plan, transportation plan intent, design plan intent, or environment and infrastructure plan intent identified in the IDP.
3. Annual monitoring reports will be

TABLE 8-C: PERMITTED USES

Healthcare facilities, including but not limited to the following ancillary and/or supporting uses:

- Hospital
- Medical office/Clinic
- Laboratory center/services
- Research and development (R&D) laboratory or facility
- Educational facility/Conference center
- Administrative/Business office
- Accessory service or trade uses
- Guest house
- Multi-family housing for healthcare staff and students
- Rehab/Skilled nursing facility
- Retail
- Restaurant/cafe
- Employee service amenities
- Day care center
- Fitness center or gymnasium
- Parking lot or garage
- Bicycle storage
- Heliport
- Antenna station
- Outdoor use areas, such as green areas, parks, gardens, art installations, and other active and passive non-commercial recreation spaces

submitted for MMC's Transportation Demand Management (TDM) Plan. TDM monitoring reports shall include a summary of progress towards targets established in the TDM Plan.

C. Uses. In addition to the uses permitted in the underlying zone, the uses in Table 8-C are permitted as a matter of right. In recognition that MMC is part of a mixed-use area of the city, with important existing services and businesses that serve the local and wider community, healthcare facility development fronting onto Congress Street and St. John Street shall activate the public realm, to the extent able, with uses such as service and retail/restaurant, landscaping, active building entrances, pocket parks, etc., on the ground or other publicly accessible level, consistent with the design intent contained in the approved IDP. In areas identified in the IDP as "Priority zone for commercially oriented/retail uses," usable ground floor retail, restaurant, or comparable community-oriented use that provides services to local residents and employees both during the day and evening hours is required. In areas labeled "Street activation through location of windows, entrances, etc.," usable ground floor retail, restaurant, or community-oriented use is encouraged to the extent practicable. Such uses, where constructed or facilitated as part of a healthcare related development, are expressly permitted whether ancillary or supporting the healthcare facility or not, and shall be open and welcoming to the general public in addition to employees or visitors of MMC.

D. Dimensional requirements. The MMC Institutional Overlay Zone shall have the dimensional requirements listed in Table 8-D and depicted in Figures 8-C and 8-D.

E. Design. New buildings within the IOZ shall adhere to the design guidelines set forth in Chapter 5: Design of the IDP and the site plan standards of Article 13.

F. Signs

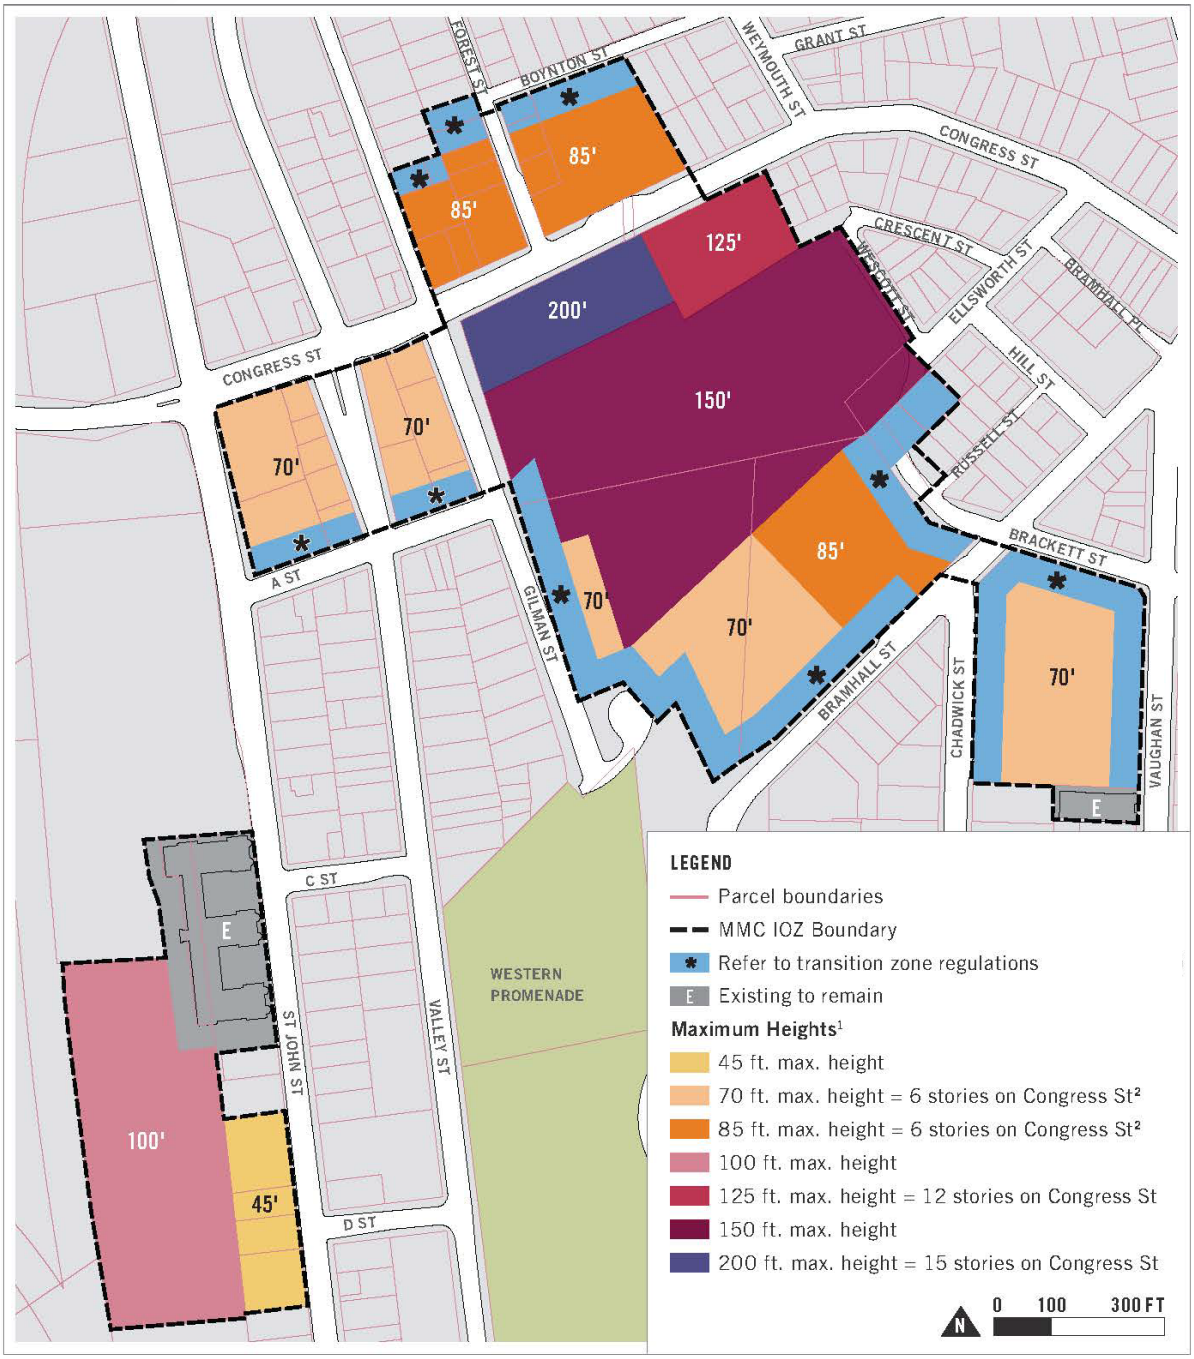
1. At the time of first site plan review following IDP approval, a unified campus-wide signage plan shall be submitted for review and approval by the Planning Authority. Any update to such plan due to a change in name or logo shall not require amendment to the IDP.

2. Signs shall be designed in accordance with the campus-wide signage plan. All signs shall be designed in proportion and character with building facades and adjacent street typology. All signs shall be coordinated with the building and landscaping design and be constructed of appropriate permanent, high quality materials and finishes.

G. Transportation

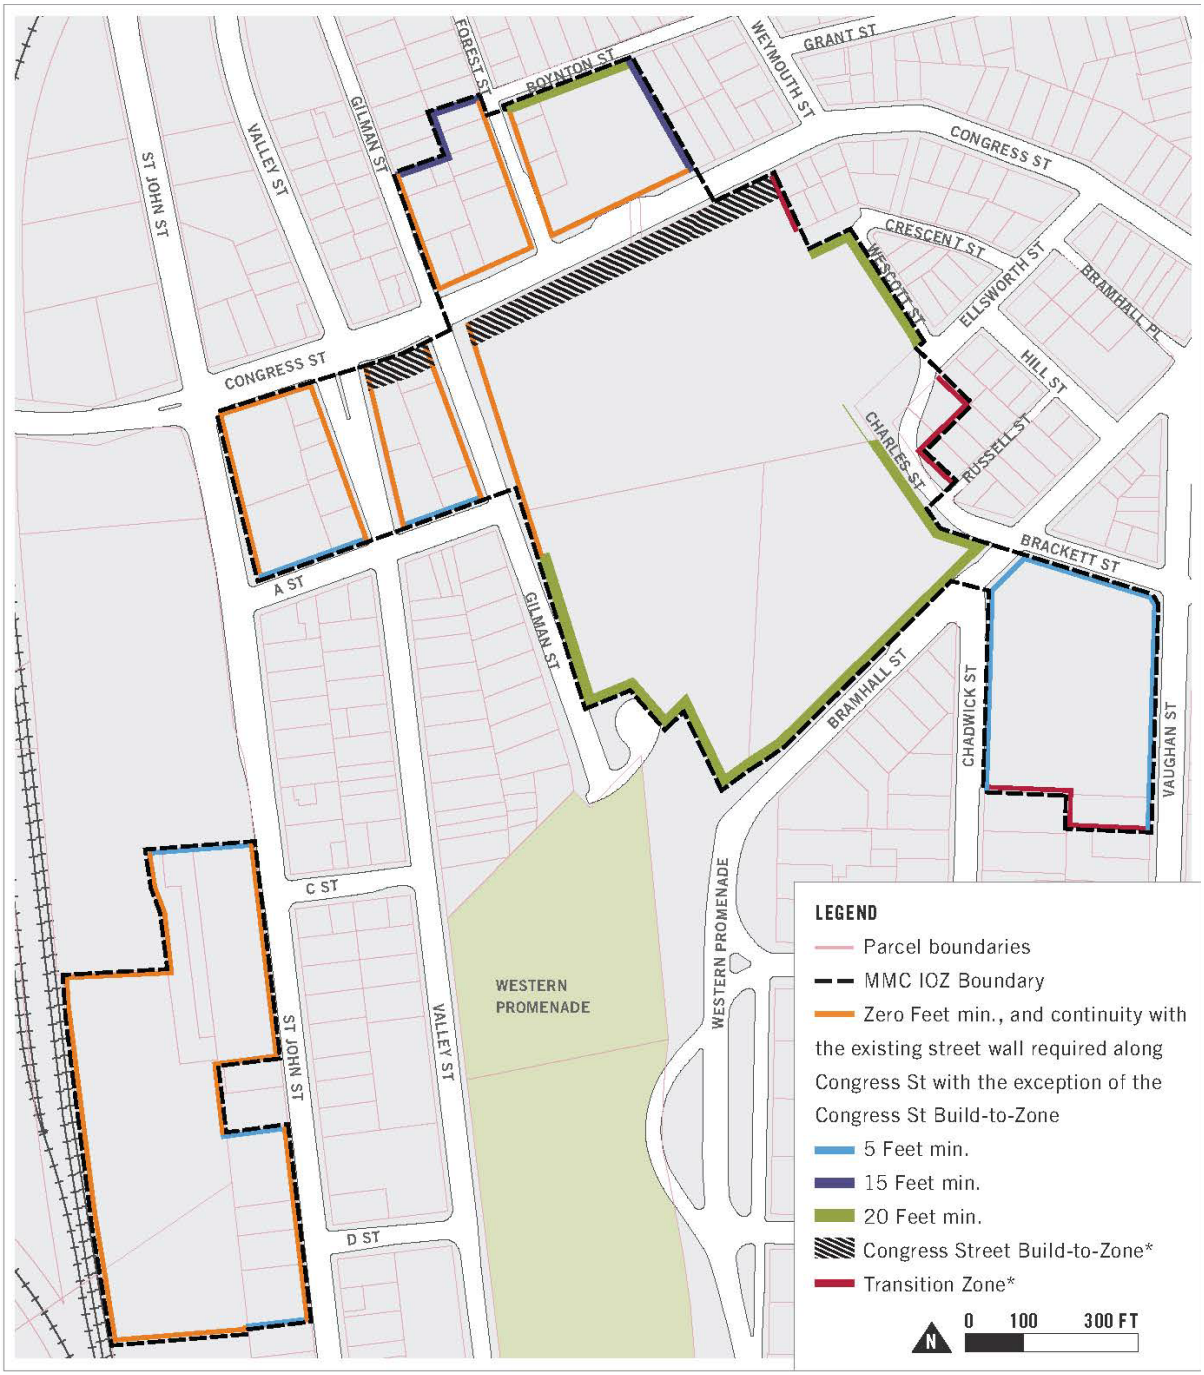
1. *Transportation Demand Management* (*TDM*)

a. At the time of the first site plan review following IDP approval, MMC shall submit a campus-wide TDM Plan substantially in accordance with those TDM objectives and strategies identified in the approved Institutional Development Plan. The TDM Plan may be phased into short-, mid-, and long-term actions to allow for progressive implementation over time.



b. The TDM Plan shall be designed to provide transportation choice with the goal of reducing parking demand

TABLE 8-D: MMC IOZ DIMENSIONAL REQUIREMENTS



Building heights (max.)	Max. building heights for new buildings within the IOZ shall be governed by the Maximum Building Heights Map in Figure 8-D, or by the transition zones clause of this table for those buildings located in transition zones. Refer to IDP "Chapter 5. Design" for methodology on determining heights.
Building heights (min.)	Three stories, except in transition zones, where the minimum building height shall be two stories. Minimum building heights shall not apply to building awnings, associated kiosks, pavilions or similar building components.
Building length (max.)	Length of proposed parking garage at 222 St John St shall not exceed 500 feet as measured roughly parallel to St John St.
Building setbacks (min.)	Minimum building setbacks shall be governed by the Minimum Setbacks Map in Figure 8-E. Additional requirements are listed in the transition zones and Congress Street build-to zone sections of this table.
Congress Street build-to zone[1]	A build-to zone is identified for some properties that abut Congress Street. See Minimum Setbacks Map in Figure 8-E for the location of build-to zone. i. The Congress Street build-to zone extends between 0 to 40 feet from the right-of-way boundary. ii. Buildings located in these parcels must have a minimum of 70% of the façade facing Congress Street located within the build-to zone.
Transition zones	Transition zones are identified inside the IOZ boundary in areas where the IOZ abuts or is located across a public right-of-way from a residential zone or a historic-designated district. See Maximum Building Heights Map in Figure 8-D for location of transition zones. i. Transition zones shall extend 50 feet into the parcel from the parcel boundary. ii. Transition zones that abut a Residential zone with or without an intervening public right-of-way shall have a maximum height limit that matches the maximum height permitted within that Residential zone. iii. In areas where the IOZ abuts a residential zone without an intervening public right-of-way, minimum side and rear yard requirements of the abutting residential zone apply within the IOZ boundary, unless noted otherwise in Minimum Setbacks Map in Figure 8-E.

[1]A "build-to zone" is the area on the lot where all or a portion of the street-facing building facade must be located, measured as a minimum and max. yard (setback) range from the public right-of-way boundary.

Notes: 1. Minimum building heights also apply. Refer to Table 8-D.
2. For buildings with residential use above the ground floor, the following height maximums apply: 70 ft. maximum height = 7 stories, and 85 ft. maximum height = 8 stories.

FIGURE 8-D: MAXIMUM BUILDING HEIGHTS

* Refer to Table 8-D Dimensional Requirements

FIGURE 8-E: MINIMUM SETBACKS

and single-occupancy vehicle trips to and from MMC by employees and visitors.

b. The TDM Plan shall establish parking and trip reduction targets associated with the short-term (0-2 years), mid-term (2-5 years), and the long-term (5+ years), as well as a data collection plan.

2. *Parking.* Parking requirements in the IOZ shall be established at the time of site plan review based on a parking study that includes a campus-wide analysis of demand and supply. The parking demand study shall determine parking requirements and shall be sufficient to alleviate parking pressure on surrounding neighborhoods. Parking studies developed by MMC shall integrate parking and trip reduction achievements and data contained in the TDM Plan.

H. Environment. Development proposed by MMC shall be designed to integrate with the surrounding context, including open space and pedestrian networks and infrastructure.

I. Mitigation measures. MMC shall mitigate site plan impacts to off-premise infrastructure in a manner proportionate to those impacts. Mitigation may include financial or in-kind contributions to existing or planned City projects focused on mitigating the impacts of MMC development. Mitigation contribution shall be determined based on the City's standard procedure in effect at the time of site plan review.

J. Neighborhood integration and engagement

1. For the purpose of keeping surrounding residential areas appraised of its future development plans, and to address any neighborhood issues related to the operations of the MMC Bramhall campus, MMC shall adhere to the ongoing community engagement principles identified in the approved Institutional Development Plan.

2. MMC shall conduct ongoing community engagement, including the formation of a Neighborhood Advisory Committee comprised of representatives of MMC, the Parkside neighborhood, the West End neighborhood, the Western Promenade Neighborhood Association, the St. John Valley neighborhood, the Libbytown neighborhood, and the City.

K. Construction management

1. At the time of site plan review, MMC shall submit a construction management plan substantially in accordance with those construction management principles identified in the approved Institutional Development Plan for review and approval by the Planning Authority.

2. The construction management plan shall include a construction schedule, as well as strategies for managing neighborhood communication and noise, air quality, traffic, and parking impacts associated with the construction as set forth on the construction management template developed by the City and attached and incorporated to the IDP as Appendix A.

L. Other requirements

1. *Helipad.* Proposed changes to MMC's helipads, including changes to preferred flight routes, shall be reviewed and approved by the Planning Authority in

accordance with the approved Institutional Development Plan.

2. *Snow ban parking.* When the City of Portland declares a snow parking ban, MMC shall make parking available to neighbors in a designated parking area on or near its campus upon the following condition: Due to the patterns of patient flow in the hospital, the hours of snow ban parking for registered vehicles during an announced City of Portland snow parking bans are 6:00 p.m. until 6:00 a.m. Vehicles that are not moved out of these parking areas by the applicable time each morning are subject to towing at the owner's expense.
3. *Healthy communities.* Recognizing that a stable residential and commercial environment is key to the health of any neighborhood, MMC commits to supporting its existing and future neighbors in the St. John Valley, Parkside, West End, Western Prom, and Libbytown neighborhoods. Accordingly, MMC shall implement and participate in the healthy communities programs as described below.
   a. Caring Community Grants. MMC shall develop an annual grant program with available funds of up to $30,000. Goals, priorities, eligibility requirements, program guidelines, and allocation approach will be developed by the MMC Neighborhood Advisory Committee, as described in Chapter 6 of the IDP approved on September 26, 2017. Neighborhood associations or other entities located or operating in the St. John Valley, Parkside, West End, Western Promenade, and Libbytown neighborhoods may apply for grant funding relating to the following initiatives:
      i. Neighborhood investment and Infrastructure: Focused on creating strong, safe, accessible and vibrant neighborhoods.
      ii. Quality of life: Focused on improving access to recreation, arts or cultural experiences in the neighborhoods.
      iii. Diversity and inclusion: Focused on fostering the building of relationships and understanding among diverse groups, including capacity building and outreach activities.
      iv. Public Safety: Focused on supporting public safety programs through training programs, equipment or other means in the neighborhoods.
      v. Environmental sustainability: Focused on preventing waste, increasing recycling or supporting other programs that work to improve the environment.
   b. Healthy Neighborhoods Program. MMC shall initiate and adopt a memorandum of understanding (MOU) by and between MMC, the City of Portland, and other community partners establishing a Healthy Neighborhoods program. Such a program shall be designed to fund and execute housing and community

improvement and development programs in St. John Valley and the other neighborhoods surrounding MMC's Bramhall Campus.

8.3.7 The Roux Institute at Northeastern University Overlay Zone Regulatory Framework

A. Applicability. All development proposed by the Roux Institute at Northeastern University ("Roux Institute") within the boundary of the Roux Institutional Overlay Zone (IOZ) shall be consistent with the approved Institutional Development Plan (IDP), consistent with the Comprehensive Plan, and meet applicable standards of the Land Use Code, unless such standards are superseded by the following regulatory framework. This regulatory framework shall govern future development by the Roux Institute within the IOZ unless amended by the Portland City Council upon formal application of the Roux Institute. The Roux Institutional Overlay Zone shall have the boundaries depicted below and shall include the approximately thirteen-acre property located at 1 Bean Pot Circle and identified as parcels 447-A001 and A002 in the City's assessing records.

B. Phasing and monitoring

1. The Roux Institute campus will be developed in phases, as set forth in the IDP. The IDP will be updated on a regular basis to ensure that the data is current and that the document remains accurate. Accordingly, monitoring reports will be filed every three years and shall include a summary of progress on IDP implementation and of acquisitions and divestment since the date of IDP approval. At the time of the submission of the monitoring report, any updates to the IDP shall be identified which may result from updated master planning, changes in baseline information, or changes in the adjacent neighborhood which affect the campus, to allow the IDP to remain current. Updates and minor amendments not described below shall be reviewed administratively by the Planning Authority.
2. At completion of each phase, the Roux Institute campus shall have the appearance of a complete and comprehensive design. Permanent and meaningful public space shall be established in the first phase to ensure public benefit. Interim conditions shall be designed for a pleasant pedestrian experience through planting, lighting, wayfinding, graphics, artwork, or

FIGURE 8-F: ROUX INSTITUTIONAL OVERLAY ZONE BOUNDARY

ornamental fencing to provide screening, buffers, and enhancement. Interim areas of the site which are not actively used for parking or construction staging will be appropriately landscaped or accommodate gathering on lawns or other aesthetically hardened spaces.

3. Minor amendments that change the approach to parking, transportation, neighborhood engagement or design shall be reviewed by the Planning Board for consistency with the objectives of the IDP. This review may occur simultaneously with the site plan review of a proposed project.
4. Major amendments shall be reviewed by the Planning Board and are required under the following circumstances:
    a. A change to the regulatory framework is required.
    b. The IDP is no longer representative of the institutional mission or approach to community as a result of redevelopment in the area or City upgrades to neighborhood planning (such as roadway changes, infrastructure upgrades, community design, lighting).
    c. A change in approach to parking, transportation, neighborhood engagement or design is inconsistent with the objectives of the IDP, resulting in a modification to the applicable objectives.
5. Review of major amendments may occur simultaneously with the site plan review of the proposed project.

C. Uses

1. The Roux Institute campus will encompass a variety of uses to support the mission of the Institute. Campus uses will include classrooms and laboratories, housing, faculty offices, dining areas, convening spaces, fitness centers, retail facilities, entrepreneurial spaces, light manufacturing, incubator space, research and design facilities, hotel, and office space. The mixture of uses is intended to support collaboration with private industry, other institutions, and community organizations. A range of rental housing options will provide on-site opportunities for students, faculty, staff, and their families, easing some of the housing pressure and traffic that might otherwise result from new residents attracted to Portland by the institute. Housing units not occupied by residents affiliated with the Roux Institute may be made available to the public to further assist in easing the housing pressure.
2. The Roux Institute campus will be designed to include uses that will welcome neighbors to the campus, including publicly available open space, waterfront access, recreational opportunities, restaurant, dining, small neighborhood grocery, and/or other limited retail options.
3. In addition to the uses permitted in the underlying zone, laboratory and research facilities, low-impact industrial uses, and high-tech manufacturing shall also be permitted as a matter of right in all buildings that are located within the IOZ and on land owned or leased by the Roux Institute. On the pier residential uses are explicitly prohibited and any allowed use

on the pier must be a functionally water-dependent use. Ground floor retail, restaurant, or comparable community-oriented uses that provide services to local residents, students, faculty and staff shall be expressly permitted whether ancillary to or supporting the educational institution, and shall be open and welcoming to the general public.

4. Within the boundary of the IOZ, hotels shall be limited as follows:
   a. No more than one hotel shall be located in the IOZ.
   b. The hotel shall contain no more than 130 rooms.
   c. The hotel shall be no more than eight stories in height, not including structured parking. There shall be no more than two levels of above grade structured parking beneath the first floor of the hotel. Nothing herein is intended to preclude the co-location of hotel use and structured parking on one or more levels of the hotel.

D. Dimensional requirements

1. *Applicability.* All principal buildings and structures located within the IOZ and located on land owned or leased by the Roux Institute shall be subject to the dimensional requirements of the underlying zone, except where modified by the provisions of this section.
2. *Rules of measurement*
   a. Publicly accessible corridor: A corridor accessible to the general public that is open to the sky or enclosed with a minimum width of 20 feet. Enclosed portions of publicly accessible corridors shall have a minimum height of 30 feet.
   b. Street wall: Within the Roux IOZ the term "street wall" shall mean a wall or portion of a wall that includes the principal entry to a building facing a street, public right-of-way, major pedestrian access routes, or open spaces. Orientation of the principal entry to a building shall be determined by the applicant.
3. *Maximum building heights.* Maximum building heights for new principal buildings in the IOZ shall be governed by the Roux IOZ Height Map (Figure 8-G).
4. *Minimum and maximum street wall heights.* New principal buildings in the IOZ shall rise to a minimum street wall height of 45 feet and may rise to a maximum street wall height of 105 feet.
5. *Stepback requirements*. At a height not lower than the minimum street wall height or higher than the maximum street wall height, a stepback with a minimum depth of at least 10 feet shall be provided. Required stepbacks shall only apply to a building's street wall.
6. *Building length requirements*
   a. For buildings with a length greater than 250 feet, a continuous, publicly accessible corridor that connects two streets, public rights-of-way, major pedestrian or bicycle access routes, or open spaces shall be provided, with the precise location to be identified, defined, and reviewed under site plan review. Building length shall be measured at grade in a straight line

between the outer corners of the designated street wall.

b. Publicly accessible corridors need not be linear and may have necessary grade changes.

c. Any building wall situated along a publicly accessible corridor shall be designed to provide sufficient architectural and graphic amenities to provide visual interest, transparency between interior activities and pedestrian activity, or active uses and relate the building, and its use to passersby.

d. Publicly accessible corridors shall:

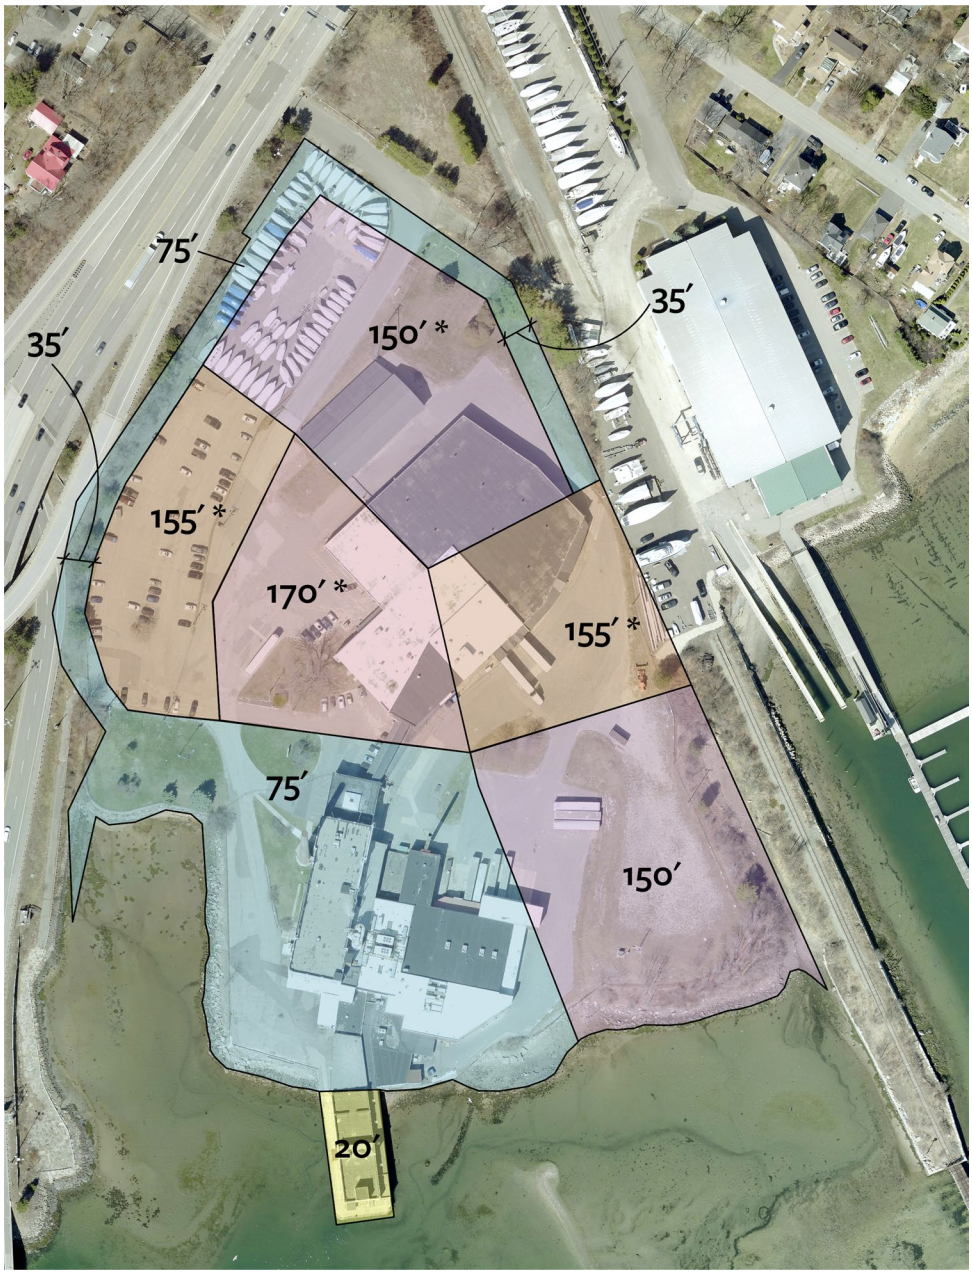
i. Include bicycle and pedestrian amenities such as benches and other seating;

ii. Be illuminated to levels that are adequate but not excessive for the safety, comfort, and conveniences of occupants and users of the site, and

iii. Provide access to the public during regular operating hours of the institute.

e. The Roux Institute may close off public access to a publicly accessible corridor during special events or when determined necessary by the institute for security or public safety purposes.

7. *Transitions and buffers*



a. The campus is surrounded by existing buffers, with I-295 to the west, state-owned vacant parcels to the north, the rail corridor and marine business to the east, and Casco Bay to the south. In addition to the existing buffers, development shall further ease the transition to and from the campus.

b. Public open space will ease transition from the smaller scale of Sherwood Street. A transition onto the campus will also be accomplished through thoughtful façade design at the pedestrian level. Potential nuisance features like dumpsters, air handlers, and parking will be appropriately screened. Buildings will avoid blank walls to respect the adjacent neighborhood and facilitate a sense of permeability and welcome.

c. The shoreline transition area between the buildings and the water will serve as meaningful public open space. Building facades facing the water will be considered public-facing, with views designed for interest from the water and Eastern Promenade Trail.

d. The transition area between the campus and I-295 contains a height limitation of 75 feet along the edge and between the highway and the B&M Cannery Building, preserving the historic view of the building from the highway and easing the transition to the greater allowable building heights in the center of campus.

e. The transition area along the edge of the campus adjacent to the rail corridor also contains a height limitation of 75 feet along the edge of the property closest to the residential neighborhood, further easing the transition to the greater allowable

1. *: Above height of 75 feet, no building floorplate shall exceed 35,000 square feet.
2. Above height of 50 feet, no two buildings shall be closer than 40 feet apart.
3. Building heights for buildings that span two or more height zones shall be measured by calculating the highest point (as defined in the Land Use Code) of that portion of the building within a particular height zone. If the roof is sloped, height is measured at the midpoint of that portion of the slope located within the particular height zone.
4. Functionally water-dependent structures on the pier are limited to 20 feet in height. Light poles on the pier are limited to 35 feet in height. On the pier height is measured from the top of the pier deck to the top of the roof of a functionally water-dependent structure or to the top of a light pole.

FIGURE 8-G: HEIGHT OVERLAY MAP

building heights at the center of campus, mitigating shadow impacts to adjacent properties.

E. Transportation

1. *Transportation demand management (TDM)*

a. At the time of the first site plan review following IDP approval, the developer shall submit a campus-wide TDM Plan substantially in accordance with those TDM objectives and strategies identified in the approved IDP. The TDM Plan may be phased into short-, mid-, and long term actions to allow for progressive implementation over time.

b. The TDM Plan shall be designed to provide transportation choice with the goal of reducing parking demand and single-occupancy vehicle trips to and from the Roux Institute campus and from the Roux Institute campus by students, faculty, staff, institutional partners, and visitors.

c. The TDM Plan shall establish parking, mode share, and trip reduction targets associated with each phase of development, as well as a data collection plan.

d. Annual monitoring reports will be submitted for the TDM Plan. TDM monitoring reports shall include a summary of progress towards targets established in the TDM Plan. If deficiencies are identified, they will be resolved in accordance with the site plan approval.

2. *Traffic movement permit (TMP)*

a. Any development that will generate over 100 passenger car equivalents will trigger TMP review which will determine applicable mitigation for that development program. There are contributions anticipated to area-wide elements to support trip reduction targets, such as contribution to the development of shared use path infrastructure and support for additional transit service to the campus. The TMP review may consider an individual site plan or may cover more than one site plan. Each of the TMP submissions and review will continue to contemplate capacity for multimodal connections to continue to reduce automobile trips.

b. Mode shares and trip reduction targets have been identified in the IDP and will be updated and modified with each TMP submission as necessary.

3. *Bicycle and pedestrian access and safety*

a. A Transportation, Access, and Circulation Plan has been provided in the IDP. At the time of the first site plan review, the developer shall submit an updated Plan. Where possible, the bicycle and pedestrian access routes shall connect to established bicycle and/or pedestrian facilities. The developer shall look to establish new bicycle and pedestrian bicycle and/or pedestrian facilities where feasible.

b. The site and building design shall not prohibit the enhancement of transit service to and from the site.

c. Bicycle, pedestrian, transit, and motorized vehicular facilities proposed to and from the site shall provide sufficient capacity and allow for safe connections for modes of transportation.

d. Sherwood Street shall be improved to accommodate bicycles and pedestrians within the existing right-of-way. Separate sidewalks and bicycle lanes shall be provided where feasible.

4. *Parking*. Parking requirements in the IOZ, including but not limited to parking ratios, shall be established at the time of site plan review for each phase of development based on a parking study that includes a campus-wide analysis of demand and supply. Parking studies shall integrate parking and trip reduction achievements and data contained in the TDM Plan. Parking requirements shall be determined in accordance with the requirements in the Land Use Code in effect at the time of site plan review.

5. *Circulation*

a. The campus shall contain a bike and pedestrian circulation network which includes a perimeter access loop, an internal system of pathways and a major campus "promenade" which will link campus developments, the upland, and the waterfront.

b. The perimeter access path for bicycle and pedestrians will serve to connect the campus to primary site entry points from the community and provide a continuous recreational loop. Where appropriate, the perimeter access path will be enhanced by wayfinding, lighting, landscaping, and safe crossings at vehicular intersections. Where possible, building facades will respond to the perimeter access path for views into the building and periodic activation to building entrances.

c. Internal campus circulation pathways will connect major open spaces, buildings entrances, and outdoor plazas to create a network of multiple pathways including the perimeter access path. Pathways will be located along or oriented toward facades that have active programs, architectural articulation, appropriately scaled entrances, and windows. Pathways will avoid traveling along stretches of undifferentiated or blank facades back doors or service areas. Pathways will be generally lower-velocity systems than the access loop. Where appropriate, the internal campus circulation pathways will be enhanced by wayfinding, lighting, landscaping, and safe crossings at vehicular intersections.

d. The campus promenade will serve as a major organizing feature connecting the upland and the water and providing access to open spaces, allowing views of the principal campus of buildings, and connecting to the internal campus circulation pathways

and perimeter access path. The promenade will be enhanced by lighting, wayfinding, landscape buffers, and open spaces. Viewsheds and topography along the promenade will emphasize the Roux Institute and Burnham & Morrill (B&M) Cannery Building, pier, and other principal buildings and spaces.

F. Environment

1. The IOZ shall contain a minimum of three acres of public open space designed to enhance waterfront access and provide bicycle/pedestrian network connectivity. This open space requirement shall be met at the completion of construction of the first site plan approval and shall be maintained at all phases of development. The three acres need not be contiguous and may be provided in new and/or different locations following completion of development phases. The public open space shall be meaningful space, functioning as recreation areas, social gathering spaces, or natural buffers consisting of a diverse mix of native woody and herbaceous vegetation, including a well-distributed mix of trees. The method of assuring public access to the public open space shall be determined at site plan review.

2. A Sustainability and Resilience Charter will be created by the Roux Institute for the campus. The charter shall contain sustainability goals related to development categories such as energy, water, transportation, equity, and resilience and may be revised over time in response to evolving technology and industry standards. The charter will require all development on the campus to utilize critical components of industry standard benchmarking systems such as LEED, SITES, WELL, ILFI, and Passive House. The charter will be submitted to the Planning Authority prior to submission of the first site plan application. Proposed site plans shall be consistent with the goals outlined in the charter.

3. Development shall utilize lighting designs required for safety and comfort and that minimize impact to the night sky in accordance with light pollution reduction standards in ANSI/ASHRAE/IESNA 90.1-2007 or its most current edition.

4. Development shall be carried out in such a way as to minimize the impacts of sea level rise, protecting infrastructure and site features by designing to a minimum of 2-feet above the Base Flood Elevation (BFE) as shown on the most current FEMA Flood Insurance Rate Map.

5. The shoreline edge and immediate adjacent upland shall be protected through shoreline armoring and vegetation to prevent erosion and enhance natural resource protection. Vegetation shall consist of a diverse mix of native woody and herbaceous vegetation. Work in coastal wetlands and significant wildlife habitats (as defined by the Maine Department of Environmental Protection) will be minimized to the maximum extent practicable and shall comply with all applicable local, state and federal

permitting requirements in effect at the time.

6. Design of exterior building envelopes will be in developed in compliance with the bird-friendly building and design requirements set forth in Article VII-A of Chapter 6 of the City of Portland Code of Ordinances, except that bird safe materials must be used for the entire façade of all buildings regardless of building height.

G. Mitigation measures

1. Site plan impacts to off-premise infrastructure shall be mitigated in a manner proportionate to those impacts. Mitigation may include financial or in-kind contributions to existing or planned City projects focused on mitigating the impacts of the development. Mitigation contribution shall be determined based on the City's standard procedure in effect at the time of site plan review.

2. Impacts to natural resources shall be mitigated in accordance with local, state and federal permitting standards in effect at the time.

H. Design. All buildings within the IOZ shall adhere to the design guidelines set forth in the IDP.

I. Neighborhood integration

1. *Neighborhood engagement*

a. For the purposes of keeping surrounding residential areas apprised of its future development plans, and to address any neighborhood issues related to the operations of the Roux Institute campus, the Roux Institute shall adhere to the ongoing neighborhood engagement principles identified in the IDP.

b. Ongoing community engagement shall be conducted, including the continuation of neighborhood forums and maintenance of the Roux Institute campus website.

c. A Community Advisory Group shall be created for the purpose of sharing information on project development, planning, and seeking input. To the extent practicable, the group shall be comprised of representatives of interested groups such as the East Deering Neighborhood, East Deering Neighborhood Association, East Deering Neighborhood for Responsible Development, Front Street Area Neighborhood, a tenant representative from Portland Housing Authority's Washington Gardens and Front Street developments, recreation, parks and trails, including the Friends of Payson Park, from sustainability, rail, bicycle/pedestrian, public transit, Portland Harbor, Portland Public Schools, including a Presumpscot School parent, higher education, and the business community.

d. A designated community contact shall be engaged to be the point of contact for providing information to the neighborhood and receiving feedback.

2. *Construction management.* At the time of site plan review, Northeastern University shall submit a Construction Management Plan substantially in accordance with the construction management principles

identified in the Institutional Development Plan for review and approval by the Planning Authority.

J. Historic preservation

1. *Historic preservation review.* The B&M Cannery Building has been designated as a local historic landmark. The area of designation includes the B&M Cannery Building, as well as the area of the former Codfish Building and pier. The Historic Preservation Board's review of activity within the site of the former Codfish Building and pier is limited to review of any activity that would require a Certificate of Appropriateness that is proposed on a newly constructed pier. A Certificate of Appropriateness will not be required for the demolition of the Codfish Building or construction of a new pier and related infrastructure, including future alterations to the pier structure.

2. *Required interpretive elements.* Northeastern University shall include interpretive element(s) on top of or within the surface of the new pier that convey the history and significance of the Codfish Building. Prior to construction of said elements, the University shall submit the proposal to the Historic Preservation Board for its review and approval. The interpretive elements shall be designed in a manner that does not interfere with the use and functionality of the pier as a marine passenger facility and for water access by the Roux Institute and the public.

3. *100-foot review exemption.* The B&M Cannery Building is exempt from Subsection 13.6.4(E)(2) for review of development within 100 feet of a landmark.

FIGURE 8-H: UNE IOZ BOUNDARY

8.3.8 The University of New England Overlay Zone Regulatory Framework

A. Applicability. The regulatory framework shall apply only to development proposed by the University of New England (UNE) within the boundary of the Institutional Overlay Zone (IOZ) and to which UNE holds right, title, or interest. Properties in the UNE IOZ shall continue to be governed by the regulations applicable to the underlying zone except as specifically modified by the regulatory framework. The UNE IOZ shall have the boundaries depicted in Figure 8-H.

B. Phasing and monitoring

1. UNE shall file monitoring reports every five years with the Planning Authority. Monitoring reports shall ensure that data in the IDP is current and provide a summary of progress on IDP implementation, including details of

acquisitions and divestments since the date of IDP approval.

2. Interim conditions shall be designed for a pleasant pedestrian experience through planting, lighting, wayfinding, graphics, artwork, or ornamental fencing to provide screening, buffers, and enhancement. Interim areas of the site which are not actively used for parking or construction staging will be appropriately left in a natural state, landscaped or accommodate gathering on lawns or other aesthetically hardened spaces.

C. Uses. In addition to the uses permitted in the underlying zone, laboratory and research facilities and off-street parking shall also be permitted as a matter of right within the IOZ.

D. Dimensional requirements

1. For the purposes of this IOZ, "lot" is defined as the contiguous lots under UNE ownership, including land separated by a public or private right-of-way. The "lot" boundary is shown in Figure 8-H.
2. Side and rear setbacks shall not be required between buildings on contiguous lots owned by UNE on the condition that such contiguous lots shall be considered merged and shall not be separately conveyed unless required setbacks in the underlying zones are provided.
3. Maximum building heights for new principal buildings in the IOZ shall be governed by the maximum building heights map in Figure 8-I.

E. Transportation

1. *Transportation demand management (TDM).* At the time of the first site plan review following IDP approval, UNE shall submit a campus-wide TDM Plan substantially in accordance with those TDM objectives and strategies identified in the approved IDP. The TDM Plan may be

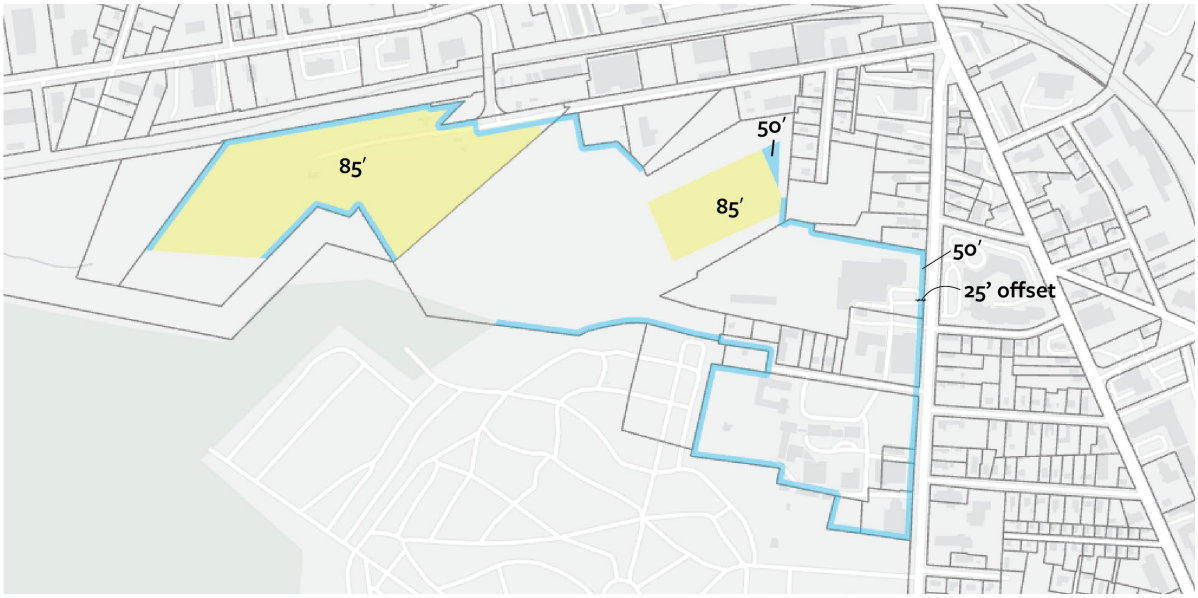


FIGURE 8-I: MAXIMUM BUILDING HEIGHTS

phased into short-, mid-, and long-term actions to allow for progressive implementation over time.

2. *Parking.* Parking requirements in the IOZ shall be established at the time of site plan review based on a parking study that includes a campus-wise analysis of demand and supply. Parking studies shall integrate parking and trip reduction achievement and data contained in the TDM Plan.

F. Environment. All new buildings and parking facilities proposed by UNE shall integrate with the surrounding context to allow connectivity amongst open space, pedestrian networks, and the Evergreen Cemetery, and to protect the critical natural resources associated with the Capisic Brook watershed. The Planning Board may approve a reduction of the setback requirement for a new building to the least amount necessary to achieve the goals of the development and minimize overall impacts, provided that the setback is not reduced to less than 40 feet.

G. Mitigation measures

1. Site plan impacts to off-premise infrastructure shall be mitigated in a manner proportionate to those impacts. Mitigation may include financial or in-kind contributions to existing or planned City projects focused on mitigating the impacts of the development. Mitigation contribution shall be determined based on the City's standard procedure in effect at the time of site plan review.
2. Impacts to natural resources shall be mitigated in accordance with local, state, and federal permitting standards in effect at the time.

H. Design

1. All new development shall be designed to create a cohesive campus character.
2. New buildings shall be designed with building entrance(s) and principle facades oriented towards existing campus buildings, open space, streets, and pedestrian pathways.
3. New buildings will minimize visual impact of service areas, loading docks, and utility structures.
4. All new development shall provide a variety of open spaces that are integrated into the existing campus.
5. All new development shall provide adequate lighting for clear visibility at streets, pedestrian pathways, building entries, and parking areas. All lighting shall be compliant with UNE's lighting plan, which is included in the IDP.
6. All signage shall be compliant with UNE's signage design standards, which are included in the IDP.

I. Neighborhood integration

1. For the purposed of keeping surrounding residential areas appraised of its future development plans, and to address any neighborhood issues related to the operations of the UNE campus, UNE shall adhere to the ongoing neighborhood engagement principles identified in the IDP.
2. Ongoing community engagement shall be conducted, including the continuation of posting project update's on UNE's Campus Planning web page and the creation of a dedicated email address for neighbor

communications with UNE's Planning Department.

3. UNE shall conduct annual neighborhood outreach through neighborhood meeting(s), to be hosted on campus, and shall provide the Planning Authority with a copy of the neighborhood notice and a record of participants, content, and feedback as described in Section 13.5.5(C).
4. A designated community contact shall be engaged to be the point of contact for providing information to the neighborhood and receiving feedback.

8.4 ISLAND TRANSFER STATION OVERLAY

8.4.1 Purpose

The purpose of the Island Transfer Station Overlay Zone is to establish a location for a transfer station for municipal solid waste and municipal public works activities. This zone shall be established through a conditional rezoning process in order to ensure the imposition of appropriate conditions for the protection of neighboring properties.

8.4.2 Permitted uses

A. Municipal solid waste facilities, including compactors and storage bins, provided that the compactor shall be located within a fully enclosed structure.

B. Recycling facilities, provided that all recycling areas shall be buffered and screened from neighboring properties.

C. Municipal garages, material storage, and parking for vehicles.

D. Maintenance of municipal vehicles and equipment.

E. Minor wind energy systems co-located with public industrial or utility facilities, subject to the applicable standards within Article 6.

8.4.3 Conditions

Requirements for setbacks and any operational limitations shall be established as part of the conditional rezoning process.

8.5 PEDESTRIAN ACTIVITIES DISTRICT (PAD) OVERLAY

8.5.1 Purpose and applicability

The purpose of the Pedestrian Activities District (PAD) Overlay is to ensure that key areas within the City, as identified on the PAD Overlay Zone map (Figure 8-~~H~~J), are maintained as active, walkable, pedestrian-oriented activity centers. As such, the overlay requires that street-level frontages within those areas identified on the PAD Overlay Zone map should be occupied with active uses as identified in this section.

8.5.2 Use restrictions

A. Within the PAD Overlay Zone, a minimum of 75% of the street level frontage, measured as a percentage of total building length excluding areas of vehicular and pedestrian egress, and any mechanical or electrical equipment rooms servicing the building, shall consist of the uses specified below. Such uses shall occupy a minimum of 40 feet in depth, measured from the street facing façade of the building.

