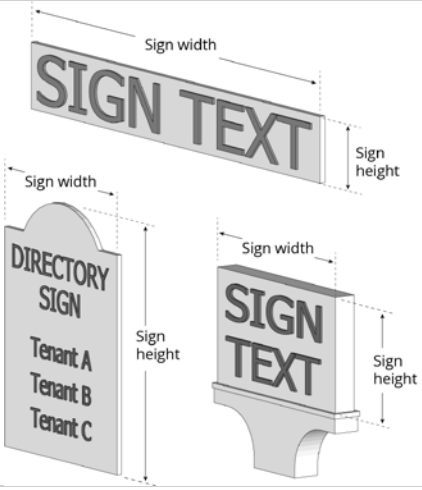
D. Signs or other devices that are inflatable or affected by the movement of the air or other atmospheric or mechanical means, including inflatable balloons, spinners, strings of flags and pennants, feather banners, fixed aerial displays, streamers, tubes, and inflated characters used as signs, whether attached to a sign or to vehicles, structures, poles, trees and other vegetation, or similar support structures, except as allowed in Section 20.9.
E. Any sign which advertises a business no longer in existence or a product or service no longer being sold, except for landmark signs.
F. Any temporary sign, other than those signs allowed pursuant to Section 20.9.
G. Any other signs not specifically allowed by the provisions of this article.

20.6.3 Display restrictions

Except as otherwise provided in this article, the following display features are prohibited:

A. Animated features which rotate, move, or give the appearance of moving by mechanical, wind, or other means. Barber poles no more than three feet in height and 10 inches in diameter and clocks are excepted from this restriction.
B. Sound, odor, or any particulate matter including bubbles, smoke, fog, confetti, or ashes.
C. Lighting devices with intermittent, flashing, rotating, blinking, or strobe light illumination, animation, motion picture, or laser or motion picture projection, or any lighting effect creating the illusion of motion, as well as laser or hologram lights.
D. Search lights or laser light displays when used as attention-attracting devices.
E. Strings of lights used in connection with commercial premises, except when used for temporary lighting for decoration, and lights arranged in the shape of a product, arrow, or any commercial message.

20.7 GENERAL REQUIREMENTS FOR ALL SIGNS



20.7.1 Sign measurement

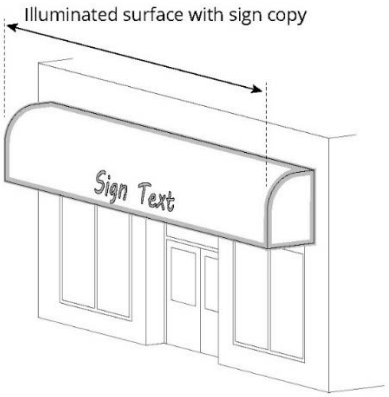
Sign area and height shall be measured as described in Tables 20-C and 20-D.

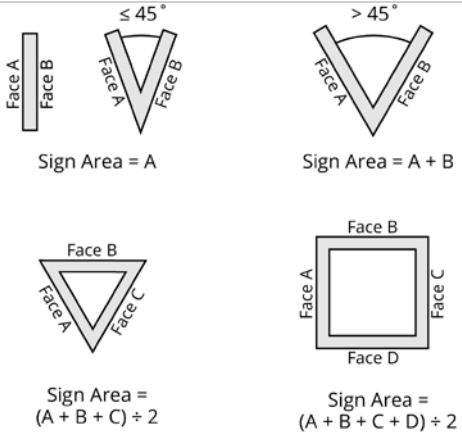
20.7.2 Computation of the number of signs

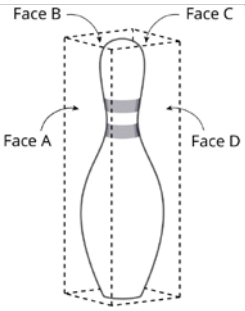
When determining the number of signs, a single sign shall be considered either enclosed within a single frame or composed of modular parts with identical frame elements designed to be joined together to form a single composite sign.

TABLE 20-C: SIGN AREA MEASUREMENT

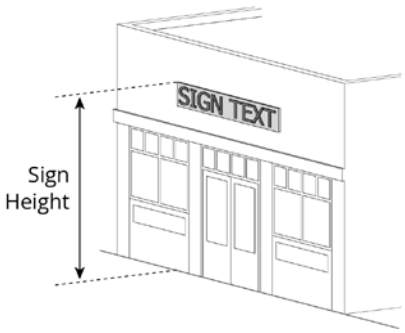
Signs on background panel	Sign copy mounted, affixed, or painted on a background panel or surface distinctively painted, textured, or constructed as a background for the sign copy, is measured as that area contained within the sum of the smallest rectangle(s) that will enclose both the sign copy and the background.	
Signs as individual letters	Sign copy mounted as individual letters or graphics against a building surface that has not been painted, textured, or otherwise altered to provide a distinctive background for the sign copy, is measured as a sum of the smallest rectangle(s) that will enclose each word and each graphic in the sign.	







Signs on illuminated surface	Sign copy mounted, affixed, or painted on an illuminated surface or illuminated element of a building or structure, is measured as the entire illuminated surface or illuminated element, which contains sign copy. Such elements may include lit canopy fascia signs, and/or interior lit awnings.	



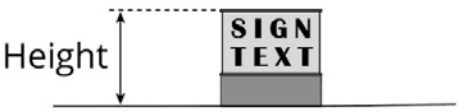


TABLE 20-C (CONT.): SIGN AREA MEASUREMENT

Irregular-shaped signs	Sign area for irregular shaped signs is determined by dividing the sign into squares, rectangles, triangles, circles, arcs, or other shapes the area of which is easily calculated.	
Multi-face signs	For two-face signs, if the interior angle between the two sign faces is 45 degrees or less and the sign faces are less than 42 inches apart, the sign area is determined by the measurement of one sign face only. If the angle between the two sign faces is greater than 45 degrees, the sign area is the sum of the areas of the two sign faces. For three- or four-face signs, the sign area is 50 percent of the sum of the areas of all sign faces.	

Spherical, free-form, or sculptural signs	Spherical, free-form, or sculptural signs are measured as 50% of the sum of the areas of the four vertical sides of the smallest four-sided polyhedron that will encompass the sign structure. Signs with greater than four polyhedron faces are prohibited.	 Sign Area = (A + B + C + D) ÷ 2

Note: Numerals and letters used to identify an address are not included in the determination of sign area.

TABLE 20-D: SIGN HEIGHT MEASUREMENT

Building-mounted signs	The height of signs mounted on a building is the vertical distance measured from the base of the wall on which the sign is located to the top of the sign or sign structure.	
Freestanding signs	Sign height is measured as the vertical distance from the finished grade at the base of a sign to the top of the sign exclusive of any filling, berming, mounding, or landscaping solely for the purpose of locating the sign and excluding decorative embellishments as permitted in Section 20.8.	

20.7.3 Sign illumination

A. Sign illumination by sign district

1. Table 20-E identifies the type of illumination permitted (●) or not permitted ( ) by sign district. All allowed permanent signs may also be non-illuminated. All permanent signs for single-family residences or duplexes and all temporary signs must be non-illuminated.
2. The illumination level of a sign must be reduced if the Building Authority determines the light output to be excessive. The Building Authority shall use the following criteria to determine if the illumination is excessive:
   a. The amount of illumination is substantially greater than the illumination level of other nearby signs.
   b. The sign's illumination interferes with the visibility of other signs or with the perception of objects or buildings in the vicinity of the sign.
   c. It directs glare toward streets or motorists.
   d. It adversely impacts nearby residents or neighborhoods.
   e. The illumination reduces the night time readability of the sign.

B. Internal illumination. To minimize glare, internally-illuminated signs must either be constructed with an opaque background and translucent text and symbols, or with a colored background. Backgrounds must not be white, off-white, light gray, cream, or yellow.

TABLE 20-E: SIGN ILLUMINATION BY SIGN DISTRICT

Sign District Name / Type of Illumination	External	Direct	Internal (Cabinet Sign)	Internal (Individual Letters /Logo)	Neon	Single or Two-Color LED	Electronic Message Signs
Residential Sign District	-- [1]			-- [1]			-- [1]
Small Mixed-Use Sign District	●	● [2]	● [3]	●	●	●	
Large Mixed-Use Sign District	●	●	●	●	●	●	●
Downtown Sign District	●	●	●	●	●	●	
Industrial and Transportation Sign District	●	●	●	●	●	●	● [4]
Open Space Sign District	●						

[1] Allowed for institutional uses only.
[2] Only allowed in B-1/B-1b, B-2b/B-2c, IS-FBC, and I-B zones.
[3] Only allowed in B-2b, B2-c, and OP zones.
[4] Only allowed in I-L, I-Lb, I-M, I-Ma, I-Mb, I-H, and I-Hb zones.

C. External illumination

1. Externally-illuminated signs must be illuminated only with steady, stationary, fully-shielded light sources directed solely onto the sign without causing glare.
2. The light source for externally-illuminated signs must be arranged and shielded to substantially confine all direct light rays to the sign face and away from streets and adjacent properties as illustrated in Figure 20-A.

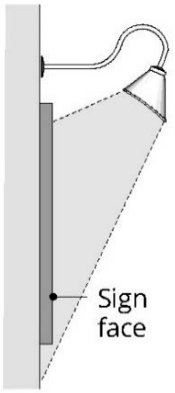

FIGURE 20-A: EXTERNAL ILLUMINATION

D. **Direct illumination.** All direct illumination must be turned off daily at the close of business or 10 p.m., whichever occurs last.

E. **Neon.** Exposed neon sign lighting must be turned off daily at the close of business or 10 p.m., whichever occurs last.

F. **Single-color or two-color LED signs.**

1. Single or two-color LED signs are exempt from the sign area limitations for window signs and building-mounted signs.
2. Single or two-color LED signs must be turned off daily at the close of business or 10 p.m., whichever occurs last.

G. **Electronic Message Signs**

1. One electronic message sign is allowed per lot.
2. Electronic message signs must not flash, blink, flutter, include intermittent or chasing lights, or display video messages (i.e., any illumination or message that is in motion or appears to be in motion). Electronic message signs may display changing messages provided that each message is displayed for no less than 30 seconds.
3. Electronic message signs must be equipped with photocell technology to control and vary the intensity of light output depending on the amount of ambient light that is present to prevent overly bright luminance at night. Automatic controls must limit night luminance to a maximum of 100 nits when the display is set to show maximum brightness in 100 percent full white mode.
4. The applicant shall provide a written certification from the sign manufacturer that the night time luminance has been factory pre-set not to exceed 100 nits as described in (3) above, and that this setting is protected from end-user modification by password-protected software or other method as deemed appropriate by the Building Authority.
5. Electronic message signs must be turned off daily at the close of business or 10 p.m., whichever occurs first.

20.7.4 Changeable sign copy

Changeable sign copy must comply with the following standards:

A. **Maximum area.** The maximum area of changeable sign copy shall be limited to 50% of

the total sign area, except for marquee signs. This does not apply to any signs required by law.

B. **Sign design.** The changeable sign copy must be an integral part of a permanent building-mounted or freestanding sign.

C. **Illumination.** Changeable sign copy may be non-illuminated or internally-illuminated.

20.7.5 Structure and installation

A. **Authority.** The construction of signs shall be enforced and administered by the Building Authority. All signs and advertising structures must be designed to comply with the provisions of this article and applicable provisions of Chapter 6 of the City of Portland Code of Ordinances and constructed to withstand wind loads, dead loads, and lateral forces.

B. **Electrical features.** Where electrical service is provided to freestanding signs or landscape wall signs, all such electrical service must be placed be underground and concealed. Electrical service to building-mounted signs, including conduit, housings, and wire, must be concealed or, when necessary, painted to match the surface of the structure upon which they are mounted. An electrical permit shall be issued prior to installation of any new signs requiring electrical service.

C. **Raceway cabinets.** Raceway cabinets, as illustrated in Figure 20-B, shall only be used in building-mounted signs when access to the wall behind the sign is not feasible, shall not extend in width and height beyond the area of the sign, and shall match the color of the building to which it is attached. Where a raceway cabinet provides a contrast background to sign copy, the colored area is counted in the total allowable sign area allowed for the site or business. A raceway cabinet is not a cabinet sign.

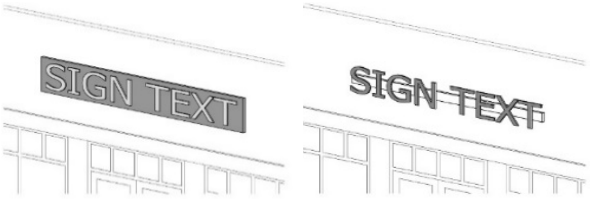

FIGURE 20-B: RACEWAY CABINET EXAMPLES

D. **Materials.** All permanent signs allowed by this article must be constructed of durable materials capable of withstanding continuous exposure to the elements and must be permanently attached to the ground, a building, or another structure by direct attachment to a rigid wall, frame, or structure.

20.7.6 Sign maintenance

All signs must be maintained by any property owner, lessor, lessee, manager, agent, or other person having lawful possession or control over a building, structure, or parcel of land, in a condition or state of equivalent quality to which was approved or required by the City. All signs together with their supports and appurtenances must be maintained in good structural condition, in compliance with applicable provisions of Chapter 6 of the City of Portland Code of Ordinances, and in conformance with this article. Maintenance of a sign includes periodic cleaning, replacement of flickering, burned out, or broken light bulbs or fixtures, repair or replacement of any faded, peeled, cracked, or

otherwise damaged or broken parts of a sign, and any other activity necessary to restore the sign so that it continues to comply with the requirements and contents of the sign permit issued for its installation and provisions of this article.

20.8 STANDARDS FOR PERMANENT SIGNS

20.8.1 Permitted sign types by sign district

Table 20-F establishes which sign types are permitted (●) or not permitted ( ) in each sign district. Any combination of allowed sign types may be used within a given sign district unless specifically prohibited.

20.8.2 Permanent building-mounted sign standards

The maximum total area for all building-mounted signs is established in Table 20-G. The area of all building-mounted signs is included in the maximum total sign area, except when specifically exempted. All permanent building-mounted signs shall comply with the corresponding sign type standards provided in Tables 20-H to 20-Q.

20.8.3 Permanent freestanding sign standards

All permanent freestanding signs shall comply with the standards of Table 20-R and the corresponding sign type standards established in Tables 20-S to 20-V. Unless specifically indicated, standards applicable within a sign district apply to single- and multi-tenant buildings. There is no setback requirement for permanent freestanding signs, provided that the sign is entirely located on the property where the sign is permitted, and the sign is located in compliance with Table 20-F.

TABLE 20-F: ALLOWED SIGN TYPES BY SIGN DISTRICT

	Sign Type	Residential Sign District [1]	Small Mixed-Use Sign District	Large Mixed-Use Sign District	Downtown Sign District	Industrial Sign District	Open Space Sign District
Building-Mounted	Awning Sign		●[2]	●	●	●	●
	Canopy Sign		●[2]	●	●	●	
	Blade Sign		●	●	●		
	Directional Sign		●[2]	●	●	●	●
	Directory Sign	●[3]	●	●	●	●	
	Marquee Sign			●	●		
	Projecting Sign		●[2]	●	●	●	
	Service Island Canopy Sign			●	●	●	
	Wall Sign	●	●	●	●	●	●
	Window Sign		●	●	●	●	●
Freestanding	Freestanding Directional Sign	●	●	●	●[4]	●	●
	Freestanding Directory Sign	●[3]	●	●	●[4]	●	●
	Monument Sign		●	●	●[5]	●	
	Pole Sign			●	●[5]	●	

[1] For institutional uses in residential zones, all permanent sign types are allowed except for the following: awning sign, blade sign, canopy sign, marquee sign, pole sign, projecting sign, service island canopy sign; and window sign.
[2] Not allowed in the R-P Zone.
[3] Not allowed in the R-1, R-2, R-4, IR-1, and IR-2 zones.
[4] Not allowed in the B-3 zone.
[5] In the B-3 and B-5 zones, freestanding signs are permitted only if the front façade of the building is set back a distance of at least 20 ft. from either of the front facades of abutting buildings. In the case of a multi-tenant building, the individual tenants' frontage must be set back a distance of at least 20 ft. from other tenant's frontages.

TABLE 20-G: DIMENSIONAL STANDARDS FOR BUILDING-MOUNTED SIGNS BY SIGN DISTRICT

Sign District			Total Area for All Signs (per Tenant or Façade)	Number of Signs (max.)
Residential	Single-family lots		2 SF max.	1 per lot (either freestanding or building-mounted)
	PRUDs, multi-family lots		10 SF max.	1 per street frontage
	Institutional use in all residential zones		1.5 SF per linear foot of building façade where the sign is placed 150 SF max.	1 per street frontage, plus 2 additional
Small Mixed-Use	Single-tenant building		I-B zone: 1 SF per linear foot of building façade where the sign is placed; Max. 40 SF All other zones: 1.5 SF per linear foot of building façade where sign is placed; Max. 100 SF	1 per street frontage, plus 1 additional
	Multi-tenant building		1.5 SF per linear foot of building façade where the sign is placed 150 SF max.	1 per tenant[5,6], plus 1 additional for the building.
Large Mixed-Use	Single-tenant building		2 SF per linear foot of building façade where the sign is placed 200 SF max.[1]	1 per street frontage, plus 2 additional
	Multi-tenant building		1.5 SF per linear foot of tenant façade where the sign is placed 150 SF max.	1 per tenant[6], plus 1 additional for the building.
Downtown	Single-tenant building		2 SF per linear foot of building façade where the sign is placed	1 per street frontage, plus 2 additional
	Multi-tenant building	Ground floor tenants	2 SF per linear foot of tenant frontage where the sign is placed	1 per tenant[5, 6]
		Building ID and upper floor tenants	5% of building wall area where sign is placed max.	1 per tenant, plus 2 additional for the building
Industrial & Trans.	Single-tenant building		2 SF per linear foot of building façade where sign is placed 250 SF max.	1 per street frontage, plus 2 additional
	Multi-tenant building		2 SF per linear foot of tenant frontage where the sign is placed 200 SF max.	1 per tenant, plus 2 additional for the building
Open Space	Commercial signs/facility signs[2, 3]		1 SF per linear foot of building façade where the sign is placed 20 SF max.[4]	1 per use (either freestanding or building-mounted)
	Sign placement		The total sign area for signs on single-tenant or multi-tenant buildings may be placed on any building elevation, provided that at least 1 sign must be placed above or associated with the building entry or tenant's building entry, in the case of a multi-tenant building.	

[1] Where a building features two principal entry facades facing parallel streets, each entry façade shall be eligible for the full amount of signage relative to its frontage, notwithstanding the total area.
[2] Standards do not apply to municipal stadiums with more than 6,000 seats. The standards for the Small Mixed-Use Sign District shall apply instead.
[3] Building signs shall be visually related to the building on which they are located in terms of materials, color, scale, etc., as determined by the Building Authority.
[4] Product trademarks limited to 5 percent of total sign area.
[5] On the peninsula, each tenant may have two signs, provided that one sign is a blade sign and one sign is placed parallel to the building façade.
[6] If a tenant faces additional street frontages, one additional sign is allowed per frontage for that tenant.

TABLE 20-H: STANDARDS FOR AWNING SIGNS

Standard	Requirements
Sign area (max.)	1 SF per linear foot of awning width
Mounting height	7 ft. min. from the bottom of the awning to the nearest grade or sidewalk 25 ft. max.
Sign placement	Must be placed above the doors and windows of the ground floor of a building. Awnings shall not project above, below, or beyond the edges of the face of the building wall or architectural element. Sign width shall not be greater than 60% of the width of the awning face or valance on which it is displayed (if an awning is placed on multiple storefronts, each business is permitted signage no greater than 60% of the width of the storefront). May project into public right-of-way with permit approval.
Valance height (max.)	6 in.
Horizontal distance from back of curb (min.)	2 ft.
Illumination	Illumination allowed under the awning.

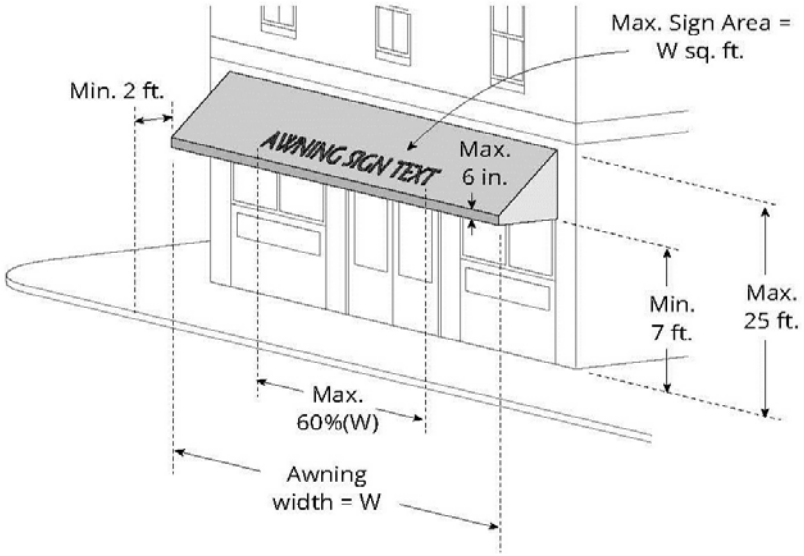

TABLE 20-I: STANDARDS FOR CANOPY SIGNS

Standard	Requirements
Sign area (max.)	1 SF per linear foot of canopy width
Mounting height	8 ft. min. from the bottom of the sign to the nearest grade or sidewalk 20 ft. max.
Sign placement	Must be placed above the doors and windows of the ground floor of a building. Sign width shall not be greater than 60% of the width of the canopy on which it is displayed (if a canopy is placed on multiple store fronts, each business is permitted signage no greater than 60% of the store width or tenant space). May project into public right-of-way with permit approval.
Horizontal distance from back of curb (min.)	2 ft.
Illumination	Direct illumination or internal illumination

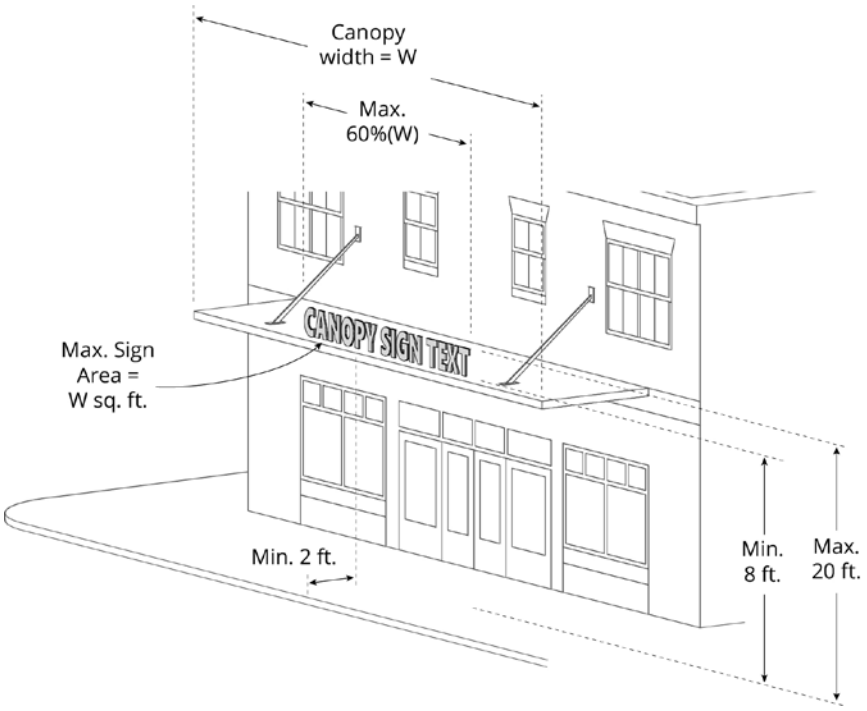

TABLE 20-J: STANDARDS FOR BLADE SIGNS

Standard	Requirements
Sign area (max.)	12 SF
Mounting height	8 ft. min. from the bottom of the sign to the nearest grade or sidewalk Must be mounted perpendicular to the building face or corner of the building.
Sign placement	If mounted below the underside of a walkway or overhead structure, must not extend beyond the edge of the structure on which it is located. May project into public right-of-way with permit approval.
Illumination	External illumination

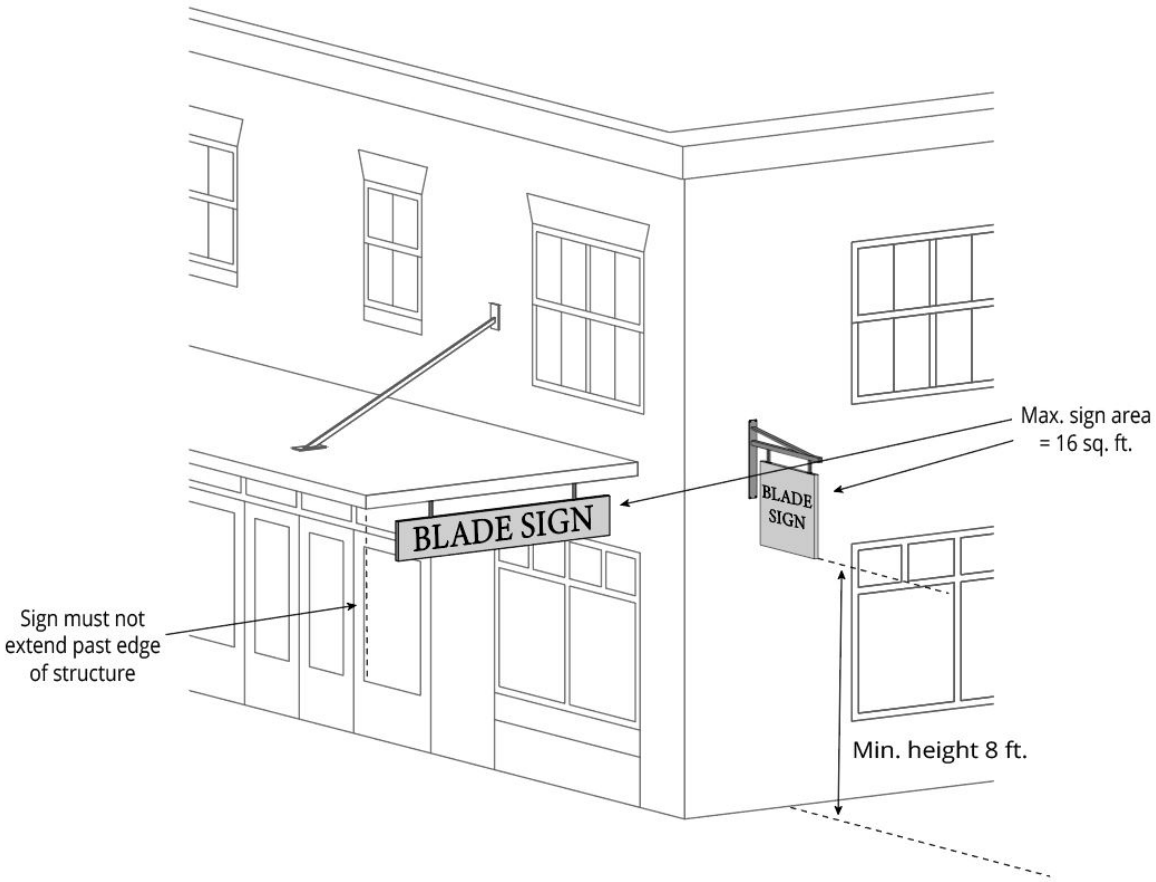

TABLE 20-K: STANDARDS FOR DIRECTIONAL SIGNS (BUILDING-MOUNTED)

Standard	Requirements
Sign area (max.)	3 SF per sign face (excluded from the total allowed sign area for all building-mounted signs)
Mounting height	6 ft. max. from nearest grade
Number of signs (max.)	1 at each driveway, drive-through lane, or alley, not to exceed 3 signs per lot (excluded from the total number of allowed signs for all building-mounted signs)
Illumination	Internal illumination

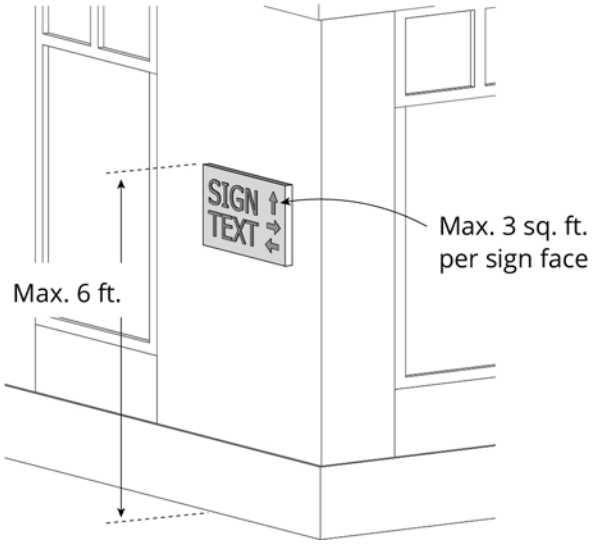

TABLE 20-L: STANDARDS FOR DIRECTORY SIGNS (BUILDING-MOUNTED)

Standard	Requirements
Sign area (max.)	1 SF per occupant of tenant space and 16 SF total max. (excluded from the total allowed sign area for all building-mounted signs)
Mounting height	8 ft. max. from nearest grade
Number of signs (max.)	1 per primary building entrance (excluded from the total number of allowed signs for all building-mounted signs)
Illumination	External illumination or internal illumination

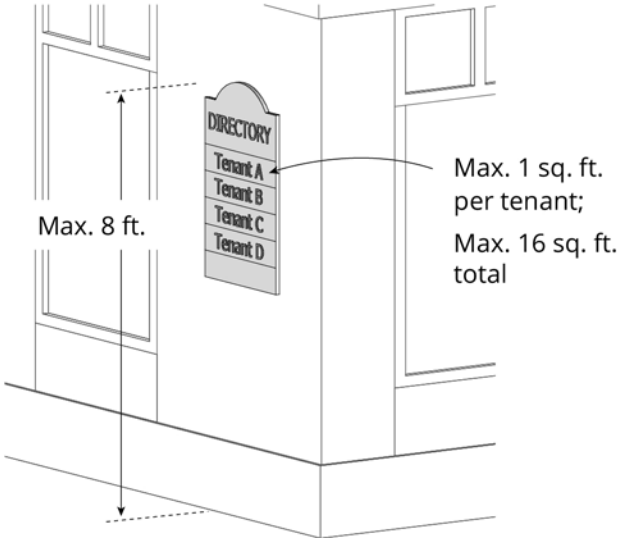

TABLE 20-M: STANDARDS FOR MARQUEE SIGNS

Standard	Requirements
Sign area (max.)	1 SF to 1 linear foot of marquee width
Mounting height	12 ft. min. from the bottom of the marquee to the nearest grade or sidewalk
Number of signs (max.)	1 per business
Sign placement	May project into public right-of-way with permit approval.
Horizontal distance from back of curb (min.)	2 ft.
Illumination	Direct illumination or internal illumination

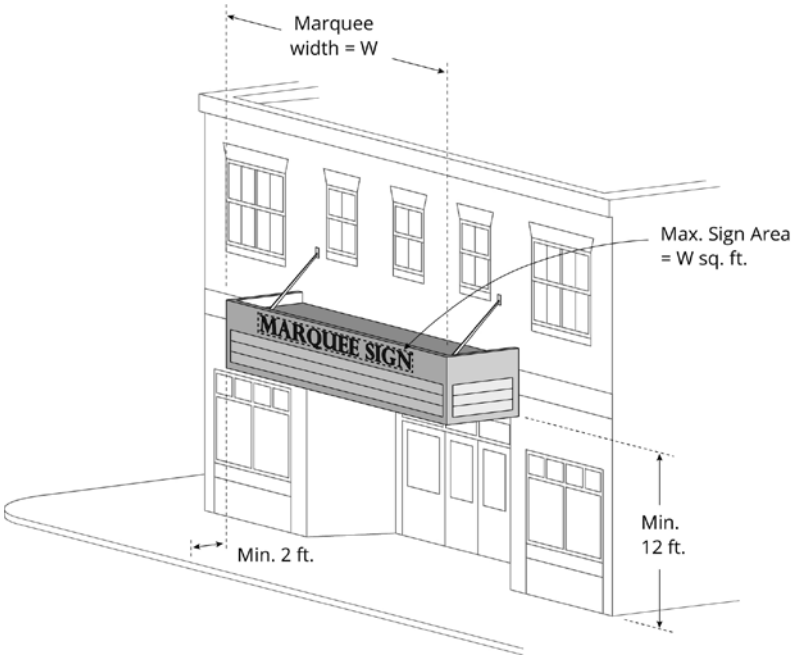

TABLE 20-N: STANDARDS FOR PROJECTING SIGNS

Standard	Requirements
Sign area (max.)	24 SF
Mounting height	8 ft. min. from the bottom of the sign to the nearest grade or sidewalk.
Sign placement	Only on the wall of a building. May project into public right-of-way with permit approval.
Number of signs (max.)	1 per business
Projection (max.)	4 ft. from the building wall to the outer edge of the sign
Illumination	External illumination, direct illumination, neon, or internal illumination of individual letters or graphics only.

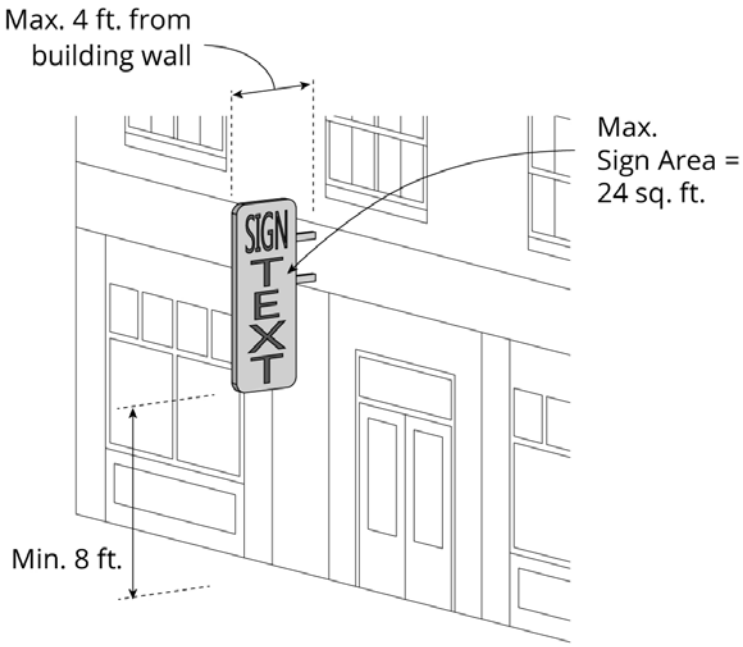

TABLE 20-O: STANDARDS FOR SERVICE ISLAND CANOPY SIGNS

Standard	Requirements
Sign area (max.)	20 SF
Number of signs (max.)	1 per canopy façade, not to exceed 2 signs total
Illumination	Internal illumination

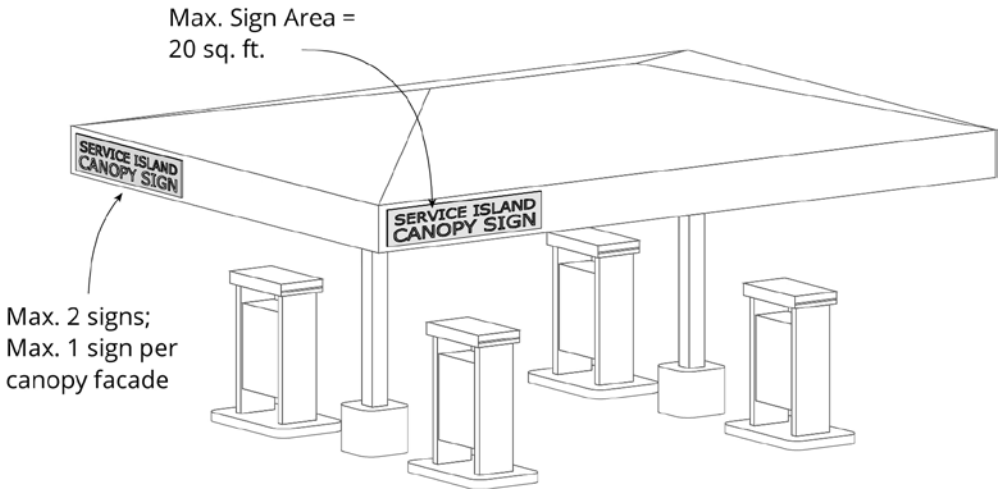

TABLE 20-P: STANDARDS FOR WALL SIGNS

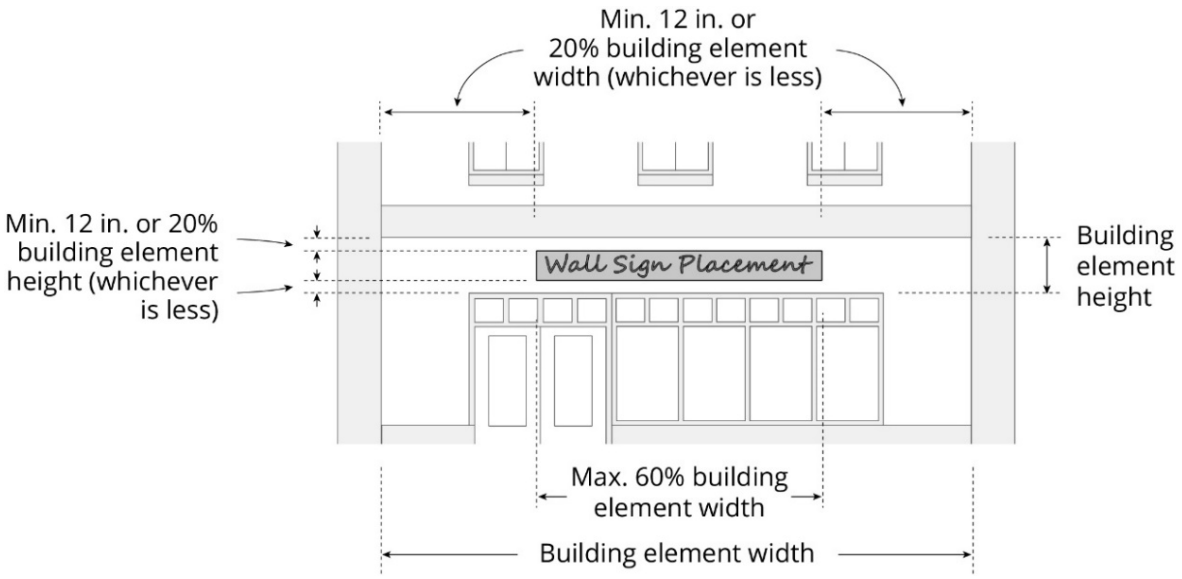
Standard	Requirements
Sign area (max.)	As provided in Table 20-G
Number of signs (max.)	As provided in Table 20-G
Illumination	External illumination, direct illumination, internal illumination, or neon
Special provisions	Painted wall signs are allowed on any exterior building wall of an individual tenant space or building. The allowable area for painted wall signs shall be increased by 10% over the normal allowable sign dimensions for the zone.



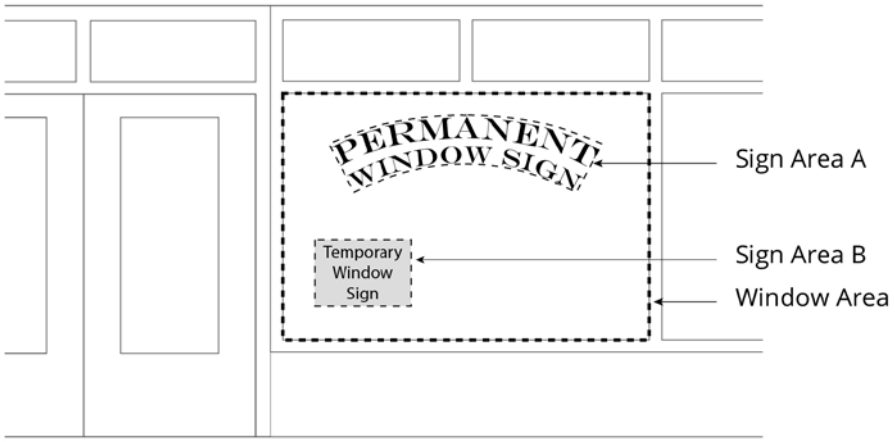


TABLE 20-Q: STANDARDS FOR WINDOW SIGNS

Standard	Requirements
Sign area (max.)	Combined area of temporary and permanent window signs must not exceed 50% of the area of the window on which they are displayed. Painted window signs or perforated vinyl signs are included in this calculation. Excluded from the total allowed sign area for all building-mounted signs.
Sign placement	Must be mounted or displayed on the interior of the window. Allowed on 1st and 2nd story windows only.
Illumination	Neon or single- or two-color LED signs

Sign Area A + Sign Area B ≤ 50% Window Area

TABLE 20-R: DIMENSIONAL STANDARDS FOR FREESTANDING SIGNS BY SIGN DISTRICT

Sign District				Area (max.)	Height (max.)	Number of Signs
Residential			Single-family lots	2 SF	5 ft.	1 per lot (freestanding or building-mounted)
			PRUDs, multi-family lots	15 SF	5 ft.	1 per major vehicular entrance
	Institutional		Street frontage ≤ 100 ft.	15 SF	6 ft.	1 per frontage[1, 2]
			Street frontage 100 – 250 ft.	25 SF	8 ft.	1 per frontage[1, 2]
			Street frontage ≥ 250 ft.	50 SF	8 ft.	1 per frontage[1, 2]
Small Mixed-Use			Single-tenant building	32 SF	B-1/B-1b, B-2b/B-2c zones: 16 ft. In all other zones: 8 ft.	1 per lot[1]
		Multi-tenant building	< 1 acre lot	32 SF		
			1 – 2.5 acre lot	100 SF		
			> 2.5 acre lot	140 SF		
			I-B Zone[3]	20 SF	10 ft.	1 per use
	OP zone		Center identification sign	50 SF	8 ft.	1 per major vehicular entrance
			Tenant sign	15 SF	5 ft.	1 per tenant[2]
Large Mixed-Use	Single-tenant building		Street frontage ≤ 200 ft.	65 SF	B-4 zone: 25 ft. In all other zones: 18 ft.	1 per lot[1]
			Street frontage > 200 ft.	100 SF		
	Multi-tenant building		< 1 acre lot	65 SF	B-4 zone: 25 ft. In all other zones: 18 ft.	1 per lot[1]
			1 - 2.5 acre lot	100 SF		
			> 2.5 acre lot	140 SF		
Downtown				16 SF	6 ft.	1 per frontage[1]
Industrial & Transportation			Single-tenant building	35 SF	10 ft.	1 per lot[1]
			Multi-tenant building	70 SF	15 ft.	1 per lot[1]
	AB zone	Single-tenant building	Street frontage ≤ 200 ft.	32 SF	16 ft.	1 per lot[1]
			Street frontage > 200 ft.	65 SF	16 ft.	1 per lot[1]
		Multi-tenant building	< 1 acre	32 SF	16 ft.	1 per lot[1]
			1 - 2.5 acres	100 SF		
			≥ 2.5 acres	140 SF		
Open Space[4]			Park identification signs[5]	20 SF	5 ft.	1 per major vehicular entrance
			All other signs[5]	16 SF[6]	8 ft.	1 per use (building-mounted or freestanding)

[1] Lots with multiple street frontages are allowed one freestanding sign for each frontage, provided that the signs are not concurrently visible from the public right-of-way.

[2] Where a lot contains more than one affiliated use or tenant, uses and tenants may be allocated space on a shared sign. Individual uses or tenants are not allowed to have individual freestanding signs.

[3] Only allowed for marine-related uses serving vessel traffic.

[4] Standards do not apply to municipal stadiums with more than 6,000 seats. The standards for the Small Mixed-Use Sign District shall apply instead.

[5] All signs must be integrated into existing landscape features or visually related to the materials, colors, scale, etc. of existing buildings as determined by the Building Authority.

[6] Product trademarks limited to 5% of total sign area.

TABLE 20-S: STANDARDS FOR DIRECTIONAL SIGNS (FREESTANDING)

Standard	Requirements
Sign area (max.)	3 SF per sign face (excluded from the total allowed sign area for all freestanding signs)
Height (max.)	6 ft. from nearest grade, except 4 ft. at driveway or drive-through lanes
Number of signs (max.)	1 at each driveway or drive-through lane, not to exceed 3 signs per lot (excluded from the total number of allowed signs for all freestanding signs)
Illumination	Internal illumination

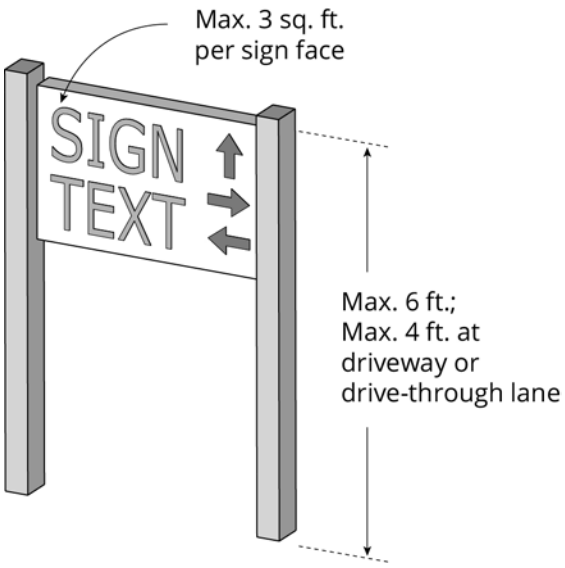

TABLE 20-T: STANDARDS FOR DIRECTORY SIGNS (FREESTANDING)

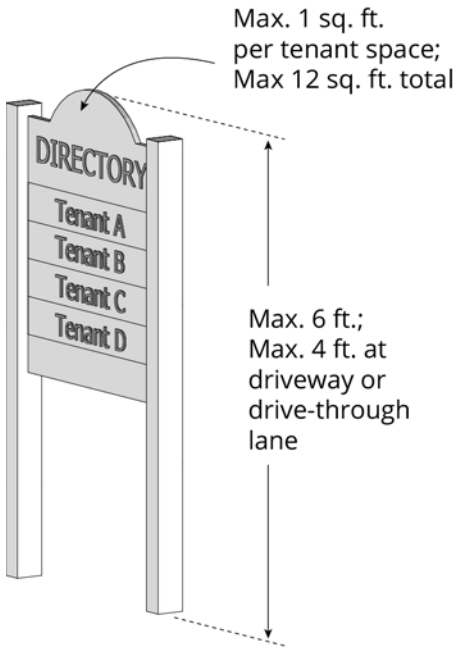
Standard	Requirements
Sign area (max.)	12 SF total 1 SF max. per occupant or tenant space (excluded from the total allowed sign area for all freestanding signs)
Height (max.)	6 ft. from nearest grade, except 4 ft. at driveway or drive-through lanes
Number of signs (max.)	1 per building (excluded from the total number of allowed signs for all freestanding signs)
Illumination	External illumination or internal illumination



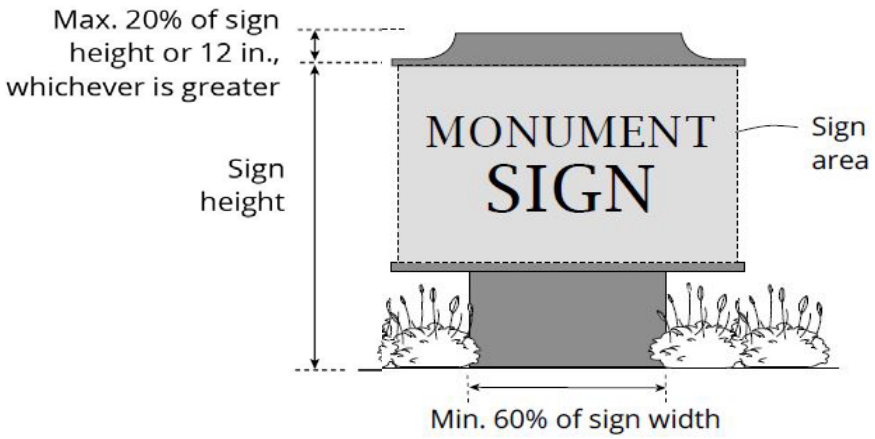


TABLE 20-U: STANDARDS FOR MONUMENT SIGNS[1]

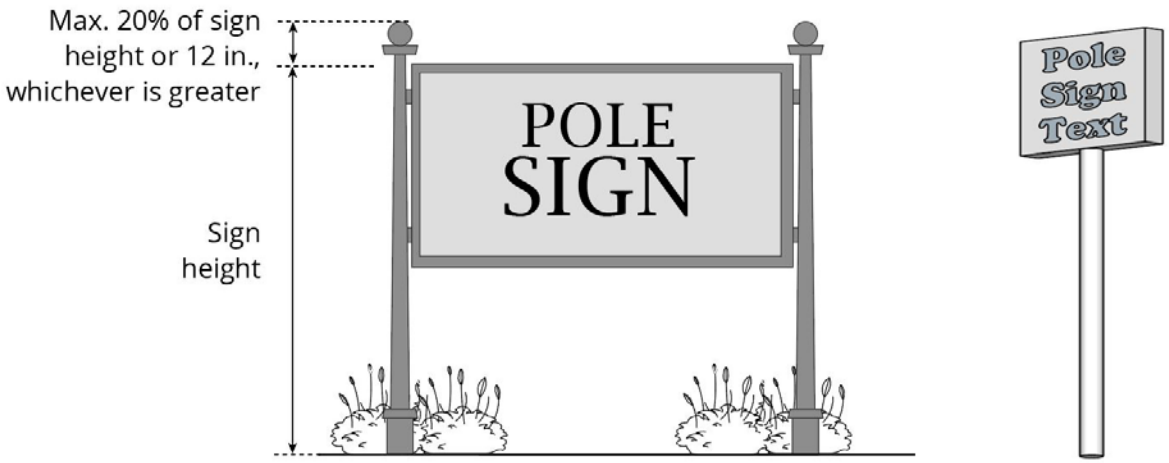
Standard	Sign District					
	Residential Sign District[2]	Small Mixed-Use Sign District	Large Mixed-Use Sign District	Downtown Sign District	Industrial Sign District	Open Space Sign District
Sign area (max.)	50 SF	50 SF	140 SF	50 SF	70 SF	20 SF
Height (max.)	8 ft.	8 ft.	18 ft.	6 ft.	16 ft.	5 ft.
Base width (max.)	The base of a monument sign must be at least 60% of the width of the sign.					
Illumination	Non-illuminated, internal illumination, or external illumination					
Special provisions for sign height	Elements to enhance the design of a sign structure may extend above the sign to a max. of 20% of the sign's allowed height, or 12 inches, whichever is greater.					



[1] The maximum sign area and sign height standards may be further limited by the standards established in Table 20-R. If no value is included in the table below, then a monument sign is not allowed in that sign district

[2] Allowed for institutional uses in residential zones only.

TABLE 20-V: STANDARDS FOR POLE SIGNS[1]

Standard		Sign District					
		Residential Sign District	Small Mixed-Use Sign District	Large Mixed-Use Sign District	Downtown Sign District	Industrial Sign District	Open Space Sign District
Sign area (max.)	Signs ≤ 8 ft. High	15 SF	24 SF	24 SF	24 SF	24 SF	20 SF
Height (max.)		5 ft.	8 ft.	8 ft.	6 ft.	8 ft.	8 ft.
Sign area (max.)	Signs 8 - 25 ft. high			140 SF		140 SF	
Height (max.)				25 ft.		16 ft.	
Illumination		Non-illuminated or internal illumination Signs ≤ 8 ft. in height may have external illumination					
Sign placement		Signs ≥ 8 ft. in height must have minimum 75 foot separation from other pole signs ≥ 8 ft. on the same side of the street.					
Sign height		Elements to enhance the design of a sign structure ≤ 8 ft. in height may extend above the sign to a max. of 20% of the sign's allowed height, or 12 inches, whichever is greater.					

1 The maximum sign area and sign height standards may be further limited by the standards established in Table 20-R.

20.9 STANDARDS FOR TEMPORARY SIGNS

20.9.1 In general

Temporary signs are allowed only in compliance with the provisions of this section.

A. **Information required for display.** All temporary signs are required to display the name and address of the entity placing the sign, and the date the sign was erected.

B. **Not included in permanent sign allowances.** Temporary signs are not counted toward the maximum total sign area established in Section 20.8.

C. **General time, place, and manner restrictions.** Unless specifically exempted by this section, temporary signs must be placed in compliance with Subsection 20.6.1. Temporary signs must not be placed to create a hazard for pedestrian or vehicular traffic and must allow for a 4-foot wide sidewalk to comply with the Americans with Disabilities Act.

D. Any form of illumination, including flashing, blinking, or rotating lights; animation; reflective materials; and attachments such as balloons, ribbons, and loudspeakers are prohibited.

E. Temporary signs must be of sufficient weight and durability to withstand wind gusts, storms, and other exterior elements.

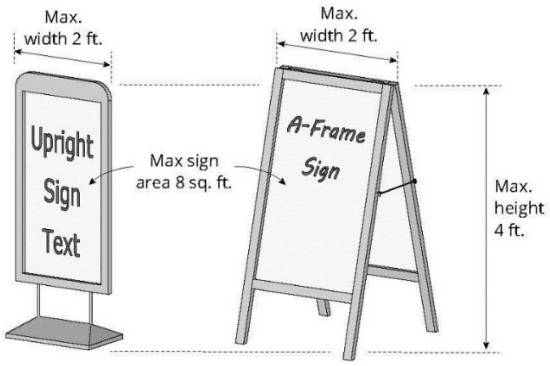
20.9.2 Additional standards for temporary signs

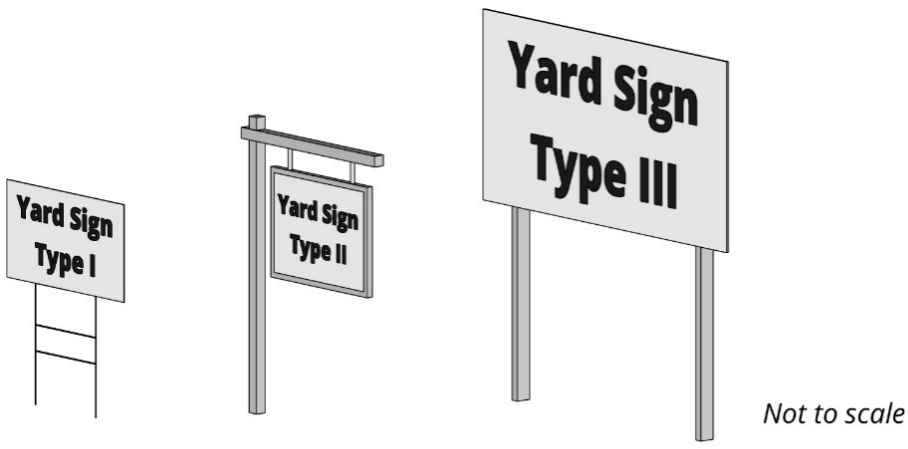
All temporary signs shall comply with the standards of Tables 20-W and 20-X.

TABLE 20-W: TEMPORARY SIGN STANDARDS BY SIGN DISTRICT

	Standard	Requirement
Residential	**Total area of all temporary signs at any one time** (max.)	16 SF per lot.
	Number of signs (max.)	Unlimited except that the total sign area must not exceed 16 SF
	Time limit (max.)	None
Other	**Total area of all temporary signs at any one time** (max.)	24 SF per tenant, with a total of max. 72 SF per lot (excludes the area of temporary window signs and permitted wall banner signs) Exception: In the Downtown Sign District and historic districts, max. 12 SF per tenant (excludes the area of temporary window signs and permitted wall banner signs)
	Number of signs (max.)	1 wall banner per tenant in a multi-tenant building. All other temporary sign types unlimited, except that the total sign area of all temporary signs (excludes the area of temporary window signs and permitted wall banner signs) must not exceed the total square footage provided above. Exception: In multi-tenant shopping centers or offices, max. 2 temporary wall banner signs per 150 linear feet of property frontage, not to exceed 24 SF combined.
	Time limit (max.)	60 days per temporary sign permit, and up to 180 days per calendar year.

TABLE 20-X: STANDARDS FOR TEMPORARY SIGN TYPES





Temporary Sign Type[1]	Standard: Height	Standard: Width (max.)	Standard: Area (max.)	Other Requirements
	Min. 30 in. Max. 4 ft.	2 ft.	8 SF	Prohibited in residential zones. Must not be placed in public right-of-way except as permitted by the City. [3] If advertising a business, only permitted during regular business hours.
A-frame or upright sign[2]				
			32 SF	Prohibited in residential zones. Must be mounted on a building wall or on T-posts or stakes installed ≤ 6" from a wall on which the wall banner will be hung. Mounting height (max.): 25 ft. to top of banner.
Wall banner				

TABLE 20-X (CONT.): STANDARDS FOR TEMPORARY SIGN TYPES

Temporary Sign Type[1]	Standard: Height (max.)	Standard: Width (max.)	Standard: Area (max.)	Other Requirements
Window sign			See End Note[4]	Mounting height (max.): Placed no higher than second story windows. Inside mounting required. Not included in the total sign area for all temporary signs.
Yard sign (Type I)	4 ft.	2 ft.	3 SF	Installation requirements: Installed securely in the ground.
Yard sign (Type II)	6 ft.	2 ft.	4 SF	Installation requirements: Installed securely in the ground.
Yard sign (Type III)	6 ft.	8 ft.	32 SF	Installation requirements: Installed securely in the ground.

[1] Other temporary sign types may be allowed (e.g. fuel pump topper signs; wrap around waste receptacles) provided the max. area limitation for all temporary signs is not exceeded.
[2] These signs may be used to identify businesses located down a wharf in the EWPZ and WCZ Zones that have no street frontage and where no other options for on-site permanent signage are available.
[3] A min. 4-foot wide pedestrian walkway must be maintained at all times.
[4] The area of temporary and permanent window signs combined (including signs constructed of perforated vinyl or painted on the window) must not exceed 50% of the area of the window on or within which they are displayed.

20.10 NONCONFORMING SIGNS

20.10.1 Applicability

A. **Maintenance.** Nonconforming signs may be maintained, expanded upon, and/or reduced only in accordance with the provisions of this section.

B. **Continuation.** All lawfully nonconforming signs may be continued, subject to this section.

1. Lawfully nonconforming permanent directional signs for existing nonconforming businesses that are established and operational in any residential zone may continue to be used subject to this section.
2. Lawfully nonconforming permanent signs for nonconforming uses established and operational in any residential zone may continue to be used subject to this section.

20.10.2 Removal or replacement of a nonconforming sign

Lawfully nonconforming signs must be made to conform or shall be removed if any of the following occurs, unless the improvements are required to achieve compliance with applicable federal, state, or local regulations, other than the provisions of this article, and the improvements do not require replacement of the nonconforming sign. In no event will the degree of nonconformity of any sign or type of signage on any lot be increased.

A. **Major site plan review.** Major site plan review is sought for any new structures or building additions on the site, except as provided in (E) below.

B. **New building permit for rehabilitation.** A building permit is sought for a rehabilitation of a building where the value of the rehabilitation exceeds 50% of the assessed value of the building, or $100,000, whichever is less, provided that where rehabilitation is of a multi-tenant building, only the tenant or tenants whose building or area is being rehabilitated shall be required to come into conformance with this article.

C. **New sign permit.** An application is filed for a new sign permit in accordance with the following:

1. When an application is filed for a new building-mounted sign, all building-mounted signs on the lot must come into compliance with all requirements of this article for building signs.
2. When an application is filed for a new freestanding sign, all freestanding signs on the lot must come into compliance with all requirements of this article for freestanding signs.

D. **Modification of sign.** A sign is modified in any way, except for routine maintenance or repair of sudden and accidental damage, or for a change in the message panel only, unless otherwise required to conform under this subsection. Repair of sudden and accidental damage will not include replacement of the entire sign, which is treated as a modification under this subsection. Letters on nonconforming signs designed for changeable messages may be changed without triggering the terms of this subsection as long as no other change is made to the sign.

Replacement of an awning covering with substantially the same material and text is not considered a modification.

E. Signs on multi-tenant properties

1. In the case of nonconforming freestanding shared signs for multi-tenant properties, signs may be added or modified to reflect a change in individual tenants without triggering the terms of this subsection, provided that the degree of nonconformity is not increased.
2. In the case of building signs on multi-tenant properties, this subsection shall apply only to the individual business tenant that is adding or modifying a sign or seeking major site plan review and shall not trigger the conformance requirement for other tenants' building signs.

F. Abandoned or vacant site. Removal of a nonconforming sign, or replacement of a nonconforming sign with a conforming sign, is required when the use of the sign and/or the property on which the sign is located has been abandoned, ceased operations, become vacant, or been unoccupied for a period of 180 consecutive days or more, as long as the period of non-use is attributable at least in part to the property owner, tenant, or other person or entity in control of the use. For purposes of this section, rental payments or lease payments and taxes are not considered as a continued use. In the event this should occur, such conditions will be considered as evidence of abandonment, requiring removal of such sign by the owner of the property, his or her agent, or person having the beneficial use of the property, building, or structure upon which such sign or sign structure is erected within 30 days after written notification from the Planning Authority. If such sign(s) is (are) not removed within the 180-day period, enforcement action will be pursued consistent with Section 20.11.

20.10.3 Permanent directional signs in residential zones

A. A lawfully existing business located in a residential zone is allowed an off-premise sign in the public right-of-way if it meets the following requirements:

1. The business is not a home occupation.
2. The business is not located within 500 feet of a major or minor arterial.
3. The off-premise sign will be no larger than 12 inches by 48 inches and complies with the requirements established in the *MDOT/MUTCD Standard Sign Manual*.

B. Such lawfully existing retail business may qualify for one two-sided or two one-sided off-premise signs that must be located within the public right-of-way of a major or minor arterial in a location determined safe by the City Traffic Engineer and upon the payment of an initial fee of $300, with an annual renewal fee of $30.

C. In the event the sign is damaged or destroyed, the replacement of the sign shall be the sole responsibility of the permittee. The permittee shall be required to obtain a permit for the replacement sign from the Planning Authority, after securing $400,000 insurance and naming

the City of Portland as an additional insured.

20.10.4 Nonconforming signs in residential zones

A. Lawfully-existing permanent signs for lawfully existing nonconforming uses in any residential zone may continue to be used.

B. If an application is filed for new or replacement building-mounted sign(s) for a lawfully-existing nonconforming use located in a residential zone, the building-mounted sign(s) must either be the same size and number as the lawfully existing building-mounted sign(s), or must comply with the standards established for the Small Mixed-Use Sign District in Table 20-G, whichever is less. Sign types shall be limited to blade, directory, wall, and window signs. Illumination shall be limited to external illumination only.

C. If an application is filed for replacement freestanding sign(s) for a lawfully-existing nonconforming use located in a residential zone, the freestanding sign(s) must be the same size and number as the lawfully existing freestanding signs, or must comply with the standards established for the Small Mixed-Use Sign District in Table 20-R, whichever is less. No new freestanding signs for a nonconforming use in a residential zone shall be permitted. Illumination shall be limited to external illumination only.

20.11 ENFORCEMENT

20.11.1 Authority

The requirements of this article shall be enforced by the Building Authority as stated in Article 1. The Building Authority has the authority to order the repair, maintenance, or removal of any sign or sign structure that has become dilapidated or represents a hazard to public health, safety, or welfare.

20.11.2 Violations

A. It shall be unlawful for any person, firm, or corporation to erect, construct, enlarge, alter, repair, display, maintain, or use a sign within the City contrary to, or in violation of, any provision of this article. Any work commenced without a sign permit, or beyond the authorized scope of a sign permit constitutes a violation of this article and is grounds for the Building Authority to issue a correction notice and/or to stop all work on the sign until appropriate permits are obtained.

B. Permits issued for work commenced without a sign permit, or any work beyond the authorized scope of a sign permit shall be assessed double the required permit fees for the sign(s).

C. Failure to perform any act required by this article, failure to obtain any permit required, or the performance of any act prohibited by this article constitutes a violation and is subject to penalties as set forth in 30-A M.R.S. §4452.

D. Each day on which a violation exists will constitute a separate violation for purposes of this section.

21 PUBLIC ART PROGRAM

21.1 ESTABLISHMENT

It shall henceforth be the policy of the City to provide on an annual basis regular funding for the preservation, restoration, and enhancement of its public art collection. This article and the funding contemplated are in recognition of the fact that only by instituting a steady stream of funding for this effort and standing by that commitment, will the City over time be able to fulfill its role as steward of its public art collection and help nurture and enrich thereby the quality of life in this city.

21.2 PURPOSE

The purpose of this article is to promote the educational, cultural, economic, and general welfare of the City of Portland by providing the means to fund the acquisition and care of art works by the City of Portland, which shall be the City's public art collection. The Public Art Program seeks to:

A. Care for and maintain the public art collection of the City of Portland by documenting, preserving, restoring, and repairing the collection.
B. Commission or acquire works of public art, and to seek donations of art work for the City's public art collection.
C. Provide curatorial expertise and project management for the care of Portland's public art collection.
D. Enhance and enrich the lives of the city's residents, visitors, and employees by incorporating the visual arts into public spaces.
E. Contribute to the city's civic pride and sense of identity.
F. Increase access to works of art for residents and visitors to the area.
G. Enhance Portland's growing reputation as a city which celebrates the arts.
H. Celebrate the multi-cultural and diverse character of Portland's communities with place-specific art.
I. Encourage collaboration between artists, landscape architects, urban planners, architects, engineers, and other designers.

21.3 DEFINITIONS

Art work. For the purposes of the Public Art Program, art work shall include the following:

A. Sculpture, statues, or monuments in any material or combination of materials.
B. Painting.
C. Graphic arts, printmaking, and drawing.
D. Photography.
E. Crafts in clay, fiber and textiles, wood, metal, plastics, glass, and other materials.
F. Mixed media, any combination of forms or media, including collage.
G. Functional art such as street furniture, as described in the *Guidelines for the Public Art Ordinance.*
H. Environmental art consisting of landforms and artistic landscape composition.

The following shall not be considered public art for the purposes of the Public Art Program:

A. Reproductions by mechanical or other means of original works of art, except for limited editions, controlled by the artist, of original prints, cast sculptures, photographs, or other works of art.
B. Decorative, ornamental, or functional elements which are designed by the building architect or consultants engaged by the architect which are

a traditional and typical element of architectural design.

C. Those elements generally considered to be conventional components of a landscape architectural design including, but not limited to, plant materials, pools, paths, benches, receptacles, fixtures, and planters except as allowed by (G) and (H) in the list of included art work above.

D. Art objects which are mass produced or of a standard design, such as playground sculpture or fountains, except pieces of historical significance to the city.

E. Directional or other functional elements, such as supergraphics, signage, color coding, and maps, except where sculptural pieces are used to define gateways in the city.

F. Electrical, water, or mechanical service for activation of the work.

G. Exhibitions and educational programs related to the work.

H. Performing arts.

I. Art that displays slogans, logos, mascots, or commercial advertising.

Public art collection. Art objects that are owned by the City of Portland which are permanently installed in public, accessible locations. Permanent public art must be located in a public place with public visibility and impact, and shall have a permanence at least comparable to associated capital projects.

Public art guidelines. The regulations adopted by the committee and approved by the City Council which establish procedures to carry out the purpose of this article. The guidelines shall include but not be limited to criteria for selection of artists and art works, maintenance of a file of interested artists, procedures for artistic competitions, and requirements for the maintenance of works of art.

21.4 FUNDING

21.4.1 Establishment of Public Art Fund

The City shall establish a special revenue fund designated as the Public Art Fund in the City treasury from which expenditures may be made in accordance with this ordinance. The Public Art Fund shall contain a capital account to fund permanent public improvements in the form of the purchase, acquisition, or commission of new public art, or major restorations, and an operations and maintenance account. Authorized expenditures include, but are not limited to, associated site installation costs, such as lighting and landscaping, and costs associated with the commission, engineering, contract administration, unveiling, and dedication activities. Also authorized are expenditures associated with preservation, conservation, and repair of existing public art. Capital funds may come from any source, including the sale of general obligation bonds. The City's capital improvement program shall contain an annual appropriation for the Public Art Fund calculated in accordance with Subsection 21.4.2. Funds for the operation and maintenance account may come from any source except bonds.

21.4.2 City-funded projects

A percentage of the City's Capital Improvement Program (CIP) shall be calculated and appropriated annually to the Portland Public Art Fund. The annual appropriation shall be .5% of the total annual CIP. Nothing contained herein shall preclude funding the acquisition of art for municipal property in other ways.

21.5 ADMINISTRATION

21.5.1 Public Art Committee responsibilities

The City Public Art Program shall be administered by the Public Art Committee whose members shall be appointed by the City Council, and shall have the following responsibilities:

A. Develop an annual art plan for Portland which shall be presented to the City Council for approval.

B. Establish such guidelines as are necessary to carry out the purpose of this article. The guidelines shall include but not be limited to criteria for selection of artists and art work, maintenance of a file of interested artists, review criteria for proposed gifts of art work to the City, procedures for artistic competitions, and requirements for the maintenance of art work. Any and all guidelines or changes to guidelines shall be placed on a City Council agenda as a communication. The guidelines shall take effect 45 days after the date of placement on the council agenda, unless the City Council takes official action disapproving the guidelines, in whole or in part, prior to the expiration of the 45-day period. If a part of a guideline is vetoed, the remainder shall continue in effect. Any guideline adopted, which is not required by the statutes of the state or by this article, may be waived by the chair upon good cause being shown.

C. Recommend to the City Council the expenditure of funds for the acquisition or commissioning of public art, for maintenance of public art, and for administration of this program.

D. Seek private donations of funds and/or works of art for the purposes of expanding the public art collection or the maintenance of the collection.

E. Oversee the maintenance, care, and repair of the public art collection.

F. Review the appropriateness of proposed public art which is intended to fulfill all or part of the contribution required by this article.

G. Review potential gifts of art to the City on City property, and assist in the development process of such gifts, in accordance with the *Guidelines for the Public Art Ordinance.*

H. Recommend appropriate locations and accessibility to the public for permanent art, with suggestion as to the type of art which is appropriate.

I. Solicit advice from arts professionals, the business community, and from local residents on the appropriateness of proposed art.

J. Recommend revisions to policies and guidelines for the improved implementation of this program.

K. Ensure that the use of funds collected under this program will increase the amount of art in the city that is available to the public.

21.5.2 Public Art Committee structure

A. The Public Art Committee shall be composed of eleven voting members who are appointed by the City Council. The City Council shall appoint one of its members, the City Manager shall recommend a member, and Creative Portland shall recommend one of its members to serve on the Public Art Committee. The City Council shall appoint the remaining eight members who shall be volunteers and have interest and/or expertise in public art. Such experience may include, but shall not be limited to, education and experience as an architect, a

landscape architect, a professional curator, a professional artist, and/or an art educator. Persons appointed to the Public Art Committee must live or work in Portland and shall be appointed through the City's annual appointment process.

B. Each Public Art Committee member shall serve for a period of three years. The appointments shall be staggered so that three appointments terminate each year.

C. Whenever a vacancy shall occur, the vacancy shall be filled by the City Council.

D. The Public Art Committee shall adopt its own rules for the conduct of its business not inconsistent with the statutes of the state and this article. Any and all rules or changes to rules shall be placed on a City Council agenda as a communication. The rule or rules shall take effect 45 days after the date of placement on the council agenda, unless the City Council takes official action disapproving the rules, in whole or in part, prior to the expiration of the 45-day period.

E. The members of the Public Art Committee shall annually elect one of their members as a chair to preside at all meetings and hearings and to fulfill the customary functions of that office, and another of their members as vice-chair.

22 REGULATION OF EXPLOSIVES

22.1 PURPOSE

The purpose of this article is to protect the public's health, safety, and general welfare by regulating and controlling blasting operations within the city.

22.2 APPLICABILITY

This article shall apply to all blasting operations related to construction and development of real estate within the city. The City of Portland *Technical Manual* is incorporated into this article by reference. Standards listed in the *Technical Manual* shall be additional to the provisions of this article.

22.3 REVIEW PROCESS

22.3.1 Permit Required

No person may conduct blasting operations within the city without first obtaining a permit from the Fire Department, as required by the National Fire Protection Association 1 Fire Prevention Code, as adopted and amended in Chapter 10 of the City of Portland Code of Ordinances. Fees for this permit shall be as established by order of the City Council.

22.3.2 Application Requirements

Prior to the issuance of a permit the following information shall be submitted to the City:

A. A blasting plan shall be submitted by the applicant to the Planning Authority for all projects where more than 300 cubic yards of material shall be removed. The blasting plan shall conform to the provisions of this article and of Section 3 of the City of Portland *Technical Manual*.

B. A blasting submittal shall be submitted to the Planning Authority where between 50 and 300 cubic yards of material shall be removed. The blasting submittal shall conform to the provisions of this article and of Section 3 of the City of Portland *Technical Manual*.

C. A blasting application shall be submitted to the Planning Authority where less than 50 cubic yards of material shall be removed, or where utility trench work in the accepted public right of way, including City or Portland Water District infrastructure is proposed. Small blasts where less than 50 cubic yards of material shall be removed are not required to submit either a blasting plan or blasting submittal. Such projects must conform to the National Fire Protection Association Fire Prevention Code and applicants shall submit a monitoring report upon request. Information provided in the blasting application shall confirm that the proposed small blast conforms to all applicable provisions of this ordinance and of Section 3 of the City of Portland *Technical Manual*.

D. A blasting plan or blasting submittal may be required for any blasting operation at the discretion of the Planning Authority when it determines that conditions at or near the site of the blasting operations warrant the provision of a plan.

22.4 STORAGE AND HANDLING

All explosives shall be stored and handled in accordance with the provisions of this code, the laws of the State of Maine, and the National Fire Protection Association 1 Fire Prevention Code.

22.5 ENFORCEMENT

In the event that there are more than three documented violations of the blasting plan, blasting submittal, or blasting permit, or any other violation of this article, a stop work order may be issued on

all construction or development related to the permitted operation. The permittee shall then be required to submit a revised blasting plan to the Planning Authority for review and approval. Work shall not be allowed to continue until the revised blasting plan is approved.

22.6 PENALTIES

In addition to the possibility of a stop work order in the event of a violation, the permittee shall be subject to the following penalties:

1st offense	$500
2nd offense	$1,000
Subsequent offenses	$1,000

22.7 NOTICE REQUIREMENTS

22.7.1 Basic noticing requirements

At least 10 days prior to the start of any blasting operation, notice shall be published in a newspaper of local publication and shall be mailed by first class mail to all property owners within the distance specified below of the perimeter of the blasting site:

A. **Small blast (trench blast or under 50 cubic yards of rock removed).** All property owners within 250 feet of the perimeter of the blasting site.
B. **Medium blast (removal of 50-300 cubic yards of rock material).** All property owners within 500 feet of the perimeter of the blasting site.
C. **Large blast (removal of over 300 cubic yards of rock material).** All property owners within 600 feet of the perimeter of the blasting site.

22.7.2 Content of notice

Notice shall conform to the model notice contained in Section 3 of the City of Portland *Technical Manual* and shall include a description of the proposed blasting operations, estimated schedule and duration of blasting operations, description of the blasting signals to be used during operations, the complaint protocol and the complete address, telephone numbers and email contact for the blasting contractor, the Planning Authority, and Fire Department where neighbors and property owners may request further information and notification.

22.7.3 Additional noticing requirements

A. For medium blasts where 50-300 cubic yards of rock material is to be removed, and large blasts where over 300 cubic yards of rock material is to be removed, additional notification requirements shall apply during construction, as detailed in Section 3 of the City of Portland *Technical Manual*.
B. If blasting operations are to occur within 250 feet of any structure, additional notification requirements shall apply, as detailed in Section 3 of the City of Portland *Technical Manual*, in order to prevent adverse public health and safety impacts due to blasting-related carbon monoxide migration.

22.8 HOURS OF BLASTING

Blasting shall occur Monday through Friday, between the hours of 9 a.m. and 4 p.m., unless otherwise approved by the Planning Authority. Requests for extension of hours of blasting must be submitted by the applicant in writing.

22.9 WAIVERS

Upon written request by the applicant, the Planning Authority, based on a positive recommendation by the Fire Department, may waive all or a portion of the blasting provisions of Section 3 of the City of Portland *Technical Manual*, provided that all waivers

are consistent with the purposes set forth in Section 22.1.

22.10 SUSPENSION OF BLASTING OPERATIONS

If it is determined that blasting operations pose any risk to public health, safety, or general welfare, the Planning Authority or the Fire Chief or their designee shall have the authority to suspend the blasting permit at any time until they deem it safe for blasting operations to continue.

1. TRANSPORTATION SYSTEMS AND STREET DESIGN STANDARDS

1.1. HORIZONTAL ALIGNMENT OF STREETS

The horizontal alignment of all proposed streets shall conform to the following standards:

- Horizontal curves shall have centerline radii of not less than 110 feet.
- The alignment centerline shall be straight for at least 100 feet between reverse curves whenever either curve has a centerline radius of less than 200 feet.
- When two streets intersect and one street is an arterial or collector street, or both streets are arterial or collector streets, the angle of intersection shall be 90 degrees. When two streets intersect and neither street is an arterial or collector street, the angle of intersection shall be at least 75 degrees and no greater than 105 degrees.
- When two streets intersect, adjoining right-of-way lines shall be connected by a circular arc with radius of at least ten (10) feet. The connecting arc shall be tangent to the right-of-way lines on both streets. When the angle of intersection is other than 90 degrees, a radius greater than ten (10) feet may be required.
- All dead-end streets shall provide for a turnaround at the end of the street, subject to approval by the reviewing authority. Turnarounds shall be designed to facilitate future street connectivity and shall always be designed to the right (refer to Figure I-5).
- Street intersections with more than four (4) legs shall be prohibited.
- The minimum distance between intersections on any street shall be as follows unless the Department of Public Works determines that unique conditions of the site necessitate a lesser length. The distance between intersections shall be measured from the intersection of street centerlines at one intersection to the intersection of street centerlines at the other intersection. Streets shall be classified in accordance with the Functional Classification Guidelines as set forth by MaineDOT.

Local Street and Local Street Intersection	200 feet
Local Street and Collector Street Intersection	250 feet
Local Street and Arterial Street Intersection	300 feet
Collector Street and Collector Street Intersection	400 feet
Collector Street and Arterial Street Intersection	500 feet
Arterial Street and Arterial Street Intersection	500 feet

1.2. STREET GRADES

1.2.1. Street grades shall conform to the following standards, as shown in Figures I-1, I-2, and I-3:

- The maximum grade for the centerline of all streets shall not exceed eight (8) percent.
- The minimum grade for the centerline of all streets shall not be less than one- half (0.5) percent.
- The cross slope for local streets shall be three (3) percent. The cross slope for other street classifications shall be two (2) percent.
- Cross slopes for sidewalks shall be one (1) percent minimum and two (2) percent maximum, sloping down and away from the street line to the top of the curb at the gutter line, including pedestrian access routes across driveways, as shown in Figure I-10C.
- Street grades at intersections shall not be more than three (3) percent for a distance of one hundred (100) feet from the center of the intersection.

1.2.2. Curbless “shared streets” shall be considered on a case-by-case basis after consideration of context, design, and maintenance. Approval of any curbless “shared street” shall be subject to review by the Department of Public Works.

1.3. VERTICAL ALIGNMENT

Where two adjacent street segments are proposed to have different straight line centerline finish grades, vertical curves shall be used to connect the adjacent street segments. Vertical curves shall be parabolic and tangent to each of the adjacent grades. The minimum vertical curve length, "L", shall be calculated based on the following formula:

$$L = K \times A$$

where "A" is the absolute value of the algebraic difference between the beginning grade and the ending grade of the vertical curve, with both grades expressed in percent, and "K" is a factor whose value depends on street design speed. The K values corresponding to the minimum vertical curve lengths for the above street classifications and vertical curve types (sag curve or crest curve) are as follows:

Local Streets	
Crest Vertical Curves:	K = 20
Sag Vertical Curves:	K = 30
Collector Streets	
Crest Vertical Curves:	K = 30
Sag Vertical Curves:	K = 40
Arterial Streets	
Crest Vertical Curves:	K = 50
Sag Vertical Curves:	K = 50

1.4. SIGHT DISTANCE

Where driveways or new streets enter an existing street, vehicular sight-distance shall conform to standards established by the Maine DOT as contained in their publication, Chapter 299, Highway Driveway and Entrances Rules. For driveways frequently accessed by large vehicles, greater sight distance will be required according to Maine DOT guidelines.

1.5. DRIVEWAY DESIGN

1.5.1. All driveways shall be designed according to the following table, unless otherwise approved by the Department of Public Works.

Requirement	Minor driveway (serving <10 residential spaces)	All other driveways
A) Number of driveways	No more than one (1) driveway shall be permitted.	No more than two (2) driveways shall be permitted. Adjacent sites under common ownership shall have no more than two (2) driveways combined.
B) Minimum/ maximum driveway width	10 feet minimum, 20 feet maximum, measured at the property line.	For two-way driveways (preferred): • 20 feet minimum, 24 feet maximum for residential/commercial uses • 30 feet maximum for industrial uses Larger driveway openings may be permitted by the Department of Public Works as determined on a case-by-case basis.
C) Driveway spacing	Spacing of new or reconfigured driveways shall take the existing pattern of driveways in the surrounding context into account, and shall limit the impact to on-street parking and existing street trees. Shared driveways are encouraged. Driveway locations may be rejected based on documented or anticipated safety or operational issues	• 50 feet along local streets • 100 feet along arterial and collector streets with posted speeds of 35 mph or less • 150 feet for roadways posted at speeds greater than 35 mph Driveway locations may be rejected based on documented or anticipated safety or operational issues.
D) Driveway separation from intersections	• At least 35 feet along local roads • 50 feet along collectors/ arterials Distance shall be measured from the projection of the right-of-way line at the roadway to the centerline of the driveway. Driveway locations may be rejected based on documented or anticipated safety or operational issues.	• At least 35 feet along local roads • 100 feet along collectors/arterials Distance shall be measured from the projection of the right-of-way line at the driveway to the centerline of the driveway. Driveway locations may be rejected based on documented or anticipated safety or operational issues.

Requirement	Minor driveway (serving <10 residential spaces)	All other driveways
E) Curbing	2-foot granite corner radius "bugs" (also known as a "bullnose") shall be used where possible. Tipdowns may be used if the driveway crosses a narrow sidewalk.	Granite radii (where sufficient esplanade is available) or tipdowns shall be used. Granite radii shall not cross the pedestrian access route.
F) Driveway intersection angle	Perpendicular to the street, where possible. Where necessary, the driveway shall intersect the street between 75 and 105 degrees unless otherwise approved by the Department of Public Works.	
G) Design vehicle	Driveways shall be designed to accommodate site-specific design vehicles, and shall not be designed larger than necessary, as determined by turning movement diagrams and engineering judgment.	
H) Loading	All necessary functions for loading, circulation, and parking maneuvers shall occur within the site and outside of the right-of-way to the extent practicable, given the site context	
I) Circulation	Vehicle circulation shall be completely contained within the site to the extent practicable, given the site context.	
J) Backing maneuvers	Backing maneuvers may be permitted to enter the site. Backing maneuvers from a site may be permitted based on upon site context including functional class of the adjacent street, traffic volumes, and speeds.	Backing maneuvers into and out of the site are prohibited. All vehicles must enter and exit the site facing forward.
K) Parking area size	All driveways shall serve a parking area of at least 8'x16', clear of any encroachment, plus any setbacks required by zoning. Parking areas and parked cars shall not encroach upon the public right-of-way.	

1.5.2. Auxiliary lanes serving driveways: A left-turn lane and/or right-turn lane with appropriate storage and transition may be considered where engineering analysis indicates a need. The need for auxiliary lanes shall be considered within the context of the impacts to sidewalks, bikeways, transit stops, on-street parking, and traffic safety. All new auxiliary lanes are subject to the approval of the Department of Public Works.

1.6. SIDEWALKS AND CURB RAMPS

1.6.1. Sidewalk construction and materials: Sidewalks shall be brick, concrete or hot mix asphalt. The City Sidewalk Materials Policy (Appendix 1) shall be consulted to determine the appropriate type of sidewalk and driveway construction to use on various streets and in different areas of the City. Within the city's historic districts, only brick shall be used. Sidewalk and driveway construction details are illustrated in Figures I-10 and I-11. All new concrete sidewalks which abut

existing concrete sidewalks must be doweled in prior to pouring. All new brick sidewalks shall be constructed with bricks running perpendicular to the path of pedestrian travel, including through driveway crossings.

1.6.2. Sidewalk accessibility: All sidewalks shall meet any minimum standards set forth by current Americans with Disabilities Act (ADA) and Public Right-of-Way Accessibility Guidelines (PROWAG) guidance. There are no exceptions unless technical infeasibilities are identified, documented, and approved by the Department of Public Works**.** In case of conflict, these standards shall supersede this manual.

1.6.2.1. Sidewalk width: The minimum sidewalk clear width shall be five (5) feet. Where obstructions, such as utility poles, are located in sidewalks, a minimum clear and direct pedestrian access route width of five (5) feet shall be provided between the obstruction and one edge of the sidewalk. Wider sidewalks may be required in locations where heavy pedestrian traffic is expected, based on the site context. New sidewalks shall be at least as wide within the right-of-way as the sidewalk(s) along the adjacent properties.

1.6.2.2. Level changes: The maximum allowable vertical level change at any point is ¼-inch. A level change of ¼-inch to ½-inch shall be formed with a beveled slope no steeper than 26.6 degrees (2:1). Level changes greater than ½-inch shall be designed as ramps.

1.6.2.3. Running slope: Sidewalks shall be designed with a running slope no greater than the adjacent street slope.

1.6.2.4. Cross-slope: Sidewalks, including pedestrian access routes across driveways, shall be constructed with a minimum cross slope of 1% and a maximum cross-slope of 2% post-construction. Finished cross-slopes of greater than 2% shall not be acceptable. Designed cross-slopes of 1.5% are encouraged. Cross-slopes shall be consistent across the width of the sidewalk.

1.6.3. Curb ramps: ADA-compliant curb ramps are required on all projects involving construction of new streets or new sidewalks, and on all projects involving alterations to the abutting street, including repaving of existing streets and sidewalks.

Curb ramps shall be designed to prevent ponding of water at the base of the ramp. Ramp designs and details will indicate how positive drainage away from the landing in the vicinity of curb ramps will be achieved.

1.6.3.1. Applicability: ADA-compliant curb ramps are required at all marked and unmarked crossing locations. **-**Ramps shall not be provided only where there is

no crossing present due to safety concerns or a lack of pedestrian facilities on the opposite corner.

1.6.3.2. Orientation: Curb ramps shall be designed with the direction of travel on the ramp perpendicular to the curb line and parallel to the crosswalk, where feasible. Where existing conditions, such as narrow right-of-way width or utility constraints, preclude such layouts, parallel ramps, where the entire sidewalk ramps down, are acceptable. Diagonal ramps are not desirable, but may be approved by DPW on a case-by-case basis. Ramp design standards are provided in Figure I-6.

1.6.3.3. Detectable warning panels: All pedestrian curb ramps shall include truncated dome warning panels as shown in Figure I-7. Any curb ramp that is not intended to be used by pedestrians (e.g. ramps serving bikeways) shall not include warning panels. Warning panels shall also be provided where a crossing is present without a curb ramp (for example, where pedestrian facilities are at the same grade as the street, within a median refuge, etc.). All warning panels shall be uncoated cast iron, as detailed in Figure I-7. DPW reserves the right to require the installation of warning panels at driveway locations in such situations where volume or configuration of traffic may necessitate their placement.

1.6.4. Shared use paths: Shared use paths and other pedestrian access routes in the right-of-way shall conform to the same ADA requirements as sidewalks discussed herein. The appropriate material for shared use paths may differ from the material prescribed in the Sidewalk Material Policy. The appropriate material shall be determined by the Department of Public Works if not already documented in a transportation plan or master plan. Shared use paths shall be 10 feet in width or greater to allow for two-way traffic and passing.

1.6.5. Curb extensions: Curb extensions (also known as bump-outs, bulb-outs, or neckdowns) describe any localized narrowing of the roadway, typically at pedestrian crosswalk locations. The installation of any curb extension is subject to the approval of the Department of Public Works.

1.6.5.1. Applicability: Curb extensions may be considered where one or more of the following conditions are met:

- There is a documented speeding issue confirmed by a speed study;
- Curb extensions are necessary to construct one or more ADA-compliant curb ramps at an existing or proposed crosswalk;
- As determined necessary at uncontrolled midblock crossings;

- At signalized intersections, where reducing the pedestrian crossing time improves signal timing;

- At locations where there is a history of crashes involving pedestrians and/or crashes involving right-turning vehicles; or

- Where they are prescribed in a master plan or transportation plan.

1.6.5.2. Curb extension design: Curb extensions, where permitted, shall be constructed to achieve the applicable goal(s) without disrupting the functionality of the roadway or intersection. Curb extensions:

- Shall not impede necessary turning movements for trucks or emergency vehicles or winter operations;

- Shall not negatively impact drainage without adequate mitigation;

- Shall not impede upon, or narrow to an unacceptable degree, the adjacent travel or bicycle lanes; and

- Shall be constructed with radial curb (typically 10-foot radius or greater) at transition points to assist with drainage and maintenance, as shown in Figure I-19.

- Curb extensions that encompass on-street parallel parking lanes should generally not exceed six (6) feet in width, as shown in Figure I-19.

1.6.6. Non-compliance: ADA-compliance is required both within and outside of the public right-of-way. Any construction within the public right-of-way that is not built to ADA-compliance shall be reconstructed at the Applicant's expense.

Where strict compliance with ADA is technically infeasible in an alteration of an existing condition, the alteration must be made to the maximum extent technically feasible. The extent to which compliance is technically infeasible shall be documented, and an acceptable design shall be approved by the Department of Public Works. This process should occur during the design phase.

1.7. DRIVEWAY APRONS

Any driveway, or section thereof, located within any public street right-of-way shall be designed and built according to the following specifications.

1.7.1. Construction and materials: The portion of the driveway within the public right-of-way within the pedestrian access route shall be comprised of the same

material as the abutting sidewalk as identified in the Sidewalk Material Policy (Appendix 1) and constructed according to Figures I-10 through I-12.

1.7.2. Pedestrian access route: Where a driveway crosses a sidewalk, shared use path, or other pedestrian access route, a pedestrian access route shall be constructed across the driveway apron with a maximum cross-slope of 2% (1.5% preferred). The pedestrian access route shall be designed and constructed to meet the elevation of the adjacent sidewalk or shared use pathway to the extent feasible.

The pedestrian access route shall be constructed at the same width as the adjacent sidewalk or shared use path to the extent feasible. For pedestrian access routes connecting to adjacent sidewalks, the minimum width is four (4) feet, with five (5) feet preferred.

1.7.3. Driveway apron slope: The driveway apron shall ramp up to the grade of the sidewalk, where feasible. The portion of the driveway between the roadway and the pedestrian access route shall be designed to a maximum slope of 15%, unless otherwise approved by the Department of Public Works. This slope should be minimized to the extent possible while maintaining ADA-compliance and continuity of travel along the pedestrian access route.

1.7.4. Driveway design: Where feasible, driveways shall be designed to keep the pedestrian access route at a consistent elevation for continuity of travel. The portion of the driveway between the roadway and pedestrian access route shall be sloped to provide the full transition between the roadway and sidewalk elevations where feasible. Along roadways where the sidewalk width plus esplanade width is less than seven (7) feet, the sidewalk may be transitioned using ADA-compliant ramps in order to create a suitable driveway crossing.

1.8. ROADWAY CONSTRUCTION, SURFACE, AND AGGREGATES

1.8.1. All roadways shall be constructed in accordance with Chapter 25 of the City of Portland Code of Ordinances and the most current edition of the MaineDOT Standard Specifications unless otherwise indicated herein or otherwise directed in writing by the Department of Public Works.

1.8.2. Aggregates used in concrete mixes and in the construction of streets, sidewalks and aprons shall meet the requirements in SECTION 703 - AGGREGATES of the most current edition of the *State of Maine Department of Transportation Standard Specifications* with the following clarifications, additions and modifications:

1.8.3. 703.06 (a) Aggregate Base Gravels shall adhere to Maine DOT standard specifications listed in sections 304 and 703 for type “A” material.

1.8.4. 703.06 (c) Aggregate Subbase Gravels shall adhere to Maine DOT standard specifications listed in sections 304 and 703 for type "D" material.

1.8.5. 703.18 Common Borrow shall not contain any particle of bituminous material.

1.8.6. 703.19 Granular Borrow shall adhere to Maine DOT standard specification 703.19 for Granular Borrow material.

1.8.7. 703.20 Gravel Borrow shall adhere to Maine DOT standard specification 703.20 for Gravel Borrow material.

Minimum thicknesses for pavement structure materials

Street Classification	Minimum Materials Thicknesses (Inches)			
	Wearing Course Pavement	Base Course Pavement	Agg. Base Course	Agg. Subbase Course
Minor Residential	1 ½	2	3	15
Residential	1 ½	2	3	15
Collector	1 ½	2 ½	3	18
Commercial/Industrial	2	3	3	18

Minimum placement temperatures for hot mix asphalt pavement

Base Temp. °f	Mat Thickness, Inches					
	½	¾	1	1 ½	2	3+
40 - 50*	--	--	--	--	285	275
50 - 60	--	310	300	295	280	270
60 - 70	310	300	290	285	275	265
70 - 80	300	290	285	280	270	265
80 - 90	290	280	275	270	265	260
90+	280	275	270	265	260	255

** Surface course pavement shall not be placed when the air or road base temperature is less than 50 degrees F.*

1.9. STREETS ON ISLANDS IN CASCO BAY

Reserved.

1.10. PARKING LOT AND PARKING SPACE DESIGN

1.10.1. Parking lots, except for temporary lots to be used for less than one year, shall be constructed of a permanent and durable hard surface that is not subject to ponding or erosion, both onsite and within the right-of-way, and shall meet accessibility standards. Any proposed permanent parking lot surface must allow for delineation of parking spaces and circulation aisles.

1.10.2. Parking spaces shall meet the following dimensional requirements:

- Standard parking space: 9 feet wide by 18 feet long, except that low turnover parking spaces, such as those used by residents or employees, may be designed with a width of 8'-6" and considered a standard parking space.

- Compact parking space: 8 feet wide by 15 feet long.

- Motorcycle/motorized scooter parking space: 4 feet wide by 8 feet long.

Obstructions within parking areas, including columns and other permanent fixtures, shall not be located within the dimensions of a parking space. Where these obstructions are present, parking shall be striped and dimensioned to omit these obstructions. Such obstructions should not significantly impact vehicle maneuverability, visibility, ability to open doors, etc.

All spaces provided shall be safely accessible. Substandard and specialty spaces that are open to the general public shall be labeled as such using signage or pavement markings to inform users.

1.10.2.1. Compact spaces: Any parking lot with five or more spaces may contain a mix of standard and compact spaces. Up to 20% of parking spaces in a parking area may be compact. Compact parking spaces should be limited in high-turnover parking areas or locations where the typical vehicle is likely to be larger than a typical passenger vehicle. Vehicle turning analysis may be required for review by the Department of Public Works to ensure that spaces function as designed.

1.10.2.2. Accessible Parking: All parking areas shall provide accessible parking per ADA and the Maine Fair Housing Act. ADA standards for number of spaces, dimensions, buffers, cross-slopes, materials, pedestrian accessibility, and other requirements shall apply with no exceptions. Accessible spaces shall be considered "standard" parking spaces for the purposes of calculating the allowable number of compact spaces.

1.10.3. Vehicular access shall be provided by one or more aisles. The minimum two-

way drive aisle width is 24 feet for standard, right-angle parking, and is otherwise dependent on parking space orientation, as illustrated in Figure I-16A. Accessible parking spaces shall be served by at least one aisle of standard width or greater.

1.11. MOTORCYCLE/MOTORIZED SCOOTER/MOPED PARKING (ON-STREET):

To distinguish motorcycle/motorized scooter/moped parking spaces from standard parking spaces the spaces shall be painted and delineated with signage. These painted spaces shall be angled and shall be four (4) feet wide by eight (8) feet long. The dimensions for on-street motorcycle/motorized scooter/moped parking are outlined in Figure I-16B. On-street motorcycle/motorized scooter/moped parking may also be located where standard vehicle parking would be prohibited because of sight restrictions, such as adjacent to a crosswalk or an approach to a traffic control device. Motorcycles/motorized scooter/mopeds do not create the same sight impediment as a standard vehicle.

1.12. BICYCLE PARKING

1.12.1. Bicycle parking shall:

- Provide secure, durable racks that maintain bicycles in an upright position and to which bicycles can be affixed with customary lock and cable mechanisms. Fence-type ("wheel bender") racks designed to secure the front wheel only and wave racks are prohibited from counting toward bicycle parking requirements.

- Be installed on a hard surface that is suitably sized and provides sufficient clearance from obstacles.

- Be separated from car parking by a physical barrier such as curbing, wheel stops, parking bollards or similar features.

- Be adequately illuminated where nighttime use is anticipated.

- Be provided under covered areas and/or in secure storage lockers or rooms, if intended for long-term use.

- Be provided within the public right-of-way or be publicly accessible if intended for uses that expect visitation, customers, or short-term usage.

1.12.2. Placement of off-street bicycle parking racks shall conform to the bicycle parking rack placement criteria (*drawn from the Bicycle Facility Design Guide of the District Department of Transportation, 2006*) as illustrated in Figure I-24.

1.12.3. For commercial or industrial uses requiring more than ten (10) bicycle parking spaces:

- A minimum of ten percent (10%) of required bicycle parking shall be provided within fifty (50) feet of the main entry point of the structure, or shall be no further from such entry than the nearest five (5) non-handicapped parking spaces.

- Where there is more than one structure on a site, or where a structure has more than one main entrance, the parking shall be distributed to adequately serve all structures or main entrances.

1.12.4. Directional Signage: If bicycle parking is not directly visible from the public right-of-way, directional signage shall be provided indicating the availability and location of bicycle parking facilities.

1.12.5. Approved Bicycle Racks:

1.12.5.1. Design: Bicycle racks that are required to meet site plan requirements shall:

- Provide multiple points of contact between the rack and the bicycle;

- Allow bicycles to be locked without the need to lift the bicycle into the rack; and

- Be placed in such a way as to allow the intended number of bikes to be securely locked.

1.12.5.2. Approved Racks by Location:

- Private property: A variety of commercially available racks are acceptable for installation on private property, including but not limited to those catalogue listings identified herein (Figures I-24 and I-25).

- In the Public Right-of-Way: Bicycle parking may be located within a public right-of-way where site conditions cannot reasonably accommodate bicycle parking on private property or in the case of sites that expect high-turnover or short-term bike parking usage. Bike parking may be placed either adjacent to or within reasonable walking distance of the site, if such areas are available that meet the bicycle parking rack placement criteria (*drawn from the Bicycle Facility Design*

Guide of the District Department of Transportation, 2006) as illustrated in Figure I-24. Bicycle racks within the public right-of-way shall be placed to allow for the safe storage of bicycles while limiting encroachment onto adjacent sidewalks. If no location within the right-of-way is available, a financial contribution commensurate with the cost for purchase and installation of the required number of bicycle racks shall be made to the Sustainable Transportation Fund.

The following approved brands, installed according to company specifications, shall be permitted in the public right-of-way. Equivalent bicycle racks by other manufacturers are acceptable upon prior approval by the reviewing authority.

- DERO 'Downtown Rack' Inverted U-Rack (Figure I-25)
- DERO 'Bike Hitch' (Figure I-24)
- Old Port District, including Commercial Street: DERO Bike Hitch only (Figure I-24)

Bicycle racks in the public right-of-way shall become the property of the City of Portland.

Bicycle racks in the public right-of-way shall match the designated street furniture color for that location as described in the Municipal Street Lighting Standards in this manual. Where there is no designated street furniture color, bicycle racks in the public right-of-way shall be black (manufacturer's specification).

1.13. BICYCLE ROUTES AND LANES

The City has developed bike network plans to show present and proposed bikeways, including neighborhood byways, dedicated bicycle lanes, and shared use pathways. Positive identification of bikeways shall be provided by pavement markings, bike lane symbols, and/or signage. The following standards shall be applied to the installation of bike facilities:

1.13.1. Design: The design of any new or modified bicycle facility shall be reviewed and approved by the Department of Public Works prior to application and shall be consistent with the following design standards:

- Vehicular travel lanes and bicycle lanes shall be separated by a minimum six (6) inch solid white painted edge line adjacent to the travel lane. At intersections the white edge line shall be a dashed line (two (2) foot painted length by four (4) foot opening) across the intersection and for 50 feet to 100 feet in advance of the intersection, as appropriate. Where there is the

potential for right-turning vehicle conflicts with through bicycle movements at intersections, green paint within the bicycle lane is recommended and may be required.

- Bike lanes shall have a minimum width of five (5) feet. Six (6) feet is preferred for bicycle lanes adjacent to curbed street sections. Where sufficient street width exists, a painted buffer of one (1) foot or more may be provided between the bicycle lane and vehicle travel lanes. Where a bicycle lane is adjacent to on-street parking with moderate to high utilization and/or turnover rates, this buffer should be placed between the bicycle lane and parking lane. The location of the buffer shall be determined in consultation with the Department of Public Works. Where a buffer of one foot or greater is provided, the width of the bicycle lane may be reduced to four (4) feet, if necessary, with approval from the Department of Public Works. Design shall take into account the location of potential obstructions, such as catch basins.

- Where the minimum or recommended width for bicycle lanes is not immediately available, reallocation of general travel lane widths or the number and configuration of general travel lanes shall be considered, as appropriate, in consultation with the Department of Public Works.

- On-street bicycle lanes and associated buffers shall not exceed eight (8) feet in total width unless vertical delineation is provided in the buffer area. Applicability and materials of vertical delineation shall be determined by the Department of Public Works.

- Shared use paths shall be designed to facilitate two-way traffic by users of multiple, nonmotorized modes. In general, shared use paths shall be ten (10) feet or greater in width, and free of any obstructions, including a 2 foot clear zone on each side of the pathway. Refer to the AASHTO *Guide for the Development of Bicycle Facilities* for shared use path design considerations.

- On bicycle routes, or other roads with considerable bicycle traffic and insufficient roadway width to provide a bicycle lane, shared lane markings (“sharrows”) may be used. Where used, sharrows shall be placed in the center of the travel lane(s) serving the bike route(s) or where bicyclists are expected.

- On two-way roadways with excess roadway width for one bicycle lane, but not two, installation of a single bicycle lane should be considered. The single bicycle lane should be placed in the uphill direction, if located on a hill. Otherwise, if parking is provided on only one side of the roadway, bicycle lane placement should be prioritized on the side of the street with no

parking. Where possible, streets with bicycle lanes in only one direction should be paired with another lane on an adjacent parallel street to achieve bicycle mobility in both directions, if possible.

- Standard bike lanes and all other on-street bicycle facilities such as separated bike lanes shall be designed in accordance with the most recent version of nationally-recognized design guides, such as the NACTO *Urban Bikeway Design Guide*, the NACTO *Urban Street Design Guide*, the FHWA *Separated Bike Lane Planning and Design Guide*, the Massachusetts DOT's *Separated Bike Lane Planning & Design Guide*, or other best practice as it becomes available.

1.13.2. Bike network considerations: Bicycle facilities shall be designed within the context of the city-wide bicycle network.

1.13.3. Pavement markings and signage:

- Bicycle lanes shall be marked with appropriate pavement markings such as longitudinal lines and stenciled symbols, as illustrated in Figure I-18.

- Bike routes shall be identified by appropriate signage as found in the FHWA 'Manual of Uniform Traffic Control Devices,' as illustrated in Figure I-18.

1.14. ELECTRIC VEHICLE INFRASTRUCTURE

New structured and surface parking lots of five or more spaces shall include energized electrical outlets or installed chargers capable of providing Level 2 EV charging or higher to 20% of parking spaces (rounded down to the nearest whole number). An additional 50% of spaces must be made EV-ready, meaning that they are served by sufficient conduit and electrical service to allow for future installation of electric vehicle supply equipment at every space.

An applicant may request a reduction in the number of required EV-installed or EV-ready parking spaces if Level 3 EV charging is proposed. In this case, spaces served by Level 3 charging may be substituted for Level 2 at a ratio to be determined in consultation with the Department of Public Works.

In the case of new structured and surface parking of greater than 100 spaces, the review authority may establish the EV parking requirements on the basis of an EV parking demand study. Such study shall be prepared by a qualified professional using industry best practice, and account for future growth in EV demand.

1.15. TRAFFIC CONTROL DEVICES

All intersections of two or more roadways shall be controlled by one of the traffic control methods listed herein. All traffic control shall be selected and installed in accordance with the Manual on Uniform Traffic Control Devices (MUTCD).

1.15.1. Traffic signals: All new traffic signals are subject to the approval of the Department of Public Works. Proposed traffic signals are required to meet at least one traffic signal warrant set by the MUTCD. Signals justified using Warrant 3 (Peak Hour Volume), Warrant 7 (Crash Experience), or Warrant 8 (Roadway Network) without meeting at least one other warrant may require additional study. Development projects that trigger, or further exceed, one or more signal warrants at one or more existing or proposed intersections or driveways may be required to install a traffic signal at those locations.

New or modified traffic signals also require the submission of a traffic signal plan, including locations of all equipment, underground utilities, phasing and timing plans, and a specific list of all traffic signal hardware. Plans shall be submitted to the Department of Public Works for review and approval prior to installation.

New traffic signal proposals are subject to review by MaineDOT, as appropriate. All city, state, and federal guidelines with regard to installation, activation, and monitoring shall apply.

Existing traffic signals that do not meet MUTCD signal warrants may be removed if they present operational or safety issues. All removals of existing traffic signals are subject to coordination with and the approval of the Department of Public Works and MaineDOT.

The City of Portland's traffic signal specifications can be found in the City of Portland Traffic Signal Policy and Guidance Manual.

1.15.2. Stop control: Stop signs shall be installed in accordance with MUTCD. Stop signs shall be accompanied by a stop line 12" in width.

Stop control shall not be used for speed control. Stop control should generally not be used on intersection approaches with multiple travel lanes. Stop control shall not be used for intersections with five (5) or more approaches. Such intersections shall be signalized (if warranted), equipped with a roundabout, or otherwise realigned or regulated so that the number of approaches is reduced to four (4) or fewer.

1.15.3. Roundabouts: Where sufficient right-of-way is available, circular intersections (i.e. roundabouts or traffic circles) should be considered. Such intersections may provide operational and safety benefits compared to signalized or stop-controlled intersections. Where selected as the appropriate traffic control measure, roundabouts shall be designed in accordance with the MUTCD Chapter 3C, with signage according to MUTCD Section 2B.07. Neighborhood traffic circles may be considered at stop-controlled intersections as a traffic calming measure. All such treatments are subject to the approval of the Department of Public Works.

1.15.4. Yield control: Yield control should generally only be implemented in the following scenarios:

- At certain channelized turning lanes separated from adjacent travel lanes by an island (even if the adjacent lanes are controlled by a stop sign or signal);
- At the entering roadway for a merging movement, including at a roundabout; or
- Where engineering judgment determines that yield control is appropriate, subject to the approval of the Department of Public Works.

1.16. PUBLIC CROSSWALKS

1.16.1. Public crosswalks shall meet the requirements of The Manual on Uniform Traffic Control Devices (MUTCD), unless City standards specify a stricter measure. Public improvements may include but shall not be limited to any one or combination of the following:

- Crosswalks;
- Curb Bump Outs or Curb Extensions, where warranted;
- Pedestrian Crossing Signs (curbside, overhead or in the street);
- Rectangular Rapid Flashing Beacons (RRFBs);
- Pedestrian Hybrid Beacons;
- Pedestrian Activated Traffic Control Signal (Red, yellow, green); and
- Medians or raised islands

1.16.2. Crossing locations shall be designed to the following standards unless otherwise directed by the Department of Public Works:

- Street markings: Crosswalks on public streets shall consist of 24-inch block style white lines, placed 48 inches apart on center, for an overall width of 8 feet (or wider; at least as wide as the sidewalks served by the crosswalk).

- Street lighting: Crosswalk locations shall be adequately illuminated for visibility at nighttime.

- Signage: Select crosswalk locations may need to be accentuated through the use of signage mounted curbside, overhead, or on the roadway centerline, as described hereinafter. Crosswalk signs shall be placed directly adjacent to crosswalks, and advance warning signs shall be placed in accordance with MUTCD. Standard signs shall be black legend on a fluorescent background.

1.17. PUBLIC TRANSIT FACILITIES

Where required, public transit facilities shall meet the following standards:

1.17.1. Transit pullout bays:

- Transit pullout bays shall be located in the City right-of-way along the property frontage; or

- Where space constraints prevent locating a transit pullout bay along the property frontage, transit pullout bays may be located within reasonable walking distance of the site.

- Where possible, transit pullout bays shall be located at intersections. At signalized intersections, far-side bus stops are preferred. Mid-block bays are not preferred due to impacts to parking and traffic.

- The design of the pullout bay shall provide adequate space for vehicles to maneuver through facilities without causing damage to either the vehicles or facilities, as detailed herein.

1.17.2. Transit shelters:

- Transit shelters shall be located within the site, directly adjacent to the right-of-way on which the public transportation route is established; or

- Where site constraints prevent locating a transit shelter on the site, it shall be located within a public sidewalk area along the property

frontage. If a transit shelter is to be located within a public sidewalk area, City sidewalk clearance requirements shall apply.

- Where space constraints prevent locating a transit shelter within a public sidewalk area along the property frontage, it may be located within reasonable walking distance of the site.

- Installation and ongoing maintenance of transit shelters on private property shall be the responsibility of the property owner. Ongoing maintenance of transit shelters located within the City right-of-way or within an easement held by the City shall be the responsibility of the City or of the local or regional transit authority serving the facility.

1.17.3. Where necessary, developments shall provide easements to the City, sufficient in size to accommodate public transit infrastructure and access to the transit stop.

2. SANITARY SEWER AND STORM DRAIN DESIGN STANDARDS

2.1. TECHNICAL REFERENCE

2.1.1. The following technical publications are recognized by the City of Portland for use in the design, construction and testing of sanitary and storm water systems:

- Technical Report #16 (TR-16): Guides for the Design of Wastewater Treatment Works, Prepared by the New England Interstate Water Pollution Control Commission available for review at the Department of Public Works or online at www.neiwpcc.org/tr16guides.asp
- Maine Department of Transportation (MDOT) Standard Specifications for Highways and Bridges, Current Edition.

2.2. SANITARY STANDARDS AND SPECIFICATIONS

2.2.1. Sewer and Storm drain systems shall be planned and constructed in accordance with the regulations contained in Chapter 24 of the City Code of Ordinances.

2.2.2. The information presented below are City of Portland exceptions to the TR-16 or additional required standards.

2.2.3. The introduction of non-contaminated water such as rain water, non-contact cooling water, groundwater from foundation drains, sump pumps, surface drains or any other sources of inflow shall not be allowed to discharge into a sewer which conveys sanitary waste unless approved by the Department of Public Works Water Resources Manager or their designee.

2.2.4. Appeals will be considered by the Director of Public Works. (Refer to Sec. 24-44 of the City Code - Public sewer connection limitations).

2.2.5. It is not permissible to backfill any excavation with frozen materials, organic materials, clay or blasted ledge. The maximum size of backfill material shall not exceed six inch (6”). (Please refer to Division 2, Street Opening Permits in the City Code.)

2.2.6. The Department of Public Works shall be responsible for televising all new sewer construction for acceptability as soon as backfilling has been completed and access is available. The permittee will be invoiced for these services. Information on current rates is available in Chapter 24 Sewer Ordinance.

2.2.7. Permits to connect to the municipal stormwater and sanitary sewer system are required and may be obtained from the Department of Public Works.

2.2.8. Covered or enclosed parking areas, mechanical rooms, garages (parking areas not exposed to rain and snow) shall direct surface drainage to a sanitary sewer. Storm water from outside of these areas shall be directed away from this

covered area so that additional storm water is not directed to the sewer. Drainage from these areas shall be collected by an Oil/ Grit Separator as shown in Figure II-20 or an approved equal.

2.3. SANITARY MANHOLES

2.3.1. All manholes shall be designed in conformance with City of Portland standards as illustrated in Figure II-02.

2.3.2. When constructing sanitary manhole channels, if the vertical difference between the invert elevation of the manhole channel and the invert elevation of the sewer pipe connecting to such manhole is two vertical feet (2') or greater, a standard City of Portland internal drop manhole shall be provided. Such drop manholes shall conform to the engineering specifications illustrated in Figure II-03. A minimum of two stainless steel pipe anchors shall be used and the manhole diameter shall be five feet (5') minimum.

2.3.3. Sanitary service laterals that are four inch (4") or six inch (6") shall not be connected into a sanitary manhole and only into a sanitary sewer main.

2.3.4. Sanitary manholes shall include frames and covers as shown in Figure II-05 or an approved equivalent. Both the frame and riser shall be machined to assure a proper fit.

2.3.5. Manhole covers shall be marked "SEWER".

2.3.6. Manhole frames shall be raised to grade using only brick and mortar as shown in Figure II-02 or approved equal.

2.3.7. Riser Rings without tabs as shown in Figure II-06 may be used to adjust manholes to grade with approval of the Department of Public Works.

2.3.8. All new sanitary manholes shall be vacuum tested before backfilling. Refer to TR-16 for testing standards.

2.3.9. Steps are not required in sewer manholes. Any structures delivered to the site with step "holes" shall be filled with mortar.

2.4. SANITARY GRAVITY PIPES

2.4.1. The types of allowable pipe used for purposes of sanitary sewers shall be:

- PVC Ring Type Sewer Pipe (SDR 35 or equivalent, minimum PS-46 rating)
- PVC Ring Type Sewer Pipe meeting ASTM F 789 or equal to SDR
- Ductile iron Pipe (DIP)
- High Performance Polypropylene Dual Wall Sewer Pipe (ADS SaniTite HP or equal) meeting ASTM F2736 and have a minimum pipe stiffness of 46 psi with pipes sizes twelve inch (12") through thirty inch (30").

- High Performance Polypropylene Triple Wall Sewer Pipe (ADS SaniTite HP or equal) meeting ASTM F2764 and have a minimum pipe stiffness of 46 psI with pipe sizes thirty inch (30”) through sixty inch (60”)

2.4.2. Minimum velocities for sanitary pipes shall not be less than two feet per second (2 ft/s).

2.4.3. All PVC connections shall be made with Solid PVC Couplings.

2.4.4. The classes of pipe indicated shall be minimums, however the actual class of pipe used shall be determined by soil weight and compaction loads applied to such pipe in accordance with standard engineering design criteria and subject to the approval of the Department of Public Works.

2.5. FORCE MAINS

2.5.1. Force mains four inches (4”) or greater shall terminate at a transition manhole and flow by gravity within a minimum sized eight inch (8”) pipe to a City manhole.

2.5.2. Force mains less than four inches (4”) may terminate to the nearest precast concrete manhole as directed by the City.

2.5.3. Cores into existing manholes shall be made with coring machines and have link seal or equivalent wall penetration seals.

2.5.4. Termination of force mains three inches (3”) or less may be permitted into existing City-owned manholes if reconstruction or replacement is performed, depending on the material and condition of the existing manhole as determined by the Department of Public Works.

2.5.5. All force mains shall be at a minimum HDPE SDR-21 made with fully restrained connections or equal. Piping pressure ratings shall be at least two (2) times the operating pressure of the system.

2.5.6. Force main discharge shall be directed into the channel in the direction of gravity flow.

2.6. BUILDING SEWER LATERALS

2.6.1. Construction of building sewers and drains shall conform to Chapter 24 (Sewers) of the City Code of Ordinance.

2.6.2. All building sewer laterals shall have a minimum diameter of four inch (4”) and a minimum slope of one eight inch per foot (1/8 in/ft) installed, as shown in Figure II-12.

2.6.3. Typical Pipe Installation: Where a building sewer lateral is to be installed from the sewer main in the street to a property or building to be served, the lateral shall either extend to the building or to the street line of each lot to be served

and the pipe shall be capped air-tight.

2.6.4. An accurate record of each building sewer, its location and its depth at the street line shall be kept by the developer's engineer and a copy of the same shall be provided to the Department of Public Works.

2.6.5. For new construction, the location of the building sewer at the street line shall be physically marked by the placement of a two inch by four inch (2" x 4") wooden stake placed at the end of the lateral end-cap and extending one foot above finished grade.

2.6.6. Each stake shall be painted with a fluorescent paint and marked as storm or sanitary sewer with the depth indicated from grade to end-cap. A one quarter inch (¼") thick by six inch (6") square ferrous metal plate or equivalent shall be placed horizontally one foot below grade over the end of the storm drain.

2.6.7. Building sewers and drains shall be connected to the main sanitary sewer line by the use of wyes, tee/wyes, Inserta-Tees or similar approved methods as determined by the Department of Public Works. A manhole shall be installed at the sewer main to connect building laterals when the building lateral is eight inches (8") or larger in diameter. The lateral connections shall be installed from the main toward the lot where possible. Inserta-Tees can be installed on pipes when the main receiving pipe is at least twelve inches (12") in size and the lateral is not more than half the size of the main receiving pipe in order to use a coring tee-type connection.

2.6.8. Before connecting new pipes into an existing sewer line, the contractor shall obtain a sewer connection permit from the Department of Public Works.

2.6.9. Accessory Dwelling Units (ADU) sewer laterals: Per Chapter 24 of the City Code of Ordinance "A separate and independent building sewer shall be provided for every new building, and a separate connection shall be made for each building sewer." The Department of Public Works recognizes the following scenarios for the successful connection of the proposed ADU to the public sewer system. See Figure II-21 for additional information.

- The proposed ADU is connected to the primary residence. In this scenario, the ADU may be connected to the primary residence sewer lateral internal to the primary residence.
- The proposed ADU is a separate standalone building: In this scenario, a separate and independent sewer lateral will be provided from both buildings with independent connections to the sewer.
- The proposed ADU is a separate standalone building: In this scenario, a separate and independent sewer lateral will be provided from both buildings with a connection of the two laterals into a sewer manhole at the property line. The sewer manhole will be a minimum two-foot (2') size providing access to each sewer lateral. The sewer manhole may be placed

on the existing sewer lateral from the primary residence with the ADU sewer lateral being fed into it.

2.6.10. Backflow Protection: Fixtures installed on a floor level that is lower than the next upstream manhole cover of the public, or private sewer shall be protected from backflow of sewage by installing an approved type of backwater valve. Fixtures on such floor level that are not below the next upstream manhole cover shall not be required to be protected by a backwater valve. Fixtures on floor levels above such elevation shall not discharge through the backwater valve. Cleanouts for drains that pass through a backwater valve shall be clearly identified with a permanent label stating "backwater valve downstream."

2.6.11. All building floor drains shall discharge to the sanitary sewer system.

2.6.12. Plugging of Abandoned Sewer Laterals: Prior to abandoning any storm water or sanitary sewer lateral, the applicant shall acquire a permit from the Department of Public Works. The applicant shall provide a 48 hour notice to the Public Works Dispatch stating the date and time the applicant wished to complete the work. The Water Resources Division will mobilize to the site and allow one hour to assist the applicant to plug the lateral in the following manner. The location of the lateral to be plugged shall be televised by the applicant and witnessed by Water Resources staff on site. The applicant shall excavate or other means plug the lateral at the main where the lateral connects to the street sewer, as determined by City staff. The lateral must be filled with pumped grout starting at the plug and filling out to the points of excavation.

2.7. STORM WATER MANHOLES

2.7.1. Storm water manholes shall include frames and covers as shown in Figure II-05 or an approved equivalent. Both the frame and riser shall be machined to assure a proper fit.

2.7.2. Manhole frames shall be raised to grade using only brick and mortar as shown in Figure II-02.

2.7.3. Riser Rings without tabs as shown in Figure II-06 may be used to adjust manholes to grade with approval of the Department of Public Works.

2.7.4. Manhole covers shall be marked “DRAIN”.

2.7.5. Steps are not required in storm manholes. Any structures delivered to the site with step “holes” shall be filled with mortar.

2.8. STORM DRAINS

2.8.1. The types of allowable pipe and fittings shall be used for purposes of storm drains:

- All pipes listed for sanitary sewers
- Reinforced Concrete Pipe (RCP) with a minimum strength of Class III;
- Smooth Bore High Performance Polypropylene Dual Wall Storm Drain Pipe. (ADS HP Storm or equal) meeting a minimum PS- 46.

2.8.2. Storm drain lateral may be connected into storm drain mains without the use of a manhole when the lateral is less than half the diameter of the receiving pipe.

2.8.3. Minimum velocities of surface water drains shall not be less than three feet per second (3 ft/s).

2.8.4. Ribbed corrugated polyethylene pipe material, smooth wall interior, is not permitted except for underdrain installation. Underdrain diameter shall be no larger than six inches (6”).

2.8.5. The classes of pipe indicated shall be minimums, however the actual class of pipe used shall be determined by soil weight and compaction loads applied to such pipe in accordance with standard engineering design criteria and subject to the approval of the Department of Public Works.

2.8.6. Pre-fabricated tees are allowable on storm drains. A pre-fabricated tee connection shall be used and installed in accordance with manufacturer specifications.

2.8.7. Connection of catch basin/storm drain lateral leads to storm drain larger than eighteen inch (18”) diameter may be performed with the use of a coring machine and suitable connection device. The connecting pipe shall not be more than half the size of the main receiving pipe in order to use a coring tee-type connection.

2.8.8. Underdrains shall be six inch (6”) diameter perforated pipe SDR 35 PVC or corrugated ADPE with smooth interior wall (AASHTO M252 Type S). They shall have a minimum of two rows of perforations.

2.9. CATCH BASINS

2.9.1. All catch basins and catch basin inlets shall be designed and constructed in accordance with Figures II-07 through II-11.

2.9.2. Catch basin drain pipes of less than ten inches (10”) in diameter are not permitted.

2.9.3. All catch basins shall have a four-foot (4’) granite headstone of catch basin

inlets conforming to City standards as shown in Figure II-11.

2.9.4. No radius catch basin stones shall be permitted.

2.9.5. All catch basins shall be constructed with a minimum sump of three feet (3').

2.9.6. Catch basins shall not be located in driveway openings.

2.9.7. No storm drains or storm drain laterals, with the exception of street underdrains, shall be connected into a catch basin structure.

2.9.8. Catch basin drains and catch basin inlet drain pipe slopes shall be such that minimum flow velocities shall not be less than three feet per second (3 ft/s).

2.9.9. Bee hive casting shall be used on drainage structures located at low points in grassed off road locations.

2.9.10. Field inlets or Type-F catch basins may be used when outside of city street right of ways within lawn areas, with Department of Public Works approval. They must have a minimum of a twelve-inch (12") sump and can be plastic or concrete.

2.9.11. All catch basins are required to have a hood on the outlet pipe as shown in Figure II-09.

2.10. SUBSURFACE WASTEWATER DISPOSAL

2.10.1. To ensure that adequate provisions have been made for subsurface wastewater disposal, developers are required to locate, design, and install all septic systems in accordance with the latest version of the Maine Subsurface Wastewater Disposal Rules,144 CMR minimum 241, as described in Chapter 6, Section 6-18(A) of the City Code.

2.10.2. Developers are required to obtain a permit through the City of Portland Inspections Division prior to the installation of any subsurface wastewater disposal system identified on an approved site plan.

2.11. GREASE INTERCEPTORS

2.11.1. Grease control equipment is required for all food establishments based on the City of Portland's Fats, Oils, and Grease Program found in the Rules and Regulations for Use of the Sewer System.

2.11.2. Concrete grease interceptors must have two chambers. Chamber A, where influent enters, must be two thirds (2/3) of the tank volume.

2.11.3. Concrete grease interceptors must have three twenty-four-inch (24") access points.

2.11.4. Tank must be designed for H-20 traffic wheel load and a concrete strength of 5000 PSI at 28 days.

2.11.5. Joints must be sealed with butyl rubber joint sealant such as CS-102 Butyl Rubber Sealant.

2.11.6. Tees inside grease interceptors must be supported. Galvanized riser clamps on drops must be rodded to tank wall with galvanized fasteners six inch (6") below service weight tee. Tees must be accessible via an unobstructed view for cleaning through top of grease interceptor.

2.11.7. High density polyethylene grease interceptors are accepted as an equivalent to concrete grease interceptors. Polyethylene units shall be properly anchored to prevent floatation.

2.11.8. A control manhole must be installed downstream of the interceptor before it enters the city sewer system.

2.12. AGGREGATE SPECIFICATIONS

2.12.1. The provisions of Section 703 of the State of Maine Department of Transportation (MDOT) *Standard Specifications for Highways and Bridges* shall apply with the following additions and modifications:

2.12.2. 703.18 Common Borrow: Common borrow shall not contain any particle of bituminous material.

2.12.3. 703.19 Granular Borrow: Granular borrow shall contain no particles which will not pass a three inch (3") square mesh sieve.

2.12.4. 703.20 Gravel Borrow: Gravel borrow shall not contain particles of rock which will not pass three inch ("3") square mesh sieve.

2.12.5. 703.13 Crushed Stone ¾" for Pipe Bedding and Underdrain: "Crushed Stone" shall be defined as rock of uniform quality and shall consist of clean, angular fragments of quarried rock, free from soft disintegrated pieces or other objectionable matter. Crushed stone used as a bedding material for pipe and underdrain shall be uniformly graded and shall meet the follow gradations. The stone shall be free from vegetable matter, lumps or balls of clay, and other inappropriate substances.

Sieve Designation	**City of Portland Percentage by Weight Passing Square Mesh Sieve**
1 inch	100
¾ inch	90-100
½ inch	20-55
$^{3}/_{8}$ inch	0-15
No. 4	0-5

3. PUBLIC SAFETY STANDARDS

3.1. CRIME PREVENTION THROUGH ENVIRONMENTAL DESIGN (CPTED) PRINCIPLES

3.1.1. Natural Surveillance: Site plans shall be designed so that they create formal and informal natural surveillance networks on the site to increase on-site visibility and the safety of legitimate users and to deter potential offenders.

a. Physical Features – The placement and design of physical features shall maximize visibility to allow for surveillance opportunities to and from site features such as entrances and exits, walkways, assembly areas, corridors, stairways, windows, parking lots, landscaping, fences or walls, and any other physical attributes.

b. Lighting – The lighting of the site and building shall meet the City's technical standards for site lighting, as detailed in Section 12 of this manual, and enable users to observe movement and activities on the site during the day and at night. Motion sensor activated lighting is permitted to provide adequate illumination of the site at night while still complying with applicable lighting curfew standards of Section 12 of the Technical Manual. Specifically, the lighting plan should satisfy the following criteria:

i. Create nighttime illumination of pedestrian travel paths and gathering areas, entrances and exits, and parking lots and garages by achieving the following:
   - Provide a clear view of an area from a distance and enable anyone moving in or immediately around it to be easily seen.
   - Deny potential hiding spaces adjacent to existing and proposed pedestrian travel routes.
   - Permit facial identification at a distance of at least 30' and create the perception of being identified.

c. Mechanical Surveillance Systems – If necessary, mechanical surveillance systems such as CCTV may be installed to monitor areas not easily observed such as parking lots and garages.

3.1.2. Access Management**:** Site plans shall be designed to provide visible pathways and to offer proper guidance for legitimate users to access the site and to discourage unauthorized use of the site.

a. Orientation and Wayfinding – The site shall be designed so that the layout, features and/or signage clearly guide the movement of vehicles and pedestrians along safe and predictable paths both during the daytime and nighttime. Specifically, the site plan shall satisfy the following criteria:

- Placement of signage, lighting fixtures, landmarks, and landscape design features shall clearly guide users to and from the facility.
- Site features shall be designed to avoid the creation of entrapment zones that afford users no opportunity to escape or retreat from an approaching hazard.

b. Mechanical Access Control – If necessary, mechanical access control systems may be implemented such as assigning personnel at key building entry points or establishing other procedures such as mechanical auto closing devices, key cards, gates and other locking devices.

3.1.3. **Territorial Reinforcement:** Proposed developments shall be designed to clearly delineate private, semi-private, and public space.

3.2. FIRE HYDRANT STANDARDS

3.2.1. All development constructed within the limits of the City of Portland shall have a hydrant within five hundred (500') feet of all structures.

3.2.2. All hydrants, private and public, shall comply with city code Chapter 10 and Portland Water District standards.

3.2.3. Private hydrants shall be maintained by the property owner. A maintenance agreement, or other documentation if deemed acceptable by the Reviewing Authority, shall be required for all private hydrants. A follow-up will be conducted and a financial penalty will be levied for non-compliance. All compliances shall meet city code Chapter 10, which adopts by reference National Fore Protection Association (NFPA) #1 and #101.

3.2.4. A 6 ft. clear space shall be maintained around the circumference of fire hydrants, private or public, except as otherwise required or approved.

3.3. SINGLE AND TWO FAMILY RESIDENTIAL DEVELOPMENT

3.3.1. As of September 16, 2010 all new construction of one- and two-family homes are required to be sprinkled in compliance with adopted NFPA code.

3.4. SITE ACCESS STANDARDS

3.4.1. Every dead-end roadway more than one hundred fifty (150') feet in length shall provide a turnaround at the closed end. Turnarounds shall be designed to facilitate future street connectivity and shall always be designed to the right (refer to Figure I-5).

3.4.2. Where possible, developments shall provide access for Fire Department vehicles to at least two sides of all structures. Access may be from streets, access roads, emergency access lanes, or parking areas.

3.4.3. Building setbacks, where required by zoning, shall be adequate to allow for emergency vehicle access and related emergency response activities and shall be evaluated based on the following factors:

- Building Height.
- Building Occupancy.
- Construction Type.
- Impediments to the Structures.
- Safety Features Provided.

3.4.4. Fire Dept. access roads shall extend to within 50' of an exterior door providing access to the interior of the structure.

3.4.5. Site access shall provide a minimum of nine (9) feet clearance height to accommodate ambulance access.

3.4.6. Elevators shall be sized to accommodate an 84 x 24 inch stretcher.

3.4.7 Street name and street numbering shall be determined during development / subdivision review and shall comply with Portland's 911 numbering system.

3.4.8. All structures are required to display the assigned street number. Numbers shall be clearly visible from the public right of way.

3.5. STANDARDS FOR EMERGENCY ACCESS LANES AND GATES

3.5.1. No inside turning radius shall be less than twenty-five (25') feet.

3.5.2. No outside turning radius shall be less than one hundred (100') feet.

3.5.3. New emergency access lanes shall be a minimum of sixteen (16') feet wide but may be required to be up to twenty (20') feet wide where one or more of the following conditions occur:

- The access is likely to be used by Fire Department ladder trucks to set up for buildings adjacent to the lane or;
- The access lane is likely to be used by Fire Department Engine companies to set up pumping operations to fight a fire at buildings adjacent to the

lane.

3.5.4. Access lanes shall be engineered and maintained to support the weight of emergency vehicles during all weather conditions.

3.5.5. Appropriate "No Parking" signs shall be posted in accordance with instructions from the Fire Department having jurisdiction, and a method of enforcing such provisions shall be provided.

3.5.6. All gates shall be located a minimum of thirty (30') feet from the public right-of-way and shall open inward to the site.

3.5.7. Fire department personnel shall have ready access to locking mechanisms on any gate restricting access to a fire lane. Proposed changes to access shall be pre-approved by the Reviewing Authority.

3.5.8. The clear opening provided through all gates shall be two (2') feet wider than the traveled way.

3.5.9. Blockading of any emergency lane shall be done by gates which are secured by chain and padlock. Padlocks shall be a "Knox" lock.

3.5.10. Emergency lanes shall be maintained and made accessible for emergency use at all times. No parking of vehicles or other use that might obstruct the emergency access lane shall be permitted. An access maintenance agreement or other suitable document acceptable to the Reviewing Authority shall be required (please refer to attached model access maintenance agreement at the end of this section).

3.5.11. The use of automatic gates such as the "Click2enter" systems requires prior approval from the Reviewing Authority.

3.5.12. Reserved

3.6. SUBDIVISION STANDARDS

3.6.1. Subdivisions shall comply with the following minimum street access requirements:

- 1-34 units: A single access road.
- 35-67 units: Two (2) access roads or a single access road and an emergency access lane.
- 68 or more units: Two (2) access roads.

3.6.2. Where residential units are provided with an approved sprinkler system designed to NFPA #13D, the following minimum street access requirements shall apply:

- 1-67 units: One (1) access road.
- 68-99 units: One (1) access road and an emergency access lane.
- 100 units or more: Two (2) access roads.

3.6.3. All planned building groups shall meet the requirements of NFPA 1141.

3.6.4. Reserved.

3.7. STANDARDS FOR BLASTING AND REGULATION OF EXPLOSIVES

3.7.1. Definitions

Small Blast: Trench blast or removal of under fifty (50) cubic yards of rock material.
Medium Blast: Removal of 50-300 cubic yards of rock material.
Large Blast: Removal of over 300 cubic yards of rock material.

3.7.2. Submittal Requirements:

3.7.2.1. All Blast Operations:

Applicants for all blasting operations shall obtain a blasting permit from the Planning and Urban Development Department prior to any blasting. Application forms may be obtained through the Inspections Division or can be downloaded from the City of Portland website.

3.7.2.2. Medium Blast Operations:

For medium blast operations, the blasting contractor will also be required to submit a blasting submittal with the blasting application form. The blasting submittal must include, at a minimum, the following information:

- Description of Test Blast, Drill Pattern
- Description of Production Blasting, Drill Pattern
- Explosives to be used during wet and dry conditions
- Stemming material and depth
- Description of matting used to prevent fly rock
- Description and location of blasting signs
- Type of seismograph to be used
- Description of proposed transportation and storage of explosives
- Signature of blasting contractor testifying to the accuracy of the above information

3.7.2.3. Large Blast Operations:

For large blast operations, the blasting contractor will also be required to submit a drilling pattern and loading plan, referred to herein as a blasting plan, with the blasting application for review and approval. Blasting plans must be submitted at least two weeks prior to the start of any drilling and/or blasting operations. A model blasting plan is provided at the end of this section and shall include, at a minimum, the following information:

- The sequence and schedule of blasting rounds, including a general description of the proposed approach for developing each bedrock excavation area.
- A diagrammatic description of the typical blast pattern to be used,

including pre-splitting pattern if pre-splitting is required.

- Diameter, spacing, burden, depth and orientation of each drill hole relative to the "free face", along with details of the delay pattern.
- A diagrammatic description of the loading plan for a typical production hole including charge weights and distribution of primer, explosives and stemming within a typical hole.
- Estimation of ground vibration levels at nearest adjacent structures.
- Written evidence of the licensing, experience, and qualifications of the blaster who will be responsible for loading and firing each shot.
- A listing of the number and type of instrumentation proposed to be used to monitor vibrations and airblast overpressures.
- Safety procedures, security measures, and warning sequences.

3.7.3. Pre-Blast Survey

Pre-blast surveys are required for all blasting operations. The blasting contractor will hire an independent seismologist or blasting consultant to perform pre-blast surveys on all structures (contingent upon property owner agreement) within the distances specified below. The independent seismologist or blasting consultant shall not be an employee of the contractor, subcontractor, explosives manufacturer, or explosives distributor.

Size of Blast	Scope of pre-blast survey
Small Blast	Within 250 feet of the perimeter of the blasting site
Medium Blast	Within 500 feet of the perimeter of the blasting site
Large Blast	Within 600 feet of the perimeter of the blasting site

3.7.3.1. Pre-Blast Survey Offer Notice:

Prior to commencement of the pre-blast surveys, the contractor shall provide the following documentation to the Planning and Urban Development Department:

- A list of property owners to be contacted (in accordance with the distances listed in the table, above).
- Verification that the subject property owners were notified of the pre-blast survey work.
- A copy of the pre-blast survey offer notice.
- Whether each offer to conduct a pre-blast survey was either accepted, rejected, or there was no response.

The contractor shall retain a copy of each pre-blast survey offer notice for their records until the development project receives a final certificate of occupancy or is otherwise deemed complete by the City. Nothing herein shall be construed to discourage repeated efforts by the blasting contractor to contact eligible property owners via phone, hand delivery, or other method in addition to provision of the required offer notice letter.

3.7.3.2. Pre-Blast Survey Documentation:

All pre-blast surveys shall include documentation of interior subgrade and above grade accessible walls, ceilings, floors, roof and visible exterior as viewed from the grade level. Where significant cracks or damage exist, or for more complex structural defects, photographs or video shall be taken.

A high- quality videotape survey with appropriate audio description of the locations, conditions, and defects may substitute for a written pre-blast survey. Where necessary, notes and sketches may also be submitted as part of a video pre-blast survey in order to highlight or elaborate on certain aspects of the video documentation.

3.7.3.3. Pre-Blast Survey Conditions Report:

The pre-blast surveys shall include a conditions report for each property. The conditions report may be presented as narrative, photographs, video or a combination thereof. Conditions reports shall summarize the condition of each building and define areas of concern, including deteriorated structures or utilities, structures housing sensitive equipment, and/or manufacturing processes that are sensitive to vibrations.

3.7.3.4. Verification:

Verification that all pre-blast surveys and conditions reports have been completed shall be submitted to the Planning and Urban Development Department at least two weeks prior to commencing any drilling and/or blasting operations.

3.7.4. Notification to Neighbors

Notice of blasting operations shall be provided in accordance with the requirements listed in Section VIII of the Land Use Code. For medium and large blasts, please also refer to the additional notification requirements during construction, described in Section 3.7.8 of this section (*Blasting Schedule*).

3.7.5. Complaint Protocol

The blasting contractor shall be solely and completely responsible for the safety of all persons and property during the performance of work. The blasting contractor shall have full and complete responsibility for the handling, discharging, or settling of any and all damage or annoyance claims resulting from the blasting activities on the project.

Complaints may be submitted to the Blasting Contractor and to the Planning and Urban Development Department or to the Fire Department throughout the duration of blasting operations. If a property owner submits a complaint regarding alleged blasting- related damages, the independent seismologist or blasting consultant shall meet with the property owner within 24 hours of receiving the complaint to discuss the basis for the complaint, review applicable blasting

records, and evaluate the reasonableness of the complaint. If a reasonable basis for the complaint is verified, the independent seismologist or blasting consultant shall conduct a second condition survey of the property within 48 hours of receiving the complaint to identify any changes in the property conditions. A condition survey report summary shall be submitted to the Applicant, and verification that the condition survey was completed shall be submitted to the Planning and Urban Development Department within two weeks of the second condition survey being conducted.

3.7.6. Hours of Blasting and Storage of Explosives

3.7.6.1. Hours of blasting operations shall be limited to those defined in Chapter 14, Section VIII, *Regulation of Explosives* of the City Code of Ordinances.

3.7.6.2. Only the amount of explosives necessary for the day's work shall be brought to the site, and explosives shall be transported and stored in approved magazines when not in use.

3.7.7. Blast Warning

3.7.7.1. International Blast Warnings shall be utilized for all blasting operations, as described below:

3 horns	5 minutes before blast
2 horns	1 minute before blast
1 horn	All clear

3.7.7.2. Large Blasts:

For large blasts, all persons within 600 feet of the blasting area shall be notified of the "warning" and "all-clear" signals through notices left in mailboxes and signs posted in the vicinity of the blasting site.

3.7.8. Blasting Schedule (Medium and Large Blasts, only)

For medium and large blasts, the blasting contractor shall prepare and submit a blasting schedule to the property owner, the general contractor and the Planning and Urban Development Department at least 10 business days prior to commencing blasting operations. The schedule shall include name and contact information for the blasting contractor, blasting area locations, planned dates and times of blasts, access restrictions to the blast areas, and warning signal protocols.

During construction, the blasting contractor shall coordinate the blasting schedule with the property owner, the general contractor, the Planning and Urban Development Department and the Fire Department on a weekly basis.

The morning of a planned detonation, the blasting contractor shall notify the Fire Department and the Planning and Urban Development Department of the planned time of the blast (+/- one hour), the location where the blasting is to occur, and the amount of explosives to be used.

At least 24 hours prior to any blast, the blasting contractor shall inform all property owners who requested notice of the blasting schedule (+/- one hour).

3.7.9. Vibration Limits and Ground Vibration Monitoring

The seismograph must be set up at the closest structure to record each blast event. Ground vibration from all blasting operations shall be measured in terms peak particle velocity (inches per second, ips) and frequency (Hertz). The permissible maximum ground vibration at existing nearby structures shall be limited to values established by the U.S. Bureau of Mines[3] to avoid cracking or structural damage in residential structures. Particle velocity shall be recorded in three mutually perpendicular directions. Ground vibration for residential structures shall not exceed the following limits:

Type of Structure	Maximum PPV (ins/s)	
	Frequencies below 40 HZ	Frequencies 40 HZ or greater
Modern Homes (drywall interior)	.75	2.0
Older Homes (Plaster on wood lath for interior walls)	.50	2.0

Deteriorated structures or utilities, structures housing sensitive equipment, and/or manufacturing processes that are sensitive to vibrations may require lower PPV limits than those listed above. If information obtained from the pre-blast surveys indicates lower limits are required for certain structures, the independent seismologist or blasting consultant shall identify the limits applicable to a specific structure, and the blasting contractor shall incorporate such provisions in the features of the blasting plan.

In the event the blasting contractor's blasting round results in ground vibrations closely approaching the stated limits, the blasting operations shall be modified to reduce ground vibrations.

In the event the blasting contractor's blasting round results in ground vibrations exceeding the stated limits at structures, the blasting contractor shall cease all blasting activities and submit a written report to the property owner and the general contractor, copied to the Planning and Urban Development Department and the Fire Department. This report shall describe corrective action to be taken on the next shot. The next shot shall not be loaded until the property owner and the general contractor acknowledge, in writing, copied to the Planning and Urban Development Department and the Fire Department, that a design change is being attempted.

[3] United States Bureau of Mines. *Structure Response And Damage Produced By Ground Vibration From Surface Mine Blasting*. Prepared by D.E. Siskind, M.S. Stagg, J.W. Kopp, and C.H. Dowding, Report of Investigations #8507, Appendix B, 1980.

3.7.10. Flyrock Control (Large Blasts, only)

For large blasts, blasting mats, soil, or other equally serviceable material shall be utilized for all blast rounds to prevent the throw of flyrock from the blasting area.

3.7.11. Pre-Blast Safety Meeting (Medium and Large Blasts, only)

For medium and large blasts, prior to any blasting the blasting contractor will conduct a pre-blast safety meeting with all contractors to familiarize them with blast signals and precautions.

3.7.12. Test Blasts (Large Blasts, only)

For large blasts, prior to commencing full-scale blasting, the blasting contractor shall demonstrate the adequacy of the proposed blasting plan by drilling, blasting, and excavating short test sections using small charges and the required monitoring instruments. The blasting contractor shall develop site specific scaled distance relationships from the test blast rounds to determine the allowable charge weight of explosives to be detonated per delay.

3.7.13. Personnel

All employees of the blasting contractor working on site during the blasting operation shall be trained in the use and handling of explosives.

3.7.13.1. Large Scale Blasts:

For large scale blasts, the blasting contractor shall be required to carry liability insurance (XCU) coverage in an amount no less than $2,000,000.

For large blasts, the blasting contractor shall a company specializing in the use of explosives for breaking rock and licensed in the State of Maine. The blaster or foreman responsible for the loading and firing of each shot, as well as the person responsible for designing and directing the blasting operation, shall have at least five years of documented experience with similar work responsibilities. If controlled blasting methods are required, these individuals shall have at least five years of documented experience in controlled blasting techniques.

At least two weeks prior to the commencement of pre-blast surveys, the contractor will submit the name and qualifications of the independent seismologist or blasting consultant proposed to conduct the pre-blast surveys to the Planning and Urban Development Department and the applicant, if other than the blasting contractor.

At least two weeks prior to the commencement of drilling and blasting operations, the contractor will submit to the City of Portland and applicant the name and qualifications of the independent seismologist or blasting consultant proposed to monitor and report blasting vibrations.

3.7.14. Record Keeping and Reporting

3.7.14.1. For large blasts, Blast monitoring and analysis shall be conducted by the independent seismologist or blasting consultant. A minimum of two (2) seismograph instruments will be used to monitor vibrations and airblast pressures for each blast. The seismographs used by the seismologist or blasting consultant for blast monitoring shall comply with the following requirements:

- Velocity range: 0.005 to 10.0 inches per second.
- Seismic frequency range: 2 to 250 Hz, within zero to -3 dB of an ideal flat response.
- Acoustic frequency range: 2 to 250 Hz flat, -3 dB at 2 Hz ± 1 dB.
- Sound range: 100 to 140 dB (linear).
- Measure, display, and provide a permanent time history record of the event, including both ground vibration and airblast.
- Measure the three mutually perpendicular components of particle velocity in directions vertical, radial, and perpendicular to the vibration source.
- The seismograph shall display and provide a record of:
  - the date and time of the event
  - identifying information concerning the company
  - the location of the seismograph and of the blast
  - trigger levels
  - verification the instrument was set for “continuous” and not “manual” readings
  - instrument serial number
  - the date of the most recent calibration
- The seismograph shall be calibrated as often as necessary, but at least once every 12 months, and must be performed to a standard traceable to the National Institute of Standards and Technology.

Blast monitoring data obtained by the independent seismologist or blasting consultant must be available for inspection on the blasting site, be submitted in writing to the Applicant within 24 hours following each blast, and be submitted to the Planning and Urban Development Department on a weekly basis. A model blast monitoring report is included at the end of this section.

3.7.14.2. Blasting Log:

A blasting log summarizing details of the round as shot, weather conditions, proximity of the blast location to nearest structures, exact locations of monitoring instruments, and the results of blast monitoring at each instrument location shall be maintained daily for every blast. The blasting log shall be available for inspection on-site, shall be submitted in writing to the Applicant within 24 hours following each blast, and shall be submitted to the City on a weekly basis.

3.7.15. Airblast Overpressure Limits

The peak airblast overpressure at any inhabited building not owned or controlled by the developer shall not be allowed to exceed 133 decibels (linear) when measured by an instrument with a high pass system and a lower frequency limit of 2 Hz.

The seismologist or blasting consultant shall monitor, record, analyze and report airblast pressure resulting from the blasting activities. In the event the blasting contractor's blasting round results in airblast overpressures approaching the stated limits, the Applicant may require the blasting contractor to modify the blasting operations to reduce airblast overpressures. In the event the blasting contractor's blasting round results in airblast overpressures exceeding the stated limits at structures, the blasting contractor shall cease all blasting activities and submit a written report to the Applicant, and copied to the City. This report shall discuss the corrective action to be taken on the next shot, and the next shot shall not be loaded until the Applicant acknowledges, in writing, that a design change is being attempted.

3.7.16. Carbon Monoxide (CO) Control

If any blasting operations are to occur within two hundred and fifty (250) feet of any structure, the blasting company shall:

- Submit a carbon monoxide (CO) management plan to the Planning and Urban Development Department with the Blasting Application for review and approval. The plan shall detail strategies that will be employed by the blasting company throughout blasting operations to prevent and mitigate the health and safety risks associated with possible CO migration away from the blast site and into abutting structures. CO management plans shall be tailored to the specific nature of blasting operations but shall include, at a minimum, two or more of the following actions:

    - Effort to determine the presence and location of one or more operable Carbon Monoxide detector(s) within abutting structures. Where operable Carbon Monoxide detectors are not present, they shall be temporarily provided and placed in the basement of the structure, or on the first floor if there is no basement, until at least 24 hours after completion of blasting operations.
    - Immediate excavation of individual shots, with holes remaining vented for an adequate time to allow any CO produced by the blast to dissipate into the atmosphere. Safe CO levels in the blast hole shall be confirmed by a CO detector before the hole is backfilled.
    - Identify and document active and abandoned sewer connection locations and sealed drains locations for abutting

structures as part of the pre-blast survey in order to identify structures that may pose an increase risk for CO migration. This information is available through the City of Portland Department of Public Services.

- Notify all commercial and residential abutters of the blast site at least 24 hours prior to the start of blasting by means of door hangers left at both front and rear primary building entrances. Reasonable effort shall be made to also provide face-to-face notification to all building owners and/or occupants of abutting buildings. Door hangers shall be provided to the blasting company by the City of Portland and are available through the Fire Department or the Inspections Division. The language provided on the door hangar is provided at the end of this section.

If a carbon monoxide detector is in alarm during blasting operations, the blasting company or building occupant shall call 911 immediately. In addition to calling 911, the blasting company shall contact the Fire Department at (207) 874-8405 to notify them of the emergency. The blast location shall be excavated immediately and shall remain open to the atmosphere until CO is no longer detectable in the blast hole.

3.8. MODEL BLASTING PLAN

Removal of over 300 cubic yards of rock material

The purpose of the Blasting Plan is to describe anticipated rock excavation requirements for the project, and outline proposed blasting operations, vibration control criteria, and monitoring/reporting protocols, and to protect surrounding properties from damage related to proposed blasting activities.

1. Project:

2. Project Location:

3. Estimated Quantity (cubic yards in-ground measurement) of Rock to be Blasted:

4. Project Description
Describe the project for which blasting is required. Include lot size, building construction type, number of units, etc. Refer to site/grading plans. Specify anticipated depth of fills and cuts.

5. Site and Subsurface Conditions
Provide a detailed description of the site, including but not limited to existing conditions, elevations, terrain character, topography, soil conditions, groundwater depths, depth of bedrock, etc.

6. Surrounding Properties, Utilities and Wells
Describe surrounding properties, specifying use and type of construction. Include a vicinity map with the outlines of existing structures located within a site radius equal to the minimum radius required for pre-blast condition surveys.

Indicate the location of all utilities in the vicinity, including water, sewer, stormwater, and natural gas.

Indicate the location of drinking wells in a 2000ft radius of the property.

7. Anticipated Project Areas Requiring Blasting
Indicate on a site plan the areas where blasting is expected to occur. Provide a narrative characterizing the blasting/excavation work, the estimated total number of cubic yards of material to be removed by blasting, and an estimate of the number of blasts required to remove the specified amount of material.

Include a proposed Bedrock Excavation Plan showing approximate bedrock excavation areas, variations in the depth of bedrock excavation requiring blasting, and areas where controlled perimeter blasting methods will be used (if any).

Describe the distance of proposed blasting to the nearest structures and underground utilities.

3.9. MODEL NOTIFICATION LETTER

Date

Dear Neighbor:

We are sending you this letter to inform you that we will be blasting ledge in preparation for the _____project on _____Street.

As required by City Ordinance, prior to any blasting, neighbors within (250, 500, 600)feet of the blast area shall be notified in writing prior to the blast.

We will begin blasting on _____. We expect the blasting to last for _____. By City Ordinance, blasting will occur between 9:00am – 4:00pm, Monday through Friday.

The procedure for the blast will be as follows: Just before the blasting is due to begin, a horn will sound to signal people in the immediate area of the upcoming blast. The horn will blow in the following sequence:

3 long horns – 5 minutes before the blast
2 long horns – 1 minute before the blast
1 long horn - All clear for the blast to proceed.

Please Note: Toxic gases, including carbon monoxide (CO), are a byproduct of the detonation of explosives. Carbon monoxide is a poisonous, colorless, odorless, and tasteless gas. Exposure to raised levels of carbon monoxide can be hazardous or deadly. It is possible, in instances of incomplete combustion of explosives and where an open pathway is present, for carbon monoxide to travel from the blast site into nearby buildings. The Portland Fire Department encourages all Portland residents to install carbon monoxide detectors in their homes and workplaces to prevent exposure to hazardous levels of carbon monoxide. Carbon monoxide detectors should be installed in the basement or on the first floor of structures.

If you have any questions, please call any of the following numbers:

Blasting Contractor	_____
City of Portland Fire Prevention Bureau	(207) 874-8405
City of Portland Development Review Coordinator	(207) 874-8719
City of Portland Inspections Division	(207) 874-8703

For damage complaints, please call the Fire Prevention Bureau at (207) 874-8405 to log the complaint and request inspection and documentation of the damage.

Please do not hesitate to call if you have any questions or concerns.

Sincerely,

Blasting Contractor

3.10. MODEL OFFER OF PRE-BLAST SURVEY NOTICE

Date

Dear Neighbor:

We are sending you this letter to inform you that we will be blasting ledge in preparation for the _____project on _____Street.

As required by City Ordinance, prior to any blasting, a pre-blast survey of all structures within (250, 500, 600)feet of the blast area shall be conducted to establish a base line against which any claims of damage caused by this blasting can be judged.

Your property is within the (250, 500, 600) ft radius. A pre-blast survey will be performed at no cost to you if you would like to have it done.

To request that a pre-blast survey be done of your residence, please complete the enclosed survey form in its entirety and mail it back in the enclosed stamped envelope no later than_____.