1. Bars
2. Cultural facilities
3. General services
4. Governmental uses
5. Hotels
6. Low-impact industrial, provided that only retail sales of products produced on site, or eating and drinking areas shall be

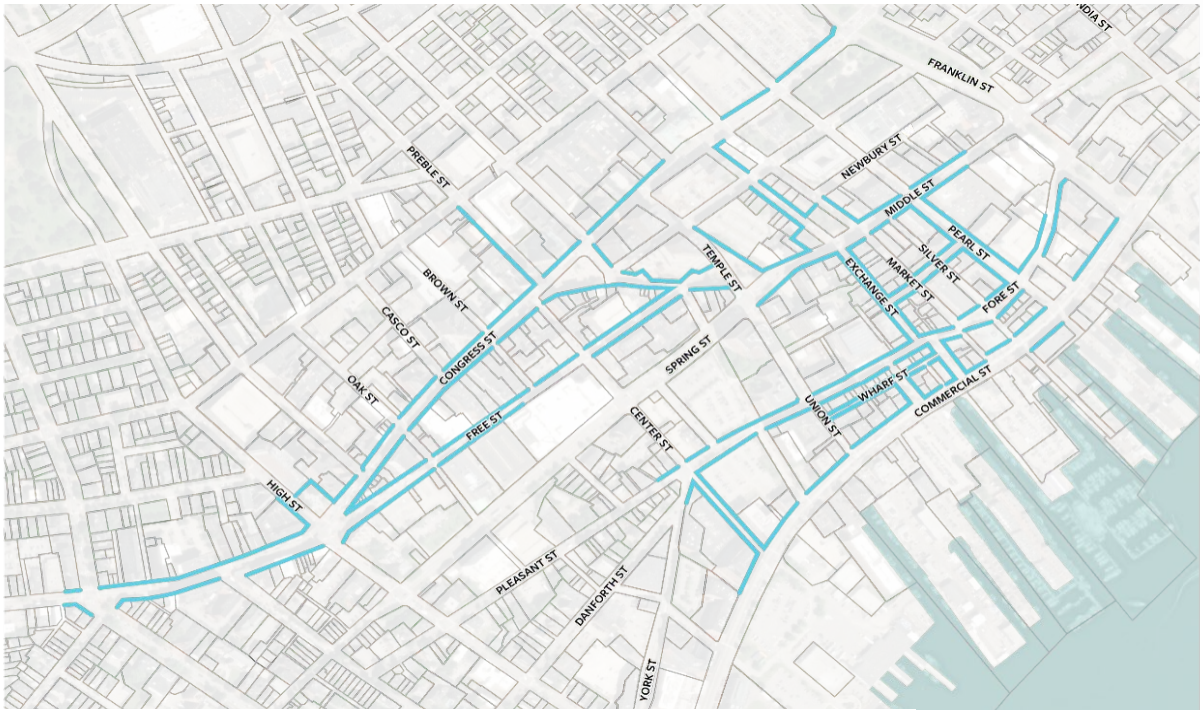

FIGURE 8-~~J~~H: PEDESTRIAN ACTIVITIES DISTRICT (PAD) OVERLAY

located within the required active use area.

7. Restaurants, including food preparation areas visually oriented toward the street.
8. Retail
9. Specialty food services, provided that only retail sales of products produced on site, or eating and drinking areas shall be located within the required active use area.
10. Studios for artists and craftspeople.
11. Theaters and performance halls, provided that only ticket and refreshment sales, lobbies, lounges and entrances shall be located within the required active use area.
12. Other uses may be allowed, provided the applicant can demonstrate to the Building Authority that the proposed use is substantially similar to a use listed above and will generate pedestrian interest and activity.

B. First floor windows shall be transparent with uses visible from the public right-of-way.

C. For buildings that have frontage on more than one street located within the PAD overlay zone, the above requirements apply to each frontage. In no event shall any required active use area be used for storage or service entrances, including loading docks, dumpsters and compactors, except as provided in Subsection 8.5.4.

8.5.3 Conditional uses

Any use permitted in the B-3 zone may be authorized as a conditional use subject to the floor area and transparency requirements of Subsection 8.5.2, provided that the Planning Authority shall be substituted for the Board of Appeals as the reviewing authority. Such uses shall meet the general conditional use standards of Section 6.5.2, and the following conditions and standards:

A. The applicant shall prove by competent evidence (including but not limited to reliable documentation of advertising, real estate brokerage efforts, and other sales mechanisms) that the space has been actively marketed, and, in the case of new construction, available for permitted uses in the PAD Overlay Zone for a period of six months and that it has been unable to market the space for a permitted use in accordance with Subsection 8.5.2.

B. The Planning Authority may impose reasonable conditions concerning the design, appearance, use, and extent of use of the space along the street frontage to ensure maximum pedestrian compatibility and interest.

C. Notwithstanding the above, the Planning Authority may authorize a reduction in the percentage of required ground floor pedestrian-oriented uses where the physical limitations of an existing building so require. Any such reduction shall be the least necessary to provide relief and shall include mitigating design factors.

8.5.4 Exceptions

For buildings that have 40 feet or less of frontage on a street within the PAD Overlay Zone, the ground floor area requirements for permitted uses under Subsection 8.5.2 shall be reduced to 50% of the frontage where required to accommodate a service entrance. For buildings that have frontage on more than one street located within a PAD Overlay Zone, only one such frontage shall be permitted to reduce the required active use area to 50% of the frontage.

8.6 UNIVERSITY OF SOUTHERN MAINE OVERLAY

8.6.1 Purpose

The intention of the University of Southern Maine Overlay Zone is to establish an overlay zone in which an existing university campus can be continued and reasonably expanded within defined boundaries, in addition to those uses permitted in the underlying zone or zones. The purpose of this section is to recognize the unique qualities of a university campus while at the same time protecting the value and integrity of established neighborhoods.

8.6.2 Location and applicability

The University of Southern Maine Overlay Zone is intended to encompass and define the University of Southern Maine campus west of Forest Avenue. Properties in the University of Southern Maine Overlay Zone shall continue to be governed by the regulations applicable to the underlying zone except as specifically modified by this section.

8.6.3 Permitted uses

A. In addition to the permitted uses allowed in the underlying zones and notwithstanding anything to the contrary in the use regulations for the underlying zones, post-secondary schools and university uses are permitted in the University of Southern Maine Overlay Zone, including, but not limited to:

1. Classrooms.
2. Laboratory and research facilities.
3. Student unions.
4. Dining halls.
5. Bookstores.
6. Auditoriums.
7. Concert and lecture halls.

8. Gymnasiums.
9. Libraries.
10. Outdoor use areas, such as "quads", greens, parks, gardens, art installations, and other active and passive noncommercial recreation spaces.
11. Faculty and student housing.
12. Parking lots and garages.
13. Community meeting spaces.
14. Administrative and faculty offices.
15. Transportation facilities.
16. Maintenance facilities.
17. Utility buildings.
18. Student health services.
19. Daycare facilities, nursery schools, and kindergartens.
20. Other buildings, structures and uses customarily incidental to a university.

B. On lots fronting on Chamberlain Avenue and Exeter Street, university uses shall be limited to faculty housing, graduate student housing, faculty offices, and administrative offices.

8.6.4 Conditional uses

The following uses are permitted as provided in Section 6.5:

A. Minor wind energy systems, subject to the standards of subsection 6.4.41.

8.6.5 Dimensional requirements

University buildings and structures shall be subject to the dimensional requirements of the underlying zone, except as follows:

A. **Minimum setbacks.** Minimum setbacks shall be the same as in the underlying zone, except as shown on the University Campus Overlay Setback Map, incorporated herein by reference. Side and rear setbacks shall not be required between buildings on contiguous lots owned by the university on the condition that such contiguous lots shall be considered merged and shall not be separately conveyed unless required setbacks in the underlying zones are provided.

B. **Maximum building height.** Maximum building height shall be the same as in the underlying zone, except as shown on the University Campus Overlay Height Map, incorporated herein by reference.

C. **Minimum building height.** All new freestanding buildings in height zone B and height zone C must be built to a height of at least 35 feet or designed and constructed so that they can be expanded to 35 feet or higher. As used in this paragraph, the term "new freestanding building" means any building which is not an addition to or expansion of a building which existed on the date of enactment of the University of Southern Maine Overlay Zone. Minimum building height provisions shall not apply to maintenance facilities, utility buildings, information kiosks, additions to and/or relocations of designated historic structures, and transportation facilities, including bus shelters, parking attendant booths, and other similar structures.

D. **Maximum impervious surface ratio.** A maximum of 66% of the total land area within the University of Southern Maine Overlay Zone, exclusive of public streets, shall be impervious.

E. **Maximum coverage by buildings.** 40% of the total land area within the University of Southern Maine Overlay Zone, exclusive of public streets, shall be covered by building footprint.

8.6.6 Parking

The amount of parking required for any university building or building addition shall be determined by the Planning Board during site plan review, based on an analysis of campus-wide parking demand and supply, pursuant to a comprehensive university parking management plan, and treating all contiguous land (including land on opposite sides of the street) owned by the university as one lot. In determining the amount of parking required for any university building, the Planning Board may take into account factors such as:

A. The availability of off-campus parking and shuttle transportation to and from such off-campus facilities.

B. The ratio of commuter students to resident students.

C. The use of centrally located on-campus parking facilities so situated that students, faculty, staff and visitors arriving on campus can reasonably be expected to park in the central facilities and walk to their various on-campus destinations during the course of a school day.

D. Shared use of a single parking facility by two or more buildings when the peak parking demand period for such buildings do not overlap.

E. Development and implementation of a parking management plan which discourages on-street parking. On-street parking shall not be used to satisfy the university's parking demand.

F. Development and implementation of programs designed to reduce the number of automobiles parking on campus, such as ride share programs and incentives for use of bicycles and public transportation.

8.6.7 Loading

The amount of loading area required for any university building shall be determined by the Planning Board during site plan review, based on a campus-wide analysis, treating all contiguous lots owned by the university as one lot. In determining the amount of loading space required for any university building, the Planning Board may take into account factors such as:

A. The use of centrally located on-campus loading facilities so situated that vehicles making deliveries can load and unload in the central facilities, provided no single location is overburdened with loading facilities.

B. Shared use of a single loading facility by two or more buildings.

C. Impacts of the loading area on adjacent uses outside the University of Southern Maine Overlay Zone.

8.6.8 Signage

Signs shall comply with the requirements of Article 19, except as those regulations are modified or augmented below:

A. Signs shall be designed in accordance with signage standards promulgated by the university, providing for a unified and ADA-compliant campus-wide system for identification, orientation, and regulatory signage.

B. Banners are allowed as follows:

1. Generic banners containing the logo and colors of the university, used for decorative purposes.

2. Banners used for advertising university events, which can be displayed for a maximum of four weeks prior to and one week following the event.

8.6.9 Design principles and standards

All development in the University of Southern Maine Overlay Zone is subject to the requirements contained within the City of Portland *Design Manual*.

8.7 WAYNFLETE SCHOOL OVERLAY

8.7.1 Purpose

The intent of this section is to establish a Waynflete School Overlay Zone which protects the value and integrity of established residential neighborhoods, establishes clearly defined boundaries beyond which residential conversions cannot occur and results in no net loss of dwelling units, while allowing Waynflete School, an existing private day school, to continue and reasonably augment its existing uses and programs, thereby maintaining compatible development at medium densities appropriate to the existing neighborhood patterns. As used in this section, the term "Waynflete School" includes any successor institution that operates as a private day school.

8.7.2 Location and applicability

The Waynflete School Overlay Zone, as shown on the zoning map, is intended to encompass and define Waynflete School's principal campus on the Portland peninsula. Properties in the Waynflete School Overlay Zone shall continue to be governed by the regulations applicable to the underlying zone except as specifically modified by this section.

8.7.3 Subdistricts

The Waynflete School Overlay Zone consists of two subdistricts. Except where otherwise specified in this Section 8.7, all provisions of this Waynflete School Overlay Zone apply in both subdistricts. The subdistricts, as shown on the Waynflete School Overlay Zone subdistrict map, incorporated herein by reference, are as follows:

A. The Campus Core subdistrict defines the interior core of the campus and is intended to allow compact development of school uses, with specific space and bulk regulations designed to accommodate school uses.

B. The Campus Edge subdistrict is intended to preserve residential character along the streets bordering the campus by limiting the amount of residential space which can be converted to school uses, by maintaining a number of dwelling units within the subdistrict which equals the number of dwelling units existing in the subdistrict at the time of enactment of this Overlay Zone, and by encouraging mixed-use buildings along the street frontages. The space and bulk regulations of the RN-3 zone continue to apply within the Campus Edge subdistrict.

8.7.4 Permitted uses

In addition to the permitted uses allowed in the underlying zones and notwithstanding anything to the contrary in the use regulations for the underlying zones, the following uses are permitted in the Waynflete School Overlay Zone:

A. **School uses.** Elementary, middle and secondary school uses including, but not limited to, the following:

1. Classrooms.
2. Laboratory facilities.
3. Dining halls.
4. Auditoriums.
5. Concert and lecture halls.
6. Gymnasiums.
7. Libraries.
8. Outdoor use areas, such as "quads", greens, parks, gardens, art installations, and

other active and passive recreation spaces.

9. Parking lots and structures.
10. Community meeting spaces.
11. Administrative and faculty offices.
12. Transportation facilities.
13. Maintenance facilities.
14. Utility buildings.
15. Student health services.
16. Bookstores.
17. Accessory uses which are customarily incidental and subordinate to the location, function and operation of a private day school.

B. Residential uses. Faculty or staff housing, which shall be considered a residential use, and not a school use, for all purposes under this overlay zone.

8.7.5 Prohibited uses

A. Boarding schools.

B. Dormitories.

8.7.6 Residential conversions prohibited

A. Conversions of existing residential buildings within the Waynflete School Overlay zone shall be prohibited.

B. The existing houses at 11 Fletcher Street, 3 Storer Street, 305 Danforth Street, and 299 Danforth Street shall not be relocated from their locations existing as of January 20, 2010. This provision shall not apply to garages.

C. At no time shall the number of dwelling units within the Waynflete School Overlay Zone be reduced below four (the number existing at the time of enactment of this Overlay Zone).

8.7.7 Dimensional requirements

Buildings and structures in the Waynflete School Overlay Zone shall be subject to the applicable dimensional requirements of the underlying zones, except as follows:

A. Minimum setbacks shall be the same as in the underlying zone, except that side and rear setbacks shall not be required between buildings on contiguous lots owned or occupied by Waynflete School on the condition that such contiguous lots shall be considered merged and shall not be separately conveyed unless required yard dimensions in the underlying zones are provided.

B. Minimum street frontage shall be the same as in the underlying zone, except that all the land within the Waynflete School Overlay Zone owned or occupied by Waynflete School shall be considered a single lot for the purpose of complying with minimum street frontage.

C. Maximum coverage by buildings shall be the same as in the underlying zone, except that in the Campus Core subdistrict the maximum coverage by buildings shall be 40% and all the land within the Campus Core subdistrict owned or occupied by Waynflete School shall be considered a single lot for the purpose of calculating maximum coverage by buildings.

8.7.8 Parking

The amount of parking required for any change of use, new building, or building addition within the zone shall be determined during site plan review, based on an analysis of school-wide demand and supply, pursuant to a comprehensive school-wide Transportation Demand Management Plan (TDM), and treating all land owned by Waynflete School within the Waynflete School Overlay Zone as one

lot. Any existing parking management or TDM plan approved as part of a previous approval shall remain in effect until revised or updated pursuant to this section. In determining the amount of parking required for any building within the Waynflete School Overlay Zone, the Planning Authority or the Planning Board may take into account factors such as:

A. The use of centrally located on-campus parking facilities so situated that students, faculty, staff and visitors arriving on campus can reasonably be expected to park in the central facilities and walk to their various on-campus destinations during the course of a school day.

B. Shared use of a single parking facility by two or more buildings when the peak parking demand periods for such buildings do not overlap.

C. Development and implementation of a parking management plan which discourages on-street parking.

D. Development and implementation of a TDM plan subject to the review and approval of the Planning Authority or the Planning Board. The TDM plan shall employee elements such as public transit initiatives, parking cash-out, car sharing, car and van pooling incentives, provision of bicycle and pedestrian commuting accommodations, guaranteed ride home programs, employee surveys, newsletters, alternative transportation information sharing, and other such strategies that reduce single occupancy vehicle trips to and from Waynflete school. Waynflete School shall follow the standards and guidelines for developing a TDM plan found in the TDM section of the City of Portland *Technical Manual*.

8.7.9 Loading

The amount of loading area required for any building within the Waynflete School Overlay Zone shall be determined by the Planning Board during site plan review, based on a campus-wide analysis, treating all land owned by Waynflete School within the Waynflete School Overlay Zone as one lot. In determining the amount of loading space required for any building within the Waynflete School Overlay zone, the Planning Board may take into account factors such as:

A. The use of centrally located on-campus loading facilities so situated that vehicles making deliveries can load and unload in central facilities, provided no single location is overburdened with loading facilities.

B. Shared use of a single loading facility by two or more buildings.

C. Impacts of the loading area on adjacent uses outside the Waynflete School Overlay Zone.

8.7.10 Signage

Signs shall comply with the requirements of Article 19.

8.7.11 Restrictions

Notwithstanding the conditional use provisions for institutional uses within the RN-3 or RN-5 zones, Waynflete School cannot locate a school use listed in Subsection 8.7.4 on any lot in the RN-3 or RN-5 zones outside the boundaries of the Waynflete School Overlay Zone that was occupied by a residential use or structure on or after January 20, 2010. This restriction does not prevent Waynflete School from seeking a conditional use permit for a school use, where otherwise allowed by the zoning regulations, on lots outside the Waynflete School Overlay Zone that were not occupied by a

residential use or structure on or after January 20, 2010.

Att. A

August 14, 2024

Kevin Kraft, Director of Planning and Urban Development
City of Portland
389 Congress Street
Portland, ME 04101

Re: University of New England
Application for Text and Map Amendment

Dear Kevin:

Woodard & Curran is pleased to submit this application for a text and map amendment on behalf of the University of New England (UNE). This application includes: 1) a text amendment to adopt the Regulatory Framework for the proposed UNE Institutional Overlay Zone (IOZ); and 2) a map amendment to change the underlying zoning of the UNE properties to B-2 Community Business with an IOZ overlay.

The City of Portland's Land Use Code includes a provision for the city's five major medical and higher education campuses to create an IOZ designation to facilitate a consistent, predictable, and clear growth management process. Consistent with that purpose, UNE is seeking to create a UNE IOZ to accommodate the development and growth of their campus.

UNE began pursuing the IOZ process in 2021 and has had meetings with Planning and other City staff, as well as neighborhood groups and members of the public, to develop its Institutional Development Plan (IDP). The IDP identifies and addresses anticipated long-term institutional needs to support UNE's continued ability to adapt and grow alongside changes in education and technology. The IDP and corresponding Regulatory Framework have been thoughtfully developed to balance the needs of the institution with the needs of the surrounding neighborhood and wider community.

As part of the IOZ process, UNE will simultaneously seek to change the underlying zoning of the campus to B-2 Community Business. The current underlying zoning on campus includes R-3, R-5, I-H, I-M, and B-2. Changing the underlying zoning entirely to B-2 will more accurately reflect the current uses within the campus and complement the surrounding zoning.

Thank you for your consideration. We look forward to working with you.

Sincerely,

Woodard & Curran, Inc.

Caitlin Suhr, PE
Project Manager

CITY OF PORTLAND
Planning & Urban Development Department

MAP AND TEXT AMENDMENT SUBMISSION CHECKLIST * Please submit each document and drawing as a separate PDF file * Please submit all drawings in a 24 x 36 sheet size * Please confirm each item by electronically checking the boxes to the left for each document/drawing	
GENERAL APPLICATION DOCUMENTS	
☑	**Project Description** • Cover Letter with detailed project description
☑	**Consistency with Comprehensive Plan** (Please see page 21 of IDP document) • Analysis of the consistency of the zone change request with the goals, policies and land use plan of Portland's Comprehensive Plan.
☑	**Proposed Text Amendment** (Please see Regulatory Framework) • Provide proposed language for text amendment(s) and cite the relevant sections to be revised in the Land Use code.
☑	**Completed Checklist – Map and Text Amendment Application (this document)**
☑	**Right, Title and Interest** • Deeds, leases, or purchase and sales agreements
PLANS	
☑	**Vicinity Map**
☑	**Proposed Map Amendment** (please use the Portland zoning map as a reference)
☐	**Site Plan (if applicable)** On a separate sheet, please provide a site plan of the property showing existing and proposed improvements, including such features as buildings, parking, driveways, walkways, landscape and property boundaries.

WARRANTY DEED

(Maine Statutory Short Form)

KNOW ALL BY THESE PRESENTS, that I, ROSEMARY S. KIMBALL, of Yarmouth, County of Cumberland, and State of Maine, for consideration paid, GRANT to the UNIVERSITY OF NEW ENGLAND a non-profit corporation organized and existing under the laws of the State of Maine, the mailing address of which is 11 Hills Beach Road, Biddeford, Maine 04005-9599, with WARRANTY COVENANTS, certain real estate located in Portland, County of Cumberland and State of Maine, which is more particularly described in Exhibit A attached hereto and made a part hereof.

This conveyance is made SUBJECT, HOWEVER, to real estate taxes which are not yet due and payable, which, by acceptance hereof, Grantee assumes and agrees to pay.

MAINE REAL ESTATE TAX PAID

WITNESS my hand and seal this 28th day of February, 2006.

SIGNED, SEALED AND DELIVERED
IN THE PRESENCE OF:

Witness

Rosemary S. Kimball
Rosemary S. Kimball

STATE OF MAINE
County of Cumberland, SS.

February 28, 2006

Then personally appeared the above-named ROSEMARY S. KIMBALL and acknowledged the foregoing instrument to be her free act and deed.

Before me,

~~Notary Public~~/Maine Attorney-at-Law
Printed Name: Brianna Adams

Exhibit A

A certain lot of parcel of land, with the buildings and improvements thereon, situated on the northerly side of College Street, in the City of Portland, County of Cumberland, State of Maine and bounded and described as follows:

Beginning at a certain point on said College Street where the northerly line of said street is intersected by the extension southerly of a line passing through the middle division wall of a certain double house (the easterly part of which stands upon the premises hereby conveyed); thence northerly by said middle division wall and said wall extended to land now or formerly of the Portland Street Railroad Company; thence easterly by said land of said Railroad Company to land formerly of C. A. Hayden; thence southerly by said Hayden land to said College Street; thence westerly by said College Street to the point of beginning.

Being the same premises acquired by the Grantor and Paul J. Kimball (as joint tenants and not as tenants in common) by Warranty Deed dated January 29, 1987 and recorded in the Cumberland County Registry of Deeds in Book 7620 and Page 201. Paul J. Kimball died March 16, 1993, and his probate is located in the Cumberland County Probate Court, Docket # 93-399.

QUITCLAIM DEED

THE STATE OF MAINE DEPARTMENT OF DEFENSE, VETERANS AND EMERGENCY MANAGEMENT successor in interest to the STATE OF MAINE, acting by and through the Acting Adjutant General pursuant to 37-B M.R.S.A. § 264, (the "Grantor"), FOR CONSIDERATION PAID, grants to the **UNIVERSITY OF NEW ENGLAND**, a Maine non-profit corporation, whose mailing address is 716 Stevens Avenue Portland, ME 04103 (the "Grantee"), certain real property, together with any improvements thereon, located at 760-780 Stevens Avenue, in the City of Portland, County of Cumberland and State of Maine, more particularly describes as follows:

> A certain lot or parcel of land with the buildings thereon situated on the westerly side of Stevens Avenue in the City of Portland in said County of Cumberland and State of Maine, being the same premises conveyed by Elizur B. Forbes to Portland and Forest Avenue Rail Road Company by deed dated March 22, 1864, and recorded in Cumberland County Registry of Deeds in Book 326, Page 212, in which deed said premises were bounded as follows:
>
> "A certain parcel of land fronting on the principal street at Stevens's Plains in Westbrook aforesaid, bounded as follows; beginning on said street at the southeast corner of land formerly of Jeremiah Beedle, now of Woodbury Polleys; thence running North sixty-four and a half degrees West five hundred seven and a half feet; thence North twenty-five and a half degrees East, thirty three feet; thence North sixty-three degrees West one hundred twenty-five feet; thence South seventy-five degrees forty-five minutes West seven hundred twenty feet; thence South sixty-four degrees east nine hundred ten and a half feet; thence North twenty and a quarter degrees east one hundred forty and a half feet; thence South sixty-six and a half degrees east, three hundred twenty four feet to the street or Stevens's Plains road before mentioned; thence North (by the line of the Street) nineteen degrees and three quarters east, two hundred ninety feet to the place of beginning - estimated to contain about nine and one quarter acres."

Meaning and intending to convey the same premises delineated on the Plan of Property in Portland, Maine made for the Adjutant General, Augusta, Maine prepared by H.I. & E.C. Jordan dated August 22, 1958.

For Grantor's source of title see: Warranty Deed from Portland Rail Road Company to the State of Maine dated October 14, 1940 and recorded at the York County Registry of Deeds in Book 1619, Page 299.

MAINE REAL ESTATE TAX PAID

By his signature hereon, the Acting Adjutant General certifies that the premises being conveyed in compliance with 37-B MRSA § 264, Section 6, Subsection 5 constitutes the Portland Armory, that he has designated an officer to inspect the premises, that he has determined the property to be unfit for military use, and has condemned the premises and furthermore that the premises are not being sold for less than appraised value as determined by a person licensed as a real estate appraiser under Title 32, chapter 123 and that the State of Maine Department of Defense, Veterans and Emergency Management is the successor in interest to the State Military Defense Commission of the State of Maine.

IN WITNESS WHEREOF, the State of Maine has caused this instrument to be executed in its name by Brigadier General Gerard F. Bolduc in his capacity as the Acting Adjutant General of the Maine National Guard, pursuant to 37-B M.R.S.A. § 264, this 11 day of June, 2015.

WARRANTY DEED
(Maine Statutory Short Form)

KNOW ALL MEN BY THESE PRESENTS, that **PIKE INDUSTRIES, INC.**, a Delaware corporation with a place of business and mailing address at 58 Main Street, Westbrook, Maine 04092 ("Grantor"), for consideration paid, hereby grants to **UNIVERSITY OF NEW ENGLAND**, a Maine non-profit corporation with a mailing address of 11 Hills Beach Road, Biddeford, Maine 04005 ("Grantee"), with **WARRANTY COVENANTS**, those certain lots or parcels of land, together with any buildings and improvements thereon, situated in Portland, Cumberland County, Maine, being more particularly described on **Exhibit A** attached hereto and incorporated herein by reference (the "Premises").

MAINE REAL ESTATE TAX PAID

The following restrictions shall run with the land, shall inure to the benefit of the Grantor, and its successors and assigns, and shall be binding upon the Grantee, and its successors and assigns:

1. The Grantee covenants and agrees that the Premises shall not be used for excavation of earth materials, crushing of rock and other materials, production of hot-mix asphalt or other similar products (e.g., cement, ready mix concrete, etc.), storage of earth materials and/or hot-mix, cement or ready-mix products or the sale (retail or wholesale) and distribution of such materials from the Premises or the use of such material or existing processed material unless such excavation and/or use of such materials is for the benefit of the Grantee on the Premises or on contiguous land in common ownership of the Grantee.

2. In the event of a violation of any or all of this restrictive covenant, the Grantor, in addition to all other remedies available to it, may obtain an injunction against the Grantee issued by a court of competent jurisdiction enjoining such breach and shall be entitled to recover its costs and expenses, including, but not limited to, reasonable attorney's fees in the enforcement or defense of the restrictions or any of them.

Being parcels 2 and 3 in the deed of Oldcastle Materials, Inc. to Pike Industries, Inc. dated March 20, 2002, and recorded in the Cumberland County Registry of Deeds in Book 17835, Page 301.

IN WITNESS WHEREOF, the Grantor has caused this instrument to be signed and sealed this 28th day of February, 2012.

EXHIBIT A

TRACT 1

A certain lot or parcel of land in the Morrill's Corner region of Portland, County of Cumberland and State of Maine, bounded and described as follows:

Commencing at a point or stake standing on the old southerly line of the Portland & Rochester Railroad, now the Portland Terminal Company, and at a point where the same intersects with land formerly of Franklin M. Purington,

THENCE South 65 3/4° West 108 Rods 15 Links, more or less, to land now owned by the City of Portland;

THENCE North 24 1/4° West 5 Rods 16 Links, more or less, to a stake;

THENCE South 65 3/4° West 34 Rods 9 Links, more or less, to a stake standing on land owned by said City;

THENCE North 11° West 11 Rods 7 Links, more or less, to a stake, standing on land formerly owned by Hiram Sawyer;

THENCE North 61 1/2° East 107 Rods, more or less, to line of said location of Portland & Rochester Railroad;

THENCE by the line of said Railroad on its southerly side as aforesaid 83 1/4° East 38 1/2 Rods, more or less, to the place of beginning.

EXCEPTING from the above described premises, the premises conveyed by Adam W. Wilson to City of Portland by deed dated March 25, 1889, and recorded in the Cumberland County Registry of Deeds in Book 556, Page 132; and the premises conveyed by Adam W. Wilson to Boston & Maine Railroad by deed dated April 4, 1907, and recorded in said Registry in Book 803, Page 232, and by deed dated August 5, 1910, and recorded in said Registry in Book 863, Page 137.

TRACT II

Another certain lot or parcel of land situated near Morrill's Corner in that part of Portland that was formerly Deering, in the County of Cumberland and State of Maine, lying adjacent to and lying northwesterly of the above described premises, being bounded and described as follows:

Beginning at the northwesterly corner of land formerly of one Smith, on the southerly side of land formerly of Portland & Rochester Railroad, now the Portland Terminal Company, and running South 62° West 106 Rods to land of Portland Cemetery;

THENCE northwesterly by said Cemetery lot 30 Rods to the Old Kenney lot;

THENCE North 52 1/2° East by said Kenney's lot 49 Rods 2 Links to the Portland Terminal Company railroad land, formerly of the Portland & Rochester Railroad;

THENCE southeasterly by said Portland Terminal Company location 70 Rods to the first mentioned bounds or place of beginning.

EXCEPTING, however, from the above described premises two certain pieces or parcels of land, that first being 200 feet in length by 28 feet in width and lying parallel with the above-mentioned railroad, said parcel being conveyed by F.O.J. Bodge to Boston & Maine Railroad by warranty deed November 20, 1907, and recorded in the Cumberland County Registry of Deeds in Book 817, Page 29; and the second being a strip along a portion of the southeasterly and southwesterly side thereof, being conveyed by Lewis Lumber Co. to Central Maine Power Company by deed dated November 23, 1951, and recorded in said Registry in Book 2067, Page 107.

Both tracts are conveyed subject to the rights acquired for a sewer by the City of Portland by taking dated May 26, 1944, and recorded in the office of the City Clerk of the City of Portland, Maine, in Vol. 66, Page 263.

Also excepting the land described in the deed from Tilcon Minerals, Inc. to the City of Portland dated November 22, 1996, recorded in the Cumberland County Registry of Deeds in Book 12886, Page 212.

The premises are conveyed subject to the following rights and easements:

1. Rights and easements granted by Warren Bros. Roads Co. to Central Maine Power Company by instrument dated June 19, 1952, and recorded in the Cumberland County Registry of Deeds in Book 2097, Page 221.

2. Rights and easements granted by Warren Brothers Roads Company to Central Maine Power Company and New England Telephone and Telegraph Company by instrument dated January 27, 1967, and recorded in the Cumberland County Registry of Deeds in Book 2996, Page 102.

3. Rights and easements granted by Warren Brothers Co. to Portland Water District by instrument dated December 15, 1977, and recorded in the Cumberland County Registry of Deeds in Book 4150, Page 72.

4. Rights and easements granted by Warren Bros., a Div. of Ashland-Warren Inc. to Central Maine Power Company and New England Telephone and Telegraph Company by instrument dated January 31, 1978, and recorded in the Cumberland County Registry of Deeds in Book 4239, Page 326.

5. Rights and easements granted by Tilcon Minerals, Inc. to the City of Portland by deed dated November 22, 1996, and recorded in the Cumberland County Registry of Deeds in Book 12886, Page 214.

6. Rights and easements granted by Lewis Lumber Company to Central Maine Power Company by instrument dated November 23, 1951, and recorded in the Cumberland County Registry of Deeds in Book 2067, Page 106.

7. Rights, easements, and exceptions set forth in deed from Rosa Lewis to Warren Brothers Roads Company dated May 26, 1962, recorded in said Registry of Deeds in Book 2676, Page 74.

Abstract of the Will of
Cordelia S. Pierce
State of Maine.

Cumberland ss. Probate Office.

Portland, Sept. 20. A. D. 1904.

I, Joseph B Reed, Register of the Probate Court, in and for said County, hereby certify that the last Will and Testament and Codicils of Cordelia S. Pierce late of Portland in said County, deceased, was proved, approved and allowed by the Judge of Probate for said County, at a Court held at Portland, on the tenth day of September A. D. 1904; and that the following is a true copy of so much of said Will and Codicils as devises Real Estate in the County aforesaid:

Fourteenth. I give and devise to Westbrook Seminary, its successors and assigns, the lot of land back of my homestead place in that part of said Portland which was formerly Deering, extending from the Easterly boundary line of land of said Seminary one hundred and twenty-five (125) feet to a line parallel with the aforesaid Easterly boundary of said Seminary's land, said last named line extending Southerly from other land of said Seminary to my Southerly boundary.

Fifteenth. I give and devise my homestead place where I now reside in said Portland extending back to the lot devised to the Westbrook Seminary in the section immediately preceding this, in trust to Cyrus O. Varney and Walter F. Goodrich, both of said Portland for a parsonage for "All Souls' Church" so called, on Stevens Plains Avenue in said Portland; reserving however to Ella Louise Fernald, before named, the privilege of occupying the upper tenement of the house, rent free, until she acquires a permanent home elsewhere; and to Mrs. Sarah D. Ballard above mentioned, the privilege of remaining in the lower tenement, rent free, during her life-time, provided she is living in said house at the time of my decease. The expenses of keeping said homestead in repair and providing for insurance and taxes are to be borne equally by Mrs. Sarah D. Ballard and Ella Louise Fernald, aforesaid; the said Trustees to determine what repairs are necessary and see that the same are made.

After the decease of Mrs. Sarah D. Ballard, the said Society of all Souls' Church shall assume all the expenses of said homestead.

Twentieth. I give and devise to Harry C. Stevens, son of Clifton Stevens, aforesaid, his heirs and assigns, a lot of land in said Portland adjoining the Unity club lot, East of the Rufus Dunham estate running East seven-

Cordelia S. Pierce (Deed)

ty-five(75) feet and thence South to the line of land of Alfred Stevens heirs;
Twenty-eighth: All the rest, residue and remainder of my estate, real, personal and mixed wherever found and however situated, I give, bequeath and devise in equal shares to Mrs. Sarah B. Ballard, Minnie Ballard York, Samuel R. Stevens, and Fannie R. Stevens hereinbefore mentioned their heirs and assigns forever.

Lastly: I hereby nominate and appoint Cyprus B. Varney of said Portland Executor of this my last will and testament, and request that he be not required to give any bond for the faithful execution of his said trust; and I also hereby revoke all former wills by me made.

Codicil. Third: For the reason that Mrs. Sarah B. Ballard has deceased and Ella Louise Fernald has attained the age of more than twenty-one years since the making of my said will, I hereby revoke the fifteenth section of my said will; and instead thereof, I hereby give and devise my homestead place described in said fifteenth section to said Ella Louise Fernald during the term of her natural life on condition that she pay to the society of "All Souls" Church named in said fifteenth section, the sum of six hundred dollars and to the executor of my said will the sum of four hundred dollars to be by him added to the residue of my estate, and distributed according to the residuary clause being the twenty eighth section of my said will as altered by this codicil; and I make the further condition that should the said Ella Louise marry her husband shall have no voice and take no part in the management and control of said homestead place. At the decease of the said Ella Louise Fernald, I give and devise my said homestead place for a parsonage to said society of "All Souls" Church, its successors and assigns forever.

Fifth: The twentieth section of my said will wherein a certain lot of land is devised to Harry L. Stevens, is hereby confirmed except that said lot is hereby given and devised as running East seventy (70) feet instead of seventy five(75) feet and provided in said will.

Twenty eighth: All the rest residue and remainder of my estate, real, personal and mixed, wherever found and however situated, I give bequeath and devise to Samuel R. Stevens, Frances R. Stevens and Minnie Ballard York hereinbefore mentioned, their heirs and assigns forever.

Twelfth: In all other respects, except as altered or revoked by this codicil, I hereby ratify and confirm my said last will and testament made and executed on the second day of August A.D. 1899 aforesaid, and all the provisions thereof.

Codicil 3. Whereas I Cordelia A. Pierce of Portland in the County of Cumberland and State of Maine on the third day of June 1904 made and executed a codicil to my last will and testament dated the second day of August, 1899, now I do make this further codicil to my said

will to be taken with, and construed, as a part thereof to wit: I hereby add to the third section of said first codicil the following words, viz. But the said Ella Louise Fernald is hereby authorized and empowered at any time during her natural life to sell and convey by her own warranty deed so much of the land adjacent to my said homestead lot as lies westerly from, and in the rear of land of Mrs. Susie Whitman and of the same width of said Whitman lot taking the proceeds of such sale for her own benefit and use.

Witness my hand and the Seal of the Probate Court for said County of Cumberland, the day and year first above written.

Abstract of the Will of
Charlotte G. Emery
State of Maine.

Cumberland, ss Probate Office

Portland, Sept. 20, A.D. 1904.

Denise

I, Joseph B. Reed, Register of the Probate Court in and for said County, hereby certify that the last Will and Testament of Charlotte G. Emery late of Portland in said County, deceased, was proved, approved and allowed by the Judge of Probate for said County, at a Court held at Portland, on the tenth day of September, A.D. 1904; and that the following is a true copy of so much of said Will as devises Real Estate in the County aforesaid:

Second. I hereby give, devise and bequeath to my nephew, Nicholas Emery Boyd, his heirs and assigns forever, in addition to any interest which I may possibly have in the bonds and personal estate, the one third interest in Nicholas Emery Homestead and the house and lot on Taylor Street, and the furniture in the said Emery Homestead house given to said Nicholas by will of his late mother, Theresa O. Boyd, and in which a life interest was given to me; the two lots of land lying between Danforth and Taylor Streets in said Portland and numbered three (3) and fifteen (15) on a Plan of Lots recorded in Cumberland Registry of Deeds, Plan Book 3, Page or Plan 27, which Plan is hereby referred to; Also one thousand dollars in money if there be so much money remaining of my own at the time of my decease.

Third. I hereby give, bequeath and devise to my niece, Julia Webster

Donnelly; thence westerly by College Street eighty (80) feet to land now or formerly of Frances E. Skillin; thence northerly by land of Frances E. Skillin one hundred and thirty-nine (139) feet to land formerly of Captain Sargent, now or formerly of Justina B. O'Brien; thence easterly by land of Justina B. O'Brien eighty (80) feet to the northwesterly corner of said land now or formerly of George E. Donnelly; thence southerly by said land of George E. Donnelly one hundred forty-eight (148) feet to the place of beginning, containing 11,480 square feet, more or less.

Being the same premises conveyed to Fred Lowd and Roger W. Flint by deed dated June 30, 1927, recorded in Cumberland County Registry of Deeds, Book 1269, Page 183. Fred Lowd died August 22, 1940 leaving as his only heirs-at-law and next-of-kin, Addie H. Lowd, widow, Dorothy J. Flint, daughter, and Russell H. Lowd, son. Said Roger W. Flint, Dorothy J. Flint and Russell H. Lowd conveyed their interest in said premises to said Addie H. Lowd by deed dated September 3, 1940, recorded in said Registry, Book 1623, Page 395.

This conveyance is made subject to a certain mortgage given by Addie H. Lowd to Marguerite G. Davis, dated July 1, 1941, recorded in said Registry of Deeds in Book 1641, Page 250, on which there is due the principal sum of thirty-five hundred dollars ($3,500.00) and which the Grantee, as part of the consideration for this conveyance, assumes and agrees to pay.

Subject also to the 1944 taxes.

To Have and to Hold the aforegranted and bargained premises, with all the privileges and appurtenances thereof, to the said Westbrook Seminary and Junior College, its successors and assigns, to its and their use and behoof forever. And I do covenant with the said Grantee, its successors and ~~heirs and~~ assigns, that I am lawfully seized in fee of the premises; that they are free of all incumbrances; except as aforesaid; that I have good right to sell and convey the same to the said Grantee to hold as aforesaid; and that I and my heirs, shall and will warrant and defend the same to the said Grantee, its successors and ~~heirs~~ assigns forever, against the lawful claims and demands of all persons. except as aforesaid.

U.S.I.R. $1.65 A.H.L. 7/8/44

In Witness Whereof, I, the said Addie H. Lowd, widow, have hereunto set my hand and seal this 8th day of July in the year of our Lord one thousand nine hundred and forty-four.

All Souls Church Parish to Messiah-All Souls Universalist Church War.

KNOW ALL MEN BY THESE PRESENTS, That All Souls Church Parish, a corporation incorporated under the laws of Maine and located at Portland in the County of Cumberland, in consideration of one dollar and other considerations, paid by Messiah-All Souls Universalist Church, a corporation incorporated under the laws of Maine and located at said Portland, the receipt whereof it does hereby acknowledge, do hereby give, grant, bargain, sell and convey, unto the said Messiah-All Souls Universalish Church, its successors and assigns forever, a certain lot or parcel of land with the buildings thereon, located at No. 706 Stevens Avenue in said Portland, and bounded northerly by land now or formerly of Westbrook Junior College, formerly called Westbrook Seminary, and by land of the grantee westerly by land now or formerly of Westbrook Seminary now Westbrook Junior College; southerly by land now or formerly of Rev. Harrison S. Whitman, and easterly by said Stevens Avenue, being the parsonage premises conveyed to the grantor by the following deeds:
Casco Realty Improvement Company to All Souls Church Parish, dated October 10, 1924, recorded Cumberland County Registry of Deeds, Book 1168, Page 366;
Theodore Kerr to All Souls Church Parish, deed dated October 17, 1924, recorded Book 1168, Page 367;
Ella Louise Perry to All Souls Church Parish, deed dated October 17, 1924, recorded Book 1168, Page 368;
City of Portland to All Souls Church Parish, deed dated October 10, 1928, recorded Book 1300, Page 58.
The premises hereby conveyed are subject to a lease given by All Souls Parish to Ella Louise Perry, dated October 17, 1924, recorded Book 1204, Page 65, and the property is conveyed subject to the following conditions,- viz: that the property herein conveyed shall be and continue to be occupied and used as a parsonage or for other religious purposes, by a society or religious organization of the Universalist denomination; to-wit,-a religious society in direct fellowship with and acknowledging the ecclesiastical authority of the Maine Universalist Convention and of the Universalist Church of America; and it is an express condition of this deed that in case the use or occupation of the aforesaid property should be diverted from the aforesaid purpose for a period of one year, then in such case the Maine Universalist Convention may enter in and upon the premises, take possession thereof and thereafter shall own, hold, use and dispose of the same for general Universalist purposes in accordance with the powers of that corporation.

TO HAVE AND TO HOLD the aforegranted and bargained premises with all the privileges and appurtenances thereof, to the said Messiah-All Souls Universalist Church, its successors and assigns, to its and their use and behoof forever, subject, however, to the conditions hereinbefore set forth.

AND it does covenant with the said Grantee, its successors and assigns, that it is lawfully seized in fee of the premises, that they are free of all incumbrances; except as aforesaid; that it has good right to sell and convey the same to the said Grantee to hold as aforesaid; and that it and its successors shall and will warrant

272 2-1

and defend the same to the said Grantee, its successors and assigns forever, against the lawful claims and demands of all persons.

IN WITNESS WHEREOF, the said Grantor herein has caused these premises to be signed and its seal hereto affixed by the Trustees of the All Souls Church Parish, thereunto duly authorized, this 22d day of August, in the year of our Lord one thousand nine hundred and forty-four.

Reynolds to Welch War.

KNOW ALL MEN BY THESE PRESENTS, That I, Bessie V. Reynolds, of Gray in the County of Cumberland and State of Maine, in consideration of One Dollar and other valuable consideration, paid by Lauretta P. Welch, of Westbrook in said County and State, the receipt whereof I do hereby acknowledge, do hereby give, grant, bargain, sell and convey, unto the said Lauretta P. Welch, her heirs and assigns forever, the following described property:

a certain lot or parcel of land situated in said Gray, lying on the Westerly shore of the most Northerly part of Little Sebago Lake, and bounded and described as follows:

Beginning at an iron post on the shore of said Lake at a point five (5) feet Northerly of the most Northeasterly corner of land of said Bessie V. Reynolds, formerly of Harry A. Weeman; thence Westerly one hundred (100) feet more or less to an iron post at the Northwesterly corner of said land of Bessie V. Reynolds; thence Northerly on the line of the road seventy-five (75) feet to an iron post; thence Easterly one hundred (100) feet more or less to an iron post on the shore of the Lake; thence Southerly on the shore of the Lake seventy (70) feet to the point of beginning.

Said premises being a portion of the first parcel of land conveyed by Ralph J. Trumbull to Adelbert R. Reynolds by deed dated June 25, 1937, recorded in Cumberland Registry of Deeds in Book 1526, Page 151. Together with the right to cross and recross land now or formerly of Matthew C. Morrill in the road formerly used to reach said lot as conveyed to said Adelbert R. Reynolds by said deed of Ralph J.Trumbull.

All Souls Church Parish to Messiah-All Souls Universalist Church War.

KNOW ALL MEN BY THESE PRESENTS, That All Souls Church Parish, a corporation incorporated under the laws of Maine and located at Portland in the County of Cumberland, in consideration of one dollar and other considerations, paid by Messiah-All Souls Universalist Church, a corporation incorporated under the laws of Maine and located at said Portland, the receipt whereof it does hereby acknowledge, do hereby give, grant, bargain, sell and convey, unto the said Messiah-All Souls Universalish Church, its successors and assigns forever, a certain lot or parcel of land with the buildings thereon, located at No. 706 Stevens Avenue in said Portland, and bounded northerly by land now or formerly of Westbrook Junior College, formerly called Westbrook Seminary, and by land of the grantee westerly by land now or formerly of Westbrook Seminary now Westbrook Junior College; southerly by land now or formerly of Rev. Harrison S. Whitman, and easterly by said Stevens Avenue, being the parsonage premises conveyed to the grantor by the following deeds:
Casco Realty Improvement Company to All Souls Church Parish, dated October 10, 1924, recorded Cumberland County Registry of Deeds, Book 1168, Page 366;
Theodore Kerr to All Souls Church Parish, deed dated October 17, 1924, recorded Book 1168, Page 367;
Ella Louise Perry to All Souls Church Parish, deed dated October 17, 1924, recorded Book 1168, Page 368;
City of Portland to All Souls Church Parish, deed dated October 10, 1928, recorded Book 1300, Page 58.
The premises hereby conveyed are subject to a lease given by All Souls Parish to Ella Louise Perry, dated October 17, 1924, recorded Book 1204, Page 65, and the property is conveyed subject to the following conditions,- viz: that the property herein conveyed shall be and continue to be occupied and used as a parsonage or for other religious purposes, by a society or religious organization of the Universalist denomination; to-wit,-a religious society in direct fellowship with and acknowledging the ecclesiastical authority of the Maine Universalist Convention and of the Universalist Church of America; and it is an express condition of this deed that in case the use or occupation of the aforesaid property should be diverted from the aforesaid purpose for a period of one year, then in such case the Maine Universalist Convention may enter in and upon the premises, take possession thereof and thereafter shall own, hold, use and dispose of the same for general Universalist purposes in accordance with the powers of that corporation.

TO HAVE AND TO HOLD the aforegranted and bargained premises with all the privileges and appurtenances thereof, to the said Messiah-All Souls Universalist Church, its successors and assigns, to its and their use and behoof forever, subject, however, to the conditions hereinbefore set forth.

AND it does covenant with the said Grantee, its successors and assigns, that it is lawfully seized in fee of the premises, that they are free of all incumbrances; except as aforesaid; that it has good right to sell and convey the same to the said Grantee to hold as aforesaid; and that it and its successors shall and will warrant

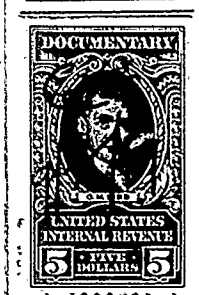
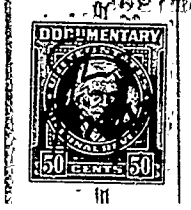
Know All Men by these Presents,



That I, GORDON L. SKILLIN of Waterville in the County of Kennebec and State of Maine

Skillin to Westbrook Seminary & Junior College -- War



in consideration of One Dollar ($1.00) and other valuable considerations

paid by WESTBROOK SEMINARY AND JUNIOR COLLEGE, a corporation organized and existing under the laws of Maine and located at Portland in the County of Cumberland and State of Maine

the receipt whereof I do hereby acknowledge, do hereby give, grant, bargain, sell and convey, unto the said Westbrook Seminary and Junior College, its successors

and Assigns forever,

the following described property:

A certain lot or parcel of land with the buildings thereon situated in said Portland, in that part formerly Deering, on the northerly side of College Street, and bounded and described as follows:

Beginning at a stone monument in the northerly side line of said College Street at the southwest corner of land of L. Laberton Moore; thence running westerly on said College Street one hundred one (101) feet, more or less, to the "Kenney" line; thence northerly on a line parallel with westerly line of said Moore's land one hundred thirty-one (131) feet, more or less, to the fence between the lot hereby conveyed and land, now or formerly, of the heirs of Capt. Sargent; thence easterly by said Sargent land and the fence one hundred (100) feet, more or less, to said Moore's land; thence southerly by said Moore's land one hundred thirty-nine (139) feet, more or less, to the point of beginning.

Also a certain other lot of land adjoining above described lot on the westerly side thereof, and bounded and described as follows:

Beginning on the northerly side line of said College Street, at the southwest corner of above described lot; thence running westerly on said College Street ten (10) feet, more or less, to a stone monument; thence northerly on a line parallel with the westerly side line of above described lot one hundred fifty-eight (158) feet, more or less, to the fence and land, now or formerly, of the Portland Railroad Company; thence easterly by the fence and said Portland Railroad Company's land seven (7) feet, more or less, to the corner of the fence and land, now or formerly, of the heirs of Capt. Sargent; thence southerly by the fence and said Sargent land twenty-eight (28) feet, more or less, to a post at the southwest corner of said Sargent land; thence easterly by said Sargent land and the fence three (3) feet, more or less, to the northwest corner of above described lot; thence southerly by above described lot one hundred thirty-one (131) feet, more or less, to the point of beginning.

Know All Men by These Presents. 69

That I, WILLIS W. JOHNSON, of Portland, in the County of Cumberland and State of Maine,

in consideration of One Dollar and other valuable considerations,

paid by WESTBROOK COLLEGE, a Maine corporation, located at said Portland.

the receipt whereof I **do hereby acknowledge, do hereby give, grant, bargain, sell and convey unto the said** WESTBROOK COLLEGE, its successors

heirs and assigns forever, a certain lot or parcel of land with the buildings thereon situated in said City of Portland on the Northerly side of College Street, and bounded as follows:- Commencing at a granite post standing on the Northerly side of College Street and located two hundred feet more or less Westerly of a lot of land conveyed by James P. Weston to C. A. Hayden by deed dated October 6, 1881, and recorded in Cumberland County Registry of Deeds, in Book 485, Page 77; and from said granite post running by a line N. 26 degrees E. one hundred and sixty-five feet to land formerly of the Portland Street Railroad Company; thence by line between this land and said Railroad Company land Southeasterly fifty-three feet to a point; thence S. 26 degrees W. one hundred sixty-three and 1/10 (163.1) feet to said side line of College Street and thence on said street line N. 64 degrees W. fifty-three feet to the granite post and point of commencing.

Meaning and intending to convey and hereby conveying all and the same premises conveyed by Will W. Johnson to Ruth S. Johnson by deed dated October 28, 1915 and recorded in the Cumberland County Registry of Deeds in Book 963, Page 174.

My title to the above described premises is derived under the Last Will and Testament of Ruth S. Johnson who died February 19, 1973 an abstract of whose will is recorded in said Registry of Deeds in Book 3382, Page 198.

To have and to hold the aforegranted and bargained premises with all the privileges and appurtenances thereof, to the said WESTBROOK COLLEGE, its successors

heirs and assigns, to its and their use and behoof forever.

And I do covenant with the said Grantee , its successors heirs and assigns, that I am lawfully seized in fee of the premises, that they are free of all incumbrances; except taxes assessed April 1, 1973 by the City of Portland, which said taxes are prorated as of the date of this conveyance;

that I have good right to sell and convey the same to the said Grantee to hold as aforesaid; and that I and my heirs shall and will Warrant and Defend the same to the said Grantee , its successors heirs and assigns forever, against the lawful claims and demands of all persons.

In Witness Whereof, I the said Willis W. Johnson

and Phyllis B. Johnson

wife of the said Willis W. Johnson

joining in this deed as Grantor , and relinquishing and conveying all right by descent and all other rights in the above described premises, have hereunto set our hand s and seal s this 24th day of August in the year of our Lord one thousand nine hundred and seventy-three.

Signed, Sealed and Delivered

KNOW ALL MEN BY THESE PRESENTS, That the CITY OF PORTLAND, a body politic and corporate located in the County of Cumberland and State of Maine, in consideration of One Dollar ($1.00) and other good and valuable considerations, paid by Westbrook College, a corporation organized and existing under the laws of the State of Maine and located at 716 Stevens Avenue in said Portland in said County and State, the receipt whereof it does hereby acknowledge, does hereby give, grant, bargain, sell and convey, unto the said Westbrook College, its successors and assigns forever, certain real estate located in said Portland, lying Westerly of College Street and Southerly of Bishop Street, bounded and described as follows:

Beginning at a point on the Northerly line of the land of Portland Railroad Company where the same intersects with land hereby conveyed and land formerly of George H. Smardon, commonly known as the Smardon Gravel Pit, formerly Read's Gravel Pit; thence from said point North 19° 30' East 28.68 rods; thence North 60° West Seven and thirty-two hundredths (7.32) rods to a point; thence South 74° 45' West Thirty-six and sixty-four hundredths (36.64) rods to a point; thence North 5° West Two and fifty-six hundredths (2.56) rods; thence North 30° West Twenty-four and four tenths (24.4) rods; thence South 65° West Forty-seven and twelve hundredths (47.12) rods to center of ditch; thence up the center of said ditch towards what is known as pasture Two Hundred Ninety-eight (298) feet; thence in a straight line to a point in line of Evergreen Cemetery indicated by a spruce stump, said stump being on the intersection between land of said Cemetery and land conveyed by Luther B. Roberts to the said City of Portland; thence from said stump North 80° 21' East Three Hundred Seventy-one and two tenths (372.2) feet to an angle; thence from said angle North 76° 8' East, Five Hundred Ninety-six and twenty-two hundredths (596.22) feet to an angle; thence from said last named angle at a right angle South 12° 52' East Seventy-five (75) feet to land of said Portland Railroad Company; thence about North 76° 8' East by said Portland Railroad Company's land to the point of beginning.

Also a certain other parcel of land, abutting the above described premises and bounded and described as follows: Beginning at the center of the ditch between the hereinabove described premises and the land hereby conveyed and in line of land now or formerly owned by Adam Wilson and running Southerly by land of said Wilson to the Westerly corner of land of Evergreen Cemetery; thence South Twenty-four (24°) degrees East by land of said Cemetery One hundred and seventy-five (175) feet to a point; thence by land formerly of Dennis F. Gulliver, and being the premises hereinabove described, in a straight line to a point in the center of said ditch; said point being Two Hundred Ninety-eight (298) feet from the point of beginning; thence down the center of said ditch to the point of beginning.

Excepting and reserving from the above described premises that portion thereof conveyed by the Grantor to Central Maine Power Company by deed dated February 26, 1967, recorded in said Registry of Deeds in Book 2989, Page 13.

This conveyance is made subject to the right-of-way or easement granted by the Grantor to Central Maine Power Company by deed dated December 13, 1951, recorded in said Registry of Deeds in Book 2055, Page 463.

Reserving to the Grantor, its successors and assigns, the right perpetually to enter at any and all times upon a strip of land fifty (50) feet in width lying equally on either side of the storm drain and upon a strip of land fifty (50) feet in width lying equally on either side of the brook presently located on the premises herein conveyed and the right perpetually to maintain, repair, rebuild, relocate, or remove said storm drain and brook with all necessary fixtures and appurtenances within said strips of land, granting to the Grantee, its successors and assigns, the use and enjoyment of said strips of land for such purposes only as will in no way interfere with the perpetual use thereof by the Grantor, its successors and assigns, for the purposes above mentioned, except that no buildings or structures may be erected within said strips of land. Also reserving to the Grantor, its successors and assigns, the right perpetually to enter at any and all times upon the premises herein conveyed for the purpose of access and egress by itself, its servants and/or agents to and from said strips of land.

Being the same premises conveyed to the Grantor by deed of James Gulliver, Administrator, d.b.n.c.t.a., of the Estate of Stephen Gulliver by deed dated August 23, 1935, recorded in said Registry of Deeds in Book 1476, Page 441.

Also a certain lot of land lying in the rear of College Street, in the City of Portland, bounded and described as follows, to wit:

Beginning at a point on the Northerly side line of College Street and at the Westerly corner of land belonging to Francis L. Stone; thence North 25° 22' east by land of said Stone eighty-seven and nineteen one hundredths (87.19) feet to land of the Portland Railroad Company; thence North 62° 26' west by land of said Portland Railroad Company four hundred and thirty-one and ninety three one hundredths (431.93) feet to a point; thence North 76° 08' east by land of said Portland Railroad Company five hundred (500) feet to a point; thence north 13° 52' west seventy-five (75) feet to a point; thence south 76° 08' west five hundred and ninety-six and twenty-two one hundredths (596.22) feet to a point; thence south 80° 21' west three hundred and seventy-one and two tenths (371.2) feet to the stump of a large spruce tree in the boundary of Evergreen Cemetery; thence easterly by land of Evergreen Cemetery and land of Pine Grove Cemetery about seven hundred and sixty (760) feet to a point on the end of College Street; thence north 24° 55' east by the end of College Street thirty and thirty-five one hundredths (30.35) feet to a stone

monument at the end of the northerly side line of College Street; thence south 65° 05' east one hundred and twelve and ninety-four one hundredths (112.94) feet by the northerly side line of College Street to the point of beginning. Said premises being a part of the several promises conveyed to Luther B. Roberts by deed of S. K. Hamilton, Admr., dated June 22, 1910, and by deed of Daniel H. Reed to Luther B. Roberts, dated July 26th, 1909, recorded in Cumberland, ss. Registry of Deeds, Book 843, Page 402, to which several deeds, and the references contained, reference is hereby made for further particulars of description.

Excepting and reserving from the above described premises that portion thereof conveyed by the Grantor to Alice M. Knight by deed dated January 17, 1947, recorded in said Registry of Deeds, in Book 1852, Page 109.

Being the same premises conveyed to the Grantor by Luther B. Roberts by deed dated June 24, 1910, recorded in said Registry of Deeds in Book 861, Page 282, and subject to the reservations contained therein.

By acceptance of this deed, Grantee covenants and agrees that it will:

1. Provide a landscape buffer zone at least twenty-five (25) feet in width along the northerly and easterly lines of the premises herein conveyed in a manner satisfactory to the Planning Board of the City of Portland.

2. Secure from said Planning Board prior site plan approval for development of all or any part of the premises herein conveyed as such development shall occur.

TO HAVE AND TO HOLD the same, together with all the privileges and appurtenances thereunto belonging, to the said Westbrook College, its successors and assigns forever.

AND the said Grantor Corporation does covenant with the said Westbrook College, its successors and assigns, that it will warrant and forever defend the premises to it the said Grantee, its successors and assigns forever, against the lawful claims and demands of all persons claiming by, through, or under it.

258

IN WITNESS WHEREOF, the said City of Portland has caused this instrument to be sealed with its corporate seal and signed in its corporate name by JOHN G. DE PALMA, its Director of Finance, thereunto duly authorized, this 8th day of November in the year one thousand nine hundred and seventy-three.

1. CONTEXT

Since its inception as Westbrook Seminary in 1831, the University of New England (UNE) Portland campus has been an integral part of the Portland community, providing innovative and diverse education opportunities for its students. The campus has undergone strategic growth and curriculum enhancements to effectively meet the evolving educational and workforce requirements of Portland, Maine, and beyond.

UNE is recognized as a leading educator of healthcare professionals and is one of a handful of private universities with a comprehensive health education mission including medicine, pharmacy, dental medicine, nursing, and an array of allied health professionals. UNE's interprofessional education initiatives prepare future healthcare professionals to practice comprehensive and collaborative team-based care.

Mission, Vision, and Core Values

UNE is guided by its Mission, Vision, and Core Values, as well as its strategic plan entitle, *Our World, Our Future*, which was developed in 2018 and continues to guide the University forward today.

Mission

UNE prepares students to thrive in a rapidly changing world and, in so doing, to improve the health of people, communities, and our planet.

Vision

UNE realizes this mission through their commitment to a distinctive approach to education that puts UNE among the most experientially driven institutions of higher education in the nation. UNE provides teaching and learning that conjoins problem-based and hands-on learning, liberal education, and professional training to immerse students in an educational experience that prepares them with:

- Habits of mind, such as cultural, quantitative, and information literacy, critical thinking, tolerance for ambiguity, and problem-solving skills;
- Discipline-based knowledge in their chosen programs of study; and
- Professional competencies, including emotional intelligence, the ability to collaborate in diverse teams, the skills to communicate persuasively, and the attributes to be thoughtful leaders.

UNE is an institution that challenges students to learn broadly, master their professional skills, ask probing questions, and engage in respectful discourse in the context of a robust marketplace of ideas. In this way, students prepare themselves for further study and successful careers, deeply rewarding lives, and meaningful contributions to their communities and the world.

Core Values

UNE is guided by the following values, essential to the culture of the UNE community.

Student Centeredness - We put the aspirations, needs, and success of our students at the center of all we do.

Diversity, Inclusion, Connection - We believe the benefits of a richly varied campus community arise not only from the diversity of its people but also from a sense of belonging and the context this creates to explore and celebrate differences in backgrounds, experiences, and perspectives, underpinned by a sense of cultural humility and a commitment to ethical ideals.

Relentless Inquiry - We take nothing for granted and view thoughtful — even uncomfortable — questioning and civil discourse as essential to the pursuit of knowledge, contribution to society, and a life worth living. Our commitment to university-wide academic freedom is fundamental to this value.

Boundary Crossing - Solutions to the complex and varied challenges we face in our personal and professional lives, our communities, and society will not be found in any single discipline, college, physical location, or individual. Thus, our ability to move easily across such boundaries in order to collaborate with colleagues makes us better problem solvers and more likely to succeed in whatever ventures we undertake.

Learning Everywhere - We believe that teaching and learning should occur beyond traditional classrooms and laboratories — in any place ripe for inquiry and experimentation, including clinics, environmental and field-study sites, online forums, libraries, museums, theaters, and places of civic engagement, among many others.

Progressive Change - We are not afraid to take thoughtful risks in the pursuit of our shared goals. Our mindset is to strategically forecast and plan for possibilities in an unknown future.

Stewardship of Our Planet - We are committed to promoting environmental, social, and economic well-being to improve the health of individuals, communities, and ecosystems.

UNE's strategic plan, *Our World, Our Vision*, further outlines six strategic priorities that the University will focus on over the next five years.

- Provide Exceptional, Innovative Teaching and Experiential, Collaborative Learning Experiences
- Optimize Enrollment, Progress to Graduation, and Lifelong Learning
- Produce Focused Research and Scholarship
- Ensure a Welcoming, Inclusive, and Vibrant Community
- Expand Engagement with Local, Regional, and Global Partners
- Foster a Strong and Sustainable Resource Base

Current Campus Programming

The UNE Portland campus is primarily a graduate campus, focused on educating health professionals, and is currently home to three of the University's premier Colleges: the Westbrook College of Health Professions, the College of Dental Medicine, and the College of Graduate and Professional Studies. The **Westbrook College of Health Professions (WCHP)** includes more than 1,000 students, faculty, and staff working in graduate programs in Social Work, Physician Assistant, Occupational Therapy, Physical Therapy, and Nurse Anesthesia, and undergraduate programs in Nursing and Dental Hygiene. The WCHP is also home to the Interprofessional Simulation and Innovation Center, which provides training opportunities for both students and healthcare professionals from the region through the use of high-tech patient simulators. In the fall of 2013, the UNE **College of Dental Medicine** unveiled a state-of-the-art Oral Health Center, built on Stevens Avenue, as it welcomed its inaugural class of dental students on campus. The **College of Graduate and Professional Studies** is the University's online college (e.g., UNE Online), whose faculty and staff are also located on campus. UNE Online serves adult learners seeking promising careers in healthcare, education, and management, offering a range of professional graduate degrees and certificates. UNE Online oversees the University's Continuing Education efforts. These are professional certificate programs designed to meet the needs of the regional and national workforce. The **School of Pharmacy** welcomed its inaugural class of 100 students in fall 2009 within a newly erected building on Stevens Avenue; distinguished for its emphasis on research and development, the UNE School of Pharmacy offers a Pharm.D. Degree.

Campus Programming

Currently, the following programs are offered in person on the University's Portland campus:

- Dental Medicine
- Dental Hygiene
- Nursing
- Nurse Anesthesia
- Occupational Therapy
- Pharmacy
- Physical Therapy
- Physician Assistant
- Health, Wellness, and Occupational Studies
- Osteopathic Medicine (anticipated July 2025)

In addition to the academic offerings on campus, the University operates two clinics on campus which are open to the public: the Oral Health Center and the Dental Hygiene Center. The Oral Health Center serves as the clinical education hub for UNE's College of Dental Medicine, offering a wide range of oral health services to the community supervised by licensed faculty dentists. Services include cleanings, checkups, fillings, root canals, crowns, veneers, extractions, x-rays, partial dentures, dentures, bridges, and implants. In 2023, it provided low-cost care for 16,701 patient visits (over 139,000 visits in the last 10 years). The Dental Hygiene Clinic, serving as the clinical education center for the University's Dental Hygiene program, provides services such as oral inspections, nutritional counseling, scaling and plaque removal, sealant placement, oral hygiene instruction, blood pressure screenings, x-rays, fluoride treatments, and mouth guard fabrication. In 2023, it provided low-cost care for 2,540 patient visits (over 11,400 in the last 4 years).

UNE North

In addition to the University's academic programs and clinics, the campus includes UNE North, the Institute for North Atlantic Studies of the University of New England, located at 1075 Forest Avenue. UNE North is a signature interdisciplinary center that convenes faculty, professional staff, and students to partner with stakeholders from across the global North to address critical social, environmental, healthcare, and economic challenges in the North Atlantic and Arctic regions.

UNE North connects UNE's expertise with a robust network of academic, business, government, and non-governmental organizations to foster productive partnerships and solve common problems. UNE North supports students from across the University's colleges and disciplines to engage with this work, through their studies, and in their future careers.

Grounded in the United Nations Sustainable Development Goals, UNE North is a leader in promoting sustainable development in Maine, New England, and throughout the North Atlantic and Arctic region. UNE North is also focused on exploring innovative and scalable approaches to expand access to quality healthcare, particularly in underserved rural communities, through tools such as telehealth and digital medicine and by using pedagogical models such as collaborative interprofessional education. UNE North collaborates with the University's colleges to envision new academic programs, cultivate new research partnerships, and advance new study abroad opportunities for students.

Center for Global Humanities

The campus is also home to UNE's Center for Global Humanities (CGH), where prominent thinkers convene to interact with UNE students and the local community. The CGH hosts free, open to the public lectures and films dedicated to exploring the human condition in the 21st century.

Cultural Institutions

The campus also hosts two important Portland cultural institutions – the Maine Women Writers Collection, and the UNE Art Gallery.

Maine Women Writers Collection

The Maine Women Writers Collection was founded in 1959 by Grace Dow and Dorothy Healy to preserve and make available the writings of Maine women who had achieved literary recognition. Designated as a national Literary Landmark, the Maine Women Writers Collection hosts local women's studies programs and national conferences.

UNE Art Gallery

The UNE Art Gallery on campus was established in 1977 as the Joan Whitney Payson Gallery of Art. The gallery has a rich history of exhibitions, houses the University's permanent collection, and continues to bring imaginative and thought-provoking shows to UNE and to the public.

Campus History

The UNE Portland campus has a long history, dating back to 1830, with the founding of a co-educational boarding school called Westbrook Seminary. Established by the Kennebec Association of Universalists, the charter for Westbrook Seminary was signed by then Governor Daniel Smith on March 4, 1831. The campus's original eight acres were a gift to the Association from Zachariah Stevens, after whom Stevens Avenue is named. The first class was held on June 9, 1834, in the newly constructed Seminary Building, which is now called Alumni Hall.

Westbrook Seminary Building, circa 1834

By the 1890's, the Seminary offered four courses of study: a three-year English course and four-year programs titled scientific, ladies' classical, and preparatory. In the last part of the 19th century, the Seminary added chemistry and physics labs to Alumni Hall and promoted a serious interest in athletics that led to the construction of McArthur Gymnasium in 1900. Other notable buildings constructed during this time to support the expanding curriculum include Goddard Hall (1857), Ludcke Auditorium (1867), and Hersey Hall (1869).

Westbrook Junior College

Westbrook Seminary existed for 91 years until 1925 when the name was changed to Westbrook Junior College. As Westbrook Junior College, the school became a career-oriented women's two-year college, which prepared students to transfer as juniors to four-year colleges or universities. Under the guidance of president Dr. Milton D. Proctor, enrollment increased steadily through the 1930's, 40's, and 50's. During this period, new buildings were added on College Street and Stevens Avenue. In 1952 a new large multi-purpose building was erected and dedicated to Milton D. Proctor, Proctor Hall.

In 1958, Dr. Edward Y. Blewett became president of Westbrook Junior College. During his tenure, with generous assistance of the W.K. Kellogg Foundation, a Department of Dental Hygiene was established. Westbrook Junior College became the first residential junior college in the United States to offer a dental hygiene degree. In the 1960's, with the sustained growth and financial support from major grants and federal money, construction of six new buildings occurred: Coleman Hall (1961), Alexander Hall (1962), Linnell Hall (1962), McDougall Hall (1962), Ginn Hall (1962), and Blewett Hall (1967).

Westbrook College

On July 1st, 1970, Westbrook Seminary and Junior College entered a new stage of educational service with a new name, Westbrook College. Looking toward the future and prompted by federal legislation that prohibited the granting of federal funds to colleges that practiced gender discrimination, the College returned to co-educational.

The first Westbrook College male students enrolled in the 1973 fall semester. In 1975, the Art Gallery was constructed and opened. In the 1980's and early 1990's, the College continued to build upon the 1970's decisions and made a firm commitment to four-year programs that combined liberal arts with professional education. The new Abplanalp Library was constructed at the rear of the existing McArthur Gymnasium and opened in 1986, contributing to the College's academic strength, while the new Finley Recreation Center was completed in 1989, providing sports and leisure opportunities.

University of New England – Portland Campus

Through his tenure from 1987-1996, President William D. Andrews guided the College's transition from associate degree programs to baccalaureate degree programs. During this period, the College found itself caught in national trends of enrollment that especially hit small colleges hard. Seeking to bring Westbrook College into the 21st century, the Trustees voted to merge with the University of New England in Biddeford. On July 31st, 1996, the merger took place under the original 1831 Westbrook College charter.

Under the leadership of President Sandra Featherman, the Westbrook College campus of the University of New England has become a center of national excellence in health professions education. The current focus on interprofessional and experiential education, and recent and ongoing campus renovations, ensure a proud future for an institution that has enriched the lives of students, alumni, neighbors, and friends for the last 189 years.

Site & Neighborhood Context

The UNE campus occupies a 72-acre site in the Deering Center area of Portland and is bounded by Warren Avenue, Bishop Street Extension, and Bishop Street to the north; Stevens Avenue to the east; and the Evergreen Cemetery and Central Maine Power Utility Corridor to the south (see **Figure 1.1**). Within the campus there are several residential properties not owned by UNE along College Street. Also within the campus is the Westbrook College Historic District. UNE owns parcels located outside of campus proper at 812 Stevens Avenue, 798 Stevens Avenue, 32 Bell Street, and 1075 Forest Avenue (also known as UNE North).

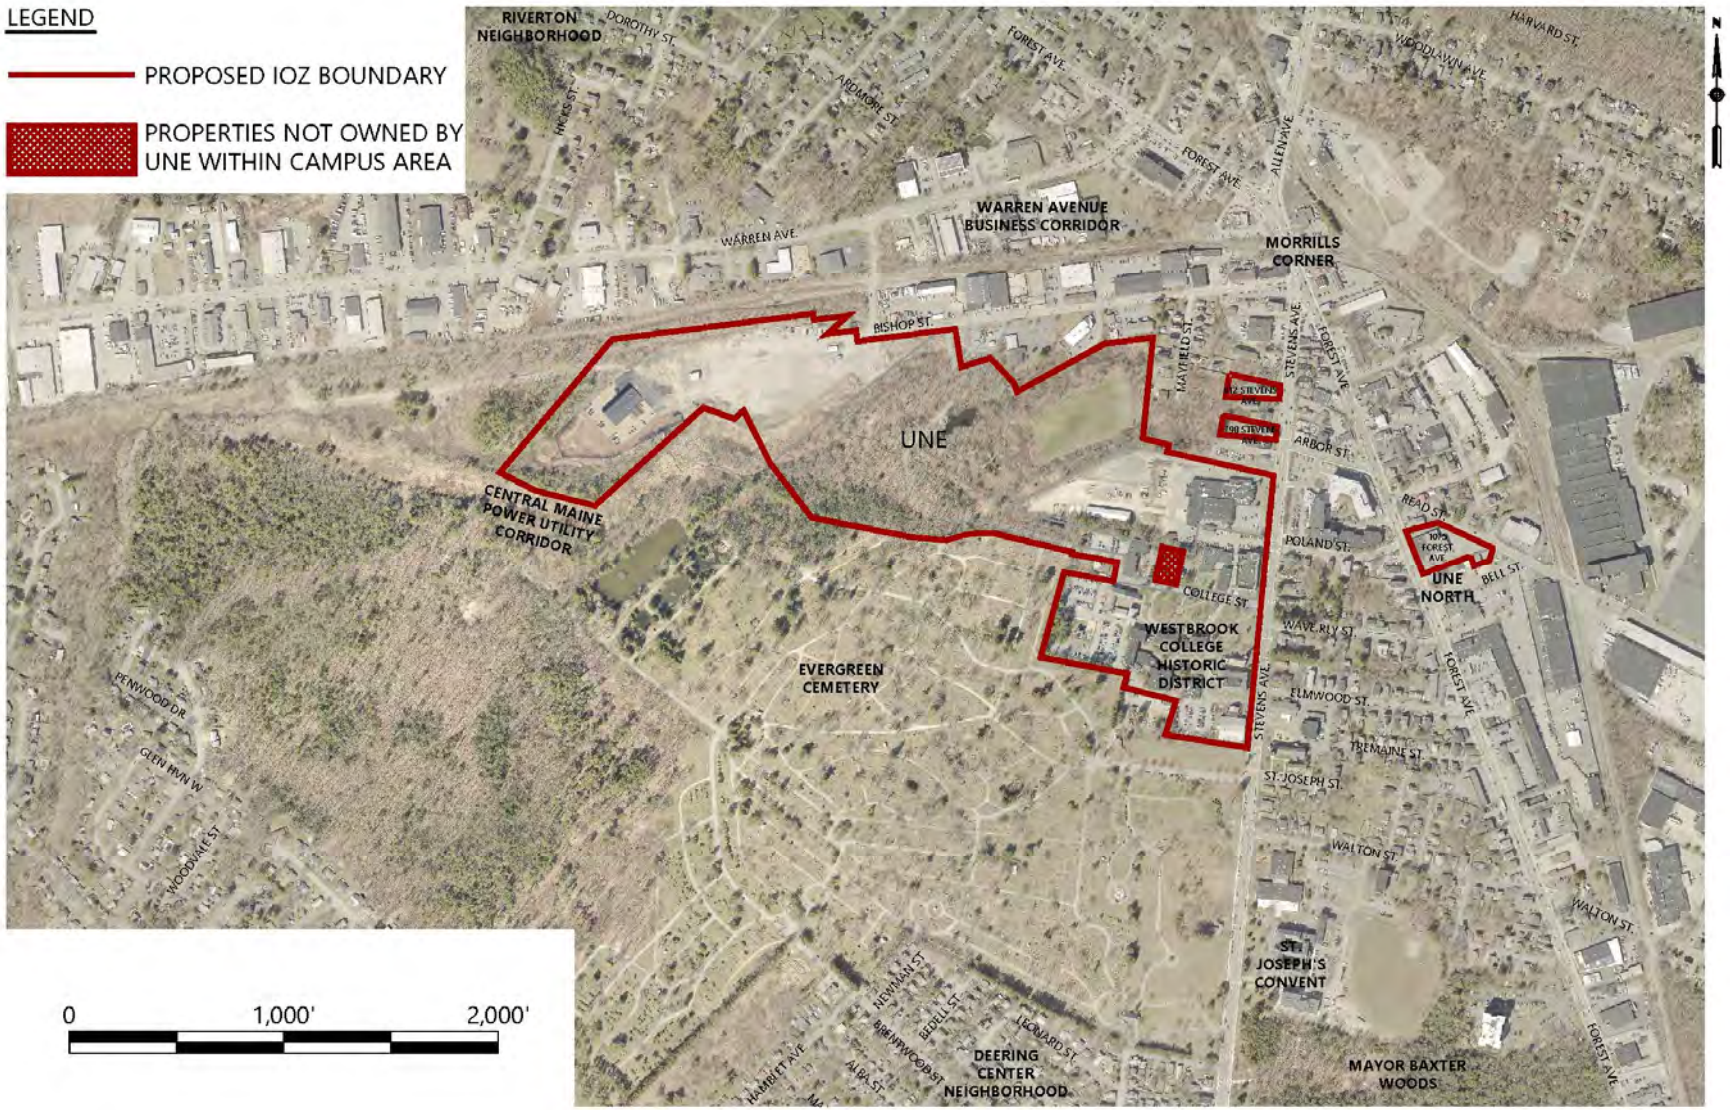

Figure 1.1 UNE Campus Site & Neighborhood Context Map

To the north of the campus, the area includes the Riverton Neighborhood, the Warren Avenue Business Corridor, and Morrill's Corner. To the south of the campus, the area includes St. Joseph's Convent, Mayor Baxter Woods, and the Deering Center Neighborhood. As stated above, the campus is adjacent to the Evergreen Cemetery, which is a 239-acre cemetery and National Historic Landmark established by the City in 1854. The Evergreen Cemetery is also utilized by the community for recreation and offers important community greenspace and recreational amenities including a network of forested trails for walking, cross-country skiing, and bird watching. Ponds located on the cemetery property also offer valuable habitat for wildlife.

Land Use

Land uses on campus and in the surrounding neighborhood include post-secondary facilities, institutional, business, residential, open space, transportation and utility uses (see **Figure 1.2**). Beyond the campus boundaries, the area includes the Stevens Avenue Congregational Church, Stevens Square Community Center, St. Joseph's Catholic Church, a catholic elementary school, St. Brigid, the Samuel Wilde Memorial Chapel, and the Portland Recovery Community Center. Business uses generally run along Warren Avenue, Bishop Street, Stevens Avenue and Forest Avenue and range from industrial to neighborhood food establishments and retail. Residential uses, the majority being detached single family homes, can be found in the area north of Warren and Woodlawn Avenues, between Stevens and Forest Avenue as well as south of Evergreen Cemetery. There are also a few multi-unit residential uses including The Park Danforth, a retirement community across from campus, and the Deering Pavilion, which provides senior living apartments. The open space uses in the area include Evergreen Cemetery, which has trails that connect to campus greenspace, and Mayor Baxter Woods.

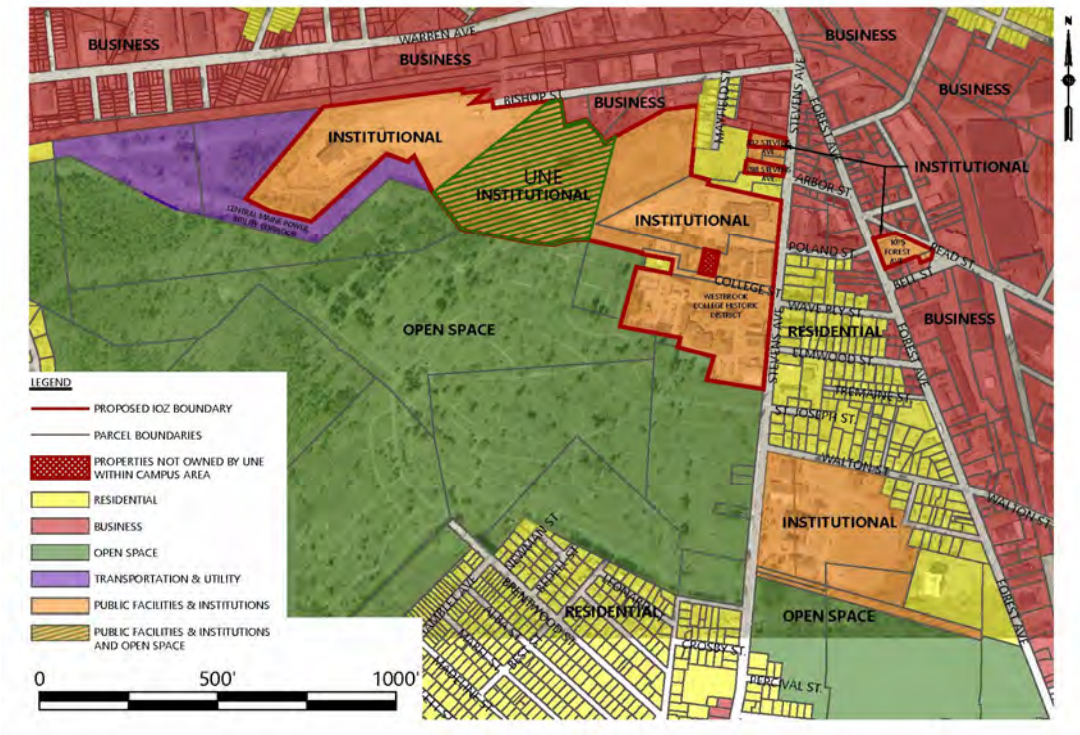

Figure 1.2 UNE Campus Site & Neighborhood Context: Existing Land Use

Zoning

The UNE campus is currently located within several zoning districts, including RN1 and RN3 Residential, IH Industrial – High Impact, IM Industrial – Moderate Impact, and B2 Business Community. Although the campus has remained in its original physical location since its establishment, the existing underlying zoning regulations do not effectively facilitate institutional development, as they primarily cater to residential and industrial uses. The campus core is located within the R5 Residential district, in which institutional uses are only conditionally allowed. Due to the inadequacy of the base regulatory framework of these zoning districts, development on the campus has historically been governed by these zones through conditional use. UNE has developed this Institutional Development Plan (IDP) and new Institutional Overlay Zone (IOZ) to better support the institutional needs of the campus. See **Figure 1.3** for a map of UNE's IOZ in its zoning context. As part of the IOZ process, UNE will simultaneously seek to change the underlying zones within the campus to B2 Business Community and OS-P Open Space Preservation. See **Figure 1.4** for the proposed zoning map. This change will allow for simplification of the IOZ Regulatory Framework, will more accurately reflect the current uses within the campus, and will complement the surrounding zoning.

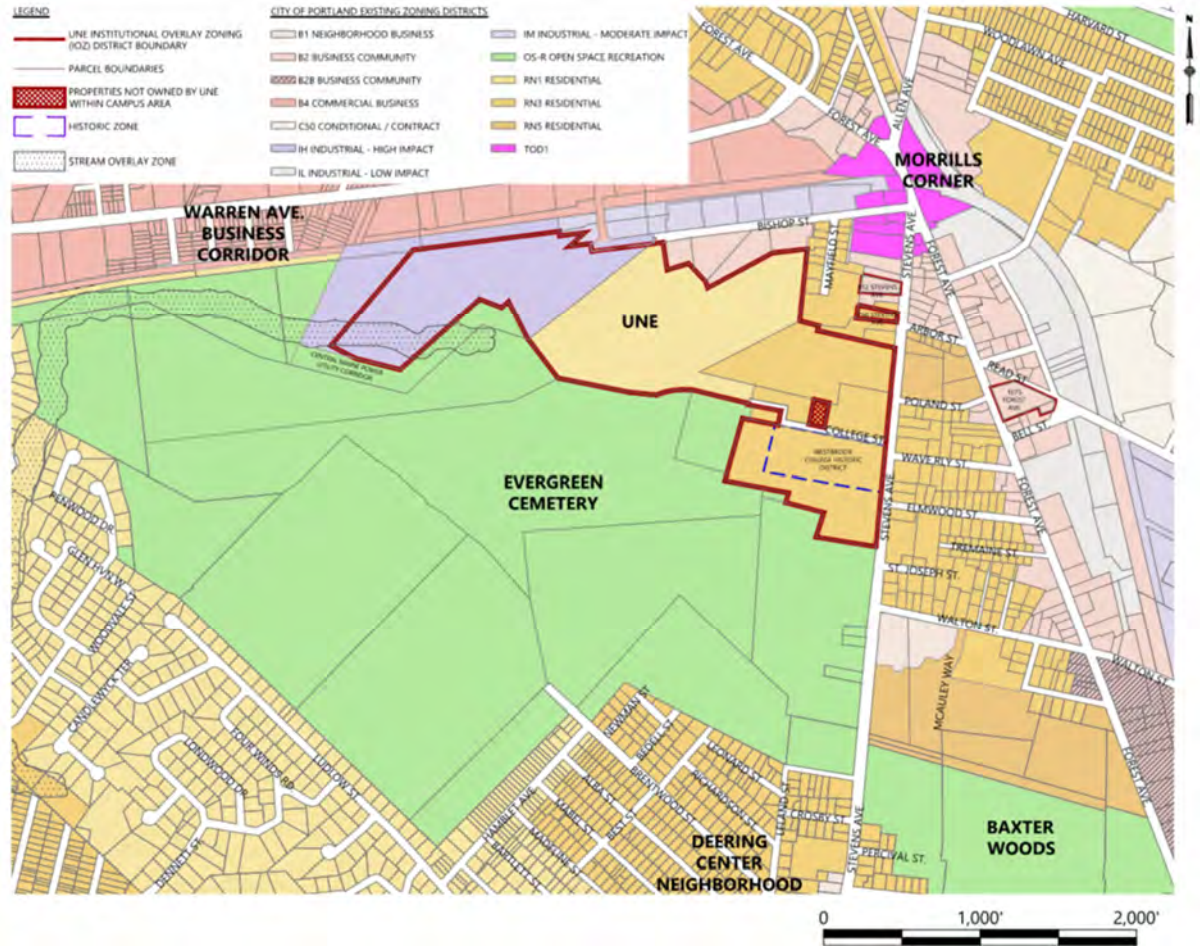

Figure 1.3 UNE Campus Site & Neighborhood Context: Existing Zoning

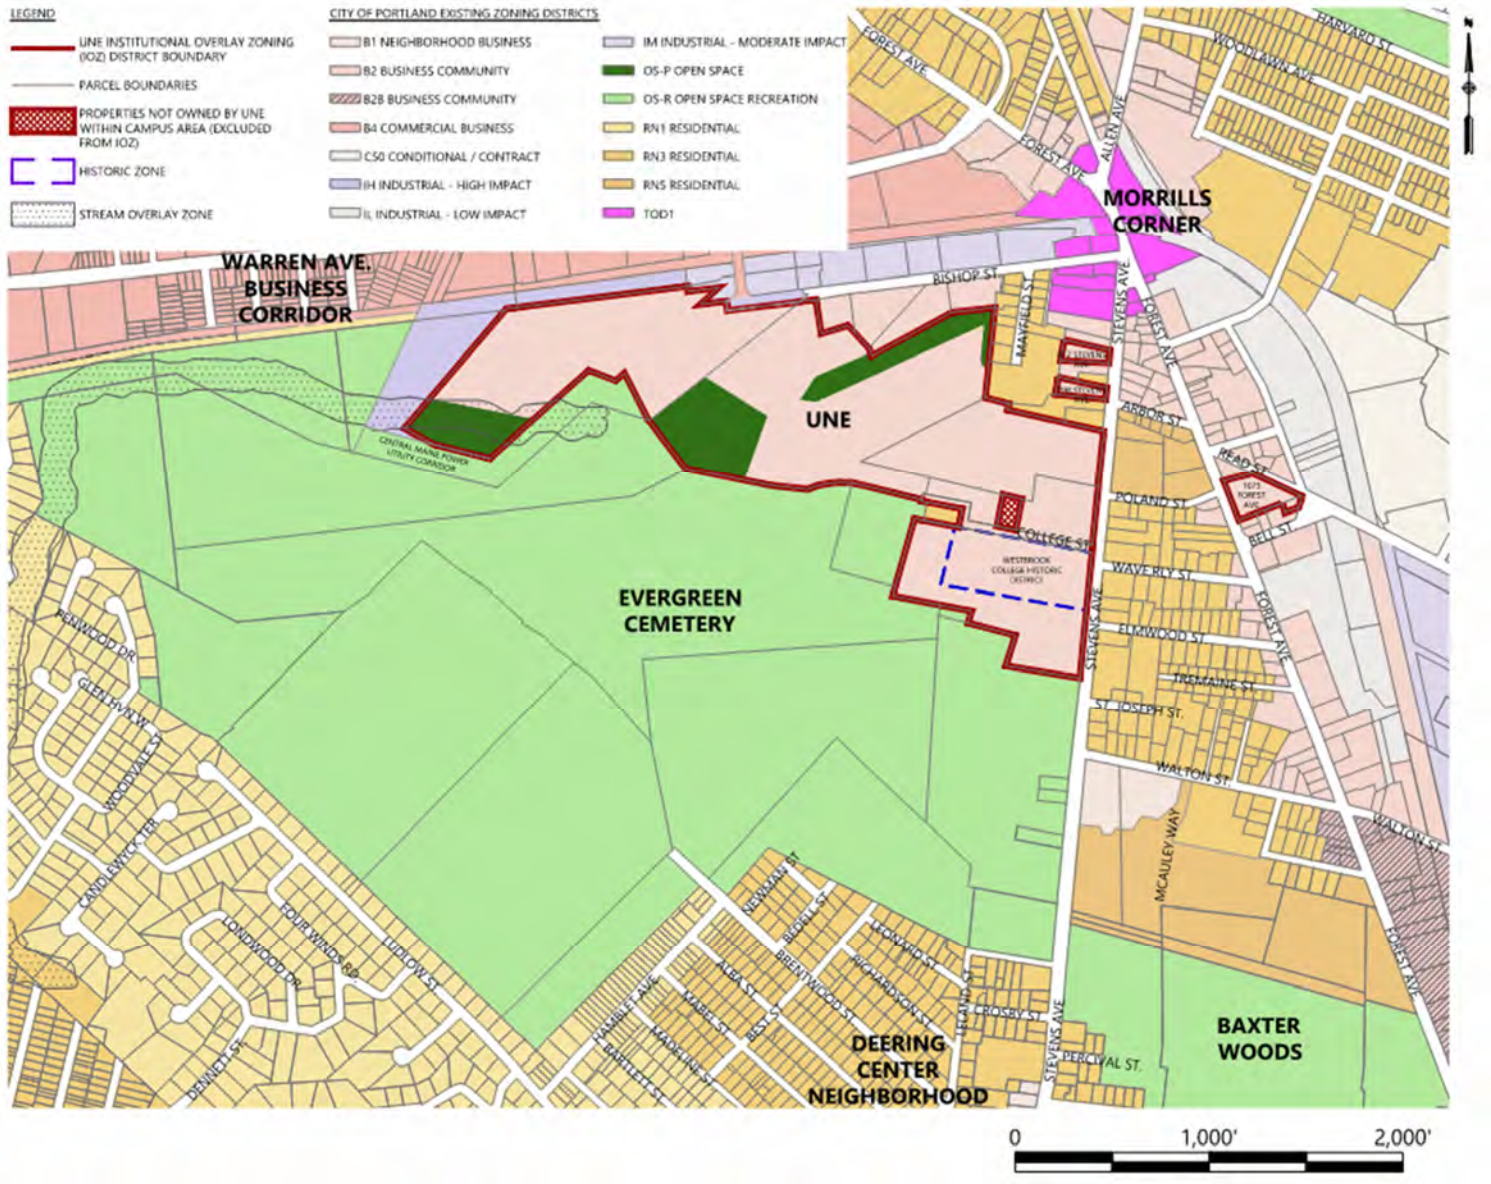

Figure 1.4 UNE Campus Site & Neighborhood Context: Proposed Zoning

Current Campus Buildings

The UNE campus includes 25 separate facilities and 11 parking areas, with a historic campus core located in the southeastern quadrant of the campus, centered around a Campus Quad (see **Figure 1.5**).

N/A	Hersey Circle	4,500	4	0	0

Property Ownership

UNE owns a number of properties that make up the Portland campus, listed in **Table 1.2** below.

Table 1.2

UNE Owned Properties in the City of Portland

Parcel Address	*Current Land Use*	*Parcel Address*	*Current Land Use*
Contiguous Campus Core			
684 Stevens Avenue	Post Secondary School	63 College Street	Post Secondary School
706 Stevens Avenue	Post Secondary School	79 College Street	Post Secondary School
710 Stevens Avenue	Post Secondary School	83 College Street	Post Secondary School
714 Stevens Avenue	Post Secondary School	0 Bishop Street	Post Secondary School / Parking
772 Stevens Avenue	Post Secondary School	**Outparcels**	
1 College Avenue	Post Secondary School	812 Stevens Avenue	Post Secondary School
31 College Street	Post Secondary School	1075 Forest Avenue	Post Secondary School
41 College Street	Post Secondary School	32 Bell Street	Post Secondary School
51 College Street	Post Secondary School	798 Stevens Avenue	Post Secondary School

Functional Land Use Links

There are four outparcels associated with UNE's Portland campus, as shown in **Table 1.2**. While not immediately connected to UNE's contiguous campus, the outparcels have distinct uses and contribute to UNE's operations. 1075 Forest Avenue houses the UNE North program within an existing 18,000 SF, 20-foot-tall building. Parking for this facility is provided on the site, and on the adjacent 32 Bell Avenue. 812 Stevens Avenue contains a 3,500 SF, 24-foot-tall facility that was formerly a dental office, but was damaged in a fire and subsequently donated to UNE. The building is currently vacant, but the associated parking lot is utilized by UNE for parking. 798 Stevens Avenue was recently acquired by UNE and contains a residential building; UNE does not currently have specific plans for that building and anticipates it may be used as housing for UNE faculty in the future. Connectivity between the outparcels and the contiguous campus is provided by a well-established network of public sidewalks, roadways, and bike routes, which are further described in Chapter 3, Transportation, of this IDP.

The Bishop Street Intermodal Transportation Facility, while one UNE's contiguous campus, is located at the end of Bishop Street away from the core campus. There is a shuttle bus provided between the more remote Bishop Street lot and the campus core to increase the lot's usage. There is a heated shelter with Wi-Fi at each end of the shuttle route to encourage ridership. The Bishop Street lot does not require a parking permit, providing free parking to further encourage its use. The shuttle runs continuously from 7 AM to 7 PM. With these incentives, parking in this remote lot has increased significantly.

Current Campus Populations

The UNE campus focuses mainly on graduate health professions programs and operates as a commuter (non-residential) campus. Clinical experience is integral to all academic programs, with varying criteria for timing and duration. As students rotate into clinical settings, the campus population fluctuates throughout the academic year. UNE boasts around 100 clinical affiliations, spanning 65 sites in Portland and over 450 statewide.

In recent years, the total number of students and staff present on campus has been declining, in part due to the COVID-19 pandemic, and the shift towards offering a hybrid model of study where students can attend classes online. Flexible work arrangements are also available for faculty, with UNE encouraging non-student facing personnel to work remotely when feasible. **Table 1.4** summarizes the full-time equivalent (FTE) student, faculty, and professional staff present on campus since 2016.

Table 1.3

FTE Student, Faculty, Professional Staff, and Patient Visits Data

Year (Fall Matriculation)	FTE Student Population	Full-time Faculty and Professional Staff	Total Full-time Campus Population	Patient Visits (Dental Hygiene & Medicine)
2016	1,362	470	1,832	20,745
2017	1,304	472	1,776	21,465
2018	1,282	467	1,749	21,295
2019	1,247	456	1,703	25,035
2020	1,162	442	1,604	20,580
2021	1,198	578	1,776	20,403
2022	1,098	541	1,639	20,009
2023	979	568	1,547	19,241

Typically, students complete their degree programs on either the Portland or Biddeford campus, with faculty and staff primarily assigned to one campus. While some commuting between campuses does occur, the trend towards remote work and the use of virtual meeting platforms like Zoom has led to fewer faculty and staff traveling between campuses for meetings, resulting in reduced traffic in the surrounding areas.

In addition to accommodating students, faculty, and professional staff, the campus regularly hosts special events and functions utilizing its larger venues, including the function halls in Innovation Hall, Ludke Hall, and Parker Pavilion, as well as occasionally outdoors on the main campus green. These events typically occur outside of regular university operational hours, often on Saturdays, Sundays, and after 5 pm on weekdays, to minimize disruption to core educational activities.

Baseline Characteristics of the Institution

Existing Resources

Historic

UNE's campus includes one of the twelve locally designated historic districts in the City of Portland, the Westbrook College Historic District, which is also nationally registered. The Westbrook College Historic District is composed of a cohesive, homogeneous group of nineteenth and twentieth century buildings that initially formed the rural campus of Westbrook Seminary. The district includes six buildings on the campus that were built between 1834 and 1952:

Westbrook Seminary Building (now Alumni Hall) built in 1833, this building was the first erected in the district, and was originally built with a tower relocated from the Market House in Portland.

Goddard Hall and Hersey Hall were the next buildings erected, in 1857 and 1869, respectively. They were sited at a right angle to Alumni Hall, beginning the idea of a campus quadrangle.

The Universalist Church (now Ludcke Hall) was designed by Francis H. Fassett in 1867 to front on Stevens Avenue, with its axis parallelling that of Goddard and Hersey halls and is Gothic Revival in style.

McArthur Gymnasium (now part of Abplanalp Library) was built in 1900 and designed by Francis H. and Edward F. Fassett. Its location beside Alumni Hall reinforced the campus plan of an L-shared grouping of buildings facing a quadrangle.

Proctor Hall was erected in 1952 between Hersey Hall and Alumni Hall, effectively closing the L-shaped campus group that compliments the massing and style of Goddard and Hersey Halls.

To date, Goddard, Hersey, and Alumni Halls have undergone historical interior renovations and have maintained and/or restored the exteriors to their original grandeur and color. Similarly, modifications to Ludcke and Proctor Hall, and the Abplanalp Library have been completed in conformance with all applicable historic preservation regulations and considerations. The renovation of Alumni Hall was awarded the 2016 Honor Award by Maine Preservation. As UNE expands its campus, it remains mindful of its historical character, aiming to design new facilities that harmonize with the existing historic district.

Existing Open Space and Natural Resources

UNE's campus boasts significant open space with its large campus green located at the main entrance on College Street, and through its preservation of existing freshwater wetland areas. The campus consists of natural area, open space, and ample opportunity for both passive and active recreation for students and the surrounding community offering amenities such as biking and walking trails, a central campus quad in the Westbrook College Historic District, tree-lined streets and pedestrian pathways, and forested area that offers wildlife and bird watching. The Portland Trails Forest City Trail crosses campus along College Street and provides a connection between on- and off-site recreational opportunities. UNE is committed to partnering with Portland Trails to extend their nearly 70-mile network of trails onto the Campus, with the goal of safely linking the Evergreen Cemetery section of walking paths to those in North Deering and providing more opportunities for the community to access Portland's open space and natural areas. The forested areas of campus are host to hardwood and coniferous tree species and emergent wetland species. These vegetative species comprise the riparian forest and scrub-shrub wetland complex surrounding the Capisic Brook headwaters. The City of Portland has identified Capisic Brook as its highest priority watershed and has outlined implementation measures to address water quality in the watershed, as summarized in the Capisic Brook Watershed Management Plan. UNE recognizes the ecological role the campus natural resources provide and is committed to implementing measures that promote groundwater recharge, increase flood capacity, reduce downstream erosion and pollution, and benefit wildlife habitat. A review of existing natural resources including open space and recreation, ecological communities, aquatic resources, and the Capisic Brook Watershed; an assessment of potential impact and impact avoidance of proposed future development; natural resource protection measures; and a review of the campus's operational sustainability is provided in Chapter 4, Environmental Plan, of this IDP.

Existing Transportation System

The campus is serviced by a variety of transportation infrastructure, including several arterial highways in close proximity with convenient access to Maine Turnpike (via Riverside Street, Warren Avenue and Bishop Street) and access to I-295 via Forest Avenue; metro transit bus service; pedestrian infrastructure; EV charging stations; and a bicycle network. The new connector drive allows direct access for UNE community members between the core campus and Bishop Street, allowing users to bypass Morrill's Corner. Based upon the last traffic impact study, performed for the recent permitting process for the relocation of the College of Osteopathic Medicine (COM) to the Portland campus, all campus drives operate at good levels of service ("A" or "B") with no capacity constraints. Stevens Avenue has dedicated marked bike lanes from Pleasant Avenue to south of Bishop Street, providing direct access to the campus. Similarly, there are dedicated bike lanes on Forest Avenue within the campus vicinity, excluding Morrill's Corner where there are shared motor vehicle – bike lanes. UNE provides bicycle racks at a ratio of 1 bicycle rack space per every 20 UNE community members. There is access to showers and lockers facilitating bicycle commuting. Transit service is provided via Greater Portland Metro Route 9, which connects downtown Portland to North Deering via Stevens Avenue and also by Metro Route 2, which connects downtown Portland to Riverton via Forest Avenue. There are two Route 9 Metro stops located on campus.

UNE has had a Transportation Demand Management (TDM) plan since 2010, which is routinely updated. The primary goal of the plan is to reduce vehicle trips to campus and, thus, reduce demand for on-site parking. Reducing trips, both on-campus and off-site, improves traffic flow in the surrounding area, and reduces UNE's carbon emissions. UNE routinely performs student and staff surveys to determine arrival and departure times, transportation modality and parking usage. The results have guided UNE in adjusting its TDM plan, including infrastructure upgrades and bus

schedule changes. Hot mapping of faculty, staff, and student home addresses was utilized to identify additional measures for enhanced promotional activities towards fostering alternative transportation modes.