Pre-blast condition surveys for this project will be performed by _____. A representative from _____ will call you to set up an appointment to perform the survey. A seismologist or a qualified technician working under the direction of a seismologist from _____ will then make a videotape of the interior and exterior condition of your residence. The pre-blast survey records will be kept in a locked file for a period of _____after the completion of blasting at which time they will be destroyed.

If you have any questions, please contact _____at _____.

Thank you,

Blasting Contractor

3.11. Door Hanger Model Language

Fact Sheet

This notice serves as a reminder that blasting operations will be occurring in your neighborhood in the next day or two. By now you should have also been notified in writing by the Blasting Company who will be doing this work. For the public's safety, theC ity of Portland requires contractors of blasting operations to monitor for the release of a ny carbon monoxide gas traveling into occupied buildings. This notice describes what c arbon monoxide is, identifies potential signs of carbon monoxide build-up and steps for y ou to follow.

What is carbon monoxide?

Carbon monoxide (CO) is an odorless, colorless gas that can cause sudden illness or death.

Where is CO found?

CO is found in combustion fumes, such as those produced by cars and trucks, small gasoline engines, stoves, lanterns, burning charcoal and wood, and gas ranges and heating systems. ***CO is also a byproduct of blasting operations in the ground***. CO from any of these sources can build up in enclosed or semi-enclosed spaces. People and animals in these spaces can be poisoned by breathing it.

Protection from CO

The best protection from CO poisoning is early detection through the installation of a working carbon monoxide detector in your home.

What are the symptoms of CO poisoning?

The most common symptoms of CO poisoning are headache, dizziness, weakness, nausea, vomiting, chest pain, and confusion. High levels of CO inhalation can cause loss of consciousness and death. Unless suspected, CO poisoning can be difficult to diagnose because symptoms mimic other illnesses. People who are sleeping or intoxicated can die from CO poisoning before ever experiencing symptoms.

Emergency Contact

If you or anybody in the building experiences any of the symptoms or your CO detector goes into alarm ***please call 911 immediately***.

If you have general questions regarding blasting operations in your neighborhood or carbon monoxide, please contact the Portland Fire Department Fire Prevention Bureau.

Portland Fire Department
Fire Prevention Bureau
380 Congress Street
Portland, ME 04101
874-8405

3.12. MODEL EMERGENCY ACCESS LANE MAINTENANCE AGREEMENT

IN CONSIDERATION OF the Subdivision approval granted by the Planning Board of the City of Portland to a plan entitled

dated , 20 and recorded in the Cumberland County Registry of Deeds in Plan Book , Page and pursuant to a conditions thereof,

_____

(Applicant, Nature of Applicant's Business-Corporation, Partnership or sole proprietorship and principal of business)

The owner of the subject premises, does hereby agree, for itself, its successors and assigns (the "Owner") as follows:

1. That the Owner shall be responsible for the maintenance and repair of, snow removal from, preservation of, and removal of obstructions and encumbrances including but not limited to debris, junked vehicles and other refuse, from the Emergency Access Lane depicted on the Plat (the "Emergency Access Lane") so that the Emergency Access Lane shall remain reasonably passable for fire-fighting and preventive apparatus and vehicles and other public emergency vehicles owned or operated by or on behalf of the City of Portland.

2. That the Owner shall remove snow from Emergency Access Lane so that at no time shall the snow accumulate thereto to an average depth in excess of four (4) inches and shall also remove snow from the Emergency Access Lane of a depth of less than four (4) inches if subsequent rain, hail or temperatures below thirty-two (32º) degrees Fahrenheit shall result in the snow accumulated on the Emergency Access Lane becoming so frozen as to render the Emergency Access drive impassable by such fire-fighting and public emergency vehicles. If the Owner shall fail to remove such non-frozen snow accumulating in excess of four (4) inches in depth within twenty-four (24) hours after the cessation of the storm creating such snow, or if the Owner shall fail to remove such ice within twenty-four (24) hours after ice has accumulated or formed to the state as to render the Emergency Access Lane impassable for said purposes, or if the Owner shall fail to remove said obstructions and encumbrances on the Emergency Access Lane (that are not the result of precipitation) which render the Emergency Access Lane (that are not the result of precipitation) which render the Emergency Access Lane impassable for said purposes within thirty-six (36) hours after such obstructions and up the Emergency Access Lane and adjacent land as necessary with men and machines in order to plow and clear, or cause to be plowed and cleared, such snow and ice and to remove said obstructions and encumbrances from the Emergency Access Lane and bill the Owner for the expense of the same. The City of Portland shall submit its itemized bill for such expenses to the Owner which the Owner shall pay to the City of Portland within sixty (60) days of receipt, or such longer period of time as the City of Portland shall agree to. The expenses billed to the Owner shall include the time spent for travel to and from the Property.

This Agreement shall bind the undersigned only so long as it retains any interest in said premises, and shall run with the land and be binding upon its successors and assigns as their interests may appear.

Date at Portland, Maine this ____ day of _____, 20__

(Applicant)

*If the approval is of a site plan, this clause should read "IN CONSIDERATION OF THE SITE PLAN APPROVAL granted by the Planning Board of the City of Portland to a site plan entitled , dated FORMTEXT , 20 , and file with the City of Portland, Department of Planning and Urban Development, 389 Congress Street, Portland, Maine,…"

4. LANDSCAPING AND LANDSCAPE PRESERVATION STANDARDS

4.1. DEFINITIONS

Feature mature tree: A tree that meets at least one of the following criteria:

1.) Any tree that is on the Register of Big Trees promulgated by the Maine Department of Agriculture, Conservation & Forestry (the "Big Tree List")

2.) Certain trees 24" in diameter or greater (diameter at breast height or DBH) as identified by the City Arborist

3.) Ornamental trees 12" in diameter or greater (diameter at breast height or DBH) as identified by the City Arborist

4.) Rare tree specimen to include either a tree species classified as rare or endangered at either the state or federal level, and/or stands of native trees that are rare or threatened as identified by the City Arborist.

4.2. PRESERVATION OF SIGNIFICANT SITE FEATURES

The applicant shall clearly identify all significant natural features on the site, as defined in Article 14 of the Land Use Code, on the submitted boundary survey and site plan, and shall clarify the proposed measures for the preservation and protection of all such features both during and after construction.

4.3. PRESERVATION OF EXISTING VEGETATION

4.3.1. The applicant shall provide a tree survey performed by a licensed land surveyor, arborist, forester, or landscape architect. The tree survey shall clearly indicate forest type and the location, size and species of all existing trees 10" diameter at breast height (DBH) or greater on the site and in the right-of-way, and all feature mature trees on the site and in the right-of-way. For sites with a high density of existing trees, the survey shall identify all existing shade and ornamental trees that may have been part of a prior landscape scheme for the site and the location, average size and species of groves of trees, and individual trees greater than 16" DBH.

4.3.2. Trees or groups of trees to be preserved shall be inspected and approved by the City Arborist or their designee and shall be clearly identified on the Site Plan, Subdivision Plat, Landscape Plan and Grading Plan. Where required by the reviewing authority, property deeds shall include language and plans to help ensure that current and future landowners are aware of all preservation requirements tied to the property.

4.3.3. Tree preservation efforts shall include posted signs clearly identifying the 'Tree Protection Zones' or 'Limit of Work Zones'.

4.3.4. Fencing or other protective barriers and signage shall be erected outside the drip line of individual, groupings of or perimeter trees to be preserved.

- No storage of construction equipment, digging, trenching or other soil disturbance shall be permitted within the drip-line of trees to be preserved.
- Areas of trees or other vegetation to be preserved shall not be used for temporary stormwater runoff storage during construction.
- Protective barriers and signage shall remain in place until completion of the project.

During the pre-construction meeting and prior to the onset of any construction including site work, the Department of Public Works or their designee shall inspect all installed protective barriers.

4.3.5. Tree preservation locations and measures to protect preserved vegetation shall be identified or noted in detail on the Landscape Plan and cross-referenced on the Site Plan, Subdivision Plat and Grading Plan.

4.3.6. Upon completion of the project, plant material that has been designated for preservation shall be subject to the maintenance and inspection requirements outlined in this section. Preserved vegetation that show signs of construction damage within a one year period following construction, including but not limited to bark damage or excessive root damage, grade changes other than those originally indicated in the approved grading plan, soil compaction due to heavy equipment traversing closely, or general decline due to mechanical or natural conditions shall be rejected and must be replaced prior to the release of any defect guarantee. Any rejected tree will be subject to the following replacement requirements:

- For every existing tree rejected that is between 10” and 16” in caliper DBH, one (1) replacement tree listed on the City of Portland approved list (Figure IV-1) shall be planted on the site.
- For every existing tree rejected that is 16” or more in caliper DBH, two (2) replacement trees listed on the City of Portland approved list (Figure IV-1) shall be planted on the site.

4.3.7. The developer shall be responsible for making all contractors aware of preservation requirements prior to any construction activities. See Figure IV-2 for typical tree preservation detail.

4.3.8 Where a waiver is requested under the landscape preservation standards of the land use code and planting of replacement trees is not feasible, financial contributions proportionate to the cost of required replacement trees shall be as indicated below.

Contribution per required replacement tree	$400.00
Contribution per existing feature mature tree removed*	$100.00 per inch diameter
Contribution where applicant plants a tree to replace feature mature tree*	$100.00 per inch diameter of removed existing feature mature tree less $400.00

*In cases of removal of a feature mature tree, these contribution amounts supersede the base replacement tree fee of $400.

4.4. Reserved.

4.5. SITE LANDSCAPING

4.5.1. All landscape design: Site landscaping should establish attractive, low-maintenance outdoor spaces that incorporate site definition and screening and be selected to achieve one or more of the following outcomes; promote a healthy and biodiverse urban ecosystem, further City goals around climate resiliency and mitigation, create or enhance areas of native habitat, improve stormwater treatment, and/or increase local food production.

4.5.2. Screening and buffers: Where required, buffer areas shall be comprised of existing trees and vegetation, new landscaping or a combination thereof to create a dense, mixed buffer incorporating both understory and tree canopy layers. While primarily of benefit from a ground level pedestrian viewpoint, such screening should also effectively provide screening when viewed from upper floors of surrounding properties, where applicable. New shrubs shall be approximately three (3) feet in mature height and shall be spaced six (6) to eight (8) feet apart. Figure IV-3 provides an example of buffering between compatible uses.

Buffers between land uses: Buffers between contrasting land uses may incorporate earthen berms not exceeding 4:1 slope, opaque fencing of high architectural quality, masonry wall or a combination thereof, in addition to landscape plantings. Where fencing or masonry wall is proposed as part of a buffer, less landscaping density is acceptable; however, buffers shall still include trees, shrubs and other vegetation.

Buffers between site components: Landscaped buffers within the site shall complement and enhance structures and site amenities, provide screening between structures, and buffer undesirable views from general public areas, from existing structures and from residents of proposed units. Accessory site elements such as parking and loading areas, utility structures, dumpsters, storage areas and other hardscaped or unvegetated areas, shall be located and screened from view from public areas and adjacent properties. Screening shall be accomplished with opaque fencing of high architectural quality, masonry wall and/or dense evergreen landscaping. Where fencing or masonry wall is proposed as part of a buffer, less landscaping density is acceptable; however, buffers shall still include trees, shrubs and other vegetation. Figures IV-6 and IV-7 provide an example of screening of accessory site elements.

4.5.3. Industrial and commercial development: In addition to other requirements of the City Code and of this section, industrial and commercial developments shall incorporate landscaping that:

- Enhances proposed buildings with foundation plantings in the vicinity of public entrances to all buildings and in areas with uninterrupted or predominantly blank facades (Figure IV-5 provides an example of interior site landscaping).

- Defines roadways and driveway entrances.

4.5.4. Planned Residential Unit Development (PRUDs): Required trees to be planted and/or preserved shall separate and screen proposed buildings and separate and screen proposed recreational uses. Where cul de sacs are provided, landscaping consisting of native or adapted low maintenance vegetation shall be provided.

4.5.5. Parking areas: Landscaping shall be incorporated into the development of surface parking to reduce adverse environmental and aesthetic impacts, to shade pavement to reduce heat island effect and to screen parking areas from public view. Plant materials shall be selected for appearance, durability, and tolerance to salt. Figures IV-6a and IV-6b provide examples of parking lot screening.

Landscaping that abuts areas of vehicular use shall be adequately protected and separated from vehicles. Protection should take the form of physical or visual separation, such as curb stops, bollards, or continuous curbing. Protection shall be designed with adequate visibility and durability in order to withstand normal snow plowing operations.

Landscaped islands shall be curbed and a minimum of eight (8) feet in width, not including curbing. The incorporation of bioretention into landscaped islands is strongly encouraged.

4.5.6. Snow storage: Snow storage areas may be located in landscaped areas provided that appropriate landscape materials are selected which can withstand such snow storage. Snow storage shall not be located where it would adversely impact the functionality of bioretention or other stormwater management systems.

4.5.7. Walls and fences: Fences and walls within public view must be of high architectural quality. Chain link and wire mesh fences shall be vinyl coated, dark in color, out of direct public view and shall be complemented with landscaping.

- For residential development, chain link fence shall be a minimum of 6-gauge fence fabric.
- For commercial or industrial development chain link fence shall be 9-gauge fence fabric mounted on schedule 40 pipe posts.

Masonry walls shall be constructed of stone, brick or other durable and attractive materials.

Concrete block walls are not permitted except where variety in color, design and detailing of the materials are of high architectural quality. Electrified or barbed fencing is not permitted.

4.5.8. Slope stabilization: Stabilization of slopes between 5% and 50% shall incorporate installation of a mixture of vegetation, organic mulch and/or erosion control seed mix.

Stabilization of slopes greater than 50% must incorporate biotechnical and/or structural methods including but not limited to terracing rip rap or retaining walls in addition to vegetation. Retaining walls, if four (4) feet in height or greater from the bottom of the footing to the top of the wall and/or if supporting a surcharge, must be designed by a licensed engineer and require a City of Portland Building Permit.

4.5.9. Low Impact Development (LID) practices: It is the City's policy to encourage Low Impact Design (LID) strategies and practices to capture and infiltrate stormwater runoff. LID is the process of developing land to mimic the natural hydrologic regime. It incorporates land planning and design practices and technologies to achieve this goal. LID is also discussed in Section V of this Technical Manual.

LID strategies and practices relating to site landscaping requirements include but are not limited to bioretention, grassed filter strips, green roofs, rain gardens and vegetated swales.

4.5.10. Climate positive planting: Site landscaping should be selected in part to further

the City's goals around mitigating the effects of a locally changing climate, with consideration given to the viability of species in a warming environment, the equitable extension of tree canopy to address the urban heat island effect, and the use of landscaping elements to reduce energy consumption.

4.6. STREET TREES

Arrangement and spacing of trees proposed in the City right of way and/or private roadway, shall be coordinated with the Portland City Arborist or their designee. Tree species shall be selected according to the City of Portland recommended tree list (Figure IV-1). Trees proposed in the sidewalk shall be planted in tree wells, as shown in Figures IV-4a, 4b, and 4c and as required by the City Arborist based upon site context and prospects for tree survival. Adequate soil volume to ensure tree survival shall also be required, as determined by the City Arborist.

4.6.1. Residential development:

Single-family residential: Single-family residential developments shall provide a minimum of two (2) street trees per unit, planted in the City right of way and/or along private roadways unless otherwise approved and spaced twenty-five (25) to thirty-five (35) feet on center.

Multi-family residential: Multi-family residential developments shall provide a minimum of one tree per unit, planted in the City right of way and/or along private roadways unless otherwise approved and spaced twenty-five (25) to thirty-five (35) feet on center.

Single-family residential subdivisions: Single-family residential subdivisions shall provide a minimum of two (2) trees per lot, planted in the City right of way and/or along private roadways unless otherwise approved and spaced twenty-five (25) to thirty-five (35) feet on center.

4.6.2. Planned Residential Unit Developments (PRUDs): Where a manufactured housing park or subdivision is also a planned residential unit development (PRUD), the development shall provide a minimum of two (2) street trees per unit, planted within ten (10) feet of the City right of way and/or private roadway proposed as part of the development.

4.6.3. Commercial, industrial and institutional development: Commercial, industrial and institutional developments shall provide street trees twenty-five (25) to thirty-five (35) feet on center in the City right of way along all street frontages unless otherwise approved.

4.6.4. Street tree alternatives: Section 14.6.2 of the Land Use Code states that where

the applicant can demonstrate that site constraints prevent the planting of required street trees in the City right-of-way and/or along private roadways, the review authority may permit the following to be counted towards the street tree requirement. The alternatives to a street tree in the right-of-way should help achieve the objectives of a street tree and contribute to the street environment. The following specifications are provided to guide the applicant; the acceptability of the alternative to a street tree shall be at the discretion of the City Arborist.

- Existing healthy street trees located in the right-of-way along the frontage of the site may be counted as street trees. Plans for protection and preservation of these trees during construction shall be included as part of the development review.

- Existing healthy trees that are six (6) inches or more in caliper, visible from the right of way and on the site within twenty (20) feet of the property line may be counted as street trees. Plans for the protection and preservation of these trees during construction shall be included as part of the development review.

- New street trees may be planted where visible from the right-of-way within twenty (20) feet of the property line, subject to the species being appropriate to the location and from the Recommended Tree List (Figure IV-1). Applicants should note that trees planted within the site would be subject to the Performance Guarantee defect period provisions and should be documented on deed plans for future preservation.

- The preferable location for new street trees that cannot be located in the right-of-way along the frontage of the site is on public land elsewhere in the neighborhood or in areas of the City with minimal tree coverage. Locations may include esplanades, sidewalks and existing empty street tree wells or planting strips, and also places such as parks, playgrounds, and other areas where public benefit would be derived from the addition of new trees. Evidence that the planting site was unlikely to be redeveloped in the near future and that the trees would be protected and maintained are required.

- Where the other alternatives are demonstrated to be infeasible, a contribution for each required street tree may be made into the City of Portland's Tree Fund in accordance with the table below. The contribution shall be used by the City to provide street trees in the right of way or in the neighborhood of the proposals site or in other areas of the City with minimal tree coverage. The contribution would be considered a "one-time" infrastructure contribution which is payable prior to the issuance of a building permit.

- Where the proposed development involves the removal of an existing street tree determined by the City Arborist to be a feature mature tree, the applicant shall be required to contribute to the tree fund as indicated below.

Contribution for new street tree	$400.00
Contribution for tree to replace feature mature tree	$100.00 per inch diameter of the removed existing feature mature tree
Contribution where applicant plants a tree to replace feature mature tree	$100.00 per inch diameter of removed existing feature mature tree less $400.00

4.7. PLANT SELECTION

4.7.1. All trees and shrubs shall comply with the standards set forth by the American Standard for Nursery Stock (ANSI Z60.1 - 2004). These standards are available through the Department of Public Works.

4.7.2. All trees and shrubs shall be nursery grown, healthy, free of disease and insect pests, and shall have a well-developed and compact root system. Plant material showing signs of a lack of proper nursery care or a lack of pruning or cultivation, or which is not true to name will be classified as collected stock regardless of its source and shall be rejected.

4.7.3. Proposed trees and shrubs installed as part of the landscaping plan shall be comprised of at least 50% native species.

4.7.4. The developer shall be responsible for preventing the spread of existing or the introduction of new invasive species on the site, as identified below. If, within one (1) year following construction, invasive species are identified on the site or if such species are pre-existing on the site but are determined to have spread by the City Arborist, the applicant shall be required to implement appropriate control measures prior to the release of the defect guarantee. Accepted mechanical and chemical control methods are provided by the Maine Natural Areas Program (MNAP) of the Maine Department of Conservation in their Invasive Plant Fact Sheets (available through the Department of Public Services and through the MNAP program website: http://www.maine.gov/doc/nrimc/mnap/features/invasives.htm.

The following plant species are recognized as invasive species that are characteristically adaptable, aggressive, and have a high reproductive capacity.

1) Asiatic Bittersweet (*Celastrus orbiculata*);
2) Autumn and Russian Olive *(Elaeagnus umbellata and Elaeagnus angustifolia*);
3) Black Swallowwort *(Cynanchum louiseae*);
4) Brazilian Waterweed *(Egeria densa);*
5) Common and Glossy Buckthor*n (Rhamnus cathartica and Frangula alnus*);
6) Common Reed *(Phragmites australis);*
7) Eurasian Milfoil *(Myriophyllum spicatum*);
8) Fanwort (*Cabomba caroliniana);*
9) Garlic Mustard (*Alliaria petiolata*);
10) Hydrilla (*Hydrilla verticillata);*
11) Japanese Barberry *(Berberis thunbergii*);
12) Japanese Honeysuckle *(Lonicera japonica*);
13) Japanese Knotweed *(Fallopia japonica);*
14) Japanese Stilt Grass *(Microstegium vimineum);*
15) Lesser Celandine *(Ranunculus ficaria*);
16) Mile-a-Minute Weed *(Polygonum perfoliatum*);
17) Morrow and Tartarian Honeysuckle *(Lonicera morrowii and Lonicera tartarica*);
18) Multiflora/Rambler Rose *(Rosa multiflora*);
19) Porcelainberry (*Ampelopsis*
20) Milfoil *(Myriophyllum heterophyllum*);
21) Water Chestnut *(Trapa natans);*
22) Norway Maple (*Acer platanoides*)
23) Yellow-flag Iris (*Iris pseudacorus).*

4.7.5. Trees selected from the Recommended Tree List (Figure IV-1) shall conform, at a minimum, to the sizes specified on the list.

4.7.6. All upright deciduous and evergreen shrubs shall be a minimum of 3 feet tall at mature height. All spreading evergreen and deciduous shrubs shall be a minimum of 2-2.5 feet in width at maturity.

4.7.7. Ground covers planted in lieu of grass shall be planted at a level of coverage equivalent to one complete growing season. Grass areas shall be planted with Kentucky Bluegrass (*Poa pratensis*), Red Fescue (*Festuca rubra*), Tall Fescue (*Festuca arundinacea*) or Perennial Ryegrass (*Lolium perenne L.).* Rolled turf, erosion reducing net or suitable vegetation along with landscaping shall be used in swales or other areas subject to erosion.

4.7.8. Mulching material shall be a minimum of three (3) inch deep wood chip or bark mulch. Inorganic mulches are not permitted.

4.7.9. No plantings used to satisfy City landscaping requirements shall be comprised of inorganic materials.

4.8 INSTALLATION AND MAINTENANCE OF PLANTINGS

4.8.1. Landscaping, earth moving and grading activities shall be performed according to standards accepted good planting and grading procedures and in accordance with the approved Site Plan, Subdivision Plat, Grading Plan and Landscape Plan.

4.8.2. No plant shall be moved after the bud break unless so authorized by the City Arborist or their designee. Planting periods are between April 1st and to July 1st and/or September 1st and November 1st.

4.8.3. Tree planting and other landscaping for subdivisions that cannot be installed prior to release of the performance guarantee must be insured by a defect bond as described in Section Article 15 of the City Land Use Code.

4.8.4. All bare soil areas shall be vegetated and/or mulched prior to the issuance of a Certificate of Occupancy.

4.8.5. New vegetation that shows signs of construction damage within a one year period following construction, including but not limited to bark damage or excessive root damage, grade changes other than those originally indicated in the approved grading plan, soil compaction due to heavy equipment traversing closely, or general decline due to mechanical or natural conditions shall be rejected and must be replaced prior to the release of any defect guarantee.

5. PORTLAND STORMWATER MANAGEMENT STANDARDS AND MAINE DEP CHAPTER 500 STORMWATER MANAGEMENT

I. INTENTION

The goal of the City of Portland's Stormwater Management Program is to address the effects of development on both the quantity and quality of stormwater runoff in order to protect and improve water quality and meet Clean Water Act requirements. The Technical Manual standards support the review criteria contained in Portland's site plan and subdivision ordinances and with the stormwater management requirements within Chapter 32. Please see Chapter 32 of the City Code of Ordinances for regulations governing stormwater systems, illicit discharges and Post-Construction Stormwater Management Plans in Portland.

II. APPLICABILITY IN PORTLAND

PROJECTS REQUIRING STATE PERMITS:

Projects that require a Stormwater Permit pursuant to 38 M.R.S.A. Sec. 420-D (Stormwater Management Law) and projects that may substantially affect the environment and require a site location of development (Site Law) permit pursuant to 38 M.R.S. A Sec 481-490 shall be reviewed for conformance with Chapter 500 under the City's Delegated Review Authority or by the Maine Department of Environmental Protection.

PROJECTS REQUIRING MUNICIPAL REVIEW IN PORTLAND:

The City of Portland's applicability requirements for all development within Portland, which are specified below, supersede the applicability thresholds specified within the Chapter 500 Rules. The City of Portland conducts reviews under the City's Code of Ordinances, specifically Chapter 32 Stormwater and Chapter 14 Land Use Code. With the intent of improving water quality within Portland's urban environment, the City has adopted codes and regulations that require development proposals of a scale smaller, than the thresholds established under the state laws, to comply with the provisions of Chapter 500.

As outlined in the Article 14 of the City of Portland Land Use Code, the developments specified below shall comply with the Urban Impaired Stream, Basic, General, and Flooding Standards of the most recent version of the Maine Department of Environmental Protection (Maine DEP) Chapter 500 Rules for Stormwater Management (http://www.maine.gov/dep/land/stormwater/storm.html)

A. Development within Urban Impaired Stream Watersheds: All development, except single and two-family homes subject to City of Portland review under the minor residential site plan application, shall be required to comply with the Urban Impaired Stream Standard pursuant to Maine DEP Chapter 500 Stormwater Management Rules if they are located within the following watersheds:

- Capisic Brook,
- Fall Brook,
- Nasons Brook,
- As listed in the most recent version of the Maine DEP Chapter 502 Rules.

Developments which will result in the creation of up to 1,000 square-feet of new impervious area or up to 10,000 square-feet of new non-impervious developed area, as defined under Definitions in the Maine DEP Chapter 500, are considered de minimis and are exempt from the Urban Impaired Stream Standard. Development within the Long Creek watershed shall be subject to the requirements set forth by the Long Creek Watershed Management District.

The City of Portland has an approved Compensation Fee Utilization Plan (CFUP) and can therefore receive in-lieu-fee payments to meet the UIS Standard.

B. Basic Erosion and Sedimentation Control Standards for all Development: All development subject to City of Portland site plan review, including but not limited to minor and major site plans, shall comply with the Basic Standard pursuant to Maine DEP Chapter 500 Stormwater Management Rules; single and two-family homes (minor residential applications) shall be exempt from the Inspection and Maintenance Documentation Requirements of Appendix B1c.

C. Stormwater Management Plans for New Development: Except as provided in below, the following development proposals shall submit a stormwater management plan pursuant to the regulations of Maine DEP Chapter 500 Stormwater Management Rules, including General and Flooding standards:

1. Minor site plans which will result in the creation of more than 1,000 square-feet of new impervious area or 10,000 square-feet of new non-impervious developed area, as defined under Developed Area and listed under Definitions of Chapter 500.
2. Major site plans.
3. Subdivisions as defined in Article 15 of the Land Use Code, except for those projects which do not result in the creation of more than 1,000 square-feet of new impervious area or 10,000 square-feet of new non-impervious developed area, as defined under Developed Area and listed under Definitions of Chapter 500.

4. Other projects that the Planning Authority determines that special conditions warrant a stormwater management plan; and
5. Projects that require a Stormwater Permit pursuant to 38 M.R.S.A. Sec. 420-D (Stormwater Management Law), a development that may substantially affect the environment and requires a site location of development (Site Law) permit pursuant to 38 M.R.S.A. Sec 481-490; and certain projects that may be eligible for license by rule for the infiltration of stormwater pursuant to 38 M.R.S.A. Sec 413.

Exemption:

1. Minor residential, as defined in the Technical Manual - Section 16.

D . Redevelopment Projects: All projects not subject to requirements of an existing Site Law or Stormwater Management Law Permit that include redevelopment of non-roof impervious area greater than 5,000 square-feet and are subject to City of Portland review shall provide stormwater quality treatment in accordance with the General Standards for no less than 50% of the redeveloped impervious area. The runoff from any upgradient area must be either directed away from the stormwater treatment measure or that measure must be sized to treat the runoff from the upgradient area.

E. Low Impact Development and Stormwater Quality Treatment: Developments that are not required to comply with the General and Flooding standards are encouraged to incorporate Low Impact Development (LID) and stormwater quality treatment techniques in their design to the maximum extent practicable; however, only projects that meet or exceed the General and Flooding Standards may qualify for a credit from the Stormwater Service Charge in accordance with the Stormwater Credit Manual. A separate application must be completed and submitted to the City for consideration of Stormwater Service Charge credits.

III. STORMWATER MANAGEMENT STANDARDS

Developments as specified under Section II Applicability in Portland must comply with the most recent version of the Maine Department of Environmental Protection (Maine DEP) Chapter 500 Rules for Stormwater Management (http://www.maine.gov/dep/land/stormwater/storm.html), including but not limited to the standards for Urban Impaired Stream, Basic, General, and Flooding Standards for the suitability, design, installation, and maintenance of systems to comply with the General and Flooding Standards are provided in Volume III of the Maine Stormwater Best Management Practices Manual.

Developments shall also comply with Chapter 32 Stormwater of the City Code and with the Subdivision and Site Plan Ordinances contained in the Land Use Code.

IV. SUBMISSION REQUIREMENTS

Applicants are required to submit a stormwater management and drainage plan as part of development review application and to provide the following submission items to demonstrate compliance with the applicable stormwater management standards:

- Urban Impaired Stream Standard: Calculations for the Compensation Fee or Mitigation Credit per the tables provided in Chapter 500 Rules and other associated Maine DEP regulations. (Note: The City of Portland has an approved Compensation Fee Utilization Plan (CFUP) and can therefore receive in-lieu-fee payments to meet the UIS Standard.)
- Basic Standard: An Erosion & Sediment Control management plan, notes, and details per the Chapter 500 Rules
- General Standard: Written narrative demonstrating compliance, site plans showing grading and drainage infrastructure, site plan showing water quality treatment area(s) with table showing compliance, BMP sizing calculations, construction details, and a Post-Construction Stormwater Inspection & Maintenance Plan per Maine DEP Chapter 500 Appendix B with reporting requirements per Chapter 32 of City of Portland Code of Ordinances, and a Stormwater Maintenance Agreement.
- Flooding Standard: Subcatchment plans with flow paths, full hydrology computations/model output of pre- and post-development conditions, summary of pre- and post-development flowrates, and a written request for waiver with rationale for waiver as noted in Section 5.II.F. (as applicable)

The following references provide guidance on LID techniques:

- *LID Guidance Manual for Maine Communities*, prepared for the Maine Coastal Program, dated September 21, 2007.
- *Low-Impact Development Design Strategies – An Integrated Design Approach,* prepared by Prince George's County, Maryland & Department of Environmental Resources, Programs and Planning Division, dated June 1999.

6. EROSION AND SEDIMENTATION CONTROL STANDARDS

Last revised May 2024

The following are the mandatory minimum standards for Construction Activity subject to Chapter 32, Article IV of the City of Portland Code of Ordinances. Minor and Major Site Plans are defined by Chapter 14 of the City of Portland Code of Ordinances.

For projects that require a **major site plan approval, or those projects that do not require site plan approval which result in 1 acre or more of Disturbed Area**, a Comprehensive Erosion and Sedimentation Control Plan as detailed in section 6.2 below is required for all Construction Activity.

For projects that require a **minor site plan approval, or those projects that do not require site plan approval which result in less than 1 acre** or more of Disturbed Area, a Basic Erosion Control Plan as detailed in section 6.1 below is required of all Construction Activity.

Minor residential projects must use effective erosion and sedimentation controls for the duration of the Construction Activity, but are not required to submit an Erosion and Sedimentation Control Plan.

In all circumstances, the City reserves the right to require a Comprehensive Erosion and Sedimentation Control Plan, or any component thereof, when site conditions dictate (e.g. proximity to sensitive natural resources, steep grades).

	Plan Submission Required	**Inspector Requirements**	**Inspection Report Submittal**
Major Site Plan >1 acre disturbance	Comprehensive	Third-party inspector	Weekly to Water Resources & Planning
Major Site Plan <1 acre disturbance	Comprehensive	Qualified professional	Weekly to Water Resources & Planning (may be waived)
Minor Site Plan	Basic	Self-inspection	None
Minor Residential	None	Self-inspection	None

6.1 Basic Erosion and Sedimentation Control Plan

Erosion Control BMPs must meet the requirements of sections 6.3 and 6.4 below. The Basic Erosion and Sedimentation Control Plan (Basic ESC Plan) shall consist of a graphic representation of the site at a scale no smaller than 1 inch = 100. The Basic ESC Plan must include the following:

a. Name(s) of and contact information for the person(s) responsible for installation, inspection, and maintenance of ESC BMPs;
b. Parcel boundaries;

c. Locations of coastal sand dune systems, coastal wetlands, significant wildlife habitat, fragile mountain areas, freshwater wetlands, great ponds and rivers, streams or brooks;
d. Locations of all Erosion and Sedimentation Control BMPs to be used; and
e. Details for all Erosion and Sedimentation Control BMPs, meeting the requirements of section 6.3, to be used.

6.1.1 Basic Inspection and Maintenance Requirements

1) All areas of disturbance, impervious areas, ESC BMPs, materials storage areas exposed to precipitation, and locations where vehicles enter or exit the Site shall be inspected:
    a. Once before any disturbance begins and after all Erosion and Sedimentation Control BMPs specified in the Erosion and Sedimentation Control Plan are in place;
    b. At least once a week as well as before and within 24 hours after a storm event (rainfall); and
    c. Once at project completion to ensure the Site has reached permanent stabilization and all temporary erosion and sedimentation controls have been removed.
2) The applicant is responsible for inspecting the site and maintaining erosion and sedimentation controls in good working order.
3) In general, sites that require a basic ESC plan and have less than 1 acre of disturbance are not required to submit an inspection report, however the City reserves the right to require and review reports for any project.
4) If ESC BMPs need to be maintained, repaired, or enhanced, the work shall be initiated upon discovery of the problem but no later than the end of the next workday or prior to a precipitation event, whichever comes first. If additional ESC BMPs or significant repair of ESC BMPs are necessary, implementation must be completed prior to any storm event (rainfall) and within 7 calendar days of identification. All measures must be maintained in effective operating condition until areas are permanently stabilized.

6.2 Comprehensive Erosion and Sedimentation Control Plan

A Comprehensive Erosion and Sedimentation Control Plan (Comprehensive ESC Plan) shall be prepared by a Qualified Professional as defined in City of Portland Code of Ordinances Chapter 32, Article IV.

The Comprehensive ESC Plan shall consist of a graphic representation of the Site at a scale no smaller than 1 inch = 100. The Comprehensive ESC Plan must include the following:

a. Name(s) of and contract information for the person(s) responsible for installation, inspection, and maintenance of ESC BMPs;
b. Parcel boundaries;
c. Topography for site pre-and post-construction conditions as 2-foot elevation contours;
d. Limits of clearing and site work;
e. Locations of coastal sand dune systems, coastal wetlands, significant wildlife habitat, fragile mountain areas, freshwater wetlands, great ponds and rivers, streams or brooks;
f. Locations of areas not to be disturbed by Construction Activity including trees, vegetation, and areas intended for infiltration;
g. Locations of all Erosion and Sedimentation Control BMPs to be used;
h. Details for all Erosion and Sedimentation Control BMPs to be used;
i. Example **inspection form** meeting the requirements of section 6.2.2;
j. **ESC Phasing Plan** for Construction as detailed in section 6.5;
k. **Dewatering Plan** as detailed in section 6.6 and application for review and approval if necessary; and

l. **Good Housekeeping and Pollution Prevention Plan** as detailed in section 6.7.

6.2.1 Pre-Construction Meeting

For sites with a Comprehensive Erosion Control Plan, a pre-construction meeting is required. Once an approved Performance Guarantee, if required, is in hand and at least five (5) days prior to commencing Construction Activity, the applicant shall request a pre-construction meeting with the Enforcement Authority. At a minimum, attendance at the meeting is required by the Enforcement Authority and the applicant or their representative in charge of construction. If the representative in charge of construction is not the primary earthwork contractor, a representative of the earth work contractor must also attend the pre-construction meeting. Erosion and sediment controls should be installed for inspection during the pre-construction meeting and must be installed and inspected prior to the start of construction.

6.2.2 Comprehensive Inspection and Maintenance Requirements

Erosion and Sedimentation Controls must be inspected, as detailed below, to confirm that BMPs are in place and functioning. Corrective actions must be taken if erosion is occurring or there is a discharge of sediment or turbid water from the construction Site.

1) For all sites with one acre or greater of disturbance, the applicant shall retain the services of a qualified professional third-party inspector to inspect the site weekly, for the duration of construction until final site stabilization is in place. For sites less than one acre of disturbance that are required to have a comprehensive erosion and sediment control plan, the applicant shall retain the services of a qualified professional.
2) The inspection is required in order to ensure that all construction and stabilization activities comply with the approved drawings and specifications; that field decisions regarding erosion control implementation, stormwater system installation, and natural resource protection are based on sound engineering and environmental considerations; and that any changes to the development's erosion control plan, stormwater management plan, or final stabilization plan is communicated to the City of Portland for additional review and approval.
3) All areas of disturbance, impervious areas, ESC BMPs, materials storage areas exposed to precipitation, and locations where vehicles enter or exit the Site shall be inspected at least once a week as well as before and within 24 hours after a storm event (rainfall) and prior to completing permanent stabilization measures.
4) For all sites with one acre or greater of disturbance, the inspector will submit weekly written reports to the Stormwater Coordinator(s) in the Water Resources Division of Public Works and the Development Review Coordinator(s) in Planning. Reports must include: project ID, project address, the date(s) and time(s) of inspection(s), site photographs of areas under construction, and the date(s) and approximate duration(s) of any rainfall events in the prior week. The report will identify and describe any erosion problems or discharge of pollutants and what actions will be taken to address these issues and repair any damage to other properties or natural resources, actions to eliminate the erosion source, and actions to prevent future sediment discharges from the area. Sites with less than 1 acre of disturbance may request a waiver to be reviewed and approved by Water Resources for the weekly inspection report submission requirement, as allowed by Chapter 32, Section 48 of the Code of Ordinances.
5) If ESC BMPs need to be maintained, repaired, or enhanced, the work shall be initiated upon discovery of the problem but no later than the end of the next workday or prior to a precipitation event, whichever comes first. Immediate corrective actions are required to

address active discharges of sediment to municipal streets or storm drains or to surface waters. If additional ESC BMPs or significant repair of ESC BMPs are necessary, implementation must be completed prior to any storm event (rainfall) and within 7 calendar days of identification. All measures must be maintained in effective operating condition until areas are permanently stabilized.

6) An inspection log summarizing the inspections and any corrective actions must be maintained. The log must include the name(s) and qualifications of the person making the inspections, the date(s) of the inspections, and major observations about the operation and maintenance of ESC BMPs, materials storage areas, and vehicle access points to the parcel. Inspection documentation must include maintenance needed, ESC BMPs that failed to operate as designed or proved inadequate for a particular location, and location(s) where additional ESC BMPs are needed. The inspection log must also document what corrective actions are needed and when corrective actions were completed. The inspection log shall be maintained for at least three years from the completion of permanent stabilization.

6.3 Erosion and Sedimentation Control BMPs

Where not otherwise specified in this section, the Erosion and Sedimentation Control (ESC) best management practices (BMPs) shall be designed using performance standards specified in the most recent Maine Erosion and Sediment Control BMPs Manual for Designers and Engineers developed by the Maine Department of Environmental Protection.

6.3.1 Minimizing Disturbed Areas

Minimize Disturbed Area and protect natural downgradient buffer areas, and any areas where stormwater may flow off-Site to the extent practicable. Control stormwater volume and velocity within the Site to minimize soil erosion. Minimize the disturbance of steep slopes. Control stormwater Discharges, including both peak flow rates and volume, to minimize erosion at outlets. The Discharge shall not result in erosion of any open drainage channels, swales, stream channels or stream banks, upland, or coastal or freshwater wetlands off the project Site.

1) Whenever practicable, no disturbance activities shall take place within 50 feet of any Protected Natural Resource.
2) If it is not practicable to maintain the 50-foot buffer of no disturbance, the Erosion and Sedimentation Control Plan must include redundant (at least two) perimeter control measures that are appropriate for the soil and slope.

6.3.2 Sediment Barriers

Prior to construction, properly install sediment barriers at the downgradient edge of any area to be disturbed and adjacent to any drainage channels within the Disturbed Area. Sediment barriers shall be installed downgradient of soil and sediment stockpiles and stormwater must be prevented from running onto the stockpile. Maintain the sediment barriers by removing accumulated sediment, or removing and replacing the barrier, until the Disturbed Area is permanently stabilized. Where a Discharge to a storm drain inlet occurs, you must install and maintain protection measures that remove sediment from the Discharge. Storm drain inlet protection must include effective curb inlet or “back throat” protection, where applicable.

6.3.3 Stabilized Construction Entrance

Prior to construction, properly install a stabilized construction entrance (SCE) at all points of egress from the Site. The SCE is typically a stabilized pad of aggregate, underlain by a geotextile filter fabric, or an engineered track out control mat which has been approved by Maine DEP which is used to prevent

traffic from tracking material away from the Site onto public ROWs. Maintain the SCE until all Disturbed Areas are stabilized. If an alternate SCE has been approved by Maine DEP, provide proof of this with the Plan or application.

6.3.4 Stormwater Channels

Each channel shall be constructed in sections so that the section's grading, shaping, and installation of the permanent lining can be completed the same day. If a channel's final grading or lining installation must be delayed, then diversion berms must be used to divert stormwater away from the channel, properly-spaced check dams must be installed in the channel to slow the water velocity, and a temporary lining installed along the channel to prevent scouring.

6.3.5 Sediment Basins

Sediment basins that will be used to control sediment during construction activities must be designed to provide storage for either the calculated runoff from a 2-year, 24-hour storm or provide for 3,600 cubic feet of capacity per acre draining to the basin. Outlet structures must discharge water from the surface of the basin whenever possible. Erosion controls and velocity dissipation devices must be used if the discharging waters are likely to create erosion. Accumulated sediment must be removed as needed from the basin to maintain at least half of the design capacity of the basin. Clearly visible staking must be installed with marks showing the elevation of half design capacity for easier inspection. The use of cationic treatment chemicals in Sediment Basins, such as polymers, flocculants, or other chemicals that contain an overall positive charge designed to reduce turbidity in stormwater may only be used if the basin does not directly discharge to surface waters and if proof of approval by Maine DEP is provided.

6.4 Timing of ESC Installation and Removal

6.4.1 ESC BMPs Required Prior to Earth Disturbance

Erosion and Sedimentation Control BMPs must be in place prior to earth disturbance. For sites with 1 acre or more of disturbance which require a Comprehensive ESC Plan, ESC BMPs should be installed prior to the required pre-construction meeting.

6.4.2 Temporary Stabilization

Within 7 days of the cessation of Construction Activities in an area that will not be worked for more than 7 days, stabilize any exposed soil with mulch, or other non-erodible cover. Stabilize areas within 75 feet of a wetland or waterbody within 48 hours of the initial disturbance of the soil or prior to any storm event, whichever comes first.

6.4.3 Permanent Stabilization

If the Site or a portion of the Site will not be worked for more than one year or has been brought to final grade, then permanently stabilize the area within 7 days by planting vegetation, seeding, sod, or through the use of permanent mulch, or riprap, or road sub-base. If using vegetation for stabilization, select the proper vegetation for the light, moisture, and soil conditions; amend the Disturbed Area subsoils with topsoil, compost, or fertilizers; protect seeded areas with mulch or, if necessary, erosion control blankets; and schedule sodding, planting, and seeding so to avoid die-off from summer drought and fall frosts. Newly seeded or sodded areas must be protected from vehicle traffic, excessive pedestrian traffic, and concentrated runoff until the vegetation is well-established with 90% cover by healthy vegetation. If necessary, areas must be reworked and restabilized if germination is sparse, plant coverage is spotty, or topsoil erosion is evident. Permanent Stabilization Definitions are as follows:

1) Seeded Areas: For seeded areas, permanent stabilization means a 90% cover of the Disturbed Area with mature, healthy plants with no evidence of washing or rilling of the topsoil.
2) Sodded Areas: For sodded areas, permanent stabilization means the complete binding of the sod roots into the underlying soil with no slumping of the sod or die-off.
3) Permanent Mulch: For mulched areas, permanent mulching means total coverage of the exposed area with an approved mulch material. Erosion control mix may be used as mulch for permanent stabilization according to the approved application rates and limitations.
4) Riprap: For areas stabilized with riprap, permanent stabilization means that slopes stabilized with riprap have an appropriate backing of a well-graded gravel or approved geotextile to prevent soil movement from behind the riprap. Stone must be sized appropriately. It is recommended that angular stone be used.
5) Paved Areas: For paved areas, permanent stabilization means the placement of the compacted gravel subbase is completed, provided it is free of fine materials that may runoff with a rain event.
6) Ditches, Channels, and Swales: For open channels, permanent stabilization means the channel is stabilized with a 90% cover of healthy vegetation, with a well-graded riprap lining, turf reinforcement mat, or with another non-erosive lining such as concrete or asphalt pavement. There must be no evidence of slumping of the channel lining, undercutting of the channel banks, or down-cutting of the channel.

6.4.4 Removal of Temporary Measures

Remove any temporary control measures, such as silt fence, within 30 days after permanent stabilization is attained. Remove any accumulated sediments and stabilize.

6.4.5 Winter Construction

Winter construction is Construction Activity performed during the period from November 1 through April 15. If Disturbed Areas are not stabilized with permanent measures by November 1 or new soil disturbance occurs after November 1, but before April 15, then these areas must be protected and runoff from them must be controlled by the following additional winter construction measures and restrictions:

1) Site Stabilization: Hay mulch is applied at twice the standard temporary stabilization rate. At the end of each construction day, areas that have been brought to final grade must be stabilized. Mulch may not be spread on top of snow.
2) Sediment Barriers: All areas within 75 feet of a Protected Natural Resource must be protected with a double row of sediment barriers.
3) Ditch Lines: Ditch lines must be stabilized with an appropriate stone lining backed by an appropriate gravel bed or geotextile unless specifically released from this standard by the Maine DEP. If release from Maine DEP has been granted, provide proof of this with the Plan or application.
4) Slopes: Mulch netting must be used to anchor mulch on all slopes greater than 8% unless erosion control blankets or erosion control mix is being used on these slopes. Unvegetated slopes less than 8% must be protected with an erosion control blanket, erosion control mix, or riprap.
5) Maintenance: Winter stabilization BMPs must be inspected and maintained as any other erosion and sedimentation control BMP.

6.5 ESC Phasing Plan

Erosion and Sedimentation Control BMPs must be in place before construction begins; additional Erosion and Sedimentation Control BMPs shall be installed as needed and shall be phased in if phasing is used; and ESC BMPs shall be maintained until permanent stabilization is achieved.

Phasing Plan Requirements: No phasing plan is required if the contractor will limit the Disturbed Area to a maximum of 5 acres of disturbance across the Site at any time. If the Construction Activity will result in more than 5 acres of Disturbed Area at any one time, the Contractor shall provide a phasing plan showing:

1. the initial 5-acre area to be disturbed;
2. which portions of the initial disturbance will be stabilized, and what temporary or permanent stabilization methods will be used;
3. which areas will be subsequently disturbed and what temporary or permanent stabilization methods will be used; and
4. each phase of disturbance and stabilization must clearly show the total areas in square feet or acres such that the 5-acre Disturbed Area limit at any one time is met throughout the entire project.

6.6 Dewatering Plan

The Erosion and Sedimentation Control Plan must include provisions to remove or properly disperse the collected water in a manner that prevents sediment from entering stormwater. The City of Portland requires a Dewatering Plan and Application for any construction dewatering discharging to City infrastructure, as detailed in the *Rules and Regulations for Use of the Sewer System*.

6.7 Good Housekeeping and Pollution Prevention Plan

A Good Housekeeping and Pollution Prevention Plan is required as part of a Comprehensive ESC Plan. The Good Housekeeping and Pollution Prevention Plan must be site specific and address the following:

6.7.1 Spill Prevention: Controls must be used to prevent pollutants from construction and waste materials stored on-Site from entering stormwater, which includes storage practices to minimize exposure of the materials to stormwater. The Site contractor or operator must develop, and implement as necessary, appropriate spill prevention, containment, and response planning measures.

6.7.2 Groundwater Protection: During construction, liquid petroleum products and other hazardous materials with the potential to contaminate groundwater may not be stored or handled in areas of the Site draining to an infiltration area. An infiltration area is any area of the Site that by design or as a result of soils, topography, and other relevant factors accumulates runoff that infiltrates into the soil. Dikes, berms, sumps, and other forms of secondary containment that prevent discharge to groundwater may be used to isolate portions of the Site for the purposes of storage and handling of these materials.

6.7.3 Fugitive Sediment and Dust: Actions must be taken to ensure that activities do not result in noticeable erosion of soils or fugitive dust emissions during or after construction. Oil may not be used for dust control, but other water additives may be considered as needed. A stabilized construction entrance shall be included to minimize tracking of mud and sediment. If off-Site tracking occurs, public roads shall be swept immediately and no less than once a week and prior to significant storm events. Operations during dry months, that experience fugitive dust problems, shall wet down unpaved access roads once a week or more frequently as needed with a water additive to suppress fugitive sediment and dust.

6.7.4 Debris and Other Materials: Minimize the exposure of construction debris, building and landscaping materials, trash, fertilizers, pesticides, herbicides, detergents, sanitary waste, and other materials to precipitation and stormwater runoff. These materials must be prevented from becoming a pollutant source. Sediment generated by concrete or mortar mixing, brick cutting & saw cutting activities must be contained (e.g., sausage boom, straw bales, etc.) and cleaned up using dry methods (i.e., sweeping or vacuuming) to prevent it from entering drainage structures or water resources. These activities shall be done on vegetated areas whenever possible and away from drainage structures and water resources.

6.7.5 Excavation Dewatering: Excavation dewatering is the removal of water from trenches, foundations, coffer dams, ponds, and other areas within the construction area that retain water after excavation. In most cases the collected water is heavily silted and hinders correct and safe construction practices. The collected water removed from the ponded area, either through gravity or pumping, must be spread through natural wooded buffers or otherwise treated to collect the maximum amount of sediment possible, like a coffer dam sedimentation or sediment filter bag. Avoid allowing the water to flow over Disturbed Areas of the Site. If the Maine DEP has approved equivalent measures, provide proof of approval. Note that discharge of excavation dewater fluids from the Site must be visually clear (no visible suspended or settleable solids). Any dewatering discharges from a site to the City right-of-way or infrastructure are prohibited unless the City has provided approval of a Dewatering Plan and Application submitted by the Contractor. Discharges from the Site into the City's storm drain or sewer system must first obtain City approval through the Dewatering Program, as detailed in the *Rules and Regulations for Use of the Sewer System.*

6.7.6 Washout from Concrete, Stucco, Paint, Curing Compounds, or Other Construction Materials: If washout/cleanout is to be completed on the Site, a designated area(s) shall be established and marked on the Erosion and Sedimentation Control Plan. This area shall be a minimum of 50 feet from all drainage structures, ditches, waterbodies, and resource areas, as well as property boundaries if possible. The area shall not have an outlet to discharge wastes or flows. No detergents shall be used or vehicles washed in this location. A leak-proof pit or container shall be established in the washout area(s), to which washings shall be directed. This area shall be used for washout containment and dewatering by evaporation only. The pit shall not allow infiltration to occur. To prevent clean water from entering the pit, the washout area shall be covered during precipitation events. Inspections of the pit shall be conducted daily to ensure no leaks are present and no discharge is occurring.

6.7.7 Non-stormwater Discharges

Except as allowed or exempted herein, no person shall create, initiate, originate or maintain a non-storm water discharge to the storm drainage system. Such non-storm water discharges are prohibited, notwithstanding the fact that the City may have approved the connections, drains or conveyances by which a person discharges un-allowed non-storm water discharges to the storm drainage system.

6.7.7.1 Authorized Non-stormwater Discharges

Where allowed non-stormwater discharges exist, they must be identified, and steps shall be taken to ensure the implementation of appropriate pollution prevention measures for the non-stormwater component(s) of the discharge. Authorized non-stormwater discharges are:

1) Discharges from firefighting activity
2) Hydrant flushing if dechlorinated to 0.05 mg/l or less

3) Vehicle wash water if detergents are not used and washing is limited to the exterior of vehicles (engine, undercarriage, and transmission washing is prohibited)
4) Dust control runoff if it does not cause erosion
5) Routine external building washdown, not including surface paint removal, that does not involve detergents
6) Pavement wash water (where spills/leaks of toxic or hazardous materials have not occurred, unless all spilled material had been removed) if detergents are not used
7) Uncontaminated air conditioning or compressor condensate
8) Uncontaminated groundwater or spring water
9) Foundation or footer drain-water where flows are not contaminated
10) Uncontaminated excavation dewatering per item 5 Excavation Dewatering
11) Potable water including waterline flushings
12) Landscape irrigation

6.7.7.2 Unauthorized Non-stormwater Discharges

The following discharges are prohibited:

1) Wastewater from the washout or cleanout of concrete, stucco, paint, form release oils, curing compounds, or other construction materials;
2) Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance;
3) Soaps, solvents, or detergents used in vehicle and equipment washing;
4) Sediment laden discharges; and
5) Toxic or hazardous substances from a spill or other release.

7. SOIL SURVEY STANDARDS

7.1. APPLICABILITY

Development proposals required to submit soil surveys include:

- Major site plans as defined in the site plan standards of the Land Use Code
- Subdivisions as defined in the subdivision standards of the Land Use Code except for those projects which do not involve construction of significant new infrastructure.
- Other projects where the review authority determines that unusual conditions specific to the site warrant a high intensity soil survey.

7.2. STANDARDS

Soil surveys are divided into four levels or classes, depending on the intensity desired. These are the minimum standards for each class of soil survey.

Class A (high intensity)

- Mapping units of 1/8 acre or less
- Scale is 1 inch equals 100 feet or larger
- Ground control – base line and test pits accurately located under the direction of a registered land surveyor or qualified professional engineer.
- Base map with 2 foot contour lines with ground survey, or aerial survey with ground control.

Class B (high intensity)

- Mapping units of 1 acre or less
- Scale of 1 inch equals 200 feet or larger.
- Ground control – test pits located by means of compass by chaining, pacing or taping from known survey points.
- Base map with 5 foot contour lines.

Class C (medium high intensity)

- Mapping units of 3 acres or less
- Scale of 1 inch equals 500 feet or larger.
- Ground control – as determined by the mapper.
- Base map – as determined by the mapper.

7.2.1. Use of the USDA National Cooperative Soil Survey and Classification:

The soil survey shall be designed using the National Cooperative Soil Survey as a guide and the soils classified at the series level. Soil map units will be phases of

soil series.

7.2.2. Map Legend and Map Unit Narratives:

The soil map legend shall include a symbol for each map unit and special symbol for areas too small to be mapped, and the name of each map unit.
The soil scientist shall provide a description for each map unit.

7.2.3. Map Unit Purity:

The soil(s) within an area enclosed by a soil boundary (map unit) will have a minimum of 75 percent of the soil(s) that provide the name of that map unit or similar soil(s). The total amount of dissimilar soils shall not exceed 25 percent of the map unit.

7.2.4. Accurate Soil Boundary Placement:

Soil boundaries must be observed throughout their length and their placement must correspond to changes in soils and/or land forms.

7.2.5. Map Preparation by a Maine Certified Soil Scientist:

All soil surveys submitted for the public record, with the exception of Soil Conservation Service soil surveys, shall be stamped and signed by a Maine Certified Soil Scientist licensed by the Maine Board of Certification for Geologists and Soil Scientists.

7.3. Reserved.

7.4. SUBMISSIONS

The following submissions will support the contention that the development will be built on suitable soils:

High Intensity Soil Survey:

A soil survey prepared by a Maine Certified Soil Scientist (CSS), completed at the appropriate mapping intensity. The soil survey must be mapped at a scale as required by the Maine Association of Professional Soil Scientists (MAPSS) Soil Survey Guidelines (available through the Department of Public Services or through the MAPSS website at http://www.mapss.org/publications.htm). The map must identify the soil mapping intensity under which the mapping was conducted.
The guidelines for each intensity level of soil mapping and the level at which various types of projects must be mapped are as follows:

- **Class A (High-Intensity) Soil Survey**:

Specific land area, within any project, which is proposed to be used for

phosphorus control measures. Phosphorus control measures include wet ponds, infiltration facilities, and buffer strips.

For residential and commercial subdivisions where any lot is less than 2 acres and on site subsurface wastewater disposal is proposed.

- **Class B (High-Intensity) Soil Survey:**

  For residential and commercial subdivisions where any lot is less than 2 acres with more than 15 lots and 20 acres of area, no on site wastewater disposal is proposed, and new city streets are to be constructed.

  The land area of condominium developments which is to be disturbed during construction. Condominium developments include single or multi-family attached dwellings where greater than 3 acres of new non-vegetated surface is constructed and/or it results in the development of an area exceeding 20 acres.

  Shopping centers, or similar commercial and industrial developments, where large areas are to be utilized or disturbed such that greater than 3 acres of new non-vegetated surface is proposed for construction and/or results in the development of an area exceeding 20 acres.

- **Class C (Medium High-Intensity) Soil Survey:**

  Residential and commercial subdivisions where all lots are greater than 2 acres and on site subsurface wastewater disposal is proposed.

  Golf courses, ski areas and trails, and other multi-use recreational developments.

  Any project which the City has determined will require a hydrogeological investigation.

- **Class D (Medium Intensity) Soil Survey (published by Soil Conservation Service for Cumberland County)**

  All other developments.

  In the event that greater than 50 percent of a proposed development site is currently developed, an applicant may petition the Planning Authority to accept a lower class soil survey. The Planning Authority shall review the request, and their decision on the appropriate level of mapping shall be final.

  A Maine Certified Soil Scientist shall accurately map and mark in the field the boundaries of any hydric soils identified by the Soil Survey.

These standards are a minimum. The Planning Authority reserves the right to request the preparation of a high intensity soil map or require more intense hydric

soil boundary delineation, when special conditions warrant it. All soil maps, with the exception of U.S. Soil Conservation Service Soil surveys, shall be signed and stamped by a Maine Certified Soil Scientist. The soil survey shall meet the standards for the degree of mapping intensity as adopted by the Maine Association of Professional Soil Scientists, dated 4-4-89.

7.4.1. Geotechnical Investigation:

If proposed buildings, facilities or infrastructure require a geotechnical investigation for their design and construction, or a geotechnical investigation is determined to be necessary by the Planning Authority, the applicant shall submit a report of this investigation prepared and endorsed by a registered professional engineer and/or other licensed professionals, as appropriate, for review and approval. This report shall identify all major limitations to the development posed by existing soils and other surface and subsurface features of the site and describe the techniques to be used to overcome these limitations. Depending on the nature of the proposed development, the requirement for a soil survey map and report may be waived if the Planning Authority determines that the geotechnical report will provide sufficient information.

7.4.2. Soils Report:

A report, completed by a Certified Soil Scientist, identifying all major limitations to the proposed development by the soil characteristics, as well as the SCS Hydrologic Soil Group classification for each soil series. A soil report shall not be required for those projects where a Class D Soil Survey is determined to be sufficient.

7.4.3. Site Engineering Report:

A Site Engineering report prepared by a qualified professional such as a soils or geotechnical engineer that describes the techniques to be used to overcome the soil limitations identified in the soil survey. The application will not be considered complete until a Site Engineering Report is submitted if the Planning Authority determines one is required.

8. STANDARDS FOR DEVELOPMENT IN AND ADJACENT TO WETLANDS

8.1. APPLICABILITY

All projects which may impact wetlands as defined by the Shoreland Zoning Ordinance or are classified as a river, stream, or brook as defined by the Natural Resources Protection Act are subject to these standards. Some wetlands which may not be regulated by the City of Portland may be regulated under State and Federal law.

8.2. STANDARDS

All wetlands shall be delineated and mapped according to the U.S. Army Corps of Engineers Wetlands Delineation Manual (1987).

Maine State Jurisdictional Wetlands and wetlands as defined by the Shoreland Zoning Ordinance (hereafter referred to as wetlands) should be identified according to the Natural Resources Protection Act (Title 38 M.R.S.A. Section 480-B) and identified on a map.

Design the development to minimize wetland impacts by either avoiding direct wetland impacts or minimizing them when they are unavoidable. Activities in or adjacent wetlands should be carried out in accordance with the standards set forth in the Maine Wetlands Protection Rules (Chapter 310 Wetlands and Waterbodies Protection) or following the specific design criteria:

8.2.1. The development should be designed to avoid disturbance in wetlands and the developer must establish undisturbed buffer strips from the wetland boundary. For developments located adjacent to perennial streams, a minimum one hundred (100) foot buffer strip on either side of the stream should be maintained. For intermittent streams, the buffer strip may be reduced to twenty five (25) feet. The undisturbed buffer must be placed in deed restrictions. In cases where State and Local rules are in conflict, the most stringent rules will apply.

8.3. Reserved.

8.4. SUBMISSIONS

8.4.1. The following submissions will support the contention that the wetland impacts have been avoided:

- A topographic map with wetlands delineated according to the U.S. Army

Corps of Engineers Wetlands Delineation Manual (1987). State of Maine Jurisdictional Wetlands will be identified according to the Natural Resources Protection Act on the same map. The scale should be 1 inch equals 100 feet.

- A site plan that shows all development activity including lots, common areas, roads, driveways, and building windows in conjunction with wetlands.

If any wetlands filling or alteration is proposed:

- Areas of wetland fill or alteration must be clearly marked and individually identified on the site plan.
- A report that contains surface area amounts of wetland fill or alteration for the individually identified fill or alteration locations.
- A letter from the Department of Inland Fisheries and Wildlife indicating the wetlands on the site contain no significant or valuable wildlife habitat.
- A letter of non-jurisdiction, a copy of permits received from other regulatory agencies (i.e. Maine Department of Environmental Protection of the U.S. Army Corps. Of Engineers) or report from a qualified professional stating that the proposed work will not require a permit from state of local agencies must be submitted for all projects proposing work either in or adjacent to wetlands prior to issuance of a building permit. This includes wetlands not regulated by the City of Portland.

9. WATER SUPPLY STANDARDS

9.1. APPLICABILITY

All applications for approval of proposed developments shall include evidence that demonstrates that the developer has made adequate provisions for securing and maintaining a sufficient and healthful water supply.

9.2. STANDARDS

9.2.1. Documentation.

If water is to be supplied from an off-site source, provide a letter from the appropriate utility or water district stating that a sufficient and healthful water supply exists and may be utilized by the development.

For on-site water supply wells, provide evidence in the form of well inventory and water quality data on existing water supplies located within one thousand feet of any property boundary of the proposed development. The well inventory data must show a probability that proposed wells will produce a safe and adequate water supply. Positive findings by a Maine Certified Geologist must be supported by a report which summarizes and interprets hydrogeologic and groundwater data for the region, with emphasis on the project site. It should include information such as: number of wells established in the vicinity of the proposed project; identification and locations of these wells on a site map, such as a USGS topographic map; the type and depths of the wells; the types and depths of soil and bedrock encountered at the well sites; and water quality data from these wells (if applicable).

9.2.2. A common water supply will be required if there is a reasonable doubt that sufficient water quality or quantity will be available from individual wells. A common water supply must have adequate safe yield and storage to supply a minimum of seventy-five (75) gallons per day per person. For a single family home, the well must be able to supply a minimum of three hundred (300) gallons per day, per household.

9.2.3. The Maine Center for Disease Control (MeCDC), Division of Environmental Health's Drinking Water Program must review and approve of any public drinking water system (if such a system serves an average of at least twenty-five (25) individuals daily at least sixty (60) days out of the year, or has fifteen (15) service connections.)

9.2.4. If the water supply wells and subsurface wastewater disposal systems are on-site and any proposed lots are less than 2 acres in area, locations of the wells and subsurface disposal systems must be identified on the site plan.

9.2.5. A water supply report must be submitted, if any well services five (5) or more homes, or any development uses greater than 1500 gallons per day.

9.2.6. If there is a reasonable doubt that sufficient and healthful water supply can be provided by on site wells, the following are required:

- potability test of water from the development site.
- establishment of one or more test wells on the development site
- pump tests of the well(s)
- A report by a Maine Certified Geologist discussing the yield and potability of water obtained.
- A complete hydrogeological assessment of groundwater quality and quantity may also be required.

For developments with shallow to bedrock soils, wells must be cased 20 feet into the solid bedrock surface and the annual space cement/bentonite grouted.

9.3. Reserved

9.4. SUBMISSIONS

For developments to be serviced by individual wells, provide evidence, from the Certified Geologist knowledgeable about the project, which indicates a sufficient and healthful water supply is likely to be available as follows:

- Well inventory data indicating number of wells, depth, yield and approximate locations shown on a USGS topographic map. This data may be available upon request from the inventory data base at the Maine Geological Survey.

- Water quality data from an area well or wells showing potability.

- If a common well or wells are to service any portion of a development, submit a detailed water supply report prepared by a Maine Certified Geologist. The report must indicate that the water supply conforms to Maine State Drinking Water Regulations, Title 22 M.R.S.A. Section 601 and it must contain the following information:

  - Determination of the long term safe yield of each well including a prediction of operating levels.
  - Determination of the cone of influence (cone of depression) for the well or wells.
  - Water quality analysis results in accordance with requirements of the Maine State Drinking Water Regulations, Title 22 M.R.S.A. Section 601.

- Delineation of well head protection zones A, B, and C.
- Well head protection plan for each zone.
- Determination of any off-site wells which may be at risk due to groundwater withdrawal.
- Storage, treatment and distribution system designed, signed, stamped and dated by a Maine Registered Professional Engineer
- Evidence that adequate provisions will be made for the establishment of an entity to provide long-term maintenance and operation of the water supply system.

10. MUNICIPAL STREET LIGHTING STANDARDS

10.1. APPLICABILITY

Street lighting on city streets and public rights-of-way not subject to decorative street lighting shall follow the General Standards under 10.2 of this section.

In addition to the General Standards for lighting applicable throughout the city, the City of Portland has established special street lighting standards for decorative lighting in the following areas and according to the tables and figures in this section:

- Downtown (includes portions of Cumberland Avenue)
- Old Port
- Peninsula - Eastern Waterfront and Bayside
- Waterfront - Commercial/Thames Street
- Off-Peninsula/Forest Avenue
- Historic Landscape Districts (including Baxter Boulevard, the Eastern and Western Promenades, Lincoln Park, and Deering Oaks Park)
- Trails and pathways (including Eastern Promenade Trail, Fore River Trail, and Bayside Trail).

Decorative street lighting specifications include but are not limited to fixture type, pole and base type, pole height to top of fixture, pole spacing, and color. Please refer to Section 10.4 Standards for Decorative Lighting and Figure X-4 for the map of Portland's decorative lighting locations.

Developments subject to site plan review, with the exception of minor residential or low impact site development projects, as defined in Chapter 16 of this Technical Manual, that are on an existing or proposed street that is not currently illuminated with street lighting meeting City standards shall install the requisite type and number of street lights along all frontages.

Where lighting is being installed in the public way as part of a private development, developers are responsible for purchasing and installing all street lighting, including light poles, brackets, slip fitters, bases and all electrical wiring and conduit. The new street lighting shall be connected to an existing metered service, unless otherwise directed by the City. Once installed and operational, and upon acceptance by the City, street lighting located in the City right of way shall become the property of the City of Portland.

10.2. GENERAL STANDARDS

Location: For areas not designated with decorative lighting, street lighting may be placed on only one side of the street within the furnishing zone. However, when deemed necessary for traffic safety, the Reviewing Authority may require some street lights to be placed the opposite side of a street.

Specification: For areas not designated with decorative lighting, the City of Portland has adopted the following typical street light pole and fixture standards:

- Residential (Local/Minor) Street [see *Figure X-1*]

  a) The standard pole height is a minimum 14', not to exceed 15' and shall be black aluminum. Poles shall be mounted on reinforced concrete pole bases with at least 2" but no more than 4" reveal above grade, with 4 bolts per pole. Street light pole base design, mounting bolt pattern, bolt spacing, and bolt size shall be approved by the Department of Public Works.

  b) Light levels and pole spacing shall be in accordance with the table in section 10.2.1

  c) Streetlights shall be full cutoff, using LEDs at a 3000 Kelvin color temperature, and shall seek to match uniformity, lumen output, and color of existing streetlights along the roadway, where applicable.

- Commercial/Industrial (Arterial/Collector) Road [see *Figures X-2A to X-2G*]

  a) The standard pole height shall be either 20' or 30' according to the table in section 10.2.1 and shall be a grey.

  b) Poles selection and finish:
     - Within .5 mi. of shoreline shall use Beacon RSA-B-SHO-S AA-10 Cobra [Figure X-2F]
     - More than .5 mi. away from shoreline shall use Hubbell RTA Upsweep Style [Figure X-2G]

  c) Poles shall be mounted on reinforced concrete pole bases with at least 2" but no more than 4" reveal above grade, with 4 bolts per pole.

  d) Light levels, pole spacing shall be in accordance with the tables in 10.2.1.

  e) Streetlights shall be full cutoff, using cost-effective and innovative

technologies and shall seek to match uniformity, lumen output, and color of existing streetlights along the roadway, where applicable.

10.2.1 Lighting Design – Standard street lighting design shall conform to the following table:

STREET CLASSIFICATION	**COMMERCIAL/INDUSTRIAL**		**RESIDENTIAL**	
	Min. Avg. Foot Candles	Maximum Pole Spacing	Min. Avg. Foot Candles	Maximum Pole Spacing
Arterial	2.0	160’ (30’ pole)	1.0	130’ (30’ pole)
Collector	1.2	130’ (30’ pole)	0.6	60’ (14’ pole)
Local/Minor	0.9	130’ (30’ pole)	0.4	120’ (14’ pole)

STANDARD COBRAHEAD				
Fixture – Figures X-2A through X-2G				
Location	**Fixture Type**	**Fixture Height**	**Spacing + Layout**	**Color**
One-lane Roadways: Without parking with low traffic	COBRAHEAD A	20’	One side: 65’ – 70’ Alt. sides: 125’ – 135’	Grey (Manufacturer’s Specification)
One-lane Roadways: With on-street parking with low traffic	COBRAHEAD A	30’	One side: 70’ – 80’ Alt. sides: 120’ – 130’	
Two-lane Roadways: With on-street parking with medium traffic	COBRAHEAD B	20’	One side: 75’ – 80’ Alt. sides: 145’ – 155’	
Two-lane Roadways: With on-street parking with low traffic	COBRAHEAD B	30’	One side: 80’ – 90’ Alt. sides: 175’ – 185’	
Two-lane Roadways: With on-street parking with medium traffic	COBRAHEAD C	20’	One side: 90’ – 100’ Alt. sides: 180’ – 190’	
Two-lane Roadways: With on-street parking with medium traffic	COBRAHEAD C	30’	One side: 100’ – 110’ Alt. sides: 200’ – 210’	
Two or more lane Roadways: With on-street with high/medium traffic	COBRAHEAD D	20’	One side: 95’ – 105’ Alt. sides: 195’ – 210’	
Two or more lane Roadways: With on-street parking with high traffic	COBRAHEAD D	30’	One side: 115’ – 125’ Alt. sides: 245’ – 255’	
	COBRAHEAD E	20’	One side: 100’ – 110’ Alt. sides: 200’ – 215’	
	COBRAHEAD E	30’	One side: 115’ – 130’ Alt. sides: 240’ – 255’	

10.2.2. New Metered Services for Light Fixtures

- New light fixtures shall:
    a) Not to be tied to the existing power utility leased lighting system.
    b) Be provided with a NEMA 7-pin receptacle for future connection to the City of Portland lighting control system. Coordinate with the City of Portland for final connection and control testing.
    c) Be specified with a color temperature of 3000K.
- The developer is to provide a new metered electrical service in an APX outdoor rated enclosure (see section 10.3.1 for unit specification), preventing any new fixtures from being directly connected to the power utility.
- The developer will be required to:
    a) Provide an astronomical timeclock inside the electrical enclosure (see section 10.3.1 for unit specification) to control light fixtures or
    b) Provide a standard photocell for each fixture, to be used until lighting control module is installed.

10.3. ACCESSORIES & BOLLARDS

10.3.1. Cabinets – The city standard cabinet specifications are as follows:

CABINET				
Location	**Fixture Type**	**Fixture Height**	**Layout**	**Color**
Public Right-of-way	APX Enclosures, Inc. Cabinet APX NEMA 3R Pedestal Enclosure APXPE401615	Per Manufacturer's Specification	Mounted on the back side of sidewalk with door facing street, meter facing building street wall. If site constraints require box to be mounted within sidewalk furnishing zone, then door should face building/private property and meter should be mounted opposite side of travel direction.	Grey/Silver or Clear Coat (Manufacturer's Specification)

- Cabinet base can be stand-alone type other than above, provided it is not in a sidewalk or on the edge of a plowed pathway, street, or parking lot. Circuits may also be wired into existing traffic signal boxes or other light circuit boxes. This will be determined on a case-by-case basis.

- Additional specifications for multiuse box with external power for festivals and special events (not required – determined by Department of Public Works):

  Square D power panel QO816L100DF/S or QO112L125G with cover QO16US
  Circuits required:
  1= 125/250V 50 Amp NEMA 14-50 Receptacle
  1= 125/250V 30 Amp NEMA 14-30 Receptacle
  2= 125V 20A Standard Receptacle

10.3.2 Wiring & Electrical

- 2” inch conduit (minimum) underground in light pole bases and cabinet base.
- Each light fused individually at base Fuse holder type is a (Buchanan 65 kit Cat # 65U)
- Regular outlet on each pole just below the fixture to be fused at the bottom of the pole base with the same fuse kit as listed above.
- Any single photo cell control for all lights shall be in the cabinet, rated for the circuit. This may require an all-purpose contactor.
- Wire size and circuit size shall be calculated by the design engineer and inspected by the city inspector to make sure it is correct. This would be done on a case by case basis because not all circuits, lights and systems are the same.

10.3.3 Bollards

This section includes standards for typical lighted bollards. Non-lighted bollards appear in *Section 1. Transportation Systems and Street Design Standards.*

Location: Bollards may be used in areas such as underpasses and similar conditions where height is restricted for pedestrian lighting. Spacing and number to be determined by Department of Public Works. Locations must be approved by Department of Public Works and the Planning Authority. The City may approve additional bollard types for streetscape or special projects such as parks or as use for security bollards; any additional bollard selection must be of equivalent structural strength as approved bollards.

Specification:

- Bollards shall be mounted on reinforced concrete bases with at least 2” but no more than 4” reveal above grade, with 4 bolts per pole.

- The City of Portland has adopted the following typical lighted bollard standards:

LIGHTED BOLLARD				
Fixture – Figure X-3				
Location *(including but not limited to)*	**Fixture Type**	**Fixture Height**	**Spacing + Layout**	**Color**
Underpasses: Park Avenue, St. James Street, St. John Street, Forest Avenue, Preble Street, Franklin Street, Commercial Street, Harborview Park, Tukey's Bridge, Veranda Street	Holophane Freeport Series	45"	To be determined by Department of Public Works	Black (Manufacturer's Specification)
Waterfront Piers				

10.4. STANDARDS FOR DECORATIVE LIGHTING

Locations, Specifications, and Finish:

- Figure X-4 identifies the decorative street light locations. The following tables and Figures X-5 through X-12 illustrate the requirements for **fixture type, height, layout, and finish for each decorative light fixture**, according to street.
- All light poles shall be mounted on reinforced concrete pole bases with at least 2" but no more than 4" reveal above grade, with 4 bolts per pole.

DECORATIVE LIGHT – Downtown

10.5. CITY OF PORTLAND VERSUS CONSTRUCTION CONTRACTOR RESPONSIBILITIES

For projects where the construction contractor is required by the City to provide new street lighting, the new street lighting shall be connected to an existing metered service, unless otherwise directed by the City (see Section 10.2.2 for new metered services for lighting). The responsibilities of the construction contractor are as follows:

Construction Contractor Responsibilities:

a) The construction contractor shall furnish and install as part of the construction scope: Street lighting luminaires, street lighting poles, bracket arms, pole accessories, and decorative base enclosures all as stipulated by the City according to the City standards for the given project location.

b) Concrete foundation bases for new street lighting poles. Poles shall be mounted on reinforced concrete pole bases with at least 2" but no more than 4" reveal above grade, with 4 bolts per pole. The installation of the foundation bases shall be coordinated with sidewalk details and requirements as stipulated by the City of Portland Department of Public Works.

c) Underground conduit and wire between street lighting pole foundation bases. In addition, underground conduit and wire shall be provided to an electrical service panelboard and meter, as well as to an existing service connection.

d) Wiring to be installed within each street lighting pole and shall be extended at the pole top (or bracket arm), with connection to the street lighting luminaire(s).

e) Upon completion of the erection of the street lighting fixtures, including the installation of all lighting poles and conduit/wire, the construction contractor shall notify the City that the system is ready for operation. THE LUMINAIRES SHALL BE ENERGIZED PRIOR TO THE CONSTRUCTION CONTRACTOR'S REQUEST FOR A CITY CERTIFICATE OF OCCUPANCY.

f) It shall be the construction contractor's responsibility to pay all costs associated with the provision of required street lighting including costs associated with street lighting luminaires, street lighting poles, brackets, bases, conduit and wire, panelboards, and metering equipment.