UNE has a number of parking facilities on its campus and performs annual parking counts to evaluate occupancy rates. Based upon the most recent counts, parking demand peaks between 10:00 AM and 2:00 PM and varies by day. There are currently eleven parking lots located on campus plus on-street parking along two campus roadways. These facilities currently provide a total of 1,064 parking spaces. In 2022, there were 1,241 spaces. The university has been decreasing spaces over time as new projects are completed and parking needs are re-evaluated. A campus parking analysis, based upon the historical count data, projects a maximum occupancy rate per university population to be at 0.39 from 2025 to 2033. This rate is similar to the Institute of Transportation Engineers (ITE) 85th percentile parking rate. UNE has purposefully maintained a surplus of spaces on campus to assure adequate on-site parking, to be sensitive to the neighborhood concerns about on-street parking on Stevens Avenue and in the neighborhood.

Existing Utility Infrastructure

Existing stormwater management systems utilize on-site infiltration systems, with secondary use of conveyance to the Stevens Avenue and Bishop Street combined sewer system. Existing wastewater infrastructure for the campus is discharged to a combined sewer system in College Street and Stevens Avenue. Additionally, UNE participates in the City of Portland's Fats, Oils, and Grease (FOG) Program to responsibly dispose of these biproducts. Maintenance of these systems is performed regularly to ensure that they are operating effectively. For water supply the campus is serviced by the Portland Water District. For electricity, the campus is serviced by Central Maine Power. Unitil currently provides natural gas service to the campus.

Compliance with the City of Portland Plans and Studies

City of Portland Plan 2030

UNE views itself as a partner to the City of Portland and this partnership is integral to their shared sustainable future. The campus was used to host two of the four Community Forums in 2016 that included presentations and engagement activities to shape Portland's Plan 2030. UNE is an important stakeholder and, as a major employer and educator of healthcare professionals, helped provide information and input for developing Portland's Plan 2030. Portland's Plan 2030 focuses primarily on eight aspects of Portland's identity and performance: environment, waterfront, transportation, housing, recreation and open spaces, facilities, historic resources, and economy. Excerpts from the plan that UNE works to promote and advance are provided here:

Environment

- "Develop climate resilience through specific carbon reduction goals, comprehensive climate adaptation strategies, and protections for the city's most vulnerable infrastructure."
- "Adopt sustainable land use and transportation policies that support connectivity, walkable neighborhoods, and multi-modal transportation."

Economy

- "Support job creation and business growth through public initiatives and private, institutional, and regional partnerships."

- "Develop programs that support industries with high-growth/high value potential such as life sciences, food production, information technology, and marine-related industries."
- "Modify ordinances and make strategic investments to better promote business development and job creation in priority areas."
- "Ensure that the growth of Portland's educational, medical, and cultural institutions is integrated into Portland's urban fabric through the use of high-quality design, management of impacts, community partnerships, and innovative planning."

Historic Resources

- "Stabilize and enhance historic areas of the city by ensuring quality investment in existing structures and compatible infill development."
- "Ensure an appropriate balance of continuity and change as Portland grows and evolves."

Housing

- "Encourage additional contextually appropriate housing density in and proximate to neighborhood centers, concentrations of services, and transit nodes and corridors as a means of supporting complete neighborhoods."
- "Identify priority growth areas."
- "Allow for a range of housing models in City codes, whether small units, co-housing, or others that may suit changing needs and demographics."

Recreation & Open Space

- "Sustain and build our system of parks, trails, and open spaces to enhance our quality of life, protect our environment, and promote the economic well-being of our remarkable city by the sea."
- "Provide high-quality, well-designed, well-maintained, safe, and integrated parks, trails, public open spaces, and recreational opportunities accessible to all residents."
- "Strengthen connections between open spaces."

Facilities & Services

- "Continue to work in partnership with regional and State agencies, neighboring communities, nonprofit organizations, and private property owners in support of efficient, sustainable City services."

Transportation

- "Promote multi-modal accessibility, enabling residents and visitors of all ages and abilities to participate fully in the social and economic life of the community."
- "Enhance regional trail connections."

One Climate Future

UNE is committed to considering the One Climate Future Plan in its future campus development. The One Climate Future Plan is a joint plan developed by the cities of Portland and South Portland with the goal of working together to be inclusive, vibrant communities that provide opportunities for residents and businesses to thrive in a changing climate. The plan has four elements, which UNE considers and incorporates into their campus planning:

Buildings & Energy Use

- Use of water-efficient/low flow fixtures to reduce water consumption
- Strive for LEED silver building design as standard for energy efficiency goals

Transportation & Land Use

- Providing bike routes, parking, and storage to encourage bike accessibility and use
- Implementation of electrical vehicle charging infrastructure
- Providing safe and accessible pedestrian routes
- Connectivity to public transit stops

Waste Reduction

- Encourage and provide recycling of materials throughout campus
- Use of recycled building materials during construction where feasible

Climate Resilience

- Preserve and protect natural resources through thoughtful land planning
- Incorporate resilient infrastructure systems for stormwater management

Smart Corridor Plan

UNE is committed to considering the recommendations of the Smart Corridor Plan (SCP) in its future campus development. The plan emphasizes the importance of completing the Smart Corridor, a seven-mile route from Morrill's Corner and UNE in Portland to Bug Light Park and Southern Maine Community College (SMCC) in South Portland. This corridor, which includes Forest Ave, High Street/State Street, the Casco Bay Bridge, and Broadway, is used by vehicles, buses, pedestrians, and bicyclists. The goals of the plan include balancing the needs and priorities of all roadway users and corridor stakeholders by encouraging high-quality development, improving safety in all travel models, managing traffic access and congestion, and improving travel options and multimodal access in the corridor. Consistent with this plan, UNE has constructed an internal access roadway that has reduced traffic through Morrill's Corner, encourages use of multi-modal transportation such as bicycling and public transport, and includes in its campus planning the goals to improve accessibility and safety for all street users, supporting a more connected and efficient transportation network.

The SCP highlights the existing Starbucks store at 1080 Forest Avenue as an example of how incorporating Complete Streets green stormwater infrastructure can serve as a template for future development in the corridor. The UNE office at 1075 Forest Avenue is noted as a street frontage that addresses the street well and would be enhanced by the recommended planting palette and materials design guidelines found in the SCP. The SCP also identifies the need for the City to install improved lighting on Poland Street, which is frequently used by UNE students to access campus. UNE supports these recommendations and will consider them in its future campus development.

Forest Avenue Redesign Project

The City of Portland is in the process of evaluating design alternatives for the Forest Avenue Redesign Project, the goal of which is to increase safety and accessibility for all street users, including pedestrians, motorists, bicyclists, and transit users. While the project is not immediately adjacent to UNE's campus, when implemented, it will improve and modernize Forest Avenue between Woodfords Corner to USM/Exit 6, which is a corridor providing access between UNE's campus and downtown Portland and I-295. The project's goals are consistent with UNE's goals for their campus, which include providing a positive pedestrian experience, encouraging the use of bicycling and established bike lanes, and connections to public transit. Improvements in traffic flow and safety on Forest Ave can benefit the broader community, including UNE students and staff who travel through this corridor. By enhancing accessibility and safety, the project supports a more connected and efficient transportation network. UNE will consider the Forest Ave Redesign Project in future development to ensure that the potential benefits to its students, staff, and the surrounding community are fully realized.

Public Involvement in the IDP

Prior to submission of UNE's Institutional Overlay Zone (IOZ) application to the City, UNE held a neighborhood meeting on June 13, 2024, at 6pm at the UNE campus at 716 Stevens Avenue, Hannaford Lecture Hall, Room 109, in the Pharmacy Building. This meeting was appropriately noticed in accordance with the Land Use Code. In an effort to be more inclusive, UNE noticed abutters within 1,000 feet of the campus, rather than the required 500 feet. Thirteen members of the community were in attendance. The purpose of this meeting was to provide a general overview of the IOZ process to the community and solicit community input on what should be considered in this Institutional Development Plan (IDP).

After the submission of UNE's IOZ Application to the City, UNE held a second neighborhood meeting on October 30, 2024, at 6pm at the UNE campus, in the same location as the first meeting. In addition to the notice to abutters within 1,000 feet of the campus, community members that provided their email addresses at previous meetings were notified electronically. Twelve members of the community were in attendance. The purpose of the meeting was to provide an update of the IOZ process, including sharing information from the first draft of the IDP and Regulatory Framework documents, and to provide an opportunity for public engagement and feedback. Certifications for both meetings were submitted to the City for record, which included a copy of the notices sent, sign-in sheets, presentation materials, and record of public feedback.

In addition to the two required neighborhood meetings, UNE has hosted two other meetings with the Deering Center Neighborhood Association (DCNA) to foster public engagement and feedback on the IOZ application and process. The first meeting was held on July 2, 2024, at 6pm in the same location as the neighborhood meetings, and seven members of the public were in attendance. Similarly, the purpose of the meeting was to provide a general overview of the IOZ process and solicit feedback for the IDP. The second meeting with DCNA was held on September 16, 2024, from 6-6;35pm at the Deering Center Community Church. Nine members of the DCNA were in attendance. The purpose of the meeting was to share an update on the IOZ process, and to share IOZ materials including the Campus Master Plan, Regulatory Framework, and Height Map. The meeting provided an opportunity for DCNA engagement in the IOZ process and provided a forum to obtain feedback from the public and these important neighbors to UNE. Technically, these meetings did not qualify as neighborhood meetings, as abutter notices were not provided, though UNE did reach out to and invite this neighborhood group prior to the meeting. These community meetings, along with the two neighborhood meetings,

sought community input and helped inform the development of this IDP. All meeting attendees who provided email contact information were emailed a copy of the Campus Master Plan as well as the notification of the Planning Board Workshop.

In addition to the neighborhood and community meetings, there are several opportunities for public engagement as part of the City review process. This includes opportunities for written or spoken comment at the Planning Board Workshops and Hearing, and at the City Council Hearing.

2. CAMPUS MASTER PLAN

Campus Master Planning Process

UNE has undergone a campus master planning process to evaluate its existing and future facilities' capacity to deliver state-of-the-art educational programs to its students. Through this evaluation, the University has identified development opportunities to support the future growth requirements of UNE and its educational programs on campus.

Over the past decade, UNE has expanded its educational programs and delivery methods, particularly in healthcare. This growth necessitated infrastructure changes to support its mission of providing high-level healthcare education in Maine, especially in the local Portland area. The Campus Master Plan has been developed to accommodate a dynamic campus that continues to evolve alongside changes in education and technology. This IDP identifies potential development and expansion projects aligned with this goal that may be developed at the campus to accommodate growth long-term.

Current Facility Assessment

The first step in the master planning process included evaluation of the current campus and its facilities to establish a baseline for UNE's Campus Master Plan. This evaluation included review of the age and condition of existing buildings, the current interior building layouts, departmental allocation of various educational programs, as well as the overall campus infrastructure including utilities, roadways, parking lots, open space areas, and pedestrian facilities. Establishing this baseline allowed UNE to identify areas to be evaluated and considered as part of future campus development.

Current and Future Program Requirements

As a leading educator of healthcare professionals, UNE is committed to providing a transformational learning experience to its students. To achieve this goal, and the priorities outlined in its Strategic Plan, UNE has identified current and future program requirements that will enable the campus to adapt and thrive in a rapidly changing world.[1] Anticipating these changes and establishing a framework that will provide maximum flexibility to support future adaptation were a key component of identifying future program requirements and developing the Campus Master Plan. Consideration of the projected trends of campus users and anticipated daily populations were also an integral part of identifying future needs and are discussed in Section 2.2.

Planning factors that were considered in establishing the Campus Master Plan and this IDP are outlined in **Table 2.1**.

[1] University of New England (2018). *Charting Our Future: Strategic Plan 2018-2023*. https://www.une.edu/sites/default/files/3_charting_our_future-strategic_plan_2018-2023_draft.pdf

Table 2.1

Campus Planning Factors

Factor	Consideration
INNOVATION & TECHNOLOGY	Ability to support future programs such as telemedicine, virtual technologies, artificial intelligence, and related technologies to enhance innovative and dynamic classroom and experiential learning opportunities
INTER-PROFESSIONAL EDUCATION	Strengthen the inter-professional educational model which brings all of the healthcare related programs together, on one campus, in an environment where there are co-educational opportunities to allow for real life interactions
HOUSING	Provision of on-campus housing to help offset a high-cost and high-demand housing atmosphere in the City of Portland; to foster community; afford more time to study and learn; and reduce traffic in and around the campus
OPEN SPACE & NATURAL RESOURCES	Emphasis on preserving natural resource areas and siting new development to have minimal impacts to existing wetlands and streams, and prioritizing open space for recreational use by students, faculty, staff, and the public
NEIGHBORHOOD CONTEXT	Siting and design of development projects such that they complement the surrounding neighborhood, including considerations for traffic and pedestrian access

Adjacencies

UNE has identified program adjacencies as a significant challenge, particularly as it relates to its interprofessional educational model. Maximizing key programmatic adjacencies was a large driver of the Campus Master Plan.

Currently, the College of Osteopathic Medicine (COM) is located on UNE's Biddeford campus, and the majority of the Westbrook College of Health Professions (WCHP) programs and College of Dental Medicine (CDM) are based on the Portland campus. All three colleges currently utilize space on both campuses, which causes large inefficiencies in the educational model and requires students and faculty to travel long distances. One of the major aspects of this Campus Master Plan addresses these inefficiencies by bringing all of these colleges together onto the Portland campus and providing more appropriate building spaces to support educational programming for the COM, CDM and WCHP colleges. The new COM building,

the Harold and Bibby Alfond Center for Health Sciences, is currently under construction, and expected to be completed in 2025. The COM building is represented as facility number 24 on **Figure 1.4**, UNE Portland Campus Map.

Projected Campus Populations

UNE is projecting an increase in full-time equivalent student, faculty, and professional staff populations over the next 10+ years, as noted in **Table 2.2**. The relocation of the COM from UNE's Biddeford to Portland campus will result in an increase of approximately 400 students and 160 faculty and professional staff on the Portland campus.

Looking forward to the next 10+ years, UNE anticipates a moderate increase in student enrollment year over year. These estimates have been calculated based on historical growth data, considering predictable swings in programmatic capacities and enrollments, limits to programs, and additional offerings. The Fall 2025 student population was determined using the current student population and the projected student population for the Harold and Bibby Alfond Center for Health Science, once complete.

Table 2.2

Projected Growth of FTE Student, Faculty, Professional Staff, and Patient Visits

Year (Fall Matriculation)	FTE Student Population	Full-time Faculty and Professional Staff	Total Full-time Campus Population	Patient Visits (Dental Hygiene & Medicine)
2025	1,400	750	2,150	20,000±
2028	1,600	760	2,360	20,000±
2033	1,750	760	2,510	20,000±

UNE anticipates projected patient visits to remain consistent with historical values, as reflected in **Table 1.4** and **Table 2.2**. UNE does not track other types of visitors, such as visiting faculty, prospective students, or guests.

At the beginning of the 2023-2024 Academic year, 108, or 26% of the Faculty and Staff on the Portland campus, were participating in Flex Work scheduling, which affords them the ability to work remotely at least one day per week. This program is expected to continue. This has reduced parking and traffic demands. The vast majority of the academic programs on campus have face to face programming, with little or no online options. Most majors have clinical requirements to be on campus, which place students in local, statewide, or regional clinical settings. UNE does have a strong online academic program; however, none of those students come to the campus, and thus are not considered in the parking or other areas of impact analysis.

The UNE Portland campus does not currently provide on-campus housing as most of its students are enrolled in graduate degree programs. Currently, most of UNE's Portland students commute from areas in and around Portland. The student population enrolled at UNE's Portland campus generally consists of students aged 22 years and above, who may already have established off-campus housing accommodation. Roughly 72% of UNE students, faculty, and staff live within a 20-mile commuting distance of campus.

UNE is aware of the current housing challenges in the City of Portland, including a limited supply of affordable housing options, and intends to develop on-campus housing to help alleviate some of the housing challenges for its students. Incorporating on-campus housing will help to reduce the number of vehicle trips to and from campus, as well as foster a sense of community amongst students. As described in **Table 2.3**, UNE is considering construction of a new residence hall that would provide 350 beds for students and their families.

Key Institutional Needs

UNE's current and future facility needs can be summarized into 5 main categories:

1. Campus Reorganization
2. New Building and Renovation Need
3. Educational/Pedagogy Improvements Need
4. Campus Infrastructure Needs
5. Housing

Campus Reorganization

For decades, UNE's Portland campus has been the home of many of the University's health profession programs. In 2025, when the COM moves from the Biddeford campus to Portland, the campus will solidify its place as the center of health care education in Northern New England. To recognize that transformation, UNE renamed the campus as the Portland Campus for Health Sciences. The establishment of a unique, nationally recognized Institute for Professional Education and Practice in Portland can only be achieved with the relocation of COM. This reorganization is UNE's highest priority and will allow it to establish a world-class academic healthcare campus in Portland, oriented around inter-professional education with the goal of empowering the next generation of world class health care providers at a single location. The relocation of COM to the Portland campus will allow UNE to strengthen its collaboration with clinical partners throughout the state. Relocation of COM to the Portland campus will also afford the opportunity to repurpose spaces on the Biddeford campus and expand existing undergraduate programs to address critical workforce needs for the State.

New Building and Renovation Need

To achieve the goals of UNE's Strategic Plan, which include providing exceptional, innovative teaching and experiential, collaborative learning experiences, UNE will need to both renovate its existing facilities, and build new academic and support spaces. The age of existing campus buildings and their suitability as structures to meet the needs of a dynamic and evolving educational model are important considerations for identifying anticipated future renovations. Through its evaluation of existing facilities, UNE has identified several buildings that will need renovations and expansions to house relocated educational programs and to improve its support departments, such as Information Technology Services, Campus Services, and Facilities Management. Additionally, lack of housing in and around Portland has deterred students from pursuing a degree at UNE.

Anticipated renovation, expansion, and new building projects are summarized in **Table 2.3**, and reflected on the Campus Master Plan included as **Figure 2.1**.

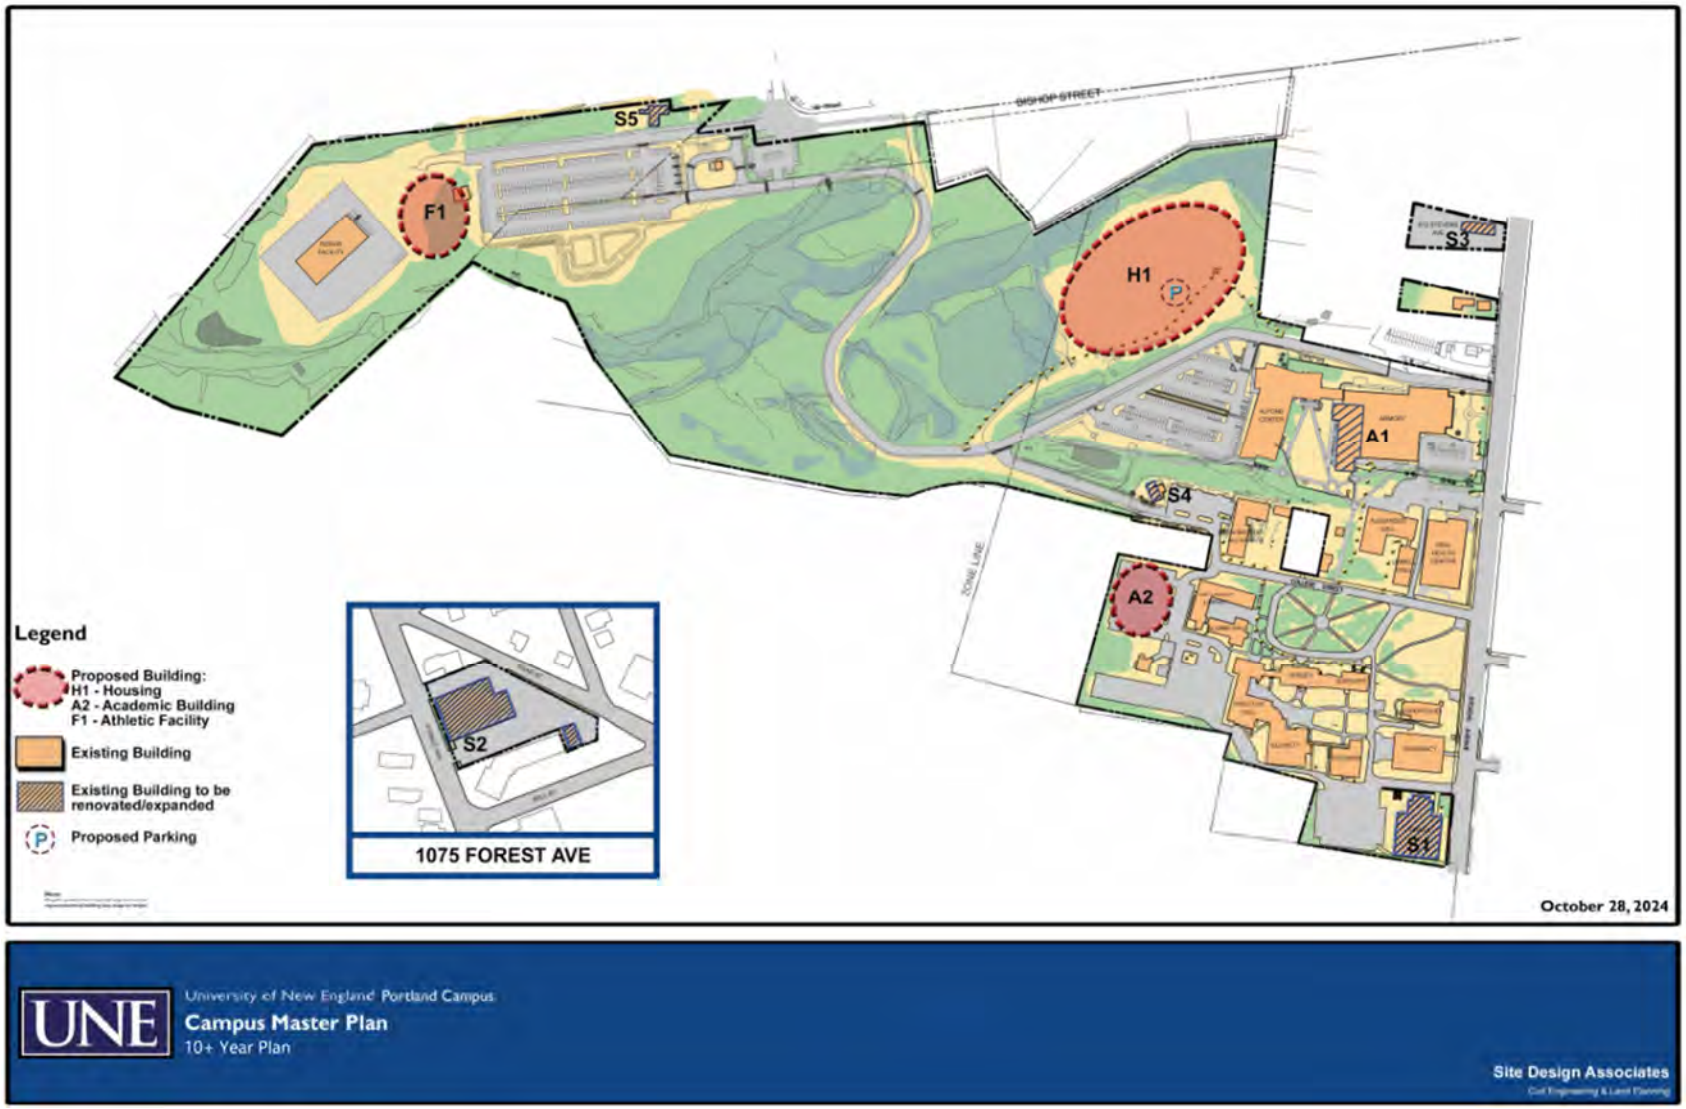

Figure 2.1 Campus Master Plan

Educational/Pedagogy Improvements Need

UNE continually endeavors to improve the way its faculty provides educational programs to its students. Ever-changing technology has also presented challenges for the University as it attempts to stay on the cutting edge in its efforts to provide world-class curriculums. Through its assessment of the current facilities on the Portland campus, it has become evident that UNE will need to undertake future facility projects to upgrade its existing classroom, lecture, laboratory, and study spaces. Mainly, larger academic spaces that facilitate hands on learning as opposed to lecture halls. Additionally, new spaces will be needed to incorporate an emphasis on higher technology, such as virtual reality, high-definition simulation and media that supports telemedicine and digital health. Projects identified within this IDP reflect and support this need.

Campus Infrastructure Needs

Through its extensive evaluation of the existing campus and facilities, UNE has identified infrastructure needs to support the campus reorganization and pedagogy improvements. Existing infrastructure evaluated as part of the master planning process included utilities such as electrical, water, and gas; stormwater systems; access roadways and sidewalks; and parking lots. Parking will be enhanced and expanded to support the additional faculty, staff, and students anticipated. During the construction of the Harold and Bibby Alfond Center for Health Sciences and the Maintenance Facility, UNE, with approval of the utility companies, installed the supporting water, sewer, electrical, communications and natural gas infrastructure to support the future adjacent projects.

Housing

UNE understands there is an increased need for student housing options as programs continue to grow and expand at the UNE Portland campus. Currently, UNE's Portland campus is comprised of commuter students. Existing housing resources are provided to students for off-campus housing options within the area. New housing on campus to support student growth is a vital component that UNE has incorporated within the UNE Campus Master Plan to limit housing pressures on adjacent neighborhoods.

10+ Year Development Plan

UNE's Campus Master Plan identifies anticipated projects which may be developed in the coming years, and identifies short- (0-5 year), medium- (5-10 year), and long-term (10+ year) priorities. These projects and priorities are summarized in **Table 2.3** below, and are represented graphically on the Campus Master Plan, included as **Figure 2.1**. The projects represent the possible future development on the campus, but the realization of these projects and priorities will only occur if the financial and philanthropic plans can support them.

Table 2.3

10±Year Development Program

Priority 1: Short-Term Development Plan (0-5 years)					
Campus Master Plan Identifier	**Project**	**Use Category**	**Total Square Footage**	**Approx. Height**	**Estimated Occupancy**
H1	Residence Hall	Housing	175,000	85 feet	350 beds
A1	Innovation Hall Renovation/Expansion	Academic	24,000	50 feet	2 offices
S3	812 Stevens Ave. Renovation/Expansion	Support	10,000	35 feet	6 offices
Priority 2: Medium-Term Development Plan (5-10 years)					
Campus Master Plan Identifier	**Project**	**Use Category**	**Total Square Footage**	**Approx. Height**	**Estimated Occupancy**
S2	UNE North/1075 Forest Ave. Renovation/Expansion	Support	60,000	65 feet	10 offices
S4	79 College Street Renovation/Expansion	Support	2,500	35 feet	2 offices
S5	Bishop Street Renovation/Expansion	Support	2,000	35 feet	N/A
Priority 3: Long-Term Development Plan (10+ years)					
Campus Master Plan Identifier	**Project**	**Use Category**	**Total Square Footage**	**Approx. Height**	**Estimated Occupancy**
A2	Academic Building	Academic	60,000	65 feet	20 offices
F1	Athletic Facility	Athletic	65,000	50 feet	12 offices

IOZ Boundary and Anticipated Property Acquisition

IOZ Boundary

The proposed IOZ boundary includes the extent of properties currently owned by UNE, as identified in **Table 1.2**, and as shown on **Figure 1.3**, UNE Zoning Context Map. The IOZ boundary includes the contiguous campus core area, as well as the four outparcels located at 812 Stevens Avenue, 798 Stevens Avenue, 32 Bell Street, and 1075 Forest Avenue.

Anticipated Property Acquisition

There is no additional property acquisition anticipated with this Institutional Development Plan.

3. TRANSPORTATION PLAN

Overview

UNE's Portland campus is in a great location, served by several arterial highways in close proximity. It provides connectivity to both pedestrian infrastructure and bicycle networks. Metro transit service is also provided by two (2) bus routes. UNE has had a Transportation Demand Management (TDM) plan in place since 2010, encouraging and promoting alternative modes of transportation to reduce trips and decrease on-site parking needs. It is regularly updated to respond to changing conditions and campus modifications. This reduces traffic impact both on campus and off-site, improving traffic flow in the surrounding area. Lowering the number of vehicular trips through TDM actions also reduces environmental impacts and impacts on the area's neighborhoods.

Campus Location and Access

The Portland campus is located off of Stevens Avenue, as shown below in **Figure 3.1**. Stevens Avenue is classified as a minor arterial. Nearby Forest Avenue is a major arterial while Warren Avenue, to the north, is a minor arterial. Allen Avenue towards the northeast is also a minor arterial. This location, within close proximity of four arterials, provides convenient access to the Maine Turnpike (via Riverside Street), Warren Avenue and Bishop Street. Access to I-295 is provided by Forest Avenue.

Vehicular Access

Vehicular access is provided by multiple unsignalized drives to Stevens Avenue as well as by a drive to Bishop Street. The new connector drive, currently under construction, will allow

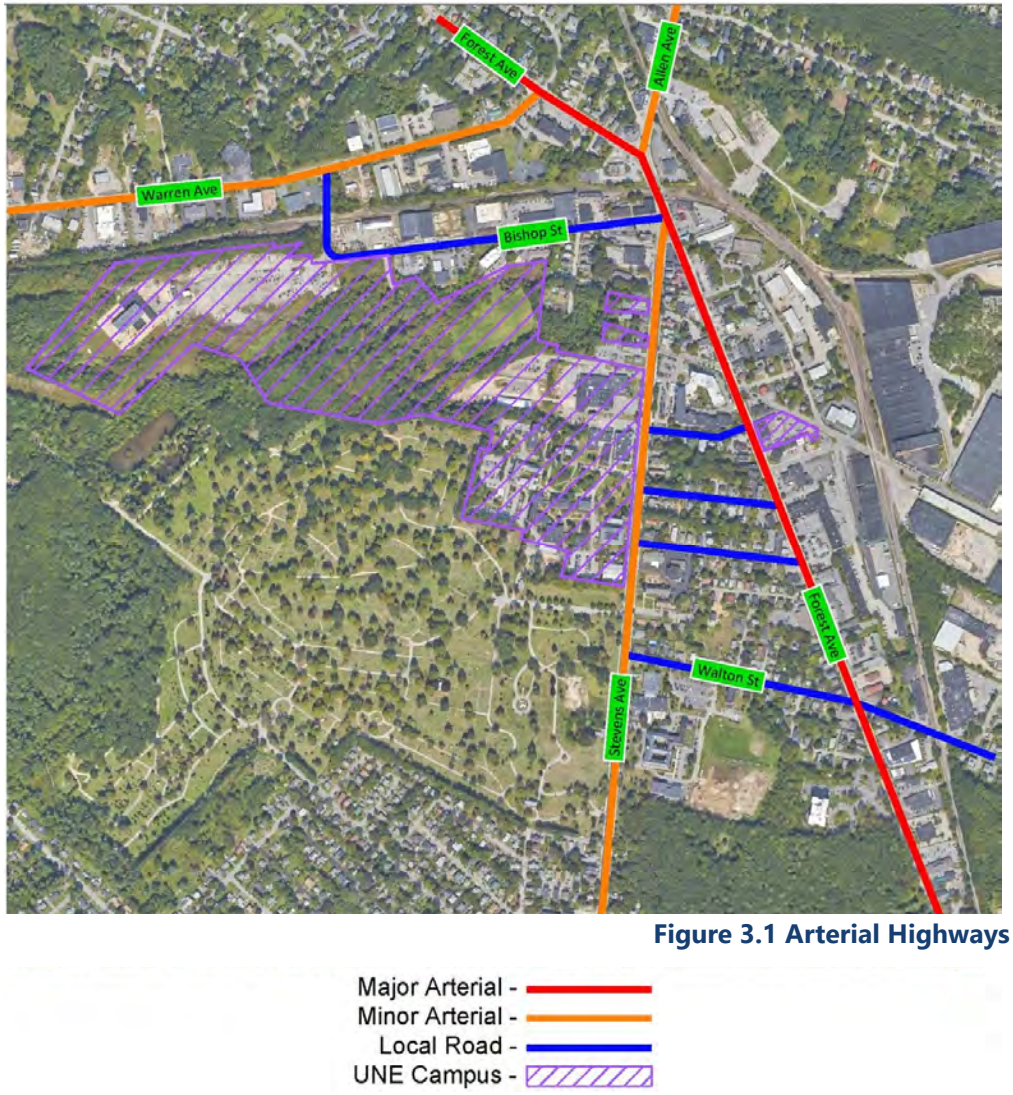

Figure 3.1 Arterial Highways

direct access for UNE community members between the core campus and Bishop Street, allowing users to bypass Morrill's Corner. Based upon the last traffic impact study, performed for the recent permitting process for the relocation of the COM to the Portland campus, all campus drives operate at good levels of service ("A" or "B") with no capacity constraints. Because the Portland campus currently has no on-campus housing, it is a commuter campus. Students and staff arrive from Portland and surrounding communities, as well as from the Biddeford campus. Short-term plans include the addition of student housing, identified on the Campus Master Plan as H1, which will reduce off-site trips. Based upon the most recent student and staff survey, 57 % utilize private vehicles to drive alone to campus while the remaining 43 % utilize alternative modes or a combination of modes.

Pedestrian Access

Pedestrian access is provided by numerous sidewalks both on campus and off campus. Sidewalks are provided on both sides of Stevens Avenue and on both sides of Forest Avenue, which are shown in **Figure 3.2**. This figure also shows a one-mile radius of the campus, which is considered the low end of a reasonable walk commute. There are crosswalks across Stevens Avenue and Forest Avenue in the vicinity of the campus at both signalized and unsignalized locations. These area pedestrian facilities also provide pedestrian access to other educational facilities, namely Longfellow Elementary School, Lincoln Middle School, and Deering High School as well as the local businesses frequented by UNE community members.

A sidewalk will be provided along the length of the new connector road. The Portland Trails network of trails abuts the campus and could be utilized by some local community members to access the campus. UNE is actively working with Portland Trails to extend this network across the UNE campus along, which could provide additional alternative pedestrian access to the campus, as well as rerouting the Portland Trails route away from Morrill's Corner. The extensive area sidewalk system is shown in **Figure 3.2**.

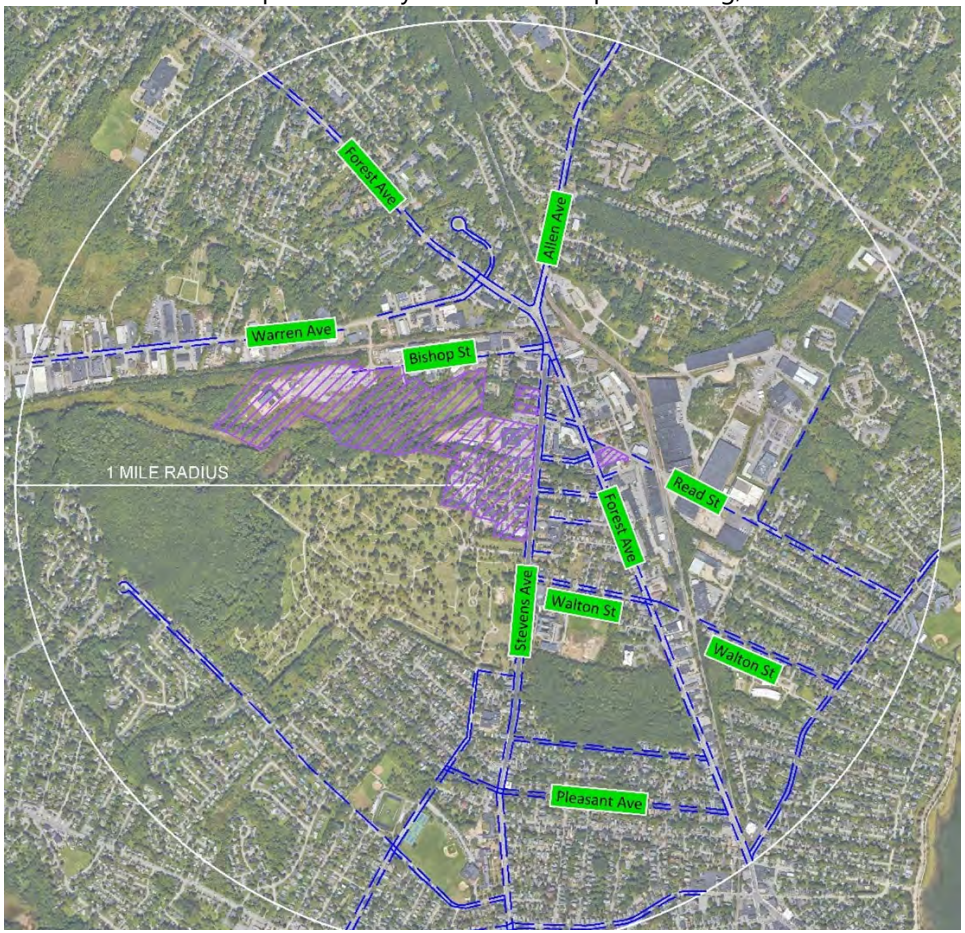

Figure 3.2 Area Sidewalk Network

Main Pedestrian Travelways - – – – – –
UNE Campus -

Note: This figure does not show sidewalks for all residential side streets

Bicycle Access

Stevens Avenue has dedicated marked bike lanes from Pleasant Avenue to south of Bishop Street, providing direct access to the campus (see **Figure 3.3**). Similarly, there are dedicated bike lanes on Forest Avenue within the campus vicinity, excluding Morrill's Corner where there are shared motor vehicle – bike lanes. UNE will be providing shared bike lanes on their new connector road, which will allow bikers destined to and from the west to bypass Morrill's corner.

UNE provides bicycle racks at a ratio of 1 bicycle rack space per every 20 UNE community members. There is access to showers and lockers in the Finley Recreation Center facilitating bicycle commuting. Additional shower and locker facilities are being added at the Harold and Bibby Alfond Center for Health Sciences building.

Transit Service

Transit service is provided via Greater Portland Metro Route 9, which connects downtown Portland to North Deering via Stevens Avenue and also by Metro Route 2 which connects downtown Portland to Riverton via Forest Avenue. The transit routes are stops shown in **Figure 3.4.** There are two Route 9 Metro stops located on the Portland campus, both of which are equipped with shelters. Several Route 2 stops on Forest Avenue are within 1,000 feet of the core campus, with one stop at UNE North, located at 1075 Forest Avenue, and Route 2 connects directly to the Metro Pulse (the downtown hub).

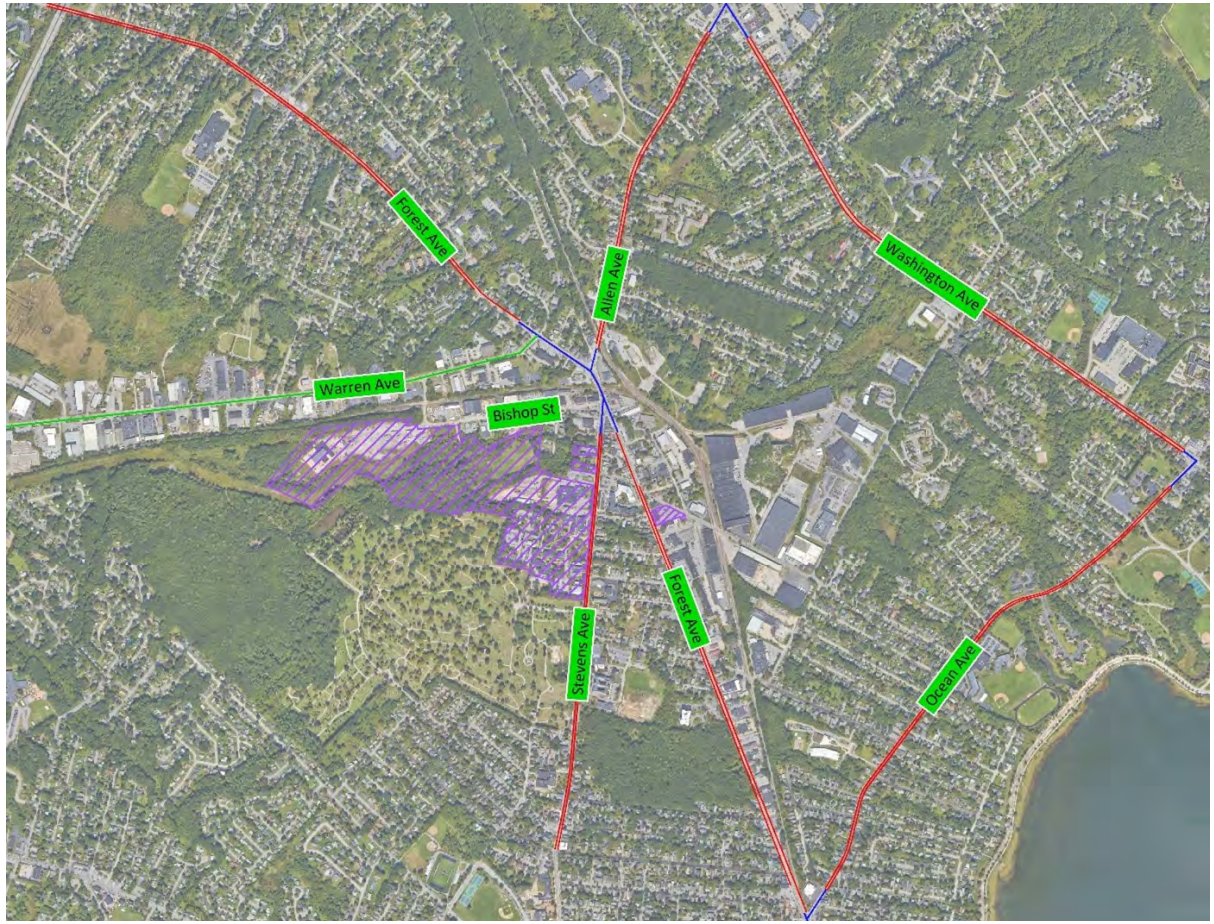

Figure 3.3 Current Bicycle Facilities

UNE provides free bus passes to all students and staff to encourage Metro use. Ridership averaged approximately 1,000 rides per month prior to the COVID-19 pandemic and then declined steeply. Ridership has increased slowly since 2022 to approximately 300 rides per month in 2023. Based upon the most recent 2024 data, monthly Metro ridership currently exceeds 350. The UNE bus pass program also allows free use of the Biddeford Saco Old Orchard Beach Transit, including the Express to Biddeford, as well as the South Portland Bus Service.

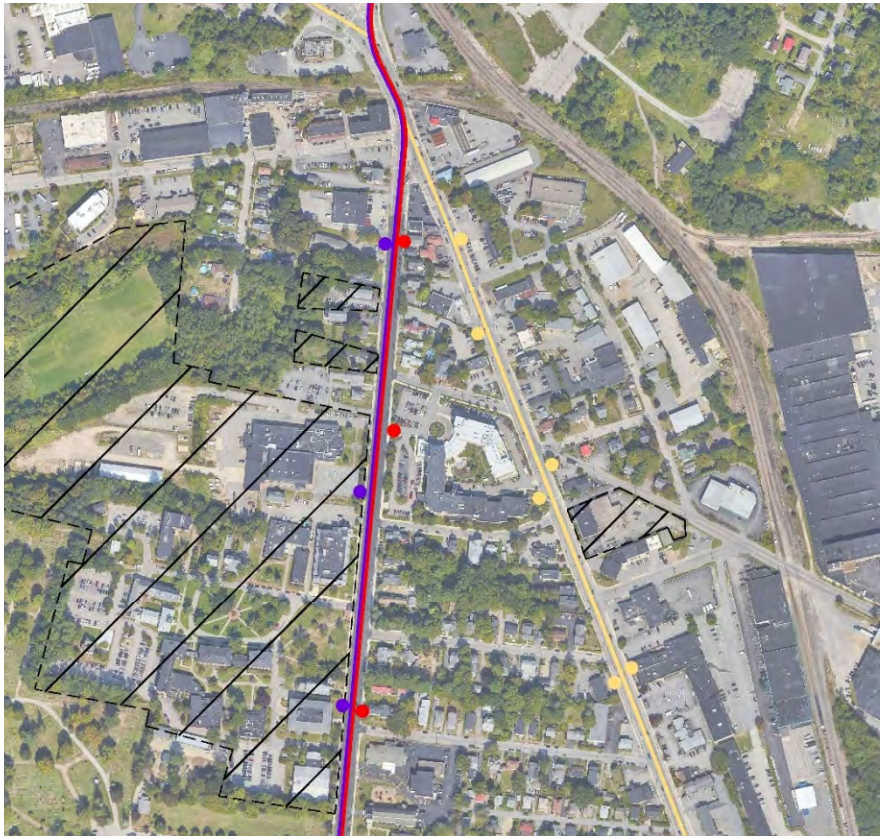

Figure 3.4 Transit Route Stops

Existing Conditions

Traffic Volumes

Existing average annual daily traffic (AADT) data for the vicinity of the campus was obtained from "Traffic Volume Counts, 2014 and 2012 Annual Reports", published by MaineDOT and their Interactive Traffic Map. This data is summarized below:

Table 3.1

Average Annual Daily Traffic

Location	2008	2010	2013	2016	2019	2022
Bishop Street, west of Forest Avenue	--	--	1650	--	--	--
Walton Street, west of Forest Avenue	--	2800	3120	2580	--	--
Forest Avenue, NW of Warren Avenue	20020	19010	19820	18140	--	17370
Forest Avenue, no. of Arbor Street	--	--	24500	22140	22570	18730
Forest Avenue, no. Walton Steet	--	--	21830	--	--	16610
Forest Avenue, so. of Walton Avenue	--	--	21710	--	--	17030
Stevens Avenue, so. of Walton Avenue	--	12510	11680	11620	--	--
Stevens Avenue, no. of Walton Avenue	--	11170	10980	11180	--	--
Stevens Avenue, so. of Forest Avenue	--	10360	10050	11230	--	8320
Warrens Avenue, SW of Forest Avenue	13370	11560	13130	11390	12380	13300
Allen Avenue, no. of Goodridge Ave	--	18210	--	16040	16220	17340

Traffic volumes in the vicinity of the campus have generally declined over the long term 2008 to 2022 period. This includes both Forest Avenue and Stevens Avenue volumes. Warren Avenue volumes are currently similar to previous 2008 levels, but they have grown in the more recent 2016 to 2022 period. Allen Avenue similarly declined long-term but has shown recent growth from 2016 to 2022.

Based upon this data, a 0.50 % growth rate was used to project previous turning movement counts, conducted during the COM study, and at Morrill's Corner in 2022, to existing 2024 conditions. This 0.5 % growth is currently being applied in most Maine locations. These existing 2024 peak hour volumes for the campus vicinity and access drives are shown in **Figure 3.5.**

Trip Generation Analysis

The Portland UNE campus currently has a student population of 979. The campus was recently permitted in 2022 for a student population of 1,598 during Site Plan Review for the relocation of the COM from Biddeford to the Portland campus (1,198 students at that time with the addition of 400 COM students). Projected short-, mid- and long-term student populations are as follows:

Table 3.2

Trip Generation Analysis

Year	Student Population
Fall 2025	1,400
Fall 2028	1,600
Fall 2033	1,750

Given the current student population, the campus is expected to serve 1,400 students in Fall of 2025 when the COM program is relocated. The expected mid-term growth in student population is expected to reach the previously permitted student population of 1,600 in Fall of 2028. Longer term growth projections show the campus reaching a total student population of 1,750 in 2033. This is an increase of approximately 150 students over the 2022 permitted enrollment of 1,598 students.

Trip generation analysis was performed for this projected student growth utilizing the Institute of Transportation Engineer (ITE) Trip Generation manual, the most recent 11th Edition. Land use code 550 – University/College was utilized for the analysis. The calculations were performed on the on the basis of students, which is the best fitting independent variable for the prediction of university trips. The calculations were performed for the

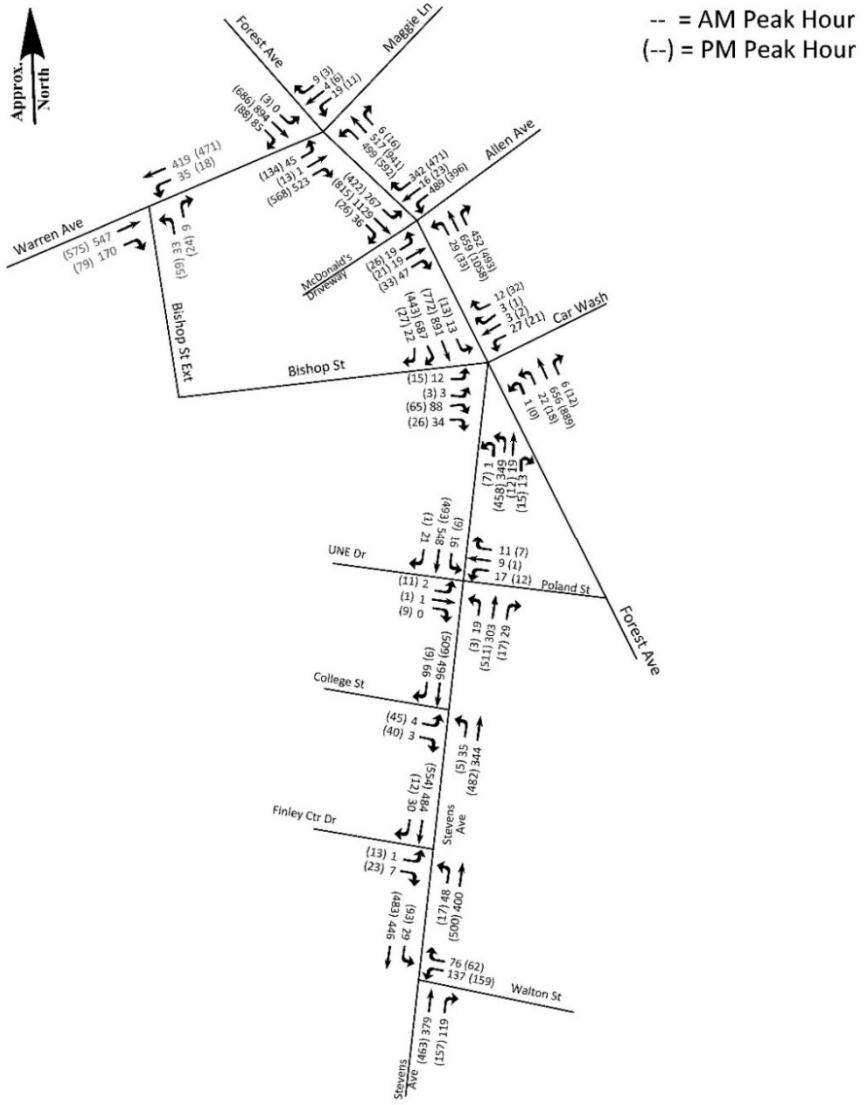

Figure 3.5 Estimated 2024 Traffic Volumes

approximate 150-student increase over previously permitted student population, to a future student population of 1,750. The results are summarized in the following table:

Table 3.3

ITE Trip Generation

Time Period	New One-way Trips	Time Period	New One-way Trips
Daily	234	PM Peak Hour	23
Entering	117	Entering	7
Exiting	117	Exiting	16
AM Peak Hour	23		
Entering	18		
Exiting	5		

The projected long-term growth in student population through 2033 is expected to result in a small increase in vehicular trips accessing the campus, 23 one-way trips in both the AM and PM Peak hours. This level of new traffic wouldn't be expected to have any significant impact off-site on either existing or future traffic operations. Typically, a development won't have any significant impact unless it generates in excess of 25 new lane hour trips in a left-turn lane or 50 new lane hour trips in a through or right turn lane. The maximum of 18 new trips, entering the campus during the AM peak hour, would be split between several arrival directions (north, south and west) and between multiple drives. As a result, the lane hour increases will be fewer than 10, due to the expected growth in student population. The 234 new daily trips represent less than a 2 % increase on Stevens Avenue volumes. Hence, the expected increase in trips due to projected student population growth should have no measurable impact either on campus or off-site.