City of Portland Responsibilities:

a) To approve the proposed point of connection for electrical service for new municipal street lighting where a new metered service is provided.

b) Connection of the construction contractor's secondary service conductors at an existing service point, where a new service is provided.

c) To review and approve the location of the street light fixtures within the public right-of-way.

10.6. Reserved.

10.7. SUBMISSION REQUIREMENTS

A lighting plan shall be provided which shall show the quantity and location of all existing and proposed street lights. This shall be incorporated into the site plan or presented on an individual lighting plan. Descriptive information including engineering detail drawings depicting the entire proposed fixture (luminaire, bracket arm, slip fitter) along with the proposed finish shall be included on the individual lighting plan.

11. SHADOW STANDARDS

11.1. DEFINITIONS

For the purposes of this section, the following definitions shall apply:

- **Shadow:** A shadow is defined as the circumstance in which a built structure blocks the sun from the land.
- **Adverse Shadow Impact:** An adverse shadow impact occurs when the shadow cast by a proposed development falls on publicly accessible open space or other important natural features where such a shadow impact would adversely affects its use and/or the viability of existing landscaping and vegetation. For the purposes of this section, the above locations shall also be referred to as "significant public resources".
- **Shadow Analysis:** A shadow analysis refers to a document and its supporting graphics, which illustrate how the shadow cast by a proposed development, will impact adjacent properties and land uses.

11.2. APPLICABILITY

All minor and major site plan applications, exempting applications defined as minor residential or low-impact site development per Section 16 of the Technical Manual, **outside the B3, B5 B6 and B7 zones** that would result in new shadows long enough to reach significant public resources (except within an hour and a half of sunrise or sunset) are required to submit a preliminary shadow analysis to the Planning Authority for review. If a preliminary analysis indicates the potential for adverse shadow impact, applicants are then required to submit a shadow analysis, as outlined below. In many cases, it may be appropriate to use the services of an architect or other professional skilled in use of computer analysis to perform a shadow analysis; however, this is not a requirement. Anyone undertaking a shadow analysis must use the longitude, latitude and time information for Portland, Maine.

11.3. REQUIRED SUBMITTALS

Preliminary Shadow Analysis*:* A preliminary shadow analysis shall be required for all applicable minor or major site plan applications that include new structures or additions to structures greater than 45 ft tall, in order to determine if additional shadow analysis is required.

a) Shadow Length: The longest shadow that any structure will cast in Portland, Maine during the year (except within an hour of sunrise or sunset) is 4.26 times its height. To conduct a preliminary analysis, multiply this factor by the height of each

proposed structure. If no significant public resources, as defined above, are located within that distance from the project site in any direction, no further analysis is required. If a resource is identified, the location of the site in relationship to the resource shall be evaluated to determine the potential for adverse shadow impact and the need for further analysis.

For example, if a development would result in a 48 ft tall building, its longest shadow would be approximately 192 feet. If there are no significant public resources within 192 feet of the project site, then no further shadow analysis is required.

b) Evaluate Site Location: Because of the path that the sun travels across the sky, no shadow can be cast in a triangular area to the south of any given project site. Therefore, if the resource in question is located within that triangular area, no further shadow analysis is required. In Portland, Maine that area lies between -122 degrees from true north and 122 degrees from true north. Thus, any significant public resource would have to be at an angle from true north greater than -122 degrees or 122 degrees in order to be shaded at any time by the proposed development.

c) Evaluate Significant Public Resource: Finally, the preliminary shadow analysis shall consider the sensitivity of the significant public resource(s) to shadow. Open spaces or natural features that require direct sunlight for a portion of the day to sustain existing vegetation or to maintain the viability of its current use (e.g. - sitting or sunning areas, public gathering spaces, turfed sports fields or children's play areas) require further analysis.

Some significant open space resources may not be sensitive to sunlight, such as paved areas or landscaped areas with all shade-tolerant species. For these types of conditions, no further shadow analysis is needed.

If the above steps are not able to determine that shadows from a proposed development would not reach a shadow-sensitive significant public resource during any time of the year, a full shadow analysis is required.

11.4. SHADOW ANALYSIS

A shadow analysis shall define the extent and duration of additional shadow that a proposed development would cast on significant public resources in the project vicinity during the year, along with the effect that new shadowing would have on any sun-sensitive aspects of the resource(s). Applicants are encouraged to use professional resources and/or computer analysis to calculate and graphically display shadows; especially if proposed structures are irregularly shaped or if the project site is located in a densely developed area. A shadow analysis shall include the following times of year:

- March 21st or September 21st

- June 21st
- May 6th or August 6th
- December 21st

A shadow analysis should identify the types of significant public resources, types of vegetation and common use(s) of the site, along with discussion of the corresponding sunlight requirements for each. The uses and vegetation of open space areas establish its susceptibility to adverse shadow impact. Uses that rely on sunlight include sitting areas, gardens, and play areas. Vegetation that relies on sunlight includes tree canopy, shade-intolerant flowering plants and turf. Shadow- sensitive landscapes and uses generally require a minimum of four to six hours of sunlight a day. If necessary, applicants are encouraged to use the professional services of a landscape architect or recreation planner to inventory and assess the sensitivity of various landscape features to shadow.

In presenting the results of a shadow analysis, the following information shall be included for each date:

- Duration of incremental shadow on affected features
- Times of shadow penetration
- Description of affected features (e.g.- landscaping, seating, active uses, historic resource)
- Time of sunrise and sunset for the date being analyzed.

In addition to a narrative description, the analysis shall include clear graphic representations of the following, as applicable:

- Relationship between the project site and significant public resources,
- Calculation of the angles from north for project shadows entering and existing the affected areas of the resource(s)
- A map showing pre-development condition shadows and the incremental shadows from the proposed structure(s) on all significant public resource(s) on each representative date.
- In the case of public open space resources, a site plan of the open space should be used to illustrate the placement of incremental shadows to allow for clear presentation of any impact to sensitive features. The length of time of the project's shadows should be indicated on each map.
- Photographs of the resource(s), focusing on elements sensitive to sunlight loss that may be impacted by new shadows from the development.
- Plan of the significant public resource, showing composite shadows and the location and duration of sunlight.

11.5. DETERMINING SIGNIFICANCE OF SHADOW IMPACT

A significant shadow impact occurs if the new shadow added by the development proposal reduces sunlight to a level where it would have an adverse impact on existing sunlight-sensitive uses. This includes but is not limited to the following scenarios:

- Substantial reduction in sunlight where a sensitive use is already subject to substandard sunlight.
- Reduction in sunlight to vegetation resulting in less available sunlight than the minimum necessary for its survival.
- Substantial reduction in the usability of an open space area.

11.6. Reserved.

11.7. ALTERNATIVES AND MITIGATION

Where an adverse shadow impact is identified, mitigation must be assessed. Types of mitigation that may be appropriate include but are not limited to relocating facilities within an open space to avoid sunlight loss, relocating or replanting vegetation, undertaking additional maintenance to reduce the likelihood of species loss, replacement facilities on another nearby site. Where affected open space is a City park, it is appropriate for the applicant to coordinate mitigation options with the Parks Division of the City of Portland Department of Public Services.

Alternatives that may reduce shadow impacts include but are not limited to

- Reorientation of the structure(s) bulk to avoid adverse shadow impacts on sensitive significant public resources.
- Reorientation of the site plan to include replacement facilities.
- Where possible, reorientation of the sun sensitive features of the resource itself.
- Incorporation of architectural design techniques and/or reflective façade materials to increase available light.

12. SITE LIGHTING STANDARDS

12.1. PURPOSE

The requirements set forth in this chapter are intended to promote and protect public health, safety and general welfare, and encourage the preservation of the natural nighttime outdoor environment. Specifically, the intent of this chapter is to limit light trespass, glare and light pollution to safeguard adequate safety, night vision, and comfort of the neighboring properties.

12.2. APPLICABILITY

The following types of development proposals are required to submit a lighting management plan for review and approval:

- All developments subject to site lighting standards of Section 14.6.4 of the Land Use Code.
- Other projects where the Reviewing Authority determines that special conditions warrant a lighting management plan.

12.3. GENERAL STANDARDS

Outdoor lighting standards listed below apply to all new developments.

1. Uniformity: As measured in foot candles at grade, maximum to minimum illumination levels shall not exceed a ratio of twenty (20) to one (1.)

2. Illumination Levels: Minimum, Maximum, and Average illumination levels for areas intended to be lighted, as measured at grade, shall be:

Minimum	0.2 foot candles (fc)
Maximum	5.0 foot candles (fc)
Average	1.25 foot candles (fc)

Average illuminance levels for exterior areas specified below, measured in foot candles (fc) at ground level unless noted, shall not exceed the following levels:

Uses	Average (Foot candle)	Uniformity Ratio (average-to-minimum)	Maximum (Foot candle)
Automated Teller Machine (ATM) Surrounding Area (10 ft perimeter)	10.0	3:1	20.0
Drive-through Canopy	10.0	3:1	20.0
Auto Service Station			
• **Approaches and Drives**	1.5	3:1	3.0
• **Service Areas**	2.0	3:1	4.0
• **Pump Island Areas**	10.0	3:1	20.0
Parking Lot			
• **Surface**	0.5	3:1	4.0
• **Structure**	0.8	3:1	2.0

3. Lumens: No fixture shall exceed 20,000 lumens (± 3%).

Types of Lighting	Maximum Lumens Allowed
Path lighting	1,500 lumens
Building Entrance	3,500 lumens
Residential/ Commercial Pole at 20'	15,000 Lumens
Industrial Pole at 30'	20,000 lumens
ATM Drive-Through Canopy	6,000 lumens
Auto Service Station	
• **Approaches and Drives**	4,000 lumens
• **Service Areas**	6,000 lumens
• **Pump Island Areas**	8,000 lumens per fuel pump

4. Light Trespass: The maximum illumination level at a property line shall not exceed 0.1-foot candle, as measured at grade, except where abutting industrial, or other non-sensitive uses. When a commercial or industrial use abuts a public right-of-way, or another commercial or industrial use, lighting must be designed so that the illumination at the property boundary line does not exceed 1.0 foot-candles.

   All residential uses and natural resource protection areas are to be considered sensitive to light trespass. In certain instances where a proposed

development is adjacent to a sensitive use, house-side shielding (see 12.3.5.1) may be necessary to comply with this standard.

5. Luminaire Types: All fixtures must be LED and shall not exceed 3000K Correlated Color Temperature (CCT). Screw in light fixtures must have LED lamps specified to be maximum of 3000K CCT.

6. Full Cut-off Fixtures and Shielding Required: All outdoor lighting fixtures, including pole mounted and wall mounted luminaires, shall be constructed Full "cut-off" or with full shielding, type where lenses, refractors or lamp sources do not extend below the surface of the fixture housing and no direct light shall be directed at or above the horizontal plane.

   Where the light source from an outdoor light fixture is visible beyond the property line, shielding shall be required to reduce glare so that the light source is not visible from within any residential dwelling unit.

   Light fixtures mounted under a canopy shall be recessed so that the lens cover is recessed into, or flush with, the underside (ceiling) of the canopy.

7. Pedestrian Walkway Lighting: Pedestrian walkway light fixtures can be a combination of freestanding pole, bollard, in-place step or building mounted fixtures. For building mounted fixtures, the proposed fixture type will be in scale with the building elevation on which it is to be installed and meet the fixture height provisions of 12.3.8. Pedestrian lighting (bollards) shall meet the technical manual standards for full cut-off or an exception may be considered under 12.2.11.

8. Fixture Height: Fixtures shall be mounted at the lowest height necessary to meet city standards and the height is measured from grade to the bottom of the lighting fixture.

Type of Lighting	Maximum Fixture Height
Residential (Pedestrian) Uses	20 feet
Commercial/ Office Uses	20 feet
Large Industrial Uses (50,000 sf or more- gross floor area)	30 feet
Building Mounted/ Entrances	below the roof eave and not to exceed 20 feet, whichever is lower
Bollard Fixtures	42 inches (3.5 feet)

9. Lighting Curfew: For surface and structured parking, lighting in vehicle parking areas containing twenty (20) or more parking spaces shall be reduced to 50% of permitted levels from one hour after the business closing

to one hour before business opening. If lighting levels are already below 50% of permitted levels, no curfew adjustment is required. Motion sensor activated lighting shall be permitted during closed hours to activate additional lighting above the 50% permitted, for the purposes of public safety.

10. Continued Maintenance: Lighting installations must be maintained in good repair to meet the provision of this ordinance on an on-going basis.

11. General Exceptions: Proposed uses that demonstrate a need to exceed the specific site lighting limits shown below for safe and reasonable exercise of the proposed use must provide a professionally produced lighting plan which adheres to the current Illuminating Engineering Society of North America (IESNA) recommendations for the proposed use. The Planning Authority may grant exceptions to the lighting standards with the finding that the light impacts do not create a public nuisance for abutting residential property. Unless otherwise specified below, exterior lighting shall conform to the recommendations put forth in Lighting for Exterior Environments RP-33-14, or its successor, published by the Illuminating Engineering Society of North America (IESNA). Lighting fixtures other than full cut-off fixtures may be allowed only if acceptable luminaires shall include internal and/or external glare control louvers and installed so as to minimize uplight and offsite light trespass.

12. Historic District, Architectural and Pedestrian Walkway Exception: Sites which are part of an historic district or require specific decorative lighting fixtures as means to achieve compatibility within an existing architectural context must meet the following standards:
    a. Lighting fixtures other than full cut-off fixtures may be allowed only if acceptable luminaires shall include internal and/or external glare control louvers and installed so as to minimize uplight and offsite light trespass.
    b. Low pressure sodium and metal halide lamps are prohibited.

12.4. Reserved.

12.5. ARCHITECTURAL AND SPECIALTY LIGHTING AND UPLIGHTING

1. Lighting shall be designed to minimize lighting of night ski and shall accentuate individual architectural or aesthetic elements, not the entire structure.

2. Lighting shall be directed downward unless the development is located in an area of the city where uplighting is permitted as described in Section 14.6.4

of the Land Use Code. Where permitted, upward aimed lighting (uplighting) shall not exceed 4,000 mean lumens per accent feature, shall be placed as close as possible to the base of the building or feature that is being illuminated, shall be fully shielded from view off-site, and shall use a narrow cone of light for the purpose of confining the light to the object.

3. Building façade lighting. The exterior of a building may be lighted provided the following standards are met:
    a. The lighting is done to accentuate an architectural or aesthetic element of the building, not the entire building.
    b. The light must only be directed onto the building façade and not spillover beyond the plane of the building.
    c. Upward aimed lighting must not exceed 4,000 mean lumens per accent feature, must be fully shielded, and mounted as flush to the wall as possible.
    d. Lighting exceeding 4,000 mean lumens per accent feature must be aimed downward, fully shielded, and mounted as flush to the wall as possible.
    e. Stripe Lighting: Stripe lighting along building structures as articulation may be approved as specialty architectural lighting, provided that it does not create nuisance.

4. Flag poles, statues and similar monuments. A flag pole bearing a state flag, a flag of the United States or a flag of a foreign nation may be illuminated, provided the following standards are met:
    a. The luminaires must be fully shielded.
    b. Upward aiming luminaires must be placed as close to the base as possible.
    c. The luminaires must not collectively exceed 20,000 mean lumens. Public statues, memorials or other similar monuments may also be lighted upon approval by the Historic Preservation authority, provided the above standards are met.

12.6. SUBMISSION REQUIREMENTS, PHOTOMETRIC PLANS

1. The Lighting Plan shall be depicted on a site plan, indicating the location of each current and proposed outdoor lighting fixture with projected hours of use. This plan will need to be stamped and certified by a licensed professional, such as an architect or engineer. The lighting plan must include a KEY to the proposed lighting that provides the following information:
    a. Type and number of luminaire equipment (fixtures), including the "cut off characteristics", indicating manufacturer and model number(s).
    b. Lamp source type (bulb type, i.e. LED), lumen output, and wattage.

c. Mounting height with distance noted to the nearest property line for each luminaire.
d. Types of timing devices used to control the hours set for illumination, as well as the proposed hours when each fixture will be operated.
e. Lighting manufacturer-supplied specifications ("cut sheets") that include photographs of the fixtures, indicating the certified "cut off characteristics" of the fixture.

2. A photometric plan shall be provided at 20 scale or larger which shall show the extent of the areas designed and intended for lighting, and within those specific areas show a photometric grid of maximum 10' point spacing, and within those areas provide foot candle calculations of maximum, average, minimum, maximum to minimum ratio, and average to minimum ratio. On the same or additional plan, a photometric plot shall extend to all lot lines and as necessary to reach illumination levels of 0 (zero) foot candles. Additionally, the applicant shall provide descriptive information, including manufacturers catalog excerpts, for all proposed light fixtures, lamps, and poles.

13. BOUNDARY SURVEY STANDARDS

13.1. MINOR RESIDENTIAL GENERAL STANDARDS

In addition to a standard boundary survey, all applications must also include a Site Plan prepared in accordance with Section 16 of the Technical Manual.

The following items and information shall be shown on boundary surveys for minor residential development site plans (as defined in Section 16 of the Technical Manual) to ensure compliance with City of Portland planning requirements, engineering technical and design standards, and accurate documents are on record for future planning, GIS mapping, and engineering needs:

1. Name and address of the property owner, the applicant and name of the proposed development, and with references to the Deed Book and Page at the Cumberland County Registry of Deeds.
2. North arrow
3. Scale of not less than one (1) inch to fifty (50) feet
4. A graphic scale (scale bar)
5. Plan Size: Where possible, it is preferred that plans not exceed a maximum size of 24” x 36”.
6. Site Boundaries: The full parcel boundaries must be shown on the survey.
7. Total land area of the site.
8. Flood Zone statement, where applicable, based on FEMA, FIRM Flood Insurance Rate Maps.
9. Existing streets, right-of-way, restrictions or easements on the site.
10. A revision block with a number and date indicating the revision status. The revision block shall be located in the title block or adjacent to it.
11. Property Corners: Location and descriptions of all property corners set or found, proposed to be set, and all granite survey monuments set. Where no property markers exist, the City of Portland requires that the property markers be installed and that a licensed surveyor set and confirm proposed building locations on site prior to the issuance of a building permit.
12. Boundary Survey plans, based on State of Maine Professional Licensing Boards’ legal requirements, shall bear the seal of a Professional Land Surveyor licensed to practice in the State of Maine.
13. City Vertical Datum: It shall be stated on all plans that the City of Portland established vertical datum of NGVD 1929 is used or manhole rim elevation data is used for all information shown on the plan.

14. All plans shall state the Official City of Portland Benchmark used as supplied by the Department of Public Services Engineering Division Archivist.
15. It may be required, especially in areas of old subdivision plans and areas not previously subdivided, that the survey show tie bearings and distances to the nearest street line corner, or to the nearest City of Portland survey monument. Survey tie line precision shall be an inverse line with the bearing to the nearest second and the distance to the nearest hundredth of a foot. This requirement is to aid in adding and verifying the property location on the City of Portland digital GIS basemap.
16. All current conveyances of lots, parcels, easements, and other forms of right, title, and/or interest shall be shown on both the survey plan (as submitted and as amended), with references to the Deed Book and Page at the Cumberland County Registry of Deeds.
17. Street Status: The Status of the street shall be shown; IE Accepted City Street, Continued Paper Street, Discontinued City Street, Vacated Paper Street, or new Proposed Street as per the project submission.

13.2. OTHER GENERAL STANDARDS

The following items shall be shown on boundary surveys for all other site plans to ensure compliance with City of Portland planning requirements, engineering technical and design standards, and accurate documents are on record for future planning, GIS mapping, and engineering needs:

1. Name and address of the property owner, the applicant and name of the proposed development, and with references to the Deed Book and Page at the Cumberland County Registry of Deeds.
2. North arrow
3. Scale of not less than one (1) inch to fifty (50) feet.
4. Graphic scale (scale bar).
5. Plan Size: Where possible, it is preferred that plans not exceed a maximum size of 24” x 36”.
6. Site Boundaries: The full parcel boundaries must be shown on the survey.
7. Total land area of the site
8. Zoning district boundaries, if applicable
9. Flood Zone statement, where applicable, based on FEMA, FIRM Flood Insurance Rate Maps

10. Required zoning setbacks for the site

11. Existing and proposed grading contours at intervals of not more than two (2) feet

12. Existing structures or other improvements on the site and the approximate location of structures or improvements on adjoining lots within fifty feet (50') of the site boundary

13. Existing streets, right-of-way, restrictions or easements on the site

14. The location and size of existing utilities servicing the site, including fire hydrants

15. Significant natural features on or directly adjacent to the site, including wetlands, ponds, watercourses, floodplains, significant wildlife habitats and fisheries or other important natural features as listed in Section 14.6.2 of the Land Use Code

16. Location of existing street trees and the general location of on-site trees and vegetation

17. Vicinity Map showing the relationship of the project to the surrounding area at a scale no greater than one inch equals 2,000 feet

18. A revision block with a number and date indicating the revision status. The revision block shall be located in the title block or adjacent to it

19. Rim elevations of all catch basin and manhole structures

20. Invert elevations of all pipes entering and/or exiting catch basins and manhole structures

21. The length, material, diameter, and slope of all storm sewer and sanitary sewer piping

22. The location, with dimensions from existing structures, at the main line pipe and at the street property line, of all sanitary sewer and storm drain laterals. The Public Services Department Engineering Archives may have this information available for existing infrastructure

23. Location, size, type of material, and invert elevations of culverts

24. Location of water lines and valves, gas lines and valves, buried electrical lines, buried communication cables, buried TV cables, telephone and electric manholes, utility hand-hold access boxes, transformer pads, utility and light poles

25. All curbing and sidewalks, stating type of material.

26. Property Corners: Location and descriptions of all property corners set or found, proposed to be set, and all granite survey monuments set. Where no property markers exist, the City of Portland requires that the property markers be installed and that a licensed surveyor set and confirm proposed building locations on site prior to the issuance of a building permit.

27. Boundary Survey plans, based on State of Maine Professional Licensing Boards' legal requirements, shall bear the seal of a Professional Land Surveyor licensed to practice in the State of Maine.

28. City Vertical Datum: It shall be stated on all plans that the City of Portland established vertical datum of NGVD 1929 is used or manhole rim elevation data is used for all information shown on the plan.

29. All plans shall state the Official City of Portland Benchmark used as supplied by the Public Services Engineering Division Archivist.

30. Distances, bearings, and angles shall be shown on the survey or subdivision plans, shall tie the property into the nearest accepted street line and be tied into established City of Portland survey monuments or record survey data at the Public Services Engineering Archives. Ties shall be considered as an inverse line with a bearing and distance to the nearest second and hundredth of a foot.

31. All current conveyances of lots, parcels, easements, and other forms of right, title, and/or interest shall be shown on both the survey plan (as submitted and as amended), with references to the Deed Book and Page at the Cumberland County Registry of Deeds.

32. Street Status. The Status of the street shall be shown; IE Accepted City Street, Continued Paper Street, Discontinued City Street, Vacated Paper Street, or new Proposed Street as per the project submission.

13.3. ADDITIONAL BOUNDARY SURVEY STANDARDS FOR MINOR AND MAJOR SITE PLANS

On minor and major site plans (excluding minor residential and low-impact site development as defined in Section 16 of the Technical Manual), the following items shall be addressed:

1. Prior to starting field surveys and design on a project it is strongly advised to contact the City Engineer's office, Public Services Department, Engineering Division at (207) 874-8846 for information on existing

infrastructure, additional requirements, or future projects that may affect the proposed project.

2. Proposed Survey Monument Locations, if required. Granite survey monuments shall be set on one side of the street as directed by the Public Services Engineering Division on the 3 foot offset Lines, as offset towards the street. Notes describing monuments found by the Project Surveyor shall include information describing the size, condition, and depth below grade to the top of any buried monuments found.

3. All proposed (if required by Planning) and existing survey monuments shall be shown in bold line type on all utility and site plans.

4. Projects shall be tied into the Maine State Plane Coordinate System (2-zone projection), West Zone using the NAD1983 Datum and the U.S. Survey Foot as the unit of measure. The survey methods, traverse or GPS observations/methods, geodetic control used, and coordinates of new monuments set shall be stated on the survey and subdivision plans.

5. When State Plane Coordinates are required, the State Plane Coordinates (to the nearest hundredth of a foot) of two survey property corners shall be displayed for any two property corners in the project which are the farthest distance apart. Please contact the Public Services Engineering Division for assistance in providing Survey Control Points or GPS Base Station Support.

6. Bearing Basis. When State Plane Coordinates are required, magnetic bearings may be shown on plans submitted, with a note stating that the project was submitted digitally to the City of Portland on State Plane Coordinates, but that the bearings on the plans are magnetic due to survey and boundary retracement considerations. The plan shall show the magnetic declination if magnetic bearings are shown.

7. All easements and conveyances proposed as part of the project shall be recorded, upon project approval, at the Cumberland County Registry of Deeds. Easement ownership and responsibility must be stated on the survey plans. Revised plans may be requested if deeds are executed during the progression of the project for easements or other conveyances.

13.4. WAIVER OF BOUNDARY SURVEY REQUIREMENTS

13.4.1. Minor and major site plans (excluding minor residential development as defined in Section 16 of the Technical Manual) – The reviewing authority may permit the submission of a partial survey depicting only the to-be- developed portion of the improved lot of record if the development:

1. Is proposed on an already improved lot of record; and
2. Comprises less than one (1) acre of said improved lot of record,

13.4.2. Minor residential development – If the proposed house is to be located on a lot within an existing subdivision, approved no earlier than 1968, the final subdivision recording plat may be used, provided that the applicant sufficiently documents all existing encumbrances, and can show that no new encumbrances have occu**rr**ed since recording of the final plat.

14. STANDARDS FOR LOCAL SITE LOCATION OF DEVELOPMENT REVIEW

14.1. Intention

These standards are intended to provide a flexible and practical means by which the City of Portland may exercise its police powers to control the location of those developments substantially affecting the local environment in order to ensure that such developments will be located in a manner which will have minimal adverse impact on the natural environment within the development sites and of their surroundings and to otherwise protect the health, safety and general welfare of the people.

14.2. APPLICABILITY

The Planning Board shall review:

(a) subdivisions;
(b) structures;
(c) developments generating passenger car equivalents of between 100-200 per peak hour for compliance with the following standards; and
(d) metallic mineral mining or advanced exploration activity.

For purposes of this section the following definitions shall be applied by the City of Portland Planning Board:

14.2.1. **Subdivisions.** The subdivision of land into 5 or more lots, other than lots for single-family, detached, residential housing, common areas or open space, to be offered for sale or lease to the general public during any 5-year period, if the aggregate land area includes more than 20 acres; or the division of a parcel of land into 15 or more lots for single-family, detached, residential housing, common areas or open space, to be offered for sale or lease to the general public within any 5-year period, if the aggregate land area includes more than 30 acres. The aggregate land area includes lots to be offered together with the roads, common areas, easement areas and all portions of the parcel of land in which rights or interests, whether express or implied, are to be offered. This definition of "subdivision" is subject to the following exceptions:

A. Lots of 40 or more acres but not more than 500 acres may not be counted as lots except where:

(1) The proposed subdivision is located wholly or partly within the shoreland zone;

B. Lots of more than 500 acres in size may not be counted as lots;

C. Five years after a subdivider establishes a single-family residence for

that subdivider's own use on a parcel and actually uses all or part of the parcel for that purpose during that period, a lot containing that residence may not be counted as a lot;

D. Unless intended to circumvent this article, the following transactions may not be considered lots offered for sale or lease to the general public:

(1) Sale or lease of lots to an abutting owner or to a spouse, child, parent, grandparent or sibling of the developer if those lots are not further divided or transferred to a person not so related to the developer within a 5-year period, except as provided in this subsection;

(2) Personal, nonprofit transactions, such as the transfer of lots by gift, if those lots are not further divided or transferred within a 5-year period or the transfer of lots by devise or inheritance; or

(3) Grant of a bona fide security interest in the whole lot or subsequent transfer of the whole lot by the original holder of the bona fide security interest or that person's successor in interest;

E. In those subdivisions that would otherwise not require site location approval, unless intended to circumvent this article, the following transactions may not, except as provided, be considered lots offered for sale or lease to the general public:

(1) Sale or lease of common lots created with a conservation easement as defined in Title 33, section 476, provided that the Department of Environmental Protection is made a party;

(2) The exception described in paragraph E does not apply, and the subdivision requires site location approval, whenever the use of a lot described in paragraph E changes or the lot is offered for sale or lease to the general public without the limitations set forth in paragraph E; and

F. The transfer of contiguous land by a permit holder to the owner of a lot within a permitted subdivision is exempt from review hereunder, provided that the land was not owned by the permit holder at the time the Department of Environmental Protection, the MDOT or the City approved the subdivision. Further division of the transferred land must be reviewed under these standards.

For the purposes of this section, a parcel of land is defined as all contiguous land in the same ownership provided that lands located on opposite sides of a public or private road are considered each a separate parcel of land unless that

road was established by the owner of land on both sides of the road subsequent to January 1, 1970. A lot to be offered for sale or lease to the general public is counted, for purposes of determining jurisdiction, from the time a municipal subdivision plan showing that lot is recorded or the lot is sold or leased, whichever occurs first, until 5 years after that recording, sale or lease.

14.2.2. **Structure**. A "structure" means any building, parking lot, road, paved area, wharf or area to be stripped or graded and not to be revegetated that cause a total project to occupy a ground area in excess of 3 acres. Stripped or graded areas that are not revegetated within a calendar year are included in calculating the 3-acre threshold; and

14.2.3. **Passenger car equivalents at peak hour**. "Passenger car equivalents at peak hour" means the number of passenger cars, or, in the case of non-passenger vehicles, the number of passenger cars that would be displaced by non-passenger vehicles, that pass through an intersection or on a roadway under prevailing roadway and traffic conditions at that hour of the day during which the traffic volume generated by the development is higher than the volume during any other hour of the day. A one tractor-trailer combination is the equivalent of 2 passenger cars.

14.3. STANDARDS

The following standards shall be applied in evaluating subdivisions or site plans as defined above, except where Portland elsewhere has adopted more restrictive standards, the more restrictive standards shall control:

1. Financial and technical capacity. The developer has the financial capacity and technical ability to develop the project in a manner consistent with state environmental standards and with the provisions of Portland's Code of Ordinances . The Planning Board may issue a permit that conditions any site alterations upon a developer providing the Planning Board with evidence that the developer has been granted a line of credit or a loan by a financial institution authorized to do business in this State or with evidence of any other form of financial assurance the Planning Board determines to be adequate. The Planning Board shall also assess any such application in accordance with the standards set forth in Chapter 373 of the Maine Department of Environmental Protection Site Law Regulations, as may be amended from time to time.

2. Traffic movement. For any development that generates 100 or more passenger car equivalents at peak hour, the developer has made adequate provision for traffic movement of all types into and out of the development area. Before issuing a permit, the Planning Board shall determine that any traffic increase attributable to the proposed development will not result in unreasonable congestion or unsafe conditions on a road in the vicinity of the proposed development. The Department of Transportation or the City of Portland Traffic

Engineer shall provide the Planning Board with an analysis of traffic movement of all types into and out of the development area and with a statement of recommended findings on traffic issues. In making its determination under this subsection, the Planning Board shall consider the analysis and recommendations provided by the City's Traffic Engineer or the Department of Transportation. Traffic movement determinations are subject to the following:

A. A proposed development that involves fewer than 100 passenger car equivalents at peak hour is not subject to traffic review.

B. If any project qualifies for review hereunder solely because it generates 100 or more passenger car equivalents at peak hour then the review hereunder shall be limited only to issues relevant to the traffic movement standards in this section. Otherwise, all other standards of review shall be applied.

In all instances the appropriate representative of the municipality or municipalities where the project is located, shall discuss with the applicant the scope of impact evaluation required for the proposed development. The applicant shall provide notice to abutting municipalities.

C. If a development is located in an area designated as a growth area in a local growth management plan that has been found by the State to be consistent with the growth management program in Title 30-A, chapter 187, the Planning Board shall require improvements to the level of traffic service only if the level of service adjacent to or in the vicinity of the development is or would be level of service E or F, as determined by the City's Traffic Engineer in accordance with the "Highway Capacity Manual" (3rd ed. 1994). In these cases, improvements are limited only to those necessary to mitigate for the foreseeable impacts of the development.

D. The Planning Board shall also assess any such application in accordance with the standards set forth in Chapter 374 of the Maine Department of Environmental Protection Site Law Regulations, as may be amended from time to time.

(3) No adverse effect on the natural environment. The developer has made adequate provision for fitting the development harmoniously into the existing natural environment and that the development will not adversely affect existing uses, scenic character, air quality, water quality or other natural resources in the municipality or in neighboring municipalities. In making a determination under this subsection, the Planning Board shall apply the standards set forth in Chapter 375 of the Maine Department of Environmental Protection Site Law Regulations, as may be amended from time to time.

(4) Soil types. The proposed development will be built on soil types that are

suitable to the nature of the undertaking. In making a determination under this subsection, the Planning Board shall apply the standards set forth in Chapter 376 of the Maine Department of Environmental Protection Site Law Regulations, as may be amended from time to time.

(5) Ground water. The proposed development will not pose an unreasonable risk that a discharge to a significant ground water aquifer will occur. In making a determination under this subsection, the Planning Board shall apply the standards set forth in Chapter 500 and 502 of the Maine Department of Environmental Stormwater Management and Direct Watersheds of Waterbodies Most at Risk from New Development Rules as may be amended from time to time.

(6) Infrastructure. The developer has made adequate provision of utilities, including water supplies, sewerage facilities, solid waste disposal and roadways required for the development and the development will not have an unreasonable adverse effect on the existing or proposed utilities and roadways in the municipality or area served by those services.

(7) Flooding. The activity will not unreasonably cause or increase the flooding of the alteration area or adjacent properties nor create an unreasonable flood hazard to any structure. In making a determination under this subsection, the Planning Board shall apply the standards set forth in Chapter 500 and 502 of the Maine Department of Environmental Stormwater Management and Direct Watersheds of Waterbodies Most at Risk from New Development Rules as may be amended from time to time.

(8) Storm water management and erosion and sedimentation control. The proposed development meets the standards for storm water management in 38 MRSA §420-D as amended from time to time (See Exhibit 1) and the standard for erosion and sedimentation control in 38 MRSA §420-C as amended from time to time. In making a determination under this subsection, the Planning Board shall apply the standards set forth in Chapter 500 and 502 of the Maine Department of Environmental Stormwater Management and Direct Watersheds of Waterbodies Most at Risk from New Development Rules, as may be amended from time to time.

16. APPLICATION SUBMISSION REQUIREMENTS

16.1 SITE PLAN

The applicant shall submit for review a packet of materials and submissions in a form and content as specified by the Department of Planning and Urban Development to demonstrate compliance of the development with the site plan standards listed in Article 14 of the Land Use Code. Such submissions shall contain, at a minimum, the following elements:

A. General Submission Requirements For all Applications

1. Application form;
2. Applicable fees;
3. Project description;
4. Evidence of right, title and interest;
5. Evidence of state and/or federal approvals, if applicable;
6. Written assessment of project compliance with applicable zoning requirements;
7. Written assessment of project compliance with site plan standards;
8. Summary of existing and/or proposed easements, covenants, public or private rights-of-way, or other burdens on the site;
9. Written requests for waivers from the city's site plan or technical standards, if applicable;
10. Evidence of financial and technical capacity;
11. Boundary survey stamped by a professional surveyor licensed to practice in the State of Maine, drawn to scale and tied into the State Plane Coordinates, NAD 1983, Maine West Zone, as specified in Section 13 of the Technical Manual. A boundary survey of the site, may be waived by the Planning Authority for a review of Master Development Plan, where an existing conditions plan is available. The Boundary Survey requirement shall be met for each phase of development.

B. Written Materials for Site Plan Applications

1. Construction Management Plan, including a traffic control plan;

2. A traffic study and other applicable transportation plans in accordance with Section 17 of the Technical Manual, where applicable;

3. A narrative describing any significant natural features, wildlife and fisheries habitats or archaeological sites subject to the provisions of Section 14.6.2 of the land use code that are located on or near the project site and a description of the methods that will be used to protect such areas or sites during and post construction;

4. A narrative describing site layout, on and off-site watershed hydrology, new and existing buildings and facilities, total impervious area, disturbed area and developed area created by the project;

5. Stormwater runoff calculations as described in Section 5 of the Technical Manual;

6. A narrative describing the development's consistency with applicable City Master Plans;

7. Evidence of Utility Capacity to Serve;

8. Estimated types and quantities of solid waste to be generated by the development. For new commercial and industrial development, a description of the estimated amount and type of recyclable material to be generated;

9. A code summary referencing NFPA 1 and all Fire Department technical standards;

10. Where applicable, an assessment of the development's consistency with any applicable design standards contained in Section 14.6.4 of the land use code and/or in the City of Portland Design Manual;

11. Manufacturer's verification that all proposed HVAC and manufacturing equipment meets applicable state and federal emissions requirements.

C. Plans Required for Site Plan Applications – Plan based upon a standard stamped boundary survey meeting City of Portland standards, stamped by a professional engineer licensed to practice in the State of Maine, and including the following information:

1. Existing and proposed structures, as applicable, and distance from property

lines;

2. Approximate location of structures on parcels abutting the site;

3. All streets and intersections adjacent to the site and any proposed geometric modifications to those streets or intersections;

4. Location, dimensions and materials of all existing and proposed driveways, vehicle and pedestrian access ways, and bicycle access ways, with corresponding curb lines;

5. Engineered construction specifications and cross-sectional drawings for all proposed driveways, paved areas, sidewalks;

6. Location and dimensions of all proposed loading areas including turning templates for applicable design delivery vehicles;

7. Existing and proposed public transit infrastructure with applicable dimensions and engineering specifications;

8. Location of existing and proposed vehicle and bicycle parking spaces with applicable dimensional and engineering information;

9. Location of all snow storage areas and/or a snow removal plan;

10. Proposed buffers and preservation measures for significant natural features, where applicable, as defined in Section 14.6.2 of the land use code;

11. Location and proposed alteration to any watercourse;

12. A delineation of wetlands boundaries prepared by a qualified professional as detailed in Section 8 of the Technical Manual;

13. Proposed buffers and preservation measures for wetlands;

14. Existing soil conditions and location of test pits and test borings;

15. Existing vegetation to be preserved, proposed site landscaping, screening and proposed street trees, as applicable;

16. A stormwater management and drainage plan, in accordance with Section 5 of the Technical Manual;

17. Grading plan;

18. Ground water protection measures;

19. Existing and proposed sewer mains and connections;

20. Location of all existing and proposed fire hydrants and a life safety plan in accordance with Section 3 of the Technical Manual;

21. Location, sizing, and directional flows of all existing and proposed utilities within the project site and on all abutting streets;

22. Location and dimensions of off-premises public or publicly accessible infrastructure immediately adjacent to the site;

23. Location and size of all on-site solid waste receptacles, including on-site storage containers for recyclable materials for any commercial or industrial property;

24. Plans showing the location, ground floor area, floor plans and grade elevations for all buildings;

25. A shadow analysis as described in Section 11 of the Technical Manual, if applicable;

26. A note on the plan identifying the Historic Preservation designation and a copy of the Application for Certificate of Appropriateness, if applicable, as specified in Section Article IX, the Historic Preservation Ordinance;

27. Location and dimensions of all existing and proposed HVAC and mechanical equipment and all proposed screening, where applicable;

28. An exterior lighting plan in accordance with Section 12 of the Technical Manual;

29. A master signage plan showing the location, dimensions, height, setback, materials, and illumination of all existing and proposed signs;

30. Location, dimensions and ownership of easements, public or private rights of way, both existing and proposed.

D. Exceptions for Minor Site Plan Applications
On account of the scope and anticipated level of impact for certain types of Minor Site Plan applications, a complete submission package as detailed under

Section 16.1(B) and 16.1(C) is not required for the following types of development, which are defined for the purposes of application fee assignment and submittal requirements:

1. Minor Residential Development:
    a. Development of a single-family or a two-family building, regardless of its size, excluding building additions, decks, or accessory structures; or

    b. The addition of one or two dwelling units to a multifamily structure.

2. Low-Impact Site Development
    a. Alteration of a watercourse or wetland as defined in Article 3 of the Land Use Code;

    b. Alteration of a site where disturbance of land area is less than one (1) acre and consisting of either one or more of the following activities; stripping, grading, grubbing, filling or excavation. The Planning Authority shall exempt from review the loam and seeding of lawns and the cumulative placement of less than fifteen (15) cubic yards of fill on any lot provided such loaming or placement does not alter a drainage course, swale, wetland or redirect water onto adjoining property and does not violate any other provision of the Portland City Code or state or federal law. “Disturbed area” does not include routine maintenance, but does include re-development and new impervious areas;

    c. The construction of any temporary or permanent parking area, paving of existing unpaved surface parking areas between 1,000 and 7,500 square feet or 5-25 spaces, or creation of other impervious surface areas between 1,000 and 7,500 square feet;

    d. The rehabilitation or reconstruction, but not new construction, of piers, docks, wharves, bridges, retaining walls, and other structures located within the shoreland zone;

    e. A site alteration in which vehicle access is proposed from more than one (1) street.

3. Plan Requirements for Minor Residential and Low-Impact Site Development, to be provided in addition to the general submission requirements for all site plan applications, listed under Section 16.1(A). Site plans shall be based upon the boundary survey and show the following information:

a. Existing and proposed structures, as applicable, and distance from property lines;

b. Existing and proposed paved areas, if applicable;

c. Proposed ground floor area and finish floor or sill elevation;

d. For minor residential only, exterior building elevation drawings (all sides);

e. Location of proposed utilities;

f. Identification and proposed protection measures for any significant natural features, as defined in Section 14.6.2 of the land use code;

g. Identification and proposed protection for alterations of watercourses, if applicable;

h. Identification and, if applicable, proposed impacts and protection measures for wetlands;

i. For minor residential projects only, soil type;

j. Existing and proposed grades and contours;

k. Location, dimensions and ownership of easements, public or private rights of way, both existing and proposed;

l. Proposed stormwater management control;

m. Soil erosion control plan;

n. Existing vegetation to be preserved, proposed site landscaping, screening, and proposed street trees, if applicable;

o. Existing and proposed curb and sidewalk;

p. Location, area, and limits of the proposed site disturbance or alteration;

q. Proposed pier, dock, wharf, pier, or slope stabilization in the Shoreland Zone, if applicable.

E. Master Development Plan. A Master Development Plan is an optional submittal as part as part of the site plan review process. If the applicant elects to submit a Master Development Plan for review, it shall include the following information in addition to general submission requirements listed above:

1. A neighborhood context map, at a scale not less than one (1) inch equals one hundred (100) feet, providing a graphic description of the neighborhood in which the tract lies, including roads, utilities and other public facilities, major existing buildings and structures. There shall also be a statement and/or plan as to the general impact of the proposed Master Development Plan upon the area, indicating how the Master Development Plan relates to surrounding properties and what measures will be taken to create appropriate transitions and access from the subject property to abutting public properties (i.e. parks, waterfront, etc.) or other neighboring tracts (if applicable).

2. A conceptual site plan drawn to a scale of not less than one (1) inch equaling fifty (50) feet, or series of drawings at the same scale, and any necessary supporting information, showing:

   a. The approximate boundary lines of existing and proposed lots within and immediately adjacent to the Master Development Plan, with approximate areas and dimensions. With respect to residential areas, the proposed density, lot configuration, circulation and a typical plot plan shall be included in the application.

   b. An analysis of the natural features of the site, including existing and/or adjacent natural waterways, wetlands, floodplains, topography, soil conditions and other natural features requested or required by the Planning Authority.

   c. An analysis of the designated view corridors, historic resources, and archeological resource associated with the site.

   d. Existing/proposed buildings and other significant structures, building groupings, exterior building elevations and entrances, parking areas, and other significant physical features of the site.

   e. The context and design approach, including context drawings, perspective renderings, photographic montages, or computer-generated graphics depicting the proposed development within the surrounding building and environmental context, and building elevations. These drawings shall include the following:

i. Illustrations of all sides of the structures;

ii. Views of major entries or prominent building features;

iii. Illustration of building articulation and elements;

iv. Building finish composition; and

v. Views of the pedestrian and streetscape experience.

The submission shall include a digital three-dimensional model tied to a specific location that is submitted as a KML, KMZ, DXF, or DWG file on a CD or DVD or such format as approved by the Planning Authority. It is the applicant's responsibility that the model is complete and represents the proposed development accurately using best practice modeling techniques and layering standards.

f. Major circulation patterns surrounding and serving the site, the existing and proposed lines of streets (including the street width), ways, easements and any public areas within or next to the site.

g. Major landscaping elements, features, open space, and plans for preservation of natural features.

h. An analysis of the public safety services needed to support the master plan.

i. An analysis of the anticipated impacts on the public-school system to support the Master Development Plan.

j. A generalized drainage plan for the site, indicating drainage ways, flow, points of outfall, and indicating impacts of development on affected drainage basins. The plan shall include contour information at not less than two-foot (2') contour intervals and document anticipated quantities of run-off characteristics. General statements concerning storm water management techniques shall also be submitted with the application.

k. The plan shall clearly show Master Development Plan boundaries, north arrow, date, scale, legend, the title "Master Development Plan Concept Site Plan" followed by the formal project name, and the name(s) of applicant(s), engineer(s), designer(s) and/or agent(s).

l. A traffic analysis and recommendations prepared by a registered professional engineer qualified to conduct such studies, including

current traffic counts for streets surrounding the project, analysis of the existing capacity of those streets, projections of the amount of traffic that will be generated by the proposed development, and the ability of the street system to absorb the increased traffic without decreasing the level of service below an acceptable level – said level to be determined by the Planning Authority in concert with the Department of Public Works. In cases where the Master Development Plan is subject to a Traffic Movement Permit (TMP) for all phases, the TMP submissions and review shall supersede these requirements.

m. A utilities analysis and recommendations prepared by a registered professional engineer qualified to conduct such studies. Said analysis shall contain an inventory of existing utilities including, but not limited to, storm sewers and drains, sanitary sewers, electrical lines, fire alarm boxes and lines, gas lines/mains, water mains, lighting, curb and gutter, etc. Said inventory shall illustrate utility locations, sizes, diameters, carrying capacity and present load on the system. The engineer's report shall state if the current system is capable of adequately serving the proposed development. If the current utility system is found to be inadequate for the proposed development, the report shall confirm the deficiencies and make recommendation(s) as to the infrastructure improvements necessary to properly service the proposed development and maintain the existing service. The report shall also present a formal plan for infrastructure improvements, documenting timing, funding mechanisms and coordination with the City; and

n. Any other supportive information the applicant feels may be beneficial in the evaluation of the request.

o. The Planning Authority or Planning Board may reduce the level of information required at the Master Development Plan review stage, provided more detailed supportive documentation is provided at final major site plan review of the Master Development Plan or phases thereof.

16. 2. SUBDIVISION

The applicant shall submit for review a packet of materials and submissions in a form and content as specified by the Department of Planning and Urban Development to demonstrate compliance of the development with the subdivision standards listed in Article 15 of the Land Use Code. Such submissions shall contain, at a minimum, the following elements:

A. Subdivision Plat. The following information shall be shown on the subdivision plat unless otherwise indicated:

1. Date, north point, title and graphic scale. Scale shall not be more than 60 feet to the inch unless lots are more than an acre, but in no event more than 100 feet to the inch;

2. Based on a recent survey by the subdivider, existing contours at two feet intervals or as otherwise required by the Public Works Authority. Existing structures which are to remain will shall be delineated;

3. Names of proposed streets, width of rights of way, and typical cross section reservation, and depth of construction materials;

4. Locations, widths and purposes of other rights of way or easements to be recorded;

5. All appropriate street curve information, including point of curvature, point of tangency, tangent distance, radii and interior angle, in standard engineering format;

6. Location of those utilities existing on or adjacent to the tract to be subdivided, including size and elevation of buried or underground utilities (may be shown on separate plan);

7. Tract boundary lines and property lines of lots, with accurate dimensions and either bearings or deflection angles. All lots shall be numbered;

8. Names of adjacent property owners with parcels over 25,000 square feet or names of adjacent subdivision;

9. Designation of flood hazard areas, as defined by the National Flood Insurance Program and shown on the city flood hazard boundary map, as well as any other areas in the subdivision subject to inundation by storm water or storm sewer overflow;

10. All potential wetlands within the proposed subdivision, regardless of the size of those wetlands;

11. Any river, stream or brook within or abutting the proposed subdivision. For purposes of this section, "river, stream or brook" has the same meaning as in 38 M.R.S. § 480 B, Subsection 9.

12. Existing historic sites and structures which either appear on the National

Register or are nominated to the National Register by the state historic preservation officer;

13. Proposed private and public utility system including water, gas, telephone, fire hydrants, and any other services which shall supply the area (may be shown on separate plan);

14. Sanitary sewer and storm drain plans and profiles showing size, kind and slope of pipe, proposed manhole rim and invert elevations and catch basin locations and drains (may be shown on separate plan);

15. Lighting plan showing the location, design, height and spacing from each other of the support poles, in accordance with standards and specifications established by the Public Works Authority (may be shown on separate plan);

16. Tree plan showing groups of existing, sizeable trees which the subdivider intends to preserve (may be shown on separate plan);

17. A detailed plan of the entire subdivision and the immediate vicinity showing all existing and proposed drainage both on- and off-site including drainage swales, ditches, etc., with directional flow arrows and approximate slope grades, and showing proposed finished "spot elevations" around the perimeter of the subdivision. Proposed drainage shall be shown as it may affect or restrict development on individual lots and with reference to improvements for which a performance guarantee is required under this article. Where deemed feasible by the Public Works Authority, proposed finished contours at intervals of two feet shall be provided on the drainage plan upon request (may be shown on separate plan);

18. Location and designation of any zoning district boundaries affecting the subdivision;

19. All future phases and sections of the subdivision proposed by the subdivider (may be shown on separate plan);

20. Proposed parks and school sites, or other public open space that the developer proposes to convey to the city;

21. Names, addresses and stamp or certification, if applicable, of registered professional engineer, subdivider, and owner:

22. At the option of the subdivider, any other information that may be necessary for the full and proper consideration of the subdivision shall be submitted in writing;

23. Streets and right of way monuments and property line markers;

24. Vicinity sketch (may be shown on separate plan);

25. Total site data, including total area of the subdivision, total area in streets, total area in recreation or open space and number of house lots;

26. Profiles of each street or way in the subdivision shall be shown on the subdivision plat. They shall be drawn to a longitudinal scale of 40 feet to one foot and a vertical scale of four feet to one inch. Such profiles shall include separate profiles of each side line and center line of the street or way. Any buildings abutting on the street shall be shown in standard engineering format as requested by the Public Works Authority.

B. Supplemental Submission Items. The following submission items shall be provided if required by the Planning Board and insofar as feasible:

1. When private sewage systems are used, the results and supporting data of a soil test of each lot in the subdivision conducted by a soil evaluator licensed in the state;

2. When the adequacy of the subdivision's load bearing capacity is in question, the results and supporting data of test borings conducted by a professional engineer registered in the state;

3. When conditions warrant, a program which shall be implemented by the subdivider to control dust, erosion and sedimentation and/or vehicular traffic during construction;

4. Evidence of the applicant's financial capability to carry out all phases of the proposed development;

5. Evidence of technical capacity to undertake the development;

6. Evidence of state and federal approvals, licenses or permits required by law, or the status of applications therefor;

7. Price range of houses that will be built in the subdivision;

8. Traffic impact analysis;

9. High intensity soil survey, if required by the Planning Authority;

10. Types and estimated quantities of solid waste to be generated by the development;

11. Construction plan outlining the anticipated sequence of construction of the major features of the project including without limitation roads, retention basins, sewer lines, seeding and other erosion and sedimentation control measures, and pollution abatement measures and also setting forth the approximate dates for commencement and completion of the project;

12. A narrative and a plan showing all proposed buffer strips, their dimensions, and maintenance plans and responsibilities;

13. A description of any wetlands, wildlife and fisheries habitats, archaeological sites or unusual natural areas located on or near the project site and a description of the methods that will be used to protect such area; and

14. Where submission drawings are available in electronic form, the applicant shall submit any available electronic CADD.DXF files with final plans.

C. Recording Plat. The Recording plat shall be an original ink drawing on linen or mylar, or as necessary to be acceptable to the Registry of Deeds, and shall be tied to an accepted street or to a proposed street under construction and bonded to insure construction. The plat shall show the following:

1. Title, date, graphic scale, north arrow, name, signature and registration number or seal of a registered land surveyor licensed in the state, name and address of developer and owner;

2. Tract boundary lines and property lines of lots, with accurate dimensions and either bearings or deflection angles. All lots shall be numbered;

3. All appropriate street curve information, including point of tangency, tangent distance, radii and interior angles, in standard engineering form;

4. Street names, width of street rights of way and typical cross section showing only surface dimensions of roadway pavement, esplanade and sidewalk reservation;

5. Street and right of way monuments and property markers. Iron pipes shall be designated by a small circle at the point of installation;

6. Locations, dimensions and purposes of any easement or right of way;

7. Purpose for which sites, other than residential lots, are dedicated or

reserved; it being understood that any reservations of areas shall be subject to the proper zoning thereof;

8. Reference to recorded subdivision plats of adjoining platted land by book and page number;

9. Space for the signatures of the Planning Board and date of approval;

10. Where required by 30 A M.R.S. § 4406, the fact that initial approval or subsequent amendment of a subdivision is based in part upon the granting of a variance from any of the applicable subdivision approval standards.

17. TRANSPORTATION STUDIES & PLANS

17.1. TRANSPORTATION STUDIES

17.1.1. Definitions: For the purposes of this section, **passenger car equivalents (PCE)** shall be defined as the number of passenger cars or, in the case of non-passenger vehicles, the number of passenger cars that would be displaced by non-passenger vehicles. One tractor trailer combination is the equivalent of two passenger cars.

17.1.2. Applicability: Developments that generate 100 PCE or more during a peak hour period, thus requiring a Traffic Movement Permit (TMP), shall meet the requirements of TMP regulations of State Law, in addition to all applicable transportation site plan standards of the City Code. The calculation of the PCE trip level for determination of TMP thresholds shall be made prior to trip reductions for other modes or shared trips.

For more information concerning state TMP requirements, please refer to https://www.maine.gov/mdot/traffic/docs/229c305.pdf or contact the Maine Department of Transportation (MaineDOT). The City of Portland is the delegated reviewing authority for TMP applications.

Developments generating at least 25 PCE and less than 100 PCE during a peak hour period may be required to complete a transportation study. The determination shall be made by the City Traffic Engineer, based upon the proximity of the development site to identified issues related to safety, congestion, and/or multi-modal accessibility.

17.1.3. Preparation: Transportation studies shall be prepared, stamped, and signed by a Professional Engineer licensed in the State of Maine.

17.1.4. Scope of study: The City Traffic Engineer, in consultation with the applicant's engineer, shall determine the scope of the transportation study. The scope of the study may include, but is not limited to, the following elements:

- A description of the development proposal.
- A description of the existing multi-modal transportation conditions and context.
- Estimated trip generation by the development and design hour volume for site driveway(s) and study intersections by mode. Trip generation will be based upon current Institute of Transportation Engineers data, or approved alternate methodology, by mode.
- Trip distribution.
- Multi-modal level of service analysis pre-and post-development at study area intersections and roadway segments.

- Capacity analysis at study area intersections, including level of service (LOS), delay, volume-to-capacity ratios, and queue analysis.
- Crash analysis within the study area, or expanded study area if deemed appropriate.
- Key findings regarding multi-modal traffic and safety issues in the existing condition or as a result of project-generated trips.
- Analysis of impacts to pedestrians, bicyclists, and transit service and users.
- Summary of findings and recommendations for transportation improvements and other impact mitigation measures.

17.1.5. Mitigation: Mitigation of development project impacts may be required under MaineDOT TMP regulations and/or by the City of Portland through a transportation study. In some cases, where safety or capacity improvements to vehicle operations are not feasible due to constraints, mitigation may consist of in-kind multi-modal improvements to pedestrian, bicycle, and/or transit facilities and service. Where required, mitigation measures shall be included in the applicant's transportation study, and shall be approved by the Department of Public Works prior to site plan approval.

17.2. PARKING STUDY

Parking studies shall be produced by a licensed transportation engineer.

Where a parking study is required, data shall be determined by values contained in the current version of the Institute of Transportation Engineers (ITE) publication titled Parking Generation, or through local, regional or other pertinent national data. If local or regional data is to be used, the scope and methodology of the parking study shall be coordinated with the City Traffic Engineer.

Parking studies for mixed-use developments shall reference best practices for shared parking, both in terms of calculations and studies, such as the Urban Land Institute's Shared Parking.

Where a parking study is required, the scope of study shall be determined in coordination with the City Traffic Engineer. The requirements for the study shall be based on standard transportation engineering practices.

17.3. TRANSPORTATION DEMAND MANAGEMENT (TDM)

All TDM Plans shall:

17.3.1. Include a transportation narrative:

Every TDM plan shall describe how the project fits within the multi-modal

transportation system serving the district in which the development or site is located. The narrative should address the specifics of the land uses, occupants, visitors, and location of the development and how it is anticipated to relate to its transportation context.

The narrative for the transportation context should address applicable existing conditions and TDM challenges and opportunities for the site related to vehicular access and circulation, the quality of the bicycling and pedestrian environment and facilities, transit service levels and the transit-supportive environment, and current levels of parking and parking policies. For existing developed sites, the current state of any TDM-related efforts should be described.

17.3.2. Identify a TDM Coordinator to administer the TDM plan:

Every TDM Plan shall identify a TDM coordinator or coordinators and establish the roles and responsibilities of the coordinator. The plan should demonstrate how the administration of the TDM plan and role of the TDM coordinator will reflect the scale of the site/development, proposed uses, parking and vehicle trip reduction targets, as well as the ownership and property management framework.

17.3.3. Document baseline TDM data:

The TDM plan shall identify baseline travel demand and supply data for the development or site in tabular format, against which future performance can be measured. Baseline data shall include:

- Future trip generation estimates (where applicable),
- Proposed parking supply and future demand estimates (where applicable), and
- Estimated modal split, recognizing modal split as the uniform metric to be used in TDM reporting in subsequent years.

Baseline data shall correspond to the transportation analysis required for the project, and shall represent best estimates of transportation demand and modal split at time of occupancy, given the transportation context.

1.13.4. Set TDM targets:

The TDM plan shall establish short-term (3-5 year) and long-term modal split targets, based on documented baseline transportation demand data, the combination of land uses, location, transportation context, and other data for the site. Modal split targets shall relate directly to the transportation infrastructure

provided, TDM strategies to be employed, and site context, and shall consider city-wide TDM goals as represented in plans such as *One Climate Future*. The metrics for TDM modal split targets shall be measurable, and shall include goals for reductions in single-occupancy vehicle trips and increases in non-single-occupancy trips, broken down by mode. The targets shall be described in both absolute values and percentage terms. The targets will be reviewed and updated based upon the annual TDM reporting.

17.3.5. Set customized modal split strategies:

Every TDM plan shall include a set of strategies designed to achieve the TDM target~~s~~. The strategies should be customized to reflect the specific mix of uses, the population that will access the site, the scale of development, the location, the modal split targets, and the transportation opportunities available to the site. The strategies should also reflect a broad mix of TDM approaches, including approaches that:

- Provide TDM infrastructure and operations to the site (e.g. on-site lockers and shower facilities, transit capital or operation funding, programming that supports TDM, such as guaranteed ride home or ride-matching programs)

- Incentivize TDM options (e.g. through parking cash-out, preferential carpool parking, subsidized transit passes, subsidized bicycle maintenance, or bikeshare memberships), and

- Educate users of the site about TDM options (e.g. through site-level information-sharing mechanisms, provision of transit maps and schedules, etc.).

For additional information on TDM strategies, see https://www.portlandmaine.gov/721/TDM-Parking.

17.3.6. Establish a monitoring and reporting plan:

All TDM plans must include provisions for monitoring program effectiveness over time to establish whether progress toward TDM targets is being met.

Responsibility: TDM Coordinators and/or plan administrators are responsible for monitoring the efficacy of the TDM plan and making adjustments to the plan as needed to achieve modal split targets.

Methods: The methods of monitoring shall be outlined in the TDM plan. Monitoring methods will typically involve use of an annual survey combined

with other data collection, such as parking utilization counts where needed.

Reporting: The results of TDM plan monitoring shall be reported to the City of Portland on an annual basis using reporting tools provided by the city.

17.4. CONSTRUCTION PERMITTING AND TRAFFIC CONTROL PLANS

17.4.1. Construction activity in the public right-of-way is controlled by Chapter 25 Article VII of the City Code of Ordinances. Required licenses and permits, restrictions on activity, and fees & charges are all outlined in that Chapter. Rules and Regulations for Excavation Activity are available through the Street Opening Clerk at the Department of Public Works.

17.4.2. Sewer and stormwater system connections are controlled by Chapters 24 and 32 of the City Code of Ordinance. Required permits for new connections and/or abandonment of existing connections are available through the Street Opening Clerk at the Department of Public Works. Rules and Regulations for these utility systems are available through the City Engineer's office of the Department of Public Works. See also Section II of the Technical Manual for lateral abandonment requirements associated with demolition permits.

17.4.3. Traffic Control Plans: Construction activity that impacts the existing public street system must be controlled to protect the safety of the construction workers and all modes of the traveling public. Projects that will occur along accepted city streets are required to submit a satisfactory 'maintenance of traffic' (MOT) plan prior to any site plan, subdivision, or street opening permit approval.

Maintenance of Traffic (MOT) plans shall provide for the safe passage of the public by all modes of transportation through or along the construction work zone. On a case-by-case basis applicants may be allowed to close a street and/or detour a mode of traffic when absolutely necessary for safety. These closures are to be limited to the shortest duration possible with durations specifically noted in the TCP documentation. MOT plans shall employ the appropriate techniques and devices as called for in the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD). In addition:

- Construction speed signing may be used as needed to slow traffic
- Traffic Control signs shall not be placed where they are an obstruction to bicycles or pedestrians. ADA-compliant access shall be maintained at all times and documented within Traffic Control Plans.
- In some situations, flaggers may be required to allow for safe pedestrian and bicycle movement

Additional information for temporary traffic control plans is provided in Chapter

6 of the MUTCD. (https://mutcd.fhwa.dot.gov/htm/2009/part6/part6_toc.htm

17.4.4. All existing modes of travel in the work zone area shall be accommodated if impacted by the activity. The safe passage of pedestrians, bicyclists, transit providers, and motorists are of equal importance when planning out the work zone; no pre-existing travel mode may be eliminated without the express approval of the Department of Public Works.

- Traffic control for bicycle and pedestrian facilities or routes through work zones shall be maintained until the bicycle and pedestrian facilities or routes are ready for safe operation. Traffic control will not be removed to allow auto travel at the expense of bicycles and pedestrians.

- Where pedestrian traffic is significant, and/or where a detour would present a significant delay and/or safety issue to pedestrians, a temporary walkway in the shoulder/parking lane/outside travel lane may be required where possible. Any temporary walkway shall be ADA-accessible, including temporary ADA ramps leading to/from the walkway where needed, and solid, detectable barriers along the edges of the walkway. Temporary walkways shall be kept clear of snow, ice and debris by the contractor at all times. Temporary walkways shall have a minimum clear width of five (5) feet.

- Pedestrian detours shall be considered as a last resort where no other practical option is available. Where pedestrian detours are allowed, pedestrians shall be directed to cross at existing crosswalk locations where practical. Temporary crosswalks and curb ramps may be required to shorten the overall detour. Any temporary crosswalk shall be ADA-compliant and shall be located where sight distance is adequate. All temporary crosswalks shall be approved by the Department of Public Works.

- Where construction requires the closure of a bicycle lane or shared use pathway alongside a high-volume and/or high-speed roadway, bicycle traffic shall be managed by the contractor in coordination with the Department of Public Works. Treatments may include a barrier-protected bicycle lane or shared use path, or bicycle detours as a last resort.

- Barrier systems utilized to separate the construction activity from the public street and/or sidewalk shall not inhibit sight distances, particularly for visibility of pedestrians and bicyclists.

For reference, see also “How to Plan, Document, and Implement Pedestrian Mobility in and around Work Zones”

(https://portlandmaine.gov/DocumentCenter/View/30884/Work-Zone-ADA)

17.4.5. Use of public parking spaces or the blockage of any portion of sidewalk for the purpose of construction activity shall require an occupancy permit and appropriate fee as assessed by the Department of Public Works.

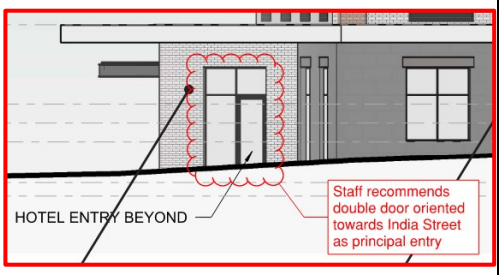
Design Review
Planning and Urban Development Department

Subject:	Design Review Memo for 203 Fore Street – Major Site Plan Application
Zone:	India Street Form Based Code (IS-FBC)
Date of Review:	April 10, 2025
Reviewer(s):	Eric Freeman (Planner), Matt Grooms (Deputy Director), Sean King (Urban Designer)
Project ID:	PL-002892-2024

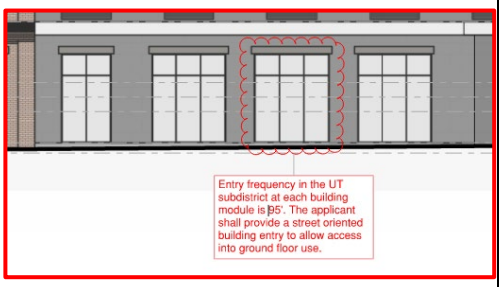
I. INTRODUCTION

The project at 203 Fore Street for the proposed hotel project consisting of 132 keyed rooms is subject for review according to the India Street Form Based Code (IS-FBC) design standards from the City of Portland *Design Manual* as defined in the ***Land Use Code Section 14.6.4.I Design standards*** when the application was originally submitted.

The built context of the surrounding area contains a variety of building types, architectural styles and mix of uses that vary in height and close proximity to the street typically found throughout Portland's India Street neighborhood.



II. **DESIGN REVIEW COMMENTS**: red text denotes standards not met and require resubmission. Design standards are objective criteria that provide specific direction based on the stated intent. Standards are used to denote issues that are considered critical to achieving the stated intent. Standards use the term "shall" to indicate that compliance is required unless it can be demonstrated that an acceptable alternative meets one or more of the following conditions in which case a waiver may be requested:



- The alternative better achieves the stated intent;
- The intent which the standard was created to address will not be achieved by application of the standard in this particular circumstance;
- The application of the other standards and guidelines to achieve stated intents will be improved by not applying this standard;
- Unique site factors make the standard impractical or cost prohibitive.

IS-FBC: Building Design Standards (BDS)					
	Complies	**More Info**	**Does Not Comply**	**N/A**	**Comments**
1. Neighborhood Context					
Intent	☒	☐	☐	☐	Staff finds that the proposed building is oriented towards Fore, India and Middle Street and responds to the neighborhood context with a high degree of architectural variation. **A public art project entitled *Portland Bricks* #8 and #11 are located within the public right-of-way in two locations at India and Middle Street. The Applicant has resubmitted plan C-2.1 to note that contractor shall locate, remove and store brick pavers which are part of the brick sidewalk public art project during construction. The pavers shall be kept and reinstalled in the same location to the satisfaction of the city.**
Guidelines	☒	☐	☐	☐	Staff finds that the proposed building respects the surrounding context to allow for the architectural expression of building modules, creates a relationship to the street with articulated building entries, arrangement of fenestration patterns and high-quality exterior material selection.
2. Massing & Proportion					
Intent	☒	☐	☐	☐	Staff finds the proposed massing is scaled for pedestrians throughout all street-facing facades.
Guidelines	☒	☐	☐	☐	Staff finds the proposed building exhibits appropriate variation in the building modules along the street frontage that mitigates floor elevation changes and provides clear proportions with the

					building's base, middle and termination at the roof line.
Standard 2.1	☒	☐	☐	☐	Staff finds the building modules along India Street are architecturally detailed to enhance the ground floor facades with clearly articulated building entries that can be accessed directly from the public sidewalk.
3. Articulation & Composition					
Intent	☒	☐	☐	☐	Staff finds a varied façade composition complements the surrounding context through ground-level articulation, retail bays and canopies that relate to each building module.
Guidelines	☒	☐	☐	☐	Staff finds the proposed building is architecturally scale to reduce the appearance of a large structure through an organized window fenestration pattern throughout each building module, horizontal delineation of floors and architectural detailing that express the character of facades facing the street.
Standard 3.1: required	☒	☐	☐	☐	The proposed building achieves ground-floor articulation by large storefront windows that delineate the upper floors with a belt course and projected canopies or awnings. In addition, the proposed building is scaled to create building modules that face the street with distinct exterior facade materials that relate to recessed elements along the façade and corners that staff finds appropriate.
Standard 3.2	☒	☐	☐	☐	Staff finds the exterior façade material changes are sufficient to provide at least 1" variation in wall plane.
Standard 3.3: Blank Wall	☒	☐	☐	☐	Staff finds no blank facades that exceed the maximum length allowed within the subdistricts
4. Fenestration					
Intent	☒	☐	☐	☐	Staff finds the proposed building design, arrangement of storefront windows, and window detailing provide high visibility

					along each street that reinforce safety and activity of the subdistrict streets.
Guidelines	☒	☐	☐	☐	Staff finds the fenestration pattern facing the street creates an active pedestrian environment and encourages visual transparency at the ground level.
Standard 4.1 (UA only)	☒	☐	☐	☐	Staff finds that between 60-90% of ground floor facade is composed of transparent materials to meet this standard.
Standard 4.2	☒	☐	☐	☐	Staff finds that at least 25% of upper facades are transparent glazing to meet this standard.
Standard 4.3	☒	☐	☐	☐	**The Applicant has provided transparent glass specifications to meet this standard for visual light transmittance (VLT) of at least .61.**
Standard 4.4	☒	☐	☐	☐	Staff finds this standard is met with no exemptions required.
5. Building Materials					
Intent	☒	☐	☐	☐	Staff finds that the building design and articulation of modules is complementary to the surrounding building context.
Guidelines	☒	☐	☐	☐	Staff finds the selection and arrangement of exterior façade material is appropriate to the surrounding context and reinforces the lower floors to include brick and masonry veneer that enhance the pedestrian environment.
6. Building Entries					
Intent	☒	☐	☐	☐	Staff finds that the proposed arrangement of street-facing entries reinforce pedestrian activity and circulation along the streets.
Guidelines	☒	☐	☐	☐	**The Applicant has resubmitted plans to clearly identify principal entrances oriented towards the street. Principal entrances are emphasized though either projecting canopies, awnings or changes in materials of greater detail that Staff finds appropriate.**
Standard 6.1	☒	☐	☐	☐	All principal entries for the hotel lobby and retail use are oriented directly and

					accessible to the public sidewalk and streets.
Standard 6.2 (UA only)	☒	☐	☐	☐	All principal entries for each building module directly face the UA streets along Middle Street and India Street.
Standard 6.3	☒	☒	☐	☐	**All street-oriented building entries are directly connected to the public sidewalk, the resubmitted plans create a stair transition from India Street to provide access to the hotel's principal entry. Staff recommends additional articulation or double entry door that visually identifies this principal entrance oriented towards India Street at the corner of India Street and Fore Street.** 
Standard 6.4	☒	☐	☐	☐	Each active use, proposed as retail and hotel lobby entries provide direct pedestrian access from the street
Standard 6.5	☒	☐	☐	☐	Staff finds the only recessed entry excluded from the setback requirements is at the corner of India Street and Fore Street.
Standard 6.6	☐	☐	☐	☒	No garage door proposed
Standard 6.7: Frequency	☒	☒	☐	☐	**Staff finds that the principal entrances along the UA streets are all oriented towards the street. The Applicant has resubmitted plans that include additional elevated stoop entries along India Street to access the building module floor elevations as non-principal entries which is allowed along a UA street.** **Entry frequency of 40 feet is generally met with the exception along India Street (UA street) for the principal entrance at the corner of India Street and Fore Street. Staff supports a partial waiver under *LUC 9.1.3.B for 4. Building entry frequency* and finds the proposed zoning alternative better achieves the zone and subdistrict intent**

					due to the existing topographic change along the India Street. **Staff finds that building entry frequency is not met along Fore Street (UT subdistrict). The resubmitted plans indicate a hotel lobby entrance with a canopy oriented towards Fore Street but eliminated a building entry at the "Fore Street Module 1". Building entry frequency in the UT subdistrict is 95', the Applicant shall provide a street-oriented building entry to allow access into the ground floor, see below for Staff recommendation.** 
7. Roof Lines					
Intent	☒	☐	☐	☐	Staff finds the roof line and building top termination with pronounced cornice is appropriate throughout the building modules.
Guidelines	☒	☐	☐	☐	The Applicant has resubmitted plans to adjust the roofline with articulation of a pronounced cornice detail that Staff finds appropriate to the surrounding context.
Standard 7.1	☒	☐	☐	☐	**The Applicant has resubmitted plans to indicate screening specifications for the proposed mechanical equipment at the roof level that Staff finds appropriate.**
Standard 7.2	☒	☐	☐	☐	The Applicant has resubmitted plans with a simple flat roof form with cornice articulation that Staff finds appropriate to each building module.
8. Structured Parking					
Intent	☒	☐	☐	☐	Staff finds the proposed development does not include structured parking, rather a parking deck covered by a pedestrian amenity outdoor space to minimize the

					visual and noise impact of the parking area below grade from Middle Street.
Guidelines	☐	☐	☐	☒	
Standard 8.1	☐	☐	☐	☒	
Standard 8.2	☐	☐	☐	☒	
Standard 8.3	☐	☐	☐	☒	
Standard 8.4	☐	☐	☐	☒	

Site Plan Review Standards (Sec. 13.6)		
Transportation Standards (Sec. 14.3.1)		
Standard	*Discussion*	*Finding*
Impact on Surrounding Street Systems	Updates Requested • DPW has repeatedly seen operational issues with the currently proposed configuration of hotel loading zones in other locations within the City. Frequently the loading zone will be full at hotel check-in which results in double parking into the travel lane essentially blocking vehicles from safely travelling down Fore Street and will cause issues into the intersection. DPW is not in support of this configuration on Fore Street and operations should utilize the existing Hampton Inn valet operations. • Delivery vehicles for the existing Hampton Inn frequently block the westbound travel lane on Fore Street, given that the existing Hampton Inn driveway can accommodate delivery vehicles and other service vehicles all vendors should be directed to do so for both the existing Hampton Inn and the proposed Home 2 Suites. • The City will need easement for existing lighting along the south side of Middle Street.	Not Met
Access and Circulation	Updates Requested • The primary entrance at the corner of Fore and India Street should front India Street. See attached design memo	Not Met
Traffic Movement Permit	Updates Requested • Per MaineDOT Traffic Movement Permit regulations, a Section 7 Study may be required. This determination was identified at the Scoping meeting. The revised report shall be noted as Section 7 of the Traffic Movement Permit. • There was considerable discussion regarding valet operations and routing to and from the on-street area where hotel guests will drop off and pick up their vehicles. ○ Figures 11 and 12 need to be revised account for all hotel trips (hotel guests and valet) arriving/departing	Not Met

curbside in front of hotel facing the westerly direction. The following are specific comments:

- It is my understanding that all hotel guests will arrive curbside and use valet services and not enter the parking lot. Figure 11 indicates 23 (24) trips will enter the site from Franklin Street. I'm not going to summarize all these types of inconsistencies, but the trip distribution must clearly account for hotel guests arriving to curbside, and valet services routing the vehicles from the curbside to a designated parking facility – and back to curbside. The report should be specific on valet routings (e.g., leaving curbside and u-turning into the site to return to India Street and the 1 India Street parking lot). This is a complicated assignment of trips, but I need to fully understand the final assignment. Feel free to send me graphic examples, so that I can offer comments, before the report is resubmitted.

  - The assignment of trips to the site assumes a significant portion arrives/departs via Fore Street east of India Street. I would expect most trips to arrive from Franklin Street/Congress Street/Washington Avenue.
  - The report shall speak to how the valet system will be managed from a curbside vehicle space capacity perspective and what strategies will be employed to ensure hotel guest vehicles will arrive in the appropriate direction on Fore Street. If the valet curbside space is unavailable, how will vehicles be managed. It should note the number of valet curbside spaces proposed and adequacy during peak periods. In general, the Section 7 report shall include a Valet Parking Management Plan.

- A concept plan shall be prepared depicting recommendations for the India Street intersections with Middle Street and Fore Street. The plan should consider the following:
  - Depicting the prohibition of parking spaces within 20 feet and the estimated loss of supply.
  - Curb extensions as noted in the report. Vehicle turning templates with and without the curb extensions shall be provided.
  - Installation of "All-Way" supplemental plates at the Middle Street intersection.

	○ Provide an opinion on the placement of STOP signs (and two sided) as it relates optimizing visibility. ○ Provide an opinion on the STOP Ahead warning sign in southbound India Street approaching Middle Street. ○ Provide an opinion on the W11-2 Pedestrian Warning sign on northbound India Street approaching Middle Street. ○ Recommend and include strategies that help to create intersections that prioritize pedestrian safety/movements. During field observations vehicles tended to "roll stop" both as through movements and turns creating unsafe pedestrian conditions. •	

Environmental Quality Standards (Sec. 13.6.2)

Standard	*Discussion*	*Finding*
Site Landscaping and Buffers	Updates Requested • The landscape plan should be updated to match the site plan.	Not Met
Water Quality, Stormwater Management and Erosion Control	Updates Requested • As a condition of this approval, the City of Portland requires the applicant to retain the services of a third-party inspector for the duration of construction until final site stabilization is in place. The inspector is required in order to ensure all construction and stabilization activities comply with the permit conditions and the approved drawings and specifications • The owner/operator of an approved stormwater management system, and all assigns shall comply with the conditions of Chapter 32, Stormwater including Article III, Post Construction Stormwater Management, which specifies the annual inspections and reporting requirements. • A maintenance agreement for the stormwater drainage system, as attached, or in substantially the same form, shall be submitted for review by Corporation Counsel. Once approved, the document shall be signed and recorded at the Cumberland County Registry of Deeds. The following stormwater management documentation shall be submitted to the Water Resources Division of Public Works and the Department of Planning and Urban Development prior to the issuance of a Certificate of Occupancy: ○ Final executed stormwater maintenance agreement with the final approved post stormwater management operation and maintenance plan.	Not Met

	○ Certification, based on initial comprehensive inspection from the project Engineer of Record, certifying that the approved stormwater systems were installed properly, are fully operational, and are functioning as intended. ○ As-built drawings including grading and drainage and updated details for any stormwater systems on site. ○ DPW Impervious Area Adjustment Form 5A ○ DPW Stormwater Credit Application Form 3 ○ DPW stormwater program forms can be found at the following link : https://www.portlandmaine.gov/1102/Credit-Manual-and-Applications	

Att. S5

203 Fore Street - Final Traffic Comments

2 messages

Tom Errico <thomas.errico@tylin.com> Fri, Jun 27, 2025 at 9:18 AM
To: Eric Freeman <efreeman@portlandmaine.gov>
Cc: Kristoffer DeVolder <kdevolder@portlandmaine.gov>, Jeremiah Bartlett <JBartlett@portlandmaine.gov>

Hi Eric – I have reviewed the application materials and have the following final traffic review comments.

- The applicant shall conduct a trip generation analysis for the project. Additionally, the applicant should note if there are any High Crash Locations in the vicinity of the project. A determination on the need for a traffic study will be determined following receipt of this information.

Status: The applicant has determined that the project requires a Traffic Movement Permit. Accordingly, the applicant will be submitting a TMP Application, and a scoping meeting will be scheduled after receipt and approval of the application.

Final Status: The applicant submitted a TMP Application, and a Scoping Meeting was held on March 11, 2025. A Section 7 Traffic Study was submitted, and the following comments were provided.

1. Per MaineDOT Traffic Movement Permit regulations, a Section 7 Study may be required. This determination was identified at the Scoping meeting. The revised report shall be noted as Section 7 of the Traffic Movement Permit.

Status: The report has been revised, and I have no further comment.

2. There was considerable discussion regarding valet operations and routing to and from the on-street area where hotel guests will drop off and pick up their vehicles.
    - Figures 11 and 12 need to be revised account for all hotel trips (hotel guests and valet) arriving/departing curbside in front of hotel facing the westerly direction. The following are specific comments:
        - It is my understanding that all hotel guests will arrive curbside and use valet services and not enter the parking lot. Figure 11 indicates 23 (24) trips will enter the site from Franklin Street. I'm not going to summarize all these types of inconsistencies, but the trip distribution must clearly account for hotel guests arriving to curbside, and valet services routing the vehicles from the curbside to a designated parking facility – and back to curbside. The report should be specific on valet routings (e.g., leaving curbside and u-turning into the site to return to India Street and the 1 India Street parking lot). This is a complicated assignment of trips, but I need to fully understand the final assignment. Feel free to send me graphic examples, so that I can offer comments, before the report is resubmitted.

Status: The applicant has provided revised information, and I find it to be acceptable.

- The assignment of trips to the site assumes a significant portion arrives/departs via Fore Street east of India Street. I would expect most trips to arrive from Franklin Street/Congress Street/Washington Avenue.

Status: The assignment has been revised, and I find it to be acceptable.

- The report shall speak to how the valet system will be managed from a curbside vehicle space capacity perspective and what strategies will be employed to ensure hotel guest vehicles will arrive in the appropriate direction on Fore Street. If the valet curbside space is unavailable, how will vehicles be managed. It should note the number of valet curbside spaces proposed and adequacy during peak periods. In general, the Section 7 report shall include a Valet Parking Management Plan.

  Status: The applicant has proposed a Valet Management Plan that will ensure valet traffic operations will not create unsafe conditions at the Fore Street/India Street intersection. Key components of the Plan include appropriate staffing; travel information provided to guests; prioritizing use of on-site parking; and guest vehicle pick up will occur on-site and not curbside. I find the Plan to be acceptable.

3. A concept plan shall be prepared depicting recommendations for the India Street intersections with Middle Street and Fore Street. The plan should consider the following:
   - Depicting the prohibition of parking spaces within 20 feet and the estimated loss of supply.
   - Curb extensions as noted in the report. Vehicle turning templates with and without the curb extensions shall be provided.
   - Installation of “All-Way” supplemental plates at the Middle Street intersection.
   - Provide an opinion on the placement of STOP signs (and two sided) as it relates optimizing visibility.
   - Provide an opinion on the STOP Ahead warning sign in southbound India Street approaching Middle Street.
   - Provide an opinion on the W11-2 Pedestrian Warning sign on northbound India Street approaching Middle Street.
   - Recommend and include strategies that help to create intersections that prioritize pedestrian safety/movements. During field observations vehicles tended to “roll stop” both as through movements and turns creating unsafe pedestrian conditions.

Status: Refer to DPW comments. I would note that upon final approval of the concept plan, the applicant will be responsible for the implementation of all improvements following approval of final design plans.

- The applicant should provide on-site handicap parking spaces or provide documentation that those types of spaces are not required according to ADA requirements.

Status: The site plan has been revised to include on-site handicap parking spaces. The applicant should provide information on how those spaces will be managed from a driver/building access perspective.

Final Status: The applicant notes that given Valet operations, only an accessible loading zone is required. The plan has been revised for this zone.

- The site plan shall include dimensions for parking spaces and aisle widths.

Status: Dimensions have generally been provided. The applicant shall provide documentation in support of waivers for all parking lot dimensions that do not meet city standards.

Final Status: The applicant is requesting two waivers, the number of compact parking spaces and drive aisle width. Given that the on-site parking spaces will be used by valet drivers, I support the requested waivers.

- The site plan shall be revised to note Hotel Parking signs and not Valet Parking. Rather than have the Hotel Parking be in the middle of Pay to Park spaces, it is suggested the Hotel spaces be shifted toward India Street.

Status: The plan has been revised, and I have no further comment.

- I continue to review parking supply conditions. I would note that the Hampton Inn currently utilizes the entire site on busy days and further note these busy days occur both during the week and on weekends.

Status: The applicant shall conduct a detailed parking demand estimate for the site, particularly considering that current parking demand conditions where the Hampton Inn frequently exceeds demand. Additionally, the applicant shall provide documentation on off-site parking lot availability for the facilities noted. Lastly, the applicant shall note how parking will be managed between the two hotels.

Final Status: The applicant has generally provided information that documents demand and parking supply availability (parking lots that are under UPP control). I find their response to be reasonable, but would note that given Hampton Inn peak parking demand, the use of off-site parking facilities will be necessary.

- The applicant should note what the parking area bounded by parking spaces 73, 92, 93 and 94 is intended for.

Final Status: The applicant has noted that this space will be used for stormwater management, and I have no further comment.

- The applicant shall provide information on truck delivery accommodations for the site.

Final Status: The applicant has noted that deliveries will occur on-site via the existing driveway. I have no further comment.

Please contact me if you have any questions.

Portside Condominium Association
207 Fore Street
Portland, Maine

To: City of Portland Planning Board
From: Portside Condominium Association
Subject: Review Comments, Traffic Impact Study, Proposed Home 2 Suites Hotel, 203 Fore Street, Portland
Date: June 29, 2025

The following comments related to the proposed Home 2 Suites development are being submitted by the Portside Condominium Association. We, the members of the 12-unit Association, continue to have serious concerns with public safety issues likely to be introduced by the completed development from offsite congestion brought on by increased uncontrolled vehicular and pedestrian traffic.

As members of the master condominium association that includes the Hampton Inn and the Friendly Toast Restaurant, we are co-owners of the property to be used for the proposed hotel operations. Of those residents living in the neighborhood surrounding the proposed development, we will be among those most affected by the increased congestion that will likely result. We would like to see the issues raised in our comments addressed during Planning Board review of the project.

We offer the following comments regarding statements made in the applicant's Traffic Impact Study (TIS) dated March 2025. We believe that certain statements and conclusions in the study show a disregard for the actual everyday traffic patterns in the study area, and do not acknowledge the detrimental impacts to public safety that will result should this project be implemented.

Statements made in the TIS and our comments are listed below.

Site Access and Parking

TIS Statement:

"*The site is proposed to be accessed via one full movement entrance.*"

Portside Review Comment:

This TIS statement is flawed as noted below:

> The statement is a misrepresentation of the proposed access to the new hotel that actually consists of “three valet spaces along the frontage of Fore Street.” The only use of the Hampton Inn access driveway will be for uses such as valet parking on low occupancy nights and trash trucks.

TIS Statements:

“*If valet spaces on Fore Street are occupied when a vehicle arrives, they will be directed off-street to enter the existing shared driveway. Once off-street, UPP can meet the needs of the guests and provide valet service. This approach is intended to avoid congestion on Fore Street*.”

Portside Review Comments:

These TIS statements are flawed as noted below:

1. The statements fail to acknowledge that the scenario where the valet spaces are occupied and waiting traffic needs to be directed elsewhere has already created congestion on Fore Street. Therefore, congestion has already occurred and cannot be avoided.
2. The statements do not take into account the recurring situation when there is no room in the existing shared driveway at the Hampton Inn because it is full of vehicles. This is a common occurrence, especially during times when Hampton Inn guests are arriving to check in (see **Attachment 1** for example photo). This situation will lead to driver confusion and enhanced vehicle congestion in a high-pedestrian usage area in front of the Hampton Inn. Where will the drivers of these vehicles go when the driveway is full?

TIS Statement:

“*In addition to the above off-site spaces, approximately 84 valet spaces are provided on-site*. “

Portside Review Comments:

This statement apparently attempts to convey some sort of comfort that there is an abundance of available parking in the Hampton Inn lot when in actuality the Hampton Inn parking lot is often overflowing with guest and other vehicles, and as a result valets park vehicles in spaces not intended for parking (e.g., the grass strip surrounding the parking lot and the area in front of the dumpster room). See **Attachment 2** for example photo.

Note that there are 125 rooms in the Hampton Inn, and when the hotel is full there is simply not enough room in the lot for all of the guest vehicles plus hotel vendors and hotel staff who typically park there. Under the "seamless" valet system referred to in the TIS, where will the drivers of the vehicles checking into the proposed hotel be directed when the three Fore Street valet spaces are full and there is no room on-site?

As an aside, how is the city being compensated for the loss of the three Fore Street parking spaces being taken over by the hotel developer?

Sight Distance

TIS Statements:

"*Based on the MaineDOT Map Viewer, the speed limit for Fore Street along the site frontage is 25 mph. The posted speed limit of 25 mph was used for the sight distance evaluation. Table 8 summarizes the measured sight distance at the existing entrance location based on the type of vehicle it is expected to accommodate. Table 8 – Sight Distance Summary Driveway Passenger Vehicle Required (feet) Observed Looking Left* (feet) Observed Looking Right* (feet) Full Movement Entrance 200 310 (To Intersection) 210 (To Intersection) *Assumes not blocked by parked cars Both distances could not be confirmed due to vehicles parked along the site frontage. However, the sight distance is expected to exceed requirements without parked vehicles. To improve the sight distance for this entrance, on-street parking in the immediate area would need to be removed; however, the City would need to do that if desired*."

Portside Review Comment:

The TIS acknowledges that sight distances in both directions from the driveway at the Hampton Inn cannot be confirmed due to parked vehicles along the site frontage. This situation results in traffic safety issues posed to vehicles leaving the Hampton Inn who cannot clearly see the traffic in either direction on Fore Street upon exiting. This safety issue will only be exacerbated by the additional traffic associated with the proposed development.

Bicycle, Pedestrian, and Transit

Portside Review Comments:

Although well-intended, the modest improvements (e.g., curb extensions, modified crosswalk striping, parking space reduction) recommended for the street intersections adjacent to the proposed development will do little, if anything, to address the public safety hazards posed by the proposed development described in our previous comments dated October 7, 2024 submitted to the Planning Board. For convenience, our concerns stated previously are summarized as follows:

- Despite best valet efforts, the potential will always exist for vehicles to back up behind the three designated Fore Street valet parking spaces into the India Street / Fore Street intersection, one of the busiest intersections in Portland's east end and the site of a pedestrian fatality earlier this year.
- Non-hotel related traffic heading southbound on Fore Street, encountering standing vehicles behind the three valet spaces will attempt to maneuver around by pulling into the northbound travel lane which often contains its own heavy traffic including standing vehicles making deliveries to the Hampton Inn.
- Guests arriving for check-in at the proposed hotel in the three designated parking spaces could potentially exit their vehicle onto the adjacent Fore Street travel lane into oncoming traffic, creating a serious safety issue.
- Most of the guest vehicles arriving at the proposed hotel will be heading northbound on Fore Street and will need to turn around in

the vicinity of the busy India Street / Fore Street intersection to access the three valet spaces.

We believe that as full-time residents of the property proposed for development, we are far more knowledgeable than the developer regarding the actual traffic conditions in the area, and trust that the Planning Board will take into account our concerns regarding the enhanced public safety hazards posed by the proposed project.

We conclude our comments with the following cautionary statement: Should the hotel development be approved and implemented as currently proposed and the public safety concerns we have described be realized, the situation would be permanent with no remedy options available.

Thank you for your time.

Re: Proposed Home 2 Suites Hotel
203 Fore Street
Portland, Maine

Dear Kevin:

Ransom Consulting, LLC (Ransom) is pleased to submit this Major Site Plan application, along with supporting materials, on behalf of Chatham Lodging Trust (dba Chatham Portland DT LLC). The project is located at 203 Fore Street and is identified as Chart and Block 029 L003.The property is located in the India Street Form Based Code District and is currently being used for parking for the Hampton Inn hotel and associated condo units on the adjacent parcel. The parcel has a history of petroleum contamination and is currently part of Maine's Voluntary Response Action Program (VRAP), which encourages the cleanup and redevelopment of contaminated properties.

The redevelopment proposed for this site includes a mixed use building with 5,519 square feet (sf) of retail space on the ground floor and 79,946 sf of hotel space throughout 5 floors – with a building footprint of approximately 16,612 sf. The parcel is bounded on the north by India Street, on the west by Middle Street, on the east by Fore Street, and on the south by the existing Hampton Inn. Topographic relief across the site from Middle Street to Fore Street is 7 feet to 8 feet and presents challenges for building entrances and uses.

The proposed 5 story structure will have multiple entrance points for different uses. The hotel entrance is proposed at the intersection of Fore Street and India Street with entrances for the 3 proposed retail units along Middle Street and India Street. Parking is expected to continue to be accessed through the existing curb cut for Hampton Inn valet driveway along Fore Street and is incorporated into the design to include a structural canopy with upper hotel floors above. A retaining wall is proposed adjacent to Middle Street to facilitate the change in grade, but will also include a structural landscaped deck above with parking at grade.

We look forward to continuing to work with you and Planning Staff on this project. Please feel free to reach out with any questions or comments you may have.

Sincerely,

RANSOM CONSULTING, LLC

MAJOR SITE PLAN
GENERAL DOCUMENT AND DRAWINGS CHECKLIST
Please submit each document as a separate PDF file.
Please confirm by electronically checking the boxes in the left-hand column.

**** PLEASE FILL OUT AND UPLOAD THE ZONING ASSESSMENT TABLE AND WAIVER TABLE SEPARATELY AS NOTED BELOW ****

At the time of application submission, please contact the Department of Public Works regarding E-911 addressing for your project.

GENERAL APPLICATION DOCUMENTS	
Yes NA	**Project Description** • Cover letter with detailed project description
Yes NA	**Completed Checklist** (this document)
Yes NA	**Evidence of Right, Title, and Interest** • Deeds, leases, or purchase and sales agreements
Yes NA	**Evidence of State or Federal Approvals** • Permits or letters of non-jurisdiction, if applicable
Yes NA	**Zoning Assessment** (see Zoning Assessment Table) Summary of compliance with use and dimensional standards of the land use code
Yes NA	**Site Plan Standards Assessment** (see Section 14.6 of the land use code) • Summary of project compliance with site plan standards of the land use code
Yes NA	**Summary of Existing and/or Proposed Easements or Covenants, applicable.** • Evidence of existing easements and any proposed easements, covenants, public or private rights-of-way
Yes NA	**Waiver Requests** (see Waiver Table) • Written request for waiver describing request and compliance with applicable waiver standards
Yes NA	**Financial Capability** • Letter or evidence from a financial institution or third party verifying financial capacity to undertake project
Yes NA	**Technical Capability** • Evidence of technical capability of applicant and consultants – resumes and/or examples of past projects

MAJOR SITE PLAN
STANDARDS AND SUBMISSION CHECKLIST

Provide assessment of compliance with standards and include supplemental documentation, as applicable.
Please submit each document as a separate PDF file.

TRANSPORTATION	
Yes **NA**	**Impact on Surrounding Street Systems (14-14.6.1(A))** ● Describe incremental volume of traffic impacts and mitigation measures. If needed
Yes **NA**	**Access and Circulation (14-14.6.1(B))** Identify and describe the following: ● Site access and internal circulation, including ADA access ● Drive-up features, if applicable ● Loading and servicing needs, routes, and geometry, providing turning templates for delivery vehicles, if applicable ● Sidewalks and condition along street frontages and internal walkways ● Engineered details for ADA ramps and public sidewalks, meeting sidewalk material policy and construction requirements (Technical Manual, Section 1)
Yes **NA**	**Public Transit (14-14.6.1(C)), if applicable** Identify and describe the following: ● Existing available transit service and proposed transit improvements, including design details, such as easement, pad base, and shelter
Yes **NA**	**Off-Street Parking (14-14.6.1(D)), if applicable** Identify and describe the following: ● Proposed vehicular and bicycle parking supply (including ADA-compliant parking) in relation to applicable parking requirements in Article 19 of the land use code ● Curb cut separation and parking layout (Technical Manual, Section 1) ● Construction details for bicycle racks ● Management plan for snow storage and removal
Yes **NA**	**Transportation Demand Management (TDM) (14-14.6.1(E)), if applicable** ● Provide TDM plan drafted in accordance with Technical Manual Section 1 requirements

ENVIRONMENTAL	
Yes NA	**Preservation of Significant Natural Features (14-14.6.2(A)), if applicable** Identify and describe the following: ● High and moderate value waterfowl and wading habitat ● Aquifers (for Casco Bay Islands) ● Waterbodies (including wetlands, watercourses, significant vernal pools and floodplains) ● Proposed preservation areas and protection measures ● Documentation from environmental compliance consultants and determinations from applicable state and federal agencies
Yes NA	**Landscape Preservation (14-14.6.2(B))** Identify and describe the following: ● Measures to preserve trees, including within required zoning setbacks (Technical Manual, Section 4) ● Measures to protect existing vegetation during construction
Yes NA	**Site Landscaping and Buffers (14-14.6.2(C))** Identify and describe the following: ● Overall landscaping approach and consistency with standards ● The use of screening and buffering of service areas and between non-residential and residential uses ● Existing Heritage or Feature Trees on site and measures to preserve ● Compliance with street tree requirements
Yes NA	**Water Quality, Stormwater Management, and Erosion Control (14-14.6.2(D))** Identify and describe the following: ● Erosion and sedimentation control plan and measures ● Evidence of compliance with Urban Impaired Stream Standards pursuant to DEP Chapter 500 stormwater law, as applicable ● Subsurface sanitary sewage disposal and groundwater protection measures

PUBLIC INFRASTRUCTURE AND COMMUNITY SAFETY		
Yes	**NA**	**Consistency with City Master Plans (14-14.6.3(A))** ● Describe proposed easements, rights and improvements to connect or continue off-premises public infrastructure, as applicable
Yes	**NA**	**Public Safety and Fire Prevention (14-14.6.3(B))** Identify and describe the following: ● Compliance with Crime Prevention through Environmental Design (CPTED) requirements (Technical Manual, Section 3) ● Emergency vehicle access ● Consistency with public safety standards (Technical Manual, Section 3)
Yes	**NA**	**Availability and Adequacy of Public Utilities (14-14.6.3(C)) (Technical Manual, Sections 2 & 9)** Identify and describe the following: ● Electrical services, including providing underground services ● Existing and proposed connections for public utilities and required public utility upgrades ● Sewer line connections
SITE DESIGN		
Yes	**NA**	**Massing, Ventilations and Wind Impact (14-14.6.4(A))** Identify and describe the following: ● Wind and ventilation impacts on adjoining structures and/or adjacent public spaces, including wind study, if applicable ● Bulk, location, or height impacts on adjoining structures
Yes	**NA**	**Shadows (14-14.6.4(B)), if applicable** ● Provide shadow analysis of impacts on publicly accessible open space (Technical Manual, Section 11)
Yes	**NA**	**Snow and Ice Loading (14-14.6.4(C))** ● Describe building design measures to prevent snow and ice from loading or falling onto adjacent properties or public ways
Yes	**NA**	**View Corridors (14-14.6.4(D)), if applicable** ● Describe any protection of designated view corridors (Portland Design Manual, Appendix. 1)
Yes	**NA**	**Historic Resources (14-14.6.4(E)), if applicable** Identify and describe the following: ● The site's status as a designated landmark, within a historic district or historic landscape district, or within 100 feet of any designated landmark, historic district, or historic landscape district ● Compliance with standards for preservation and documentation of archaeological resources

Yes	**NA**	**Exterior Lighting (14-14.6.4(F))** ● Describe how the proposed site lighting will adhere to photometrics requirements as it relates to light trespass and full cutoff fixture design, pursuant to Technical Manual Section 12
Yes	**NA**	**Noise and Vibration (14-14.6.4(G))** ● Provide data on noise levels for HVAC and other mechanical equipment, such as design specifications, to demonstrate consistency with state and federal noise emissions requirements as well as City code
Yes	**NA**	**Signage and Wayfinding (14-14.6.4(H)), if applicable** ● Provide signage plan showing the location, dimensions, height and setback of all existing and proposed signs ● Provide drawings of all commercial and directional signage on site
Yes	**NA**	**Zone-Related Design Standards (14-14.6.4(I))** ● Address any applicable design review standards by zone, including compliance with Design Manual

MAJOR SITE PLAN
DRAWINGS CHECKLIST

Please upload the following DRAWINGS with the listed details into e-Plan as separate pdfs.

All drawings must be submitted in a 24 x 36 sheet size.

BOUNDARY SURVEY (stamped by a Maine Licensed Surveyor and drawn as per Technical Manual Sec. 13)

SITE PLAN(s) (stamped by a Maine Licensed Professional Engineer) including:

All sheets – Include a title block with project title and the following information:

- Project street address
- Name and address of property owner & applicant
- Licensed design professional, incl firm that produced plans
- North arrow
- Date of preparation and revision history block
- Tax parcel (chart, block, and lot) number

Existing Conditions Plan with the following:

- Existing structures, with distance from primary building façade(s) to the property line
- Approximate location of structures on abutting properties
- All streets and intersections adjacent to the site
- Existing driveways, pedestrian ways, and bicycle infrastructure, including dimensions and materials
- Existing public transit infrastructure
- Existing vehicle & bicycle parking areas
- Existing utilities on site and within adjacent rights-of-way
- Existing grades (two-foot contours preferred)
- Location of water courses, wetlands, and vegetation, or other significant natural features
- Existing soil conditions and location of test pits and borings
- Zoning boundary lines, including overlays
- Location of all existing easements and rights-of-way

Proposed Site Plan with the following:

- Proposed structures, including distance from primary building façade(s) to property lines
- Ground floor area, and finished floor elevations for all buildings
- Any proposed geometric modifications to streets and intersections adjacent to site
- Location, dimensions and materials of all proposed driveways, vehicle, bicycle, & pedestrian access ways with corresponding curb lines
- Engineered specifications/ cross-sections for proposed driveways, sidewalks & paved areas
- Location and dimensions of proposed loading areas, including turning templates
- Proposed transit infrastructure with dimensions/ engineering specifications
- Location of vehicle and bicycle parking with dimensions and engineering specifications
- Location of all snow storage areas
- Exterior lighting (please see Technical Manual Sec. 12 for photometrics requirements)

- Location of fire hydrants
- Location of solid waste management receptacles
- Location of all proposed HVAC and mechanical equipment, including proposed screening, where applicable
- Location of proposed easements and rights-of-way, including dimensions
- Please utilize color-coding and/or hatches and shading to delineate changes between the pre and post development condition as needed

UTILITY PLAN including:

- Proposed electrical infrastructure
- Location, sizing and directional flows of all proposed sewer and stormwater infrastructure
- Location and dimensions of off-premises public or publicly accessible infrastructure adjacent to site
- Electric utility infrastructure

GRADING AND DRAINAGE PLAN including:

- Proposed grades
- Proposed stormwater management measures meeting Technical Manual (Section 5) standards
- Any proposed alteration of a watercourse or wetlands
- Any groundwater protection measures
- Proposed buffers and preservation measures for wetlands or significant natural features

LANDSCAPE PLAN including:

- Existing vegetation to be preserved and preservation measures
- Proposed landscaping, screening, and street trees, including caliper widths for trees
- Planting schedule, including street trees

ARCHITECTURAL PLANS AND RENDERINGS including:

- Exterior building elevations, color renderings, illustrations of all sides
- Axonometric and street-level views for structures greater than three stories in height
- Provide context drawings, if applicable (Design Manual, page 1)
- Floor plans

CONSTRUCTION MANAGEMENT PLAN including:

- Specifics on traffic control, sidewalk sheds, and pedestrian rerouting
- Include a drawing and written narrative

OTHER

- Details and cross-sections, as necessary

Att. C

QUITCLAIM DEED WITH COVENANT
(Maine Statutory Short Form)

FORE INDIA MIDDLE, LLC, a Maine limited liability company, whose mailing address is 11 Corporate Drive, Belmont, New Hampshire 03220, for consideration paid, grants to CHATHAM PORTLAND DT LLC, a Delaware limited liability company, whose mailing address is c/o Chatham Lodging Trust, 50 Cocoanut Row, Suite 211, Palm Beach, Florida 33480, with Quitclaim Covenant, a certain lot or parcel of land, with any buildings and improvements thereon, located on Fore Street, India Street and Middle Street in the City of Portland, County of Cumberland, and State of Maine, being more particularly bounded and described as follows:

MAINE REAL ESTATE TAX PAID

Lot 2 as shown on a subdivision plan entitled "Subdivision Plan of Hotel, Restaurant & Portside Residences, 207 & 209 Fore Street, Portland, Maine" dated February 8, 2010, as most recently revised on April 23, 2010, approved by the City of Portland Planning Board on April 13, 2010, and recorded in the Cumberland County Registry of Deeds in Plan Book 210, Page 194 (the "Subdivision Plan").

Lot 2 is hereby conveyed together with and subject to the rights and easements granted by Old Port Hospitality, LLC to Fore India Middle, LLC and by Fore India Middle, LLC to Old Port Hospitality, LLC as set forth in an Amendment of Deed, Termination of Rights and Easements and Grant of Rights and Easements by and between Old Port Hospitality, LLC and Fore India Middle, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 181, subject to the terms and conditions with respect to said rights and easements as set forth therein.

Old Port Hospitality, LLC created a condominium on Lot 1 shown on the Subdivision Plan known as the Hotel, Restaurant and Portside Residences Condominium (the "Condominium") pursuant to a Declaration of Condominium dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 188, as amended by Amendment Number One thereto dated June 3, 2011, and recorded in the Cumberland County Registry of Deeds in Book 28833, Page 126 (the "Declaration") that includes a unit in which is operated as a restaurant facility, which unit is referred to in the Declaration as the "Restaurant Unit". Lot 2 is hereby further conveyed subject to the restriction that for so long as a full-service restaurant is being operated in the Restaurant Unit, no full-service restaurant containing three thousand five hundred (3,500) square feet or more of public space may be operated on Lot 2, provided, however, that this restriction shall, in any event, expire and be of no further force and effect on the fifteenth (15^{th}) anniversary of the date of Old Port Hospitality, LLC's initial conveyance of the Restaurant Unit to a third party. This restriction shall be enforceable by Old Port Hospitality, LLC, its successors and assigns, and the owner of the Restaurant Unit, and not by the owner of any other units in the Condominium. The Restaurant Unit was conveyed by Old Port Hospitality, LLC to Bass Ackwards Realty, LLC by Deed dated January 25, 2011, and recorded in the Cumberland County Registry of Deeds in Book 28563, Page 264, together with the benefit of said restriction.

Lot 2 is further conveyed together with and subject to all rights, easements, terms, covenants, conditions, obligations and agreements set forth in a certain Revised and Restated Parking Agreement by and between Old Port Hospitality, LLC and Fore India Middle, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 242 (the "Parking Agreement"), relating to the access and use of a Parking Lot comprised of ninety (90) parking spaces

located on Lot 2, including, without limitation, the perpetual, exclusive and appurtenant right and easement to access and use all of the parking spaces covered by such Parking Agreement with the exception of the twelve (12) parking spaces granted as appurtenant to the Residences Unit of the Condominium, as set forth in a Deed of the Residence Unit from Old Port Hospitality, LLC to Portside Residences, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 251.

Chatham Portland DT LLC, by its acceptance of this Deed, hereby assumes all obligations of Fore India Middle, LLC under the Parking Agreement.

The premises conveyed herein are further subject to the following matters of record:

1. Rights and easements for sewer purposes granted by the Slum Clearance and Redevelopment Authority to the City of Portland in an instrument dated October 8, 1958 and recorded in the Cumberland County Registry of Deeds in Book 2438, Page 258, as relocated pursuant to an Easement Relocation Agreement by and between Old Port Hospitality, LLC and the City of Portland dated April 28, 2010 and recorded in the Cumberland County Registry of Deeds in Book 27742, Page 26, further reference being made to a Letter from David Margolis-Pineo, Deputy City Engineer of the Public Services Department, dated August 25, 2010 and recorded in the Cumberland County Registry of Deeds in Book 28028, Page 257;

2. Terms and conditions of a No Further Action Assurance Letter from the Maine Department of Environmental Protection to Jordan's Meats dated April 17, 2003 and recorded in the Cumberland County Registry of Deeds in Book 19244, Page 271;

3. Restrictions, covenants and conditions set forth in a Deed from Zemco Industries, Inc. to PME I, Limited Partnership dated September 23, 2005 and recorded in the Cumberland County Registry of Deeds in Book 23199, Page 107, and repeated in a Deed from said PME I, Limited Partnership to Old Port Hospitality, LLC dated January 29, 2010 and recorded in the Cumberland County Registry of Deeds in Book 27567, Page 40;

4. Matters and General Notes set forth on subdivision plan entitled "Subdivision Plan of Hotel, Restaurant & Portside Residences, 207 & 209 Fore Street, Portland, Maine" dated February 8, 2010, as most recently revised on April 23, 2010, approved by the City of Portland Planning Board on April 13, 2010, and recorded in the Cumberland County Registry of Deeds in Plan Book 210, Page 194;

5. Underground Line Easement granted by Old Port Hospitality, LLC to Central Maine Power Company dated July 21, 2010 and recorded in the Cumberland County Registry of Deeds in Book 28094, Page 298;

6. Maine Department of Environmental Protection Commissioner's Certification dated June 27, 2011 and recorded in the Cumberland County Registry of Deeds in Book 28791, Page 132, as affected by a Commissioner's Certification Amended to Reflect Re-Development Plans Dated August 20, 2012, dated October 26, 2012 and recorded in the Cumberland County Registry of Deeds in Book 30111, Page 193;

7. Declaration of Environmental Covenant by and between Fore India Middle, LLC and the Maine Department of Environmental Protection dated May 24, 2011 and recorded in the Cumberland County Registry of Deeds in Book 28791, Page 136;

8. Agreement Regarding Wall and Window With Respect to Unit One in Portside Condominium, 207 Fore Street, Portland, Maine, by and between Fore India Middle, LLC and Paula Foley-Stelmack and Mark Stelmack dated September 29, 2011 and recorded in the Cumberland County Registry of Deeds in Book 29001, Page 234; and

9. Certificate of Subdivision Waiver Approval by the City of Portland in favor of Fore India Middle, LLC dated October 18, 2012 and recorded in the Cumberland County Registry of Deeds in Book 30102, Page 285.

Reference is made to a Quitclaim Deed With Covenant from Old Port Hospitality, LLC to Fore India Middle, LLC dated June 11, 2010, and recorded in the Cumberland County Registry of Deeds in Book 27850, Page 63, as amended by said Amendment of Deed, Termination of Rights and Easements and Grant of Rights and Easements by and between Old Port Hospitality, LLC and Fore India Middle, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 181, for Fore India Middle, LLC's source of title to the premises conveyed herein.

IN WITNESS WHEREOF, FORE INDIA MIDDLE, LLC has caused this instrument to be executed by Gregory R. Kirsch, its Manager, hereunto duly authorized, this 21ST day of December, 2012.

WITNESS:

Chatham Lodging Trust Increases Credit Facility with RBC Commitment

WEST PALM BEACH, Fla., December 20, 2022 —Chatham Lodging Trust (NYSE: CLDT), a hotel real estate investment trust (REIT) focused on investing in upscale extended-stay hotels and premium branded, select-service hotels, today announced that it has increased commitments under its senior unsecured revolving credit facility by $45 million with the addition of Royal Bank of Canada as a top tier lender.

With this incremental commitment, Chatham's unsecured revolving credit facility increases to $260 million. Combined with its new $90 million term loan, Chatham received commitments of $350 million that replace Chatham's previous $250 million senior unsecured credit facility that was scheduled to mature in 2023. Inclusive of extension options, the revolving credit facility and term loan mature in October 2027. Chatham has up to six months to borrow funds under the unsecured term loan and intends to fully draw the $90 million within that time frame to repay maturing secured debt. There are currently no borrowings outstanding on either facility.

"We are excited to add another great financial institution to our outstanding group of participating lenders, further solidifying our financial position for the next five years and

providing even more flexibility to manage our maturing debt over the next couple of years and capacity to acquire hotels," highlighted Jeremy Wegner, Chatham's chief financial officer.

About Chatham Lodging Trust

Chatham Lodging Trust is a self-advised, publicly traded real estate investment trust focused primarily on investing in upscale extended-stay hotels and premium-branded, select-service hotels. The company owns 39 hotels totaling 5,914 rooms/suites in 16 states and the District of Columbia. Additional information about Chatham may be found at chathamlodgingtrust.com.

This press release may contain "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 about Chatham Lodging Trust, including those statements regarding acquisitions, capital expenditures, future operating results and the timing and composition of revenues, among others, and statements containing words such as "expects," "believes" or "will," which indicate that those statements are forward-looking. Except for historical information, the matters discussed in this press release are forward-looking statements that are subject to certain risks and uncertainties that could cause the actual results or performance to differ materially from those discussed in such statements. Additional risks are discussed in the company's filings with the Securities and Exchange Commission.

TECHNICAL ABILITY

The project team assembled for this development combines the expertise of civil and geotechnical engineering, design-build architecture and construction, and hotel management firms. The assembled project team is highly qualified with extensive experience in developing, permitting, managing, and operating large scale developments projects, including hotel construction.

Applicant's Experience

Chatham Lodging Trust (Chatham) is a publicly traded hotel real estate investment trust (REIT) with hotel investments of approximately $1.7 billion as of December 31, 2023. Chatham currently own 38 hotels around the United States.

Within Portland, Chatham owns the Hampton Inn hotel that is adjacent to the proposed Home2 development and have owned that hotel since 2012. In the upper northeastern U.S., their properties also include the Hilton Garden Inn in Portsmouth, New Hampshire and the Hampton Inn and Suites in Exeter, New Hampshire; as well as two hotels in the greater Boston area.

This development will be Chatham's second developed Home2 Suites by Hilton hotel. The first was opened in Woodland Hills, California in January 2022 and won the Development of the Year Award from Hilton.

Project Team:

Chatham has retained the New Hampshire based ***Procon***, which is an architecture and construction firm and will utilize their integrated approach to design-build. Procon was founded in 1935 and has a very diverse portfolio which includes hospitality and mixed-use projects throughout New England. A listing of similar projects performed by Procon is attached and includes projects in the greater Portland area such as:

- Custom House Square
- Inn at Diamond Cove
- Portland Harbor Hotel

Chatham has also retained ***Ransom Consulting, LLC***, in Portland Maine to be the lead consultant in preparing permit applications and civil engineering plans, calculations, and reports for the project. Ransom's staff includes professionals in civil, transportation, utility, stormwater, environmental, geotechnical, and coastal engineering, and have been serving municipalities throughout New England for over 35 years. Specifically, Ransom will provide civil/site engineering, stormwater management analysis & design and permitting services for this project. Ransom has provided these same services on similar projects throughout Portland, including just down the hill at the AC Hotel, 20 Thames Street, and 5 India Street development – also a VRAP site.

Company resumes detailing the experience and qualifications of key personnel are available upon request, if necessary.

Site Plan Review Standards (Section 14.6)

14.6.1 Transportation Standards

The project proposes to utilize 3 parking spaces along Fore Street frontage as transitory valet drop off for the proposed hotel. Valet will then park cars in the private lot within the site through the existing curb cut on Fore Street. Valet employees would be the only ones utilizing the lot for the proposed Home 2 Suites hotel. Condominium owners (top floor of Hampton Inn) would have dedicated spaces behind Hampton Inn.

Valet drop off is proposed to be adjacent to the hotel entrance and would allow hotel guests to access the lobby right from the existing 8' wide sidewalk. Access to retail spaces would also be along sidewalks. Sidewalks along Middle, India, and Fore Streets are currently brick with granite curbing and are in good condition. All sidewalks disturbed during construction will be repaired to City Standards.

Although the project is proposed along a minor arterial (India Street and Franklin Arterial), it is not anticipated that the hotel would generate public transit usage as the majority of guests would be from out of town. The retail spaces would be approximately 5,500 sf and therefore would not appear to require a public transit shelter.

The existing Hampton Inn hotel has 125 guest rooms and 12 residential units. The Home 2 Suites is proposing 132 guest rooms. One parking space per residential unit, 12 spaces, are required. With a total of 257 guest rooms at 1 space per 4 guest rooms, 65 spaces are required for a total of 77 spaces required. 108 spaces are being provided: 12 residential spaces at 9'x18'; 24 valet spaces at 8'x15'; and 72 valet spaces at 8'x18'. A bicycle rack with storage for 20 bicycles is currently available along Fore Street adjacent to the Hampton Inn. A rack with storage for an additional 20 bicycles is proposed for the landscaped area along Middle Street.

A snow management plan has not been developed at this time. It is anticipated that a snow removal contract will be utilized in lieu of on-site snow storage.

A Transportation Demand Management plan has not been developed at this time.

14.6.2 Environmental Quality Standards

The project site is a 1.1 acre parcel that is currently developed with a parking area. There are no natural features such as wetlands, waterfowl and wading bird habitat, threatened or endangered species to be preserved. There are currently trees just off of the sidewalk along India and Middle Streets being counted as street trees for the development. These trees will not be preserved but rather are anticipated to be replaced. Five street trees are proposed along India Street and seven street trees proposed along Middle Street. Existing street trees within the right-of -way along Fore Street are slated to be preserved. A landscaping area/pocket park is proposed along Middle Street as part of the structural parking canopy. A smaller landscaped area is also proposed along Fore Street between the two hotel buildings.

Stormwater structures are proposed to treat the 1-inch storm event for at least 90% of impervious surfaces as well as at least 80% of all developed area within the project/parcel boundary. It is currently anticipated that a combination of tree box filters (existing, bioretention filter systems, and modular wetland systems will be employed to provide that treatment. Conceptual stormwater

structure locations are provided on the Grading, Drainage, and Erosion Control Plan. The existing capacity of the separated stormwater system will be discussed with the Public Works Department to determine what, if any, the requirements will be for on-site detention. As this has been identified as a VRAP site, infiltration of stormwater is not proposed at this time. A stormwater management report has not yet been developed but will be provided as a stand alone document as the project progresses forward.

14.6.3 Public Infrastructure and Community Safety

As the project design moves forward, discussions will be had with planning staff to confirm that the development of the property complies with the City's master plans and provides connection to off-site infrastructure as necessary. Additionally, throughout the design process the development team will be discussing public safety and fire prevention with the appropriate departments.

Connections to public utilities will be discussed with the agencies responsible for those utilities including sanitary and storm sewers, water, electric, communications, and gas. Service letters and recommendations will be provided as a separate document as the project moves forward. The following utilities are being contacted:

Storm drains:	Department of Public Works Water Resources Division
Sanitary sewer:	Department of Public Works Water Resources Division Bradley Roland, P.E.
Water:	Portland Water District Contact MEANS dept.
Electric:	Central Maine Power
Communications:	Spectrum
Natural Gas:	Until

14.6.4 Site Design Standards

Refer to the Architectural Drawings. Massing, ventilation, and wind is not anticipated to impact adjacent properties. It is anticipated that mechanical units are proposed to be roof top units and will not have an impact on adjacent properties. The flat roof design will minimize snow and ice from falling on to adjacent properties. The proposed development is not within a designated historic district.

Exterior lighting on the building façade has not yet been incorporated. Full cut off fixtures are expected. As the design progresses, a photometrics plan can be provided.

Building signage is shown on the architectural perspective drawings for conceptual purposes. Signage for individual spaces is expected to be mixed mediums including illuminated hotel signage consistent with hotel chains design standards, awning signs, window signage, etc. As the design progresses, a signage plan will be provided.

Att. H

DECLARATION OF ENVIRONMENTAL COVENANT

This ENVIRONMENTAL COVENANT is hereby declared and granted as of this 24th day of May, 2011, by Fore India Middle, LLC, a Maine limited liability company ("Declarant"), whose mailing address is c/o Richard A. Shinay, Esq., 84 Marginal Way, Suite 600, Portland, Maine 04101-2480, to the Maine Department of Environmental Protection ("DEP") on property located in Portland, Maine, which is more fully described below.

WHEREAS, Declarant is the owner of that certain parcel of land located in the City of Portland, Cumberland County, Maine, shown as Lot 2 on a plan entitled Subdivision Plan of Hotel, Restaurant and Portside Residences prepared by Sebago Technics dated February 8, 2010 and recorded in the Cumberland County Registry of Deeds in Plan Book 210 Page 194 (the "Subdivision Plan"), said parcel of land being approximately 1.09 acres in size and more particularly described in Exhibit A attached hereto (said property to be referred to as "Protected Parcel");

WHEREAS, Declarant acquired title to the Protected Parcel by deed of Old Port Hospitality, LLC ("Old Port") executed on June 11, 2010, and recorded in the Cumberland County Registry of Deeds at Book 27850, Page 63;

WHEREAS, the DEP's Bureau of Remediation and Waste Management issued to Old Port and Declarant a Voluntary Response Action Program ("VRAP") No Action Assurance Letter dated July 22, 2010, with respect to the Protected Parcel (the "July 22, 2010 VRAP NAA"), attached hereto as Exhibit B, which was revised and clarified in a second No Action Assurance Letter dated November 19, 2010 (the "November 19, 2010 VRAP NAA"), attached hereto as Exhibit C, (collectively the "VRAP NAA Letters"), both of which require the preparation and recordation of a Declaration of Environmental Covenant consistent with the VRAP NAA and the Maine Uniform Environmental Covenants Act ("UECA"), 38 M.R.S.A. § 3001 et seq.;

WHEREAS, the Declarant has completed the development of the Protected Parcel as a surface parking lot, but may in the future engage in the further development of the Protected Parcel with a parking structure, as set forth in the November 19, 2010 VRAP NAA;

WHEREAS, the DEP has determined in accordance with 38 M.R.S.A. § 1301 et seq. and the UECA that the environmental covenants in this Declaration are necessary (i) to prevent the installation of groundwater extraction wells on the Protected Parcel, (ii) to ensure that the contaminated soils on the Protected Parcel remain covered with impervious surfaces or twelve inches of vegetative cover; (iii) to ensure that future development or excavation on areas of the Protected Parcel where residual petroleum may exist conforms

to the Plans approved by the DEP as referenced in the VRAP NAA Letters or otherwise receives prior DEP approval, and (iv) to protect the public health, safety, and the environment, which covenants shall run with the land; and

WHEREAS, Declarant intends to create and grant an Environmental Covenant pursuant to the UECA;

NOW, THEREFORE, the Declarant for and in consideration of the facts above recited and the covenants herein contained, and intending to create and be legally bound by a perpetual covenant running with the land, subject to the terms hereof, hereby declares, covenants and agrees as follows:

1. Declaration of Covenant. This instrument is an Environmental Covenant executed pursuant to the UECA.

2. Groundwater Extraction Prohibited. The installation of groundwater extraction wells on the Protected Parcel is prohibited without the written approval of the Department.

3. Contaminated Soils to be Covered. The petroleum contaminated soils on the Protected Parcel as identified in the Soil Management Plan referenced in the July 22, 2010 VRAP NAA are to remain covered with either impervious surfaces or twelve (12) inches of vegetative cover, except during future construction activities for development of the parking structure as contemplated in the November 19, 2010 VRAP NAA.

4. Parking Structure to Provide Enhanced Ventilation. Design, construction, and ongoing operation of the proposed parking structure shall provide enhanced ventilation of potential vapors as set forth in the November 19, 2010 VRAP NAA and the Plan referenced therein.

5. Changes to Site Use or Certain Improvements Require DEP Approval. If use of the Protected Parcel is proposed to change significantly from that which is described in the VRAP NAA Letters, the DEP must be notified at least thirty (30) days in advance. Additional investigation and/or remedial activities may be required by the DEP depending on the nature and extent of the proposed changes to the Protected Parcel.

6. Development or Excavation in Petroleum Contaminated Areas Prohibited. Any future development and/or excavation plans on the Protected Parcel on or in the areas of petroleum contaminated soil removal areas (below the clean backfill layer) where residual petroleum may exist, as identified in the Soil

Management Plan referenced in the July 22, 2010 VRAP NAA, must either conform to the Plan referenced in the November 19, 2010 VRAP NAA or otherwise receive prior written approval from the DEP. Such plans must consider provisions for worker health and safety, and for identifying, managing and remediating any petroleum contaminated soils that are encountered, and such work must be overseen by an environmental professional knowledgeable and trained in compliance with OSHA 29 CFR 1910.120.

7. Agency and Holder. DEP is the environmental agency with enforcement authority pursuant to the UECA, and is also the only Holder of the Environmental Covenant granted by Declarant in this Declaration.

8. Notice to Tenants and Others. The Declarant (or future owners of any portion of the Protected Parcel not controlled by the Declarant) shall provide notice of this Environmental Covenant to any tenants or lessees, or to any person conducting any activities on the Protected Parcel that could result in disturbance of soil or groundwater, or any activity that would be otherwise prohibited by this Environmental Covenant.

9. Perpetuity of Covenant. This Environmental Covenant and each and every covenant herein shall be a covenant running with the land in perpetuity, and shall bind the Protected Parcel, all persons or entities having any right, title, or interest in and to the Protected Parcel or any portion thereof, and their respective heirs, personal representatives, successors, and assigns, and all those acting by, through or under any of them forever. Any present or future owner of the Protected Parcel or any interest therein, by the acceptance of a deed of conveyance of all or any part of the Protected Parcel or any interest therein, whether or not the deed shall so express, shall be deemed to have accepted the Protected Parcel subject to the restrictions contained herein and shall be deemed bound by, obligated to comply with, and otherwise subject to the restrictions herein and this Covenant.

10. Representation of Authority, Ownership and Encumbrances. By its execution hereof, Declarant warrants that it is the sole owner of the Protected Parcel and that there are no mortgages, easements, or other encumbrances on the Protected Parcel that would materially adversely affect the effectiveness or enforceability of this Environmental Covenant (other than mortgages that have been subordinated of record with respect to this Environmental Covenant).

11. Access. The Declarant, its successors and assigns, and all future owners and land users shall provide, without cost, access to the Protected Parcel to the DEP, including its authorized employees, agents, representatives, and independent contractors, upon presentation of credentials, for purposes of monitoring and enforcing this Environmental Covenant.

12. Notice of Noncompliance. The Declarant and all future owners shall provide written notice to the DEP within ten (10) working days of discovery of any noncompliance with the terms of this Environmental Covenant.

13. Enforcement. This Environmental Covenant shall be enforceable as authorized by the UECA. Any forbearance as to the enforcement of any of the terms hereof shall not be deemed a waiver of the right to seek and obtain enforcement at any time thereafter as to the same violation or as to any other violations.

14. Amendment or Termination by Consent. The terms and conditions herein may not be amended or terminated except by a written instrument duly executed by the Declarant and/or any successor owner's association that controls commonly owned property on the Protected Property, any owner of any portion of the Protected Property that is not commonly owned and controlled by such an owners' association, at the time of the amendment or termination, and DEP, or its successor in legal function, which instrument is duly recorded in the Cumberland County Registry of Deeds, pursuant to the UECA.

15. Notice Pursuant to Covenant. Any notice or other communication required pursuant to this Environmental Covenant shall be in writing and shall be sent by certified mail, return receipt requested and shall be sent to the following addresses, or such other addresses as the Declarant and the DEP may designate from time to time in a written notice to other entities: (a) if to the Declarant, to the attention of Richard A. Shinay, Esq., 84 Marginal Way, Suite 600, Portland, Maine 04101-2480; if to DEP, 17 State House Station, Augusta, Maine 04333-0017, to the attention of Director, Bureau of Remediation & Waste Management (or successor in position).

16. Recording. Declarant shall cause this Declaration to be duly recorded in the Cumberland County Registry of Deeds within twenty (20) days of the execution of this Declaration by the last signatory, and shall, within thirty (30) days of the recording of the Declaration, notify the DEP of the book and page at which it is recorded, and submit to DEP a copy of the signed Declaration date-stamped by the Register of Deeds.

17. Administrative Record. The administrative record relating to the Protected Parcel is located at the main office of DEP, whose mailing address is 17 State House Station, Augusta, ME 04333-0017, with a street address of Ray Building, 28 Tyson Drive, Augusta, Maine.

18. Governing Law. This Environmental Covenant shall be governed and interpreted in accordance with the laws of the State of Maine.

19. Liberal Construction. It is intended that this Environmental Covenant be construed liberally to protect the health and welfare of the public and the quality of the environment from the risk of adverse effects of exposure to hazardous substances.

20. Invalidity. If any part of this Environmental Covenant shall be decreed to be invalid by any court of competent jurisdiction, all of the other provisions hereof shall not be affected thereby and shall remain in full force and effect.

IN WITNESS WHEREOF, Fore India Middle, LLC, has caused this Declaration of Environmental Covenant to be executed by its duly authorized representative as of the date first set forth above.

[End of page. Execution pages follow.]

Re: Lot 2, Former Jordan's Meats Property, 201 Fore Street, Portland, Maine
Voluntary Response Action Program No Action Assurance Letter

Dear Mr. Woglom:

The Maine Department of Environmental Protection ("Department") has received and reviewed your application dated June 17, 2010, along with an explanatory cover letter and a Soil Management Plan, both dated June 21, 2010, and prepared by Sebago Technics, Inc., all of which were submitted to the Department's Voluntary Response Action Program ("VRAP") for the above-referenced property on Fore Street in Portland, Maine (the "Property"). The application was submitted to the Department with the request that you, as an applicant to the VRAP, receive the liability protections provided by the VRAP Law, M.R.S.A. 38 §343-E.

Based on the information presented in the Soil Management Plan, and in the Summary Report, the Department agrees with the conclusions and recommendations for remedial actions at the Property set forth in those documents, specifically, the covering of contaminated soils with impervious surfaces or 12 inches of vegetative cover. The Department's concurrence with the proposed actions is conditioned on the prohibition of installation of groundwater extraction wells on the Property. This letter confirms the Department's approval of the Soil Management Plan and constitutes a written determination to take no action in accordance with M.R.S.A. 38 §343-E(9).

The Department has been advised that Old Port Hospitality, LLC transferred the Property to an affiliated entity, Fore India Middle, LLC, by deed recorded at Book 27850, Page 63 at the Cumberland County Registry of Deeds on June 17, 2010. The Department's determination to take no action as set forth in this letter shall extend to Fore India Middle, LLC as the successor in title to Old Port Hospitality, LLC, and shall also extend to the successors and assigns of Fore India Middle, LLC, all of whom shall be bound by the conditions set forth herein as provided in M.R.S.A. 38 §343-E(9)(B).

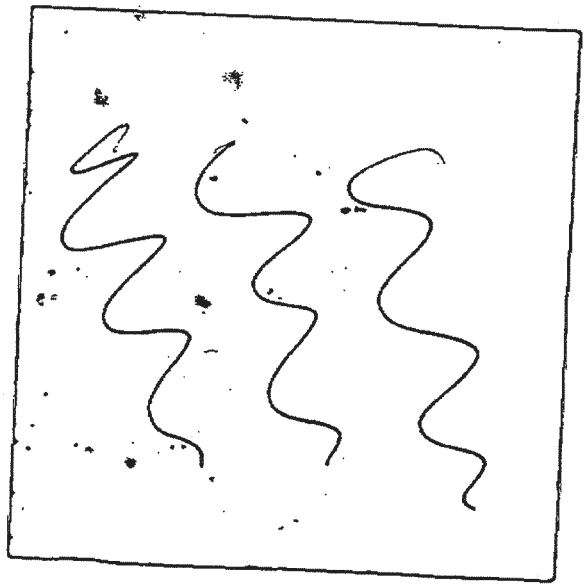
Provided that the recommended remedial measures are completed in accordance with the Soil Management Plan, and to the satisfaction of the Department, Old Port Hospitality, LLC, Fore India Middle, LLC, their successors and/or assigns, and additional persons who qualify under 38 M.R.S.A. §343-E (6) will be granted the liability protection provided by 38 M.R.S.A. §343-E (1) for the Property located on Fore Street that is shown as Lot 2 (1.09 acres) on the Subdivision Plan of the Hotel, Restaurant, and Portside Residences approved by the City of Portland Planning Board on April 13, 2010, and recorded at Plan Book 210, Page 194 in the Cumberland County Registry of Deeds.

Once the recommended remedial measures to be implemented at the Property are completed in accordance with the Soil Management Plan, a report documenting such completion should be forwarded to the VRAP. Upon determining that the remedial measures have been properly completed, the Department will issue a Commissioner's Certificate of Completion to Fore India Middle, LLC, in accordance with M.R.S.A. 38 §343-E(5).

If you have any questions regarding this letter, please feel free to call me at 207-287-7746.

Sincerely,



Laura L. Gay

Re: Lot 2, Former Jordan's Meats Property, 201 Fore Street, Portland, Maine
Voluntary Response Action Program No Action Assurance Letter

Dear Mr. Woglom:

The Maine Department of Environmental Protection ("Department") has received and reviewed the letter dated October 25, 2010, and entitled Lot 2 of the Former Jordan's Meats Property, 203 Fore Street and 66 Middle Street, Portland, Maine, Phase II Redevelopment Plans-Structured Parking, submitted by your consultant for the project, Sebago Technics, Inc. ("STI"). The revised redevelopment plans (the "Plan") were submitted to the Department pursuant to the project's continuing participation in the Voluntary Response Action Program ("VRAP"). Fore India Middle, LLC (the "Applicant"), as an affiliate of and successor in title to Old Port Hopitality, LLC (the original applicant to VRAP), is the current owner of the property and is seeking the liability protections provided by the VRAP law, 38 M.R.S.A. §343-E.

Based on the information presented in the Plan, the Department agrees with the conclusions and recommendations for remedial actions on Lot 2 of the Former Jordan's Meats Property, which includes the covering of soils with impervious surfaces and enhanced ventilation of any potential vapors within the proposed parking garage. The Department's concurrence with the proposed actions is consistent with our previous "No Action Assurance Letter" for the property dated July 22, 2010, which is conditioned on the prohibition of installation of groundwater extraction wells on the property. This letter confirms the Department's approval of the revised Plan and constitutes a written determination to take no action in accordance with 38 M.R.S.A. §343-E(9).

The Department recognizes that the Plan for a structured parking lot is an alternative to the previously submitted plan to develop a surface (i.e., non-structured) parking lot on

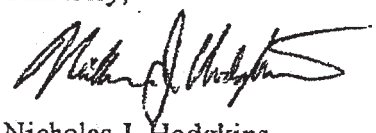
printed on recycled paper



Lot 2, which was the subject of the No Action Assurance Letter dated July 22, 2010 (the "Existing NAA Letter"). The Department has been advised that the Applicant may opt to develop Lot 2 in accordance with the Existing NAA Letter, which the Department hereby confirms is still valid and in force and not negated by the issuance of this letter. Furthermore, the Applicant may proceed to first develop the surface parking lot on Lot 2 in accordance with the Existing NAA Letter, and then proceed to construct the structured parking lot in accordance with this letter.

Provided that the recommended remedial measures are completed in accordance with the Plan, and to the satisfaction of the Department, Fore India Middle, LLC, and their successors and/or assigns, and additional persons who qualify under 38 M.R.S.A. §343-E(6) will be granted the liability protection provided by 38 M.R. S.A. §343-E(1) for the property located on 203 Fore Street and 66 Middle Street that is shown as Lot 2 (1.09 acres) on the Subdivision Plan of the Hotel, Restaurant, and Portside Residences approved by the City of Portland Planning Board on April 13, 2010, and recorded in Plan Book 201, Page 194 in the Cumberland County Registry of Deeds.

Once the recommended remedial measures to be implemented at the property are completed in accordance with the Plan, a report documenting such completion should be forwarded to the VRAP. Upon determining that the remedial measures have been properly completed, the Department will issue a Commissioner's Certificate of Completion to Fore India Middle, LLC, in accordance with 38 M.R.S.A. §343-E(5).

203 Fore Street – Home 2 Suites
Transportation Demand Management Plan

In accordance with Section 17.3 of the Technical Manual the following information is provided,

Project Description: Chatham Lodging Trust (dba Chatham Portland DT LLC) proposes a 132 room Home 2 Suites (Home2 Suites by Hilton - Extended Stay Hotel Suites) extended stay hotel and associated ground level commercial space that is expected to be an assortment of retail and restaurant tenants. The project is located at 203 Fore Street and is identified as Chart and Block 029 L003. The property is located in the India Street Form Based Code District and the building area is currently being used for parking for the Hampton Inn hotel and associated condo units which are under common ownership of the applicant, on the adjacent parcel. The parcel is identified as Lot 2 (47,473 SF) of the Subdivision plan recorded in CCRD Plan book 210, page 144.

The project proposal includes a mixed-use building with 5,519 square feet (sf) of commercial retail/restaurant space on the ground floor and 79,946 sf of hotel space throughout 5 floors – with a building footprint of approximately 16,612 sf. Upon completion of the Home 2 Suites, there will be 105 valet-controlled parking spaces provided on the site and 3 short term valet spaces on Fore Street, if approved. The parcel is bounded on the north by India Street, on the west by Middle Street, on the east by Fore Street, and on the south by the existing Hampton Inn.

The proposed 5 story structure will have multiple entrance points for different uses. The hotel entrance is proposed at the intersection of Fore Street and India Street with entrances for the 3 proposed retail units along Middle Street and India Street. Onsite valet parking is expected to continue to be accessed through the existing curb cut for the Hampton Inn valet driveway along Fore Street and the parking is incorporated into the design to include a structural canopy with upper hotel floors above. A retaining wall is proposed adjacent to Middle Street to facilitate the change in grade, but will also include a structural landscaped deck above at-grade valet parking below.

Part 17.3.1 Transportation Narrative

In May 20204, the applicant contracted with Unified Parking Partners (UPP) UPP Global as their parking valet operator. Until construction commences, the applicant does not expect to require any off-site parking for the operations of the existing Hampton Inn hotel. The existing parking lot accommodates the Hampton Inn's parking needs.

During construction, the applicant estimates that off-site parking needs for the existing Hampton hotel will max out at approximately 85 cars per day during the peak summer months. This parking will be offered through various nearby parking garages.

After the Home 2 Suites opens, the applicant currently estimates that the off-site parking needs will max out at approximately 35-40 cars per day during the peak summer months. The applicant does not expect to need any off-site parking for five of the 12 months of the year (November to March).

UPP intends to primarily use four available lots within one block of the Hampton/Home2 site for off-site parking as laid out on the images below:

- 280 Fore Street – 20 available spaces
- 194 Fore Street – 20 available spaces
- 1 India Street – 44 available spaces
- 100 Middle Street – 245 available spaces, will only be used for heavy weekend and overnight stays.
- UPP also has parking available at 175 Fore Street and the Ocean Gateway Garage

The proposed development benefits from proximity to nearby transit services including the Portland METRO Route 1 Congress Street and Route 8 Peninsula Loop that traverses along India Street and is adjacent the site. The site is also within ½-mile walking distance of Monument Square and the METRO transfer center hub at that location. On-street parking is commonly available along Middle, India and Fore Street for the commercial guests and nearby parking garages include the nearby Gateway Garage and Shipyard Garage. Surface parking is also available in the neighborhood.

As is customary for Hotel use, arrivals and departure times at the hotels are staggered, reducing the amount of people coming at one time. The Hampton Inn Valet service allows guests to enter off Fore Street into a short queuing zone. The proposed Home 2 Suites valet zone is off Fore Street adjacent the ground level hotel entry.

Hotel guests will have access to shuttle service not only to nearby transportation centers including the Jetport, and Portland Transportation Center (bus and Train) but also to shuttle service to destinations on and off peninsula. Concierge service is available to arrange for taxi and Uber transportation for hotel guests.

Hotel Staff and guests will also have access to various pedestrian and bicycle routes in the project vicinity including the Bayside trail that extends to the Portland Transportation Center as well as the East End Trail that connects to Back Cove and points beyond. METRO Transit service also links to the METRO Breez service at Congress Street and that offers service to Yarmouth, Freeport, and Brunswick. The hotel is reviewing opportunities for staff incentive programs for rideshare and other multi-modal transportation and financial assistance.

METRO Route 8

METRO Route 1

The development will include signage in the common ground level hotel corridor identifying nearby public transit locations as well as mapping for pedestrian/bicycle routes on the peninsula. The mapping will also identify nearby parking structures within ½ mile of the development site. It is assumed that guests will quickly familiarize themselves with nearby parking and access routes for their use and enjoyment. There will be a bike room in the building and additional bike hitches outside.

17.3.2 Identify a TDM Coordinator

Given the small size of the development a designated TDM coordinator is not proposed although the hotel concierge and hotel management will oversee guest accommodations, transportation issues and questions and overall arrival/departure management to assure smooth operations and minimal impact to the surrounding street system. The applicant and their management team will be responsible for building maintenance as well as to assure that site features including the valet parking and bike racks are maintained and available. The applicant has managed numerous similar properties for many years, and is therefore very familiar with the requirements for maintenance, working with City officials, and related hotel operations.

Parts 17.3.3 thru 17.3.6

The project's future trip generation is expected to be less than 100 vehicles per peak hour for the Home 2 Suites project based on 132 rooms. Due to the small impact of traffic associated with the development, targets for TDM traffic reductions and related TDM objectives are quite minor. It's simply expected that this infill development will blend harmoniously within the surrounding Peninsula/downtown activities and land use and will benefit from the general proximity of transit, parking, and multi-modal transportation options available on the Portland Peninsula.

~~JULY 2024~~
~~OCTOBER 2024~~
REVISED FEBRUARY 2025

Stormwater Management Report

1.1 Overview

The project is located at 203 Fore Street and is approximately 1.1 acres. The existing site is located to the east of the existing Hampton Inn Hotel, bordered by Fore Street to the south, India Street to the east, and Middle Street to the north. The existing area is used as a parking area for the existing hotel, and is envisioned to be a developed to hold a new, five story hotel containing 128 rooms and associated retail/commercial space. This new development will include parking, streetscape and sidewalk improvements, pedestrian plazas, a pocket park, and general landscaping improvements and site furnishings.

Under the City of Portland's Technical Manual, a new development project that warrants major site plan shall submit a stormwater management plan pursuant to the regulations of Maine Department of Environmental Protection (Maine DEP) Chapter 500 Stormwater Management Rules, including General and Flooding Standards. As the proposed development will warrant major site plan, it is required to meet these Basic, General, and Flooding standards, along with water quality standards set forth in Section 4.C.2(a) of Chapter 500. The site's existing impervious area is approximately 21,457 square feet and the proposed impervious area will be 43,873 square feet, for an increase of 22,416 square feet.

1.2 Stormwater Management Control

Based on the Stormwater Management Rules, Chapter 500, the proposed development is required to meet the Basic Standard, General Standard, and Flooding Standard. The Basic Standard is presented in the Erosion Control Report, while the General Standard and Flooding Standard are presented as follows.

The development will also be required to meet the MDEP's water quality and quantity standards. To meet the water quality standard, the project will utilize a subsurface storage system. The facilities will be utilized to control the post development runoff for the larger 2, 10, 25-year storm events where applicable.

The Maine Department of Environmental Protection rules and regulations regarding stormwater concentrate on four stormwater management objectives:

- Effective Pollutant Removal
- Cooling
- Channel Protection
- Flood Control

These objectives may be met either directly by providing BMP's that manage and treat the runoff after it has been created, or indirectly by incorporating low impact development site planning concepts to minimize production and contamination of runoff by maximizing infiltration and evapotranspiration.

1.3 Approach and Analysis for Water Quality

The following narrative discusses the Basic Standard and General Standard of the MaineDEP Stormwater Law. The proposed development will be required to meet the Basic Standard, BMP Standard under the General Standard, and Flooding Standard for a MaineDEP Chapter 500 Stormwater Management Rules. Based upon review of the five recommended and approved methods for mitigating the increased frequency and duration of channel erosive flows, as required by the BMP Standards, the applicant is proposing to construct a subsurface storage system and proprietary treatment filter system.

Water quality calculations for this portion of the site are presented in Section 1.3.2 below.

1.3.1 Redevelopment Treatment Calculations

Under the Treatment Requirements for the MaineDEP General Standards, the proposed development may qualify for a lower treatment percentage based on the redevelopment Pollutant Impact Rankings [MaineDEP Chapter 500 Section 4.C.2(d)]. The following table summarizes the pollutant rankings for the existing and redevelopment.

TABLE 1 – REDEVELOPMENT TREATMENT SUMMARY			
Type	Pollutant Ranking 3 (Ac)	Pollutant Ranking 2 (Ac)	Impact Rating
Existing Development	0.494	0.598	2.452
Redevelopment	0.297	0.794	2.272

Based on Table 1 above, the impact ranking from the existing development to the proposed development will decrease. For this reason, the proposed development treatment percentages are 0% for stormwater projects and 50% for site projects per MaineDEP Chapter 500 Section 4.C.2(d.i) Table 3. However, the City of Portland Technical Manual requires the minimal redevelopment treatment levels to be at least 50%, so this level of treatment is required for the proposed development.

1.3.2 Stormwater Quality Treatment

Attachment A contains the Water Quality maps for this project. The proposed development will be treated by a focal point with subsurface detention for stormwater quality treatment.

FocalPoint™ and Subsurface Storage System

FocalPoint's are defined in Volume III Appendix B (Proprietary Systems). Proprietary systems are defined as a system or practice designed for stormwater runoff treatment from a development that has to meet all the stormwater requirements of Maine's Stormwater Law, and the Chapter 500 Stormwater Management Rule to be

considered equivalent to any of the suggested structures found in the BMP Manual. A proprietary system must be live-tested for a variety of storm lengths and intensities. The system must remove at least 60% total phosphorus, with at least similar removals metals (zinc and copper), and hydrocarbons; it must provide temperature reduction and channel protection storage detention either independently or in combination with another measure; and it must also be maintainable.

Filtration systems that store and treat a volume of water must be sized to store and treat 1.0 inch of runoff from the contributing impervious area and 0.4 inches of runoff from contributing landscaped areas. If channel protection storage and cooling are required, they must be provided independently, and the stored volume must be released slowly over a 24 to 48-hour period and cooled. Flow-through or hybrid systems that do not store the water quality volume prior to treatment must be sized so that they treat the entire volume of the 0.95-inch Type III 24-hour storm without bypass.

The FocalPoint™ system received approval by the MDEP in February 2017. The proposed system was designed in accordance with the MDEP approval letter dated February 2, 2017. The FocalPoint's are designed to treat 1 inch times the subcatchments impervious area plus 0.4 inch times the subcatchments landscaped area. The elevation of the bypass overflow such that the water quality volume of a 0.95 inch type III 24 hour storm is treated prior to activation was determined using a HydroCAD model. The filter media has an exfiltration rate of 100 inches/hour. The surface media must be 174 sq. ft./acre of impervious plus 174 sq. ft./acre of vegetated area multiplied by 0.4. The filter media depth shall be 1.5 feet and the ratio of the media to the runoff volume stored above it is no less than 1 to 5. The runoff from the FocalPoint will enter a subsurface chamber storage system. Runoff will enter the subsurface chamber storage system through an Isolator Row. The Isolator Row is required to convey the peak runoff from the 1-year Type III 24-hour storm, without overflowing, while the entire chamber system will provide storage for the water quality volume and release the flow over a 24-48-hour period. The subsurface chambers will be installed within a stone bed assumed to have 40% porosity.

The proposed subsurface system on site was designed in accordance with Maine DEP's Chapter 500 Stormwater Management Rules and the Maine Stormwater Best Management Practices Manual, Volume III. BMP Technical Design Manual, Chapter 6 Infiltration BMPs. Some measures to be highlighted for the system include sizing, site suitability, siting, setbacks, pretreatment, design and construction, erosion control, groundwater monitoring, and maintenance. The Water Quality Maps are included in Attachment A. The stage/storage tables for the subsurface infiltration system are included in Attachment B.

The following table presents information for the FocalPoint™ System in the proposed development.

TABLE 2		
FocalPoint™		
	REQUIRED	PROVIDED
Impervious Area (SF)	-	8,318
Vegetated Developed Area (SF)	-	375
Water Quality Treatment Volume (CF)	706	711
FocalPoint™ Mulch Bed Elevation (FT)	-	15.74
Rim to Overflow Structure (FT)	-	16.24
Filter Surface Area (SF)	33.8	55.4

In addition to the area being treated by the FocalPoint™, the subsurface system will store runoff from the proposed flat-roof building. This additional area will be stored via a Ferguson R-Tank™ HD chamber, that has storage capacity of 8.3 CF per design unit. Runoff from storms producing the water quality volume will be conveyed from the subsurface chambers through the underdrain system. A valve will be placed on the underdrain to regulate the outflow through the underdrain. The valve will be field adjusted to maintain the outflow time between 24 and 48 hours. Yearly maintenance of the FocalPoint™ system will include monitoring the outflow after a rainfall event to ensure the outflow time is within the required parameters and inspecting the system for accumulation of sediment within the Isolator Row. Larger storms will be conveyed from the subsurface system though an Outlet Control Structure with a weir set at the water quality elevation. The following table presents information for the Chamber System in the proposed development.

TABLE 3		
Chamber System		
	REQUIRED	PROVIDED
Ferguson R-Tank™ HD Chambers for Water Quality Volumes Single + Mini	228	228
Ferguson R-Tank™ HD Chambers for Water Quality Volumes Mini	18	18
Total Ferguson R-Tank™ HD Chambers	-	238
Storage Base Elevation (FT)	-	12.70
Water Quality Elevation (FT)	-	13.30
Top of Ferguson R-Tank™ HD Chambers (FT)	-	14.87
Weir Elevation in Outlet Control Structure (FT)	-	15.50

1.3.3 Conclusion – Water Quality

Table 4 below summarizes the proposed total treatment for the proposed development.

TABLE 4 – OVERALL TREATMENT FOR DEVELOPMENT		
	IMPERVIOUS	DEVELOPED
Subsurface Infiltration System (SF)	28,505	28,880
Total Area Treated (sf)	28,505	28,880
Area Untreated (SF)	15,383	14,985
Total Area of Project (sf)	43,873	47,524
Percent Treated	--	60.8%
Percent Required	--	50%

1.4 Stormwater Quantity

The stormwater management study provides an analysis of predevelopment and post development stormwater runoff rates.

The SCS TR-20 methodology, using the HydroCAD program, was employed by Gorrill Palmer to analyze pre-development and post-development conditions. A 24-hour, SCS Type III storm distribution for the two-, ten-, and twenty-five-year storm frequencies was used. The corresponding rainfall amounts for these storms are 3.1", 4.6", and 5.8" respectively.

Land use cover, delineations of watershed hydraulic flow paths, and hydrologic soils data were obtained using the following data:

- ALTA/NSPS Land Title Survey from Owen Haskell, Inc.
- Medium Intensity Soil Survey from the USGS Web Soil Survey.
- Aerial photography of the project site, obtained from the Maine Office of GIS.

1.4.1 Pre Development Conditions

The drainage study analyzes the watersheds in the predevelopment condition as depicted on the Predevelopment Watershed Map W1.

Sub Catchment 1S is made up of the entire parcel, which is approximately 1.1 acres and consists of soil type C. There is runoff from approximately just under half an acre of existing impervious area onsite, while the remainder of the site consists of grass/landscape cover. This runoff is conveyed to POI 1, which is an existing storm drain basin located just southwest of the site.

A watershed map for the predevelopment conditions is attached to this section as drawing number *PRE* in Attachment A.

Table 5 presents the peak flow rates at the point of interest in the predevelopment condition.

TABLE 6 – PREDEVELOPMENT PEAK FLOW RATES (TYPE III 24-HR)

Point of Interest	Peak Flow (CFS)		
	2 Year	10 Year	25 Year
POI 1	2.22	3.97	5.36

Copies of the calculations for the predevelopment conditions are included in Attachment B.

1.4.2 Post Development Conditions

Analysis for the post development condition consists of determining post development peak flows and limiting the post development flows to predevelopment levels. The post development condition has been modeled as two sub catchments tributary to POI 1.

Sub catchment 1S consists of approximately 0.35 acres of impervious and approximately 3,300 square feet of pervious area.

Sub catchment 2S consists of approximately 0.46 acres of building rooftop. Runoff from this area is tributary to the subsurface chamber system and tributary to POI 1.

Sub catchment 3S consists of approximately 8,300 square feet of impervious surfaces and approximately 375 square feet of vegetated area. Runoff from this area is treated by the focal point system prior to the subsurface chamber system and tributary to POI 1.

Given that the subsurface chamber system will be used for thermal treatment and downstream treatment from the focal point, detention of the stormwater runoff will be necessary to meet the requirements for this development.