Currently, based upon the most recent TDM survey, approximately 1 % of the trips to the campus are transit trips, 1 % are bicycle trips and 3 % are walking trips. ITE data also projects peak hour Walk and Walk+Bike+Transit trips. For the projected 150-student increase, there would be 5 additional AM Walk trips and 18 combined Walk+Bike+Transit trips. During the PM peak hour, 6 additional Walk trips are projected with 17 combined Walk+Bike+Transit trips.

In terms of traffic permitting requirements, the state Traffic Movement Permit (TMP) rules were modified in 2022. The rules only apply to a ten-year permitting window. Projects properly permitted over 10 years ago do not need to be considered. The history of recent UNE projects and TMPs is as follows:

- A TMP was obtained in 2008 for the College of Pharmacy for 300 new pharmacy students.
- In 2012, the College of Dentistry was approved by the City for 138 students. The 138-student increase did not require a TMP.
- The College of Osteopathic Medicine (COM) was approved by the City in 2022 with 400 students. The additional trips generated by the COM relocation project, when combined with the College of Dentistry, did not require a TMP.
- Given the above timeline, going forward only the COM project will count towards future TMP requirements since the other projects are beyond the 10-year permitting window. The COM project generated 61 AM and PM peak hour trips. Given the 23 AM and PM peak hour trips projected for the 150-student increase it is unlikely a TMP will be required since peak hour trips will not reach the 100-trip threshold by 2033.

Capacity Constraints

Numerous traffic impact studies have been performed for UNE building projects. The most recent study was "Traffic Impact Study, COM, UNE, Portland, Maine," which was performed by Sewall in 2022. The only capacity constraint identified in the study area for the planned and approved 400-student increase was Morrill's Corner, which includes the signalized intersections of Stevens Avenue, Forest Avenue and Bishop Street, and Forest Avenue/Allen Avenue. The level of service (LOS) at these Forest Avenue intersections was found to be an unacceptable LOS "E" or "F" for several movements and/or approaches. The projected increases in volumes due to the COM relocation were not found to have any significant impact on Morrill's Corner levels of service or delays. Similarly, the minor increase in peak hour trips, 23 one-way trips during the AM and PM peak hour, for the projected long-term growth of the university would have no significant impact on Morrill's Corner operations since these trips are split between several drives, northbound, southbound and westbound directions and between entering/exiting trips. The resulting new lane hour trips would be fewer than ten (10) having no measurable impact off-site on Morrill's Corner operations. Additionally, as previously noted, the new connector drive will reduce existing trips at Morrill's Corner.

Opportunities for Improvement

As previously noted, the only capacity constraint identified in previous studies is Morrill's Corner, including the intersection of Stevens Avenue/Forest Avenue/Bishop Street and the intersection of Forest Avenue/Allen Avenue. It is important to note that area traffic volumes have not changed significantly since these studies were performed and that UNE's student population is currently well below the permitted/previous study level. Morrill's Corner intersections have had known capacity constraints and associated queuing issues for over a decade. The "Portland – South Portland Smart Corridor Plan," completed in 2019, outlined improvements for Morrill's Corner. These improvements include removing Bishop Street from the signal system and limiting exits there to right turns out, and access management improvements/restrictions to other Forest Avenue parcels. Under the preferred plan, the level of service for Morrill's Corner are improved as follows:

Table 3.4

Portland-South Portland Smart Corridor Plan - Potential Morrill's Corner Improvements

Peak Hour/ Intersection	Existing/ No Build	Preferred Alternative
AM Forest Avenue/ Allen Avenue	F	D
AM Forest Avenue/ Stevens Avenue/ Bishop Street	E	C
PM Forest Avenue/ Allen Avenue	E	C
PM Forest Avenue/ Stevens Avenue/ Bishop Street	D	C

While this study was completed in 2019, the improvements have not yet been funded for implementation as the City of Portland has been focusing attention on other transportation priorities.

UNE has previously paid impact fees to the City of Portland for Morrill's Corner improvements. UNE contributed a $29,000 impact fee to the city as part of the 2008 approval for the School of Pharmacy.

The Morrill's Corner improvements would also be expected to address and reduce crash potential at these high crash intersections and along the adjacent links. As previously noted, the new connector drive, currently under construction, will reduce existing trips through Morrill's Corner by allowing UNE community members to directly travel to/from the campus core to/from Warren Avenue, bypassing Morrill's Corner. This reduction in volumes should also improve operations and reduce crash potential.

UNE will continue to update their Transportation Demand Management Plan and strive to reduce off-site trips as described in the following section. The planned addition of on-campus housing is also expected to reduce daily commuting trips to the campus.

Transportation Demand Management Plan

UNE has had a Transportation Demand Management (TDM) plan since 2010, which is routinely updated. The most recent update was completed in April of 2022. The primary goal of the plan is to reduce vehicle trips to campus and, thus, reduce demand for on-site parking. The plan further aims to reduce traffic impacts, both on-campus and off-site, improve traffic flow in the surrounding area, and reduce UNE's Scope 3 carbon emissions.

UNE hopes to achieve these goals by implementing TDM strategies that promote and encourage alternative modes of transportation. In 2019, a "Transportation Think Tank" (TTT) committee formed, with representation from Campus Planning, Student Affairs, Safety and Security, Undergraduate and COM Student Governments, Sustainability Office, and the Environmental Council. With oversight from the TTT committee, the TDM strategies

are regularly reviewed and updated to respond to changing conditions and needs. The TTT committee actively engages in implementing and promoting the TDM strategies outlined below.

TDM Strategies

Education and Promotion

UNE provides both educational and promotional material regarding the advantages of alternative transportation modes. The TDM Coordinator regularly publishes the "*Movements*" newsletter, which is hung in all bathroom stalls throughout the campus, ensuring visibility and contemplation. The newsletter informs the UNE community about ongoing, new, or revised transportation programs, events and resources, like bus maps and schedules, GoMaine carpool/rideshare information, parking updates, bike infrastructure updates, incentive program information and safety practices for pedestrians, among other topics. Additionally, the university regularly provides specific TDM-related information to the campus community through various methods and media formats, including bulletin boards, strategically placed bus schedule brochure holders, weekly community-wide emails, digital screens, and website.

Carpooling & Ridesharing

UNE utilizes the GoMaine service to encourage "greener commuting" to each campus as well as between campuses when required. UNE has its own landing page on the GoMaine website, which helps users find carpool partners, map out alternative transportation methods with transit, walking and biking routes, incentivizes users with rewards, and offers emergency "ride home guarantee" for regular users. Additionally, UNE takes advantage of the expertise of GoMaine staff for educational and promotional events.

The university provides free parking to carpoolers and dedicates some of the most convenient parking spaces as incentives. The university offers GoMaine tutorials every year. The TTT committee has identified the need to streamline carpool permitting procedures, which would make the incentive more desirable while making administration of the program less cumbersome. This is a continued goal for the committee for the upcoming year.

Transit Service

As previously noted, UNE provides free GP Metro, South Portland City Bus Services, and Biddeford, Saco Old Orchard Beach Bus Transit (BSOOB) passes for all students, faculty, and staff to encourage transit usage. Each of these services provides GPS trackers with mobile apps for cell phones, which aid riders in knowing exactly where the bus is located and how close it is to their stop. The TTT committee actively engages with administration from these transit providers to update materials and promote ridership.

Incentives

Since 2008, UNE has continually promoted the use of alternative modes of transportation through incentives and promotions, including:

- Raffling of new bicycles and iPads for transportation competitions
- Providing free coffee and doughnuts to users of the Bishop Street parking lot

- Free use of electric vehicle charging stations
- Free public transit passes.

The university is currently considering dedicating additional prime campus parking spaces as carpool spaces to encourage greater carpooling.

UNE has considered disincentives but given the distance that many students and staff commute, whom have no alternative since they are located too far to walk, bike or utilize transit, disincentives would unfairly punish students and staff whom have no other reasonable alternative, especially in light of the current affordable housing crisis in Southern Maine. Additionally, the UNE Portland Campus is a graduate campus with nontraditional students. Many of which have families, jobs and most must participate in clinical experiences. All of which limit opportunities for alternative transportation usage.

EV Charging Infrastructure

UNE provides free charging for electric vehicles. UNE has eight (8) Level 2 chargers at the Bishop Street parking lot, two of which are reserved for handicapped parking. There are also (62) 100v charging outlets in that lot. There will be additional charging capacity at the Harold and Bibby Alfond Center for Health Sciences parking lot with (10) Level 2 chargers and (26) spaces with 100v outlets. At this time, there are only 17 electric vehicles registered with the University on the campus. The TTT Committee will continue to monitor the growth of EV adoption in the campus community and will advise administration regarding further expansion of charging infrastructure as needed.

Bicycle Infrastructure

UNE promotes bicycling as a convenient means to access campus for those students and employees that reside within the appropriate range, and for exercise and wellness benefits. The university has several bikes on campus that the UNE community members can borrow to utilize during the day. Bike racks are conveniently located across campus for community members to store their personal bikes as well. UNE has previously discussed, and would consider, being a site for a city-wide bike share program.

There is access to showers and lockers in the Finley Recreation Center further facilitating bicycle. The Harold and Bibby Alfond Center for Health Sciences building will include men's, women's and gender-neutral locker room facilities, with showers. These additional facilities will encourage and support greater commuting by active transportation means. The new shared connector drive will provide better access for bicyclists destined to and from the west.

Pedestrian & Bicycle Access

As previously presented, there is an extensive sidewalk system surrounding the campus as well as bike facilities. The shared bike lanes that will be provided on the new connector drive will provide additional opportunities for UNE community members to bike to campus, without having to bike through Morrill's Corner, with its intimidating shared vehicle bicycle lanes.

UNE is committed to partnering with Portland to extend their trail system through UNE property in an effort to safely link the Evergreen Cemetery section of walking paths to those in North Deering. Currently, several large sections of the Portland Trail system are adjacent to UNE's Portland campus in Baxter Woods Park and Evergreen Cemetery. Hikers and walkers wishing to move from the Evergreen Cemetery area to the North Deering

section of Portland must traverse busy streets like Stevens and Allen Avenues, through Morrill's Corner, in order to reach the next trailhead. As part of UNE's initiative to construct the Institute for Interprofessional Education and Practice on its Portland Campus, the access road that links College Street to UNE's Bishop Street parking lot will be improved, with additional lighting and features to improve safety.

UNE Community Member Surveys

UNE routinely performs student and staff surveys to determine arrival and departure times, transportation modality and parking usage, as well as to gauge interest in various alternative transportation and incentive programs. The results have guided UNE in making adjustments to its TDM plan, including infrastructure upgrades, and bus schedule changes. Hot mapping of faculty, staff, and student home addresses was utilized to identify additional measures for enhanced promotional activities towards fostering alternative transportation modes and associated programs.

Based upon the most recent 2023 survey, students and staff on campus are currently utilizing the following mode choices:

- Combination of Modes 34 %
- Carpool/Van 3 %
- Transit 1 %
- Bicycle 1 %
- Walk 3 %
- Remote 1 %
- Drive Alone 57 %

While the majority drive alone to campus, a large percentage of the community uses a combination of modes to reach campus.

The Director of Safety and Security monitors the effectiveness of the TDM plan through biannual parking utilization studies. The TDM Coordinator and TTT Committee use the data collected from these parking studies to continually review and anticipate parking demand on campus and guide ongoing revisions to the TDM plan.

Data analysis conducted during development of the 2022 plan found that 13% of the campus community live within a walkable 1.5 miles radius and a bikeable 1.5 - 5-mile radius of the campus. It was also found in the survey that 11.5% of the survey respondents walk to campus 1-9% of the time.

Figure 3.6 shows the primary campus sidewalks, bike facilities and off-site connections. Opportunities to expand this network and increase these alternative commuting modes will continue to be explored.

Comments indicate that 31% of the survey respondents desire to use an alternative mode of transportation, but are unable due to external commitments, such as work, daycare pickups and clinical requirements. Opportunities to increase the alternative modes of transportation percentage exist, and efforts will continue to be made to identify incentives that would increase these modes of commuting, including the extension of the Portland Trails network through the campus, which would allow Deering Center and Riverton residents to more easily walk to campus.

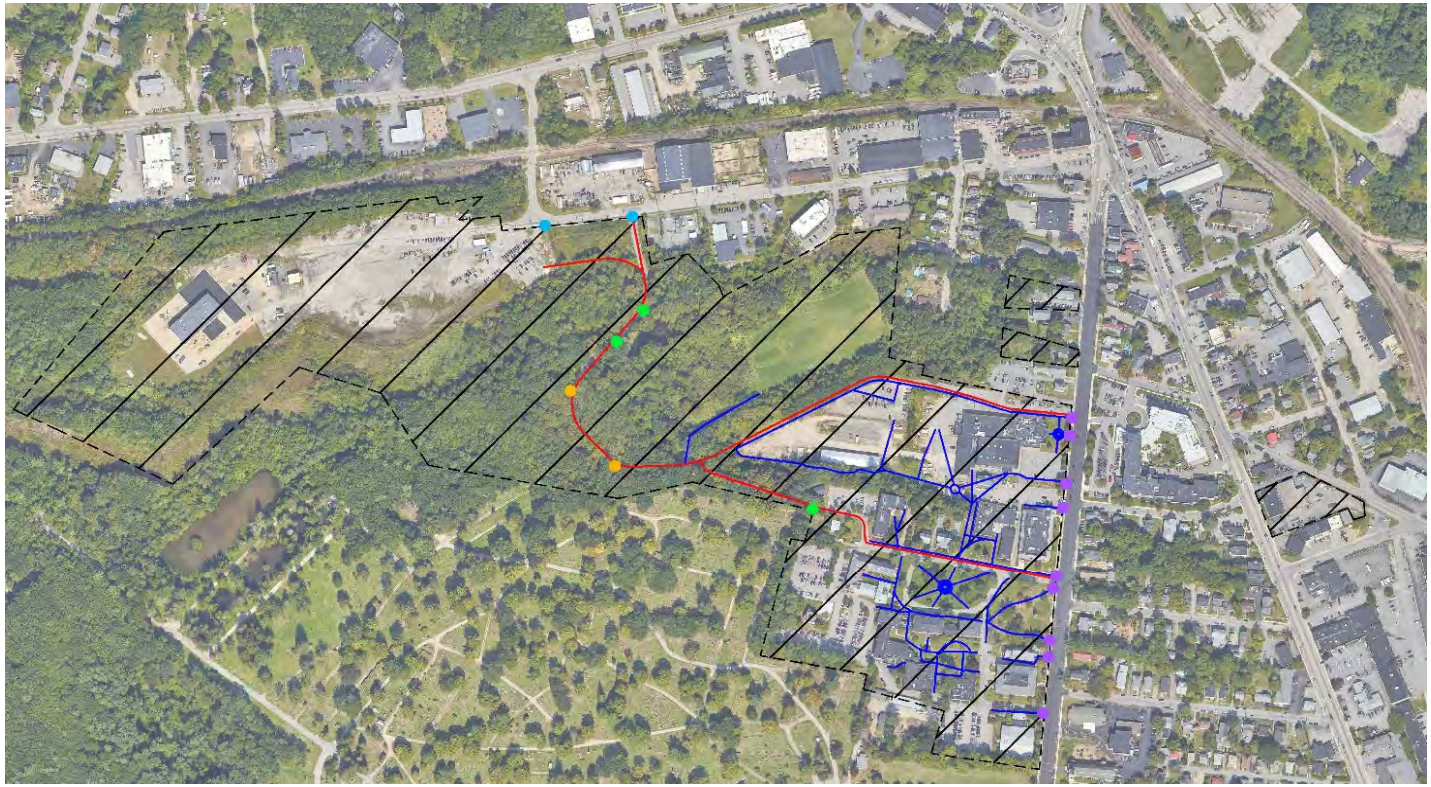

Figure 3.6 Core Campus Bicycle and Pedestrian Connectivity

Parking

While there are several alternative transportation modes available to access the campus and many use a combination of modes, the majority of students and staff arrive by private vehicle. Based upon the most recent parking counts, conducted in fall of 2023, parking demand peaks between 10:00 AM and 2:00 PM and varies by day. There are currently eleven parking lots located on campus plus on-street parking along two campus roadways. The lot locations are shown on the campus map in **Figure 1.4**. The number of spaces located in these lots is detailed below:

Table 3.5

UNE Portland Campus – Parking Spaces

Lot Description	Number of Spaces
Lot 1 – 812 Stevens Avenue	30
Lot 2 – COM	182 (permitted)
Lot 3 – Innovation South	33
Lot 4 – Oral Health Center	24
Lot 5 – Ginn/ MCD	28
Lot 6 – Library	103
Lot 7 – Proctor	121
Lot 8 – Finley	89
Hersey Circle	4
Ludke	3
Bishop	344
UNE North	72
Church	31
Total Spaces	**882 plus 182 (permitted)**

There will be 1,064 parking spaces on campus after the COM project is completed. In 2022, there were 1,241 spaces available, so the university has been decreasing spaces over time as new projects are completed and parking needs are re-evaluated.

Most campus lots require the purchase of parking permits. The largest number of vehicles recorded during the fall 2023 counts in the university lots was 796. This represents 75 % of the overall on campus capacity with the COM completion. This highest weekly demand occurred on Wednesday at 1:00 PM.

There is a shuttle bus provided between the more remote Bishop Street lot and the campus core to increase that lot's usage. There is a heated shelter with Wi-Fi at each end of the shuttle route to encourage ridership. The Bishop Street lot does not require a parking permit, providing free parking to further encourage its use. The shuttle runs continuously from 7 AM to 7 PM with minimal wait times. With these incentives, parking in this more remote lot has increased significantly from 37 vehicles in 2012 to an average of 233 during the peak period in 2019. The average peak daily use in this lot in 2023 was 245 vehicles, which occurred while half of the lot (300 spaces) was closed for construction.

There is significant historical parking data available for the campus given UNE's annual weeklong parking counts. This measured data is summarized by year, along with projections for future years, as follows:

Table 3.6

UNE Portland Campus – Parking Occupancy

Year	Students	Staff	Population	Spaces	Max. Occupancy	Spaces/ Student	Max. Occupancy/ Student	Max. Occupancy/ Population
2015	1,397	317	1,714	783	577	0.560	0.413	0.337
2018	1,257	588	1,845	1,256	765	1.000	0.609	0.415
2021	1,198	578	1,776	1,261	651	1.053	0.543	0.367
2023	979	568	1,547	863	512	0.882	0.523	0.331
2025	1,400	750	2,150	1,056	848	0.754	0.606	0.394
2028	1,600	760	2,360	1,162	931	0.726	0.582	0.394
2033	1,750	760	2,510	1,069	990	0.611	0.566	0.394

As seen in Table 3.6, the number of parking spaces on campus declined from 2021 to 2023. The space/student ratio has been declining since 2021 and is projected to continue to decline while the number of spaces will remain fairly steady long-term, from 2025 through 2033. The projected maximum occupancy rate per university population is projected to be at 0.39 from 2025 to 2033. This rate is very similar to the Institute of Transportation Engineers (ITE) 85th percentile parking for a university of 0.38 vehicles per school population. Additional review of parking rates and opportunities to decrease parking will be evaluated as future building projects go through the site plan review process. UNE has purposefully maintained a surplus of spaces on campus to assure adequate on-site parking, to be sensitive to the neighborhood concerns about on-street parking on Stevens Avenue and in the neighborhood.

In addition to on-campus parking, there is also on-street parking located on surrounding streets, which is available to UNE community members. This on-street parking includes College Avenue on campus and parking along both sides of Stevens Avenue off campus.

The City of Portland has implemented residential parking permits and one-hour parking restrictions on many side streets in the vicinity of campus, reducing the amount of on-street parking available to UNE community members. As long as there continues to be free on-street parking along Stevens Avenue without any time restrictions, in close proximity to the campus core, continued use of these spaces by staff and students is expected to occur given their convenience.

The goals for UNE in terms of parking are:

- Continue to provide an adequate parking supply on-campus
- Reduce parking needs over time through continued TDM actions
- Reduce neighborhood impact by reducing on-street parking usage by UNE students

4. ENVIRONMENTAL PLAN

Existing Natural Resources

Open Space and Recreation

The UNE Portland campus consists of natural area and open space, with opportunity for both passive and active recreation. Approximately 53 percent of the 72-acre campus is open space and offers amenities such as biking and walking trails, a central campus quad, tree-lined streets and pedestrian pathways, and forested area (see **Figure 4.1**) that offers wildlife and bird watching opportunities. There are two gardens on the campus; the Medicinal Herbal Garden, which is a demonstration of the types of medicinal herbs used in phytotherapy, and the Community Garden, which is managed by volunteer faculty and staff and produces vegetables for personal consumption and donation to local charities.

The campus is located adjacent to industrial, commercial, residential, as well as other open space uses. The adjacent 239-acre Evergreen Cemetery offers important community greenspace and recreational amenities including a network of forested trails for walking, cross-country skiing, and bird watching. The Portland Trails Forest City Trail crosses campus along College Street and provides a connection between on- and off-site recreational opportunities. UNE is committed to partnering with Portland Trails to extend their nearly 70-mile network of trails onto the campus, with the goal of safely linking the Evergreen Cemetery section of walking paths to those in North Deering and overall providing more opportunities for the community to access Portland's open space and natural areas.

Figure 4.1 Existing Open Space on Campus

Ecological Communities

The campus contains varied natural resource features and is characterized by two levels of generally flat topography with both landscaped and natural greenspace punctuated by campus facilities.

Forested areas are host to hardwood and coniferous tree species such as speckled alder (*Alnus rugosa*), red maple (*Acer rubrum*), willow (*Salix* spp.), winterberry (*Ilex verticilata*), green ash (*Fraxinus pennsylvanica*), and balsam fir (*Abies balsamea)*. Emergent wetland species on the campus include cattails (*Typha latifolia*), sensitive fern (*Onoclea sensibilis*), jewel weed (*Impatiens capensis*), and blue flag (*Iris versicolor*). These vegetative species comprise the riparian forest and scrub-shrub wetland complex surrounding the Capisic Brook headwaters. **Figure 4.2** illustrates delineated resources within the campus footprint as well as wetlands and streams identified in the United States Fish and Wildlife Service (USFWS) National Wetland Inventory and United States Geological Survey (USGS) National Hydrography Dataset. There are vernal pools, open waters, perennial and intermittent streams, and forested, scrub-shrub, and emergent wetlands delineated on campus.

Consultation with DEP in 2017 determined no records of Significant Wildlife Habitat exist onsite and there are no records of Imperiled (S2) or Critically Imperiled Natural Communities (S1) listed for the site. Additionally, no USFWS Critical Habitat is listed as occurring on campus and according to the Maine Beginning with Habitat map viewer, no Essential or Significant Habitats are recorded on campus. Lastly, no Important Bird Areas are listed by Maine Audubon as occurring on campus.

Figure 4.2 Ecological Communities and Aquatic Resources

Aquatic Resources

Aquatic natural resources can be found on campus and include the headwaters of Capisic Brook. Capisic Brook is listed on the 2022 Maine DEP Integrated Water Quality Monitoring and Assessment Report as '*impaired*' and is included in the City of Portland's Capisic Brook Watershed Management Plan. Capisic Brook, a small tributary to the Fore River, consists of several branches, with headwaters on campus located near north of Gulliver's Field.

Streams on campus are surrounded by riparian hardwood forest and wetlands as described above, as well as vernal pools. The extents and boundaries of streams, wetlands and vernal pools were delineated in 2022 and a vernal pool assessment completed in 2021. The vernal pools identified in 2021 were assessed using the Maine State Vernal Pool Assessment Forms and confirmed by Maine DEP to be Non-Significant Vernal Pools as they lacked the physical and biological characteristics necessary to meet significance criteria.

Under the Maine DEP Natural Resources Protection Act: Chapter 310, Wetlands and Waterbodies Protection Rules, wetlands located within 25-feet of a river, stream, or brook are considered Wetlands of Special Significance. As identified in a 2022 wetland delineation of the campus, many of the wetlands located on-site may be considered Wetlands of Special Significance as they are located within 25-feet of Capisic Brook. UNE recognizes the ecological role the campus natural resources provide such as groundwater recharge, increased flood capacity, downstream erosion and pollution control, and beneficial wildlife habitat.

Capisic Brook Watershed

The Capisic Brook watershed covers approximately 1,418 acres within the cities of Portland and Westbrook. The East Branch of Capisic Brook which flows through part of the UNE campus is within the East Tributary subarea of the Capisic Brook Watershed. Approximately 31% of the watershed is covered by impervious surface. Maine DEP has designated Capisic Brook as an urban impaired stream under Chapter 502 of the Maine Stormwater Management Rules. Capisic Brook is listed as Category 4a, with an approved Total Maximum Daily Load (TMDL) in place. The stream is designated a Class C water, meaning it is intended to meet the state's minimum environmental goals for water quality. The City of Portland identified Capisic Brook as its highest priority watershed and has outlined a number of provisions to address water quality in the watershed as outlined in the Capisic Brook Watershed Management Plan, developed and adopted by the City of Portland in December of 2012. The Plan outlines the status and restoration needs of the watershed and establishes provisions and goals for improving water quality in Capisic Brook.

Capisic Brook has two existing DEP Sample Locations including one near the recently constructed Connector Road (see **Figure 4.3**). Sample results from 2003 were used to develop the Watershed Management Plan and showed that the upstream station on the UNE campus had a healthy macroinvertebrate community, good water quality, low concentration of bacteria, and good instream habitat quality. The downstream station results showed a degraded macroinvertebrate community, impaired water quality, elevated concentrations of bacteria, and impaired instream habitat quality. Variation in water quality at these two stations is attributed to differences in land use and prevalence of impervious surface downstream (south) of campus. The Capisic Brook Watershed Management Plan acknowledges the need for implementation measures to improve water quality within the watershed. Maine DEP has five goals for Capisic Brook including: improvement of instream habitat quality; restoration of natural hydrology; reduction of toxics, nutrients, bacteria, and elevated water temperature in runoff; and improvement of dissolved oxygen levels. UNE remains committed to the protection of the watershed and the stream on campus.

Figure 4.3 Maine DEP Water Quality Sampling Locations

All proposed campus development projects will review potential aquatic resource and watershed impacts and avoid to the extent practicable and feasible, significant impacts to resources in project design and implementation. Proposed projects will submit project plans and designs to the City of Portland for municipal review, per the City's Land Use Code. As the campus is located within the Capisic Brook Watershed, UNE development projects are subject to comply with the Urban Impaired Stream (UIS) Standard of Chapter 500 of the Maine DEP Stormwater Management Rule. All natural resources on campus are protected by the Maine Natural Resource Protection Act (NRPA) which requires permitting/notification of all projects located in, on, or over natural resources or that are located adjacent to natural resources. All proposed projects will avoid and/or minimize impacts to natural resources to the maximum extent practicable and when impacts to areas adjacent to natural resources may not feasibly be avoided, projects will comply with NRPA permitting and mitigation requirements.

Floodplains

The FEMA National Flood Hazard Layer for Portland is currently under review and an updated flood map is approved as of June 20, 2024. One area of Minimal Flood Hazard (500-year floodplain) and one area of High Risk (100-yeard Floodplain) are identified within the proposed IOZ. The area of High Risk is mapped on the western-most portion of the proposed IOZ and continues off-site to the southwest, following the Capisic Brook (see **Figure 4.4**).

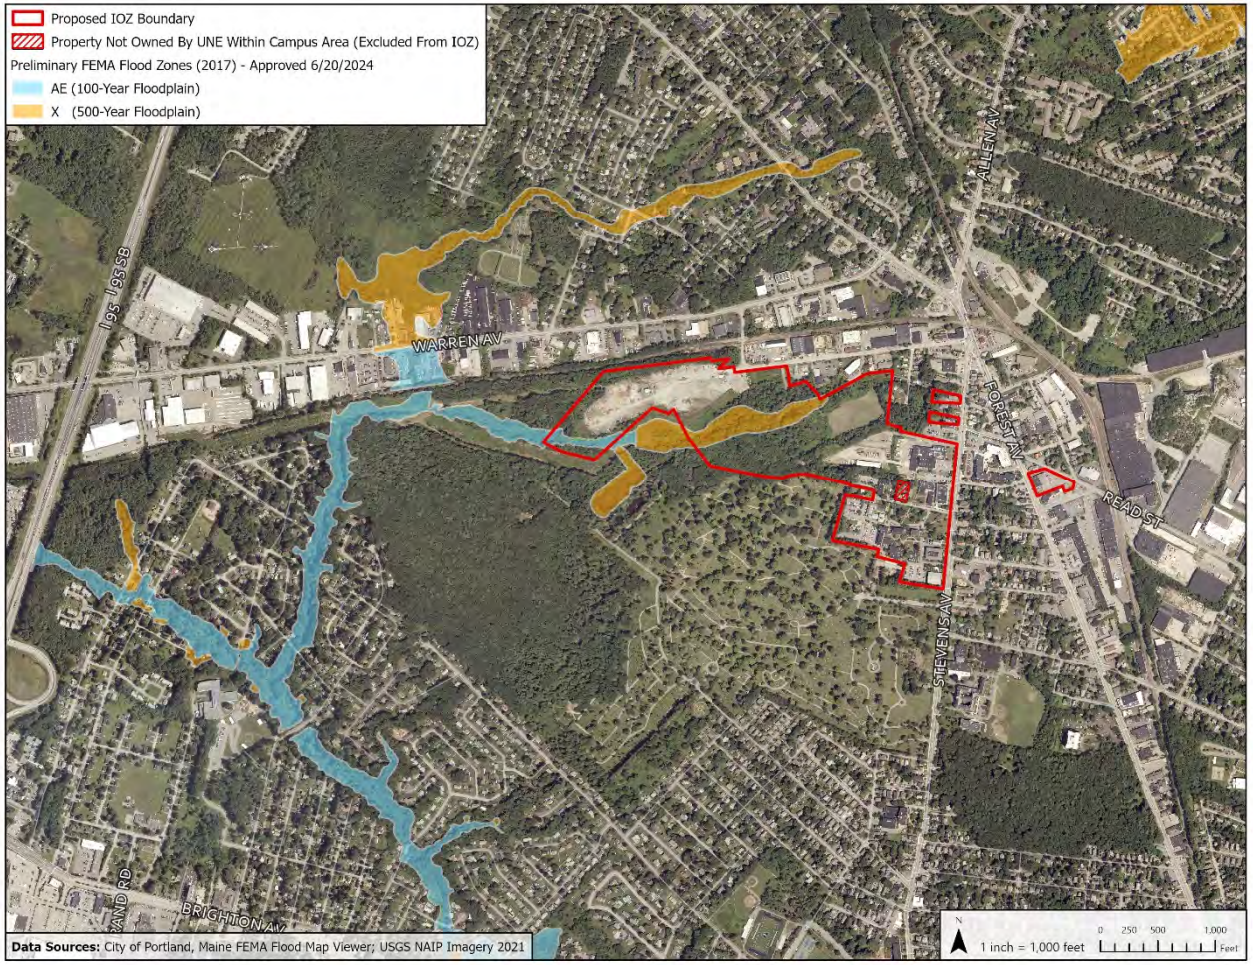

Figure 4.4 FEMA Flood Hazard Map

Proposed Future Development and the Environment

Future development will not impact existing streams on campus and minimum setbacks will be maintained for all future projects. In cases where development cannot reasonably avoid these setbacks, consultation with the City of Portland and Maine DEP will be conducted to determine potential permitting or mitigation requirements. Additionally, none of the proposed projects includes direct or indirect impacts to freshwater wetlands or potential open waters and no impacts to wetlands within the FEMA designated 100-year flood plain are included in the campus master plan. No areas of significant wildlife habitat on or directly adjacent to campus are identified in the Maine Environmental Review Tool. With each project, Best Management Practices (BMPs) will be utilized to prevent offsite impacts to natural resources: additionally, nature-based solutions such as rain gardens, bioswales, landscaping with native plants and nest boxes for birds and bats will be considered to improve post-development conditions. Resources and guidance developed by Maine Audubon, Maine DEP, and Maine Department of Inland Fisheries and Wildlife will be referenced for effective design that will benefit wildlife and support the ecosystem services of the campus open spaces.

UNE has committed to preserving a significant acreage of dedicated open space, as shown on **Figure 6.4**. These areas will be rezoned as Open Space Preservation (OS-P). The total acreage of UNE's campus is approximately 72 acres, with approximately 10 acres being dedicated as open space. The 10± Year Development Plan includes development of approximately 2± acres of impervious area in Phase 1 (0-5 years), 0 acres in Phase 2 (5-10 years), and 0.6± acres in Phase 3 (10+ years). In total, the proposed development projects are anticipated to result in an increase of approximately 3.5% impervious area across the campus over the next 10+ years. The minimization of impact to natural resources and creation of impervious areas is achieved through careful site selection, including siting the new A2 academic facility on an existing developed surface parking lot and siting the new F1 athletic facility in a previously developed portion of campus. Additionally, through the increase in allowable height, the building footprint for the new H1 housing facility is able to be minimized, preserving the adjacent natural resources. UNE has committed to preserving approximately 14% of its campus as Open Space Preservation (OS-P) area, as shown on **Figure 6.4**, with areas summarized in **Table 4.1** below.

Table 4.1

Open Space Area Calculations

Description	Area (acres)	% of Campus Area
Total campus area	72	N/A
OS-P area in westernmost part of campus	2.7	4%
OS-P area adjacent to Evergreen Cemetery	4.6	6%
OS-P area near Mayfield St neighborhood and Capisic Brook	3.0	4%
Total Open Space Preservation (OS-P) area	**10.3**	**14%**

Athletic Facility (Campus Master Plan Identifier: F1)

The development of the athletic facility will not have impacts to nearby natural resources (see **Figure 4.5**). The facility is proposed in an existing impervious surface lot near the UNE Intermodal Transportation Facility (ITF).

Figure 4.5 Proposed Athletic Facility (F1) Development and Adjacent Natural Resources

Residence Hall (Campus Master Plan Identifier: H1)

The Residence Hall and associated parking (see **Figure 4.6**) are proposed for development on the existing Gulliver's Field and have been planned to minimize natural resource impacts, however some impacts may be unavoidable. In cases where development cannot reasonably avoid these setbacks, consultation with the City of Portland and Maine DEP will be conducted to determine potential permitting or mitigation requirements.

Gulliver's Field is a mowed, turf grass soccer and athletic field currently used for informal recreation with low vegetative species diversity and low wildlife value but is adjacent to mixed hardwood forest and forested and shrub wetlands as described in the Ecological Communities section of this chapter. These adjacent forested habitats may provide habitat a variety of eastern warblers, ruffed grouse, the American woodcock, red and gray foxes, microtones, and mustelids and serve as stopover locations for spring and fall migratory passerine bird species.

No impacts or tree-clearing activities are proposed in the Campus Master Plan within the open space areas on campus; forested areas will remain unchanged and provide valuable wildlife habitat and open space.

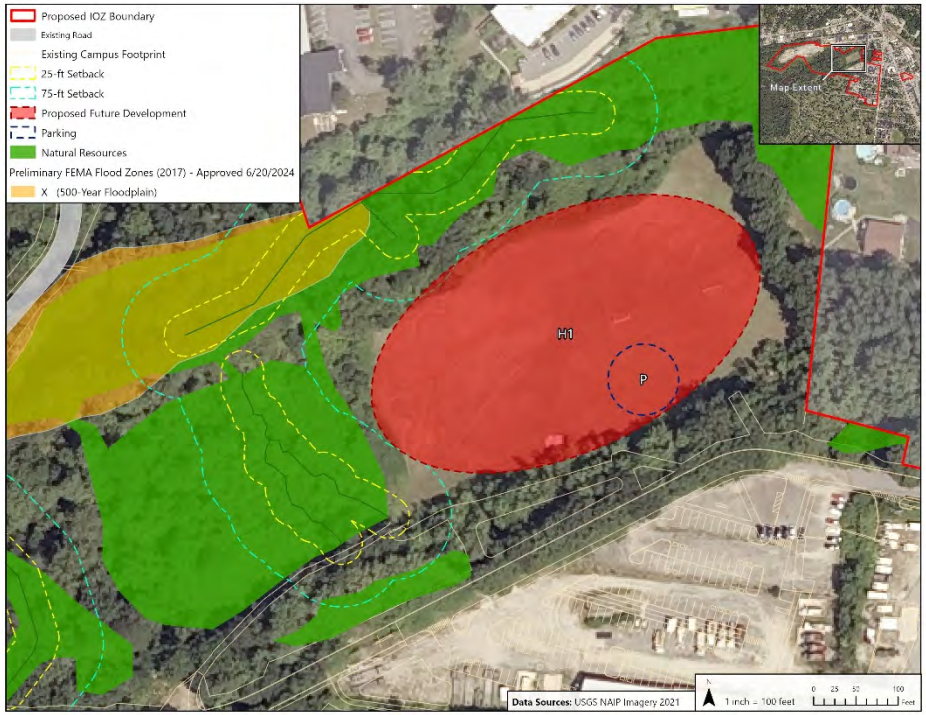

Figure 4.6 Proposed Residence Hall Development and Adjacent Natural Resources

Academic Building (Campus Master Plan Identifier: A2)

The proposed Academic Building will be built on an existing parking lot on the southwest side of campus (see **Figure 4.7**). No significant tree-clearing and no direct or indirect impacts to natural resources is proposed for this project.

Figure 4.7 Proposed Academic Building Development and Adjacent Natural Resources

Natural Resources Protection

UNE, in development of this IDP, has sited the proposed campus improvements in locations that avoid conflict with natural resources being contained to existing disturbed areas and maintaining open space (see **Figure 4.8**). Through thoughtful siting, impacts to the undeveloped and natural areas of the campus are avoided or minimized to the greatest extent practicable and overall contribute to the health of Capisic Brook by maintaining the stream's riparian zone, which provides canopy cover, flood protection, stabilizes soils, filters pollutants, and provides habitat for native wildlife. As previously stated, UNE is partnering with Portland Trails with the goal of providing more opportunities for the community to access Portland's open space and natural areas. UNE students and staff participate annually in coastal and river cleanup efforts and are part of a research team leading the effort to restore the American Chestnut tree, a keystone species of eastern U.S. forests, including Maine. In addition, UNE received funding approval to undertake a cleanup of the Campus Pond of accumulated debris, demonstrating the university's commitment to environmental stewardship.

With all campus improvements, consideration of the site's natural characteristics including soils, hydrology, slope, and vegetation as well as its proximity to wetlands, aquatic resources, and habitats will be evaluated, and impacts avoided or minimized to the greatest extent practicable and adhering to all related state and federal permitting requirements.

Specific to the Capisic Brook watershed, UNE understands its importance and will meet City and State stormwater management requirements for quality and quantity and consistent with earlier work on campus. The specific measures utilized to meet the regulatory requirements related to stormwater runoff will be determined during the site plan review process for each proposed facility. Items in the BMP toolbox include revegetation of currently impervious and de-vegetated areas, infiltration of stormwater where soil conditions permit, and under-drained soil filters. UNE will manage stormwater on-site before considering connections to the City's enclosed stormwater system. Further detail on stormwater management is provided in Chapter 5, "Infrastructure Plan."

As stated above, UNE is committed to including design elements that foster environmental stewardship and promote the health of ecosystems and the Capisic Brook Watershed. Incorporating wildlife habitat design into the project planning process will ensure that with each new project, additional greenspace and/or habitat is created. All proposed campus development projects will review potential aquatic resource and watershed impacts and avoid to the extent practicable and feasible, significant impacts to resources in project design and implementation. Proposed projects will submit project plans and designs to the City of Portland for municipal review and plans are subject to comply with the Urban Impaired Stream (UIS) Standard of Chapter 500 of the Maine DEP Stormwater Management Rule and NRPA permit requirements.

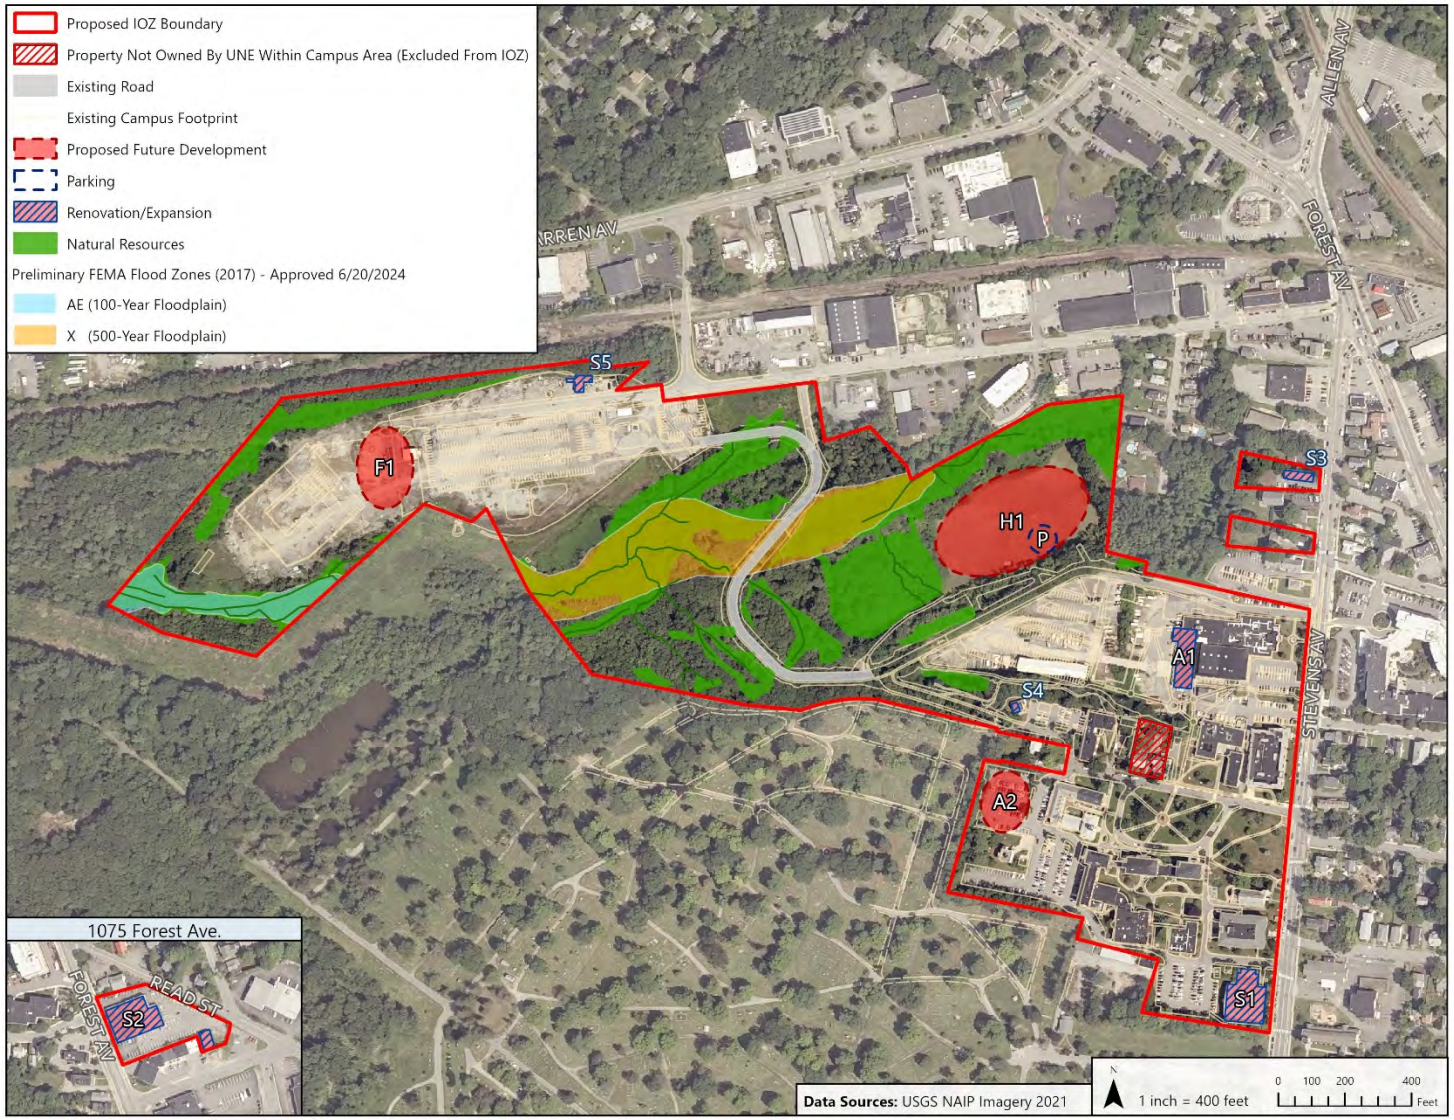

Figure 4.8 Natural Resources and Campus Master Plan

Operational Sustainability

Environmental stewardship is a core value of the University. UNE has been named one of the nation's most environmentally responsible colleges for seven consecutive years, according to the Princeton Review. In 2024, UNE was named in the Princeton Review's top 50 of the nation's most eco-friendly colleges. All new construction is conducted to the highest standards of sustainability, and all renovations are conducted with an eye toward improving environmental impacts. Each year, UNE invests in additional sustainable energy products (e.g., solar panels). As part of long-term plans for the campus, UNE expects to maintain, and where possible, broaden initiatives on its sustainable operation strategies.

Energy Conservation

UNE's Sustainability Office has been conducting greenhouse gas (GHG) emission inventories since 2008. The university's Carbon Monitoring Task Force has been charged with "making recommendations on energy demand, procurement, production, renewable technology implementation, emissions reductions and conservation." UNE voluntarily became a signatory to the Carbon Commitment in 2008 and as part of this commitment, created the university's Climate Action Plan (CAP) in 2010, which was subsequently updated in 2017. The UNE CAP has set an aggressive carbon neutral goal for 2040. The 2017 CAP update includes goals for GHG reductions and activities to help achieve those goals, including energy efficiency and renewable energy projects, building design and development standards (see Chapter 6), waste reduction strategies, alternative transportation initiatives (see Chapter 3), sustainability criteria integration into contracts, offset purchases, community-based marketing strategies aimed at sustainable behavior adoption for individuals, and integration of climate change and sustainability education across the curriculum.

The University's Energy Subcommittee regularly reviews operational efficiencies and monitors energy consumption internally through its direct digital controls and utility statements. Fiscal year 2023 usage for the campus was as follows: 4,668,514.67 kWh of electricity, 1,964.9 gallons of #2 heating oil, 2,146.6 gallons of propane, and 278,523.13 cubic feet (CCF) of natural gas burned in the campus' central steam plant and natural gas condensing boilers.

If the university realizes the full potential of development identified in the Campus Master Plan, the potential future usage of electricity and natural gas may initially be higher assuming similar operational conditions. However, with UNE's commitment to carbon neutrality, and advances in building technology, the actual consumption may be significantly less. UNE is unaware of capacity issues in these existing distribution systems and anticipates use of these systems to supply the future development. UNE will request capacity to serve letters from Central Maine Power (CMP) and Unitil for new projects during each site plan review process.

As detailed in the UNE Climate Action Plan, UNE has previously partnered with ConEdison Solutions to investigate a comprehensive energy efficiency program, and is now working with B2Q Associates to update it. The potential sustainable energy use opportunities being considered include further LED retrofits, solar thermal, solar electric, and boiler plant upgrades with potential fuel switching. Building automation controls and window replacements for the campus are currently in progress. UNE has also developed a purchasing policy for energy consuming appliances and equipment to guide future campus purchases that do more to consider life-cycle costs. UNE will also undertake a lighting audit and retrofit, considering life-cycle costs when deciding what fixtures to install or replace.

Waste Management

Appropriate disposal of waste is a priority of the Sustainability and Environmental Health and Safety (EHS) Department at UNE. The EHS Department believes that "all faculty, professional staff, administration, students, and patrons are entitled to a safe and healthy campus." To this end, UNE commits resources to remove recognized hazards, provide education and training, provide appropriate personal protective equipment, and holds everyone accountable and responsible for good health and safety practices. For all university activities, UNE implements and maintains the University's Environmental Health and Safety Manual (revised August 2019), which houses the campuses environmental health and safety policies and procedures in accordance with federal and state regulations and also maintains the campuses Chemical Hygiene Plan (revised May 2022). These policies and procedures are continuously reviewed to ensure that UNE is meeting the goal of providing a safe and healthy campus community.

Annual Waste Audit

UNE partners with its contracted waste hauler to conduct annual waste audits of all municipal solid waste (MSW) dumpsters and single-sort recycling containers on campus. The annual waste audit spans three weeks in October, is weight-based, and is reported through the annual GHG emissions inventory on a fiscal year basis. For the fiscal year 2023, the campus disposed of an estimated 60 tons of MSW, and an additional estimated 7 tons of mixed single-sort recycling and cardboard were separated for recycling.

Recycling

UNE encourages students, faculty, and staff to engage in recycling and waste reduction throughout campus operations. Single-sort recycling stations are available in all academic and business buildings and include a three-bin, color coded system: blue for returnable bottles and cans, green for single-sort recycling, and gray for trash. The green, single-sort recycling bins allow for the co-mingling of paper, plastics labeled #1-7, metal, and glass. Returnable bottles and cans are separated from the single-sort stream for the purpose of supporting the recycling program, as the funds collected help to purchase bins, labels, signs, and educational materials aimed at waste minimization. In fiscal year 2022, UNE categorized its recycled waste and found 3% cardboard, 4% returnables (or redeemables), 12% metal, and 16% single-sort materials.

Additionally, campus recycling includes batteries, fluorescent light bulbs, computers, and electronics through the universal waste program. Books and journals are either recycled through the single sort program or donated to Better World Books for literacy programs. Waste cooking oil is collected by Maine Standard Biofuels and incorporated into their Bioheat product. Ink and toner cartridges are recycled through our office supply contractor. Facilities staff recycle used motor oil, scrap metal, tires, pallets, and captured refrigerants as well. Unneeded, lightly used furniture is offered to other non-profits or municipalities.