Pond RT – Ferguson R-Tank™ HD Chambers

Pond RT is a subsurface storage basin that utilizes Ferguson R-Tank™ HD Chambers located beneath the proposed parking area to detain the runoff. The stormwater runoff from sub catchment 2S will enter the isolator rows through the storm drain system. The outflow has been modeled with a constant velocity of 0.01 cfs for absorption exfiltration. The subsurface basin has been analyzed to determine its performance for the 2-, 10-, and 25-year storms. Storms smaller than a two-year event will generate a runoff volume equal to or less than the channel protection volume provided at 706 cf. Larger storms will be conveyed through an overflow pipe into a drainage manhole with 6" and 8" orifices through a weir. The drainage manhole outlets to an existing pipe stub that will release flow to the downstream POI. Table 7 below presents the subsurface basin's performance.

TABLE 7 – SUBSURFACE BASIN

	Storm Event		
	2-Year	10-Year	25-Year
Peak Inflow (CFS)	1.96	3.06	3.88
Peak Outflow (CFS)	1.12	2.19	2.96
Stage (Max. Elevation)	14.57	15.05	15.53
Detention Storage (CF)	1,845	2,201	2468
Depth above base (FT)	1.87	2.35	2.83

A watershed map for the post development conditions is attached to this section as drawing number *POST* in Attachment A. Attachment B includes the TR-20 pond calculations. The

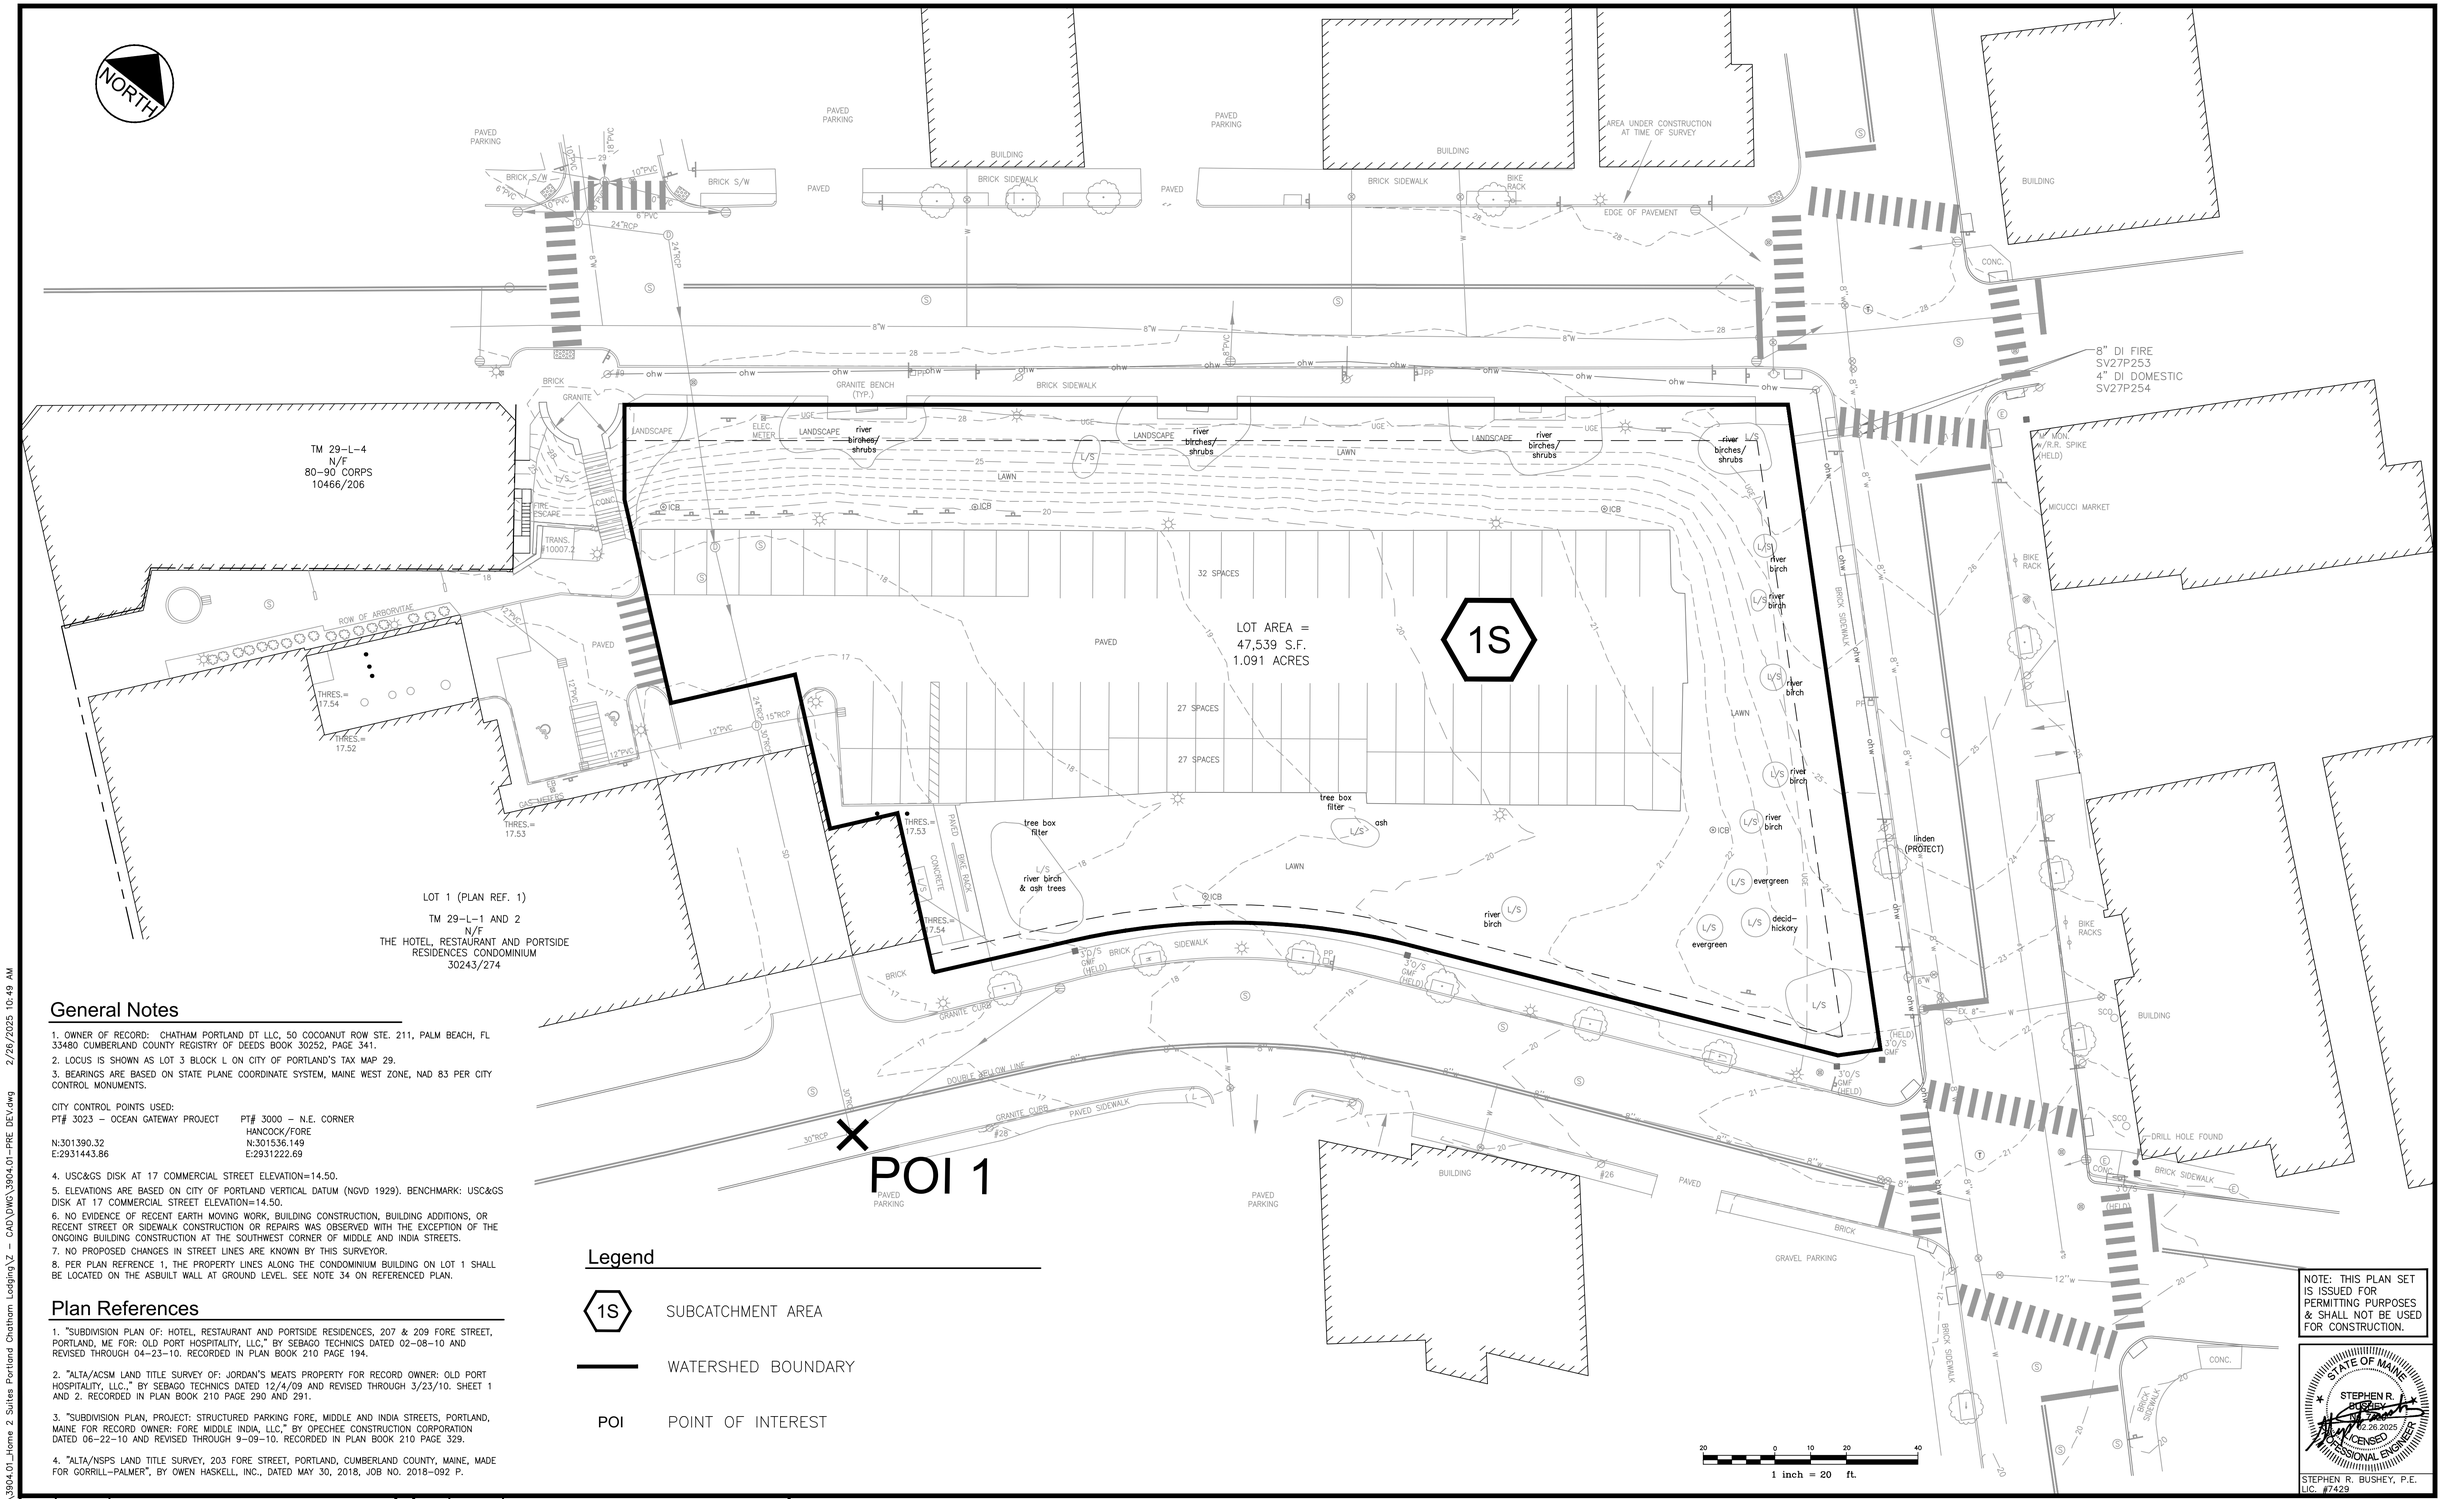
following table presents a comparison of peak flow with detention.

TABLE 8 – PEAK FLOW COMPARISON WITH DETENTION			
Point of Interest	Peak Flow (CFS)		
	2 Year	10 Year	25 Year
POI 1			
Pre	2.22	3.97	5.36
Post	2.04	3.79	4.96

As can be seen from Table 8 above, the peak post development flow for POI 1 is at or below predevelopment levels.

1.4.3 Conclusion – Water Quantity

The peak flow at the Point of Interest has been reduced to be at or below predevelopment peak levels. As such, the project is not likely to have an adverse impact on abutting or downstream properties due to stormwater runoff. Approximately 1,756 square feet of the parcel is expected to drain to the adjacent storm drain system without any treatment. Due to the location of the existing sidewalk along the eastern portion of the site, along with the existing grades, the ability to treat this portion of the site is not feasible. The limited expected runoff from this small portion of untreated impervious area is not expected to have adverse impact on the pipe capacity of the adjacent storm drain system, which has been show in the attached Pipe Capacity Calculations.



1.5 Conclusion

Gorrill Palmer has been retained by Chatham Portland DT, LLC to prepare plans and permit applications for the development of Home 2 Suites on the proposed parcel in Portland, Maine. Based upon the attached calculations, the proposed project meets or exceeds the water quality and water quantity regulations of the City of Portland and Chapter 500 of the MDEP and will not cause degradation of the receiving waters from the site or likely have an adverse impact on abutting or downstream properties due to the stormwater runoff.

DRIVE EDGE-LIT

FEATURES

- Edge-lit optical assembly delivers exceptional uniformity over the entire lens with indirect illumination that reduces glare and improves visual comfort
- Low profile housing intended for 8' - 20' mounting heights for surface, trunnion/yoke or pendant mounting
- Applications include parking garage, walkway or building canopies, corridors, tunnels, large stairwells and other interior applications
- Multiple optical distributions are available making the Beacon Edge-Lit luminaire both versatile and functional
- UL/cUL listed for wet locations, IP65

C US DLC LISTED **IP65**

CONTROL TECHNOLOGY

NX CONNECT NX WIRED NX WIRELESS LIGHTGRID+

SPECIFICATIONS

HOUSING

- Die-cast aluminum housing ensures long electrical component life and luminaire performance
- Corrosion resistant powder coat finish both protects and provides architectural appearance
- One piece molded silicone gasket ensures weather proof seal
- Thermally isolated driver mounted to dedicated bracket reduces operating temperatures and increases driver life and reliability
- Torx head screws standard for tamper resistant housing

OPTICS

- Edge-lit acrylic light guide provides blended non-pixelated light for unprecedented visual comfort
- Choice of multiple light outputs with lumen range of 4,000–16,000
- Five distribution types: Type V Square, Type V Rectangular, Type V Concentrated, Type V Wide or Asymmetric (Type 3/4)
- Wide variety of CCT's and CRI's offered: 3000K (70CRI), 3000K (80CRI), 3500K (80CRI), 4000K (70CRI), 4000K (80CRI) or 5000K (70 CRI) CCT

ELECTRICAL

- 120V–277V 50/60Hz with 347V and 480V available
- 0-10V dimming drivers are RoHS compliant and IP66
- Surge protection – Standard 6kA with optional 20kA end of life LED indicator

ELECTRICAL (CONTINUED)

- Dimming Drivers are standard and dimming leads are extended out of the luminaire unless control options require connection to the dimming leads. Must specify if wiring leads are to be greater than the 24" standard

INSTALLATION

- Standard quick mount plate over standard 4" square junction box or octagonal box and allows for simplified fixture installation.
- Standard luminaire accepts a rigid or free-swinging 3/4" NPT stem for pendant mount via wet location j-box (by others)
- Optional bird deterrent shroud available for field installation
- Optional trunnion/yoke mount available for field installation

OPTIONS/CONTROLS

- Standalone occupancy sensor available for on/off or dimming operation
- NX Lighting Controls available with in fixture Zigbee wireless control module, features dimming and occupancy sensor
- LightGRID+ available with in fixture wireless control module, features dimming and occupancy sensor
- UL924 device available for standalone and wireless control override during power interruptions
- Uplight option provides approximately 800 lumens and consumes only 8 additional watts

	Weight
SRT2	15 lbs / 6.8 kg

OPTIONS/CONTROLS (CONTINUED)

- Integral battery backup option available with and without heater. Rated for 0°C (without heater) and -30°C (with heater) and uses 13 Watts of power
- Emergency lighting relay available for generator or central inverter supplied lighting
- Vandal resistant wire guard available as an option for factory installation or as an accessory for field installation

OPTIONS/CONTROLS (CONTINUED)

Please consult brand or sales representative when combining control and electrical options as some combinations may not operate as anticipated depending on your application

CERTIFICATIONS

- Listed to UL1598 for use in wet location, listed for -40°C to 40°C applications
- Meets IDA recommendations using 3000K and warmer configurations at 0 degrees tilt
- IP65
- DLC® (DesignLights Consortium Qualified). Not all product variations on this page are DLC Qualified. Refer to www.designlights.org for the most up-to-date list.
- Emergency battery backup options are California Energy Commission (CEC) Title 20 Compliant

WARRANTY

- 5 year warranty

Control Options

NX Networked – Wireless	
NXW [3,10]	NX Networked Wireless Radio Module NXRM2 and Bluetooth Programming, without Sensor
NXWS12F	NX Networked Wireless Enabled Integral NXSMP2-OMNI PIR Occupancy Sensor with Automatic Dimming Photocell and Bluetooth Programming [3]
LightGRID+ – Wireless	
WIR	Wireless Controls, LightGRID+
WIRSC	LightGRID+ and occupancy sensor
Sensor Controls	
SCP-8F	Remote control programmable line voltage sensor (8-12' recommended MH) [2,3]
SCP-20F	Remote control programmable line voltage sensor (12-20' recommended MH) [2]
BTSO12F	Bluetooth Programmable, BTSMP-OMNI-O PIR Occupancy Sensor with Automatic Dimming Photocell and 360° Lens [11]

Accessories (Order Separately)

☐	SRT2-WG	Wire Guard for SRT2 version
☐	SRT-MB	Mounting bracket for pre-installation
☐	SRT2-BS-XXX	Bird deterrent shroud for SRT2 version, not available with uplight or trunnion mount
☐	SRT2-TM	Trunnion/Yoke accessory for SRT2 version
☐	CLEDSJK	Whiteway stem and junction box

Notes:

1 For applications that must comply with UL924. Can not be combined with E or EH options
2 Available for 120 to 277 volts only, not 347 or 480
3 Not available with uplight (UD)
4 100, 120 and 140W light engines only
5 Not available with E, EH or DTS options, standard wire length 24"
6 65W and 85W only
7 Uplight Module (UD)will not be controlled by sensors
8 Consult Brand for 480 Volt
9 Not available in 30W and 50W
10 Up to 85W configurations only.
11 Available for 65W and higher

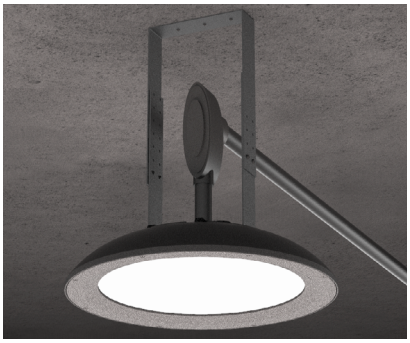
A	B	C	Weight
18.5" (469mm)	4.0" (1mm)	5.2" (132mm)	15bs (6.8kg)

ADDITIONAL INFORMATION

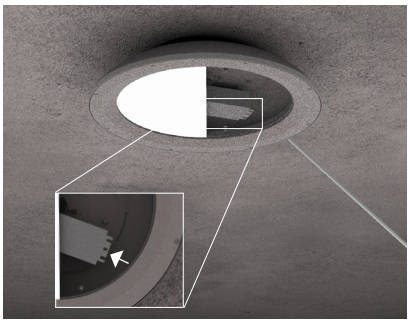
MOUNTING



Surface Mount

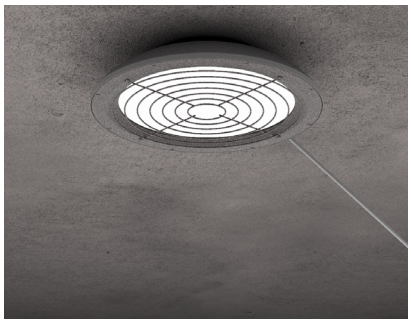
Mounting plate with “quick mount” hanger for one person simple installation.
(conduit not included)

Pendant Mount



Standard 3/4" threaded entry for pendant applications. (Conduit and pendant not included).
Pendant available as an accessory.

Trunnion/Yoke Mount



Multiple position trunnion mount adjusts 9" up and down for positioning in 1" increments.
(conduit not included)

ACCESSORIES AND SERVICES

Battery Backup

Integral battery backup option available on SRT2 version.
(conduit not included)

Wire Guard

An optional wire guard can be specified at the factory or as an accessory for field installation.
(conduit not included)

Bird Deterrent

An optional bird shroud deterrent can be specified at the factory or as an accessory for field installation.
(conduit not included)

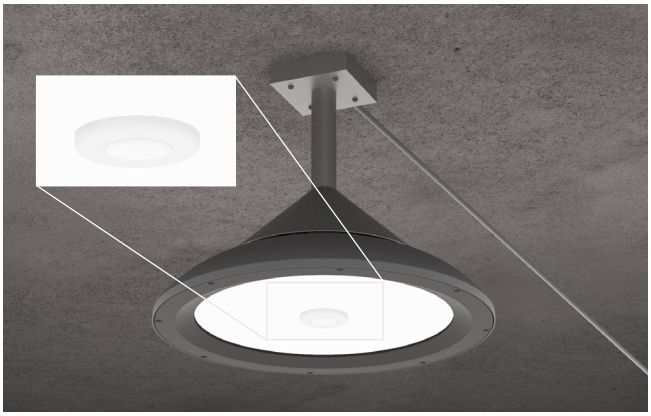
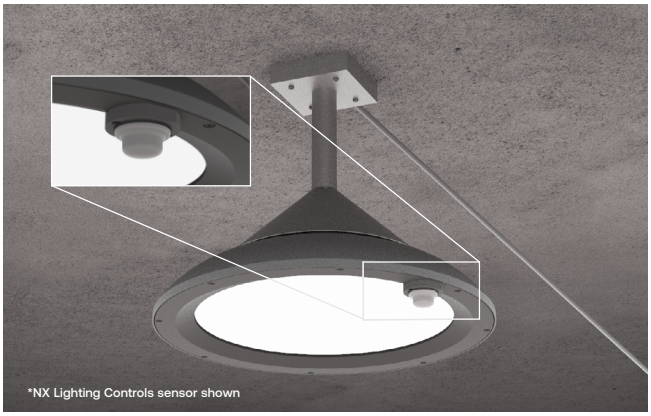
ADDITIONAL INFORMATION CONTINUED

UPLIGHT

Optional uplight module provides 800 lumens of indirect illumination for improved visual quality while eliminating cave effect.



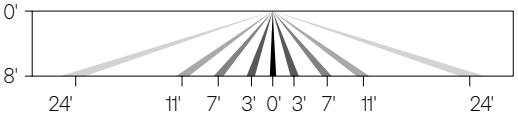


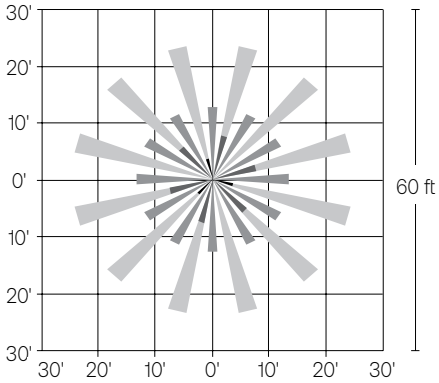
CLEDSJK - Whiteway 6 inch stem and junction box

CONTROLS

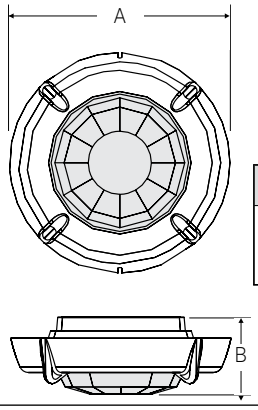
Standalone Controls

Optional passive infrared sensors are available for basic occupancy and daylight sensing. Programmable via remote or Bluetooth® phone app. (conduit not included)





Wireless Controls



NX LIGHTING CONTROLS™ LIGHTGRID

Optional NX Lighting Controls and LightGRID+ wireless controls are available for SRT2 versions (with or without occupancy sensing). (conduit not included)

CY2

ARCHITECTURAL AREA/SITE

CYPHER™

Cypher 14"

FEATURES

- Integral Battery Backup Option
- 360° Light Distribution
- RGBW or Static White Luminous Front Option
- Multiple Fascia Options and Finishes
- 4G Vibration Tested

3000K and warmer CCTs only

CONTROL TECHNOLOGY

SPECIFICATIONS

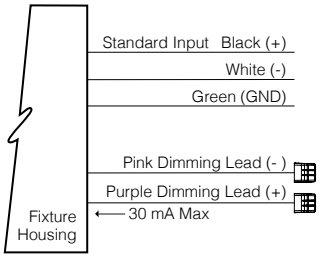
CONSTRUCTION

- Main housing shroud is made of fabricated 5052-H32 aluminum alloy
- Housing mounting interface has a stamped silicone gasket
- Luminaire housing is free of any visible heat fins, hardware or fasteners
- Bracketry and hardware is stainless steel
- Luminaire finish consist of a five stage pretreatment regimen with a polymer primer sealer, oven dry off, and top coated with a thermoset super TGIC polyester powder coat finish
- Luminaire finish meets the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance

LED/OPTICS

- LEDs are mounted to a metal printed circuit board assembly (MCPCB) with a uniform conformal coating over the panel surface and electrical features
- Optical lenses is clear injection molded PMMA acrylic
- Optical array is recessed in order to shield each LED optic across the length of the aperture
- Optical array is sealed for IP66 rating
- Secondary lens is impact resistant 5/32" tempered glass

INSTALLATION



- JUNCTION BOX: Standard with zinc-plated, quick-mount junction box plate that mounts directly to 4" J-Box
- Mounting plate features a one-piece EPDM gasket on back side of plate to firmly seal fixture to wall surface, forbidding entry of moisture and particulates

INSTALLATION (CONTINUED)

- Fixture attaches by two Allen-head hidden fasteners for tamper resistance
- Optional mounting arrangements utilize a die-cast mounting adaptor to allow for surface conduit and through branch wiring
- Housing is able to hang freely in an open service position for inspection of internal wire connections. Once in service position, the housing shall be able to be removed for service by lifting the assembly up off the rear mounting plate and disconnecting the wiring plugs
- Driver assembly is mounted to a prewired internal tray with quick disconnects for removal

ELECTRICAL

- Drivers are in direct contact with the die-cast aluminum housing across the entire surface area of the widest face for maximum thermal transfer
- "Thermal Shield", primary side, thermister provides protection for the sustainable life of LED module and electronic components
- Drivers have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments
- Luminaires have integral surge protection that shall be U.L. recognized and have a surge current rating of 10,000 Amps using the industry standard 8/20uSec wave and surge rating of 372J. Surge protection device shall be wired in series
- Drivers are 0-10V dimming control with a dimming range of 100%-10%. Drivers are U.L. listed. All luminaires shall accept 120-277 volt input and have integral surge protection."Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components

ELECTRICAL (CONTINUED)

- Integral battery backup provides emergency path of egress lighting for the required 90 minutes for -20°C ambient environments
- Luminaire are capable of operating at 100% brightness in a 40°C environment. Both driver and optical array shall have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C

CONTROLS

- Button photocontrol for dusk to dawn energy savings
- Photocell is factory installed inside the housing with a fully gasketed sensor on the side wall. For multiple fixture mountings, one fixture is supplied with a photocell to operate the others. Photocell adapter shall include an internal twist lock receptacle. Photocell by others

Notes:

1 Consult factory for custom distributions. See Distribution Matrix on page 4 restrictions

2 PB distribution is available for 90/10 and 70/10/10/10 models only. Not all combinations are recommended. See Distribution Matrix on page 2 for restrictions.

3 Consult factory for custom color, marine and corrosive finish

4 RGBW and LFSW luminous fronts are only available with open, four square and perforated fascia panels

5 Flat and Radius Fascia forms only. Painted panels by default match base housing finish/color. Consult factory for custom panel finishes.

6 Occupancy sensors not available with CB, T, E or C fascia forms

7 Luminous front is required to select the Open Panel and 4-Square Panel fascia panels.

8 Consult factory for information on specific configurations with different fascia forms.

9 Custom Building Material Mount Ghost Fascia option allows the Cypher to blend seamlessly into the building architecture by matching the finish of the architectural background. See page 7 for dimensions and contact factory for additional information. Custom material provided by others.

ARCHITECTURAL AREA/SITE

SPECIFICATIONS (CONTINUED)

CONTROL (CONTINUED)

- Each fixture comes equipment with a dual control driver that supports Bluetooth® operation of individual fixtures or DMX control of an entire system of fixtures.

BLUETOOTH®:

- Free Bluetooth® Apps are available for Apple iOS and Google Android mobile devices and are downloadable via the Internet at Apple App Store or Google Play.
- Modular wiring harness in the service area provides user access to the dimming circuitry via DMX.

DMX:

- Fully DMX/RDM Compatible
- Utilizes 4 DMX Channels per fixture

DMX MAP

- Start Address – Red
- Start Address +1 – Green
- Start Address +2 – Blue
- Start Address +3 – White

DMX Addressing is performed by using a compatible RDM handheld unit or via the Bluetooth® App.

- Performed by using a compatible RDM handheld unit or via the Bluetooth® App

DMX WIRING COLOR CODE

- Red Wire – DMX +
- Brown Wire – DMX-
- Yellow Wire – Shield/Ground
- DMX termination must be achieved by adding a DMX terminator to the last fixture in a Daisy-Chain. Fixture does not auto terminate.
- Kim Lighting is proud to offer the Pharos Architectural Controls DMX Controllers and Touch screens. See Pharos Spec Sheet for more details.
  See the Pharos® Spec Sheet for more details.

MOBILE APP:

- Mobile App specification in additional information section.
- Mobile App. dimming range from 0% to 100% through the use of Current RGBW app (available on IOS and Android).
- Color selection and adjustment.
- Camera function for color matching.
- Intensity slider for dimming/ramping up.
- Save and rename up to 10 presets.
- Group and rename fixtures.
- Fixture is password protected, refer to instructions to set unique password.

CERTIFICATIONS

- Luminaire is listed with UL for outdoor, wet location use, UL1598, UL 8750 and Canadian CSA Std. C22.2 no.250
- IP66 rated assembly
- IDA approved, 3000K and warmer CCTs only
- DLC® (DesignLights Consortium Qualified), with some Premium Qualified configurations. Not all product variations listed in this document are DLC® qualified. Refer to http://www.designlights.org for the most up-to-date list.
- ANSI C136.31-2010 4G Vibration tested and compliant
- Complies with “Americans with Disabilities Act” or "ADA" on select versions for low mounting height applications (fixtures extend maximum of 4 inches from wall for mounting heights of 80 inches or less)
- Emergency battery back options are California Energy Commission (CEC) Title 20 Compliant

WARRANTY

- 5 year warranty

May 30, 2025

Eric Freeman, City Planner
Planning & Urban Department
389 Congress Street
Portland, ME 04101

Subject: Project ID – PL-002882-2024
203 Fore Street
Proposed Home 2 Suites
Applicant: Chatham Lodging Trust
Letter of Response to Planner Comments

Dear Eric:

On behalf of **Chatham Lodging Trust (Applicant),** our office is pleased to provide this letter of response to City Review Comments dated April 10th, 2025, for the proposed development at 203 Fore Street. We offer the following response for each comment, below. For ease of reference, we have repeated those comments in *italics* followed by our responses for the City's consideration in **bold.**

Staff Review Comments received via email April 10th, 2025

Transportation Standards (Sec. 14.3.1)

Impact on Surrounding Street Systems

1. *DPW has repeatedly seen operational issues with the currently proposed configuration of hotel loading zones in other locations within the City. Frequently the loading zone will be full at hotel check-in which results in double parking into the travel lane essentially blocking vehicles from safely travelling down Fore Street and will cause issues into the intersection. DPW is not in support of this configuration on Fore Street and operations should utilize the existing Hampton Inn valet operations.*

   Response: We understand DPW Staff's concerns about the hotel loading zone spaces and believe that the information provided with this letter, below and previously, provides sufficient evidence that the hotel loading zones can and will be operated in a safe and efficient manner. This includes a management structure comprised of the hotel management staff and the valet vendor, UPP. Further information regarding the valet operation approach is provided below.

2. *Delivery vehicles for the existing Hampton Inn frequently block the westbound travel lane on Fore Street, given that the existing Hampton Inn driveway can accommodate delivery vehicles and other service vehicles all vendors should be directed to do so for both the existing Hampton Inn and the proposed Home 2 Suites.*

   Response: The Applicant is amenable to this approach and will direct delivery vehicles to enter the existing curb cut for loading/unloading.

3. *The City will need easement for existing lighting along the south side of Middle Street.*

   Response: The Applicant is understanding an easement will be necessary and will coordinate with Public Works for the relocation of underground power and light poles accordingly. Notes for the relocation and protection of these elements are identified on the Utility Plan.

Access and Circulation

4. *The primary entrance at the corner of Fore and India Street should front India Street. See attached design memo.*

   Response: The entrance has been revised accordingly and is further discussed in the response letter and plans provided by ProCon.

Traffic Movement Permit

5. *Per MaineDOT Traffic Movement Permit regulations, a Section 7 Study may be required. This determination was identified at the Scoping meeting. The revised report shall be noted as Section 7 of the Traffic Movement Permit.*

   Response: Based on the meeting on Wednesday May 7th, we understand this comment was satisfied with the documents uploaded on March 28th which represented the Section 7 traffic impact study.

6. *There was considerable discussion regarding valet operations and routing to and from the on-street area where hotel guests will drop off and pick up their vehicles.*
   a. *Figures 11 and 12 need to be revised to account for all hotel trips (hotel guests and valet) arriving/departing curbside in front of hotel facing the westerly direction. The following are specific comments:*
      i. *It is my understanding that all hotel guests will arrive curbside and use valet services and not enter the parking lot. Figure 11 indicates 23 (24) trips will enter the site from Franklin Street. I'm not going to summarize all these types of inconsistencies, but the trip distribution must clearly account for hotel guests*

arriving to curbside, and valet services routing the vehicles from the curbside to a designated parking facility – and back to curbside. The report should be specific on valet routings (e.g., leaving curbside and u-turning into the site to return to India Street and the 1 India Street parking lot). This is a complicated assignment of trips, but I need to fully understand the final assignment. Feel free to send me graphic examples, so that I can offer comments, before the report is resubmitted.

Response: Figures 11 and 12 have been split into the following figures:

- ***Figure 11A – Guest Arrival***
- ***Figure 11B – Guest Departure***
- ***Figure 12A – Valet Arrival***
- ***Figure 12B – Valet Departure***

As discussed in the meeting on May 7th, the previous distribution figures were to be split up to demonstrate the vehicles that arrive and depart as guests and those that arrive and depart from the site as valet trips which are either parked on or off-site in the four off-site parking lots previously identified. We note these figures represent the original trip assignment for vehicles traveling to the site where guests taking Franklin Arterial to the hotel would be directed to approach the hotel loading spaces by travelling northeast on middle street, turning southeast (right) onto India Street and then turning south (right) onto Fore Street. Of particular importance are Figures 12A and 12B which demonstrate the movements for valet vehicles which are going to and from the hotel loading zones. These figures demonstrate that safe vehicle movements area available to and from the individual assigned parking lots at 194 Fore Street, 280 Fore Street, and 1 India Street in the AM and PM peak hours. U-turns and other unsafe vehicle movements will be discouraged.

For discussion purposes, we note these figures are conservative for two reasons;

1. **The valet distributions assume that in the AM and PM peak hours, the onsite parking lot is full, and no vehicles will be able to park onsite.**
2. **The valet distribution assumes that every vehicle arriving/departing from the site also requires valet services. Considering this hotel is an extended stay hotel, it can be assumed that some of the vehicle trips generated are comprised of taxis, rideshares (Uber, Lyft, etc.), or other means of transportation. However, there is no data to support how many trips may be comprised of these types of vehicle trips.**

b. *The assignment of trips to the site assumes a significant portion arrives/departs via Fore Street east of India Street. I would expect most trips to arrive from Franklin Street/Congress Street/Washington Avenue.*

Response: We agree with this conclusion and have revised our assignments to our original analysis which emphasizes more vehicles arriving from Franklin via India and Fore Streets.

c. *The report shall speak to how the valet system will be managed from a curbside vehicle space capacity perspective and what strategies will be employed to ensure hotel guest vehicles will arrive in the appropriate direction on Fore Street. If the valet curbside space is unavailable, how will vehicles be managed. It should note the number of valet curbside spaces proposed and adequacy during peak periods. In general, the Section 7 report shall include a Valet Parking Management Plan.*

Response: We have consulted with UPP, the valet operator contracted to provide valet services for both the Hampton Inn and the proposed Home2 Suites. In support of the proposed valet parking operation, we offer the following:

1. **UPP is contracted with the Owner to provide valet services for both hotels. This will allow a synchronized valet operation that can efficiently manage vehicles approaching both hotels and providing parking onsite and in one of four offsite parking lots, all located within 600' of the project site.**
2. **UPP will provide, at a minimum, 1-2 employees at each hotel. During timing of shifts, more employees will be provided to align with peak demand. The attendants at each hotel will be equipped with radios or other wireless devices to ensure timely communication of valet demands. UPP has reviewed and confirmed that three spaces at the Home2 entrance will be sufficient to manage the valet services.**
3. **To ensure guests arrive from the appropriate direction, the hotel can provide specific directions online that may be followed by GPS/travel applications.**
4. **Onsite parking will be prioritized for valet parking first. The 194 Fore Street, 280 Fore Street, and 1 India Street parking lots will be utilized next. In the event that additional offsite parking is necessary, the 100 Middle Street garage will be utilized.**
5. **For all cars that are valeted on site, guests will be advised to pick up their car under the porte-cochere at the Hampton Inn entrance to avoid unnecessary trips around the block to reach the Home2 Suites hotel loading spaces.**

6. **As demonstrated in the revised distribution figures, above, U-turns and other unsafe vehicle movements are discouraged and UPP will ensure vehicles reaching the 1 India parking lot, for example, will turn into the site to turn around to drive northeast on Fore Street.**

As previously discussed in the Transportation Demand Management Plan submitted, the total average offsite parking demand between the two hotels combined is 35-40 parking spaces during peak summer months per day. This is based on information from UPP and the Applicant, an owner and operator of more than 35 hotels.

7. *A concept plan shall be prepared depicting recommendations for the India Street intersections with Middle Street and Fore Street. The plan should consider the following:*
    a. *Depicting the prohibition of parking spaces within 20 feet and the estimated loss of supply.*
    b. *Curb extensions as noted in the report. Vehicle turning templates with and without curb extensions shall be provided.*
    c. *Installation of "All-Way" supplemental plates at the Middle Street intersection.*
    d. *Provide an opinion on the placement of STOP signs (and two sided) as it relates to optimizing visibility.*
    e. *Provide an opinion on the STOP Ahead warning sign in southbound India Street approaching Middle Street.*
    f. *Provide an opinion on the W11-2 Pedestrian Warning sign on northbound India Street approaching Middle Street.*
    g. *Recommend and include strategies that help to create intersections that prioritize pedestrian safety/movements. During field observations vehicles tended to "roll stop" both as through movements and turns creating unsafe pedestrian conditions.*

Response: A concept plan has been prepared demonstrating the prohibition of parking spaces within 20' of the edge of curb ramps and "All-Way" supplemental plaques on the Middle/India Street Stop signs. Notes on the plan identify where existing parking spaces are lost. The concept plan also demonstrates curb extensions at the corner of Fore/India Street as directed by City Staff in a meeting on site on May 15th. In support of the curb extensions, we are also providing a fire truck turning template to demonstrate a fire truck's ability to maneuver around the curb extensions.

Regarding the additional opinions/recommendations requested in Items d thru g, above, we offer the following:

d. All Stop signs appear to be properly located. The two-sided Stop signs are a reasonable option to increase visibility for the stop signs given the current intersection skews.
e. The Stop Ahead sign located in the southbound approach to the Middle/India intersection appears to be necessary as the existing 8' curb extension contains utility poles and landscaping which may otherwise hinder a vehicles view of the Stop sign in advance of the intersection.
f. The W11-2 Pedestrian Warning sign on the northbound India Street side is not necessary in our opinion as the intersection is a controlled crossing location (4-way stop).
g. Other than the mitigation currently identified in the concept plan, other strategies to prioritize pedestrian improvements would be other visual aids such as different crosswalk painting instead of the current piano key type paint. This could include a ladder style painting with longitudinal bars and perpendicular bars on each side.

Environmental Quality Standards (Sec. 13.6.2)

Site Landscaping and Buffers

8. *The landscape plan should be updated to match the site plan.*

Response: The Landscape Plan by Carroll Associates Landscape Architects is provided with this submission which matches the site plan.

Water Quality, Stormwater Management and Erosion Control

9. *As a condition of this approval, the City of Portland requires the applicant to retain the services of a third-party inspector for the duration of construction until final site stabilization is in place. The inspector is required in order to ensure all construction and stabilization activities comply with the permit conditions and the approved drawings and specifications*

Response: The Applicant is amenable to this condition of approval and will engage a third-party inspector accordingly.

10. *The owner/operator of an approved stormwater management system, and all assigns shall comply with the conditions of Chapter 32, Stormwater including Article III, Post Construction Stormwater Management, which specifies the annual inspections and reporting requirements.*

Response: The Applicant understands these requirements and is prepared to comply with the conditions of Chapter 32 accordingly.

11. *A maintenance agreement for the stormwater drainage system, as attached, or in substantially the same form, shall be submitted for review by Corporation Counsel. Once approved, the document shall be signed and recorded at the Cumberland County Registry of Deeds. The following stormwater management documentation shall be submitted to the Water Resources Division of Public Works and the Department of Planning and Urban Development prior to the issuance of a Certificate of Occupancy:*
    a. *Final executed stormwater maintenance agreement with the final approved post stormwater management operation and maintenance plan.*
    b. *Certification, based on initial comprehensive inspection from the project Engineer of Record, certifying the approved stormwater systems were installed properly, are fully operational, and are functioning as intended.*
    c. *As-built drawings including grading and drainage and updated details for any stormwater systems on site.*
    d. *DPW Impervious Area Adjustment Form 5A*
    e. *DPW Stormwater Credit Application Form 3*
    f. *DPW stormwater program forms can be found at the following link: https://www.portlandmaine.gov/1102/Credit-Manual-and-Applications*

Response: The Applicant will coordinate to execute the stormwater maintenance agreement with the City and the final documentation will be completed, as identified, prior to the issuance of a Certificate of Occupancy.

These files are being transmitted via email and uploaded separately to EPlan.

We look forward to your review of these materials and trust that this information satisfactorily meets the resubmission requirements. If you have any questions regarding the information being submitted, please contact our office.

Sincerely,

Attn: Eric Freeman

Re: PL-002892-2024

Dear Eric,

We have received your design review comments, dated April 10, 2025, regarding the proposed Hilton Home 2 mixed use building at 203 Fore Street, Portland, ME.

Please find our formal responses below to each of the city comments regarding Building Design Standards within the India Street Form-Based Code zone where the submitted project requires additional information and/or a path to compliance.

- **Standard 6 Building Entries, Standard 6.3:** See revised sheets A1.01 and A2.01 indicating a double door facing India Street as the principal entrance into the hotel.
- **Standard 6 Building Entries, Standard 6.7:** See revised sheets A1.01, A2.02 and A2.04 indicating additional building entries along Fore Street to meet the standard.

In addition, we have maintained the proposed hotel building to accommodate OSHA 1926 minimum clearance distances to the existing overhead 3-phase electrical wires during construction and maintenance along Middle and India Streets. The ground floor setback has been maintained at ten (10) feet within the Urban Active subdistrict as the ground plane frontage will be an extension of the accessible public right of way.

The upper portion of the building facing Middle Street is setback from the ground level footprint approximately four (4) feet and setback approximately three (3) feet facing India Street. This resulted in a reduction of two (2) guestrooms. The total number of proposed guestrooms has been modified from 132 guestrooms to 130 guestrooms.

If you have any questions and/or concerns, please feel free to call and we will gladly discuss these items to assist in the resolution of these issues.

Sincerely,

Kent Beirne, AIA

Attn: Stephen Bushey, PE

Subject/Description of project: Chatham Portland DT LLC, Portland - Natural Gas Ability to Serve Response

Dear Stephen,

Thank you for your interest in using natural gas for the above referenced project.

This is to confirm that natural gas can be made available from our distribution system to serve your proposed project. Once a site plan showing the gas riser location is available we can size the required gas service. The new gas service could come off of the main on either Middle St. or at the intersection of Fore St./India St. The approval by our engineering is based off a nameplate load of 2.95 MCFH. In order to determine is the customer would need to share in the cost to install the gas service we would need to see a site plan showing the route and distance of the gas service. We would also need confirmation that we could install the gas service to the building with one mobilization instead of installing gas to get out of the way of paving and then coming back a second day to finish the service when the building has been constructed. If two mobilizations are required we can evaluate the cost as such and confirm if there would be a cost to the customer or not. Please let us know.

All work necessary to provide service will be performed in accordance with the Maine Public Utilities Commission requirements.

If you have any further questions or require additional information, please contact me at 207-541-2543 or email at carpenters@unitil.com.

Sincerely,

Scott Carpenter

203 Fore St Portland, Maine
SAP # 10301112257 FORE STREET -10007.3 PADXMR 3P 1000K 12GRDY 208Y/120P FT E

Dear Ms. White:

In support of your project at 203 Fore St Portland, Central Maine Power has confirmed our construction cost to install the necessary electrical infrastructure**. The cost associated with CMP's portion of the project is $70,622.99. The quote is attached.** This cost includes all of CMP's material, labor and trucking necessary to provide the upgraded three phase electrical services to this site. This is a firm cost that is valid for 90 days from the date of the invoice and must be paid in advance of any work performed by CMP. Please contact Consolidated and Spectrum to determine if these utilities will bill you as well.

When we have received your payment, applicable easements (still waiting on the Easement Information Worksheet), and the electrical inspection, the job can be scheduled and completed. CMP may elect to do some construction work prior to receiving the electrical inspection, but the service cannot be energized until it is in. It should be noted that the transformer will be ordered once we receive payment and easements. Be aware that material availability may impact your desired installation schedule.

As you may be aware, there are global supply chain issues impacting the utility industry. CMP is closely monitoring and managing their inventory to serve our customers. Larger padmount transformers may not be readily available for the date that you will need to be energized. Please consider this as part of your construction plan. The energy service advisor will continue to work closely with you and let you know as soon as the transformer becomes available. Should you have any questions or concerns throughout this process, please do not hesitate to contact your ESA directly at the number or email provided.

Central Maine Power will construct, own and maintain the line extension to serve your property. This does not include customer owned secondaries or related equipment-all of which is provided, installed and maintained by the customer in accordance with the CMP Handbook of Standard Requirements

General Work Scope:

CMP will install a 1000 kva 120/208v three phase pad mount transformer based on your submitted load sheets. You will be installing the secondaries to all the services. You are limited to 8 sets of secondaries for the three-phase pad mounted service. From existing pad mount located at 10007.2 CMP will install 4/0 CU primary in your 3x5" conduits. Please coordinate the installation of the conduits from existing 10007.2 to 1007.3, approximately 35'.

You will be responsible for installing the conduits, and metering in accordance with the CMP Handbook of Standard Requirements. The transformer was sized based on your submitted load sheets.

AIC:

AIC for the 1000 kva 120/208v transformer is 79,310 amps. This information should be sent to your electrician as well. Please consult the Handbook of Standard Requirements or contact me if you have additional questions.

Metering:

Based on the submitted load sheet, you will have a 3000a CT for the Hotel, and 2x200a and 1x400a self-contained meters. CMP must pre-approve the metering location. CMP must pre-approve the CT gear as well.

Please consult the Handbook of Standard Requirements or contact me if you have additional questions.

Power Quality:

We wish to advise that it is the Customer's responsibility to install adequate phase loss protection on all their equipment that can be damaged by abnormal voltage conditions. Abnormal voltage conditions are typically attributable to storm activity, animal contact with the electric distribution system and vehicular accidents involving CMP property. You can also visit our website at CMP Power Quality for more information on this topic.

Reallocation:

Recently, changes were made to the three-phase construction policy, which require CMP to reallocate construction costs paid by customers. If applicable, those projects identified as "developments" do not qualify for reallocation of funds. Please see this document at our website for details about the reallocation conditions. Any reallocation charges will be specifically denoted on your invoice. The website link is found here; CMP Reallocation Policy .

This line extension will be part of Central Maine Power's distribution system. In the event the property served under this Agreement is sold or otherwise conveyed, all rights and obligations of the Agreement shall stay with the property. Please note that if you rent or lease this property to another

and you want to receive the reimbursement payments, you must make special arrangements with the Central Maine Power Company. Otherwise, any reimbursement payments will be sent to the "Customer" taking service at the service location.

Electricity Supplier Information:

Central Maine Power Company (CMP) will provide your facility with electric delivery service. If you don't already have a provider, you will need to make arrangements with a competitive electricity provider in order to receive electricity supply for your facility. In the event you fail to choose a competitive electricity provider, you will receive Standard Offer service arranged by the Maine Public Utilities Commission. If you wish to be served by a competitive electricity provider immediately upon establishment of delivery service, you must arrange for this service directly through your chosen competitive electricity provider, who must enroll your account no later than 5 PM on the business day prior initiation of delivery service by CMP. An up-to-date list of competitive suppliers can be found at the:

1. Maine Public Utilities Commission (MPUC) web site, https://www.maine.gov/mpuc/, by selecting Central Maine Power in the drop-down box for Regulated Utilities
2. By calling the MPUC at (207) 287-3831

Where to Send your payment:

You can now pay ONLINE, by PHONE, or by MAIL.

Quote payments only by ACH accepted online: www.cmpco.com/payquote

Quote or Invoice payments by ACH or credit card accepted by calling 1-800-750-4000 option 4.

Quote or Invoice payments by check:
Please make the check out to Central Maine Power. Single payments for multiple notifications will cause significant delays in processing. Also please write the work request numbers (**SAP #)** in the memo section of the check to allow better tracking of your payment.

Please send the check to the address below:

Central Maine Power Company
PO Box 847811
Boston, MA 02284-7811

In the meantime, if you have any questions or concerns about the information I have provided, please contact me.

Regards,

Jamie

Construction Management and Site Logistic Plan

This document and its subsequent attachment Exhibits comprise the Construction Management Plan being submitted to the Portland Department of Planning & Urban Development Department for the new 5-story, mixed-use extended stay hotel building located at 203 Fore Street. This plan is being submitted by PROCON construction on behalf of the owner, Chatham Lodging Trust.

The purpose of the Construction Management plan is to identify, mitigate and plan for all potential impacts throughout the duration of construction. PROCON construction will ensure that the safety of the public and the surrounding communities are at the top of our priorities.

This CM plan will be continually updated as the project progresses to meet the needs of the project, community, and the City of Portland. PROCON Construction's main objective is to deliver the project to the Owner, Chatham Lodging, and the City of Portland successfully with zero safety accidents or incidents by means of communication and teamwork.

A. Project Description

The project consists of new construction for a five-story, 85,500 SF +/-, 132 guestroom extended stay hotel. The structure consists of a 4-story, type 5A, one-hour protected combustible construction (wood frame) over a 1-story above grade, type 1A, three-hour protected construction (steel frame, three-hour protected) podium building with fully automatic NFPA 13 sprinkler system throughout.

Occupancy groups A-2, A-3, B & R-1 located on first floor having entrance lobby, breakfast/lounge, buffet with supporting food prep kitchen, meeting room, back of house offices, fitness areas, elevator lobby, egress stairs, building storage, mechanical, electrical and water service entrance room with fire separation rated partitions and assemblies as indicated and as required by code.

Occupancy group R-1 use group located on second, third, fourth, and fifth floors with supporting electrical, building storage, common egress corridors, elevators and stairs with fire separation rated partitions and assemblies as indicated and as required by code. A 2-HR rated fire barrier creating a horizontal exit shall be incorporated from the 2nd floor to the underside of roof deck to eliminate the requirements for an accessible means of egress with associated emergency operation, signaling and standby power requirements per 2015 IBC section 1009.2.1 exception 1.

There will be approx. 5,300 SF of retail/restaurant tenant space along Middle and India Streets.

B. Construction Schedule

The project is expected to commence construction sometime in the spring/summer of 2025 and is anticipated to be completed spring/summer of 2027. Construction duration is approximately 24 months.

Construction work hours will be in accordance with City of Portland ordinance requirements.

Work hours will be limited to Monday – Friday 7:00am -7:00pm. Should Saturday work be required, the use of heavy equipment will be kept within the time constraints of 8:00am to 4:00pm.

PROCON
CONNECT • CREATE • CONSTRUCT

T 603.623.8811
F 603.623.7250
P.O. Box 4430
Manchester, NH 03108

C. Security & Public Safety

Please refer to Exhibit A for the site fencing/gates, traffic and pedestrian routing plan, which will be utilized for the duration of the project. If required by the city, Knox Box Pad Locks will be installed at each gate for fire department emergency access.

The fire safety program on-site will consist of the following:

1. Fire extinguishers will be placed throughout the construction site for the duration of the project.
2. On-site fuel storage will be limited but will be required throughout construction. A free-standing, 30-minute fire-rated enclosure will be provided for this safe and secure storage.
3. During construction, our Means of Egress will have at least two permanent stairs. Temporary signage will be installed to clearly indicate these egress methods.
4. PROCON construction will provide dumpsters for the removal of debris from the site. All subcontractors are responsible for the daily clean-up of their work areas. Additionally, PROCON construction will have laborers to assist with this daily clean-up. Daily safety walks by the Construction Superintendent will be utilized to ensure that all working floors are equipped with an inspected fire extinguisher and a clear means of egress in the event of an emergency.
5. Any personnel (whether working or visiting the site) will go through our safety orientation that will include our emergency evacuation plan. Hard hats and high visible (Safety Orange or Fluorescent green) shirts and/or vest shall be worn at all times within the construction site.
6. Once the combustible wood superstructure construction starts the project will implement a temporary pre-action fire sprinkler system within the wood structure. A detailed narrative Exhibit will be provided at a future date.

D. Construction Management Principles

The impact of this project during construction will be minimized via the following management practices and principals:

1. As depicted on the attached Site Logistics plan (Exhibit A), the Construction Zone will be secured with a combination of jersey barriers, fencing and gates along Middle Street, India Street and Fore Street as well as the other side of this site adjacent to the existing Hampton Inn Hotel. These barriers will prevent the public from any access into the construction site.
2. All construction activities will be performed within the limits of the site fence to ensure the public is never exposed to any risks caused by construction activities. The sidewalks along Middle Street and India Street adjacent to the building will be closed for a majority of the construction duration of the project until completion. One vehicle entrance will be maintained into and out of the site from Fore Street for deliveries. A minimum of three man gates will also be provided around the construction site as shown on the Site Logistics plan (Exhibit A).
3. All deliveries will be scheduled and coordinated to ensure there is minimal off-site queuing.
4. All construction activities will occur within the sound ordinance times.

E. Development Review of Construction Management Plan

PROCON construction has developed a comprehensive management plan that will be in place for the duration of the construction timeline (or until permanent/final measures are installed and can be utilized).

T 603.623.8811
F 603.623.7250
P.O. Box 4430
Manchester, NH 03108

PROCON Construction utilizes a site-specific safety policy for all workers on-site. Each member will complete a job specific safety orientation prior to starting work activities. At no point will the public have access to the project site within the fenced limits.

F. Performance Guarantees, Inspection Fees, Preconstruction Meeting, and Permits

All fees, building permit fee and guarantees will be paid/issued prior to the commencement of construction.
All street opening permits will be applied for by the selected site contractor upon award of the contract and in hand prior to opening the street for work.

There is no blasting anticipated for this project, however due to the soil conditions, it is anticipated that the foundation system may involve the installation of piles to support the building's column loads.

G. Construction Administration and Communication

The PROCON contact person for all construction activities for the project will be:

Project Superintendent: TBD

PROCON Construction Main Office number: (603) 623-8811

Due to the proximity to occupied buildings and the number of anticipated deliveries, community outreach and communication will be required throughout construction to keep the public and neighboring businesses informed of our plan.

Signage will be posted onsite with additional emergency contact information for the selected Superintendent that will be the site contact for the project. An Emergency Call Log will be developed and distributed to the project team including all subcontractors.

Periodic reporting and updating of our Construction Management Plan will be required to update the city and community of the following activities:

1. Construction schedule updates.
2. Material deliveries, including notice of any oversized loads that may impact public traffic.
3. Requests for upcoming off-hours work including weekends and holidays.
4. Notice of any upcoming activities that may produce strong noise, vibration or dust that could adversely affect the neighboring communities.
5. Requests for any street openings or public sidewalk work to be completed as part of the construction contract.

H. Construction Permitting and Traffic Control Plans

The construction will be near pedestrian right of ways and will interact with public traffic throughout the duration of the project. There will be little to no lay down area for materials on-site. Deliveries will be scheduled in advance and planned for accordingly. We will stay in constant communication with the City and the neighboring businesses to keep them informed of our upcoming construction activities / deliveries with the intent to minimize impacts to all surrounding Streets.

This project includes new utilities that will require new taps/tie-ins within the public ROW. All street opening permits will be applied for and approved prior to start of utility work in the street.

PROCON
CONNECT • CREATE • CONSTRUCT

T 603.623.8811
F 603.623.7250
P.O. Box 4430
Manchester, NH 03108

I. Site Management and Controls

PROCON construction will adopt the following site management and maintenance activities through the of the project:

1. Trash and debris will be contained within the project fencing and changed out on a regular basis. PROCON will establish a recycling program for construction debris which is recyclable and coordinate these efforts with Waste Management or another local rubbish recycling company.
1. A stabilized construction entrance will be installed at the gate locations and maintained by the selected sitework contractor. Street cleaning will be reviewed daily and cleaned as required to remove dirt/debris caused by the construction efforts.
2. Noise will comply with City Ordinances.
3. If needed, water will be used to control dust during the sitework activities of the project. We do not anticipate any other activities that will require dust control measures.
4. Onsite snow removal will be handled by PROCON construction.

J. Erosion Control and Preservation of Trees

We will comply with the approved erosion and sedimentation control plan.

K. Construction Staging Area

Exhibit A of this document is the site logistics plan for the project. An offsite marshalling area may be needed during the erection of the steel structure, concrete placements, and the exterior wall systems due to the limited area on site. Once all these subcontractors are procured, we will have further review and update this plan accordingly.

L. Parking During Construction

Off-site parking is required. Employee parking will be provided by employers utilizing legal parking methods. It will be discussed in the Subcontract agreements that no street parking will be allowed during work hours and all street parking to be available for local businesses and the public. PROCON and Chatham Lodging will develop a plan for subcontractors to park either with available private parking lots nearby and/or further parking lots with a bussing plan to provide transportation to the construction site.

M. Special Measures as Necessary

This is a 4-story wood frame building over 1-story structural steel building that will be erected utilizing a Crane. Once an erector/crane operator has been selected, we will further review and discuss with the City to update this plan if needed. See attached Exhibit A for proposed crane location.

Should we encounter any groundwater, dewatering will be handled by the sitework contractor. This can be further with the Contractor/s at the Preconstruction meeting for specific details.

This site is participating in a Voluntary Response Action Program (VRAP) along with MDEP as there are the potential for elevated levels of VOCs. PROCON construction and Chatham Lodging Trust will engage an environmental

engineer/scientist to test soil samples prior to and during construction to ensure the safety of the workers and surrounding community. Any areas disturbed during excavation containing contaminated soils will be tested and disposed of in accordance with MDEP.

N. Project truck routing

All truck deliveries will be routed as stated below:
Incoming deliveries: US Highway I-295 exit 7 off I-295 onto Franklin Street heading south then a left onto Fore Street which will lead construction site entrance gate.
Outgoing Traffic: Construction traffic will leave the site and take a right onto Fore street, right onto Franklin Street Franklin Street and back on to US Highway I-295.

Eric Freeman, City Planner
Planning & Urban Department
389 Congress Street
Portland, ME 04101

Subject: Project ID – PL-002882-2024
203 Fore Street
Proposed Home 2 Suites
Applicant: Chatham Lodging Trust
Waiver Requests

Dear Eric:

On behalf of **Chatham Lodging Trust (Applicant),** our office is providing the formal waiver requests below in support of the proposed development at 203 Fore Street. For ease of reference, we have repeated the applicable Land Use Code Standard in *italics* followed by our responses for the City's consideration in **bold.**

Waiver Requests:

Parking and Vehicle Display Lot Landscaping – Land Use Code Sec. 14.6.2.C.3

This provision of the Land Use Code requires at least two trees per five parking spaces to be planted in landscaped islands and that landscaped islands shall be provided such that there are no more than 40 uninterrupted parking spaces. There are 96 parking spaces which would require at least 19 trees to be planted. The current landscape plan proposes 29 new trees to be planted on site. The site layout design has reinforced the building along Fore, India, and Middle Streets with landscaped spaces along Middle and Fore Street connecting the mid-block permeability corridor through the parking lot. There are no areas where more than 40 parking spaces are uninterrupted in line. Of the 96 proposed parking spaces on site, the parking layout also includes 44 covered or partially covered parking spaces beneath the hotel structure and covered parking structure along Middle Street. The covered parking structure will include landscaped plantings above. We believe this approach, which provides a covered parking structure with landscaping above, meets the intent of the parking lot landscaping requirement and we respectfully request a waiver from providing parking lot islands per the code.

Drive Aisle Width – Technical Manual Section 1.10.3

This provision of the technical manual requires parking lot drive aisle widths to be 24' wide. The parking area will only be accessible to valet and service vehicles and the parking lot will be effectively managed such that the decreased drive aisle widths do not pose an issue for parking of guests' vehicles. The drive aisle widths shown on Sheet C-3.1 are 22.3' wide and 11' wide, however, during valet operations, other vehicles can be moved such that the effective widths necessary for movement of vehicles will be increased. Delivery vehicles will typically enter the parking area and stop to unload within the 22.3' wide drive aisle where they will be able to back up to turn around towards the existing Hampton Inn dumpster area and exit the property. For these reasons, we respectfully request a waiver from the standard drive aisle width.

We look forward to your review of these materials and trust that this information satisfactorily meets the waiver justification requirements. If you have any questions regarding the information being submitted, please contact our office.

Sincerely,

GORRILL PALMER

I, Kaleb Bourassa, of Gorrill Palmer, herby certify that a Neighborhood Meeting was held on Thursday, September 12th, 2024, at 5:30pm at the Hampton Inn Conference Room located at 209 Fore Street in Portland, ME for the proposed mixed-use Hotel and Retail development located at 203 Fore Street in Portland, ME.

I also certify that on August 27th, 2024 (at least 10 days prior to the neighborhood meeting), notices were mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes property owners within 500 feet of the proposed development or within 1,000 feet of a proposed industrial subdivision or industrial zone change.

2. Residents on the "interested parties" list.

Signed,

Kaleb Bourassa, PE
Project Manager
Phone 207-772-2515 x297
KBourassa@GorrillPalmer.com

Attachment to this certification are:
1. Copy of notice sent
2. Sign-in Sheet
3. Record of Feedback (Meeting Notes)

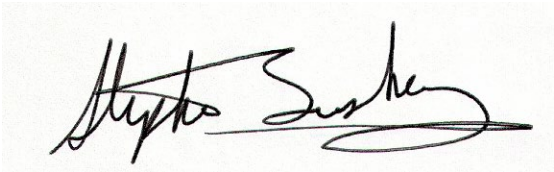
August 21, 2024

Dear Neighbor:

Please join us for a Neighborhood Meeting to discuss the proposed Major Site Plan application (PL-002892-2024) by Chatham Lodging Trust for a mixed-use Hotel (Home 2 Suites) and 5,000 SF Retail development project at 203 Fore Street in Portland, ME.

Meeting Location: **Hampton Inn Conference Room - look for signs- enter off 209 Fore St. Portland, ME 04103**



Meeting Date: **Thursday September 12, 2024**

Meeting Time: **5:30 PM – 6:30 PM**

The City Code requires that property owners within 500 feet (except notices must be sent to property owners within 1,000 feet for industrial zoning map amendments and industrial subdivisions) of the proposed development and residents on an "interested parties list", be invited to participate in a neighborhood meeting. We will take attendance and submit a sign-in sheet to the Planning Board. The meeting will last no more than 60 minutes. If you have any questions, please feel free to contact Stephen Bushey 207.772.2515 x286.

Sincerely,

GORRILL PALMER

Stephen Bushey, PE
Senior Associate
sbushey@gorrillpalmer.com/Sbushey@ljbinc.com
207-772-2515 ext. 286

Note: Under Section 14-32(C) and 14-525 of the City Code of Ordinances, an applicant for a Major Site plan development, subdivision of over five lots/units, or zone change is required to hold a neighborhood meeting within three weeks of submitting a preliminary application or two weeks of submitting a final site plan application, if a preliminary plan was not submitted. The neighborhood meeting must be held at least seven days prior to the Planning Board public hearing on the proposal. Should you wish to offer additional comments on this proposed development, you may contact the Planning Division at 874-8721 or send written correspondence to the Planning and Urban Development Department, Planning Division 4th Floor, 389 Congress Street, Portland, ME 04101.

Kaleb Bourassa (KB-GP), Gorrill Palmer
Kent Beirne (KB-PC), ProCon

Neighbors
See Sign-In Sheet for full list of Attendees

2. MINUTES

- Presenter introductions and explanation for purpose of meeting and current application process.
- **Kaleb Bourassa (KB-GP)** provided explanation for purpose of meeting, application process and current status of application. Noting additional comments and questions can be directed to the Planning Department.
- **Kent Beirne (KB-PC)** provided overview of building scope using slideshow presented on screen.
- Various questions and comments were heard and discussed as follows:
  - What does it mean for the project to be deemed complete? ***KB-GP*** *responded that the basic application must contain certain materials as outlined in the Ordinance, application form, and application checklists.*
  - When you say City Staff are reviewing, who is reviewing? ***KB-GP*** *responded that the application will be reviewed by City Staff including Planning Staff and Engineering/Public Works Staff as well as other third-party peer reviewers that may be associated with the project. For instance, the City utilizes a third-party peer reviewer for Traffic reviews.*
  - What happened to the project 5 years ago? ***KB-PC*** *noted this is not the same project.*
  - How does the process work? Where can we see these plans and application materials? ***KB-GP*** *noted that currently, the Applicant has made an application which has been deemed complete and the design team is reviewing and responding to review comments from Staff. Once a response to comments and supplemental materials are provided to Staff and the neighborhood meeting is held, Planning Staff will place the application on a workshop agenda with the Planning Board. Then the project will continue through the Planning Board process.*
  - Does the project require any variances? ***KB-GP*** *noted the project does not currently require any variances.*
  - Isn't this project located in a historic district? ***KB-PC*** *responded that the project is not located in a historic district and that it is applicable to the India Street form-based code.*

- What is being done for noise, lighting, construction management? ***KB-PC*** *noted that a Construction Management Plan was submitted with the application. The Plan will include measures for noise and lighting including time of work.*
- When will the project take place? *KB-PC noted the hope is for the permitting process to take place this Fall/Winter2024 with approvals in the Winter, allowing for construction in 2025.*
- How tall is the building? How tall is the Hampton Inn? ***KB-PC*** *noted the Hampton Inn will be taller than the proposed building by approximately 1-story. The proposed building will be 5-stories (54') along Fore Street and 4-stories (46') along Middle Street. The architectural plans noted the heights which were approximately,*
- How is building height determined? ***KB-PC*** *noted the building height is determined by the average height at the corners of the building. This has been taken into account in the current building design and will be finalized as the design is completed.*
- How close will the building be to the road? ***KB-PC*** *responded that the building needs to be located within 5' of the right-of-way boundary and, so, the building will be approximately at the back of the existing sidewalk and +/-10' from the curb.*
- How far apart will the existing Hampton Inn and new hotel be? ***KB-PC*** *noted that the buildings are located approximately 50' away.*
- What are dimensions of building along Fore, India, and Middle Streets? ***KB-PC*** *explained the requirements of the form-based code require modules/partitions to be included*
- Will you be able to see the water from Middle Street? ***KB-PC*** *stated that the same view will change since the lot is a parking lot currently. However, the form-based code includes a mid-block permeability requirement to provide an open space allowing visibility/connection between public streets. This is provided with the staircase from Middle Street and walkway to Fore Street which will go between the Hampton Inn and the proposed Homes 2 Suites.*
- Where are other buildings on Middle Street in relation to this building? *Not all buildings easily appeared on the plans presented on screen, however,* ***KB-GP*** *noted the Retail C and the edge of the patio area were in line with the Duckfat structure on Middle Street.*
- How will parking be handled? There is not enough parking now. ***KB-PC*** *the Applicant has contracted with UPP to handle the valet parking for both the Hampton Inn and the Homes 2 Suites. UPP will be able to provide sufficient parking to meet the needs of both properties. Additionally, 108 parking spaces are provided on site.*
- Where will parking for existing condos and existing ADA spaces be located? What about Toast parking? How many parking spaces are there? ***KB-PC*** *noted parking for existing condo owners will be allocated on site.*
- Are 3 valet spaces enough? What happens when the hotel is busy and the valet spaces back up? ***KB-PC*** *noted the valet service will be able to handle the demand.*
- How will deliveries be handled? Delivery vehicles already park in Fore Street. ***KB-PC*** *noted that the intention will be for delivery vehicles to enter into the parking lot or unload on Fore Street.*
- How will trash be handled? Shared dumpsters with Hampton Inn? Is that enough? ***KB-PC*** *noted the Homes 2 Suites will utilize the shared dumpster facilities already located on site.* The dumpster facilities or the frequency of collections may need to be reviewed further.
- Will there be any traffic mitigation required? ***KB-GP*** *responded that the design team has held a scoping meeting with City Staff to review the scope of the traffic study and that no mitigation has been identified yet.*

- Are all existing green spaces on the property going away? ***KB-PC*** *responded that the existing green areas on site will be removed, however, there are planned open areas and green space along Middle Street and Fore Street.*
- Will there be trees planted on the parking structure/deck? ***KB-PC*** *noted the landscaping design has not been completed however the soil depth on the structure will not support trees. Trees in large planters may be an option.*
- How will stormwater be handled on site? The city already has flooding issues in large storm events. ***KB-GP*** *noted the current stormwater design will provide flood control for rainwater via underground storage chambers in the parking area which will reduce the amount peak discharge rate emanating from the site.*
- What about the contaminated soil? What will you do with it when you dig it up? ***KB-PC*** *noted that an environmental consultant has been enlisted and that plans for the contaminated soil have not yet been finalized.*
- What about the water on the parking structure/deck? ***KB-GP*** *responded that there will be a drainage layer incorporated into the design of the parking structure to collect runoff and connect to the chamber system.*
- Will the parking structure/deck be designed to allow future development? ***KB-PC*** *stated the parking structure is not being designed to support a building.*
- Where will the mechanical equipment be located? The Hampton Inn is noisy. ***KB-PC*** *noted any mechanical equipment will be located on the rooftop.*
- Will the mechanical equipment on the roof be screened? ***KB-PC*** *responded yes.*
- Will there be any residential units/can there be? ***KB-PC*** *noted the development will not include any residential units.*
- What will the retail units be? ***KB-PC*** *noted the prospective tenants for the retail spaces have not been finalized.*
- Where will the stair access be/will there be stair access onto Middle Street? ***KB-PC*** *noted there will be no direct staircases from the Hotel onto Middle Street.*

Introduction

This Traffic Impact Study (TIS) is being submitted per the City's request to support the MaineDOT Traffic Movement Permit (TMP) application for the proposed hotel, restaurants, and retail area in Portland, Maine. The City has delegated review authority to administer the TMP permit process. Sections 1-6 of the TMP application were submitted to the City of Portland in February 2025, and a scoping meeting was held for this project on March 11, 2025. This TIS reflects comments from the City and T.Y. LIN (the City's delegated traffic reviewer) at the scoping meeting. Much of this information was provided in the TMP application Sections 1-6 but is repeated here for convenience of review.

Site Description and Site Plan

This study is for a proposed Hotel, Restaurants, and Retail Area at 203 Fore Street - Portland, Maine. The site is currently occupied by an existing parking lot and is bounded by Hampton Inn to the west, India Street to the east, Fore Street to the south, and Middle Street to the north. The overall site is shown on Portland's Tax Map 029 as Lot L003001. The site is proposed to be accessed via one full movement entrance shared with the existing Hampton Inn on Fore Street and approximately three valet spaces along the frontage on Fore Street. The site plan is included in Appendix A.

Trip Generation

Trip generation for the project has been calculated using the Institute of Transportation Engineers' (ITE) publication, *Trip Generation,* Eleventh Edition, the most recent edition accepted by MaineDOT. The applicant proposes a Hotel, Two Restaurants, and a Retail Area. The exact use of the retail space is unknown at this time, but it is expected to be a low-traffic generator. For this evaluation, an apparel store is assumed. After a review of the Land Use Codes (LUC) provided in the 11th Edition of the *Trip Generation*, the following was selected to calculate the trip generation for the proposed project:

Proposed Trip Generation Variables

- LUC 311 – All Suites Hotel – 132 Keys
- LUC 876 – Apparel Store – 1,777 SF
- LUC 932 – High Turnover (Sit-Down) Restaurant – 1,843 SF & 1,651SF

In calculating trip generation, the MaineDOT methodology requires a review of both the average rate and the fitted curve equation. If $r^2 \geq 0.80$, the fitted curve equation is typically used, and if $r2 < 0.80$, then the average rate is generally used. Trip generation calculations are provided in Appendix B.

Table 1 summarizes the trip generation for the proposed hotel.

Table 1 – Trip Generation Hotel (LUC 311 – 132 Keys**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday*	4.31	569
AM Peak Hour of Adjacent Street	0.34	45
PM Peak Hour of Adjacent Street*	0.36	48
AM Peak Hour Generator	0.37	49
PM Peak Hour Generator*	0.37	49
Saturday Peak Hour Generator**	N/A	N/A

* Trip gen rates based on fitted curve equation

**No available trip gen in ITE 11th edition

Table 2 summarizes the trip generation for the proposed retail.

Table 2 – Trip Generation Apparel Store (LUC 876 – 1,777 SF**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday*	66.40	118
AM Peak Hour of Adjacent Street*	1.00	2
PM Peak Hour of Adjacent Street	4.12	8
AM Peak Hour Generator*	4.80	9
PM Peak Hour Generator	4.20	8
Saturday Peak Hour Generator	5.32	10

* One study available

Table 3 summarizes the trip generation for one of the proposed High Turnover (Sit-Down) Restaurants.

Table 3 – Trip Gen. High Turnover (Sit-Down) Restaurant (LUC 932 – 1,843 SF**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday	107.20	197
AM Peak Hour of Adjacent Street	9.57	18
PM Peak Hour of Adjacent Street	9.05	17
AM Peak Hour Generator	13.68	25
PM Peak Hour Generator	16.35	30
Saturday Peak Hour Generator	11.19	21

Table 4 summarizes the trip generation for one of the proposed High Turnover (Sit-Down) Restaurants.

Table 4 – Trip Gen. High Turnover (Sit-Down) Restaurant (LUC 932 – 1,651 SF**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday	107.20	177
AM Peak Hour of Adjacent Street	9.57	16
PM Peak Hour of Adjacent Street	9.05	15
AM Peak Hour Generator	13.68	23
PM Peak Hour Generator	16.35	27
Saturday Peak Hour Generator	11.19	18

Table 5 summarizes the combined trip generation for the proposed site.

Table 5 – Combined Trip Generation

Time Period	Trip Generation (Trip Ends)
Weekday	1061
AM Peak Hour of Adjacent Street	81
PM Peak Hour of Adjacent Street	88
AM Peak Hour Generator	106
PM Peak Hour Generator	114

As shown in Table 5, the AM and PM Peak Hours of Generator traffic are 106 and 114 trips, respectively. Based on this, the project requires a 100-200 trip-end MaineDOT Traffic Movement Permit (TMP). The City of Portland has delegated review authority to administer this application for the MaineDOT. The above trip generation was confirmed at the scoping meeting.

Study Area

Using MaineDOT methodology, the study area appears limited to the site driveway and streets within the immediate surrounding area. This would include Middle Street, Fore Street, and India Street, as they border the potential site. The study area was discussed and confirmed during the scoping meeting.

Traffic Volumes

Based on conversations with the City of Portland, it was determined that traffic counts would be completed for only the PM peak hour at the following locations:

- India Street / Middle Street
- India Street / Fore Street
- Fore Street / Site Drive

Counts were completed by GP on Tuesday, September 10, from 3:00 PM – 6:00 PM for Middle Street / India Street, Wednesday, September 11, from 3:00 PM – 6:00 PM for Fore Street / India Street, and Fore Street / Site Drive on Friday, September 27 from 3:00 PM – 6:00 PM. MaineDOT's available data on their website shows that traffic volumes along the site frontage have decreased from 2016 to 2022. To be conservative, the yearly growth was decided to be 0.5%. Traffic counts are located in Appendix B.

Trip Distribution

Based on ITE's Trip Generation Manual, the following trip distribution is forecast for the combined Land Use Codes:

Table 6 – Trip Distribution

Time Period	Trip Ends		
	Enter	Exit	Total
Weekday	531	530	1061
AM Peak Hour of Adjacent Street	45	36	81
PM Peak Hour of Adjacent Street	47	41	88
AM Peak Hour Generator	57	49	106
PM Peak Hour Generator	57	57	114

Trip Composition and Assignment

Trip Composition:

Primary trips are made for the sole purpose of going to or from the site. When exiting the site, these primary drivers return to where they came from. Diverted trips are made a short distance out of the way while en route to somewhere else. Pass-by trips are made by people who would otherwise drive past the site and decide to stop at it. All the trips were considered primary for the initial purposes of this section and the figures.

Trip Assignment:

The hotel's trip assignment is based on traffic counts completed in the area, traffic flow suggested by the City of Portland in the scoping meeting, and valet trips. The forecast trip generation to and from the general site area will not be increased, but it was expressed during the scoping meeting that valet trips to/from nearby parking lots be shown on trip assignment figures. For the purposes of this study, it was assumed that all traffic to/from the site would be

taken by valet to parking in the area. This will increase vehicle movements in the immediate area, as shown in Figures 11 and 12 in Appendix B.

Proposed Uses in Vicinity of Proposed Development

Based on discussions with the City of Portland's assistant city planner, Eric Freeman, and the City of Portland's delegated reviewer, Tom Errico of TY LIN, two other developments provide additional traffic in our study area. WEX phase 3 and 58 Fore Street ("Portland Foreside") will provide additional traffic in the study area. Other development figures are located in Appendix B in figures 8 & 9.

Capacity Analysis

At the scoping meeting, the City of Portland expressed that capacity analysis was unnecessary for TIS submittal.

Site Access & Parking

The proposed hotel and the existing adjacent Hampton Inn hotel are owned and operated by the same entity and will share the existing full-movement entrance on Fore Street. As part of the project, three valet spaces along the proposed hotel's frontage near the site drive are proposed. Hotel visitors will be valet only, with no on-site self-parking. The Hampton Inn and proposed Home2 Suites will share the same valet service, Unified Parking Partners (UPP). This will allow for seamless parking coordination between the two hotels. If valet spaces on Fore Street are occupied when a vehicle arrives, they will be directed off-street to enter the existing shared driveway. Once off-street, UPP can meet the needs of the guests and provide valet service. This approach is intended to avoid congestion on Fore Street.

UPP intends to primarily use four available lots within one block of the site for off-site parking (Appendix B Figure 4); the lots are as follows:

- 280 Fore Street – 20 Available Spaces
- 194 Fore Street – 20 Available Spaces
- 1 India Street – 44 Available Spaces
- 100 Middle Street – 245 Available Spaces (only used for heavy weekend and overnight stays)

In addition to the above off-site spaces, approximately 84 valet spaces are provided on-site. The restaurant and retail areas will not have dedicated parking spaces or use the valet service, and visitors will use public parking to access these uses.

Sight Distance

Appendix A shows the proposed site plan; there are no detailed entrance dimensions, as the existing driveway will not be altered. To evaluate available sight distances for the existing entrance, Gorrill Palmer completed a field review on 6/27/2024. The City of Portland and MaineDOT use the same standards for sight distances. Table 7 below summarizes the sight distance standards for MaineDOT.

Table 7 – Standards for Sight Distance

Speed Limit (mph)	Passenger Vehicle – MaineDOT (ft)
25	200
30	250
35	305
40	360
45	425
50	495

MaineDOT and the City of Portland sight distance evaluation methodology is as follows:

Driveway Observation Point:	10 feet from the traveled way
Height of Eye at Driveway:	3.5 feet above the ground
Height of Approaching vehicle:	4.25 feet above the ground

Based on the MaineDOT Map Viewer, the speed limit for Fore Street along the site frontage is 25 mph. The posted speed limit of 25 mph was used for the sight distance evaluation.

Table 8 summarizes the measured sight distance at the existing entrance location based on the type of vehicle it is expected to accommodate.

Table 8 – Sight Distance Summary

Driveway	Passenger Vehicle Required (feet)	Observed Looking Left* (feet)	Observed Looking Right* (feet)
Full Movement Entrance	200	310 (To Intersection)	210 (To Intersection)

*Assumes not blocked by parked cars

Both distances could not be confirmed due to vehicles parked along the site frontage. However, the sight distance is expected to exceed requirements without parked vehicles. To improve the sight distance for this entrance, on-street parking in the immediate area would need to be removed; however, the City would need to do that if desired.

Bicycle, Pedestrian, and Transit

Per conversations at the scoping meeting, the city requested alternatives to improve pedestrian safety for the four intersections surrounding the site. The study area for the pedestrian and bicycle inventory and analysis includes the immediate intersections around the project, including the following four intersections:

- Franklin Street / Middle Street
- Franklin Street / Fore Street
- Middle Street / India Street
- Fore Street / India Street

Inventory & Analysis

Franklin Street/Middle Street & Franklin Street/Fore Street:

Both of these intersections are signalized intersections utilizing conventional crosswalks and curb ramps. A center median provides refuge along Franklin Street for both intersections. All curb ramps utilize truncated dome warning plates and are equipped with actuated signal pedestrian push buttons.

Not all push buttons are located proximate to the curb ramps. Some truncated dome warning plates do not cover the entire ramp width and are missing panels or filled in with pavement.

Middle Street/India Street:

Middle and India Streets are two-lane streets with an all-way stop intersection. All legs of the intersection include curb ramps and painted crosswalks. A pedestrian crossing sign adjacent to the curb ramp in the intersection's northwest corner alerts vehicles traveling westbound towards Congress Street.

India Street/Fore Street:

Fore and India Streets are two-lane streets with an all-way stop intersection. The intersection's legs include curb ramps and painted crosswalks.

Other Access to the Site:

Mid-block along Middle Street, a crosswalk, is located at the intersection with Hampshire Street. This crosswalk aligns with the existing access through the Hampton Inn property, providing pedestrian passage to Fore Street. The crosswalk is painted with accessible curb ramps on either side.

An existing access is also located mid-block between Middle and Fore Streets along Franklin Street. This provides pedestrian passage from Franklin Street north into the Hampton Inn site.

A proposed mid-block access is provided along the south side of the proposed Home2 Suites Hotel, approximately ±200 feet from the respective corners of India Street, spanning from Middle to Fore Street.

Existing condition photos are located in Appendix C.

Lighting:

The entire study area has a mix of decorative streetlights and standard pole-mounted lights on utility poles. The decorative lights are located along Middle, Fore, India, and Franklin Street. On the project side of Middle and India Street, the decorative poles are located behind the sidewalk or not at all due to overhead wire conflicts. The typical utility pole-mounted streetlights light the intersections of Middle / India Streets and Fore / India Streets. The Middle / India Street intersection appears well-lit and includes at least three lights covering the intersection. The Fore / India Street intersection appears to have two lights broadcasting over the intersection with an additional decorative light nearby southerly on Fore Street.

Bicycle Facilities:

No bicycle lanes are located along Franklin, Middle, India, or Fore Street. Bicycle racks are available along the Middle Street sidewalk (both sides), India Street sidewalk (north side), and Fore Street sidewalk (west side).

The proposed project includes bicycle racks along Middle Street.

Options to Improve Existing Facilities

Various options to improve pedestrian facilities were explicitly reviewed for the intersections of Middle / India Street and Fore / India Street. The following three items were considered as potential improvements:

- Remove parking within 20' of crosswalks – all intersections were observed to allow on-street parking within 20' of crosswalks. This change would improve the visibility of pedestrians at the edge of the roadway from approaching vehicles.

- Increase crosswalk paint width and repaint crosswalks—the existing paint appears visible and is in a piano-key alignment. Increasing the crosswalks' paint width will increase visibility and encourage vehicles to decelerate and/or stop sooner.

- Curb extensions—Based on the existing alignments at the Middle / India Street and Fore / India Street intersections, we recommend adding curb extensions at least 4' wide only along India Street. This will allow pedestrians to be closer to the traveled way and increase visibility from approaching vehicles.

Transit

There are bus stops within a quarter mile of the proposed site. A Husky Lines bus stop is provided at the intersection of Thames Street and Hancock Street. At the intersection of Congress Street and India Street, a Breez / Metro bus stop is provided. No other bus stops are offered in the quarter-mile area.

Safety Review

Gorrill Palmer requested and reviewed the latest three-year crash history for Fore Street, India Street, and Middle Street along the site frontage from the MaineDOT, as well as reviewing safety information on the MaineDOT Crash Query website from 2021 to 2023, the most recent MaineDOT history available. Crash history is provided in Appendix D.

MaineDOT evaluates whether a location has a crash problem by using two criteria to define a High Crash Location (HCL). Both criteria must be met for a location to be classified as an HCL.

1. A critical rate factor (CRF) of 1.00 or more for a three-year period. A CRF compares the actual crash rate to the rate for similar intersections in the state. A CRF of less than 1.00 indicates a rate of less than average **and**:

2. A minimum of eight crashes over the same three-year period.

High Crash Locations:

Based on a review of the crash data, no high crash locations are along the site frontage. To identify locations close to becoming HCLs, we identified locations that meet one of the two criteria.

Table 9 – Safety Review Summary

Node(s)	Location	Number of Crashes	Critical Rate Factor
Intersection			
63225	Congress Street / Franklin Street NB	18	0.88
18519	Congress Street / Franklin Street SB	9	0.40

18517	Fore Street / Franklin Street	13	0.86
15397	Commercial Street / Franklin Street / Maine State Pier	11	0.78
18518	Franklin Street / Middle Street	8	0.43
Segment			
18517 to 18762	Fore Street from Franklin Street to Custom House Street	4	1.62
18814 to 19413	Middle Street from Pearl Street to Church Street	2	1.37
18518 to 18801	Middle Street from Franklin Street to Hampshire Street	2	1.02
18801 to 18817	Middle Street from Hampshire Street to India Street	5	2.06
18817 to 18818	Middle Street from India Street to Hancock Street	1	1.09
18800 to 18801	Hampshire Street from Newbury Street to Middle Street	1	2.12
18796 to 18804	India Street from East Federal Street to Newbury Street	4	2.20
18804 to 18817	India Street from Newbury Street to Middle Street	4	2.49

Based on the information in Table 9, no locations are close to becoming a HCL.

Pedestrian & Bicycle crashes:

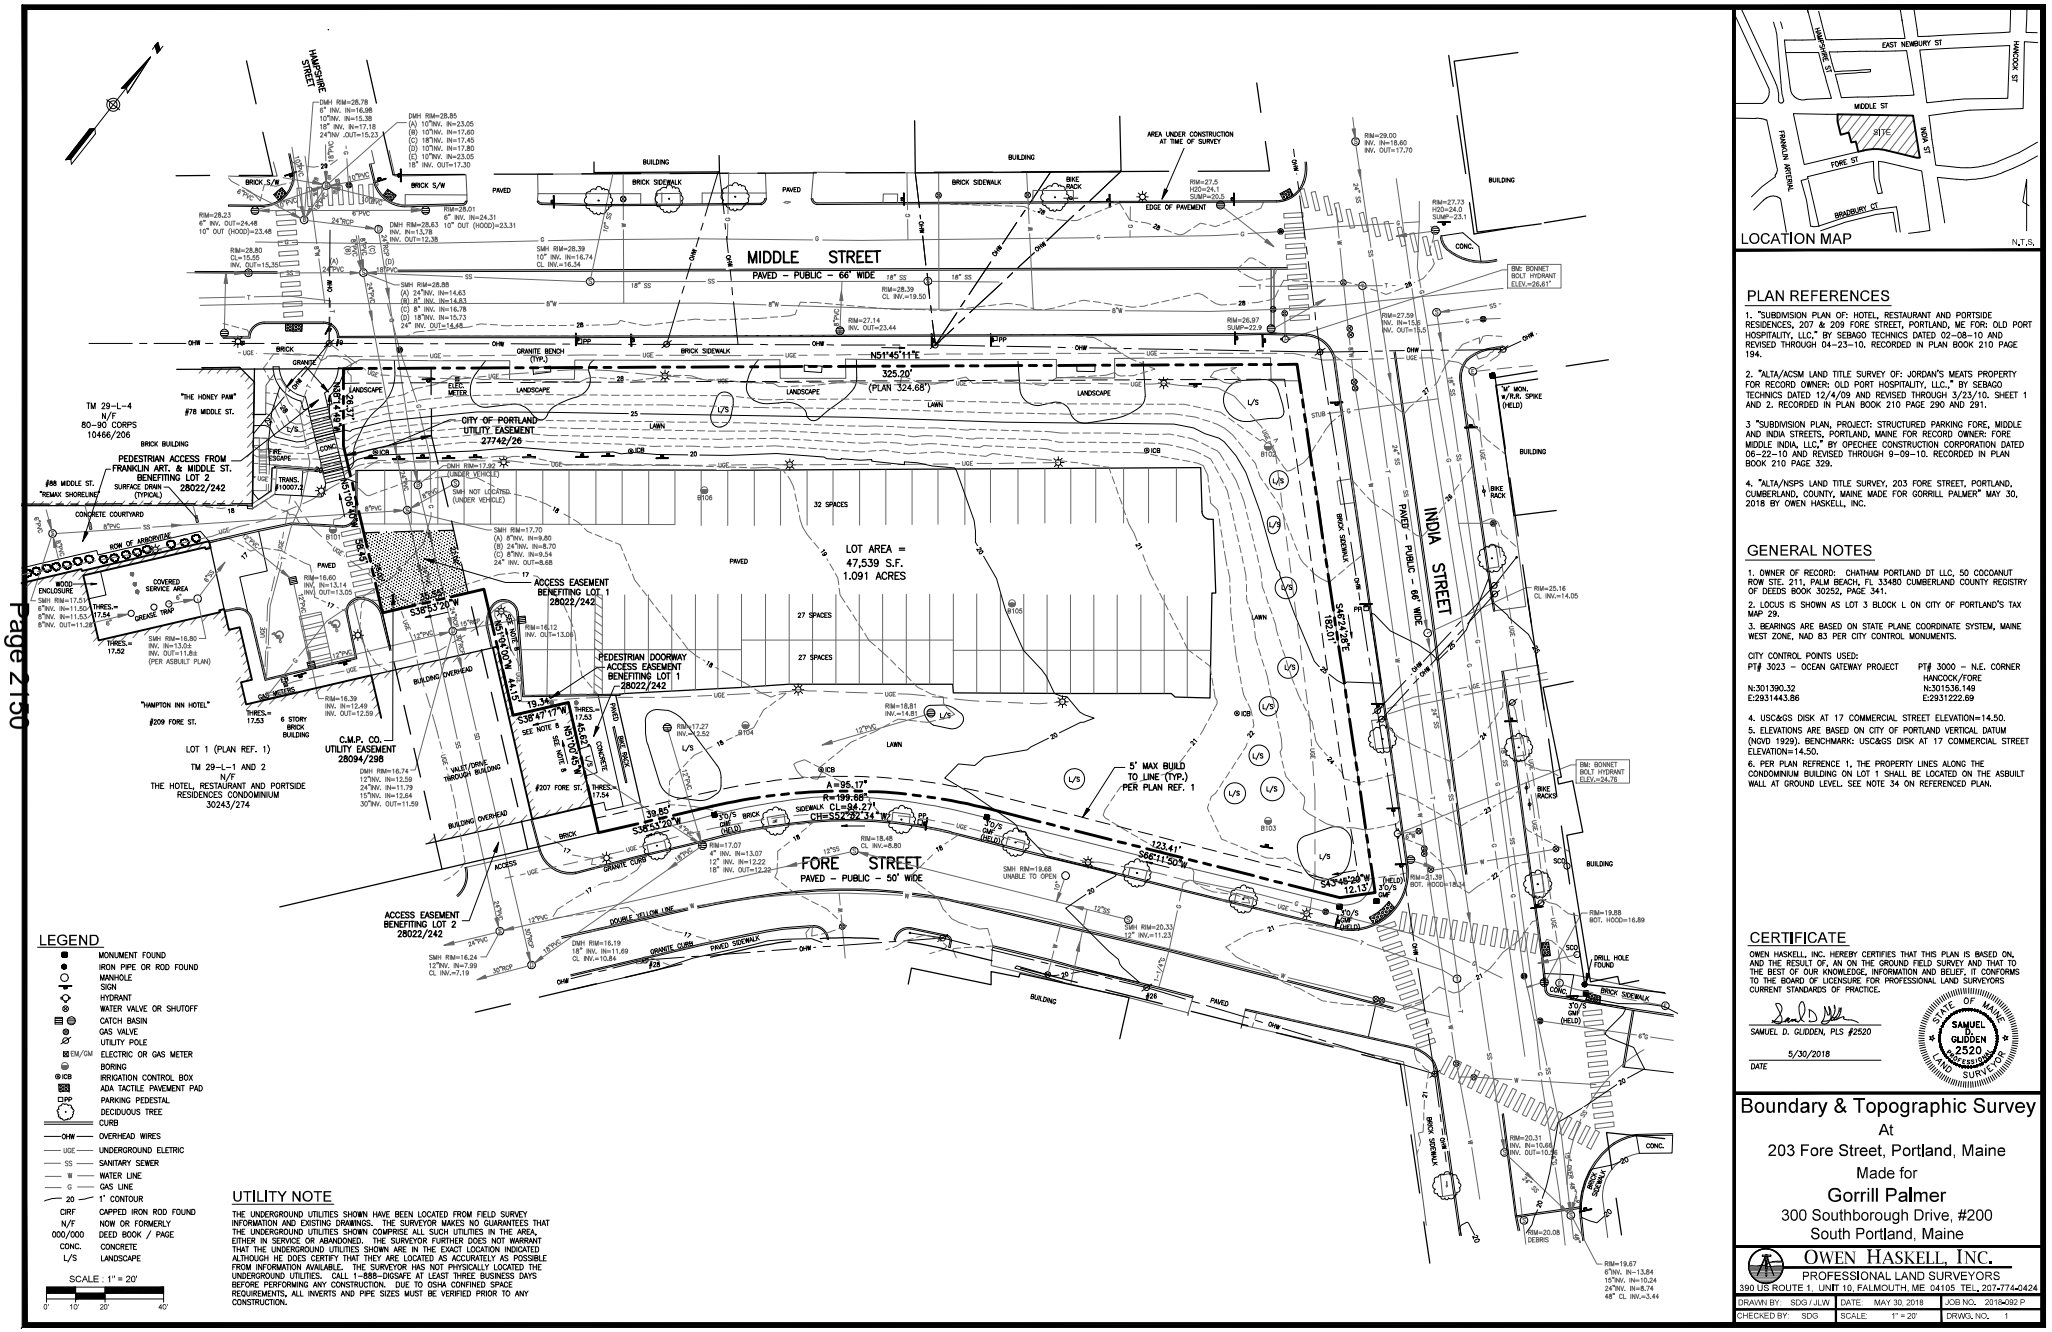
In addition to the high crash locations, GP reviewed available crash information for pedestrian or bicycle crashes within the immediate area for 2021-2023. A singular non-fatal bicycle crash was recorded in the study area. The collision occurred at Middle Street / Franklin Street on 8/10/2022 at 12:34 PM. A singular non-fatal pedestrian crash was recorded in the study area. The collision occurred at the Middle Street / Franklin Street intersection on 9/22/2022 at 11:00 AM.

It should be noted that a fatal pedestrian crash occurred on January 3, 2025, at the intersection of India Street and Fore Street. We understand that an eastbound Fore Street vehicle turning left to travel north on India Street hit a pedestrian within the crosswalk crossing India Street. The crash occurred in the middle of the day, with clear and dry weather conditions. Other details of the crash are not available.

Potential Mitigation

Potential mitigation was discussed at the scoping meeting, and the City stated they felt that the intersection's overall operations were acceptable but wanted to concentrate efforts on pedestrian safety in the area, more specifically at the two adjacent intersections with India

Street. Based on discussions at the scoping meeting and the reviews provided in this TIS, GP recommends considering the following potential off-site mitigation to improve pedestrian safety at the India Street intersections with Middle Street and Fore Street.



- Remove parking within 20' of crosswalks: Intersections were observed to allow on-street parking within 20' of crosswalks. The removal of parking within 20' could improve the visibility of pedestrians at the edge of the roadway from approaching vehicles.

- Increase crosswalk paint width and repaint crosswalk: The existing paint appears visible and is in a piano-key alignment. Increasing the crosswalks' paint width will increase visibility and encourage vehicles to stop.

- Curb extensions: Based on the existing alignments at Middle / India Street and Fore / India Street intersections, we recommend adding curb extensions at least 4' wide only along India Street. This will allow pedestrians to be closer to the traveled way and increase visibility to approaching vehicles.

Mr. Eric Freeman
Assistant City Planner
Portland Planning & Urban Development
389 Congress Street
Portland, ME 04101

Subject: Application for Traffic Movement Permit
Hotel/Condominium
203 Fore Street – Portland, ME

Dear Eric,

On behalf of **Chatham Lodging Trust** (applicant), **Gorrill Palmer** (GP) is pleased to submit this Traffic Movement Permit (TMP) Application for a proposed Hotel, two restaurants, and retail area located at 203 Fore Street, Portland, ME 04101. The application is being submitted to the city per their delegated review authority to administer the MaineDOT TMP process.

We have attached the following information in support of this application:

- Sections 1-6
- Signed Application Form
- Notice of Intent to File
- List of Abutters

With the filing of this application, we are pleased to start this permit review process and would like to schedule a Scoping Meeting in the near future.

Sincerely,
Gorrill Palmer

NOTICE OF INTENT TO FILE
Traffic Movement Permit

Please take notice that

Chatham Lodging Trust
222 Lakeview Avenue, Suite 200, West Palm Beach, Florida 33401
(561)-802-4477

is intending to file a Traffic Movement Permit application with the City of Portland who has delegated authority to administer the MaineDOT's TMP process pursuant to the provisions of 23 M.R.S.A. § 704 - A on or about

February 21, 2025

The application is for

A proposed Hotel, Restaurants, and Retail Area and is forecast to generate the following trip ends: 1061 weekday, 81 AM Peak Hour Adjacent Street, 86 PM Peak Hour Adjacent Street, 106 AM Peak Hour of the Generator, 113 PM Peak Hour of the Generator.

at the following location:

The site is located at 203 Fore Street, Portland, ME 04101 and bounded by Hampton Inn to the west, India Street to the east, Fore Street to the south, and Middle Street to the north. The parcel is identified in Portland, Maine's Tax Map #029 as Lot #L003001. The site is proposed to be accessed via an existing shared driveway onto Fore Street.

Any interested party may request in writing to participate in the City's scoping meeting for the subject project no later than 20 days after the application is found by the City to be complete and is accepted for processing. Requests shall be sent to the City of Portland, Attn: Eric Freeman, 389 Congress Street, Portland, ME 04101. Public comments on the application pertaining to either congestion or safety will be accepted throughout the processing of the application.

The application will be filed for public inspection at City Hall (Planning Dept.) during normal working hours. A copy of the application may also be seen at the MaineDOT region office on Pleasant Hill Road in Scarborough.

Written public comments concerning congestion or safety only, may be sent to the Department of Transportation, State Traffic Engineer, 16 State House Station, Augusta, Maine 04333.

Section 1

Site and Traffic Information

Section 1
Site and Traffic Information

1.A. Site Plan

This application is for a proposed Hotel, Restaurants, and Retail Area to be located at 203 Fore Street, Portland, ME 04101. The site is currently occupied by an existing parking lot and is bounded by Hampton Inn to the west, India Street to the east, Fore Street to the south, and Middle Street to the north. The overall site is shown on Portland's Tax Map 029 as Lot L003001. The site is proposed to be accessed via one full movement entrance that is shared with the existing Hampton Inn on Fore Street; and approximately three valet spaces along the site frontage on Fore Street. The site plan is included in Attachment 1A.

Pedestrian Accommodations:

- On-site
  - Sidewalks are currently existing around the proposed property and will not be altered.
- Off-site
  - Sidewalks are provided on both sides of Fore Street, both sides of India Street, and both sides of Middle Street.

Bicycle Accommodations:

- On-site
  - It is our understanding that there will be bicycle racks on site.
- Off-site
  - No dedicated bike lanes exist on Fore Street, India Street, or Middle Street. On site observations show that bicycles regularly use India Street, Middle Street, and Fore Street in shared use fashion.

Transit Accommodations

- On-site
  - No public transit is proposed on-site.
- Off-site
  - The City of Portland provides several transportation services. There is a metro bus line that has three routes that passengers can use to reach the site, route 1, route 8, and route 9A/9B. There is also a husky bus line that passengers can use to reach the site as well.

1.B. Description of Existing and Proposed Site Uses

The existing site is approximately 1.09 acres and includes an existing parking lot. As described in the previous section and shown on the attached site plan, the proposed Hotel will be accessed via a shared existing full movement driveway on Fore Street; and approximately three valet spaces along the site frontage on Fore Street. The Restaurant and Retail Area will be accessed via public parking.

The applicant is proposing a new Hotel, Restaurants, and Retail Area where the existing parking lot is located. Parking is proposed to be valet for the Hotel; valet spaces will be provided on site and agreed upon off-site locations if needed. Parking for the proposed Homes2 Suites and existing Hampton Inn will be shared. The applicant contracted Unified Parking Partners (UPP) as their parking valet operator. UPP intends to primarily use four available lots within one block of the site for off-site parking (Attachment 1B figure 4); the lots are as follows:

- 280 Fore Street – 20 Available Spaces
- 194 Fore Street – 20 Available Spaces
- 1 India Street – 44 Available Spaces
- 100 Middle Street – 245 Available Spaces (only used for heavy weekend and overnight stays)

There are approximately 105 proposed valet spaces on-site, but the final design is still being refined. The restaurant and retail area will not have any dedicated parking spaces, visitors will use public parking to access these locations.

1.C. Regional Mapping

The site is bounded by Hampton Inn to the west, India Street to the east, Fore Street to the south, and Middle Street to the north. The overall site is shown on Portland's Tax Map 029 as Lot L003001. A location map is included with the figure set, Attachment 1B.

1.D. Information Concerning Proposed Uses

Based on discussions with the City of Portland's assistant city planner Eric Freeman and the City of Portland's delegated reviewer Tom Errico of TY LIN, there are two other developments that provide additional traffic in our study area. WEX phase 3 and 58 Fore street ("Portland Foreside") will provide additional traffic in the study area. Other development figures are located in Attachment B on figures 7 & 8.

I.E Information Concerning Vehicle Trip Generation

Trip generation for the project has been calculated using a combination of the Institute of Transportation Engineers' (ITE) publication, *Trip Generation,* Eleventh Edition, the most recent edition accepted by MaineDOT. The applicant is proposing a Hotel, Two Restaurants, and a Retail Area. The exact use of the retail space is unknown at this time but is expected to be a low traffic generator. For the purposes of this evaluation assumes apparel store. After careful review of the Land Use Code (LUC) provided in the 11th Edition of the *Trip Generation,* trip generation calculations are located in Attachment 1C, the following was selected to calculate the trip generation for the proposed project:

Proposed Trip Generation Variables

- LUC 311 – All Suites Hotel – 132 Keys
- LUC 876 – Apparel Store – 1,777 SF
- LUC 932 – High Turnover (Sit-Down) Restaurant – 1,843 SF & 1,651SF

In calculating trip generation, MaineDOT methodology requires review of both the average rate and the fitted curve equation. If $r^2 \geq 0.80$ then the fitted curve equation is typically used, and if $r^2 < 0.80$ then the average rate is typically used. Trip generation calculations are provided in Attachment 1C.

The following Table 2 summarizes the trip generation for the proposed hotel.

Table 2 – Trip Generation Hotel (LUC 311 – 132 Keys**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday*	4.31	569
AM Peak Hour of Adjacent Street	0.34	45
PM Peak Hour of Adjacent Street*	0.36	48
AM Peak Hour Generator	0.37	49
PM Peak Hour Generator*	0.37	49
Saturday Peak Hour Generator**	N/A	N/A

* Trip gen rates based on fitted curve equation

**No available trip gen in ITE 11th edition

The following Table 3 summarizes the trip generation for the proposed retail.

Table 3 – Trip Generation Apparel Store (LUC 876 – 1,777 SF**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday*	66.40	118
AM Peak Hour of Adjacent Street*	1.00	2
PM Peak Hour of Adjacent Street	4.12	8
AM Peak Hour Generator*	4.80	9
PM Peak Hour Generator	4.20	8
Saturday Peak Hour Generator	5.32	10

* One study available

The following Table 4 summarizes the trip generation for one of the proposed High Turnover (Sit-Down) Restaurants.

Table 4 – Trip Generator High Turnover (Sit-Down) Restaurant (LUC 932 – 1,843 SF**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday	107.20	197
AM Peak Hour of Adjacent Street	9.57	18
PM Peak Hour of Adjacent Street	9.05	17
AM Peak Hour Generator	13.68	25
PM Peak Hour Generator	16.35	30
Saturday Peak Hour Generator	11.19	21

The following Table 5 summarizes the trip generation for one of the proposed High Turnover (Sit-Down) Restaurants.

Table 5 – Trip Generator High Turnover (Sit-Down) Restaurant (LUC 932 – 1,651 SF**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday	107.20	177
AM Peak Hour of Adjacent Street	9.57	16
PM Peak Hour of Adjacent Street	9.05	15
AM Peak Hour Generator	13.68	23
PM Peak Hour Generator	16.35	27
Saturday Peak Hour Generator	11.19	18

The following Table 6 summarizes the combined trip generation for the proposed site.

Table 6 – Combined Trip Generation

Time Period	Trip Generation (Trip Ends)
Weekday	1061
AM Peak Hour of Adjacent Street	81
PM Peak Hour of Adjacent Street	88
AM Peak Hour Generator	106
PM Peak Hour Generator	114

As shown in Table 6, the AM & PM Peak Hour of Generator is 106 and 114 trips respectively. Based on this, the project requires a 100-200 trip end MaineDOT Traffic Movement Permit (TMP). The City of Portland has delegated review authority to administer this application for the MaineDOT.

1.F. Information about Trip Distribution

Based on ITE's Trip Generation Manual, the following trip distribution is forecast for the combined Land Use Codes:

Table 7 – Trip Distribution

Time Period	Trip Ends		
	Enter	Exit	Total
Weekday	531	530	1061
AM Peak Hour of Adjacent Street	45	36	81
PM Peak Hour of Adjacent Street	47	41	88
AM Peak Hour Generator	57	49	106
PM Peak Hour Generator	57	57	114

1.G. Information about Trip Assignment

Trip Composition:

Primary trips are made for the sole purpose of going to or from the site. These primary drivers go back in the direction where they came from when exiting the site. Diverted trips are made a short distance out of the way while on route to somewhere else. Pass-By trips are made by people who would otherwise already be driving past the site and

decide to stop at the site. For the initial purposes of this section and the figures, all the trips were considered primary.

Trip Assignment:

Trip assignment for the hotel is based on traffic counts completed in the area, information from the City of Portland, and the location of the valet. The valet will be located on the northern side of Fore Street. It is anticipated that the hotel will advise guests to use the route of Middle Street to India Street to Fore Street.

1.H. Study Area

Using MaineDOT methodology, the study area appears to be limited to the site driveway and streets within the immediate surrounding area. This would include Middle Street, Fore Street, and India Street as they all border the potential site.

1.I. Traffic Volumes

Based on conversations with the City of Portland, it was determined that traffic counts would be completed in only the PM at the following locations:

- India Street / Middle Street
- India Street / Fore Street
- Fore Street / Site Drive

The counts were completed by Gorrill Palmer on Tuesday, September 10 from 3:00 PM – 6:00 PM for Middle Street / India Street, Wednesday, September 11 from 3:00 PM – 6:00 PM for Fore Street / India Street, and Fore Street / Site Drive on Friday, September 27 from 3:00 PM – 6:00 PM. Based on data provided from the MaineDOT, traffic volumes along the site frontage have decreased from 2016 to 2022. In order to be conservative, the yearly growth was decided to be 0.5%.

Trip Generation Calculations
ITE Supporting Documents

JN 3904.01
February 2025

Chatham Lodging Trust
West Palm Beach, Florida

Land Use: 311
All Suites Hotel

Description

An all suites hotel is a place of lodging that provides sleeping accommodations, a small restaurant and lounge, and small amounts of meeting space. Each suite includes a sitting room and separate bedroom. An in-room kitchen is often provided. Hotel (Land Use 310), business hotel (Land Use 312), motel (Land Use 320), and resort hotel (Land Use 330) are related uses.

Additional Data

Six studies provided information on occupancy rates at the time the studies were conducted. The average occupancy rate for these studies was approximately 74 percent.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s, the 1990s, and the 2010s in Florida, Georgia, Minnesota, Montana, Virginia, and Washington.

For all lodging uses, it is important to collect data on occupied rooms as well as total rooms in order to accurately predict trip generation characteristics for the site.

Apparel Store

Description

An apparel store is an individual store specializing in the sale of clothing. Department store (Land Use 875) is a related use.

Additional Data

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s, the 1990s, and the 2010s in California, Florida, New York, Vermont, and Wisconsin.

Land Use: 932
High-Turnover (Sit-Down) Restaurant

Description

This land use consists of sit-down, full-service eating establishments with a typical duration of stay of 60 minutes or less. This type of restaurant is usually moderately priced, frequently belongs to a restaurant chain, and is commonly referred to as casual dining. Generally, these restaurants serve lunch and dinner; they may also be open for breakfast and are sometimes open 24 hours a day. These restaurants typically do not accept reservations. A patron commonly waits to be seated, is served by wait staff, orders from a menu, and pays after the meal.

Some facilities offer carry-out for a small proportion of its customers. Some facilities within this land use may also contain a bar area for serving food and alcoholic drinks.

Fast casual restaurant (Land Use 930), fine dining restaurant (Land Use 931), fast-food restaurant without drive-through window (Land Use 933), and fast-food restaurant with drive-through window (Land Use 934) are related uses.

Additional Data

Users should exercise caution when applying statistics during the AM peak periods, as the sites contained in the database for this land use may or may not be open for breakfast. In cases where it was confirmed that the sites were not open for breakfast, data for the AM peak hour of the adjacent street traffic were removed from the database.

If the restaurant has outdoor seating, its area is not included in the overall gross floor area. For a restaurant that has significant outdoor seating, the number of seats may be more reliable than GFA as an independent variable on which to establish a trip generation rate.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in Alberta (CAN), California, Florida, Georgia, Indiana, Kentucky, Massachusetts, Minnesota, New Hampshire, New Jersey, New York, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Texas, Vermont, and Wisconsin.

Section 2

Traffic Crashes

Section 2
Traffic Crashes

2.A. Crash Summary Data

Gorrill Palmer requested and reviewed the latest three-year crash history for Fore Street, India Street, and Middle Street along the Site Frontage from the MaineDOT, as well as reviewing safety information on the MaineDOT Crash Query website for the period of 2021-2023. Crash history is provided in Attachment 2A.

To evaluate whether a location has a crash problem, MaineDOT uses two criteria to define a High Crash Location (HCL). Both criteria must be met to be classified as an HCL.

1. A critical rate factor (CRF) of 1.00 or more for a three-year period. A CRF compares the actual crash rate to the rate for similar intersections in the state. A CRF of less than 1.00 indicates a rate of less than average **and**:

2. A minimum of eight crashes over the same three-year period.

High Crash Locations:

Based on a review of the crash data information there are no high crash locations along the site frontage. To identify if there are locations that are close to becoming a HCL, we identified locations that meet one of the two criteria.

Table 1 – Safety Review Summary

Node(s)	Location	Number of Crashes	Critical Rate Factor
Intersection			
63225	Congress Street / Franklin Street NB	18	0.88
18519	Congress Street / Franklin Street SB	9	0.40
18517	Fore Street / Franklin Street	13	0.86
15397	Commercial Street / Franklin Street / Maine State Pier	11	0.78
18518	Franklin Street / Middle Street	8	0.43
Segment			

18517 to 18762	Fore Street from Franklin Street to Custom House Street	4	1.62
18814 to 19413	Middle Street from Pearl Street to Church Street	2	1.37
18518 to 18801	Middle Street from Franklin Street to Hampshire Street	2	1.02
18801 to 18817	Middle Street from Hampshire Street to India Street	5	2.06
18817 to 18818	Middle Street from India Street to Hancock Street	1	1.09
18800 to 18801	Hampshire Street from Newbury Street to Middle Street	1	2.12
18796 to 18804	India Street from East Federal Street to Newbury Street	4	2.20
18804 to 18817	India Street from Newbury Street to Middle Street	4	2.49

Based on the information in Table 1, there are no locations that are close to becoming a HCL.

Pedestrian & Bicycle crashes:

In addition to the high crash locations, GP reviewed available crash information for pedestrian or bicycle crashes within the immediate area for 2021-2023. There was a singular non-fatal bicycle crash recorded in the study area. The crash occurred at the intersection of Middle Street / Franklin Street on 8/10/2022 at 12:34 PM. There was a singular non-fatal pedestrian crash recorded in the study area. The crash occurred at the intersection of Middle Street / Franklin Street on 9/22/2022 at 11:00 AM.

Section 3

Development Entrances and Exits

Section 3
Development Entrances and Exits

3.A. Entrance and Exit Locations

The site is currently occupied by an existing parking lot with frontage along Fore Street to the south, India Street to the east, and Middle Street to the north. The site is proposed to be accessed via one shared existing full movement entrance on Fore Street; and approximately three valet spaces along the site frontage on Fore Street. The entrance is located approximately 210 feet northeast of the existing signalized intersection with Fore Street / Franklin Street. The entrance is located approximately 315 feet southwest of the existing unsignalized intersection of Fore Street / India Street.

There are sidewalks provided on both sides of Fore Street, both sides of India Street, and both sides of Middle Street.

3.B. Intersection Information

As mentioned above, access to the site is anticipated to be from an existing full movement curb cut on Fore Street; along with approximately three valet spaces along the site frontage on Fore Street. The speed limit on Fore Street along the site frontage is 25 mph.

3.C. Sight Distances

Attachment 1A of Section 1 shows the proposed site plan, there are no detailed entrance dimensions as the existing driveway will not be altered. To evaluate available sight distances for the existing entrance, Gorrill Palmer completed a field review on 6/27/2024. The City of Portland and MaineDOT use the same standards for sight distances. Table 1 below presents the sight distance standards for MaineDOT.

Table 1 – Standards for Sight Distance

Speed Limit (mph)	Passenger Vehicle – MaineDOT (ft)
25	200
30	250
35	305
40	360
45	425
50	495

MaineDOT and the City of Portland sight distance evaluation methodology is as follows:

Driveway Observation Point:	10 feet from traveled way
Height of Eye at Driveway:	3.5 feet above the ground
Height of Approaching vehicle:	4.25 feet above the ground

Based on the MaineDOT Map Viewer, the speed limit for Fore Street along the site frontage is 25 mph. For the sight distance evaluation, the posted speed limit of 25 mph was used.

Table 2 summarizes the measured sight distance at the existing entrance location based on the type of vehicle it is expected to accommodate.

Table 2 – Sight Distance Summary

Driveway	Passenger Vehicle Required (feet)	Observed Looking Left* (feet)	Observed Looking Right* (feet)
Full Movement Entrance	200	313 (To Intersection)	210 (To Intersection)

*Assumes not blocked by parked cars

Both sight distances could not be confirmed due to parked vehicles along the site frontage. It is our opinion that without parked vehicles the sight distance would exceed requirements. To improve sight distance for this entrance on-street parking in the immediate area would need to be removed; however, that is something the city would need to do if desired.

3.D. Entrance/Exit Requirements

The following information is based on the proposed site plan provided in Section Attachment 1A.

1. The site plan is provided in Attachment 1A of Section 1. As can be seen from the site plan, the MaineDOT minimum corner clearance of 100 feet from an unsignalized intersection is maintained.

2. As identified in the previous Section, the available sight distances for the proposed driveway are expected to exceed requirements if vehicles don't park directly next to the full movement driveway. As previously identified, there are paved sidewalk on Fore Street, Middle Street, and India Street along the site frontage.

3. The access is existing.

4. The site access is expected to be maintained. The driveway is assumed to meet grading requirements.

5. The existing entrance is not proposed to be altered; this is a full movement driveway with entering/exiting at the same location.

6. No separation islands are proposed.

7. The proposed project will not change the sidewalks or curbing as the existing entrance will be used.

8. Due to the existing driveway being utilized it is our understanding that no significant impacts are expected to drainage along the site frontage.

Additional Information

Capacity Analysis

Although not required for TMP sections 1-6, GP completed capacity analyses for the two unsignalized intersections of Fore Street / India Street and Middle Street / India Street. The capacity analysis has been completed using the Synchro/SimTraffic computer analysis software (Version 12). Hard copies of the capacity analysis are provided in Attachment 3B. Level of service rankings are similar to the academic rankings system where an 'A' is good with little control delay and an 'F' represents poor traffic conditions. If the level of service falls below a 'D' an evaluation should be made to determine if mitigation is warranted. The capacity analysis was completed for PM peak hours assuming full occupancy of the site and using the existing geometry.

The following Table 3 summarizes the level of service for an unsignalized intersection.

Table 3 – Unsignalized Intersection

Level of Service	Control Delay per Vehicle (s)
A	Less than 10.0
B	10.1 to 15.0
C	15.1 to 25.0
D	25.1 to 35.0
E	35.1 to 50.0
F	Greater than 50.0

The following Table 4 summarizes the results of the capacity analysis of 2027 pre and postdevelopment conditions with both level of service and delay (rounded up to the nearest second) shown. The results represent the average of five SimTraffic runs.

Table 4 – Capacity Analysis

Intersection	Existing PM (delay/LOS)		Proposed PM (delay/LOS)	
Fore Street / India Street				
Fore Street EB LTR	10	A	12	B
Fore Street WB LTR	9	A	10	A
India Street SEB LTR	8	A	8	A
India Street NWB LTR	7	A	8	A
India Street / Middle Street				
India Street SEB LTR	6	A	6	A
India Street NWB LTR	7	A	7	A
Middle Street NEB LTR	6	A	6	A
Middle Street SWB LTR	6	A	6	A

NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound
L = Left, T = Thru, R = Right

As can be seen from the results in Table 4, the intersections are forecasted to operate at an acceptable LOS for all approaches.

QUITCLAIM DEED WITH COVENANT
(Maine Statutory Short Form)

MAINE REAL ESTATE TAX PAID

FORE INDIA MIDDLE, LLC, a Maine limited liability company, whose mailing address is 11 Corporate Drive, Belmont, New Hampshire 03220, for consideration paid, grants to CHATHAM PORTLAND DT LLC, a Delaware limited liability company, whose mailing address is c/o Chatham Lodging Trust, 50 Cocoanut Row, Suite 211, Palm Beach, Florida 33480, with Quitclaim Covenant, a certain lot or parcel of land, with any buildings and improvements thereon, located on Fore Street, India Street and Middle Street in the City of Portland, County of Cumberland, and State of Maine, being more particularly bounded and described as follows:

Lot 2 as shown on a subdivision plan entitled "Subdivision Plan of Hotel, Restaurant & Portside Residences, 207 & 209 Fore Street, Portland, Maine" dated February 8, 2010, as most recently revised on April 23, 2010, approved by the City of Portland Planning Board on April 13, 2010, and recorded in the Cumberland County Registry of Deeds in Plan Book 210, Page 194 (the "Subdivision Plan").

Lot 2 is hereby conveyed together with and subject to the rights and easements granted by Old Port Hospitality, LLC to Fore India Middle, LLC and by Fore India Middle, LLC to Old Port Hospitality, LLC as set forth in an Amendment of Deed, Termination of Rights and Easements and Grant of Rights and Easements by and between Old Port Hospitality, LLC and Fore India Middle, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 181, subject to the terms and conditions with respect to said rights and easements as set forth therein.

Old Port Hospitality, LLC created a condominium on Lot 1 shown on the Subdivision Plan known as the Hotel, Restaurant and Portside Residences Condominium (the "Condominium") pursuant to a Declaration of Condominium dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 188, as amended by Amendment Number One thereto dated June 3, 2011, and recorded in the Cumberland County Registry of Deeds in Book 28833, Page 126 (the "Declaration") that includes a unit in which is operated as a restaurant facility, which unit is referred to in the Declaration as the "Restaurant Unit". Lot 2 is hereby further conveyed subject to the restriction that for so long as a full-service restaurant is being operated in the Restaurant Unit, no full-service restaurant containing three thousand five hundred (3,500) square feet or more of public space may be operated on Lot 2, provided, however, that this restriction shall, in any event, expire and be of no further force and effect on the fifteenth (15^{th}) anniversary of the date of Old Port Hospitality, LLC's initial conveyance of the Restaurant Unit to a third party. This restriction shall be enforceable by Old Port Hospitality, LLC, its successors and assigns, and the owner of the Restaurant Unit, and not by the owner of any other units in the Condominium. The Restaurant Unit was conveyed by Old Port Hospitality, LLC to Bass Ackwards Realty, LLC by Deed dated January 25, 2011, and recorded in the Cumberland County Registry of Deeds in Book 28563, Page 264, together with the benefit of said restriction.

Lot 2 is further conveyed together with and subject to all rights, easements, terms, covenants, conditions, obligations and agreements set forth in a certain Revised and Restated Parking Agreement by and between Old Port Hospitality, LLC and Fore India Middle, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 242 (the "Parking Agreement"), relating to the access and use of a Parking Lot comprised of ninety (90) parking spaces

located on Lot 2, including, without limitation, the perpetual, exclusive and appurtenant right and easement to access and use all of the parking spaces covered by such Parking Agreement with the exception of the twelve (12) parking spaces granted as appurtenant to the Residences Unit of the Condominium, as set forth in a Deed of the Residence Unit from Old Port Hospitality, LLC to Portside Residences, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 251.

Chatham Portland DT LLC, by its acceptance of this Deed, hereby assumes all obligations of Fore India Middle, LLC under the Parking Agreement.

The premises conveyed herein are further subject to the following matters of record:

1. Rights and easements for sewer purposes granted by the Slum Clearance and Redevelopment Authority to the City of Portland in an instrument dated October 8, 1958 and recorded in the Cumberland County Registry of Deeds in Book 2438, Page 258, as relocated pursuant to an Easement Relocation Agreement by and between Old Port Hospitality, LLC and the City of Portland dated April 28, 2010 and recorded in the Cumberland County Registry of Deeds in Book 27742, Page 26, further reference being made to a Letter from David Margolis-Pineo, Deputy City Engineer of the Public Services Department, dated August 25, 2010 and recorded in the Cumberland County Registry of Deeds in Book 28028, Page 257;

2. Terms and conditions of a No Further Action Assurance Letter from the Maine Department of Environmental Protection to Jordan's Meats dated April 17, 2003 and recorded in the Cumberland County Registry of Deeds in Book 19244, Page 271;

3. Restrictions, covenants and conditions set forth in a Deed from Zemco Industries, Inc. to PME I, Limited Partnership dated September 23, 2005 and recorded in the Cumberland County Registry of Deeds in Book 23199, Page 107, and repeated in a Deed from said PME I, Limited Partnership to Old Port Hospitality, LLC dated January 29, 2010 and recorded in the Cumberland County Registry of Deeds in Book 27567, Page 40;

4. Matters and General Notes set forth on subdivision plan entitled "Subdivision Plan of Hotel, Restaurant & Portside Residences, 207 & 209 Fore Street, Portland, Maine" dated February 8, 2010, as most recently revised on April 23, 2010, approved by the City of Portland Planning Board on April 13, 2010, and recorded in the Cumberland County Registry of Deeds in Plan Book 210, Page 194;

5. Underground Line Easement granted by Old Port Hospitality, LLC to Central Maine Power Company dated July 21, 2010 and recorded in the Cumberland County Registry of Deeds in Book 28094, Page 298;

6. Maine Department of Environmental Protection Commissioner's Certification dated June 27, 2011 and recorded in the Cumberland County Registry of Deeds in Book 28791, Page 132, as affected by a Commissioner's Certification Amended to Reflect Re-Development Plans Dated August 20, 2012, dated October 26, 2012 and recorded in the Cumberland County Registry of Deeds in Book 30111, Page 193;

7. Declaration of Environmental Covenant by and between Fore India Middle, LLC and the Maine Department of Environmental Protection dated May 24, 2011 and recorded in the Cumberland County Registry of Deeds in Book 28791, Page 136;

8. Agreement Regarding Wall and Window With Respect to Unit One in Portside Condominium, 207 Fore Street, Portland, Maine, by and between Fore India Middle, LLC and Paula Foley-Stelmack and Mark Stelmack dated September 29, 2011 and recorded in the Cumberland County Registry of Deeds in Book 29001, Page 234; and

9. Certificate of Subdivision Waiver Approval by the City of Portland in favor of Fore India Middle, LLC dated October 18, 2012 and recorded in the Cumberland County Registry of Deeds in Book 30102, Page 285.

Reference is made to a Quitclaim Deed With Covenant from Old Port Hospitality, LLC to Fore India Middle, LLC dated June 11, 2010, and recorded in the Cumberland County Registry of Deeds in Book 27850, Page 63, as amended by said Amendment of Deed, Termination of Rights and Easements and Grant of Rights and Easements by and between Old Port Hospitality, LLC and Fore India Middle, LLC dated August 23, 2010, and recorded in the Cumberland County Registry of Deeds in Book 28022, Page 181, for Fore India Middle, LLC's source of title to the premises conveyed herein.

IN WITNESS WHEREOF, FORE INDIA MIDDLE, LLC has caused this instrument to be executed by Gregory R. Kirsch, its Manager, hereunto duly authorized, this 21ST day of December, 2012.

WITNESS:

FORE INDIA MIDDLE, LLC

By: _____
Gregory R. Kirsch
Its Manager

STATE OF MAINE
COUNTY OF CUMBERLAND, ss.

December 21, 2012

Personally appeared the above named Gregory R. Kirsch, Manager of FORE INDIA MIDDLE, LLC, and acknowledged the foregoing instrument to be his free act deed in his said capacity and the free act and deed of said FORE INDIA MIDDLE, LLC.

Before me,

GENERAL NOTES:

1. APPLICANT: OLD PORT HOSPITALITY, LLC 11 CORPORATE DRIVE, 11 BELMONT, NEW HAMPSHIRE, 03220.
2. THE RECORD OWNER OF THE PROPERTY IS OLD PORT HOSPITALITY, LLC BY DEED DATED JANUARY 29, 2010 AND RECORDED AT THE CUMBERLAND COUNTY REGISTRY OF DEEDS (CCRD) IN BOOK 27367, PAGE 149.
3. THE PROPERTY IS SHOWN AS LOTS 1, 2, 4 & 5 OF BLOCK L ON THE CITY OF PORTLAND TAX MAP 29.
4. TOTAL AREA OF PARCEL IS APPROXIMATELY 16,269 SQUARE FEET.
5. BOUNDARY AND TOPOGRAPHIC INFORMATION SHOWN HEREON IS BASED UPON AN ON THE GROUND ALTA SURVEY TITLED ALTA/ACSM LAND TITLE SURVEY OF JORDAN'S MEATS PROPERTY FOR OLD PORT HOSPITALITY, LLC BY SEBAGO TECHNICS, INC. PERFORMED DATED DECEMBER 4, 2009, REVISED THROUGH DECEMBER 10, 2009 TO BE RECORDED IN THE CUMBERLAND COUNTY REGISTRY OF DEEDS.
6. ZONING DISTRICT: B-3 DOWNTOWN BUSINESS DISTRICT.
7. SPACE AND BULK CRITERIA FOR THE B-3 DOWNTOWN BUSINESS DISTRICT:
   (a) MIN. LOT SIZE: NONE
   (b) MIN. STREET FRONTAGE: 15 FT.
   (c) STREET WALL TO BUILD LINE: 3' FT. (SEE SEC. 14-220, CHAPTER 14, OF CITY LAND USE ORDINANCE)
   (d) MIN. YARD DIMENSIONS: NONE
   (e) MIN. LOT WIDTH: NONE
   (f) MAX. LENGTH OF UNDIFFERENTIATED BLANK WALL ALONG A PUBLIC STREET OR PUBLICLY ACCESSIBLE PEDESTRIAN WAY:
      (1) PAD OVERLAY ZONE: 15 FT.
      (2) ALL OTHER AREAS: 30 FT.
   (g) MAX. LOT COVERAGE: 100%
   (h) MIN. BLDG. HEIGHT: NO NEW CONSTRUCTION OF ANY BUILDING SHALL BE LESS THAN 35 FT. IN HEIGHT WITHIN 50 FT. OF ANY STREET FRONTAGE, EXCEPT FOR PARKING ATTENDANT BOOTHS OR BANK REMOTE TELLER FACILITIES
   (i) MAX. HEIGHT OF STRUCTURES: SEE SEC. 14-220, CHAPTER 14, OF CITY LAND USE ORDINANCE.
8. "HOTEL, RESTAURANT AND PORTSIDE RESIDENCES" IS A PRIVATE CONDOMINIUM DEVELOPMENT THAT WILL CONSIST OF A HOTEL UNIT, A RESTAURANT UNIT AND A RESIDENTIAL UNIT. THE RESIDENTIAL UNIT WILL ITSELF BE A SUB-CONDOMINIUM NAMED "PORTSIDE CONDOMINIUM" CONSISTING OF UP TO 12 DWELLING UNITS. FOR DIMENSIONS AND BOUNDARIES OF THE UNITS AND COMMON ELEMENTS, REFER TO THE CONDOMINIUM PLATS AND PLANS OF THE FOREGOING CONDOMINIUM AND SUB-CONDOMINIUM TO BE RECORDED IN THE CUMBERLAND COUNTY REGISTRY OF DEEDS.
9. THE SIGNATURE(S) OF THE CITY OF PORTLAND PLANNING BOARD ON THIS SUBDIVISION PLAN SHALL CONSTITUTE APPROVAL OF SUBDIVISION OF THE LAND INTO TWO LOTS AS SHOWN HEREUPON AND APPROVAL OF SUBDIVISION OF THE TOP FLOOR OF THE PROPOSED BUILDING INTO UP TO 12 RESIDENTIAL CONDOMINIUM UNITS. THE APPLICANT OR ITS SUCCESSORS OR ASSIGNS MAY DESIGNATE AND ALTER THE LAYOUT, DIMENSIONS AND BOUNDARIES OF THE RESIDENTIAL DWELLING UNITS WITHOUT FURTHER PLANNING BOARD APPROVAL, PROVIDED THAT NO MORE THAN 12 RESIDENTIAL DWELLING UNITS MAY BE DESIGNATED AND CONSTRUCTED.
10. THE PROJECT IS A PRIVATE CONDOMINIUM DEVELOPMENT AND SITE LIGHTING, TRASH REMOVAL AND SNOW REMOVAL SHALL BE THE RESPONSIBILITY OF THE CONDOMINIUM ASSOCIATION(S) OR THE HOTEL UNIT OPERATOR.
11. A SUBDIVISION SHALL BE DEFINED AS THE DIVISION OF A LOT, TRACT OR PARCEL OF LAND INTO THREE (3) OR MORE LOTS, INCLUDING LOTS OF FORTY (40) ACRES OR MORE, WITHIN ANY FIVE-YEAR PERIOD, WHETHER ACCOMPLISHED BY SALE, LEASE, DEVELOPMENT, BUILDINGS OR OTHERWISE AND AS FURTHER DEFINED IN 30-A M.R.S.A. SECTION 4401. THE TERM SUBDIVISION SHALL ALSO INCLUDE THE DIVISION OF A NEW STRUCTURE OR STRUCTURES ON A TRACT OR PARCEL OF LAND INTO THREE (3) OR MORE DWELLING UNITS WITHIN A FIVE-YEAR PERIOD AND THE DIVISION OF AN EXISTING STRUCTURE OR STRUCTURES PREVIOUSLY USED FOR COMMERCIAL OR INDUSTRIAL USE INTO THREE (3) OR MORE DWELLING UNITS WITHIN A FIVE-YEAR PERIOD. THE AREA INCLUDED IN THE EXPANSION OF AN EXISTING STRUCTURE IS DEEMED TO BE A NEW STRUCTURE FOR THE PURPOSES OF THIS PARAGRAPH. A DWELLING UNIT SHALL INCLUDE ANY PART OF A STRUCTURE WHICH, THROUGH SALE OR LEASE, IS INTENDED FOR HUMAN HABITATION, INCLUDING SINGLE-FAMILY AND MULTI-FAMILY HOUSING CONDOMINIUMS, TIME-SHARE UNITS AND APARTMENTS.
12. METHODS AND MATERIALS USED IN THE CONSTRUCTION OF THE IMPROVEMENTS WITHIN THE CITY RIGHT OF WAY SHALL CONFORM TO THE CURRENT CITY OF PORTLAND TECHNICAL AND DESIGN STANDARDS AND SPECIFICATIONS AND/OR CURRENT M.D.O.T STANDARDS AND SPECIFICATIONS.
13. ALL CURBING SHALL BE DESIGNED AND BUILT WITH TIP-DOWNS AT ALL DRIVEWAYS AND CROSSWALKS, IN ACCORDANCE WITH THE CITY OF PORTLAND PUBLIC SERVICES DIVISION TECHNICAL STANDARDS AND GUIDELINES.
14. THE FACILITY IS SERVICED BY CITY SEWER, WATER, GAS, UNDERGROUND ELECTRIC, STORM DRAINAGE, TELEPHONE AND CABLE TELEVISION UTILITIES.
15. ALL ELECTRIC, TELEPHONE AND CABLE T.V. SERVICES SHALL BE UNDERGROUND AND IN CONFORMANCE WITH THE STANDARDS OF CENTRAL MAINE POWER CO., VERIZON NEW ENGLAND, TIME WARNER CABLE T.V. CO., OR OTHER UTILITIES PROVIDING SERVICE TO THE SITE.
16. ALL WATER MAINS, SERVICES AND ASSOCIATED APPURTENANCES SHALL BE IN CONFORMANCE WITH PORTLAND WATER DISTRICT STANDARDS.
17. ALL NATURAL GAS MAINS, SERVICES AND ASSOCIATED APPURTENANCES SHALL BE IN CONFORMANCE WITH NORTHERN UTILITIES/UNITIL STANDARDS.
18. ALL SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED IN ACCORDANCE WITH "MAINE EROSION AND SEDIMENTATION CONTROL HANDBOOK FOR CONSTRUCTION: BEST MANAGEMENT PRACTICES" PUBLISHED BY THE CUMBERLAND COUNTY SOIL AND WATER DISTRICT AND MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION, MARCH 2003 OR LATEST EDITION. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO POSSESS A COPY OF THE EROSION CONTROL PLAN AT ALL TIMES.
19. THE CONTRACTOR OR DEVELOPER IS REQUIRED TO NOTIFY THE CITY OF PORTLAND PUBLIC SERVICES INSPECTION DIVISION IN WRITING THREE (3) DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION (874-8300 EXT. 8828). SHOULD THE IMPROVEMENTS BE OF SIGNIFICANT CONCERN OR IN A SENSITIVE AREA, A PRE-CONSTRUCTION MEETING MAY BE REQUIRED AT THE DISCRETION OF THE PUBLIC WORKS AUTHORITY.
20. AN APPROVED SET OF PLANS AND ALL APPLICABLE PERMITS MUST BE AVAILABLE AT THE CONSTRUCTION SITE. THE DEVELOPER, OR AN AUTHORIZED AGENT, MUST BE AVAILABLE AT ALL TIMES DURING CONSTRUCTION.
21. WARNING SIGNS, MARKERS, BARRICADES OR FLAGMEN, APPROPRIATE FOR THE TYPE OF CONSTRUCTION MUST BE EMPLOYED TO REGULATE TRAFFIC.
22. CONSTRUCTION DEBRIS SHALL BE CONTAINERIZED AND DISPOSED OF IN ACCORDANCE WITH CITY OF PORTLAND'S SOLID WASTE ORDINANCE CHAPTER 12.
23. ANY DAMAGE TO PUBLIC OR PRIVATE PROPERTY RESULTING FROM CONSTRUCTION ACTIVITIES SHALL BE REPAIRED BY THE DEVELOPER/CONTRACTOR AT THEIR EXPENSE.
24. PROPERTY MARKERS AND STREET LINE MONUMENTS SHALL BE PROPERLY PROTECTED AT ALL TIMES DURING CONSTRUCTION TO INSURE THEIR INTEGRITY. IF DISTURBED THEY SHALL BE REPLACED BY A SURVEYOR REGISTERED IN THE STATE OF MAINE AT THE CONTRACTOR/DEVELOPER'S EXPENSE.
25. ALL SANITARY SERVICES AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE CURRENT STANDARDS AND SPECIFICATIONS OF THE CITY OF PORTLAND PUBLIC SERVICES DEPARTMENT SEWER DIVISION.
26. ALL NEW CONNECTIONS, RECONNECTIONS, ETC. TO SANITARY OR STORM SEWERS SHALL REQUIRE A CONNECTION PERMIT PRIOR TO BEGINNING ANY WORK. THE CITY OF PORTLAND PUBLIC SERVICES DEPARTMENT MUST BE NOTIFIED AT LEAST 24 HOURS PRIOR TO COMMENCEMENT TO ALLOW FOR INSPECTION.
27. A PERMIT MUST BE OBTAINED FROM THE CITY OF PORTLAND PUBLIC SERVICES DEPARTMENT PRIOR TO BEGINNING ANY WORK WITHIN THE CITY RIGHT-OF-WAY.
28. THE ENTIRE SITE SHALL BE DEVELOPED AND/OR MAINTAINED AS DEPICTED ON THE SITE PLAN. APPROVAL OF THE PLANNING AUTHORITY OR PLANNING BOARD SHALL BE REQUIRED FOR ANY ALTERATIONS TO OR DEVIATIONS FROM THE APPROVED SITE PLAN, INCLUDING, WITHOUT LIMITATION, TOPOGRAPHY, DRAINAGE, LANDSCAPING, RETENTION OF WOODED OR OPEN AREAS, ACCESS, SIZE, LOCATION AND SURFACING OF PARKING AREAS, AND LOCATION AND SIZE OF BUILDINGS.
29. LANDSCAPING SHALL MEET THE "ARBORICULTURAL SPECIFICATION AND STANDARDS OF PRACTICE AND LANDSCAPE GUIDELINES" OF THE CITY OF PORTLAND TECHNICAL AND DESIGN STANDARDS AND GUIDELINES.

ELEVATION DATUM
ALL ELEVATIONS SHOWN HEREON ARE REFERENCED TO NAVD 88. THE CONVERSION TO CITY OF PORTLAND VERTICAL DATUM IS AS FOLLOWS:
NAVD 88 ELEV. + 0.71' = CITY DATUM ELEV.

30. ALL DISTURBED AREA ON THE SITE NOT COVERED BY BUILDINGS OR PAVED AREA SHALL BE STABILIZED WITH LOAM AND SEED OR OTHER MATERIALS AS REQUIRED BY BEST MANAGEMENT PRACTICES.
31. PRIOR TO CONSTRUCTION, A PRECONSTRUCTION MEETING SHALL BE HELD AT THE PROJECT SITE WITH THE CONTRACTOR, DEVELOPMENT REVIEW COORDINATOR, PUBLIC WORKS REPRESENTATIVE AND OWNER TO REVIEW THE CONSTRUCTION SCHEDULE AND CRITICAL ASPECTS OF THE SITE WORK. AT THAT TIME, THE SITE/BUILDING CONTRACTOR SHALL PROVIDE THREE (3) COPIES OF A DETAILED CONSTRUCTION SCHEDULE AT ATTENDING CITY REPRESENTATIVE. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO ARRANGE A MUTUALLY AGREEABLE TIME FOR THE PRECONSTRUCTION MEETING.
32. AREAS INDICATED ARE SUBJECT TO EASEMENTS AND RIGHTS TO BE CONVEYED IN PROPOSED EASEMENT AGREEMENT BETWEEN OLD PORT HOSPITALITY, LLC AND 80-90 CORPS TO BE RECORDED IN THE CCRD.
33. THIS SUBDIVISION SUPERSEDES THE WESTIN HOTEL AND RESIDENCES PORTLAND SUBDIVISION OF THIS PROPERTY APPROVED BY THE CITY OF PORTLAND PLANNING BOARD ON DECEMBER 13, 2005. SAID SUBDIVISION WAS NOT RECORDED AND APPROVALS HAVE SINCE LAPSED.
34. SEGMENTS L8, L9 AND L34 OF THE BOUNDARY BETWEEN LOT 1 AND LOT 2 ARE INTENDED TO FOLLOW THE BUILDING TO BE CONSTRUCTED ON LOT 1, AND SEGMENT L7 IS INTENDED TO RUN IN THE SAME BEARING AS SEGMENT L34, UNTIL SUCH TIME AS THE BUILDING IS CONSTRUCTED. THE FOREGOING SEGMENTS SHALL BE AS SHOWN ON THIS PLAN. UPON COMPLETION OF THE BUILDING, THE FOREGOING SEGMENTS SHALL BE DEEMED TO FOLLOW THE LINE FORMED BY THE "AS-BUILT" FOUNDATION WALLS OF THE BUILDING AT GROUND LEVEL (THE "WALL LINE") AND SEGMENT L9 SHALL EXTEND ALONG THE WALL LINE TO THE FORE STREET RIGHT-OF-WAY. NOTWITHSTANDING THE FOREGOING, ALL SUCH AS-BUILT PROPERTY LINE SEGMENTS SHALL NOT DEVIATE MORE THAN TWO FEET FROM THE LINES SHOWN ON THIS PLAN.
35. THE BOUNDARY LINES BETWEEN LOT 1 AND THE ABUTTING LAND OF 80-90 CORPS FOLLOW THE EXISTING FACE OF THE BRICK WALLS OF THE BUILDING ON 80-90 CORPS LAND.
36. SEE EASEMENT RELOCATION AGREEMENT BETWEEN OLD PORT HOSPITALITY, LLC AND THE CITY OF PORTLAND TO BE RECORDED IN THE CCRD.
37. THE HOTEL AND THE RESIDENTIAL UNITS HAVE ACCESS AND PARKING RIGHTS ON LOT 2 IN ACCORDANCE WITH THE APPROVED SITE PLAN OF THE HOTEL, RESTAURANT AND PORTSIDE RESIDENCES, WHICH RIGHTS ARE GRANTED IN THE QUITCLAIM DEED CONVEYING TITLE TO LOT 2 FROM OLD PORT HOSPITALITY, LLC TO FORE INDIA MIDDLE, LLC OR IN THE PARKING AGREEMENT BETWEEN OLD PORT HOSPITALITY, LLC AND FORE INDIA MIDDLE, LLC, BOTH TO BE RECORDED IN THE CCRD.
38. PEDESTRIAN ACCESS IS TO BE PROVIDED FROM THE MIDDLE STREET SIDEWALK, APPROXIMATELY AT THE HAMPSHIRE STREET INTERSECTION, THROUGH THE SITE TO FORE STREET. THE PEDESTRIAN ACCESS SHALL BE OPEN TO PUBLIC USE AS A CONDITION OF PLANNING BOARD APPROVAL FOR THIS PLAN.
39. THE SOUTHWESTERLY SIDELINE OF INDIA STREET SHOWN HEREON IS BASED UPON FOUND MONUMENTATION AND THE INDIA STREET ACCEPTANCE. THE CITY OF PORTLAND DEPARTMENT OF PUBLIC WORKS HAS PERFORMED A STREET LINE SURVEY OF HANCOCK STREET AND THAMES STREET, TIED INTO THE LINES OF INDIA, FORE, MIDDLE & COMMERCIAL STREETS, DATED JANUARY 7, 2008 ON FILE AT THE DEPARTMENT OF PUBLIC WORKS. ON SAID SURVEY AN ANGLE POINT WAS INTRODUCED TO THE INDIA STREET RIGHT OF WAY LINE AT THE MONUMENT ON THE EASTERLY CORNER OF THE INDIA STREET AND MIDDLE STREET INTERSECTION. THE CITY COUNCIL HAS NOT REDEFINED INDIA STREET TO INCLUDE THE ANGLE POINT SO THE SIDELINE OF INDIA STREET SHOWN HEREON REMAINS AS ACCEPTED. IF THE COUNCIL WERE TO REDEFINE INDIA STREET PER THE PUBLIC WORKS SURVEY THE LOCUS PROPERTY WOULD GAIN APPROXIMATELY 79 SQUARE FEET IN AREA.

GENERAL NOTES:

1. THIS PROJECT IS SUBJECT TO THE TERMS AND CONDITIONS OF ALL REGULATIONS ADMINISTERED BY THE LOCAL UTILITY COMPANIES AND THE CITY OF PORTLAND.
2. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL PLANS FOR EXACT LOCATIONS AND DIMENSIONS OF THE ENTRANCES, EXITS, PRECISE BUILDING DIMENSIONS, AND EXACT BUILDING UTILITY ENTRANCE POINTS.
3. ALL REQUIRED AND NECESSARY INSPECTIONS AND/OR CERTIFICATIONS REQUIRED BY CODES AND/OR UTILITY SERVICE COMPANIES SHALL BE PERFORMED PRIOR TO ANNOUNCED BUILDING POSSESSION AND THE FINAL SERVICE CONNECTIONS.
4. THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT THE LOCATION AND/OR THE ELEVATION OF THE EXISTING UTILITIES AS SHOWN ON THESE PLANS IS BASED ON RECORDS OF THE VARIOUS UTILITY COMPANIES AND, WHERE POSSIBLE, MEASUREMENTS TAKEN IN THE FIELD. THIS INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR MUST CALL THE APPROPRIATE UTILITY COMPANY AND DIG SAFE (1-888-DIGSAFE), IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO RELOCATE ALL EXISTING UTILITIES WHICH CONFLICT WITH THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS, AT NO EXTRA EXPENSE TO THE OWNER.
5. MAINTENANCE OF EROSION CONTROL MEASURES IS OF PARAMOUNT IMPORTANCE TO THE OWNER AND THE CONTRACTOR IS RESPONSIBLE FOR COMPLYING WITH ALL EROSION CONTROL MEASURES SHOWN ON THE PLANS. ADDITIONAL EROSION CONTROL MEASURES SHALL BE INSTALLED IF DEEMED NECESSARY BY ONSITE INSPECTIONS OF THE OWNER OR THEIR REPRESENTATIVES AT NO ADDITIONAL COST TO THE OWNER.
6. ALL MATERIAL SCHEDULES SHOWN ON THE PLANS ARE FOR GENERAL INFORMATION ONLY. THE CONTRACTOR SHALL PREPARE HIS OWN MATERIAL SCHEDULES BASED UPON HIS PLAN REVIEW. ALL SCHEDULES SHALL BE VERIFIED IN THE FIELD BY THE CONTRACTOR PRIOR TO ORDERING MATERIALS OR PERFORMING WORK.
7. ALL MATERIALS AND CONSTRUCTION METHODS SHALL CONFORM TO PROJECT CONTRACT SPECIFICATIONS, AND THE CITY OF PORTLAND TECHNICAL MANUAL STANDARDS, WHICHEVER IS MORE STRINGENT.
8. TOPOGRAPHIC AND BOUNDARY SURVEY INFORMATION WAS PROVIDED BY OWEN HASKELL, INC. BENCHMARK = USC & GC DISK AT 17 COMMERCIAL STREET. ELEVATION 14.50
9. FEMA MAP COMMUNITY PANEL NUMBERS 0692 AND 0711. THE SITE IS LOCATED IN A C ZONE.
10. THE PROPERTY SHOWN ON THIS PLAN MAY BE DEVELOPED AND USED ONLY AS DEPICTED IN THIS APPROVED PLAN. ALL ELEMENTS AND FEATURES OF THE PLAN AND ALL THE PROPERTY WHICH APPEARS IN THE RECORD OF THE PLANNING BOARD PROCEEDINGS ARE CONDITIONS OF THE APPROVAL. NO CHANGE FROM THE CONDITIONS OF APPROVALS IS PERMITTED UNLESS AN AMENDED PLAN IS FIRST SUBMITTED TO AND APPROVED BY THE PLANNING AUTHORITY.
11. ALL SIGNAGE SHALL CONFORM TO THE STANDARDS FOR SIZE, HEIGHT, LOCATION AND REFLECTIVITY SET FORTH IN THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD).
12. ALL CURB SHALL CONFORM TO THE FOLLOWING SPECIFICATIONS AS NOTED ON THE PLANS:
    GRANITE AND BITUMINOUS CONCRETE CURB SHALL MEET THE REQUIREMENTS OF MAINE DEPARTMENT OF TRANSPORTATION SPECIFICATIONS 609.03 AND 609.04 AND CITY OF PORTLAND TECHNICAL STANDARDS.
13. ALL DIMENSIONING UNLESS OTHERWISE NOTED IS TO THE FACE OF CURB OR FACE OF BUILDING.
14. THE FACILITY IS SERVICED BY PUBLIC WATER, SEWER, NATURAL GAS AND OVERHEAD POWER. THE PROJECT INCLUDES UPDATES TO THE POWER SERVICE INCLUDING THE INSTALLATION OF NEW UNDERGROUND SYSTEM. SEE SITE ELECTRICAL PLANS FOR DETAILS.

PERMITTING NOTES:

1. THIS PROJECT IS SUBJECT TO THE TERMS AND CONDITIONS OF THE SITE PLAN REVIEW PERMIT FROM THE CITY OF PORTLAND WHICH WILL BE MADE A PART OF THE CONTRACT BID DOCUMENTS. THE CONSTRUCTION WILL BE GOVERNED BY THE ZONING ORDINANCES WHICH ARE AVAILABLE FOR VIEWING AT THE OFFICE OF THE ENGINEER OR THE MUNICIPAL OFFICE.