Composting

Food waste, such as kitchen preparation food scraps, compostable utensils and dinnerware, and post-meal food scraps are collected from UNE's Nor'easter Café dining facility. Compost is collected by Garbage to Garden and brought to Benson Farm in Gorham for composting. In fiscal year 2023 over 3,222 gallons of food waste was composted from campus. The Green Office certification program also encourages individual offices to participate in the program, and the Communications Department, Library, and College of Graduate and Professional Studies have collection locations

for food waste in their kitchenette areas that are routinely collected by office staff and consolidated with the dining service waste for composting by Garbage to Garden.

Hazardous Waste

UNE is registered as a Small Quantity Generator (SQG) as defined by Chapter 851 of Maine DEP's hazardous waste regulations. The campus generates less than 220 pounds of hazardous waste a month and generates less than 1 pound of acute hazardous waste per month and does not accumulate more than 1 pound of acute hazardous waste at any one time. The hazardous waste generated on campus is gradually generated in small amounts in the research and academic laboratories. UNE does not anticipate increased hazardous waste generation and the future relocation of the Maine Army National Guard Vehicle Maintenance Facility will reduce the need to store hazardous materials on campus. All hazardous waste is appropriately labelled, stored, shipped, and managed in accordance with the Maine DEP hazardous waste regulations per Chapters 850-852, 857, and 875. The EHS Department oversees the management of hazardous waste and ensures the appropriate process documentation of all hazardous waste generated at the facility from generation to disposal.

Biomedical Waste

UNE is registered with DEP as a large quantity biomedical waste generator (a facility that generates 50 pounds or more of biomedical waste per month). Two types of biomedical waste are generated at UNE. The first is generated from academic and research labs and consists mostly of solid cultures of media, disposable culture containers and sharps. The second is generated by medical services and consists of blood-soaked material, personal protective equipment and other potentially infectious material. All biomedical waste is generated, managed, and disposed of in accordance with the regulations set forth by the DEP in Chapter 900, the Biomedical Waste Management Rules. Laboratory managers are responsible for the generation and packaging of biomedical waste while EHS oversees the program from generation, storage, transportation, and ultimate disposal. EHS maintains all paperwork associated with the transportation and disposal of biomedical waste. UNE has a biomedical waste management plan for the campus; the plan includes a description of the biomedical waste generated, packaging and handling procedures, training requirements, spill containment and clean up procedures, and contact information for persons responsible for biomedical waste management at the university.

Sustainable Landscaping

As stated above, there are two gardens on the campus of significance regarding sustainability - the Medicinal Herbal Garden and the Community Garden. UNE is committed to including design elements that foster environmental stewardship and promote the health of ecosystems and the Capisic Brook Watershed such as bird-safe window design, stabilizing construction disturbance areas with native seed mixes and revegetation utilizing native plants, in particular as buffers between development and natural areas; utilizing best management practices for stormwater retention and infiltration; limiting tree clearing; and removing existing trash and debris from aquatic resources. Incorporating wildlife habitat design into the project planning process will ensure that with each new project, additional greenspace and habitat is created.

Noise Generation

UNE's campus generates noise at low levels that are consistent with and generally not disruptive to the neighborhood. Measured sound levels are below the Noise Standards within the City's' Land Use Ordinance. Some periods of increased noise generation are anticipated during project construction and are addressed in Chapter 7 – Neighborhood Engagement.

5. INFRASTRUCTURE PLAN

Infrastructure Planning

Sustainable and resilient infrastructure is essential for the continued operation of UNE's existing campus as well as planned development. With the projected future demand realized through the Campus Master Plan, sufficient capacity to serve would be ensured. **Figure 5-1** illustrates existing City sanitary sewer and stormwater infrastructure within and surrounding the campus.

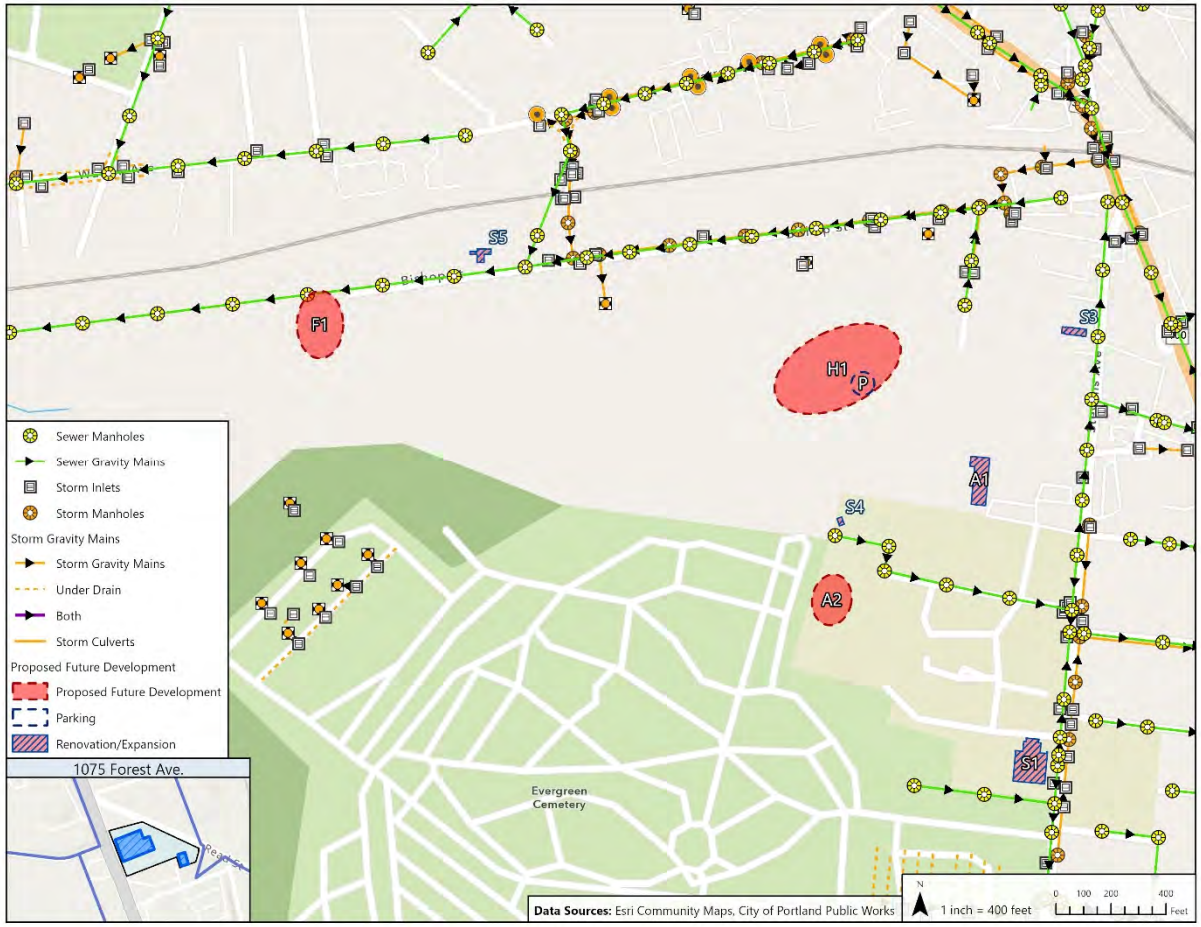

Figure 5.1 Existing Stormwater Infrastructure and Campus Master Plan

Stormwater Management

Existing Stormwater Infrastructure

Existing stormwater management systems on campus mainly utilize on-site stormwater quality and quantity BMPs including infiltration systems, with the secondary means being conveyance to the Stevens Avenue and Bishop Street combined sewer system. The value and importance of reducing stormwater runoff is reflected in UNE's recent development projects as evident in the design of the UNE Intermodal Transportation Facility, which reduced impervious surfaces by approximately 2.3 acres and utilized infiltration systems to minimize flow to the combined sewer. With the northwestern portion of the campus within the Capisic Brook Watershed, an urban impaired stream classified by Maine DEP, UNE seeks to actively contribute to the health of the watershed through the implementation of low impact development strategies.

The Bishop Street combined sewer has a Combined Sewer Overflow (CSO) located to the west of the UNE campus, which serves as a relief point during high-flow conditions. In low-flow conditions, combined sewer flows to a pump station located off of Congress Street, which sends flow to the East End Wastewater Treatment Plant. UNE understands the importance of reducing and minimizing flows to this combined system to help reduce the potential for overflows. The Stevens Avenue combined sewer is routed to Back Cove, where it is ultimately conveyed to the East End Wastewater Treatment Plant.

Future Stormwater Flows

UNE will continue to make efforts to minimize the impact of its future development stormwater runoff through the continued and expanded use of infiltration systems. All projects at UNE will be designed in compliance with the State and City standards. Wherever possible, UNE intends to manage stormwater on site to reduce flows to the City's combined system and consistent with its past, UNE will meet or exceed local and state regulatory requirements.

The University also has an active Spill Prevention Control and Countermeasure Plan and Stormwater Pollution Prevention Plans, further assisting them with regulatory compliance.

Utility Demand and Capacity

Water

Water services are supplied by Portland Water District (PWD). The two water mains that serve the campus include a 12" water main in Stevens Avenue and a 12" water main in Bishop Street. Fire protection services include hydrants that are located along Warren Avenue, Forest Avenue, Bishop Street and Stevens Avenue. UNE strives to limit water consumption through various means including low flow fixtures. Water usage in fiscal year 2023 was 13,741.4 gallons per day (GPD).

Ability to serve letters have been provided by PWD for two current projects (as of the preparation of this Plan) including the Department of Campus Services Maintenance Facility building and the COM building. Based on correspondence with PWD, UNE does not anticipate any issues with capacity

of the existing water distribution systems to support the university's Master Plan and will provide ability to serve letters from PWD as part of future Site Plan Reviews.

Wastewater

Wastewater from UNE is discharged to a combined sewer system in College Street and Stevens Avenue. With a conservative assumption that no water is exported (used for drinking water as an example) and assuming wastewater discharge is equivalent to water usage, in the fiscal year 2023 wastewater discharge was 13,741 GPD. Future planned development is expected to increase wastewater discharge. All future projects will provide an ability to serve letter from the Department of Public Works as part of Site Plan Review. UNE also participates in the City's Fats, Oils, and Grease (FOG) Program, to responsibly dispose of these biproducts; maintenance of these systems is performed regularly to ensure they are operating effectively and not discharging to the City's sewer system.

Electricity

Central Maine Power currently provides electric power to the campus. As discussed in Section 4 Environmental Plan, fiscal year 2023 usage for the campus was: 4,668,514.67 kWh of electricity. UNE will request capacity to serve letters from Central Maine Power (CMP) during each site plan review process but does not anticipate any electrical capacity issues in the future.

Telephone & Data

UNE is currently serviced for their communications services by Consolidated Communications and plans to continue to work with this provider in the future. Additionally, UNE internet is serviced by Consolidated Communications and Spectrum and plans to work with these providers in the future. UNE does not anticipate any capacity issues or disruptions in the future.

Natural Gas and Heating Fuels

Unitil currently provides natural gas service to the campus. Natural gas services are located within Bishop Street and Stevens Avenue. Natural gas services required for future buildings will be coordinated with Unitil during the site plan approval process. Fiscal year 2023 usage for the campus was 278,523.13 cubic feet (CCF) of natural gas burned in the campus' central steam plant and natural gas condensing boilers. Two new 4" service lines have been installed to supply natural gas to future projects including F1 (Athletic Facility) from Bishop Street, and H1 (Residence Hall) from Stevens Avenue. The remaining planned projects will not require upgrades to existing natural gas services. If determined to be needed, gas service for future projects will be evaluated during site plan review. With UNE's commitment to carbon neutrality, and advances in building technology, future natural gas consumption will be limited to the greatest extent possible during the development of the Campus Master Plan.

Further, as discussed in Section 4 Environmental Plan, fiscal year 2023 usage for the campus included 1,964.9 gallons of #2 heating oil, and 2,146.6 gallons of propane. UNE does not anticipate any capacity issues securing heating fuels in the future.

Public Safety

The well-being of UNE's students and faculty is the top priority of UNE. This goes hand in hand with safety and security on campus. UNE has security officers that provide 24/7 patrol and dispatch coverage of the campus. These services are essential for crime prevention and emergency response. In addition to on campus security, UNE uses Rave Mobile Safety, an emergency notification service, which provides faculty, professional staff, and students with timely information and instructions during emergencies.

Sustainable Guidelines

UNE is committed to developing and maintaining sustainable and resilient infrastructure to support its current and future campus operations. UNE's proactive approach includes effective stormwater management through on-site infiltration systems and compliance with state and City standards to minimize runoff. UNE's water and wastewater systems are supported by Portland Water District and the City's infrastructure. UNE will continue to ensure sustainable capacity and growth of water and wastewater systems. UNE prioritizes efficiency and sustainability in its use of electricity, natural gas, and heating fuels. Additionally, UNE's robust public safety measures and reliable communication services ensure a secure and well-connected environment.

UNE has, and will continue to, support infrastructure sustainable growth through several key guidelines. For water conservation, UNE will implement and maintain water-efficient or low-flow fixtures to significantly reduce water consumption. For stormwater management, UNE will continue to incorporate and uphold green infrastructure practices and promote on-site infiltration. Enhancing energy efficiency is also a priority; UNE will upgrade and sustain energy-efficient systems such as LED lighting and energy-efficient HVAC systems. Achieving LEED Silver certification will continue to be the standard for energy efficiency. UNE is also dedicated to preserving existing natural habitats, integrating them into the campus landscape, and preserving open spaces and wetland areas where practicable. Through these practices, UNE will continue its commitment to a sustainable and environmentally responsible future.

6. DESIGN

UNE recognizes that the success of future development relies on structured design guidelines, review, and accountability. UNE is committed to maintaining its existing building stock, including those within the Westbrook College Historic District. Where feasible, UNE will renovate its existing buildings to create internal efficiencies and provide for continued and cutting-edge learning excellence, while respecting the campus' historic character. Where necessary, UNE will develop new buildings in accordance with the Campus Master Plan. UNE has committed to assessing the applicability and feasibility of the construction of new buildings to State of Maine Energy Stretch Code (IECC 2021), which meets and, in some places, exceeds Leadership in Energy and Environmental Design (LEED) Silver standards. The University also aims to design and build structures that are at significantly more energy efficient than comparable building stock, verified with third-party energy modeling. Building systems will be evaluated for life-cycle costs and take into account life-cycle fuel consumption and initial capital investment. This assessment informs the decision-making process for future development. New construction will also adhere to considering sustainability and energy efficiency in the Request for Qualifications (RFQ) process and will continue to integrate best practice design into all new projects. Each individual project will work within the planning framework and goals that set out to minimize its adverse impact on the campus, the environment, and the community.

Development Design Impact Considerations

UNE's campus includes one of the twelve locally designated historic districts in the City of Portland, and a nationally registered district, which is the Westbook College District and its contributing buildings of Alumni Hall, Hersey Hall, Goddard Hall, the Abplanalp Library and the internal common or College Green. The proposed campus development looks to balance the campus' history and neighborhood context with UNE's programmatic needs. Predominant design characteristics of the historic property and resources (i.e., materiality, scale, orientation, etc..) are considered to establish a baseline for informing design principles. The design focuses on minimizing environmental impact while creating a cohesive campus with sensible and historically sensitive buildings and inviting open spaces. Within this framework, UNE aims to preserve the historic character of the existing campus and find opportunities for modernization and set the tone for the future of UNE and its commitment to the modern delivery of healthcare. The campus development will be planned to complement and enhance the community by respecting architectural character, minimizing visual and physical burdens, and creating enhanced open space accessible to all. Building siting will focus on campus optimization and minimizing impacts on neighbors through the use of buffers, landscaping, and architectural design. As much as possible the development will seek to create more compact circulation, limit new shadows and wind, and minimize the visual impacts from the surrounding neighborhood. Existing buffers will be maintained, as much as possible, to maintain the current visual character of the campus. Similarly, no new campus entrances are planned, which might adversely increase or change the existing public ways. The campus frontage is anticipated to remain the same with the Campus Master Plan.

Figure 6.1 Proposed Development in 3D - Overview

Neighborhood Integration

The neighborhood design standards establish a framework for a visually and architecturally integrated campus development and ensure that the campus is safe, environmentally sensitive, and minimizes adverse impacts on and off the campus. With respect to how the potential campus interfaces with the neighborhood, these design standards address the scale and massing of buildings, appropriate materials and colors, rooflines, locations of building entrances, building linkages, architectural detailing, adjacent open spaces, campus circulation and similar features.

Figure 6.2 Proposed Development in 3D - View from Stevens Avenue

Figure 6.3 Proposed Development in 3D - View from Mayfield Street

Historic Preservation and Impact on Future Designs

The Westbrook College Historic District encompasses the historic core of the campus and is bounded on the east by Stevens Avenue, and on the north by College Avenue. The surrounding context and history set the tone for the campus character and future development integration. UNE is committed to respecting and celebrating historic preservation and maintaining the overall legacy of the neighborhood. UNE has successfully designed, permitted, and renovated several historic facilities on campus. To date, Goddard Hall, Hersey Hall, and Alumni Hall have been revitalized through full historical renovations permitting through the Historic Preservation Commission. The exterior of these facilities has been maintained and restored to their original grandeur and color. All work done to Ludcke Hall, Proctor Hall and the Abplanalp Library has been done with an effort to preserve the historical nature of these facilities and has also been permitted through the Historic Preservation Commission. UNE's renovation of Alumni Hall was recognized with Maine Preservation's 2016 Honor Award as an outstanding example of historic preservation.

The Westbrook College Historic District building characteristics include a range of late 1800s and early 1900s architectural styles including Gothic Revival, Italianate style, and Colonial Revival. Creating an intimate scale and romanticism focus with earthy materials and sophisticated aesthetics. These styles have provided guidance on the design characteristics of recently completed buildings such as the School of Pharmacy and College of

Dental Medicine building located directly on Stevens Avenue. Brick blends, sizing of windows and doors, building proportions and roof edge details allow newer buildings to seamlessly blend with those within the historic district and surrounding community.

Sustainability and Resiliency

UNE has a commitment to its community and natural surroundings. Campus development will further improve UNE's status as a resilient campus that provides a responsiveness to the planet and inspire the next generation of environment stewards. Buildings will be situated and oriented to take advantage of passive solar energy, natural light, air, and views. New buildings will take a low impact development approach to manage stormwater runoff and emphasize conservation and use of on-site natural features to protect water quality. The use of high efficiency building envelopes and mechanical systems will reduce the energy necessary to operate the building, further increasing resilience and protecting against unanticipated events. Universities are a vital partner to the communities they serve, and UNE will ensure the campus is part of an overall community solution to sustainability and resiliency.

Maximum Heights

UNE uses a multi-pronged methodology to determine the appropriate height profile for potential future development within the IOZ boundary to ensure an appropriate scale, while maximizing the utilization of space and minimizing impacts to the environment and surrounding neighborhood. As shown in **Table 2.3**, heights and square footages have been identified that reflects UNE's campus modernization needs. The development proposed in the Campus Master Plan would be allowed in the proposed Institutional Overlay Zone, including allowances of up to 85 feet in the areas of the proposed Residence Hall (H1), Athletic Facility (F1), and Bishop Street (S5) renovation/expansion and up to 75 feet elsewhere on the campus, consistent with the maximum allowable height in the proposed underlying zone of B2. Along the campus edges, where the campus is located adjacent to residential and open space zones, a 25-foot-wide transition zone will allow for building heights of up to 50 feet (see **Figure 6.4**).

For the proposed student housing building, the additional height is necessary to efficiently accommodate approximately 350 beds, a threshold determined through financial analysis to ensure project viability. By building upward rather than outward, UNE can significantly reduce the structure's footprint, preserving adjacent natural resources and maintaining more open space on campus. The 85 feet will accommodate a 7-story building, with a 25,000 square foot footprint. This was calculated assuming 500 square feet per bed, with a lower level floor to floor height of 15' (programming may include fitness center, laundry, mechanical, community rooms, etc.), with the upper level floor height of 11' per story, for a total height of 81', plus roof parapet or pitch dimensions.

For the second location, at the rear of campus, the 85-foot height allowance will provide essential flexibility for the development of a new athletic facility. This height will allow room for parking beneath the structure, if necessary, and/or potentially a larger mixed-use building. Given the constraints of the campus footprint and UNE's commitment to responsible land use, vertical expansion is a key strategy for balancing growth with conservation. Allowing increased height in these specific areas ensures that future campus development can proceed efficiently, minimizing land disturbance while supporting UNE's evolving academic, athletic, and student life needs.

Figure 6.4 Proposed Open Space and Maximum Height Map

These heights were determined using context-sensitive best practices, similar to those used to develop height zones for UNE's Biddeford campus. The approach includes enabling larger buildings within the campus core while providing height transitions and expanded setbacks to better align with the scale of the residential and historic neighborhoods along the campus' edge. Consideration was also given to the campus' natural topography when determining maximum heights, to minimize perceived height from adjacent streets and neighborhoods. Dedicated open space areas reflected on Figure 6.4, such as along Capisic Brook, are identified as no-build areas, to preserve existing natural resource areas. Consistent with the City of Portland's recently adopted ReCode, UNE is seeking an increase in allowable maximum height from 75-feet (per the proposed underlying zone of B-2) to 85-feet in specific locations on campus to allow for densification and to minimize impacts to natural resources. The resulting height profiles are the basis of the maximum heights in the Regulatory Framework.

Transition Zones

UNE has identified transition zones along the edges of the IOZ boundary to allow for an appropriate relationship to the surrounding context and create a consistent scale of development. **Figure 6.4** depicts a 25-foot-wide transition zone around the interior perimeter of the contiguous campus with a maximum height in that transition zone of 50-feet, as well as a triangular area adjacent to the proposed housing site with a maximum height of 50-feet. In the area of campus adjacent to the Mayfield Street neighborhood, an open space area 35 feet in width provides buffering and transition from the residential neighborhood to the interior 85-foot maximum height at Gulliver's Field. The open space areas, which will be rezoned to Open Space Preservation (OS-P) will be no build areas. Activities within the OS-P will comply with the requirements of the City's Land Use Code.

Safety & Environment

UNE is committed to maintaining a safe environment for all users in and around its campus. The Campus Safety and Security Department monitors the campuses through in-person patrols and CCTV cameras and provides response to any situation that may arise, around the clock, every day of the year. UNE recognizes that environmental design can play a large role in creating a safe place. To this end, UNE has focused on providing a clean and aesthetically pleasing campus environment that is designed with vandal-resistant materials and is providing clear and properly sized signs in safe locations to ensure safe wayfinding. Paths from transit stops, bike storage areas, and parking areas to main pedestrian entrances are well-lit with clear sight lines. Street-level elevations and landscaping areas are designed to minimize potential hideouts and blind spots. Call boxes with blue lights are distributed across campus and are easily identifiable as well as the installation CCTV monitors in more remote areas provide additional safety measures. An Important element is the adequate lighting levels on walkways, parking lots and roadways as well as encouraging activating spaces to encourage many eyes and people. UNE's Campus Safety and Security Department provides a Clery Report every year that summarizes the past year's offenses and crime statistics on each of its campuses. Over the last 3 years there have been no events reported related to issues stemming from Crime Prevention Through Environmental Design (CPTED) deficiencies on the campus. The University feels that active CPTED during the planning of projects has contributed to low crime statistics.

Design Guidelines

School integrity, academic achievement, and productive student lifestyle is reflected in the institution's physical building and campuses. To ensure that this character is intentional and consistent across UNE's Portland campus, the following Architectural Design Guidelines have been established. These guidelines will preserve and enhance the image of the University's quality, beauty, durability, and history.

UNE has developed a Master Plan (see **Figure 2.1**) and guidelines to enhance its campuses and help it fulfill its greatest potential. The Master Plan identifies the future programmatic needs and generally locates future building based on connectivity, height strategies, and sustainability approaches. Where possible buildings are clustered close together to encourage dense development while reinforcing active outdoor spaces, creating functional linkages with surrounding facilities. The Architectural Design Guidelines are to be used in conjunction with the Master Plan for consistency on the Portland campus and provide an overarching framework while still allowing flexibility in individual building design. The Architectural Design Guidelines provide direction for future development in the IOZ around the visual identity, building location, mass, and consistent use of materials.

Architectural Design Guidelines

The Architectural Design Guidelines were developed to address the following requirements and needs of UNE. These guidelines are intended to provide general guidance and direction and are not intended to supersede any local, state, or federal codes. It is the architect's responsibility to comply with all applicable codes.

1. Cohesive Campus

The overall composition and experience of the campus will be considered for cohesive identity.

2. Building Design

Building façade materials will be of high quality, durable to the weather, and contribute to an attractive campus experience.

3. Building Entrances

Building entrances will include prominent facades and be oriented toward pedestrian-oriented activity areas, including parking areas, to facilitate safe and barrier free access.

4. Lighting

New or renovated buildings should have adequate exterior lighting to ensure that entrances and surrounding areas are safe. All new exterior lighting will be selected to provide lighting levels that meet the safety criteria of the Illuminating Engineers Society of North America, IESNA. Consideration will be given to limit light trespass and glare into neighboring properties through the use of cutoff fixtures at the edge of campus, resulting in less light spillover into the surrounding community. Refer to **Attachment B** for UNE's Lighting Standards.

5. Outdoor Spaces

Building designs should strive to include a variety of open spaces and activities ranging from small intimate courtyards for contemplative study to open lawn areas for informal recreation and outdoor classes. Where applicable, provision should be made during the programming and conceptual design of new facilities to provide opportunities for outdoor use of open space as part of the site and for integration within the larger open space/conservation network.

6. Mitigation of Impacts

Buildings and site development will endeavor to minimize potential negative impacts related to shadows, wind, noise, heat, glare, lighting, contaminants, and the environment.

Visual Identity

The historic nature of the buildings located within the Westbrook College Historic District provides the underlying baseline for the visual identity of new proposed buildings. In addition to creating a consistent historic language, universal design elements will be considered. Universal Design is the design and composition of an environment so that it can be accessed, understood, and utilized to the greatest extent possible by all people regardless of their age, gender, or ability. All new buildings will be in accordance with ADA requirements. The University is committed to making its spaces accessible to the public. The University employs a comprehensive and consistent interior and exterior signage system on campus to establish a unified visual identity. This aids in the cohesiveness of the campus and creates a familiar visual style for information. All signs comply with ADA guidelines.

Building Location

The Master Plan identifies potential building sites and open spaces. This framework provides guidance to ensure a cohesive campus and that the University's goals are being met. The Architectural Design Guidelines will reinforce the University's Master Plan while providing further direction on site elements. Access for emergency and maintenance vehicles, ADA issues, the relationship of new facilities with respect to existing campus elements, and the surrounding natural environment must be considered and maintained with each new building or renovation/expansion. In addition to new connections, new buildings and renovations/expansions must consider existing building relationships to ensure campus functionality and space activation are enhanced and not negatively impacted. Each new project will need to include pedestrian pathways and thoughtful, placemaking design to reinforce the Master Plan's vision.

Massing

The shape and size of each potential building is a balance of programmatic needs, site constraints, and appropriateness based on the historic context and University's goals. Human scale, pedestrian orientation and circulation, entrances and relationship to open space are key elements to consider. The perceived proportions of both individual and the collective buildings need to consider visual connections and sight lines. Deliberate efforts need

to be made to avoid adverse impacts on surrounding neighborhood context. The Architectural Design Guidelines provide human scale strategies to deploy to any new building or addition.

Building Materials and Systems

Material selection is critical for maintaining the overall aesthetic vision while ensuring performance standards are met. The American Society for Testing and Materials (ASTM) is recognized as the industry standard for establishing the performance requirements for various building materials. Adhering to ASTM standards for design criteria, material performance, and construction will provide quality control levels while eliminating untested or unproven materials, products, and systems from consideration on future projects. Materials selection will consider long-term maintenance and life cycle costs. Life Cycle Costing (LCC) is a process used to select the most appropriate and durable material based upon the owner's ability to initially purchase it, evaluate the materials' longevity, and its expected maintenance costs. LCC systems principally address mechanical, electrical, and plumbing; however, can also include materials associated with the aesthetic character of a project as well. Analysis of architectural, civil, and structural materials tends to be a balance of vendor reputation, past performance, environmental factors, and maintenance resources. The University's life cycle expectations are based on a 40-year building life. In addition, materials shall be considered on their physical make up and performance to ensure no materials that contain harmful substances or release volatile organic compounds are being used. The University considers WELL Building Design and U.S. Green Building Council (USGBC) design features in its projects. WELL, is a performance-based system for measuring, certifying, and monitoring features of the built environment. No asbestos containing materials, lead, PCBs, or mercury will be allowed in construction. UNE will strive to eliminate the release of volatile organic compounds to the extent practicable. Energy-efficient design will be incorporated into the design of each new project. The University has adopted the Maine Energy Code and whenever feasible, new, and renovated buildings will be designed with approaches targeting energy conservation and energy efficiency. UNE uses the IECC or USGBC LEED Silver rating for its energy efficiency and sustainability baseline. UNE is also a signatory of the Carbon Commitment and is striving for carbon neutrality.

Signage

UNE has established a standard for signage for their Portland campus, which is included as **Attachment A** to this IDP. The signage standards will be used for each future project to ensure consistency throughout the campus. These standards include directional signage for pedestrians and vehicles, as well as campus maps, building identification, and campus identification signs.

Exterior Lighting

Additionally, UNE has established exterior lighting standards for its Portland campus, outlined in **Attachment B** of this IDP. These standards will be applied to all future projects to ensure consistency across campus. They include lighting fixture distribution classifications, performance standards for different areas—such as roadways, parking lots, and walkways—requirements for lighting controls and equipment, and specific standards for athletic field lighting. Establishing clear lighting standards helps enhance campus safety, improve energy efficiency, and support UNE's commitment to sustainability.

7. NEIGHBORHOOD ENGAGEMENT

Being a good neighbor and having meaningful engagement with the community is critical to UNE's success. UNE makes every effort to being a respectful and understanding partner to its adjacent communities. An open exchange of information, ideas and feedback allows for vetted decision making and ensures everyone benefits from future plans and growth while minimizing adverse impacts. This engagement foundation allows the community to flourish and address concerns together. UNE ensures their partnership and communication goes above and beyond standard outreach. Informing abutters within a 1,000-foot radius, going beyond the 500-foot radius requirement, UNE is committed to including as many community members as possible in the IOZ process and Campus Planning.

Ongoing Community Engagement

UNE understands that its vision and growth is dependent on the overall success of the entire community, and this begins with open communication and collaborative engagement. UNE is committed to building and maintaining trust by clearly and consistently engaging its neighbors on both the institution's core mission and neighborhood concerns. The surrounding community is a diverse section of the city with many perspectives and goals. The campus is an important component that acts as a transition between commercial and industrial businesses in the Forest Avenue, Morrill's Corner and Warren Avenue corridors and the residential neighborhoods of Deering Center, Stevens Avenue and Mayfield Street. UNE values its role with both the local residential communities and the area businesses and strives to be fully supportive of the health and vitality of its neighbors. Over the years, UNE has established an honest and reliable communications, such as with the Deering Center Neighborhood Association, and UNE is committed to maintaining an open dialog with all of its neighbors, to resolve disputes quickly and fairly, and to ensure that its growth not only provides a robust, highly educated future workforce, but that also enhances the neighborhood's unique diversity, economy and livability. To do this, UNE proposes the following ongoing community engagement initiatives to ensure the surrounding neighbors are kept informed of UNE's future development plans and to gather any feedback from the public related to projects or operations on the UNE campus.

1. Develop a comprehensive Construction Management Plan utilizing the City of Portland's template to provide information on maintaining normal campus operations, providing continual public safety, and minimizing impacts to areas surrounding the campus during project construction. More information on the Construction Management Plan is below in this chapter.
2. Provide high level monthly project updates for all current/active projects on the Campus Planning page of UNE's web page (www.une.edu/campus/campus-planning). This web page will be accessible to the public.
3. Create a dedicated email address (uneprojects@une.edu) to allow neighbors to forward questions, concerns, or feedback directly to UNE's Planning Department and project team members. These emails will be answered in a timely fashion by the people directly involved in the construction activities. This email will also be utilized to send out specific project updates and potential impacts to its neighbors on current projects. Email updates will be sent out to neighbors who request to be included on the updates.
4. Continue to attend regularly scheduled local community neighborhood association meetings, like the Deering Center Neighborhood Association (DCNA), to present and review future development plans and receive ideas and feedback.

UNE's community reach is broad and deep in Portland, Cumberland County, across the State, and the region, with particular benefits to health care services, student and faculty volunteer initiatives for the marginalized and underserved, and educational benefits for residents. UNE is Maine's largest

private university and the state's largest health care professional educator. UNE is also one of the region's major employers and ranks in the top quartile of Maine workplaces for the size of its workforce. Given this broad impact and influence it is important for UNE to have ongoing community engagement and align with all stakeholders.

UNE partners with external community focused associations that can help coordinate outreach and amplify messaging. These groups include the Deering Center Neighborhood Association, Friends of Evergreen, Portland Trails, etc. A neighborhood meeting was held on June 13, 2024, to provide the neighborhood with background information on the IOZ process and to garner feedback on UNE's Campus Master Plan. A second neighborhood meeting was held on October 30, 2024, at 6pm in the same location as the first meeting, to provide an update on the IOZ process and share materials from this IDP and from the Regulatory Framework. In addition to the required neighborhood meetings, UNE has hosted meetings on July 2, 2024, and September 16, 2024, with the Deering Center Neighborhood Association (DCNA), to share updates on the IOZ process and solicit feedback from this important neighbor to UNE.

A Community Advisory Group will be created for the purpose of sharing information on project development, planning, and seeking input. To the extent practicable, the group will be comprised of representatives of interested groups such as the Deering Center Neighborhood, parks and trails, bicycle/pedestrian, public transit, and the business community.

Property Management Framework

UNE directly oversees the maintenance and care of its facilities. This includes Safety and Security, grounds and building maintenance. Should operational issues arise, neighbors are encouraged to reach out to inform UNE of their concerns. The UNE phone line is answered 24/7 and persons can report concerns directly at any time. UNE has an on-call roster of technicians available to respond to emergencies in the evenings, overnight or on weekends or holidays.

UNE does not inspect or approve any off-campus housing and only provides an off-campus housing list as a convenience to students and landlords/rental agencies. UNE operates under the assumption that landlords/rental agencies conduct business within the guidelines of the law and all contractual agreements are between students and the landlords or agents. Any property issues of non-university properties would be dealt with through the appropriate resources. UNE provides an Off-Campus Housing Disclaimer that outlines its general approach.

Property Acquisition and Disposition Communications

UNE has established strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods. This includes alerting abutting properties of the transition of ownership and providing the appropriate contact information should it be required.

Student Service Learning and Volunteerism

Student learning and volunteerism aligns and integrates academics with the needs of the community. This learning strategy integrates meaningful community service with instruction and reflection to enrich the learning experience, teach civil responsibility, and strengthen communities. Community engagement is a core component of all UNE health professions programs and Student Service Learning and Volunteerism is a key

commitment of the university. Through structured service learning and volunteer opportunities, UNE students play an active role in promoting health, with an emphasis on serving Portland's vulnerable citizens. More than 700 health professions students annually provide hundreds of hours to non-profits across the city, often in interdisciplinary team-based groups that maximize the impact to community members. Benefits of UNE's Student Service Learning and Volunteerism includes culture competency, professional skill development, real-world application, and an opportunity to give back to the local community.

Service to the City and Region

UNE students and staff volunteer and donate generously to the local communities. They provide thousands of hours of service annually. Some examples include:

Health Care

UNE educates approximately 2,500 health professions students annually, nearly all of whom advance their clinical knowledge and skills by completing student practicums with health care affiliates in Portland, across Maine, and throughout New England. UNE has well established, long term academic and clinical partnerships with over 65 organizations in Portland alone, including major health systems, retail pharmacies, elder care facilities, agencies supporting disadvantaged residents, physical therapy businesses, and the Portland School System, among many others.

- Hundreds of UNE health care students provide thousands of hours to nonprofits in southern Maine, including the City of Portland, annually.
- In 2023 there were nearly 20,000 visits to one of UNE's Portland-based community outpatient health clinics, offering reduced cost care:
    - Dental Hygiene Clinic 2,540 (Over 11,400 visits in last 4 years)
    - OT/PT Lab and Rehab Clinic 1,135 (Over 4,700 visits in last 4 years)
    - Oral Health Center 16,701 (Over 139,000 visits in the last 10 years)
- Allied Health Professions Students provide many hours of service at a number of Portland clinical sites.
- Dental students have annual rotations at Greater Portland Health
- Physical Therapy students provide services in 21 clinical locations in Portland.
- Applied Exercise students provide services in 6 clinical locations in Portland, including Portland High School
- Dental Hygiene students provide service in 3 clinical locations in Portland including St. Brigid's School
- Dental Hygiene students provide service at Portland Women, Infants & Children (WIC) sites, with 130 outpatient visits in 2023.
- Public Health, Social Work, and Nutrition students provide services at 13 clinical locations in Portland.
- Athletic Training students provide services for Deering and Portland High Schools
- Nurse Anesthesiologist students provide services for patients at Maine Medical Center and Mercy Hospital
- Occupational Therapy students provide services at 8 clinical sites in Portland including STRIVE, Long Creek Youth Development Center, and the Boys and Girls Club
- Physical Therapy students provide services at 11 clinical sites in Portland.
- Hundreds of UNE Nursing students provide a range of services at Portland health care providers and public health centers.
- The Cedars Portland senior living community has engaged the CDM to serve as a dental home for its residents.

- UNE COM supports many trainings for Portland-based surgeons, physicians, and EMTs.
- In 2024, 9 COM students were chosen for Maine Medical's Residency Program.
- In 2024, 60 COM students completed clinical rotations at Portland health care centers (majority Maine Medical Center and Northern Light Mercy)

Public Health

UNE's Center for Excellence in Public Health (CEPH) provides education and service to the community and administers the Maine Area Health Education Center (AHEC). Portland and the surrounding communities are partners and recipients of these services.

- CEPH implements the State of Maine's SNAP-Ed program. Since 2012, the City of Portland's Public Health Division Nutrition Educators have provided Maine SNAP-Ed programming including direct education and policy and systems and environmental change interventions for eligible participants in the Portland community.
- Between 2016 and 2022, CEPH oversaw statewide substance use prevention efforts on behalf of the Maine Center for Disease Control and Prevention (CDC). The City of Portland was one of CEPH's subcontractors and implemented substance use prevention interventions in Portland.
- Between 2018 and 2020, in collaboration with UNE COM, CEPH oversaw a federally funded Primary Care Training and Enhancement Champions grant, through which a physician from GPH participated in a 2-year fellowship to improve services for people with opioid use disorder.
- Between 2020 and 2022, in collaboration with GPH and the Portland-based Maine Access Immigrant Network, CEPH evaluated a federally funded project on behalf of the Maine CDC to address health disparities in diabetes and HIV among Black and African immigrants, refugees, and asylum-seeking individuals in Cumberland County.
- Maine AHEC Network engages University of New England health profession students in community-based learning experiences with underserved communities in Portland. Maine AHEC Network coordinates these events in collaboration with community partners and provides training for students in advance of their participation. Examples since 2018 include:
    - School-based Oral Health Care: Partner with local schools to have students participate in delivering oral health education, and in some cases apply dental varnish for school students (2018–Present)
    - Portland Needle Exchange: Partnership with Portland Public Health's Free Clinic where students provided support at the Portland Needle Exchange (2018-Present)
    - School-based Vision and Hearing Screenings: Partner with local schools for students to assist with vision and hearing screenings (2018–Present)
    - Cumberland County Jail Corrections Officer Wellness Program: Partner with Cumberland County Jail for students to provide wellness education to corrections officers (2019-2020)
    - Greater Portland Health Support Group for Refugees and Immigrants: Partner with Greater Portland Health for students to assist with a Support Group for Refugee and Immigrants (2019)
    - Preble Street Volunteering: Students volunteered to assist at the Preble Street shelter (2018-2019)

- Partnered with Portland Public Health's Screening Priority Urgent Referral (SPUR) Clinic screenings for newly arrived refugees and asylees at Portland Public Health (PPH). The program rolled out this spring, with:
    - 14 Scholar and Non-Scholar student participants, with a combined 21 student visits (some chose to visit multiple times)
    - Students worked with precepting health professionals at the SPUR clinic, participating in health history taking and physical exams, point of care testing, intake and resource referral, health promotion and education.
- Maine AHEC Network Youth Healthcare Workforce Diversity Program
    - Since 2017 Maine AHEC Network has partnered with Portland high schools and the local Ethnic Community-Based Organization Maine Access Immigrant Network to provide health career exploration learning opportunities for New Mainer students. A total of 167 Portland high school New Mainer students has participated in the program since it began in 2017.

Service Learning and Community Outreach

Community engagement is a core component of all UNE health profession programs. Through structured service learning and volunteer opportunities, UNE students play an active role in promoting health, with an emphasis on serving Portland's vulnerable citizens. More than 700 health professions students annually provide hundreds of hours to non-profits across the city.

- Meals for Maine 2023 Contributions (September 2023)
    - 23,290 nonperishable, shelf stable meals distributed to:
        - Preble Street Resource Center: 13,260 meals donated.
        - Sacred Heart Food Pantry: 2,690 meals donated.
        - Milestone Recovery: 2,040 meals donated.
        - Maine Access Immigrant Network: 1,630 meals donated.
        - City of Portland: 1,630 meals donated.
        - South Portland Library: 2,040 meals donated.
        - More than 28,000 additional meals were distributed to other areas in Cumberland County and beyond.
    - Meals for Maine 2024 will double its impact with 100,000 meals delivered across the state, with a focus on Portland and Biddeford
- Cumberland County Jail (CCJ)
    - Hundreds of harm reduction kits have been assembled by students and given to residents in need upon release from incarceration.
    - Wellness kits and programming have been delivered to correction officers (COs) at CCJ to promote healthy living for individuals in these high stress positions.
    - In fall 2024, weekly wellness programming will return to residents after a 4-year hiatus due to COVID. Jail administration and Armour Health have requested that UNE re-implement this long-standing program that earned UNE a Cumberland County Sherriff's Office Certificate of Appreciation in 2018.
- Barron Center
    - Nearly 100 UNE students have participated in the "Dinner with Friends" program which pairs students with residents to share a meal and special events together.

- Boys and Girls Clubs of Greater Portland:
  - More than 25 UNE students volunteer as mentors at the clubs each semester.
  - Even more students have delivered special event programming for club members such as health fairs and pizza parties.
  - Hundreds of pounds of granola bars, pasta and tomato sauce have been donated by the UNE community to help address food insecurity among club members.
- Milestone Recovery:
  - Hundreds of students have shadowed the HOME team, learning about the collaborative effort to address the needs of Portland's unhoused community.
  - Hundreds of sandwiches have been made by UNE students and delivered around Portland in collaboration with the HOME team.
  - Student clubs and organizations have gathered hundreds of dollars' worth of supplies to meet the needs of Milestone's "wish list," as well as collected donations to fill backpacks for delivery around Portland by the HOME team.
- Deering High School & Casco Bay High School:
  - UNE students have regularly delivered programming, mentorship, and special events for students, including a Career Exploration Day and STEM Expo exhibits.
- Maine Department of Corrections:
  - Students have assembled more than 8,000 harm reduction kits for distribution to individuals state-wide, including community correction offices in Portland. As part of the kits, UNE students write notes of encouragement and hope which have been found to be incredibly meaningful to recipients.
- UNE College of Dental Medicine (CDM) Community Service:
  - Second-year dental students visit Goodwill LifeWorks Deaf Services and Goodwill Neuro Rehab Clinic to provide oral health education and activities to their patients.
  - Third-year dental students visit the Glickman Lauder Center of Excellence in Autism and Developmental Disorders once a month to provide oral health education and desensitization activities for the children at the Center.
  - Health Fair at the Greater Portland Immigration Welcome Center.
  - CDM participates in the Juneteenth Community Health Fair.
  - CDM is one of several locations across the state participating in a program to provide care to veterans through the Maine Veterans' Dental Network (MVDN). Any veteran who is not 100% service-connected to the Veterans Administration, does not have dental insurance, and cannot afford to pay for dental care out of pocket can register for the program.
- Hundreds of UNE students have volunteered countless hours for Portland based Partners for World Health.
- Students in UNE's Reproductive Health Leadership program collected donations to assemble menstruation care kits for Sacred Heart Pantry when funding for these critically needed products ran out.
- COM provides medical services for the Maine Marathon.
- UNE is recipient of a grant to support training of Sexual Assault Nurse Examiners (SANE):
- Training Forensic Nurses, law enforcement, and EMS in Portland.
- ME Council of Elder Abuse Prevention Summit training.

- UNE's Center for Excellence in Aging and Health offers continuing education opportunities to 730 Legacy Scholars annually – 143 of those scholars live in Portland.

Economy

UNE serves over 970 students on the Portland Campus alone. UNE brings students from Maine, New England, and increasingly from across the country and the world to Portland to live, study, and work. Many students elect to stay in Maine following graduation, including in Portland. The University is a top local employer, and it spends significantly to support local businesses. UNE faculty, professional staff, and students volunteer thousands of hours annually, providing *pro bono* services in the City. UNE researchers are tackling some of the most pressing issues facing the City and region, developing solutions with tangible impacts.

Many UNE students live in Portland and surrounding communities. They spend money to support local businesses and institutions. UNE also attracts thousands of visitors every year to Portland. These visitors spend money on lodging, food, and other services in the community.

- In 2023, 979 students attended classes on the Portland campus, and 372 reported a Portland home address.
- An additional 400 students will join the Portland campus when the new UNE COM facility opens Summer 2025.
- Approximately 30% of students are from Maine (including Portland and the surrounding area), and 70% of students come from outside of Maine (bringing "new" dollars to the community and region).
- A 2024 economic impact study found that student and visitor spending accounts for $51.9 million in revenue for Maine businesses annually.

UNE is a major employer in Portland, Cumberland County, and the state of Maine, with many employees living in Portland and the surrounding areas. These residents pay property taxes and rent or mortgages. They support local businesses and services. Their children attend local schools. The following data exclude student employee numbers.

- UNE is the 15th largest employer in Cumberland County.
- UNE employs 1,890 people in Maine - over 560 employees work on the Portland campus.
- An estimated 150 additional employees will join the Portland campus when the new UNE COM facility opens Summer 2025.
- 177 UNE employees live in the City of Portland.
- UNE provides excellent employment opportunities with competitive salaries and benefit packages.
- UNE pays over $17.6 million per year in salaries and benefits to employees living in Portland.
- UNE spends over $143 million annually in operational expenses, $55.4 million of which buys goods and services from Maine businesses, the vast majority of which are located in southern Maine.

Construction Management Principles

UNE has identified the construction management principles that will be implemented to minimize impacts to its surrounding neighborhoods from noise, vibrations, ground movement, truck traffic, dust control and other construction related factors. UNE will strive to schedule and undertake

construction operations in a way that will minimize, to the extent feasible, the disturbance to the public and occupants of buildings in the adjacent area.

Communication Initiatives

UNE has established a communication method to connect with its adjacent neighbors, the City of Portland, and construction teams. To facilitate direct interaction, UNE employs a dedicated email address where neighbors can submit questions or express concerns. UNE staff responsible for future projects promptly address these emails. Additionally, UNE proactively sends monthly updates to interested neighbors, covering project status and important alerts related to activities that might impact nearby roadways, create dust, vibration, or noise, and affect traffic around the campus. These updates are also accessible on the UNE website's Campus Planning page at une.edu. Furthermore, UNE actively engages with adjacent neighborhood associations, such as the Deering Center Neighborhood Association (DCNA), by participating in regularly scheduled meetings to discuss ongoing or upcoming projects.

Construction Schedule

UNE commits to delivering estimated master project schedules at the outset of any significant construction project it undertakes in the future. Throughout the construction period, regular updates to these schedules will occur, reflecting any adjustments to dates. These updates will be tailored based on the project's assessed impact on the surrounding neighborhoods and areas. UNE will relay these updates through the communication initiatives mentioned earlier.

Construction Management Plan

As part of the planning process and before beginning any major construction project, UNE will create a comprehensive Logistics and Safety Plan. This plan will be shared with neighboring communities and the City with objectives to ensure the continuity of normal campus operations, enhance public safety, and minimize disruptions in the areas surrounding the campus. UNE will adopt the City's Construction Management Plan template to develop its own Construction Management Plan, which will accompany each future project's Site Plan application.

Project Work Hours

Construction Management Plans submitted for each future project will outline the project's work hours, carefully established to minimize the impact on surrounding areas and neighbors, while ensuring efficient completion of the project work. UNE will adhere to the City's code of ordinances, which regulates work hours.

Public Safety and Access

Safety is of utmost concern for UNE, and it will be thoroughly reviewed and integrated into its Construction Management Plans. During construction, pedestrian walkways and vehicular access routes will be clearly marked with appropriate signage and diligently maintained. Safety fencing and lockable gates will be deployed to separate construction zones from public spaces. Access to these fenced-off areas will be restricted to authorized

construction personnel, delivery staff, and members of the construction project team. UNE's campus houses a Safety and Security Department, which will oversee safety and access to these construction zones outside of work hours.

Construction Noise

UNE is dedicated to minimizing construction noise impacts on the surrounding areas. Construction projects inherently generate noise due to necessary tasks throughout their duration. UNE, along with its construction project team members, will proactively notify neighbors of any abnormal noise-creating activities, such as blasting or pile driving, through the updates process the university has established.

Construction Traffic and Parking

Construction Truck Routes and Volume – UNE and its construction project team will establish construction vehicle access routes to and from construction zones, prioritizing distance from residential and other sensitive areas. Construction vehicles will directly enter the fenced construction areas, avoiding queues on public roadways. This will be achieved by managing the frequency and volume of deliveries throughout the construction timeline. Clear markings and signage will guide construction traffic strategically to minimize noise, reduce conflicts with on and off campus users, and limit the spread of dust and dirt. Specific details for each future project will be outlined in the Construction Management Plans submitted for each project.

Construction Staging Areas – Construction staging areas for material and equipment delivered to the project sites will be located within the fenced construction zones for each project, ensuring they are positioned as far away as possible from residential and other sensitive areas.

Construction Personnel Parking – Jobsite personnel will be instructed to park either within the fenced construction zones for each project or remotely in UNE's Bishop Street parking lot. The construction project team and its subcontractors will actively promote the use of public transportation by workers to minimize the impact on the surrounding area.

Construction Air Quality

To mitigate dust issues and minimize impacts on the local environment from its project sites, UNE and its project team will implement several strictly enforced measures. These measures include using wetting agents to control airborne dust from construction access drives and construction zones, covering soil stockpiles as needed, ensuring that transport trucks use covers while moving materials that generate dust, and periodically sweeping and cleaning the construction zones.

City of Portland Construction Management Plan General Template

Attachment C to this IDP is the standardized City of Portland template that will be used for each future project to establish a clear and concise plan and open lines of communications with the City and its neighbors.

Attachment B: UNE Lighting Standards

University of New England
Exterior Lighting Standards

Exterior Lighting – General Site

The purpose of this document is to provide recommendations for exterior lighting master plan standards. Included are lighting standards for parking lots, roadways, walkways, and landscape accent areas.

References are made in this document to lighting standards published by the *Illuminating Engineering Society of North America (IESNA)*.

- The Lighting Handbook, 9th Edition
- RP-33-99 Lighting for Exterior Environments
- RP-6-01 Sports and Recreational Area Lighting
- RP-8-00 Roadway Lighting
- DG-5-94 Recommended Lighting for Walkways and Class 1 Bikeways
- RP-33-99 Lighting for Exterior Environments
- RP-6-01 Sports and Recreational Area Lighting

Lighting Fixture Distribution Classifications

The primary components of a light fixture that determine its performance are the lamp, reflector/refractor system, and ballast. The *IESNA* classifies exterior lighting fixtures by their performance characteristics relating to optical control: full cutoff, cutoff, semicutoff and noncutoff:

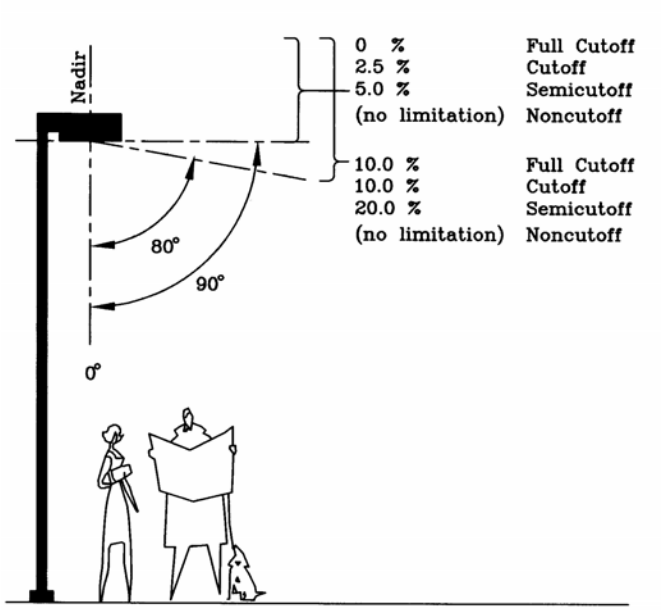

Fig. 1 *IESNA* Luminaire Cutoff Classifications

Full Cutoff

A luminaire light distribution where zero candela intensity occurs at an angle of 90° above nadir, and at all greater angles from nadir. Additionally, the candela per 1000 lamp lumens does not numerically exceed 100 (10 percent) at a vertical angle of 80° above nadir. This applies to all lateral angles around the luminaire.

Cutoff

A luminaire light distribution where the candela per 1000 lamp lumens does not numerically exceed 25 (2 1/2 percent) at a vertical angle of 90° above nadir and 100 (10 percent) at a vertical angle of 80° above nadir. This applies to all lateral angles around the luminaire.

Semicutoff

A luminaire light distribution where the candela per 1000 lamp lumens does not numerically exceed 50 (5 percent) at a vertical angle of 90° above nadir and 200 (20 percent) at a vertical angle of 80° above nadir. This applies to all lateral angles around the luminaire.

Noncutoff

A luminaire light distribution where there is no candela limitation in the zone above maximum candela.

Exterior Lighting Performance Standards

Roadways

Exterior illuminance levels for roadways should conform to the following criteria listed in **Table 1.** There are two roadway use classifications that apply: *Collector* and *Local*. In each case, the classification for pedestrian/vehicle conflict would be a *High* rating.

Collector Roadway: Roadways servicing traffic between major and local streets. These are streets used mainly for traffic movements within residential, commercial and industrial areas. They do not handle long, through trips. Collector streets may be used for truck or bus movements and give direct service to abutting properties.

Local Roadway: Local streets are used primarily for direct access to residential, commercial, industrial, or other abutting property. They make up a large percentage of the total street system, but carry a small proportion of vehicular traffic.

High Pedestrian Conflict Areas: Areas with significant numbers of pedestrians expected to be on the sidewalks or crossing the streets during darkness. Examples are downtown retail areas, near theaters, concert halls, stadiums, and transit terminals.

IESNA RP-8-00 Roadway Lighting

MAINTAINED ILLUMINANCE
VALUES FOR ROADWAYS IN FOOTCANDLES
TABLE 1

	Pedestrian Conflict Area	*Ave. Illuminance (Footcandles)*	*Illuminance Uniformity Ratio (Average-to-Minimum)*
Collector	High	1.2	4.0 to 1
Local	High	0.8	6.0 to 1

Parking Areas

Exterior illuminance levels for outdoor parking lots should conform to the following criteria listed in **Table 2.**

MAINTAINED ILLUMINANCE VALUES FOR OPEN PARKING LOTS
TABLE 2

	Basic	*Enhanced Security*[1]
Minimum Horizontal Illuminance	0.2 footcandles[2]	0.5 footcandles[2]
Maximum Horizontal Illuminance	7.5 footcandles[2]	10.0 footcandles[2]
Average Horizontal Illuminance	1.5 – 2.0 footcandles	2.0 – 2.5 footcandles
Uniformity Ratio, Maximum to Minimum	20:1	15:1

[1] If personal security or vandalism is a likely and/or severe problem, an increase of the basic level may be appropriate. This standard would be utilized in most areas of campus.

[2] Measured on the parking surface, without any shadowing effect from parked vehicles or trees at points of measurement.

Walkways and Bikeways

Exterior illuminance levels for outdoor walkways and bikeways that are remote from streets should conform to the following criteria listed in **Table 3.** The recommendations are based on classification of walkway locations. The walkway use classifications that best applies, is that of *Intermediate.*

Intermediate Walkway: Those areas of a municipality often characterized by moderately heavy nighttime pedestrian activity such as in blocks having libraries, community recreation centers, large apartment buildings, industrial buildings, or neighborhood retail stores.

MAINTAINED ILLUMINANCE VALUES FOR WALKWAYS
TABLE 3

	Average Horizontal (footcandles)[1]	*Average Hor.Uniformity (Ave.-to-Min.)*	*Average Vertical (footcandles)*[2]	*Average Vert. Uniformity (Ave.-to-Min.)*
Intermediate (Average Conditions)	0.5	4:1		
Intermediate (Special Conditions)			1.0	5:1

[1] Values measured or calculated at ground level.

[2] Values measured or calculated at 5 feet above pavement, in both directions, parallel to the direction of travel on the walkway.

Exterior Lighting Control Standards

Light Trespass

Exterior lighting should be selected and arranged such that not more than 0.1 footcandles are allowed to extend beyond property lines.

Glare Control

Exterior lighting fixtures shall include proper shielding and aiming such that excessive brightness is not seen from neighboring properties or along adjacent roadways.

Light Pollution

Exterior lighting fixtures used for the lighting of parking lots, walkways, and roadways shall not direct light at angles higher than 90 degrees above the horizontal. Directional accent lighting fixtures for accent of landscaping, signage and buildings shall include shielding as required to prevent light from being directed beyond the surfaces intended to be lighted.

Exterior Lighting Equipment Selection Standards

For the purposes of establishing a sense of visual consistency, and to assure that glare and fixture brightness are properly controlled, the following lighting equipment standards in **Table 4** should be followed.

EXTERIOR LIGHTING
EQUIPMENT REQUIREMENTS
TABLE 4

Roadways		
	Luminaires:	*IESNA* full cutoff distribution classification with flush, flat lenses.
	Lamps:	LED, 250 to 400 watt, or the equivalent in lumens. The recommended color temperature is 4000K.
	Controls:	Integral photocell.
	Lighting Poles:	Pole heights between 12 and 20 feet.
Parking Areas		
	Luminaires:	*IESNA* full cutoff distribution classification with flush, flat lenses.
	Lamps:	LED, 250 to 400 watt, or the equivalent in lumens. The recommended color temperature is 4000K.
	Controls:	Integral photocell.

Lighting Poles: Pole heights between 16 and 24 feet.

Walkways

Luminaires: *IESNA* full cutoff distribution classification with flush, flat lenses.

Lamps: LED, 100 to 250 watt, or the equivalent in lumens. The recommended color temperature is 4000K.

Controls: Integral photocell.

Lighting Poles: Pole heights between 10 and 12 feet.

Building Entryways

Luminaires: *IESNA* full cutoff, cutoff, or semi-cutoff distribution classification.

Lamps: LED, 35 to 150 watt, or the equivalent in lumens. The recommended color temperature is 4000K.

Controls: Integral photocell and/or local switching.

Mounting Heights: Between 10 and 16 feet

Building Entry Plazas

Luminaires: 36 inch high bollard lights with louver shields.

Lamps: LED, 35 to 150 watt, or the equivalent in lumens. The recommended color temperature is 4000K.

Controls: Local switching.

Building and Landscape Accent Lighting

Luminaires: Ground mounted floodlights with front face louvers or top/side shields.

Lamps: LED, 35 to 150 watt, or the equivalent in lumens. The recommended color temperature is 4000K.

Controls: Integral photocell.

Exterior Lighting – Athletic Field Lighting

Class of Play

The *Illuminating Engineering Society of North America (IESNA)* publishes recommendations for sports lighting applications. Included in the *IESNA* publication *RP-6* is information pertaining to general outdoor sports lighting practices as well as specific suggestions for equipment layout and illuminance levels. Illuminance recommendations are organized in terms of need given the sport being lighted and the anticipated class of play. The *IESNA* has identified four general classes for consideration:

- Class I For competition play before a large group of spectators (over 5000). Included in this classification are facilities for professional, college, semi-professional and sports club levels of play.
- Class II For competition play with less than 5000 spectators. Included in this classification are facilities for college, semi-professional, sports club, amateur league, and high school levels of play.

- Class III For competition play with some provisions for spectators. Included in this classification are facilities for sports club, high school, and training facilities levels of play.
- Class IV Facilities with no provisions for spectators. Included in this classification are facilities for amateur leagues, high schools, training facilities, elementary schools, recreational events, and social events level of play.

Each of these classes requires different levels of illumination given the corresponding purpose of play, skill levels of players, and spectator/broadcasting needs.

Soccer Field Lighting

Soccer is considered a multi-directional aerial sport since it involves the playing of a ball in the air as well as on the ground. Accordingly, it is important that soccer field lighting provide both adequate levels of horizontal illuminance to light the playing field, as well as vertical illuminance to light the ball in flight. The degree to which a lighting solution can provide both high levels of horizontal and vertical illuminance is largely dependant upon the location of luminaires with respect to the playing field. Luminaires that are mounted on tall poles aimed in a sharp downward direction can easily provide high levels of horizontal illuminance at the field below. Lighting the sides of a ball in flight, however, is made difficult when a vast majority of the light is delivered from overhead at great mounting heights. Vertical illuminance is more easily achieved from luminaires that are located at lower mounting heights, allowing for light to be directed from the sides. A successful athletic field lighting solution is one that achieves a balance between horizontal and vertical illuminance needs. Lighting pole heights and setback locations play a critical role in achieving this balance. As a design guide, the relationship of the pole height to the pole setback dimension from the soccer field should be as follows: pole height = (setback dimension plus 1/3 the width of the playing field) times the tangent of 30 degrees.

$$PH = (SB + 1/3W)(\tan 30°)$$

As the setback dimension increases, so too does the pole height. At sites where there is a limitation of space available for pole setback, the pole heights become shorter. Ideally, the setback distance should not be less than about fifteen feet. This would result in a pole height of about fifty feet for the average size soccer field. Poles that are less than 50 feet in height significantly increase the chance for unacceptable glare seen from areas that are adjacent to the field due to the resulting high aiming angles of the sports lights.

Softball Field Lighting

Softball is also considered a multi-directional aerial sport since it involves the playing of a ball in the air as well as on the ground. Like soccer, it is important that softball field lighting provide both adequate levels of horizontal illuminance to light the playing field, as well as vertical illuminance to light the ball in flight. Lighting poles are generally located parallel to the base lines to light the infield, and along the outfield fence to light the outfield. Pole heights must be selected to not only provide proper coverage of the playing field, but also to assure that the top of the lighting beam from floodlights forms an angle with the horizontal of at least 10 degrees.

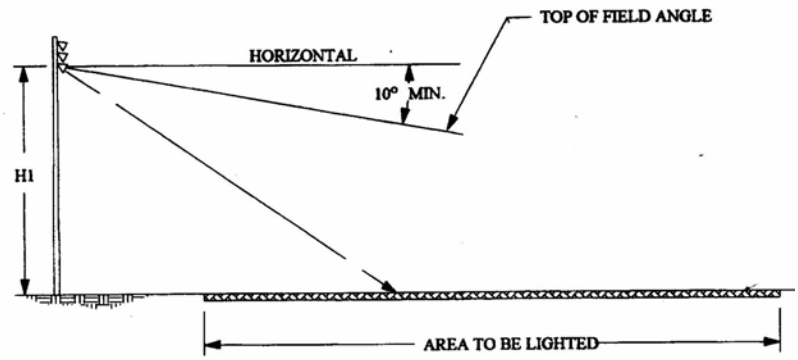

Fig. 1 *Softball Floodlight Aiming Angle*

Athletic Field Lighting Performance Standards

Illuminance Standards

Maintained illuminance levels for athletic fields should be as listed in **Table 1** and **Table 2**, below. Illuminance criteria is listed in footcandles, measured at the playing surface.

MAINTAINED ILLUMINANCE VALUES FOR SOCCER FIELDS

TABLE 1

	Illuminance	*Max. to Min. Uniformity*
Class I	75 FC	1.7 : 1
Class II	50 FC	2.5 : 1
Class III	30 FC	3 : 1
Class IV	20 FC	4 : 1

MAINTAINED ILLUMINANCE VALUES FOR SOFTBALL FIELDS

TABLE 2

	Infield		**Outfield**	
	Infield Illuminance	*Max. to Min. Uniformity*	*Outfield Illuminance*	*Max. to Min. Uniformity*
Class I	150 FC	1.3 : 1	100 FC	1.7 : 1
Class II	100 FC	1.5 : 1	70 FC	2 : 1
Class III	50 FC	2 : 1	30 FC	2.5 : 1
Class IV	30 FC	2.5 : 1	20 FC	3 : 1

Athletic Field Lighting Control Standards

Light Trespass

Exterior lighting from athletic fields should be selected and arranged such that not more than 0.1 footcandles is allowed to extend beyond property lines.

Glare Control

Exterior lighting fixtures shall include proper shielding and aiming such that excessive brightness is not seen from neighboring properties or along adjacent roadways.

Light Pollution

Exterior lighting fixtures used for the lighting of athletic fields shall be positioned such that the top of the field angle of the selected luminaires is 10 degrees, or greater.

Revised 012010

Attachment C: City of Portland Construction Management Plan General Template

Construction Management Plan
General Template
[Applicant and Project Name]

Construction Management Plans shall depict the overall planning, coordination, and control of a construction site, including phases as applicable, from beginning to completion. The City's goal for a construction management plan is to support a safe construction site and protect the public safety, accessibility (including preserving accessible pedestrian, bicycle, and vehicular modes of transport throughout the city), and welfare during construction. In addition, the construction management plan shall minimize construction impacts in their duration and magnitude to the surrounding area and develop an effective communication process for resolving concerns and conflicts.

The Construction Management Plan will be submitted as part of the Site Plan Review and it shall address the construction logistics for a project. The Construction Management Plan shall include the following submissions:

1) a construction management site plan;
2) a construction schedule (time frame); and
3) a written narrative addressing the categories below.

A. Construction Management Principles

The following narrative provides an overview of the construction management principles that the [Applicant and Contractor] has identified to minimize impacts from the construction, such as noise, vibrations, ground movement, truck traffic, and other construction related factors to the surrounding building and communities.

B. Development Review of Construction Management Plan

[Applicant and Contractor] shall submit a construction management plan that provides a comprehensive logistics and safety program for the construction project, which will be reviewed and approved as part of the site plan review process. Minimizing impacts to areas surrounding the building/construction site will be primary considerations in the process.

The Planning Authority and the Department of Public Works have the right to seek revisions to an approved Construction Management Plan or require a condition of approval that states an applicant shall coordinate a project's construction schedule with the timing of nearby construction activity, in order to avoid cumulative impacts on a neighborhood. Such a condition may involve a delay in commencement of construction, if necessary.

The following details define the intended approach to the successful management of the project construction and the construction management plan will address the general conditions contained below.

C. Performance Guarantees, Inspection Fees, Preconstruction Meeting, and Permits

Prior to scheduling a preconstruction meeting and the issuance of any city required permits, [Applicant and Contractor] shall meet all of the requirements contained in Section 14-530. Development review fees and post approval requirements and 14-532. General requirements and enforcement of Portland's Land Use Code.

Other permits, as applicable, include

1. **Street Opening and Street Occupancy Permits:** Construction activity in the public right-of-way are controlled by Chapter 25 and sewer and stormwater system connections are controlled by Chapters 24 and 32 of the Land Use Code. All required permits shall be obtained through the Department of Public Works and the requests shall conform with the approved construction management plan.
2. **Blasting:** Blasting, if required, shall conform with all measures of Article VIII. Regulation of Explosives in the Land Use Code and Section 3.7 Standards for Blasting and Regulation of Explosives in Portland's Technical Manual.
3. **Building Code:** Employ the best practices, as applicable, of Chapter 33 Safeguards During Construction, from the 2009 International Building Code.

D. Construction Administration and Communication

[Applicant and Contractor] will work diligently to implement a communication strategy as outlined below. The communication strategy is intended to ensure that all construction operations are performed in accordance with all agreements, ordinances and special permits applicable to this project. The Construction Manager will work closely with adjacent abutters, businesses, nearby construction sites, and all parties informed, as far in advance as possible, of scheduled work, particularly work anticipated to cause significant noise, vibrations, or dust. The final construction management plan shall provide for the following:

1. Contact Person and contact information for the [applicant and contractor] and who is available 24 hours
2. Construction Signage posted on the site with Contact Information for Contractor
3. Describe any additional communication strategies
4. All construction site signage is temporary and shall be removed at project completion.

E. Construction Schedule

1. The contractor shall submit a schedule or time line for the construction project, including any Phasing.
2. Hours of Construction. Construction may occur during the daytime hours as defined in Section 17-18. Construction Activities for Building permit (Attachment 1) and Section 25-129. Noise, dust and debris (Attachment 2).
3. Extended Hours or Night Work: Pursuant to Section 17-18, this section not apply to emergency utility work or "Situations where the public works authority or the office of building inspections determines that the construction activity is of a unique character which cannot reasonably be completed or performed during the permitted hours and which is not of a recurring nature, provided that prior to engaging in such activity the contractor or his representatives gives notice of the time and scope of such proposed activity, the notice to be given in a manner approved by the public works authority."
4. Material Deliveries: Schedule and designated location for delivery of materials and boxed goods.

F. Security & Public Safety

1. The Construction Management Plan will depict all proposed fencing or other barriers and access gates (with knox locking devices) with the intent of separating pedestrian and vehicle circulation from the construction site.

2. Structures undergoing construction, alteration, or demolition operations, including those in underground locations, shall comply with NFPA 1 Chapter 16. *Safeguarding Construction, Alteration, and Demolition Operations.*
3. Fire Safety Program. An overall construction of demolition fire safety program shall be developed. Essential items to be emphasized include the following:
    - Good Housekeeping
    - On-site security
    - Installation of new fire protection systems as construction progresses
    - Preservation of existing systems during demolition
    - Organization and training of an on-site fire brigade
    - Development of a pre-fire plan with the local fire department
    - Rapid communication
    - Consideration of special hazards resulting rom previous occupancies
    - Protection of existing structures and equipment from exposure fires resulting from construction, alteration, and demolition operations
4. Blasting, if required, shall conform with all measures of Article VIII. Regulation of Explosives in the Land Use Code and Section 3.7 Standards for Blasting and Regulation of Explosives in Portland's Technical Manual.
5. Any proposed temporary security lighting shall be shown on CMP and all fixtures shall be full cutoffs.

G. Construction Permitting and Traffic Control Plans

1. Construction Activity in Public Streets: Construction activity in the public right-of-way is controlled by Chapter 25 Article VII of the City Code of Ordinances. Required licenses and permits, restrictions on activity, and fees & area are outlined in that Chapter. Rules and Regulations for Excavation Activity are available through the Street Opening Clerk at the Department of Public Works. At no time can construction activity including delivery vehicles close or block streets or affect public safety access without prior notice and approval of the Department of Public Works.
2. Sewer and Stormwater: Sewer and stormwater water system connections are controlled by Chapters 24 and 32 of the City Code of Ordinance. Required permits for new connections and/or abandonment of existing connections are available through the Street Opening Clerk at the Department of Public Works. Rules and Regulations for these utility systems are available through the City Engineer's office of the Department of Public Works and in Section II of the Technical Manual.

3. Traffic Control Plans: Construction activity that impacts the existing public street system must be controlled to protect the safety of the construction workers and all modes of the traveling public. Projects are required to submit a satisfactory 'maintenance of traffic" (MOT) plan prior to any site plan, subdivision, or street opening permit approval. MOT plans may be required for projects that have impacts on local streets.

   Maintenance of Traffic (MOT) plans shall provide for the safe passage of the public through or along the construction work zone. On a case-by-case basis, applicants may be allowed to close a street and/or detour a mode of traffic when absolutely necessary

for safety. MOT plans shall employ the appropriate techniques and devices as called for n the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD). In addition:

- Construction speed signing may be used as needed to slow traffic
- Traffic Control signs shall not be placed where they are an obstruction to bicycles or pedestrians.
- In some situations, flaggers may be required.
- Police details may be required at lighted intersections and may be requested by the City's transportation engineer or his designee.

All existing modes of travel in work zone area shall be accommodated if impacted by the activity. The safe passage of pedestrians, bicyclists, transit providers, and motorists are of equal importance when planning out the work zone; no pre-existing travel mode may be eliminated without the express approval of the Department of Public Works. The MOT should also address on-street parking impacts, including deliveries and parking for adjoining businesses and property owners, analysis of roadway capacity or diversion capacity if street closure or change to roadway capacity is required, and coordination with other on-going or future construction or utility projects in the vicinity.

- Traffic control of bicycle and pedestrian facilities or routes through work zones shall be maintained until the bicycle and pedestrian facilities or routes are ready for safe operation. Traffic control will not be removed to allow auto travel at the expense of bicycle and pedestrians.
- Barrier systems utilized to separate the construction activity from the public street and /or sidewalk shall not inhibit sight distances, particularly for visibility of pedestrians and bicyclists.
- ADA compliance shall be maintained.

Use of public parking spaces or the blockage of any portion of sidewalk for the purpose of construction activity shall require an occupancy permit and appropriate fee as assessed by the Department of Public Works.

H. Site Management and Controls

The final Construction Management Plan will address maintaining the site in a safe condition and will include the following:

1. Regular trash and debris removal
2. Street cleaning and damage controls
3. Dust controls- The construction shall comply with Portland's requirements under Section 25-129 on Noise, dust and debris (Attachment 2).
4. Noise: The construction shall comply with Portland's requirements under Section 17-18 of the City Code (Attachment 1) and Section 25-129 on Noise, dust and debris Attachment 2).
5. Rodent Control will be provided, if applicable, by a professional exterminator and consistent with Chapter 22 of the City Code.

6. Snow Removal: Pursuant to Section 25-173 Contractors to ensure a safe means of travel within the work zone.
    1) Snow/ice removal or commence automatically from (1" of snow and up) or Ice
    2) Remove snow as needed within the work zone, including parking spaces & not to block any driveways or sight lines with the piles of snow.
    3) Clear all walks & ramps with the work zone
    4) Sand or Salt as needed
    5) Clear all basin or drainage to help snow melt
    6) This would include Monday-Friday Sat/Sunday/Holidays

I. Erosion Control and Preservation of Trees

1. The [contractor] shall install all erosion and sedimentation controls as depicted on the approved erosion and sedimentation control plan prior to the pre-construction meeting for inspection by the City. The contractor shall regularly inspect the control measures, no less than weekly and after significant storm events, and maintain any installed temporary or permanent stormwater management systems in working order. The contractor shall document all inspection activities and corrective actions and be prepared to provide these documents for inspection by the City, Maine Department of Environmental Protection or the U.S. Environmental Protection Agency upon request.
2. The [contractor] shall maintain all tree and landscaping preservation measures as depicted on the landscaping plan (Exhibit) within the area of construction.
3. The storage of materials shall be identified and avoid being located under/near trees.

J. Construction Staging Area

1. The Construction Management Plan shall depict location of the material staging areas, the location on onsite temporary construction trailers, the location on onsite truck delivery holding areas, the location onsite truck washing stations, masonry mixing stations, the general location of the construction security fence and the general location of temporary construction dumpsters. An open storage areas shall be shown on the plan.
2. Delivery Truck Holding Areas On-Site: The delivery holding area shall be shown on the plan and shall not be blocked during construction. On days when the construction activities require multiple truck deliveries, these deliveries will be carefully scheduled so that there is always adequate on-site area for the holding of the trucks until they can be unloaded. Once at the site all vehicles well be brought within the fence line and will make every attempt to avoid queueing on public streets.
3. Delivery Truck Holding Areas Off-Site: In the event that adequate on-site area for holding of trucks is not available, an off-site marshalling area will be utilized for trucking. The designated off-site location will be identified in the construction management plan.

K. Parking During Construction

1. Construction Parking: Adequate parking for construction workers shall be provided on site or arrangements for off-street parking at an off-site location shall be provided. The parking arrangements shall be included in the construction management plan.

2. Parking: Where existing facilities are remaining in operation during construction, the construction management plan shall identify how the parking for employees and others shall be managed.
3. Truck Routes and Volumes: The Construction Management Plan shall address the designated truck routes and expected truck volumes.

L. Dewatering Plans

A basic dewatering plan for any construction work is required. The plan must cover construction sites where groundwater is not expected but the impact of rainwater may require dewatering. The plan must include operating procedures, equipment to be used, including filters, erosion and sediment control measures, or other methods of removing sediment from approved discharges.

For construction work that will require frequent dewatering of groundwater from site, a dewatering plan must be prepared and approved by the Department of Public Works. Groundwater and/or soil testing may be required to determine course of action if treatment is necessary. Approval for all discharges to City infrastructure is required.

The proposed plan must address the following:

- Project duration, discharge location, storage equipment on-site, dewatering schematic, and emergency contact.
- General requirements include trained staff on-site for all approve discharges and required site log for documentation of all discharges.
- Storage and/or treatment process should include proper settling time and maintain proper use of filtering medium as required.
- Contingency/maintenance plan for all dewatering equipment devices and filtration mediums.

Any water that is removed from an excavation must be pumped from a perforated device buried in crush stone prior discharge and/or prior to storage and treatment. There will be no discharge allowed during precipitation events.

M. Special Measures as Necessary

For construction work that will take place over a long period (e.g. 12 months or more), involve major demolition/ deep excavation/ piling and/or special construction techniques, or are located near sensitive uses (e.g. medical care facilities, schools), the Construction Management Plan should provide details and demonstrate that all appropriate special measures have been taken to avoid, minimize, or possibly compensate for potential impacts. This may include taking baseline measurements before construction, such as arranging to photograph the foundations of nearby properties upon consent of the owners, in order to assess any future impacts of vibration, noise, etc.

REGULATORY FRAMEWORK

8.5.8 The University of New England Institutional Overlay Zone Regulatory Framework

A. Applicability: All development proposed by the University of New England (UNE) within the boundary of the Institutional Overlay Zone (IOZ) shall be consistent with the approved Institutional Development Plan (IDP), consistent with the Comprehensive Plan, and meet applicable standards of the Land Use Code, unless such standards are superseded by the following Regulatory Framework. This Regulatory Framework shall govern future development by UNE within the IOZ unless amended by the Portland City Council upon formal application of UNE. The UNE IOZ shall have the boundaries depicted in Figure 8-H, and shall include the properties listed in Table 8-G.

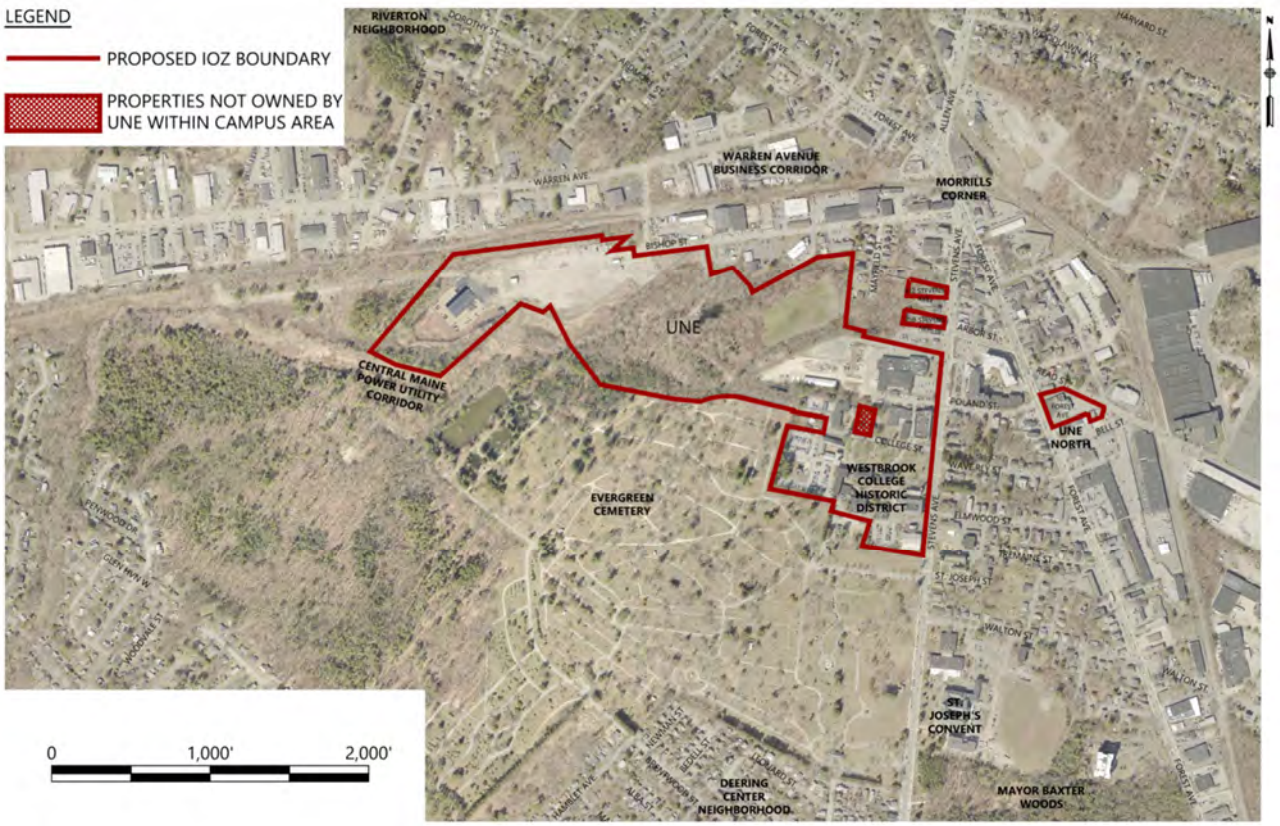

Figure 8-H: UNE Institutional Overlay Zone Boundary

Table 8-G: List of Properties Included in the UNE IOZ					
Chart	**Block**	**Lot**	**Address**	**Acreage**	**Ownership**
144	A	005	684 Stevens Avenue	0.141	UNE
144	A	006	684 Stevens Avenue	0.275	UNE
144	A	007	684 Stevens Avenue	0.371	UNE

B. Updates and Amendments.

1. It is intended that the IDP will be updated on a regular basis to ensure that the data is current and that the document remains accurate. Accordingly, UNE shall file monitoring reports every five (5) years with the Planning Authority and shall include a summary of progress on IDP implementation and progress towards targets established in UNE's Transportation Demand Management Plan (TDM), and of acquisitions and divestment since the date of IDP approval. At the time of the submission of the monitoring report, UNE shall identify any updates to the IDP which may result from updated master planning, changes in baseline information, or changes in the adjacent neighborhoods which affect UNE, to allow the IDP to remain current. Updates and minor amendments not described in Sub-section 2 and 3 below shall be reviewed
administratively by the Planning Authority.

2. Minor amendments that impact phasing of the development or change the approach to parking, transportation, neighborhood engagement, or design shall be reviewed by the Planning Board for consistency with the objectives of the IDP. In addition to consistency with the objectives of the IDP, review of phasing and development program amendments shall focus on integration with the campus and impacts on transportation or infrastructure. This review may occur simultaneously with the site plan review of an anticipated project.

3. Major amendments shall be reviewed by the Planning Board and are required under the following circumstances:
a. A change to the IOZ boundary or Regulatory Framework is required;
b. The IDP is no longer representative of the institutional mission or approach to community as a result of redevelopment in the area or City upgrades to neighborhood planning (such as, but not limited to, roadway changes, infrastructure upgrades, community design,); or,
c. Development proposed by UNE is inconsistent with the Campus Master Plan, Transportation Plan intent, Design Plan intent, or Environment and Infrastructure plan intent identified in the IDP.

4. Proposed amendments to the IOZ boundary or regulatory framework must also be adopted by the City Council subject to the provisions of the Land Use Code.

C. Uses. The UNE Campus will encompass a variety of uses to support the academic programs on the campus. In addition to the uses permitted in the underlying zone, the uses in Table 8-H shall also be permitted as a matter of right in all buildings that are located within the IOZ. In recognition that the UNE Campus contains undergraduate and graduate-level programming, ground floor retail, restaurant, or comparable community-oriented uses that provide services to local residents, students, faculty and staff may be provided. Such uses are expressly permitted whether ancillary to or supporting the educational institution, and shall be open and welcoming to the general public in addition to students, faculty, staff, or visitors of UNE.

Table 8-H: Permitted Uses
Laboratory and Research Facilities
Off-Street Parking
Intermodal Transportation Facilities

D. Dimensional requirements.

1. Applicability
   All principal buildings and structures located within the IOZ shall be subject to the dimensional requirements of the underlying zone, except where modified by the provisions of this Section.

   For the purposes of this IOZ, "lot" is defined as the combination of the contiguous lots under UNE ownership, including land separated by a public or private right-of-way. The "lot" boundary is as shown in Figure 8-H. Side and rear setbacks shall not be required between buildings on contiguous lots owned by UNE on the condition that such contiguous lots shall be considered merged and shall not be separately conveyed unless required setbacks in the underlying zones are provided.

Table 8-I: Dimensional Requirements	
Building Height (max.)	Maximum building heights for new principal buildings in the IOZ shall be governed by the UNE IOZ Height Map (Figure 8-I)

2. Transition Zones
   The UNE campus abuts residential zones to the north and across Stevens Avenue to the east. As shown on the UNE IOZ Height Map, transition zones extend twenty-five feet from the lot boundary. Within transition zones, the maximum building height shall be fifty feet.

Figure 8-I: Open Space and Maximum Height Map

E. Transportation.

1. Transportation Demand Management (TDM)

a. At the time of the first site plan review following IDP approval, UNE shall submit a campus-wide TDM Plan substantially in accordance with those TDM objectives and strategies identified in the approved IDP. The TDM Plan will be updated with each subsequent application for site plan approval to allow for progressive and responsive implementation over time.

b. The TDM Plan shall be designed to provide transportation choice with the goal of reducing parking demand and single-occupancy vehicle trips to and from UNE by students, faculty, staff, and visitors.

c. The TDM Plan shall establish parking, mode share, and trip reduction targets associated with each phase of development, as well as a data collection plan.

d. The TDM Plan shall include parameters to encourage trip reduction and to ensure pedestrian, vehicular, bicycle, and public transit access and safety.

e. Annual monitoring reports will be submitted for the TDM Plan. TDM monitoring reports shall include a summary of progress towards targets established in the TDM Plan. If deficiencies are identified, they will be resolved in accordance with the site plan approval.

2. Parking.

Parking requirements in the IOZ shall be established at the time of site plan review based on a parking study that includes a campus-wide analysis of demand and supply. Parking studies shall integrate parking and trip reduction achievements and data contained in the TDM Plan. Parking requirements shall be determined in accordance with the requirements in the Land Use Code in effect at the time of site plan review and shall be sufficient to alleviate parking pressure on surrounding neighborhoods.

F. Environment.

1. All proposed campus development projects shall avoid to the extent practicable and feasible, significant impacts to wetlands and aquatic resources. Development shall comply with the Urban Impaired Stream (UIS) Standard of Chapter 500 of the Maine DEP Stormwater Management Rules, as applicable.

2. All new buildings and parking facilities shall be set back a minimum of 75 feet from the normal high-water line of existing streams. Notwithstanding this requirement, the Planning Board may approve a reduction of the setback requirement for a new building to the least amount necessary to achieve the goals of the development and minimize overall impacts, provided that the setback is not reduced to less than 40 feet.

3. Development in significant wildlife habitats (as defined by the Maine Department of Environmental Protection) will be minimized to the maximum extent practicable and shall comply with all applicable local, state and federal permitting requirements in effect at the time.

G. Mitigation measures.

1. Site plan impacts to off-premise infrastructure shall be mitigated in a manner proportionate to those impacts. Mitigation may include financial or in-kind contributions to existing or planned City projects focused on mitigating the impacts of the development. Mitigation contribution shall be determined based on the City's standard procedure in effect at the time of site plan review.

2. Impacts to natural resources shall be mitigated in accordance with local, state and federal permitting standards in effect at the time.

H. Design.

1. Introduction and intent.

New development in the IOZ shall adhere to the following design guidelines and the site plan standards of the City of Portland. All new development shall be designed to create a visual connection with the goal of achieving a cohesive campus appearance with a strong identity and sense of place. These standards are intended to regulate future development on the UNE campus to

ensure that new development is sensitive to adjacent neighborhoods while allowing UNE to maintain a thriving academic institution in Portland.

2. Standards
   a. Cohesive campus
      The overall composition and experience of the campus will be considered for cohesive identity.
   b. Building design
      Building facade materials will be of high quality, durable to the weather, and contribute to an attractive campus experience.
   c. Building entrances
      Building entrances will include prominent facades and be oriented toward pedestrian-oriented activity areas, including parking areas, to facilitate safe and barrier free access.
   d. Lighting
      New or renovated buildings should have adequate exterior lighting to ensure that entrances and surrounding areas are safe. All new exterior lighting will be selected to provide lighting levels that meet the safety criteria of the Illuminating Engineers Society of North America, IESNA. Consideration will be given to limit light trespass and glare into neighboring properties through the use of cutoff fixtures at the edge of campus, resulting in less light spillover into the surrounding community.

   e. Outdoor Spaces
      Building designs should strive to include a variety of open spaces and activities ranging from small intimate courtyards for contemplative study to open lawn areas for informal recreation and outdoor classes. Where applicable, provision should be made during the programming and conceptual design of new facilities to provide opportunities for outdoor use of open space as part of the site and for integration within the larger open space/conservation network.

   f. Mitigation of impacts
      Buildings and site development will endeavor to minimize potential negative impacts related to shadows, wind, noise, heat, glare, lighting, contaminants, and the environment.

3. Signage. Signs shall comply with the requirements of Article 20, except as modified below:

   a. Signs shall be designed in accordance with a signage plan pursuant to signage standards promulgated by the university, providing for a unified and ADA compliant campus-wide system for identification, orientation, and regulatory signage.
   b. A unified campus-wide signage plan shall be submitted for review and approval by the Planning Authority. Any update to such plan due to a change in name, text or logo shall not require amendment to the IDP.
   c. Banners are allowed as follows:

i. Generic banners containing the logo and colors of the university, used for decorative purposes.

ii. Banners used for advertising university events, which can be displayed for a maximum of four weeks prior to and one week following the event.

I. Neighborhood integration.

1. Neighborhood Engagement

a. For the purpose of keeping surrounding residential areas appraised of its future development plans, and to address any neighborhood issues related to the operations of the UNE campus, UNE shall adhere to the ongoing neighborhood engagement principles identified in the IDP.

b. Ongoing community engagement shall be conducted, including the continuation of posting project updates on UNE's Campus Planning web page and the creation of a dedicated email address for neighbor communications with UNE's Planning Department.

c. A Community Advisory Group shall be created for the purpose of sharing information on project development, planning, and seeking input. To the extent practicable, the group shall be comprised of representatives of interested groups such as the Deering Center Neighborhood, parks and trails, bicycle/pedestrian, public transit, and the business community.

d. A designated community contact shall be engaged to be the point of contact for providing information to the neighborhood and receiving feedback.

2. Construction Management

At the time of site plan review, UNE shall submit a Construction Management Plan substantially in accordance with the construction management principles identified in the Institutional Development Plan for review and approval by the Planning Authority.

J. Monitoring

1. Monitoring reports shall be provided to the City of Portland Planning Authority every five (5) years from the date of IDP approval. Monitoring reports shall include a summary of progress on IDP implementation and of acquisitions and divestment since the date of IDP approval.

Re: UNE Institutional Overlay Zone Application (ZN-003059-2024)
Neighborhood Meeting #1

Dear Natasha:

I, Megan Gatto, consultant for the University of New England (UNE), hereby certify that a Neighborhood Meeting was held on Thursday, June 13, 2024, at the UNE Portland Campus, 716 Stevens Avenue, in the Hannaford Lecture Hall, Room 109, at the College of Pharmacy, for the Institutional Overlay Zone proposed for the UNE Portland Campus (address: 716 Stevens Avenue).

I also certify that on June 3, 2024, notices were mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes owners within 1,000 feet of the proposed Institutional Overlay Zone.

2. Residents on the "interested parties" list.

Sincerely,

Woodard & Curran, Inc.

Megan Gatto

June 3, 2024

Dear Neighbor:

On behalf of the University of New England (Applicant), please join us at a neighborhood meeting to discuss our plans for the Portland Campus Overlay Zone located at 716 Stevens Avenue in Portland, Maine.

The City of Portland has implemented an Institutional Overlay Zone (IOZ) ordinance that "provides a regulatory mechanism available to the city's four major medical and higher education campuses where an improved regulatory structure is needed to facilitate a consistent, predictable, and clear growth management process." This applies to the University of New England. This process will ultimately simplify the campus planning and regulatory permitting process in the future as the University grows. UNE has initiated the necessary work to coordinate with the City of Portland and apply for this Institutional Zone change.

This neighborhood meeting will provide an overview of the IOZ process and gather our neighbors' input on the growth of the campus, in advance of our Application to the City.

Neighborhood Meeting

Meeting Location: University of New England – Portland Campus, 716 Stevens Avenue, Hannaford Lecture Hall, Room 109, College of Pharmacy, Portland, ME

Meeting Date: Thursday, June 13, 2024

Meeting Time: 6:00-7:00 PM

The City of Portland's Land Use Code requires that property owners within 500 feet of the proposed development and residents on the City's "interested parties list" be invited to participate in a neighborhood meeting. In an effort to be more inclusive, UNE has extended beyond the 500-foot requirement to include property owners within 1,000 feet of the Portland Campus. Your contact information has been provided to us by the City of Portland as part of these lists. A sign-in sheet will be circulated at the meeting, and minutes of the meetings will be taken. Both the sign-in sheets and minutes will be submitted to the Planning Authority for inclusion in the project's Institutional Overlay Zone (IOZ) application to City Planning, which includes an Institutional Development Plan and Regulatory Framework.

If you have any questions, please contact me at +1 (781) 613-0168 or via email at megan.gatto@woodardcurran.com

Sincerely,

WOODARD & CURRAN, INC.

Megan Gatto

Megan Gatto, AICP
Project Manager

On behalf of the University of New England (UNE) - Portland Campus

Note:

Under the City of Portland land use code, an applicant for a major site plan, master development plan, subdivision of over five lots, or zoning map amendment is required to hold a neighborhood meeting within 30 days of an application being deemed complete and no less than seven calendar days before a public hearing. Should you wish to offer additional comments on this proposed development, you may forward them by e-mail to planning@portlandmaine.gov or by mail to the Planning and Urban Development Department, Planning Division, 4th Floor, 389 Congress Street Portland, ME 04101.

UNE Portland Campus: Programming

The UNE Portland Campus is primarily a graduate campus, focused on educating health professionals, and is currently home to four of the University's premier Colleges: the Westbrook College of Health Professions, the College of Dental Medicine, the College of Graduate and Professional Studies and the School of Pharmacy.

Programs:

- Dental Medicine
- Dental Hygiene
- Nursing
- Nurse Anesthesia
- Occupational Therapy
- Pharmacy
- Physical Therapy
- Physician Assistant
- Health, Wellness, and Occupational Studies

Project Presentation & Content

- Welcome and Introductions provided by Alan Thibeault, UNE
- Project Background presentation provided by Alan Thibeault, UNE and Mary Costigan, Bernstein Shur
  - Overview of UNE (Portland Campus History + Programming)
  - Regulatory Process (Institutional Overlay Zone)
  - Campus Master Plan
  - Public Involvement Opportunities
  - Comments and Questions

Record of Feedback

Throughout and following the project presentation, there was a question-and-answer period with attendees. The following topics were discussed:

- Questions and discussion about zoning, property acquisitions, and tax concerns
    - Representatives clarified that the proposed IOZ only applies to UNE property as currently held and will not apply to property acquired thereafter, without revisions to the IOZ necessitating Planning Board and City Council approval.
    - Participant asked what the Roux did for underlying zoning; representatives responded the change was from I-M to B5.
    - Participant asked if IOZ application was submitted to City; representatives confirmed it has not submitted an application and will use the information gained tonight to revise the draft before it is submitted.
    - Participant asked if the City is considering an adjacent zone change; representative responded they were not aware of that.
    - Participant asked about whether UNE makes payment in lieu of taxes (PILOT) to the City; representatives responded that they did not, and as a non-profit were not required to. However, UNE provides significant services to the greater community, including the low-cost dental clinics on campus.
    - Participant asked about whether PILOT could be a condition of IOZ approval; representatives responded they felt that would be an unusual condition.
    - Concerns were raised about City tax increases from future UNE property acquisitions.
- Questions and discussion about UNE's future plans for campus expansion
    - Participant asked what additional properties UNE is considering in the long term; representatives responded that one homeowner on Stevens Avenue has approached the University to sell their property, and that the University is considering this offer.
- Questions and discussion about traffic and parking
    - Concerns were raised about parking along Stevens Avenue.
    - Participant asked how UNE communicates with students on encouraging use of the Bishop Street remote lot; respondents reiterated communication with students is constant to increase usage of the remote parking lot.
    - Participant asked is UNE contemplating a parking garage in the future; representatives responded that structured parking is not envisioned on campus, as the city has confirmed that the current parking capacity is adequate to meet the University's needs.
    - Participant asked about shuttle usage; representatives responded that METRO use is down since COVID however the University still offers free bus passes to all faculty, staff and students, and encourages usage to reduce single occupancy vehicle trips.
    - Concerns were raised about on-street parking impacts; representatives expressed understanding and reiterated the Bishop Street remote parking and other parking on campus is intended to alleviate on-street parking, but student habits are a challenge to change, especially when pubic parking is readily

available closer to the buildings, then the students, faculty and staff will use it. UNE will continue to support any revisions to public parking the City makes.
    - Representatives clarified the size of the Bishop Street parking lot and usage: There are approximately 350 spaces with 100 cars parked at any given time.
    - Participant inquired about COM building parking needs; representatives explained that parking was a Site Plan review consideration with the City's Planning Board and that there is adequate parking supply available on campus. In fact, during its review the Planning Board suggested UNE has too much parking on site.
    - Participant asked is the City studying traffic at Morrill's Corner; representatives explained they were not aware of any ongoing City traffic studies.
- Questions and discussion about Westbrook Historic District
    - Concerns were raised regarding impacts to historic district; representatives expressed no intention to change the historic district.
- Questions and discussion about Campus Master Plan
    - Representatives clarified there would be height and dimensional limits to campus master plan, which will enable the University to meet campus program needs.
    - Representatives responded to a specific question regarding the location of Bishop Street remote parking versus proposed housing, and the intent to keep housing closer to the academic buildings on campus.
- Questions and discussion about zoning restriction changes and adjacent lot zoning
    - Concerns were raised regarding noise and light impacts; representatives reassured they had no intention of seeking changes from existing City Ordinances for noise or light trespass, and actually utilizes its own lighting standards to limit the impacts as well.
    - There was a discussion about noise and light restrictions in various city zones, for example: noise standards in B-2 zoning districts versus R-zone standards; representatives reassured these standards were City-wide and the proposed IOZ would not seek to modify those.
    - Concerns were raised regarding off-campus Waste Management truck collections before 7am.
- Questions and discussion about environmental impacts
    - Concerns were raised regarding impervious area, including Gulliver's field on Mayfield Street and climate impacts; representatives explained their overarching approach to protecting natural resources and UNE goal to Carbon Neutrality by 2040 and its commitment to its Climate Action Plan, most recently updated in 2017. UNE has a long, successful track record designing and constructing facilities in sensitive environmental locations, and is confident that this could be achieved on Gulliver's Field as well.
    - Participant asked what wildlife studies have been done; representatives explained that all studies associated with prior Site Plan approvals are public record and available through the City.
    - A concern was raised about a nearby well or individual spring and the water level; representatives shared the COM building stormwater design was reviewed and approved by the City Planning Board and had a lack of awareness of the particular issue raised and did not believe they were related, but

promised to make inquiries into this issue so it could be adequately considered in any future design.
    - A concern was raised about impacts to migratory birds, in particular the American Woodcock, resulting from development; representatives reiterated that all studies associated with prior Site Plan approvals are public record and available through the City.
    - A concern was raised about construction impacts to Mayfield with planned housing (H1) building; representatives offered assurance that City Site Plan and MaineDEP Site Law standards have always and will continue to be met when proposing future projects.
- Questions and discussion about housing
    - Participant asked If anyone looked at land behind Bruno's for housing; representatives responded that UNE has not looked at that land.
    - Positive comment shared about student tenants in the area.
    - Concerns were raised about the height of housing - too tall; representatives explained the intent of increased height to reduce footprints and impervious area and maintain open space on campus.
    - Participant asked can you develop multiple buildings or move housing to Bishop Street and parking to Gulliver field; representatives reiterated their intent to locate housing proximate to academic buildings, and that multiple buildings would have greater potential impact
- Questions and discussion about maximum growth potential
    - Participant asked about student population size and program sizes; representatives responded with current campus demographics.
- Questions and discussion about neighborhood traffic
    - Concerns were raised about traffic at Morrill's Corner; representative expressed understanding and shared a benefit of the Bishop Street parking lot and private connector road is to remove students, staff, and faculty from the intersection. This access road would also afford public cyclists access without going through Morrill's Corner.
- Questions and discussion about meeting noticing
    - Some attendees asked for earlier public notice.
    - One commenter noted that the meeting room was hard to find.

Attendees requested a copy of the Master Plan be provided to them. A follow up email was promised to be sent to all attendees with email addresses on the attendance sheet, which would include the Master Plan.

List of Plans, Documents or Drawings Shared

The following information was shared via the PowerPoint presentation given at the meeting, with the presentation attached for reference:

- Regulatory Process and project timeline
- Campus Master Plan
- Work completed to date
- Website for campus project updates
- Email for follow up questions and concerns.

Meeting Close

- The meeting closed at approximately 7:15 and the project team thanked attendees and noted that a second Neighborhood Meeting would be held in the summer/fall 2024 and those in attendance will receive an email notice as well as another mailed notice.

Re: UNE Institutional Overlay Zone Application (ZN-003059-2024)
Neighborhood Meeting #2

Dear Natasha:

I, Caitlin Suhr, consultant for the University of New England (UNE), hereby certify that a Neighborhood Meeting was held at 6 PM on Wednesday, October 30, at the UNE Portland Campus, 716 Stevens Avenue, in the Hannaford Lecture Hall, Room 109, at the College of Pharmacy, for the Institutional Overlay Zone proposed for the UNE Portland Campus (address: 716 Stevens Avenue).

I also certify that on October 15, 2024, notices were mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes owners within 1,000 feet of the proposed Institutional Overlay Zone.

2. Residents on the "interested parties" list.

Sincerely,

Woodard & Curran, Inc.

Caitlin Suhr

T 207.774.2112
F 207.774.6635

October 15, 2024

Dear Neighbor,

On behalf of the University of New England (UNE) (Applicant), please join us at a Neighborhood Meeting to discuss UNE's plans for an Institutional Overlay Zone (IOZ) at their Portland campus, located at 716 Stevens Avenue in Portland, Maine.

The City of Portland's Land Use Code allows for the creation of an IOZ to "provide a regulatory mechanism available to the city's four major medical and higher education campuses where an improved regulatory structure is needed to facilitate a consistent, predictable, and clear growth management process." Consistent with that purpose, UNE is seeking a zoning amendment to create an UNE IOZ to accommodate the development and growth of their Portland Campus.

UNE has submitted a Text and Map Amendment Application to the City of Portland to create an UNE IOZ, and to change the underlying zoning of the UNE properties to B-2 Community Business. As part of that Application, the City of Portland's Land Use Code requires at least two Neighborhood Meetings be held to encourage public involvement. The first meeting was held on June 13, 2024, during the development of the IOZ Application, and before the formal submission of the zone change application. A second meeting is required to be held during the City's review, which is currently ongoing.

This Neighborhood Meeting will provide an overview of the IOZ process, provide an update on UNE's IOZ Application, including the Institutional Development Plan (IDP) and Regulatory Framework, and provide an opportunity to gather neighbors' input on the growth of the campus.

Neighborhood Meeting

Meeting Location: University of New England – Portland Campus, 716 Stevens Avenue, Hannaford Lecture Hall, Room 109, College of Pharmacy, Portland, ME

Meeting Date: Wednesday, October 30, 2024

Meeting Time: 6:00 – 7:00 PM

The City of Portland's Land Use Code requires that property owners within 500 feet of the proposed development and residents on the City's "interested parties list" be invited to participate in a Neighborhood Meeting. In an effort to be more inclusive, UNE has extended beyond the 500-foot requirement to include property owners within 1,000 feet of the Portland campus. Your contact information has been provided to us by the City of Portland as part of these lists. A sign-in sheet will be circulated at the meeting, and minutes of the meeting will be taken. Both the sign-in sheet and meeting minutes will be submitted to the Planning Authority for inclusion in the project's IOZ application to City Planning.

If you have any questions, please contact me at 207-558-3707 or via email at csuhr@woodardcurran.com. We hope to see you.

Sincerely,

Woodard & Curran, Inc.

Caitlin Suhr, PE
Project Manager
On behalf of the University of New England (UNE)

Attachments: Campus Map with Neighborhood Meeting Location

Note:

Under the City of Portland Land Use Code, at least two Neighborhood Meetings shall be required as part of an Application for an Institutional Overlay Zone (Section 8.5.3.B.). The first shall be held prior to the formal submission of a zone change application for an Institutional Overlay Zone and the second shall be held during the City's review. Meetings shall identify the concerns, if any, of affected residents and property owners, and inform the development of the Institutional Development Plan (IDP) and regulatory framework. Meetings shall be held in a convenient location proximate to the institution. The applicant shall provide written notification to property owners of record within 500 feet of the proposed IOZ boundary at least ten days prior to the meeting dates and maintain written records of the meetings.

Should you wish to offer additional comments on this Application, you may forward them by e-mail to planning@portlandmaine.gov or by mail to the Planning and Urban Development Department, Planning Division, 4th Floor, 389 Congress Street, Portland, ME 04101.

Woodard & Curran Sewall BERNSTEIN SHUR UNE UNIVERSITY OF NEW ENGLAND INNOVATION FOR A HEALTHIER PLANET

Campus Master Plan

Woodard & Curran Sewall BERN STEIN SHUR UNE UNIVERSITY OF NEW ENGLAND
INNOVATION FOR A HEALTHIER PLANET

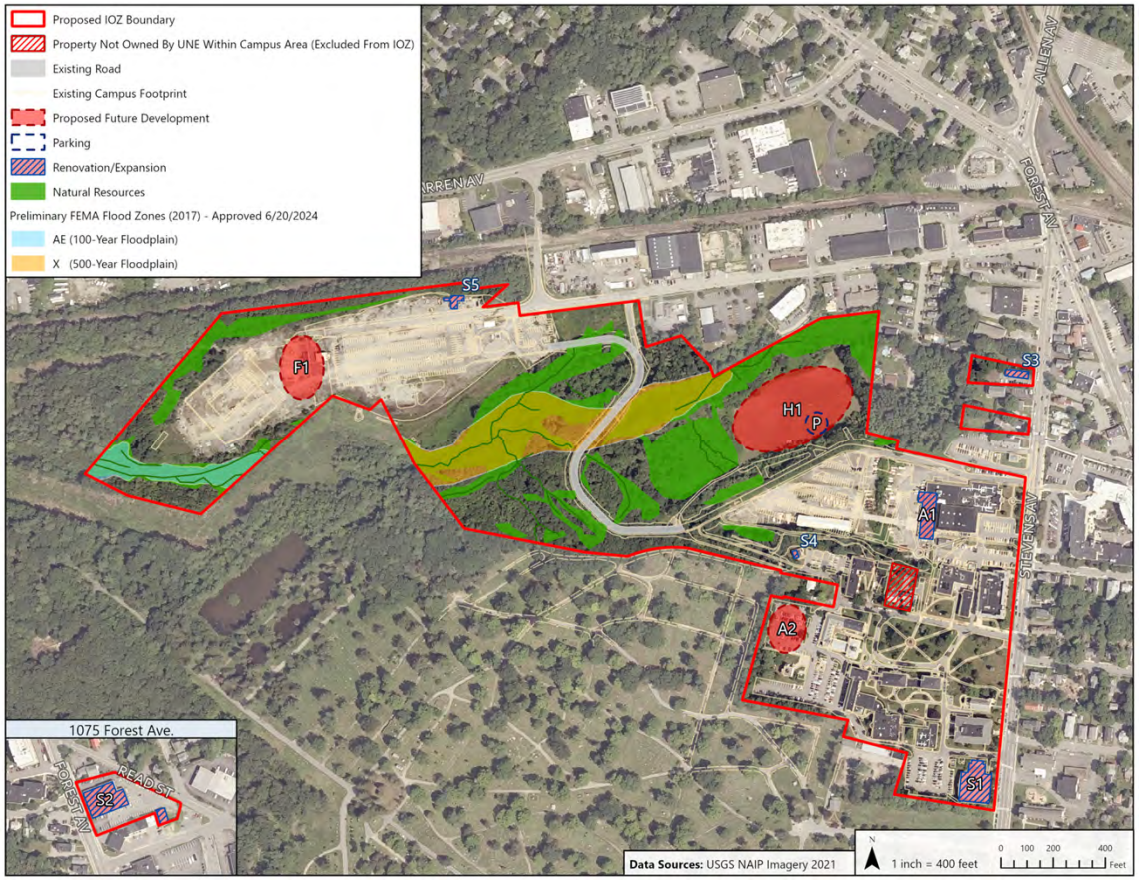
10+ Year Development Plan

Priority 1: Short-Term Development Plan (0-5 years)				
Campus Master Plan Identifier	Project	Use Category	Total Square Footage	Estimated Occupancy
H1	Residence Hall	Housing	175,000	350 beds
A1	Innovation Hall Renovation/Expansion	Academic	24,000	2 offices
S3	812 Stevens Ave. Renovation/Expansion	Support	10,000	6 offices
Priority 2: Medium-Term Development Plan (5-10 years)				
Campus Master Plan Identifier	Project	Use Category	Total Square Footage	Estimated Occupancy
S2	UNE North/1075 Forest Ave. Renovation/Expansion	Support	60,000	10 offices
S4	79 College Street Renovation/Expansion	Support	2,500	2 offices
S5	Bishop Street Renovation/Expansion	Support	2,000	N/A
Priority 3: Long-Term Development Plan (10+ years)				
Campus Master Plan Identifier	Project	Use Category	Total Square Footage	Estimated Occupancy
A2	Academic Building	Academic	60,000	20 offices
F1	Athletic Facility	Athletic	65,000	12 offices

Woodard & Curran Sewall BERN STEIN SHUR UNE UNIVERSITY OF NEW ENGLAND INNOVATION FOR A HEALTHIER PLANET

Student Populations

Year	Student Population
Fall 2015	1,397
Fall 2018	1,257
Fall 2021	1,198
Fall 2023	979
Fall 2025	1,400
Fall 2028	1,600
Fall 2033	1,750



Proposed Height Map

Woodard & Curran Sewall BERN STEIN SHUR UNE UNIVERSITY OF NEW ENGLAND
INNOVATION FOR A HEALTHIER PLANET

IDP: Environmental Plan

- UNE committed to fostering environmental stewardship
- Extensive open space and natural areas
- New development sited to avoid existing natural resources
- Maintaining Capisic Brook riparian zone
- Partnership with Portland Trails
- Future site development projects will be required to go through Site Plan Review and comply with local and state stormwater management requirements

Woodard & Curran Sewall BERN STEIN SHUR UNE UNIVERSITY OF NEW ENGLAND
INNOVATION FOR A HEALTHIER PLANET

IDP: Transportation Plan

- Traffic volumes in area have been declining
- Inclusion of on-campus housing will help reduce peak hour trips to and from campus
- Projected long-term growth of student population not expected to have any significant off-site impacts
- Newly constructed connector road provides relief to Morrill's Corner

ITE Trip Generation

Time Period	New One-way Trips	Time Period	New One-way Trips

NEIGHBORHOOD MEETING MINUTES

University of New England – Portland Campus Rezoning – Neighborhood Meeting #2

PROJECT:
University of New England (UNE)
Portland Campus Rezoning

MEETING DATE: October 30, 2024

ISSUED DATE: November 19, 2024

LOCATION:
University of New England - Portland Campus, 716 Stevens Avenue, Hannaford Lecture Hall, Room 109, College of Pharmacy, Portland, ME

ATTENDEES:

Presenters/Representatives
Alan Thibeault – UNE
Mary Costigan – Bernstein Shur
Diane Morabito – Sewall
Caitlin Suhr – Woodard & Curran (W&C)

Public
See attached sign-in sheet

Total recorded attendance was 12.

In person began at 6:00 p.m.

Project Presentation & Content

- Welcome and Introductions provided by Alan Thibeault, UNE
- Presentation provided by Alan Thibeault, UNE and Mary Costigan, Bernstein Shur
  - Overview of UNE
  - Regulatory Process (Institutional Overlay Zone)
  - Institutional Development Plan
  - Public Involvement Opportunities
  - Comments and Questions

Record of Feedback

Throughout and following the project presentation, there was a question-and-answer period with attendees. The following questions were asked and feedback provided:

- Participant asked if information on the upcoming Planning Board Workshop could be provided.
- Participant asked if any future property acquisitions would automatically be included in the IOZ.

- Participant asked where the headwaters of Capisic Brook are located.
- Participant asked what an urban impaired stream is.
- Participant asked if the parking lot behind the newly constructed College of Osteopathic Medicine (COM) building has been permitted and how many spaces it has.
- Participant asked what the ratio of students and staff is to parking spaces.
- Participants expressed that it is difficult to find on-street parking on Stevens Avenue due to students parking there.
- Participants expressed that the City doesn't enforce the 1-hour parking restrictions on side streets, and that students block driveways of abutters.
- Participant asked what the existing building is located behind the Bishop Street parking area.
- Participant asked what height is allowed in the B-2 zone under current zoning.
- Participant asked how many stories the proposed housing building would be.
- Participant asked whether the new housing would be dormitories or apartments.
- Participant asked what will happen if the building height request as part of this application doesn't get approved.
- Participant asked if the housing will be for students only.
- Participant asked if UNE is bound by rent control restrictions.
- Participant asked what the height is of the new medical (COM) building.
- Participant asked whether the housing building could be located where the proposed athletic facility is, near Bishop Street.
- Participant asked what academic programs will be occupying proposed development A2.
- Participant asked if the location of proposed development A2 is located in an existing parking lot.
- Participant asked how many units would be in the housing building.
- Participant noted that there was recently construction noise happening at night at one of the parking lots on campus.
- Participant noted that 2024 student population data was not provided in the table in the presentation.
- Participant asked what UNE's plans are for the building at 798 Stevens Avenue.
- Participant asked whether UNE has done traffic counts for new roadway internal to campus.
- Participant asked when UNE met with DCNA.
- Participant asked what DCNA's concerns were related to the IOZ application.
- Participant asked if a copy of the PowerPoint presentation could be made available.
- Participant asked if this information is available on UNE's website.

List of Plans, Documents or Drawings Shared

The following information was shared via the PowerPoint presentation given at the meeting, with the presentation attached for reference:

- UNE Portland Campus overview
- Regulatory process and project timeline
- Existing and proposed zoning

- Summary of public feedback received to date
- Institutional Development Plan (IDP)
- Campus Master Plan
- Proposed Height Map
- IDP: Environmental Plan
- IDP: Transportation Plan
- Public involvement opportunities
- Email for follow up questions and concerns.

Meeting Close

- The meeting closed at approximately 7:30 and the project team thanked attendees.

Re: University of New England – Map and Text Amendment Application ZN-003059-2024
Response to City Comments

Dear Natasha:

Thank you for coordinating the review of our application (ZN-003059-2024), a Map and Text Amendment, proposing a new Institutional Overlay Zone (IOZ) for the University of New England (UNE) at 716 Stevens Avenue, with a change to the underlying zoning to B-2 Community Business. We received the comments from the City's reviewers on October 17, 2024, and are providing responses.

Our responses are provided in tables in the following sections:

- Attachment 1: Institutional Development Plan (IDP): Response To Comments
- Attachment 2: Regulatory Framework: Response To Comments

If you have any questions or require additional information, please do not hesitate to contact me at (207) 558-3707 or csuhr@woodardcurran.com. We look forward to continuing to collaborate with the City as we work through the IOZ process.

Sincerely,

Woodard & Curran, Inc.

Caitlin Suhr, PE
Project Manager

cc: Alan Thibeault, University of New England
Mary Costigan, Bernstein Shur

Worksheet(s) Table Legend:
Provided on Page # = Requirement Met
Partially Provided on Page # = Requirement Not Fully Satisfied
Not Provided = Requirement Not Satisfied

1. ATTACHMENT 1: INSTITUTIONAL DEVELOPMENT PLAN (IDP): RESPONSE TO COMMENTS

Institutional Development Plan (IDP): Content Land Use Code, Section 8.5.4.C			
Category, Sub-category, requirement and Sub-requirement	***Location, IDP Page #***	***Review Comments: Overview & Updates Requested***	***Comment Response Provided by Applicant***
1. Context Information *a. The institution's adopted mission, vision or purpose statement*	Pages 4-5	As stated and provided for on pages 4-5, UNE is guided by its Mission, Vision, and Core Values, as well as its own strategic plan ("Our World, Our Future").	This requirement has been met.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *i. A neighborhood context plan*	Pages 11-12, Figure 1.1	The UNE's approximately 72-acre campus is bounded by Warren Ave., Bishop St. Extension, and Bishop St. to the north; Stevens Ave. to the east; and, Evergreen Cemetery and CMP's Utility Corridor to the south, as depicted in provided Figure 1.1.	This requirement has been met.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *ii. An inventory of current programs and services.*	Page 7-9	The UNE Portland campus houses three academic colleges: the Westbrook College of Health Professions (WCHP), the College of Dental Medicine, and the College of Graduate and Professional Studies. In addition, UNE operates two health clinics on campus: the Oral Health Center and the Dental Hygiene Center, as well as UNE North, the Center for Global Humanities, and cultural institutions that include the Maine Women Writers Collection and the UNE Art Gallery.	This requirement has been met.

1. Context Information *b. A summary of relevant baseline data on the institution, including;* *iii. A current census of the number of people using the institution (e.g., employees, enrollment, patients), with an indication of maximums and minimums over time.*	Page 18, Table 1.3	Table 1.3 titled "FTE Student, Faculty, and Professional Staff Data", includes population data from 2016-2023 for student, faculty and professional staff, and campus population. Please also add an additional column to Table 1.3 that includes patient figures visiting the campus (for example, dental patients to the Oral Health Center), further, consider incorporating part-time data, as the provided table only documents FTE.	Table 1.3 has been updated to include historical patient visit data. UNE does not keep track of other campus visitors so is unable to provide this information.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *iv. An inventory and/or plan of all existing property holdings within the main campus and within the City of Portland, including an indication of functional land use links between off-campus properties and the main campus (e.g. remote parking).*	Page 17, Table 1.2	Table 1.2 titled "UNE Owned Properties in the City of Portland", documents UNE's total of 17 parcels, the majority of which are contiguous in the campus core, while several are outparcels. Please speak to the functional land use links between off-campus properties and the main campus (e.g. remote parking and the Bishop Street shuttle service).	This section has been updated to include descriptions of the outparcels, including their functional land use, and links to the campus core.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *v. An inventory and/or plan of existing facilities, including data on use, floor area, and any existing functional connections between facilities.*	Page 16, Figure 1.5 Pages 21-22	The UNE campus map is provided on page 16 as Figure 1.5, depicting the 25 distinct facilities and 11 parking areas, with an inset map centered around the Campus Quad. Please supplement Figure 1.5 Campus Map with a table listing the 25 facilities and 11 parking areas identified in Figure 1.5, organized chronologically by facility number. Please also incorporate the parking spaces data from Table 3.5 here as well. The table should include columns for facility name, total	Table 1.2 has been added to this section that lists and describes the facilities and parking areas as shown on the Campus Map.

		floor area, and use. For parking areas, organize chronologically by parking area # and include columns for total square footage, total number of existing spaces, and a breakdown of ADA and EV spaces.	
1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *i. A summary of existing resources, such as historic, open space, and natural resources.*	Pages 19-20	UNE's campus is the site of the Westbrook College Historic District, which includes six buildings built between 1834 and 1952. Further, existing open space and natural resources are summarized, and include notation of the Portland Trails Forest City Trail connection and the Capisic Brook watershed area.	This requirement has been met.
1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *ii. A summary of the existing transportation system, including vehicular, pedestrian, transit, bicycle, and parking supply, demand, and utilization*	Page 41-44, Table 3.5	Table 3.5 titled "UNE Portland Campus - Parking Spaces" details the currently 11 parking lots located on campus, plus the on-street parking along two principle campus roadways, which amounts to 882 spaces total, plus the 182 permitted spaces presently at the COM building. Please include a quick summary of the existing transportation system within the Context chapter, to incorporate what is detailed on pages 41-44.	A summary of the existing transportation system has been added to the Context chapter.
1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:*	Page 20	Existing stormwater management systems utilize on-site infiltration systems, with secondary use of conveyance to the Stevens Ave. and Bishop St. CSO. Existing wastewater infrastructure for the campus is discharged to	This requirement has been met.

iii. A summary of existing public infrastructure supporting the institution, including demand, utilization and any capacity issues.		a CSO in College St. and Stevens Ave. Other public utilities include: PWD, CMP, and Unitil.	
1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *iv. Relevant municipal plans, projects, and studies that may influence the IDP study area and opportunities for integrating institutional growth.*	Page 21	A breakdown of the City's Comprehensive Plan, with tie in to the eight policy guide topics as they relate to UNE's work is provided with excerpts from Portland's Plan that UNE works to promote and advance are underscored and include the: environment, economy, historic resources, and housing. Please include additional studies that should be referenced in this section, such as the: Portland-South Portland Smart Corridor Plan (final report dated June 2018), the One Climate Future Plan, and the Forest Avenue Redesign Project. For example, within the Smart Corridor Plan on Page 143 it states: "[The] University of New England (UNE) office at 1075 Forest Avenue, shown in Figure 142 is a parcel that addresses the street well, and would be enhanced by the recommended planting palette and materials design guidelines found later in this section."	This section has been updated to reference additional studies as suggested in the comment.
1. Context Information *d. A summary of public involvement in the development of the IDP, including major areas of public concern.*	Page 22	UNE has worked to involve the public in the creation of the IDP during the IOZ submission process, this includes holding one of two required neighborhood meetings, which took place on June 13, 2024. Please be sure to update this section with the 10/30 neighborhood meeting date. Additionally, it may be beneficial to include a few sentences on the required review by both the Planning Board and City Council, as these	This section has been updated to include the 10/30 neighborhood meeting, as well as to include an additional meeting with Deering Center Neighborhood Association. Additional information on the City review process and opportunities for public engagement at Planning Board and City Council has also been provided.

		will also be opportunities for public involvement.	
2. Assessment of future institutional growth and change, including: *a. A description of institutional needs and areas of future institutional growth and change, with:* *i. A projected census of users (e.g., enrollment /employment/patient/ visitor figures and anticipated variations over time).*	Page 25, Table 2.2	Table 2.2 titled "Projected Growth of FTE Student, Faculty, and Professional Staff" provides a snapshot of data for the years of 2025, 2028, and 2033. Please include data on campus visitors, i.e. visiting faculty, prospective students, guests, etc.; to incorporate as a column in Table 2.2. Please also add patients seen for on-campus health visits.	Projected patient visit data has been added to Table 2.2. UNE does not track other types of visitors (such as visiting faculty, prospective students, or guests) so is unable to provide projections for these visitor types.
2. Assessment of future institutional growth and change, including: *a. A description of institutional needs and areas of future institutional growth and change, with:* *ii. Institutional objectives for property both within and outside the IOZ boundary (e.g. acquisition and/or disposition), including an indication of any functional land use connection for sites outside the IOZ boundary to the main campus.*	Pages 26-28	UNE identifies five categories for key current and future institutional needs: campus reorganization, new building and renovation, educational/pedagogy improvements, campus infrastructure, and housing.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *a. A description of institutional needs and areas of future*	Pages 28-30, Table 2.3	A development plan is shown in Table 2.3, titled "10 +- Year Development Program", which identifies three core priority timelines: the short-term (0-5 years), medium-term (5-10 years), and long-term (10+ years).	This requirement has been met.

institutional growth and change, with: *iii. A development plan addressing anticipated or potential institutional needs and physical improvements, including the proposed boundary of the IOZ and any phasing of the development.*			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *i. Transportation and access, with:* *a) An analysis of the projected changes in parking demand, supply, and impacts to the off-street and on-street parking capacity, including an explanation of the proposed parking plan.*		Please provide an analysis of the projected changes in parking demand, supply, and impacts, and a review of current parking conditions. The previous TDM plan could be utilized to assist in completing this section. Further, a discussion on how to mitigate neighborhood impact by reducing on-street parking usage by UNE students and personnel should be included here.	This section has been updated to include the parking analysis based upon the historical parking counts.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support*	Page 36-37, Tables 3.2 & 3.3	Table 3.2 titled "Trip Generation Analysis" provides a snap shot of vehicular usage projections for the student population in the years 2025, 2028, and 2033.	This section has been updated to project increases in pedestrian, bicycle and transit trips based upon ITE data for the projected increase in student population.

the development parameters as set out in the regulatory framework, including: *i. Transportation and access, with:* *b) An analysis of the projected changes in vehicular, pedestrian, transit, and bicycle access routes and facilities, their capacity, and safety.*		Please provide more details, as it relates to pedestrian and bicycle usage in this section, which largely focuses on vehicular travel.	
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *i. Transportation and access, with:* *c) A transportation, access, and circulation plan, representing the synthesis of the analysis, and including a program of potential improvements or set of guidelines to address access deficiencies to and within the IOZ. The plan should outline proposed mechanisms and potential strategies to meet transportation objectives, including transportation demand management, phasing,*	Pages 38-44	UNE's original TDM plan was created in 2010, and is routinely updated, most recently in April 2022. Strategies that emerged from the plan include: education and promotion, carpooling & ridesharing, transit service, incentives, EV charging infrastructure, bicycle infrastructure, and pedestrian & bicycle access. Please provide a more detailed transportation, access, and circulation plan, that expands beyond the strategies identified in the TDM. As an example, perhaps providing a circulation plan of the core campus as a visual could then highlight potential opportunities for connections to the existing and future trail network. Please also speak to the existing Traffic Movement Permit (TMP) in this section, whether UNE envisions surpassing the threshold for a new TEMP under your build-out plans, i.e. indicate when a revised TMP may be required, or triggered, in the future.	A circulation and access plan for the core campus (Figure 3.6) has been added, as suggested, showing the sidewalk connections as well as trail connections with some discussion. A discussion was added regarding the historical TMP information and recent campus building projects. It is unlikely a TMP will be required for the building projects anticipated in this 10-year plan.

and when a Traffic Movement Permit (TMP) may be required.			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *ii. Environment, with:* *a) An analysis of potential cumulative impacts on natural resources and open spaces.*	Page 52	Please provide an expanded analysis under the 'Proposed Future Development and the Environment' paragraph, which should detail potential cumulative impacts to the existing natural resources and open spaces on campus. For example, perhaps some good data to capture here could be existing vs. proposed impervious lot coverage, the existing open space on campus vs. proposed loss or gain of open space over time, and the existing square footage of wetlands vs. potential impacts or gains in the future.	An expanded analysis related to anticipated impacts on natural resources and open space has been included in this section.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *ii. Environment, with:* *b) An analysis of projected energy consumption, hazardous materials*	Pages 57-60	UNE's operational sustainability is detailed within the categories of energy conservation, waste management practices, biomedical waster best practices, sustainable landscaping, and noise generation.	This requirement has been met.

generation, noise generation, and similar issues as relevant.			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *ii. Environment, with:* *c) An environmental plan, representing the synthesis of the analysis and including a proposed program or set of guidelines for future preservation, enhancement, conservation, and/or mitigation*	Page 56, Figure 4.8	Figure 4.8 titled "Natural Resources and Campus Master Plan" shows proposed campus improvements in locations aimed to mitigate impact to natural resources.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iii. Infrastructure, with:*	Pages 62-63	Utility demand and capacity are detailed through the lens of the various providers: water services supplied by PWD, electricity supplied by CMP, telephone & data services by Consolidated Communications and Spectrum, natural gas and heating fuels supplied by Unitil, and existing wastewater infrastructure	This requirement has been met.

a) An analysis of projected public utility demand and the capacity of associated infrastructure.			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iii. Infrastructure, with:* *b) An analysis of projected public safety needs and projected impacts to the capacity of these services.*	Page 64	UNE has security officers who provide 24/7 patrol and dispatch coverage of the campus, in addition, an emergency notification service (Rave Mobile Safety), provides faculty, staff, and students with timely updates during emergencies, speaking to the capacity of public safety as the campus grows.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iii. Infrastructure, with:* *c) An infrastructure plan, representing the synthesis of the analysis and including a proposed*	Pages 61-62, Figure 5.1	Figure 5.1 titled "Existing Stormwater Infrastructure and Campus Master Plan" illustrates existing City sanitary sewer and stormwater infrastructure surrounding and within the campus, as well, future stormwater run-off flows are detailed. Please include a set of guidelines to support sustainable growth at the conclusion of this chapter.	A set of guidelines to support sustainable growth has been added at the conclusion of this chapter.

program or set of guidelines to support sustainable growth.			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iv. Design, with:* *a) An analysis of projected impacts to neighboring properties and public spaces, including potential shadow, wind, and lighting impacts, impacts of height and massing, and impacts to historic resources.*	Pages 65-72, Figures 6.1, 6.2, 6.3, & 6.4	The City wants to ensure UNE is adequately addressing potential impacts to the surrounding parcels, including: Evergreen Cemetery, the isolated parcels within the Campus, and properties on Mayfield Street. Please provide spot elevations on the buildings shown in Figure 6.2 to better dedicate heights. Provide rendering of proposed development looking from Mayfield Street towards proposed student housing building (west). Additionally, as UNE considered alternative building layouts and parking configurations for the conceptual student housing on the Gulliver's Field site?	Building height information has been added to Figure 6.1 to provide greater context for existing and proposed facilities. A rendering of the proposed housing development looking from Mayfield Street towards the proposed student housing building has been included as Figure 6.3. The design of the proposed housing building and associated parking area is still in the planning stages. UNE is evaluating alternatives for building footprints and parking configurations within the general area depicted on the Campus Master Plan. The general area for development will be within the existing Gulliver's Field site, however final design will be developed in the future and reviewed by the City as part of the Site Plan Review process. The rendering included as Figure 6.3 shows a version of the housing located at the closest point to Mayfield Street within the 85-ft maximum height overlay.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set*	Page 71-72, Figure 6.4	Figure 6.4 titled "Proposed Maximum Heights" has identified transition zones along the edges of the IOZ boundary. Please provide the design rationale for the proposed 50 ft height within the 25 ft-wide transition zone—was there any consideration of varying the maximum height to better align with the surrounding context? Did UNE	Figure 6.4 has been revised to be a "Proposed Open Space and Maximum Height Map" and has been updated to include open space, i.e., "no build", areas. The design rationale for the proposed 50 ft height within the 25 ft-wide transition zone was to provide a step back of building heights from the campus edges and

out in the regulatory framework, including: *iv. Design, with:* *b) An analysis of transition areas between the institution and adjoining neighborhoods, including identification of key character defining components of the surrounding context.*		consider mapping lower maximum heights along Capisic Brook, and what is the rationale for mapping 65 ft on the two outparcels fronting Stevens Avenue? Additionally, the parcel on Forest Avenue, under ReCode, would allow a height of up to 75 ft. We recommend removing the height limitation for that parcel should ReCode pass as proposed.	adjacent properties, with the intent to focus densification and greater building heights internal to the campus. The open space areas that have been added to the plan will provide further buffering of neighboring properties, and will preserve existing wetland and open space areas, such as along Capisic Brook and adjacent to the Mayfield Street neighborhood. The proposed maximum height of the outparcels on Stevens Ave and Forest Ave have been revised to 75-ft for consistency with the updated maximum height for the B2 zone as part of the recently adopted ReCode. The UNE outparcels at 1075 Forest Ave, 32 Bell Street, and 812 Stevens Ave are zoned B2 under ReCode. As part of this IOZ application, UNE is seeking to change the underlying zoning at outparcel 798 Stevens Ave to B2 for consistency with the rest of the campus and nearby properties on Stevens Ave.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iv. Design, with:*	Page 72	UNE's Campus Safety and Security Department monitors through in-person patrols and CCTV cameras and provides response 24/7, which contribute to low crime statistics on campus.	This requirement has been met.

c) An analysis of existing Crime Prevention Through Environmental Design issues and identification of how these principles would be addressed as part of the proposed campus development.			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iv. Design, with:* *d) A conceptual built environment/public realm plan, representing the synthesis of the analysis and including a set of guidelines for urban design, landscape, open space, and streetscape treatments, with particular attention to the treatment of edges (both within and abutting the IOZ boundary) to achieve compatible transitions.*	Pages 71-75	Figure 6.4 titled "Proposed Maximum Heights" could be expanded on as a conceptual built environment/public realm plan for this section. Has there been consideration for a more targeted contextual set of heights throughout the campus to address varying building typologies in adjacent neighborhoods?	Figure 6.4 has been revised to be a "Proposed Open Space and Maximum Height Map" and has been updated to include open space, i.e., "no build", areas. The open space areas that have been added to the plan will provide further buffering of neighboring properties, and will preserve existing wetland and open space areas, such as along Capisic Brook and adjacent to the Mayfield Street neighborhood, and Evergreen Cemetery. The proposed maximum height areas have been thoughtfully selected to facilitate future development in portions of the campus that will not impact natural resources and will enhance campus engagement and safety.

Re: University of New England – Map and Text Amendment Application ZN-003059-2024
Response to City Comments Round 2

Dear Natasha:

Thank you for coordinating the review of our application (ZN-003059-2024), a Map and Text Amendment, proposing a new Institutional Overlay Zone (IOZ) for the University of New England (UNE) at 716 Stevens Avenue, with a change to the underlying zoning to B-2 Community Business, and OS-P Open Space Preservation. We received the second round of comments from the City's reviewers on January 17, 2025, and are providing responses on the attached table:

- Attachment 1: Institutional Development Plan (IDP): Response To Comments

In addition to the written comments received from City staff, we have also heard feedback from the Planning Board and public at the second Planning Board Workshop held on January 28, 2025. Some of the feedback we heard included a suggestion to consider rezoning the proposed open space areas as Open Space Preservation (OS-P), suggestions for ongoing community engagement requirements to be incorporated into the Regulatory Framework, and suggestions related to the maximum height areas and consideration of increased transition zones. Responses and further information related to these topics are provided below for consideration.

Open Space Preservation (OS-P) Rezoning

Staff suggested considering rezoning UNE's proposed open space areas as Open Space Preservation (OS-P), for consistency with the City's Land Use Ordinance. UNE is committed to preserving these areas of campus, which are largely comprised of natural resources such as wetlands and streams. In line with Staff's suggestion, UNE is proposing to rezone three areas of campus as OS-P. These areas are shown on Figures 1.4 and 6.4 in the IDP. These areas make up approximately 14% of the campus' total area, reflecting UNE's commitment to protecting the environment and providing ample open space areas on their campus.

Ongoing Community Engagement

UNE and City Staff have had discussions regarding the requirements for ongoing community engagement, as described in Section I, Neighborhood Integration, of the draft Regulatory Framework. UNE has a history of consistent outreach to its neighbors and is committed to continuing that engagement. To reflect this commitment, UNE will conduct annual

neighborhood outreach through neighborhood meetings, to be hosted on campus. Neighbors within 500' of the campus will receive notices ahead of the meeting, and UNE will provide a record of participants, content, and feedback to the City, as required in Section 13.5.5.C of the City's Land Use Code.

Height Map

During the second Planning Board Workshop, Members of the Planning Board and public shared suggestions on further revisions to the proposed Open Space and Maximum Height Map, which is a figure included in both the IDP and Regulatory Framework. Suggestions included providing additional transition zones between the proposed housing site and the Mayfield Street neighborhood and providing open space areas adjacent to Evergreen Cemetery. In consideration of the feedback related to the maximum heights near Mayfield Street, the Open Space and Maximum Height Map has been revised to reflect an additional transition zone with a maximum height of 50' adjacent to the proposed housing site. This transition zone is in addition to the 50' wide no build area adjacent to the Mayfield Street neighborhood, which is proposed to be rezoned as OS-P.

UNE has considered the feedback received suggesting additional open space area be provided adjacent to Evergreen Cemetery. There is an area of approximately 4.6 acres of OS-P that is proposed adjacent to Evergreen Cemetery. The remaining area of campus immediately adjacent to the cemetery has been previously developed with an access roadway that provides connectivity between the core campus and the Bishop Street intermodal facility. A 25' wide transition zone with maximum height of 50' is provided on the campus adjacent to Evergreen Cemetery, which exceeds the typical minimum 15' setback required in the B-2 zone for areas adjacent to Open Space Recreation (OS-R) areas (as Evergreen Cemetery is zoned).

If you have any questions or require additional information, please do not hesitate to contact me at (207) 558-3707 or csuhr@woodardcurran.com. We look forward to continuing to collaborate with the City as we work through the IOZ process.

Sincerely,

Woodard & Curran, Inc.

1. ATTACHMENT 1: INSTITUTIONAL DEVELOPMENT PLAN (IDP): RESPONSE TO COMMENTS

Institutional Development Plan (IDP): Content Land Use Code, Section 8.5.4.C			
Category, Sub-category, requirement and Sub-requirement	***Location, IDP Page #***	***Review Comments: Overview & Updates Requested***	***Comment Response Provided by Applicant***
1. Context Information *a. The institution's adopted mission, vision or purpose statement*	Pages 4-5	As stated and provided for on pages 4-5, UNE is guided by its Mission, Vision, and Core Values, as well as its own strategic plan ("Our World, Our Future").	This requirement has been met.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *i. A neighborhood context plan*	Pages 11-12, Figure 1.1	The UNE's approximately 72-acre campus is bounded by Warren Ave., Bishop St. Extension, and Bishop St. to the north; Stevens Ave. to the east; and, Evergreen Cemetery and CMP's Utility Corridor to the south, as depicted in provided Figure 1.1.	This requirement has been met.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *ii. An inventory of current programs and services.*	Page 7-9	The UNE Portland campus houses three academic colleges: the Westbrook College of Health Professions (WCHP), the College of Dental Medicine, and the College of Graduate and Professional Studies. In addition, UNE operates two health clinics on campus: the Oral Health Center and the Dental Hygiene Center, as well as UNE North, the Center for Global Humanities, and cultural institutions that include the Maine Women Writers Collection and the UNE Art Gallery.	This requirement has been met.

1. Context Information *b. A summary of relevant baseline data on the institution, including;* *iii. A current census of the number of people using the institution (e.g., employees, enrollment, patients), with an indication of maximums and minimums over time.*	Page 21, Table 1.3	Table 1.3 titled "FTE Student, Faculty, and Professional Staff Data", includes population data from 2016-2023 **for student, faculty and professional staff, campus population, and patient visits. Note, UNE does not keep track of general campus visitors.**	This requirement has been met.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *iv. An inventory and/or plan of all existing property holdings within the main campus and within the City of Portland, including an indication of functional land use links between off-campus properties and the main campus (e.g. remote parking).*	Page 20, Table 1.2	Table 1.2 titled "UNE Owned Properties in the City of Portland", documents UNE's total of 17 parcels, the majority of which are contiguous in the campus core, while several are outparcels. **An additional section speaks to the functional land use links between off-campus properties (outparcels) and the main campus.**	This requirement has been met.
1. Context Information *b. A summary of relevant baseline data on the institution, including;* *v. An inventory and/or plan of existing facilities, including data on use, floor area, and any existing functional connections between facilities.*	Page 16, Figure 1.5 Pgs. 17-19, Table 1.1	The UNE campus map is provided on page 16 as Figure 1.5, depicting the 25 distinct facilities and 11 parking areas, with an inset map centered around the Campus Quad. **A campus facilities table has been provided detailing each facility, their location, name, total floor area, building height, and use. Further, the table includes each parking facility, a lot description, total parking area, total number of spaces including those ADA and EV charging compliant.**	This requirement has been met.

1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *i. A summary of existing resources, such as historic, open space, and natural resources.*	Pages 22-23	UNE's campus is the site of the Westbrook College Historic District, which includes six buildings built between 1834 and 1952. Further, existing open space and natural resources are summarized, and include notation of the Portland Trails Forest City Trail connection and the Capisic Brook watershed area.	This requirement has been met.
1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *ii. A summary of the existing transportation system, including vehicular, pedestrian, transit, bicycle, and parking supply, demand, and utilization*	Page 41-53, Table 3.5 & 3.6, Page 50, Figure 3.6	Table 3.5 titled "UNE Portland Campus - Parking Spaces" details the currently 11 parking lots located on campus, plus the on-street parking along two principal campus roadways, which amounts to 882 spaces total, plus the 182 permitted spaces presently at the COM building. **Table 3.6 details parking occupancy at the UNE Portland campus data and assumptions from 2015-2033. The chapter concludes with three main parking goals for the campus.**	This requirement has been met.
1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *iii. A summary of existing public infrastructure supporting the institution, including demand, utilization and any capacity issues.*	Page 24	Existing stormwater management systems utilize on-site infiltration systems, with secondary use of conveyance to the Stevens Ave. and Bishop St. CSO. Existing wastewater infrastructure for the campus is discharged to a CSO in College St. and Stevens Ave. Other public utilities include: PWD, CMP, and Unitil.	This requirement has been met.

1. Context Information *c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:* *iv. Relevant municipal plans, projects, and studies that may influence the IDP study area and opportunities for integrating institutional growth.*	Page 24-27	A breakdown of the City's Comprehensive Plan, with tie in to the eight policy guide topics as they relate to UNE's work is provided with excerpts from Portland's Plan that UNE works to promote and advance are underscored and include the: environment, economy, historic resources, and housing. **Additional studies also referenced are: One Climate Future, the Smart Corridor Plan, and the Forest Avenue Redesign Project.**	This requirement has been met.
1. Context Information *d. A summary of public involvement in the development of the IDP, including major areas of public concern.*	Pages 27-28	UNE has worked to involve the public in the creation of the IDP during the IOZ submission process, **this includes holding two required neighborhood meetings, which took place on June 13, 2024 and October 30, 2024, as well as the necessary Planning Board and City Council meetings during the adoption of the IOZ.**	This requirement has been met.
2. Assessment of future institutional growth and change, including: *a. A description of institutional needs and areas of future institutional growth and change, with:* *i. A projected census of users (e.g., enrollment /employment/patient/ visitor figures and anticipated variations over time).*	Page 31, Table 2.2	Table 2.2 titled "Projected Growth of FTE Student, Faculty, and Professional Staff, **and Patient Visits" provides a snapshot of data assumptions for the years of 2025, 2028, and 2033. Note, UNE does not keep track of general campus visitors.**	This requirement has been met.

2. Assessment of future institutional growth and change, including: *a. A description of institutional needs and areas of future institutional growth and change, with:* *ii. Institutional objectives for property both within and outside the IOZ boundary (e.g. acquisition and/or disposition), including an indication of any functional land use connection for sites outside the IOZ boundary to the main campus.*	Pages 32-34	UNE identifies five categories for key current and future institutional needs: campus reorganization, new building and renovation, educational/pedagogy improvements, campus infrastructure, and housing.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *a. A description of institutional needs and areas of future institutional growth and change, with:* *iii. A development plan addressing anticipated or potential institutional needs and physical improvements, including the proposed boundary of the IOZ and any phasing of the development.*	Pages 34-35, Table 2.3	A development plan is shown in Table 2.3, titled "10 +- Year Development Program", which identifies three core priority timelines: the short-term (0-5 years), medium-term (5-10 years), and long-term (10+ years).	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support*	Page 24, Pages 51-53	**The context section notes: "A campus parking analysis, based upon the historical count data, projects a maximum occupancy rate per university population to be at 0.39 from 2025 to 2033. This rate is similar to the Institute of Transportation Engineers (ITE) 85th percentile parking rate." Further,**	This requirement has been met.

the development parameters as set out in the regulatory framework, including: *i. Transportation and access, with:* *a) An analysis of the projected changes in parking demand, supply, and impacts to the off-street and on-street parking capacity, including an explanation of the proposed parking plan.*		**provided within the Transportation Plan section, UNE includes a parking analysis based upon the historical parking counts.**	
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *i. Transportation and access, with:* *b) An analysis of the projected changes in vehicular, pedestrian, transit, and bicycle access routes and facilities, their capacity, and safety.*	Page 36-37, Tables 3.2 & 3.3	Table 3.2 titled "Trip Generation Analysis" provides a snap shot of vehicular usage projections for the student population in the years 2025, 2028, and 2033.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the*	Pages 45-53, Figure 3.6	UNE's original TDM plan was created in 2010, and is routinely updated, most recently in April 2022. Strategies that emerged from the plan include: education and promotion, carpooling & ridesharing, transit service, incentives, EV	This requirement has been met.

identified study area, and support the development parameters as set out in the regulatory framework, including: *i. Transportation and access, with:* *c) A transportation, access, and circulation plan, representing the synthesis of the analysis, and including a program of potential improvements or set of guidelines to address access deficiencies to and within the IOZ. The plan should outline proposed mechanisms and potential strategies to meet transportation objectives, including transportation demand management, phasing, and when a Traffic Movement Permit (TMP) may be required.*		charging infrastructure, bicycle infrastructure, and pedestrian & bicycle access. **Figure 3.6 titled "Core Campus Bicycle and Pedestrian Connectivity", shows the primary campus sidewalks, bike facilities, and off-site connections. UNE notes, opportunities to expand this network (as visualized in Fig. 3.6), and to increase these alternative commuting modes, will continue to be explored. Details regarding the Traffic Movement Permit (TMP) have also been included in this section.**	
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *ii. Environment, with:* *a) An analysis of potential cumulative impacts on natural resources and open spaces.*	Page 61 Page 80, Figure 6.4	**Provided under the 'Proposed Future Development and the Environment' section, UNE details their commitment to preserving 10± acres on campus as dedicated open space, which is also depicted in Figure 6.4 titled "Proposed Open Space and Maximum Height Map".** **Staff suggests an additional table be added to this section, breaking down the acreage on campus, and providing the dedicated open space calculations.**	Table 4.1 has been added to this section summarizing the total campus area and dedicated open space area calculations. Language has also been added to this section to note UNE's commitment to rezoning the three open space areas as Open Space Preservation (OS-P).

2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *ii. Environment, with:* *b) An analysis of projected energy consumption, hazardous materials generation, noise generation, and similar issues as relevant.*	Pages 67-70	UNE's operational sustainability is detailed within the categories of energy conservation, waste management practices, biomedical waster best practices, sustainable landscaping, and noise generation.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *ii. Environment, with:* *c) An environmental plan, representing the synthesis of the analysis and including a proposed program or set of guidelines for future preservation, enhancement, conservation, and/or mitigation*	Page 66, Figure 4.8	Figure 4.8 titled "Natural Resources and Campus Master Plan" shows proposed campus improvements in locations aimed to mitigate impact to natural resources.	This requirement has been met.

2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iii. Infrastructure, with:* *a) An analysis of projected public utility demand and the capacity of associated infrastructure.*	Pages 72-73	Utility demand and capacity are detailed through the lens of the various providers: water services supplied by PWD, electricity supplied by CMP, telephone & data services by Consolidated Communications and Spectrum, natural gas and heating fuels supplied by Unitil, and existing wastewater infrastructure	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iii. Infrastructure, with:* *b) An analysis of projected public safety needs and projected impacts to the capacity of these services.*	Page 74	UNE has security officers who provide 24/7 patrol and dispatch coverage of the campus, in addition, an emergency notification service (Rave Mobile Safety), provides faculty, staff, and students with timely updates during emergencies, speaking to the capacity of public safety as the campus grows.	This requirement has been met.
2. Assessment of future institutional growth and change, including:	Pages 71-74, Figure 5.1	Figure 5.1 titled "Existing Stormwater Infrastructure and Campus Master Plan" illustrates existing City sanitary sewer and	This requirement has been met.

b. Infrastructure, with:* *c) An infrastructure plan, representing the synthesis of the analysis and including a proposed program or set of guidelines to support sustainable growth.*		stormwater infrastructure surrounding and within the campus, as well, future stormwater run-off flows are detailed. **At the conclusion of this chapter, a set of guidelines to support sustainable growth was added.**	
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iv. Design, with:* *a) An analysis of projected impacts to neighboring properties and public spaces, including potential shadow, wind, and lighting impacts, impacts of height and massing, and impacts to historic resources.*	Pages 65-72, Figures 6.1, 6.2, 6.3, & 6.4	The City wants to ensure UNE is adequately addressing potential impacts to the surrounding parcels, including: Evergreen Cemetery, the isolated parcels within the Campus, and properties on Mayfield Street. **Figure 6.1 was updated to include spot elevations on campus current and future buildings, in order to better delineate height. Further, Figure 6.3 was updated to provide a 3D view from Mayfield Street towards proposed student housing building (west). With regard to the future development of the Gulliver's Field site, UNE notes they are evaluating** **alternatives for building footprints and parking configurations within the general area depicted on the Campus Master Plan (Figure 2.1, P. 33). The general area for development will be within the existing**	This requirement has been met.

		Gulliver's Field site, however final design will be developed in the future and reviewed as part of site plan application	
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iv. Design, with:* *b) An analysis of transition areas between the institution and adjoining neighborhoods, including identification of key character defining components of the surrounding context.*	Page 79-81, Figure 6.4	**Figure 6.4 titled "Proposed Open Space and Maximum Height Map" depicts open space (i.e. "no build" areas), as well, a 25-ft-wide transition zone around the interior perimeter of the contiguous campus, with a maximum height in that transition zone of 50-ft. UNE indicates the design rationale of which is to provide a stepback of building heights from the campus edges and adjacent properties, with the intent to focus densification and greater building heights internal to the campus. Further, the open space areas added to the plan will provide added buffering of neighboring properties, and will preserve existing wetland and open space areas, including along Capisic Brook and adjacent to the Mayfield Street neighborhood.**	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set*	Page 81	UNE's Campus Safety and Security Department monitors through in-person patrols and CCTV cameras and provides response 24/7, which contribute to low crime statistics on campus.	This requirement has been met.

out in the regulatory framework, including: *iv. Design, with:* *c) An analysis of existing Crime Prevention Through Environmental Design issues and identification of how these principles would be addressed as part of the proposed campus development.*			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *iv. Design, with:* *d) A conceptual built environment/public realm plan, representing the synthesis of the analysis and including a set of guidelines for urban design, landscape, open space, and streetscape treatments, with particular attention to the treatment of edges (both within and abutting the IOZ boundary) to achieve compatible transitions.*	Pages 79-84, Figure 6.4	**Figure 6.4 titled "Proposed Open Space and Maximum Height Map" was revised to include open space (i.e., "no build", areas). The open space areas added to the plan provide further buffering of neighboring properties, and will preserve existing wetland and open space areas, such as along Capisic Brook and adjacent to the Mayfield Street neighborhood, and Evergreen Cemetery. UNE notes, the proposed maximum height areas have been selected to facilitate future development in portions of the campus that will not impact natural resources and will enhance campus engagement and safety.**	This requirement has been met.

2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *v. Neighborhood engagement, with:* *a) A plan for ongoing community engagement that represents best practices, promotes collaborative problem solving around community concerns, fosters transparency, and identifies mechanisms for neighborhood feedback and institutional accountability.*	Pages 85-86	UNE outlines four steps in their effort to provide ongoing community engagement, which include: -Developing a comprehensive CMP -Providing monthly project updates for all current/active projects -Creating a dedicated email address to allow neighbors to forward questions, concerns, and feedback -Attendance as local community neighborhood association meetings	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *v. Neighborhood engagement, with:* *b) A property management framework that identifies the*	Page 86	UNE directly oversees the maintenance and care of its facilities; it does not inspect or approve any off-campus housing.	This requirement has been met.

institution's process for handling operational property issues with neighbors.			
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *v. Neighborhood engagement, with:* *c) Strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods.*	Page 86	UNE has established strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods, including alerting abutting properties of the transition of ownership and providing the appropriate contact information.	This requirement has been met.
2. Assessment of future institutional growth and change, including: *b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:* *v. Neighborhood engagement, with:* *d) A set of construction management principles to apply to all institutional construction, that*	Pages 91-93, + Attachment A	UNE has identified construction management principles that will be implemented to minimize impacts to its surrounding neighborhoods from noise, vibrations, ground movement, truck traffic, dust control and other construction related factors.	This requirement has been met.

represent best practice, aim to minimize short- and long-term construction impacts on surrounding residents and businesses, and ensure a clear communication strategy is in place in advance of construction.