GRADING AND DRAINAGE NOTES:

1. ALL STORM DRAIN PIPE SHALL BE SMOOTH BORE INTERIOR PROVIDING A MANNINGS ROUGHNESS COEFFICIENT OF n = 0.013 OR LESS. UNLESS A SPECIFIC PIPE MATERIAL IS CALLED FOR ON THE CONTRACT DRAWINGS. PVC PIPING SHALL NOT BE USED IN AREAS OF EXPOSED SUNLIGHT.
2. SLOPE PROTECTION IS TO BE PROVIDED PER THE DESIGN PLANS AND MAY INCLUDE RIPRAP, SOD OR MULCH.
3. THE CONTRACTOR SHALL EXERCISE EXTREME CAUTION DURING EARTHWORK OPERATIONS TO INSURE THAT DISTURBANCE TO ANY STEEP SLOPE AREAS ARE MINIMIZED TO THE EXTENT PRACTICABLE.
4. THE CONTRACTOR IS HEREBY CAUTIONED THAT ALL SITE FEATURES SHOWN ARE BASED ON FIELD OBSERVATIONS BY THE SURVEYOR AND BY INFORMATION PROVIDED BY OTHERS. THE INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR SHALL CONTACT DIG SAFE (1-888-DIGSAFE) AT LEAST THREE (3) BUT NOT MORE THAN THIRTY (30) DAYS PRIOR TO COMMENCEMENT OF EXCAVATION OR DEMOLITION TO VERIFY HORIZONTAL AND VERTICAL LOCATION OF ALL UTILITIES.
5. ALL PAVING WITHIN THE PUBLIC R.O.W. SHALL BE PERFORMED IN ACCORDANCE WITH THE CITY OF PORTLAND RULES AND REGULATIONS FOR EXCAVATION ACTIVITIES IN THE PUBLIC R.O.W.
6. NO HOLES, TRENCHES OR STRUCTURES SHALL BE LEFT OPEN OVERNIGHT IN ANY EXCAVATION ACCESSIBLE TO THE PUBLIC OR IN PUBLIC RIGHTS-OF-WAY.
7. THE CONTRACTOR SHALL TAKE FULL RESPONSIBILITY FOR ANY CHANGES AND DEVIATION OF APPROVED PLANS NOT AUTHORIZED BY THE ARCHITECT/ENGINEER AND/OR CLIENT/OWNER.
8. CONTRACTOR SHALL INCORPORATE PROVISIONS AS NECESSARY IN CONSTRUCTION TO PROTECT EXISTING STRUCTURES AND PHYSICAL FEATURES THAT ARE OUTSIDE THE SCOPE OF WORK. THE CONTRACTOR SHALL MAINTAIN SITE STABILITY DURING CONSTRUCTION TO AVOID EROSION AND SEDIMENT TRANSPORT. CONTRACTOR SHALL RESTORE ALL AREAS TO A FINAL STABILIZED CONDITION AS DIRECTED BY DESIGN DRAWINGS.
9. CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS IN THE FIELD PRIOR TO FABRICATION AND ERECTION OF ANY MATERIAL. ANY UNUSUAL CONDITIONS SHALL BE REPORTED TO THE ATTENTION OF THE ENGINEER.
10. EXTERIOR GRADES AROUND PROPOSED STRUCTURE SHALL BE COORDINATED WITH FINAL BUILDING PLANS AND PROVIDE FOR ALL ACCESS OPENINGS.
11. SUBGRADE FILL PLACED BENEATH ALL PERMANENT PAVEMENT, SIDEWALK OR CONCRETE SURFACES EXCLUDING ANY BUILDING AREAS, SHALL BE GRANULAR BORROW (MDOT 703.19). SUBGRADE FILL PLACED BENEATH ALL LANDSCAPE AREAS EXCEPT THOSE ADJACENT THE FOUNDATION SYSTEMS MAY BE A COMMON BORROW MATERIAL SUITABLE FOR EMBANKMENT CONSTRUCTION, FREE FROM FROZEN MATERIAL, PERISHABLE RUBBLE, PEAT, ORGANICS, ROCKS LARGER THAN 12" IN DIAMETER, VEGETATION AND OTHER MATERIAL UNSUITABLE FOR ROADWAY AND SUBGRADE CONSTRUCTION. EXCAVATED ON-SITE MATERIALS MAY BE USED FOR FILL PROVIDED THE MATERIAL IS FREE FROM UNSUITABLE MATERIAL DESCRIBED IN THIS NOTE AND UPON APPROVAL OF THE ENGINEER. EXCAVATED ONSITE MATERIALS MAY NOT BE USED AS COMPACTED STRUCTURAL FILL BENEATH THE BUILDING AREAS OR AS FOUNDATION BACKFILL. GRANULAR BORROW AND COMMON BORROW SHALL COMPLY WITH THE MDOT SPECIFICATIONS.
12. ALL FILLS SHALL BE PLACED IN LAYERS NOT MORE THAN 12" LOOSE DEPTH AND COMPACTED BY HEAVY COMPACTION EQUIPMENT. MINIMUM COMPACTION SHALL BE 95% OF MAXIMUM DENSITY ASTM 1557, MODIFIED AND FIELD DENSITY ASTM D2922 (NUCLEAR METHODS).
13. THE CONTRACTOR SHALL ANTICIPATE THAT GROUNDWATER WILL BE ENCOUNTERED DURING CONSTRUCTION AND SHALL INCLUDE SUFFICIENT COSTS WITHIN THEIR BID TO PROVIDE DEWATERING AS NECESSARY. NO SEPARATE PAYMENT SHALL BE MADE TO THE CONTRACTOR FOR DEWATERING.

CONSTRUCTION MANAGEMENT NOTES:

1. ALL CONSTRUCTION SHALL COMPLY WITH 2009 NFPA 1 CHAPTER 16 SAFE GUARDS DURING BUILDING CONSTRUCTION, ALTERATION AND DEMOLITION OPERATIONS.
2. ANY CUTTING AND WELDING WORK PERFORMED ONSITE SHALL REQUIRE A "HOT WORK" PERMIT FROM THE PORTLAND FIRE DEPARTMENT.
3. THE GENERAL CONTRACTOR SHALL POST EMERGENCY CONTACT INFORMATION ON THE PROJECT SITE PROPERTY DURING CONSTRUCTION IN THE EVENT OF AN AFTER HOURS EMERGENCY. THIS CONTACT INFORMATION SHALL ALSO BE PROVIDED TO THE PORTLAND FIRE DEPARTMENT.
4. IF THE SITE IS SECURED BY TEMPORARY OR PERMANENT FENCING WITH LOCKED GATES, THEN THE APPLICANT OR ASSIGNED REPRESENTATIVE SHALL PURCHASE A KNOX PADLOCK FROM THE PORTLAND FIRE DEPARTMENT TO ALLOW ACCESS BY THE PORTLAND FIRE DEPARTMENT.
5. STREETS SHALL MAINTAIN A 20' WIDTH FOR FIRE DEPARTMENT ACCESS AT ALL TIMES.
6. FIRE HYDRANTS SHALL NOT BE BLOCKED OR ENCLOSED BY FENCING. A 3' CLEARANCE SHALL BE MAINTAINED AT ALL TIMES AROUND FIRE HYDRANTS.

EROSION CONTROL NOTES:

THE PROJECT SITE IS RELATIVELY SMALL AND WILL PRIMARILY FEATURE BELOW GROUND EXCAVATION THAT WILL RESULT IN AN INTERNALLY DRAINING RUNOFF PATTERN. NEARLY THE ENTIRE PROJECT SITE WILL BE STABILIZED BY ROOFTOP, PAVEMENT, OR BRICK SIDEWALKS.

THE PRIMARY EMPHASIS OF THE EROSION AND SEDIMENTATION CONTROL PLAN TO BE IMPLEMENTED FOR THIS PROJECT IS AS FOLLOWS:

1. PLANNING THE PROJECT TO PROVIDE THE ABILITY TO CAPTURE ANY ERODED MATERIALS FROM THE WORK AREA ON THE SITE.
2. DEVELOPMENT OF A CAREFUL CONSTRUCTION SEQUENCE.
3. RAPID STABILIZATION OF DENUDED AREAS TO MINIMIZE THE PERIOD OF SOIL EXPOSURE.
4. PREVENTING SEDIMENT LADEN RUNOFF FROM ENTERING THE EXISTING STORM DRAIN NETWORK ON AND AROUND THE SITE.
5. KEEPING SURROUNDING STREETS FREE OF MUD AND DUST BY REGULARLY SWEEPING.

EROSION/SEDIMENTATION CONTROL DEVICES

AS PART OF THE SITE DEVELOPMENT THE CONTRACTOR WILL IMPLEMENT THE FOLLOWING EROSION AND SEDIMENT CONTROL DEVICES. THESE DEVICES SHALL BE INSTALLED AS INDICATED ON THE PLANS OR AS DESCRIBED HEREIN. FOR FURTHER REFERENCE, SEE THE "MAINE EROSION AND SEDIMENT CONTROL BMPS" HANDBOOK PUBLISHED BY THE MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION.

1. SILTATION FENCE SHALL BE INSTALLED DOWN SLOPE OF ANY DISTURBED AREAS TO TRAP RUNOFF-BORNE SEDIMENTS UNTIL THE SITE IS REVEGETATED. THE SILT FENCE SHALL BE INSTALLED PER THE DETAIL PROVIDED IN THE PLAN SET AND INSPECTED IMMEDIATELY AFTER EACH RAINFALL AND AT LEAST DAILY DURING PROLONGED RAINFALL. THE CONTRACTOR SHALL MAKE REPAIRS IMMEDIATELY IF THERE ARE ANY SIGNS OF EROSION OR SEDIMENTATION BELOW THE FENCE LINE. PROPER PLACEMENT OF STAKES AND KEYING THE BOTTOM OF THE FABRIC INTO THE GROUND ARE CRITICAL TO THE FENCE'S EFFECTIVENESS. IF THERE ARE SIGNS OF UNDERCUTTING AT THE CENTER OR THE EDGES, OR IMPOUNDING OF LARGE VOLUMES OF WATER BEHIND THE FENCE, THE BARRIER SHALL BE REPLACED WITH A STONE CHECK DAM. THE SILTATION FENCE SHALL REMAIN IN PLACE AND PROPERLY MAINTAINED UNTIL THE SITE IS PERMANENTLY STABILIZED.
2. CATCH BASIN INLET PROTECTION: STONE SEDIMENT TRAPS OR A PREMANUFACTURED SILTSACK™ WILL BE INSTALLED AT CATCH BASIN INLETS TO PREVENT SILT FROM ENTERING THE STORM DRAIN SYSTEM. INSTALLATION DETAILS ARE PROVIDED IN THE PLAN SET. INLET PROTECTION SHALL REMAIN IN PLACE AND PROPERLY MAINTAINED UNTIL TRIBUTARY AREAS ARE PERMANENTLY STABILIZED.

TEMPORARY EROSION & SEDIMENTATION CONTROL MEASURES

ACTIONS MUST BE TAKEN TO ENSURE THAT ACTIVITIES DO NOT RESULT IN EROSION OF SOILS OR FUGITIVE DUST EMISSIONS DURING OR AFTER CONSTRUCTION. THE FOLLOWING ARE PLANNED AS TEMPORARY EROSION/SEDIMENTATION CONTROL MEASURES DURING CONSTRUCTION:

1. SILTATION FENCE AND CATCH BASIN INLET PROTECTION AS DESCRIBED ABOVE.
2. IF OPERATIONS DURING WET MONTHS RESULT IN TRACKING OF MUD OFF THE SITE ONTO PUBLIC ROADS, ROADS SHALL BE SWEPT AT LEAST ONCE A WEEK AND PRIOR TO SIGNIFICANT STORM EVENTS. WHERE CHRONIC MUD TRACKING OCCURS, A STABILIZED CONSTRUCTION ENTRANCE SHOULD BE PROVIDED.
3. IF OPERATIONS DURING DRY MONTHS RESULT IN FUGITIVE DUST EMISSION, ADJACENT ROADS SHALL BE SPRAYED WITH WATER ONCE A WEEK OR MORE FREQUENTLY, AS NEEDED.
4. STABILIZE WITH MULCH OR OTHER NON-ERODIBLE COVER ANY SOILS THAT WILL NOT BE WORKED FOR MORE THAN 7 DAYS.
5. LITTER, CONSTRUCTION DEBRIS, AND CHEMICALS MUST NOT BE STORED IN A MANNER THAT WILL CREATE A POLLUTANT SOURCE IF EXPOSED TO STORMWATER RUNOFF.

TIMING AND SEQUENCE OF EROSION/SEDIMENTATION CONTROL MEASURES

THE FOLLOWING BASIC CONSTRUCTION SEQUENCE SHALL BE REQUIRED TO ENSURE THE EFFECTIVENESS OF THE EROSION AND SEDIMENTATION CONTROL MEASURES IS OPTIMIZED. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TO THE OWNER A SPECIFIC CONSTRUCTION SCHEDULE, WHICH SHALL BE SUBJECT TO THE APPROVAL OF THE OWNER.

NOTE: FOR ALL GRADING ACTIVITIES, THE CONTRACTOR SHALL EXERCISE EXTREME CAUTION NOT TO OVEREXPOSE THE SITE BY LIMITING THE DISTURBED AREA.

1. INSTALL PERIMETER SILTATION FENCE & CATCH BASIN INLET PROTECTION. THE CONTRACTOR MUST INSTALL ANY ADDED MEASURES WHICH MAY BE NECESSARY TO CONTROL EROSION/SEDIMENTATION FROM THE SITE AND FUGITIVE DUST EMISSIONS DEPENDENT UPON THE ACTUAL SITE AND WEATHER CONDITIONS.
2. CLEAR AND GRUB THE WORK AREA FOR THE BUILDING, HAUL OFF THE LOAM, AND EXCAVATE FOR THE BUILDING FOUNDATION.
3. CONSTRUCT THE DRAINAGE SYSTEM.
4. INSTALL STONE AND HAY BALE CHECK DAMS AT ANY CONCENTRATED FLOW DISCHARGE POINTS.
5. INSTALL SIDEWALKS AND PAVEMENT AS DETAILED ON THE SITE PLANS.
6. REMOVE ALL TEMPORARY EROSION CONTROL DEVICES ONCE THE SITE IS STABILIZED.

PROVISIONS FOR MAINTENANCE OF THE EROSION/SEDIMENTATION CONTROL FEATURES

DURING CONSTRUCTION OF THE BUILDING AND ASSOCIATED SITE DEVELOPMENT THE CONTRACTOR SHALL BE REQUIRED TO PERFORM THE FOLLOWING:

1. INSPECTION OF THE PROJECT WORK SITE ON A WEEKLY BASIS AND AFTER EACH SIGNIFICANT RAINFALL EVENT (0.5 INCH OR MORE WITHIN ANY CONSECUTIVE 24-HOUR PERIOD) DURING CONSTRUCTION UNTIL THE SITE HAS BEEN PERMANENTLY STABILIZED. INSPECTION OF THE PROJECT WORK SITE SHALL INCLUDE:
   - IDENTIFICATION OF PROPER EROSION CONTROL MEASURE INSTALLATION IN ACCORDANCE WITH THE EROSION CONTROL DETAILS OR AS SPECIFIED HEREIN.
   - DETERMINE WHETHER EACH EROSION CONTROL MEASURE IS OPERATING PROPERLY. IF NOT, IDENTIFY DAMAGE TO THE CONTROL DEVICE AND DETERMINE REMEDIAL MEASURES.
   - IDENTIFY AREAS THAT APPEAR VULNERABLE TO EROSION AND DETERMINE ADDITIONAL EROSION CONTROL MEASURES THAT SHOULD BE USED TO IMPROVE CONDITIONS.
   - DETERMINE THE NEED TO SWEEP ADJACENT STREETS OR APPLY WATER FOR DUST CONTROL.

   ACCUMULATED SILT/SEDIMENT SHOULD BE REMOVED WHEN THE DEPTH OF SEDIMENT REACHES 50 PERCENT OF THE BARRIER HEIGHT. ACCUMULATED SILT/SEDIMENT SHOULD BE REMOVED FROM BEHIND SILT FENCING WHEN THE DEPTH OF THE SEDIMENT REACHES 6 INCHES.
2. IF INSPECTION OF THE SITE INDICATES A CHANGE SHOULD BE MADE TO THE EROSION CONTROL PLAN, EITHER TO IMPROVE EFFECTIVENESS OR CORRECT A SITE-SPECIFIC DEFICIENCY, THE INSPECTOR SHALL IMMEDIATELY IMPLEMENT THE CORRECTIVE MEASURE AND NOTIFY THE OWNER OF THE CHANGE.
3. THE CONTRACTOR SHALL KEEP A LOG (REPORT) SUMMARIZING THE INSPECTIONS AND ANY CORRECTIVE ACTION TAKEN. THE LOG MUST INCLUDE THE NAME(S) AND QUALIFICATIONS OF THE PERSON MAKING THE INSPECTIONS, THE DATE(S) OF THE INSPECTIONS, AND MAJOR OBSERVATIONS ABOUT THE OPERATION AND MAINTENANCE OF EROSION AND SEDIMENTATION CONTROLS, MATERIALS STORAGE AREAS, AND VEHICLES ACCESS POINTS TO THE PARCEL. MAJOR OBSERVATIONS MUST INCLUDE BMPS THAT NEED MAINTENANCE, BMPS THAT FAILED TO OPERATE AS DESIGNED OR PROVED INADEQUATE FOR A PARTICULAR LOCATION, AND LOCATION(S) WHERE ADDITIONAL BMPS ARE NEEDED. FOR EACH BMP REQUIRING MAINTENANCE, BMP NEEDING REPLACEMENT, AND LOCATION NEEDING ADDITIONAL BMPS, NOTE IN THE LOG THE CORRECTIVE ACTION TAKEN AND WHEN IT WAS TAKEN.

   THE LOG MUST BE MADE ACCESSIBLE TO THE OWNER AND REGULATORY STAFF, AND A COPY MUST BE PROVIDED UPON REQUEST.
4. ONCE THE SITE HAS BEEN PERMANENTLY STABILIZED, THE TEMPORARY EROSION CONTROL MEASURES SHOULD BE REMOVED.

UTILITY NOTES:

1. ALL REQUIRED UTILITIES SERVING THE PROJECT SHALL BE COORDINATED BETWEEN THE SITE WORK CONTRACTOR AND DIVISION 22/26 CONTRACTOR(S). THE SITE WORK CONTRACTOR SHALL BE RESPONSIBLE TO EXTEND ALL PROPOSED UTILITIES TO WITHIN FIVE (5) FEET OF THE BUILDING TO A LOCATION COORDINATED WITH THE MECHANICAL AND ELECTRICAL SUBCONTRACTORS. THE BUILDING CONTRACTOR SHALL BE RESPONSIBLE FOR ALL UTILITIES WITHIN FIVE (5) FEET AND INSIDE THE BUILDING OR UNDER SLAB.
2. THE CONTRACTOR SHALL COORDINATE THE INSTALLATION OF AND/OR RELOCATION OF OVERHEAD AND UNDERGROUND TELEPHONE WITH FAIRPOINT COMMUNICATIONS. CONTRACTOR SHALL BE RESPONSIBLE FOR CONDUITS, PULL WIRES, TRENCHING AND BACKFILLING NECESSARY TO COMPLETE THE WORK.
3. THE CONTRACTOR SHALL COORDINATE THE INSTALLATION OF ELECTRIC SERVICE WITH CENTRAL MAINE POWER; THE TELECOMMUNICATIONS SERVICE WITH FAIRPOINT COMMUNICATIONS AND CABLE SERVICE WITH TIME WARNER CABLE. ALL WORK SHALL CONFORM TO THE PROJECT SPECIFICATIONS OR UTILITY COMPANY STANDARDS, WHICHEVER IS MORE STRINGENT.
4. ADJUST ALL MANHOLES, CATCH BASINS, CURB BOXES, ETC. WITHIN LIMITS OF WORK TO FINISH GRADE AT NO ADDITIONAL EXPENSE TO THE OWNER.
5. ALL UNDERGROUND CONDUITS SHALL HAVE NYLON PULL ROPES TO FACILITATE PULLING CABLES.
6. THE CONTRACTOR SHALL OBTAIN, PAY FOR, AND COMPLY WITH ALL REQUIRED PERMITS, ARRANGE FOR ALL INSPECTIONS, AND SUBMIT COPIES OF ACCEPTANCE CERTIFICATES TO THE OWNER PRIOR TO COMPLETION OF THE PROJECT.
7. THE CONTRACTOR SHALL PROVIDE AND INSTALL ALL BOXES, FITTINGS, CONNECTORS, COVER PLATES AND OTHER MISCELLANEOUS ITEMS NOT NECESSARILY DETAILED ON THE DRAWINGS TO RENDER INSTALLATION OF UTILITIES COMPLETE AND OPERATIONAL; AT NO EXTRA EXPENSE TO THE OWNER.
8. A 10 FOOT MINIMUM EDGE TO EDGE HORIZONTAL SEPARATION SHALL BE PROVIDED BETWEEN ALL WATER AND SANITARY SEWER LINES. A 12 INCH OUTSIDE TO OUTSIDE VERTICAL SEPARATION SHALL BE PROVIDED AT ALL WATER AND SANITARY SEWER CROSSINGS.
9. THE CONTRACTOR SHALL PROVIDE TEMPORARY SERVICES AS REQUIRED TO PROVIDE CONTINUOUS SERVICE TO THE JOBSITE. TEMPORARY SERVICES SHALL COMPLY WITH ALL FEDERAL, STATE, LOCAL AND UTILITY COMPANY STANDARDS. COORDINATE ALL TEMPORARY SERVICES WITH UTILITY COMPANY, OWNER AND AFFECTED BUSINESSES.
10. CONTRACTOR SHALL PROVIDE AND INSTALL ALL NECESSARY ELECTRICAL SERVICES IN CONDUIT TO SITE LIGHTING, COMPLYING WITH APPLICABLE CODES. COORDINATE WITH OWNER, SITE ELECTRICAL, ARCHITECTURAL AND CMP PLANS.
11. ALL SANITARY SERVICES AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE CURRENT STANDARDS AND SPECIFICATIONS OF THE CITY OF PORTLAND PUBLIC WORKS DEPARTMENT. ALL SANITARY SERVICES AND APPURTENANCES TO BE ABANDONED SHALL BE PROPERLY RECORDED WITH PORTLAND PUBLIC WORKS ENGINEERING DEPARTMENT. A DIGITAL VIDEOTAPE SHALL BE MADE OF SANITARY SEWER SYSTEMS TO BE UTILIZED PRIOR TO CONSTRUCTION; UPSTREAM PIPES INTENDED FOR ABANDONMENT SHALL BE INSPECTED TO VERIFY THAT THEY NO LONGER SERVE OTHER FACILITIES.

VRAP - CERTIFICATION OF COMPLETION CONDITIONS

1. THE FUTURE INSTALLATION OF GROUNDWATER EXTRACTION WELLS ON THE PROPERTY FOR ANY PURPOSE IS PROHIBITED WITHOUT PRIOR WRITTEN PERMISSION FROM THE DEPARTMENT.
2. IF SOILS ARE EXCAVATED ON THE PROPERTY THAT WILL NOT BE USED ON SITE DURING FUTURE WORK, THESE SOILS MUST BE CHARACTERIZED TO DETERMINE IF THEY CAN BE USED OFFSITE OR IF THEY NEED TO BE APPROPRIATELY DISPOSED.
3. PROPERTY USE SHALL REMAIN RESIDENTIAL AND COMMERCIAL UNLESS OTHERWISE APPROVED IN WRITING BY THE DEPARTMENT.
4. A SUB-SLAB VAPOR BARRIER MUST BE INSTALLED BENEATH ANY NEW STRUCTURES BUILT ON THE PROPERTY THAT ARE TO OCCUPIED BY HUMANS.
5. A COPY OF THIS CERTIFICATE SHALL BE RECORDED AT THE CUMBERLAND COUNTY REGISTRY OF DEEDS. A COPY OF THE RECORDED DOCUMENT MUST BE SUPPLIED TO THE DEPARTMENT.
6. A DECLARATION OF ENVIRONMENTAL COVENANT, AS DEFINED IN 38 M.R.S.A. § 3001 et seq., THAT IS CONSISTENT WITH THIS CERTIFICATE AND ACCEPTABLE TO THE DEPARTMENT MUST BE PREPARED AND RECORDED AT THE CUMBERLAND COUNTY REGISTRY OF DEEDS. A COPY OF THE RECORDED DOCUMENT MUST BE SUPPLIED TO THE DEPARTMENT.

GEOTECHNICAL RECOMMENDATIONS

THE FOLLOWING RECOMMENDATIONS ARE CONTAINED IN THE GEOTECHNICAL REPORT 24-1452 S PREPARED BY S.W. COLE, DATED NOVEMBER 8, 2024:

4.2 Site and Subgrade Preparation

We recommend that site preparation begin with the construction of an erosion control system to protect adjacent drainage ways and areas outside the construction limits. Surficial organics, roots and topsoil should be completely removed from areas of proposed fill and construction. As much vegetation and pavement as possible should remain outside the construction areas to lessen the potential for erosion and site disturbance.

As discussed, the site was previously developed and the borings encountered unsuitable layers of unsuitable uncontrolled fill, relic bay sediment, and soft silty clay. Therefore, we recommend the proposed building and carport structures be supported on steel H-Piles driven to end bearing on sound bedrock. We recommend at least 6-inches of Crushed Stone be provided beneath pile caps and grade beams to act as a casting bed and stable working surface. We recommend at least 12-inches of Crushed Stone be provided beneath floor slabs.

Slab-on-grade subgrades should be proof-rolled and densified. Areas that become soft or continue to yield should be removed and replaced with compacted Structural Fill. As discussed, we recommend lightweight fill, such as Foamed Glass Aggregate, be used to raise grades beneath the proposed retail units along India Street and Middle Street; alternatively, pile supported Structural Floor slabs with normal weight fill, and utilities hung from the structural slabs, may be considered.

Uncontrolled fills encountered beneath proposed paved areas should be proof-rolled and densified. Areas that become soft or continue to yield after densification should be removed and replaced with compacted Structural Fill. Additionally, we recommend installing woven geotextile fabric over pavement subgrades.

Beneath pipes and utility structures with soft trench bottoms, we recommend overexcavating with a smooth edged bucket and installing at least 1 foot of Underdrain Sand below customary bedding materials wrapped in geotextile filter fabric, such as Mirafi 180N. The depth of customary bedding materials for soft trench bottoms should be at least 12 inches beneath pipes and 24 inches beneath structures. Organics, rubble, and debris encountered at utility subgrade elevation should be over-excavated and replaced with compacted Underdrain Sand.

4.3 Excavation and Dewatering

Excavation work will generally encounter uncontrolled fills with rubble and debris, relic bay sediments, silty sand, silt, and clay soils. Care must be exercised during construction to limit disturbance of the bearing soils. Earthwork and grading activities should occur during drier, non-freezing weather of Spring, Summer and Fall. Final cuts to subgrade should be performed with a smooth-edged bucket to help reduce strength loss from soil disturbance.

Vibrations from construction should be controlled below threshold limits of 0.5 in/sec for structures, water supply wells and infrastructure within 500 feet of the project site. More restrictive vibration limits may be warranted in specific cases with sensitive equipment, historic structures or artifacts on-site or within close proximity.

The site soils include uncontrolled fill with ash and debris. We recommend planning include an environmental media management plan prepared by the project environmental consultant. Handling and disposal of soil and groundwater must meet applicable local, state, and federal regulations.

Sumping and pumping dewatering techniques should be adequate to control groundwater in excavations. Controlling the water levels to at least one foot below planned excavation depths will help stabilize subgrades during construction.

Excavations must be properly shored or sloped in accordance with OSHA Regulations to prevent sloughing and caving of the sidewalls during construction. Support of Excavation (SOE) such as braced soldier piles and lagging or interlocking sheetpiles will be required for construction of along Middle and India Streets. We recommend the contract documents require a support of excavation plan, prepared by a Professional Engineer licensed in the State of Maine, for review prior to construction. We recommend the SOE design submittal include a global stability analysis.

Care must be taken to preclude undermining adjacent structures, utilities and roadways. The design and planning of excavations, excavation support systems, and dewatering is the responsibility of the contractor.

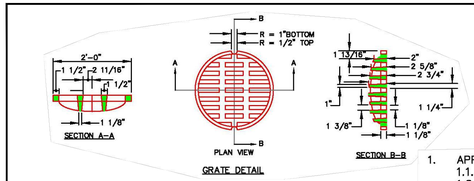
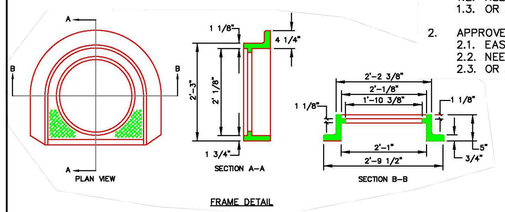
METHOD 2 – NEW CONSTRUCTION



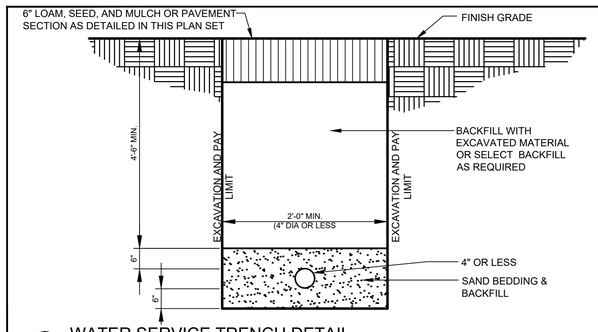
METHOD 1 – EXISTING PIPE INTO NEW STRUCTURE



(A) PLASTIC PIPE CONNECTION METHODS 1 & 2

N.T.S.

AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"



1. APPROVED CATCH BASIN FRAMES:
   1.1. EAST JORDAN = 7375Z
   1.2. NEENAH = R-3248
   1.3. OR APPROVED EQUAL
2. APPROVED CATCH BASIN GRATES
   2.1. EAST JORDAN = 2440M
   2.2. NEENAH = R-3248
   2.3. OR APPROVED EQUAL

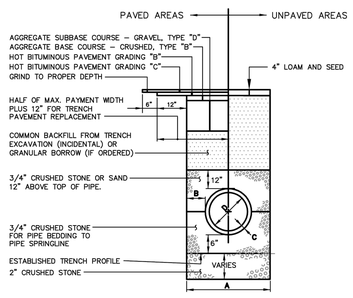
(D) CATCH BASIN FRAME AND GRATE

N.T.S.

AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"

(B) WATER SERVICE TRENCH DETAIL

N.T.S.

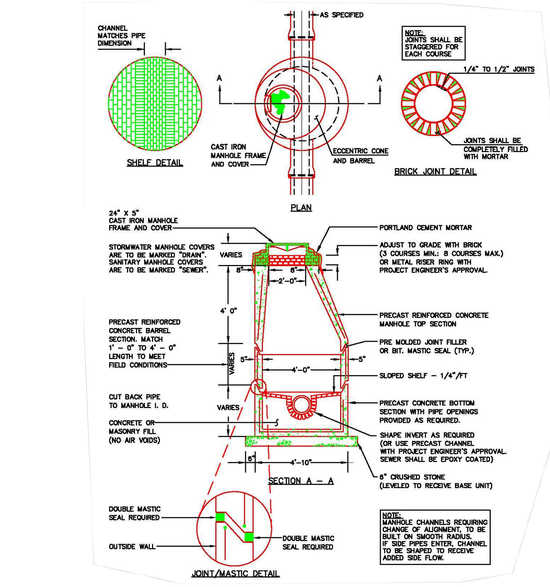


NOTES

1. ALTERNATIVE CONSTRUCTION METHODS OR PAYMENT METHODS SHALL BE APPROVED IN ADVANCE BY THE CITY.
2. IN PAVED AREAS, DEPTHS OF GRAVEL AND HOT MIX ASPHALT PAVEMENT SHALL MATCH THE GREATER OF EXISTING CONDITIONS OR THE REQUIREMENTS FOR THE CORRESPONDING STREET CLASSIFICATION.
3. DIMENSION **B** SHALL BE SUFFICIENT TO ALLOW CRUSHED STONE BEDDING TO BE PLACED AND COMPACTED UNDER THE HAUNCHES OF THE PIPE; BUT IN ALL CASES DIMENSION **B** SHALL BE AT LEAST 9".
4. DIMENSION **A** IS THE MAXIMUM WIDTH ALLOWED FOR CALCULATING PAY QUANTITIES UNDER GRANULAR BORROW, CRUSHED STONE, STRUCTURAL EARTH EXCAVATION, AND STRUCTURAL ROCK EXCAVATION. DIMENSION **A** SHALL BE BASED ON PIPE DIAMETER **D**, AS SET FORTH IN THE FOLLOWING TABLE.

PIPE DIAMETER, **D** (INCHES)	MAX. TRENCH WIDTH, **A** (FEET)
4	4.0
6	4.0
8	4.0
10	4.0
12	5.0
15	5.0
18	5.0
21	5.0
24	6.0
27	6.0
30	6.0
36	6.0
42	7.0
48	7.0

NOTES:
DEPTH OF BITUMINOUS PAVEMENT AND AGGREGATE COURSES SHALL BE DETERMINED BY STREET CLASSIFICATION.

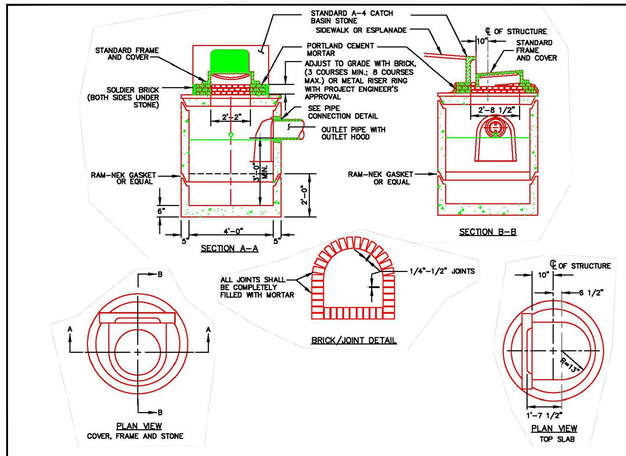


ANY ALTERNATE TRENCHING OR PAYMENT METHODS SHALL BE APPROVED IN ADVANCE BY THE CITY OF PORTLAND, DEPARTMENT OF PUBLIC SERVICES..

(D) TYPICAL PIPE TRENCH INSTALLATION AND NOTES

N.T.S.

AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"

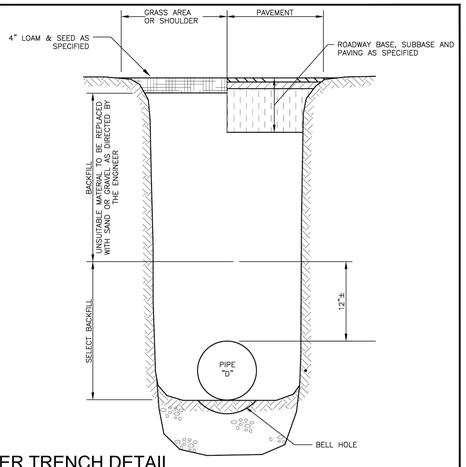


(G) PRECAST CONCRETE MANHOLE

N.T.S.

AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"

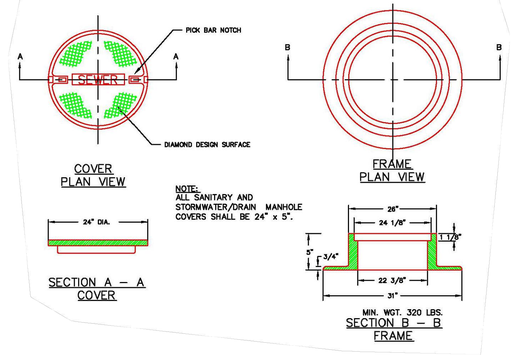
1. ALL CONCRETE SHALL HAVE A MINIMUM ULTIMATE COMPRESSIVE STRENGTH OF 4000 lbs. PER SQ. INCH AT THE END OF 28 DAYS, UNLESS OTHERWISE NOTED.
2. MANHOLES MAY BE CONSTRUCTED OF PRECAST REINFORCED CONCRETE, OR CAST IN PLACE.
3. PRECAST REINFORCED CONE BARREL MANUFACTURED PER ASTM SPEC. C-478.
4. ALL PIPES ENTERING MANHOLES AND CATCH BASINS SHALL HAVE FLEXIBLE PIPE CONNECTIONS WITH STAINLESS STEEL BANDS. FILL ANY ANNUAL SPACE WITH NON SHRINK GROUT.
5. ALL STORM AND SEWER MANHOLE COVERS SHALL BE SOLID
6. ALL SANITARY MANHOLE COVERS SHALL HAVE "SEWER" CAST INTO THE COVER. ALL STORMWATER/DRAIN MANHOLE COVERS SHALL HAVE "DRAIN" CAST INTO THE COVER.
7. SEWER BRICK SHALL CONFORM TO ASTM SPEC. DESIGNATE ON C-32-63, GRADE MA AND SA.
8. INVERTS SHALL BE BUILT TO THE HEIGHT OF THE FOLLOWING AS DETERMINED BY THE LARGEST PIPE SIZE.
   8.1. FOR PIPE SIZES 4"–12" INVERTS SHALL GO TO THE TOP OF THE PIPE.
   8.2. FOR PIPE SIZES 15"–36" INVERTS SHALL GO TO THE SPRING LINE.
   8.3. FOR PIPE SIZES 42"–60" INVERTS SHALL GO TO THE 1/3 OF PIPE SIZE
9. ALL SANITARY MANHOLES SHALL HAVE A WATERPROOFING COATING APPLIED TO THE EXTERIOR SURFACE.
10. CASTINGS SHALL CONFORM TO ASTM DESIGNATION A48–CLASS 35.
11. EXISTING MANHOLES, CATCH BASINS, FRAMES, AND COVERS SHALL BE SALVAGED BY THE CONTRACTOR, AND SHALL REMAIN THE PROPERTY OF THE CITY OF PORTLAND.
12. ALL CATCH BASIN OUTLETS SHALL BE INSTALLED WITH A HOOD / CASCO TRAP. SEE FIGURE II-09.
13. ALL MANHOLES AND CATCH BASINS REQUIRE BUOYANCY CALCULATIONS AND THE STRUCTURES SHALL BE MODIFIED AS NECESSARY BASED ON THOSE CALCULATIONS.



GENERAL NOTES FOR MANHOLES AND CATCH BASINS

(C) PRECAST CONCRETE CATCH BASIN - TYPE 'E'

N.T.S.



AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"

(F) TYPICAL WATER TRENCH DETAIL

N.T.S.

NOTES:
1. ALL SANITARY MANHOLE COVERS SHALL HAVE "SEWER" CAST INTO THE COVER. ALL STORMWATER/DRAIN MANHOLE COVERS SHALL HAVE "DRAIN" CAST INTO THE COVER.
2. APPROVED MANHOLE FRAMES:
   2.1. EAST JORDAN = 1690Z
   2.2. NEENAH = R-1496
   2.3. OR APPROVED EQUAL
3. APPROVED MANHOLE COVERS
   3.1. EAST JORDAN = 2160A
   3.2. NEENAH = R-1496
   3.3. OR APPROVED EQUAL

(H) CAST IRON MANHOLE COVER AND FRAME

(F) PERPENDICULAR ADA RAMP FOR SIDEWALK GREATER THAN 6.5'
N.T.S.

AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"

Product Dero Bike Hitch
As manufactured by Dero Bike Racks

Capacity 2 Bikes

Materials Centerbeam: 2" schedule 40 pipe (2.375" OD)
Ring: 1.5" OD 11 gauge tube

Finishes As after fabrication hot dipped galvanized finish is standard. 2507GIC powder coat colors, a thermoplastic coating and a stainless steel option are also available.

Our powder coat finish assures a high level of adhesion and durability by following these steps:
1. Sandblast
2. Iron phosphate pretreatment
3. Epoxy primer electrostatically applied
4. Final thick TGIC polyester powder coat

Stainless Steel: 304 grade stainless steel material finished in either a high polished shine or a satin finish.

A rubbery PVC Dip is also available

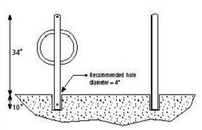
Installation Methods **In-ground mount** is embedded into concrete base. **Surface mount** has one 5" x 6" foot which is anchored to the ground with four anchors (included with rack).

Space Use and Setbacks

Wall Setbacks:
For racks set parallel to a wall:
Minimum: 12"
Recommended: 24"

For racks set perpendicular to a wall:
Minimum" 35" (centerline measurement)
Recommended: 38" (54" if table is needed between bike and wall)

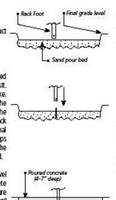
Distance Between Racks:
Minimum: 24"
Recommended: 38"



Street Setbacks:
Minimum: 36"

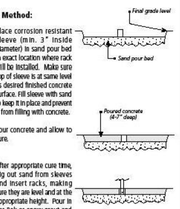
Tools needed for installation

Level	Hole coring machine with 4" bit
Cement mixing tub	Access to water hose
Shovel	Materials to build brace (see "install Tip" at bottom of page)
Trowel	



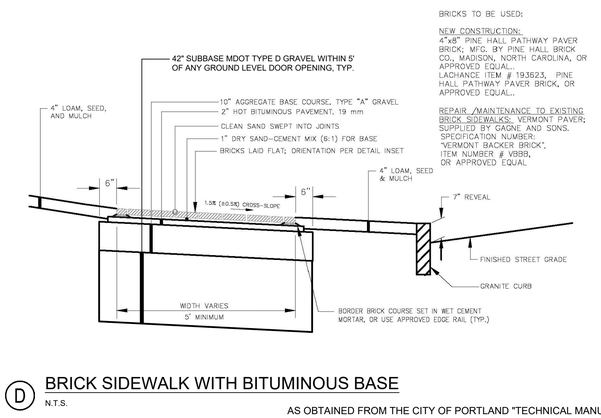
Installing into Existing Sidewalk

Core holes no less than 3" diameter (4" recommended) and no less than 6" deep into sidewalk. Place Bike Hitch into hole making sure the rack is level. Fill hole with Por-Rok or epoxy grout. 34-36" of the bike Hitch should remain above the surface. Make sure Hitch is level and held in place until the grout has completely set.



Installing into a New Sidewalk:

Stake Method:
1. Use rack to measure exact location in pour bed.
2. Pound stake into pour bed where end of rack will sit. Slide rack and onto stake. You may need to dig the end of the rack into the sand to make sure the rack sits at least 25" above final grade level. The stake keeps the rack straight while the concrete is being poured.
3. Make sure the rack is level and true. Pour concrete around the rack. Make sure the rack is not touched until the concrete has completely set.



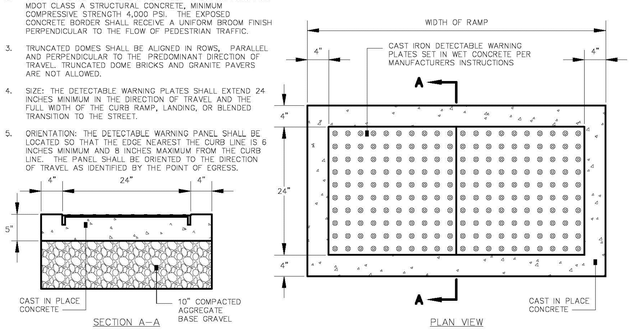
Sleeve Method:
1. Place corrosion resistant sleeve (min. 3" inside diameter) in sand pour bed in exact location where rack will be installed. Make sure top of sleeve is at same level as desired finished concrete surface. Fill sleeve with sand to keep it in place and prevent it from filling with concrete.
2. Pour concrete and allow to cure.
3. After appropriate cure time, dig out sand from sleeves and insert racks, making sure they are level and at the appropriate height. Pour in Por-Rok or epoxy grout and allow to set.

INSTALL TIP
An easy way to brace the Bike Hitch while the grout sets is to bolt two 1x4" boards together at one end and clamp them onto the legs of the bike Hitch like a clothes pin.

DERO BIKE RACKS www.dero.com 1-800-248-4015

(B) CITY STANDARD DERO BIKE HITCH DETAILS
N.T.S.

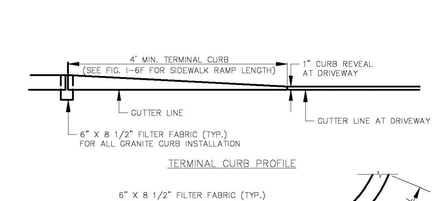
BRICKS TO BE USED:



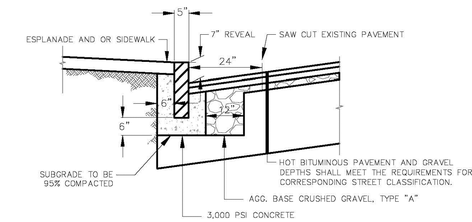
NEW CONSTRUCTION:
4"x8" PINE HALL PATHWAY PAVER BRICK; MFG. BY PINE HALL BRICK CO., MADISON, NORTH CAROLINA, OR APPROVED EQUAL.
LACHANCE ITEM # 193523, PINE HALL PATHWAY PAVER BRICK, OR APPROVED EQUAL.

REPAIR /MAINTENANCE TO EXISTING BRICK SIDEWALKS: VERMONT PAVER; SUPPLIED BY GAGNE AND SONS. SPECIFICATION NUMBER: "VERMONT BACKER BRICK", ITEM NUMBER # V888, OR APPROVED EQUAL

(D) BRICK SIDEWALK WITH BITUMINOUS BASE
N.T.S.



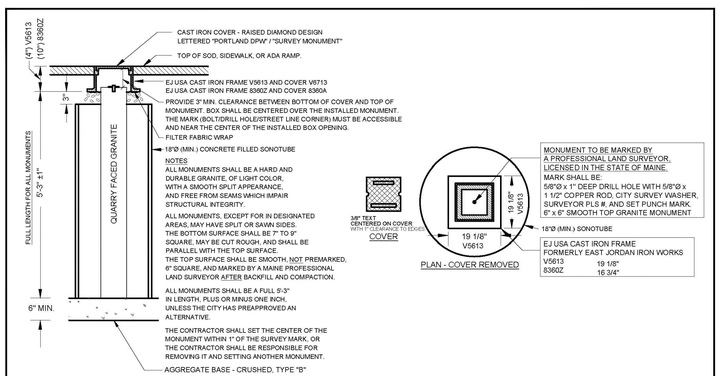
AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"



NOTES:
1. ALL DETECTABLE WARNING PLATES SHALL BE UNCOATED CAST IRON. FOLLOW MANUFACTURER'S INSTRUCTIONS FOR INSTALLATION.
2. CAST IN PLACE CONCRETE SHALL MEET SPECIFICATIONS FOR MDOT CLASS A STRUCTURAL CONCRETE, MINIMUM COMPRESSIVE STRENGTH 4,000 PSI. THE EXPOSED CONCRETE BORDER SHALL RECEIVE A UNIFORM BROOM FINISH PERPENDICULAR TO THE FLOW OF PEDESTRIAN TRAFFIC.
3. TRUNCATED DOMES SHALL BE ALIGNED IN ROWS, PARALLEL AND PERPENDICULAR TO THE PREDOMINANT DIRECTION OF TRAVEL. TRUNCATED DOME BRICKS AND GRANITE PAVERS ARE NOT ALLOWED.
4. SIZE: THE DETECTABLE WARNING PLATES SHALL EXTEND 24 INCHES MINIMUM IN THE DIRECTION OF TRAVEL AND THE FULL WIDTH OF THE CURB RAMP, LANDING, OR BLENDED TRANSITION TO THE STREET.
5. ORIENTATION: THE DETECTABLE WARNING PANEL SHALL BE LOCATED SO THAT THE EDGE NEAREST THE CURB LINE IS 6 INCHES MINIMUM AND 8 INCHES MAXIMUM FROM THE CURB LINE. THE PANEL SHALL BE ORIENTED TO THE DIRECTION OF TRAVEL AS IDENTIFIED BY THE POINT OF EGRESS.

(E) SIDEWALK RAMP DETECTABLE WARNING PANEL
N.T.S.

AS OBTAINED FROM THE CITY OF PORTLAND "TECHNICAL MANUAL"



NOTES:
1. INDIVIDUAL PIECES OF CURB SHORTER THAN 4 L.F. ARE NOT ALLOWED, WITH THE EXCEPTION OF RADIAL CURB.
2. THE MINIMUM HEIGHT OF THE CONCRETE BACKING SHALL BE 10-INCHES OR TO THE BOTTOM OF THE HOT MIX ASPHALT PAVEMENT, WHICHEVER IS GREATER, MEASURED FROM THE BOTTOM OF CURB.
3. CURBING SHALL BE SET IN A 6-INCH BED OF POURED IN PLACE 3,000 PSI CONCRETE MIX.
4. WOODEN SHIMS MAY BE USED TO SET CURB.

(F) 12" DIA. LIGHT POLE BASE

N.T.S.

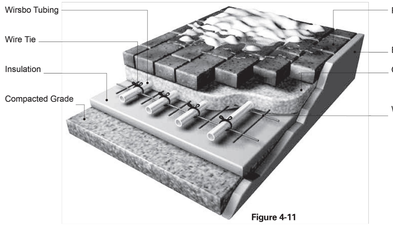

Figure 4-11

Pavers Over a Compactable Soil/Sand Bed

Application

This method is for designs with light vertical load requirements. With insulation, the heated area is isolated from high movement of energy from the system to the surrounding frozen soil. Response time is fairly quick and even faster if the system is idled.

Where Used

This installation is applicable to the following applications.

- Sidewalks
- Driveways
- Low-density roads

How to Install

There are two ways to install the tubing over the high-density insulation. As shown in **Figure 4-11**, secure the tubing to the wire mesh or rebar which has been placed over the high-density insulation board. In the alternative method, secure the tubing to the high-density insulation using Wirsbo plastic staples with the manual stapler.

Install vertical insulation along the entire edge down to the depth of the horizontal insulation. The insulation creates a thermal break between the heated area and the frozen ground.

After installing the tubing, cover with a compactable soil/sand bed (typically 2 to 3 inches) prior to applying pavers or bricks.

What to Look For

- Make sure the base material is properly compacted as specified by the project engineer.
- Verify whether a high water table or moist soil conditions exist within 8 to 10 vertical feet of the snow and ice melting system. If found, isolate the system from the moisture.
- Using approved insulation with vertical compressive strength is critical. Consult with the insulation manufacturer or project engineer for recommendations.
- Supply water temperatures for this application should be no higher than 150°F.

Control Strategy

Use the semi- or fully automatic strategy for this installation method.

NOTE:

SNOWMELT SYSTEM INSTALLATION TO BE COORDINATED WITH MEP PLANS AND CITY OF PORTLAND PUBLIC WORKS (WHEN SYSTEM IS IN THE R.O.W.).

1. CONTRACTOR SHALL BEGIN MAINTENANCE IMMEDIATELY AFTER PLANTING AND SHALL CONTINUE UNTIL FINAL ACCEPTANCE. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF WATERING AND MAINTENANCE.
2. CONTRACTOR SHALL SUPPLY PLANTS IN QUANTITIES SUFFICIENT TO COMPLETE WORK SHOWN ON THE PLAN. ANY DISCREPANCY BETWEEN THE QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED ON THE PLAN SHALL NOT ENTITLE THE CONTRACTOR TO ADDITIONAL RENUMERATION. ANY DISCREPANCIES SHALL BE CLARIFIED WITH THE LANDSCAPE ARCHITECT PRIOR TO ORDERING PLANT MATERIAL.
3. ALL MATERIALS SHALL CONFORM TO SPECIFICATIONS OF THE AMERICAN STANDARDS FOR NURSERY STOCK (LATEST EDITION) AS SET FORTH BY THE AMERICAN ASSOCIATION OF NURSERYMEN.
4. ALL PLANTS SHALL BEAR THE SAME RELATIONSHIP TO FINISH GRADE AS THE ORIGINAL GRADES BEFORE DIGGING.
5. THE LANDSCAPE CONTRACTOR SHALL GUARANTEE ALL PLANT MATERIALS FOR ONE (1) FULL YEAR FROM DATE OF SUBSTANTIAL COMPLETION.
6. ALL PLANT MATERIALS ARE SUBJECT TO THE APPROVAL OF THE LANDSCAPE ARCHITECT AT THE NURSERY AND AT THE SITE.
7. ALL PLANT BEDS SHALL MEET MINIMUM TOPSOIL REQUIREMENTS (SEE SPECIFICATIONS) AND NOTE 18.
8. NO PLANT MATERIAL SHALL BE INSTALLED UNTIL GRUBBING, BED PREPARATION, AND FINISH GRADING HAS BEEN COMPLETED IN THE IMMEDIATE AREA.
9. ALL PLANTS BEDS AND TREE WELLS SHALL HAVE A MINIMUM OF 3" OF UNIFORMLY DISTRIBUTED, DARK, SHREDDED BARK MULCH.
10. CONTRACTOR SHALL SUBMIT SOIL SAMPLE AND TEST OF TOPSOIL TO LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. SOIL ADMIXTURE SHALL BE ADDED TO EXISTING SOIL (BY CONTRACTOR) IF DEEMED NECESSARY BY SOIL TEST RESULTS.
11. ROUGH GRADING AND BED PREPARATION SHALL BE APPROVED BY LANDSCAPE ARCHITECT PRIOR TO PLANT INSTALLATION. CONTRACTOR SHALL NOTIFY LANDSCAPE ARCHITECT 48 HOURS PRIOR TO REQUIRED SITE VISIT.
12. ALL PLANTS SHALL BE BALLED AND WRAPPED OR CONTAINER GROWN AS SPECIFIED. ALL ROOT WRAPPING AND CONTAINER MATERIAL MADE OF SYNTHETICS OR PLASTICS SHALL BE REMOVED AT THE TIME OF PLANTING.
13. ALL BROAD LEAF EVERGREEN PLANTS SHALL BE SPRAYED WITH AN ANTI-DESSICANT AT THE BEGINNING OF THEIR FIRST WINTER.
14. ALL PLANTS SHALL BE INSTALLED AS PER DETAILS AND THE CONTRACT SPECIFICATIONS. THE LANDSCAPE CONTRACTOR SHALL REFER TO THE CONTRACT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
15. CONTRACTOR SHALL STAKE TREES IF DEEMED NECESSARY BY THE LANDSCAPE ARCHITECT.
16. THE LANDSCAPE CONTRACTOR SHALL PROVIDE PREPARED SOIL PLANTING MIX AS PER THE CONTRACT SPECIFICATIONS.
17. THE LANDSCAPE CONTRACTOR SHALL REFER TO THE PLANT LIST AND PLANTING SPECIFICATIONS FOR SEASONAL REQUIREMENTS AND OTHER RESTRICTIONS RELATED TO THE TIME AND SEASON OF PLANTING.
18. PLANTING SOIL MIX: 1 PART COMPOST, 8 PARTS TOPSOIL, 3 PARTS HUMUS.

    TOPSOIL: FERTILE, FRIABLE, NATURAL TOPSOIL OF LOAMY CHARACTER, WITHOUT ADMIXTURE OF SUBSOIL MATERIAL, FREE FROM CLAY, LUMPS, COARSE SANDS, STONES, PLANTS, ROOTS, STICKS, AND OTHER FOREIGN MATERIALS GREATER THAN 1" IN ANY DIMENSION, PH RANGE 5.0-7.0 , AND SHALL CONTAIN NOT LESS THAN 6% ORGANIC MATTER BY WEIGHT. SANDY LOAM OR LOAM SOIL AS DEFINED BY THE USDA SOIL CONSERVATION SERVICE, AND HAVE THE FOLLOWING MECHANICAL ANALYSIS:

TEXTURAL CLASS	% OF TOTAL WEIGHT	AVERAGE %
SAND (0.05- 2.0 MM)	45 TO 75%	60%
SILT (0.002- 0.05 MM)	15 TO 35%	25%
CLAY (< 0.002 MM)	5 TO 25%	15%

N.T.S.

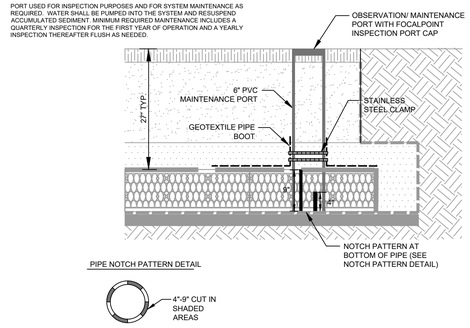
FOCALPOINT HP PERFORMANCE SPECIFICATION:

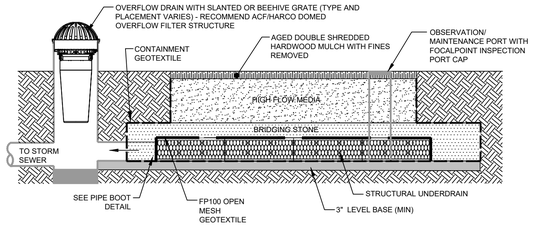
HIGH PERFORMANCE MEDIA

HIGH PERFORMANCE MEDIA MUST MEET A MINIMUM OF 100'PER HOUR INFILTRATION RATE.



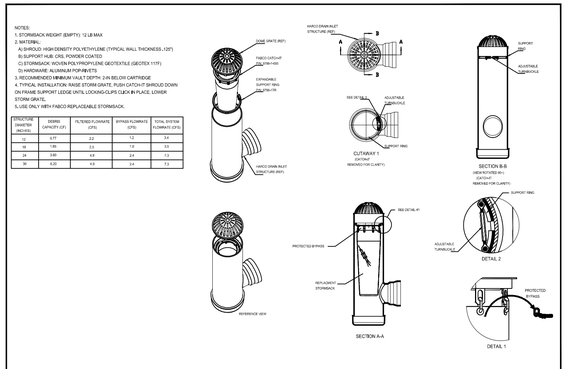
HIGH PERFORMANCE STRUCTURAL UNDERDRAIN

MUST HAVE A MINIMUM OF 19 SQUARE INCHES OF ORIFICE OPENING PER SQUARE FOOT.
MUST MEET H20 LOADING REQUIREMENTS.
MUST BE MODULAR IN NATURE AND ASSEMBLED ON SITE.
MUST HAVE MINIMUM 90% INTERIOR VOID SPACE.



Ⓓ FOCALPOINT DETAILED CROSS SECTION
N.T.S.

OBSERVATION/ MAINTENANCE PORT



PORT USED FOR INSPECTION PURPOSES AND FOR SYSTEM MAINTENANCE AS REQUIRED. WATER SHALL BE PUMPED INTO THE SYSTEM AND RESUSPEND ACCUMULATED SEDIMENT. MINIMUM REQUIRED MAINTENANCE INCLUDES A QUARTERLY INSPECTION FOR THE FIRST YEAR OF OPERATION AND A YEARLY INSPECTION THEREAFTER FLUSH AS NEEDED.

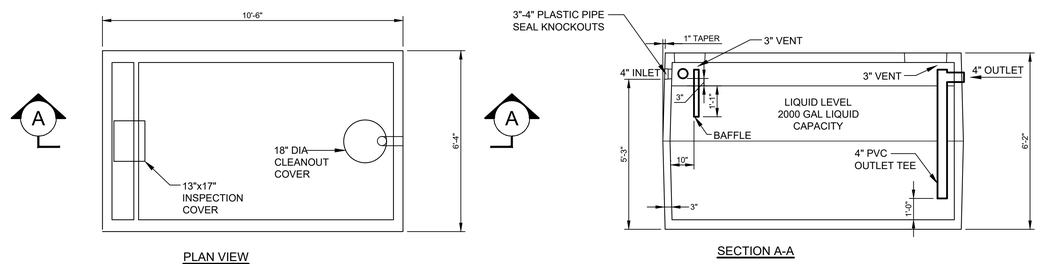
CONDUIT TYPE

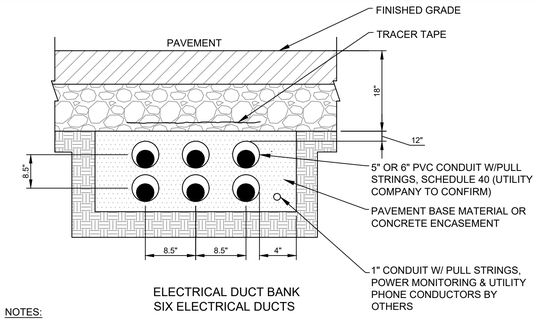
SERVICE	CONDUIT SIZE	GRASS AREAS	PAVED AREAS	UTILITY	REMARKS
A	2-6"	SCHEDULE 40 PVC ELECTRICAL GRADE	RIGID GALVANIZED STEEL, ASTM A120*	POWER	SEE NOTE
B	2-4"	SCHEDULE 40 PVC	RIGID GALVANIZED STEEL, ASTM A120*	TELEPHONE	SEE NOTE
C	2-4"	SCHEDULE 40 PVC	RIGID GALVANIZED STEEL, ASTM A120*	COMMUNICATION	SEE NOTE
D	2-4"	SCHEDULE 40 PVC	RIGID GALVANIZED STEEL, ASTM A120*	SPARES	SEE NOTE

*AS REQUIRED BY CITY /UTILITY



NOTES:
1. ONE CONDUIT CAPPED FOR SPARE, PROVIDE GALVANIZED STEEL LONG SWEEP AT RISER POLE AND EXTEND GALVANIZED CONDUIT TO 10' ABOVE GRADE AT POLE WITH STAND-OFF BRACKETS, COORDINATE WITH ELECTRICAL SITE PLANS BY E.S. BOULOS.
2. IN CITY RIGHT OF WAY, CONDUITS TO HAVE 36" MIN. COVER AND BE ENCASED WITH MIN. 3" CONCRETE ON ALL SIDES.
3. CONDUIT DUCT BANKS SUBJECT TO COORDINATION WITH ALL UTILITY PROVIDERS FOR NUMBER, PIPE SIZE & TYPE AND TRENCHING REQUIREMENTS. THE UTILITY REQUIREMENTS SHALL BE SATISFIED AT NO ADDITIONAL EXPENSE TO THE OWNER.

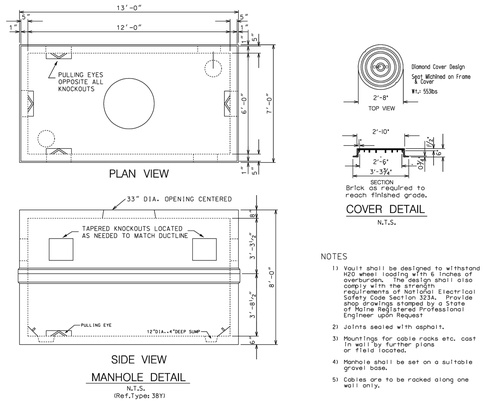
(A) UTILITY TRENCH - PRIMARY ELEC., TEL. & COMM.
N.T.S.



GENERAL NOTES
1. CONCRETE MINIMUM COMPRESSIVE STRENGTH 5000 PSI @ 28 DAYS WITH STEEL REINFORCEMENT
2. OPENINGS SIZED FOR 4" & 6" CONDUITS.
3. MEETS ALL CENTRAL MAINE POWER CO.SPECIFICATIONS.
4. SUITABLE FOR PRIMARY CABLE INSTALLATIONS.
5. IF INSTALLED IN A PAVED AREA, ORDER PRECAST SLAB FOR USE UNDER HANDHOLE FOR H-20 LOADING.
6. ORDER 3 PIECE ETHERIDGE FOUNDRY "TYPE B" CASTING. MINIMUM ONE COURSE OF BRICK TO GRADE.

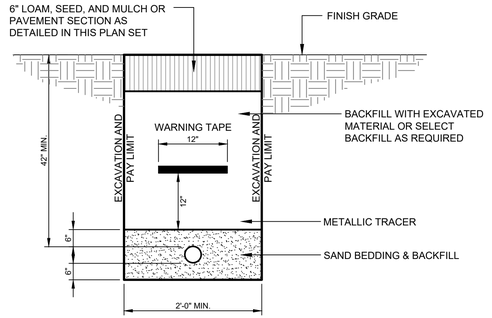
(D) SPLICE BOX DETAIL
N.T.S.

NOTES:
1. CONCRETE: 4000 PSI AFTER 28 DAYS
2. REINFORCING: 6x6/10x10 W.W.M. & FIBERS
3. HEAVY DUTY SEPTIC TANK TOPS REINFORCED WITH 5/8" REBAR @ 12" O.C.E.W.
4. KEYED JOINT SEALED WITH BUTYL RUBBER.
5. EXCAVATION MUST BE AT LEAST 12" WIDER & LONGER THAN TANK SIZE
6. TOTAL STRUCTURE WEIGHT =12,500 LBS
7. INSTALL APPROPRIATE CONCRETE RISER SECTIONS OVER INSPECTION & CLEANOUT OPENINGS TO BRING COVERS TO GRADE.



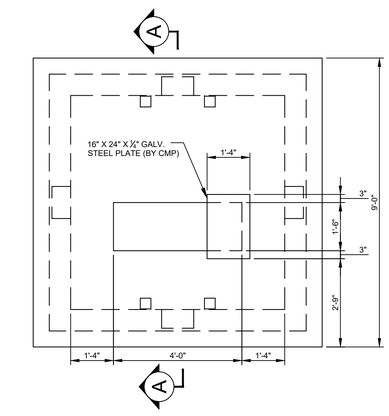
(F) GREASE TRAP DETAIL
N.T.S.

ELECTRICAL DUCT BANK
SIX ELECTRICAL DUCTS



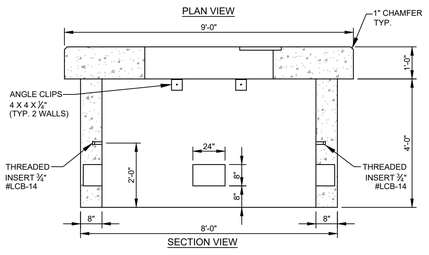
NOTES:
1. CONDUIT BANK WILL EXTEND 5' BEYOND FOUNDATION WALL. CAP ALL CONDUITS.
2. THE NUMBER AND SIZE OF CONDUITS FOR POWER, COMMUNICATIONS AND CABLE SHALL BE COORDINATED WITH THE UTILITY PROVIDERS.

(B) SECONDARY UNDERGROUND ELECTRIC CONDUIT BANK DETAIL
N.T.S.



NOTES
1) Vault shall be designed to withstand H20 wheel loading with 6 inches of overburden. The design shall also comply with the strength requirements of National Electrical Safety Code Section 323A. Provide shop drawings stamped by a State of Maine Registered Professional Engineer upon Request
2) Joints sealed with asphalt.
3) Mountings for cable racks etc. cast in wall by further plans or field located.
4) Manhole shall be set on a suitable gravel base.
5) Cables are to be racked along one wall only.

(E) PRECAST CONCRETE 38Y MANHOLE
N.T.S.



NOTE:
GAS LINE TO BE INSTALLED BY OTHERS. SITE CONTRACTOR IS RESPONSIBLE FOR EXCAVATION AND BACKFILL OF THE GAS LINE AND PLACEMENT OF THE WARNING TAPES AND TRACER.

(G) GAS SERVICE TRENCH SECTION
N.T.S.

(C) 9'-0" TRANSFORMER PAD
N.T.S.

SUBJECT TO CMP REQUIREMENTS

NOTES:
1. CONCRETE MINIMUM COMPRESSIVE STRENGTH 4,000 PSI @ 28 DAYS WITH STEEL REINFORCEMENT.
2. AS PER CENTRAL MAINE POWER COMPANY SPECIFICATIONS.
3. ONE 8" x 24" KNOCKOUT PROVIDED EACH WALL.
4. FOR 750 - 5000 KVA THREE PHASE TRANSFORMER.
5. FINISH GRADE SHALL BE GRADED TO ALLOW SURFACE WATER TO FLOW AWAY FROM THE PAD.

NOTE: THIS PLAN SET IS ISSUED FOR PERMITTING PURPOSES & SHALL NOT BE USED FOR CONSTRUCTION.

PROPOSED ALONG MIDDLE STREET AND ADJACENT TO THE MID BLOCK PERMABILITY PEDESTRIAN THRU-WAY ALONG FORE STREET IS TO PROVIDE A COMBINATION OF HARDSCAPE AND LANDSCAPE ELEMENTS TO CREATE SMALL PARK LIKE SETTINGS FOR RELAXATION AND SOCIALIZATION ALONG THESE PUBLIC ACCESS STREETS AS ASSETS FOR THE COMMUNITY. POCKET PARK ELEMENTS SHALL INCLUDE A COMBINATION OF LANDSCAPE AND HARDSCAPE WITH BENCHES, RAISED FLOWER BEDS, PLANTINGS, AND OTHER NATURAL ELEMENTS. IMAGRY SHOWN FOR INFORMATION ONLY. A LANDSCAPE ARHITECT WOULD BE RETAINED TO ASSIST IN THE DESIGN OF THESE SMALL COMMUNITY SPACES.

1584 Forest Avenue
Major Site Plan Application
PL-003161-2024
Acre Properties, Applicant

Submitted to:	Portland Planning Board	**Prepared By:**	Eric Freeman
Public Hearing Date:	July 8, 2025	**Date:**	July 2, 2025

Figure 1: Perspective Rendering

I. INTRODUCTION

Gorrill Palmer Engineering, on behalf of Acre Properties, has submitted a Major Site Plan application to facilitate the construction of two, three-story multi-family buildings, each containing 25 dwelling units, along with 50 on-site parking spaces. The proposed project is located at 1584 Forest Avenue in the RN-1 Residential Neighborhood zone, the B-1 Neighborhood Business zone, and the RN-5 Residential Neighborhood zone.

This application is being referred to the Planning Board for compliance with the City of Portland's Land Use Code Site Plan Standards, Section 13.6. Additionally, this application is required to meet the City of Portland's inclusionary zoning requirements outlined in Section 17.2 of the City's Land Use Code.

The Planning and Urban Development Department mailed 138 notices advertising this meeting to property owners within 500 feet of the site. A legal advertisement ran in the June 12th and June 13th editions of the

Portland Press Herald. At the June 24 Planning Board meeting, the Board voted to table the public hearing until July 8, 2025.

Applicant: Acre Properties
Applicant Representatives: Gorrill Palmer Engineering

II. REQUIRED REVIEWS

Review	*Applicable Standards*
Site Plan	Section 13.6
Inclusionary Zoning	Section 17.2
Multifamily Design Review Standards	Section 9.1 City of Portland Design Manual (I)

Project Data	
Existing Zoning	RN-5; RN-1; B-1
Property Size	66,560 SF
Existing Use	Undeveloped area. Grass and wooded area
Proposed Development Program	Two three-story, 25-unit multifamily buildings with 50 parking spaces and site landscaping.

III. PLANNING BOARD WORKSHOPS

The Planning Board has held two workshops on this application, with the first having been held on April 8, 2025, and the second held on June 10, 2025. Written and verbal in-person public comments were taken at each workshop, all of which were open to the public. The following section contains a synopsis of the two Planning Board workshops, along with an overview of the internal coordination that has occurred since the June 10th workshop.

A. April 8th Workshop

During the first workshop, the Board requested that the City and the applicant explore shifting the vehicular entrance to the proposed development from Belfort Street to the Talbot School driveway. This recommendation was made in order to redirect vehicle traffic generated by the proposed development to the signalized intersection where the school driveway meets Forest Avenue. Additionally, the Board raised questions regarding the ability of the applicant to consider the property's Forest Avenue frontage as the frontage for the property, given the existence of an easement held by Moran's Market which enables the market to use this portion of the 1584 Forest Avenue property for parking or potentially even a future structure. The Board also requested that the proposed private walkway to Forest Avenue be extended to the street and proposed bus shelter, and that the site's grading and stormwater management plan be reevaluated to confirm that the post-development drainage plan would not increase flow rates onto adjacent properties.

A video recording of and materials for the April 8, 2025 Planning Board workshop are available at the following link: https://portlandme.portal.civicclerk.com/event/7569/files/agenda/16058

B. June 10th Workshop

At the June 10, 2025 meeting, staff presented responses to the concerns and questions raised by the Board during its April 8th meeting, and presented the applicant's proposed traffic mitigation plan. Staff confirmed that vehicular access across the Maine Land and Water Conservation Fund (LWCF) easement to the school and community center driveway would be very difficult to pursue, given the complex nature of amending an LWCF easement, and noted that the applicant planned to proceed with their Belfort Street connection. Staff, in coordination with the City's Corporation Counsel, also confirmed that the easement held by Moran's Market did not, from a legal standpoint, impact the applicant's ability to consider Forest Avenue as the property's legal frontage, given that the language within the easement grants Acre Properties access through the frontage in perpetuity.

In terms of traffic mitigation, staff presented the applicant's planned approach, which included the extension of a private walkway between the proposed residential buildings and the Forest Avenue sidewalk, which would connect to a newly proposed public transit stop and covered shelter. The revised plan also showed the closure of an existing curb cut on the Moran's Market property along the north side of Belfort Street, a prohibition on on-street parking along the north side of Belfort Street, the provision of a left-turn lane on Forest Avenue at the intersection of Forest Avenue and Belfort Street, and the redevelopment of a crosswalk across Belfort Street at the intersection of Belfort Street and Forest Avenue.

During the Board's discussion on June 10th, the Board continued to push for additional on-site and off-site improvements to help better integrate the proposed project into the neighborhood, including the provision of a sidewalk from the project site out to Belfort Street; improvements to the crosswalk across Forest Avenue located just east of Belfort Street, and confirmation that the proposed stormwater management infrastructure would function as stated and not adversely impact abutters. The Board also asked that the City's third-party traffic engineer provide a finding related to the applicant's February 25th traffic study, and a determination as to whether the study was acceptable based upon the scope of development and anticipated impacts. Lastly, the Board requested that City staff confirm with Corporation Counsel that the financial capacity letter provided by the applicant met the City's standard.

A video recording of and materials for the April 8, 2025 Planning Board workshop are available at the following link: https://portlandme.portal.civicclerk.com/event/7573/files/agenda/16374

A. Coordination Following June 10th Workshop

Following the June 10th workshop, staff met with the applicant to discuss potential revisions, requesting that the applicant; provide a walkway within their proposed driveway connecting to the public sidewalk on Belfort Street; provide a direct pedestrian connection between the project site and Talbot School if pedestrian access were determined to be acceptable under the LCFW easement held by the State; and

relocate the placement of the proposed stormwater management infrastructure to reduce the likelihood of adverse impacts to abutters.

Staff also met with the City's third-party traffic engineer and the City's transportation systems engineer from the Department of Public Works (DPW) to finalize the City's recommendation for off-site traffic mitigation. The City recommended that the applicant augment their proposed traffic mitigation plan, and relocate the existing crosswalk across Forest Avenue to the west side of the Forest Avenue and Belfort Street intersection. The City also recommended that the applicant develop a center refuge island for pedestrians with pedestrian crossing signals, and close the westerly curb cut to the Riverton Station Pizza, Bar and Grill property, located at 1569 Forest Avenue, to accommodate this new crosswalk.

Additionally, Planning staff met with the City's third-party stormwater engineer and staff from the Water Resources Division at the Department of Public Works (DPW), to discuss the applicant's proposed alteration to the development's stormwater management plan. City staff were supportive of the change, noting that the drip strip proposed at the southwestern corner of the property better aligns with existing drainage patterns and that an existing swale is being utilized to direct stormwater towards existing stormwater infrastructure on City property at the Talbot School.

This coordination is discussed in greater detail below under the relevant sections of this report.

IV. EXISTING CONDITIONS AND SURROUNDING AREA

The subject property is located near the intersection of Forest Avenue and Belfort Street in the Riverton neighborhood. The irregular shaped site is bounded to the north by a multifamily home owned by the applicant, to the south and west by single family homes along Belfort Street and to the east by the Talbot School, which also houses the Riverton Community Center, a public recreational facility that includes a branch of the Portland Public Library. The site is currently undeveloped and consists almost entirely of undergrowth and mature trees. There is a portion of an unimproved parking lot and a small amount of grassed open space along the property's Forest Avenue frontage, which is formally used by Moran's Market. The surrounding neighborhood is comprised mostly of single-family homes, small-scale multifamily development and neighborhood businesses including Moran's Market and Riverton Station Bar & Grill.

V. PROPOSED DEVELOPMENT

The proposed development involves the construction of 50 multifamily residential units in two, three-story buildings each containing 25 units. Each building would have a footprint of approximately 7,600 square feet and would feature a lobby area, bike storage for up to 13 bicycles, and shared laundry facilities. Each building would have multiple entrances providing direct access to parking areas and shared open space. In total, there would be 20 one-bedroom and 25 two-bedroom units. Each unit would be provided with one off-street parking space.

Primary vehicular access to the site would be provided via a 20-foot-wide two-way driveway connecting the development with Belfort Street. This drive aisle would lead directly to the 50-space parking area, which

would serve to buffer the two buildings from homes on Belfort Street. A direct pedestrian connection to Forest Avenue would be provided via an ADA-accessible 6-foot-wide walkway. This walkway would be illuminated and would lead to a newly proposed transit stop on the western side of Forest Avenue. A second walkway is proposed along the east side of the Belfort Street sidewalk and would measure four feet in width.

The site would feature a shared patio area located between the two residential buildings. This area would have open seating, tables and landscaping. Additional site landscaping and open space would feature a mixture of existing mature trees, bushes, and low-profile landscaping. Plantings would also be used to help buffer buildings and parking areas from surrounding properties.

The site would be served by a 2-inch domestic water service and a 6-inch fire service connecting to existing stubs on Belfort Street. The site would connect to an existing 8-inch gravity sewer main on Belfort Street. Stormwater treatment would be provided on-site using sand filters and a stone drip edge. The site slopes continuously down from Forest Avenue towards the southern property boundary. Based upon this, the applicant has prepared a post-development grading plan which would convey stormwater to the southern edge of the property, where it would collect in one of two catch basins that direct the stormwater into either a subsurface sand filter, located under the parking lot, or a drip strip, located at the southwestern corner of the property. The drip strip was relocated from the southeastern corner of the property based upon feedback from the Planning Board and the neighborhood, due to the potential that this location could result in an increased flow rate onto the abutting property.

VI. RIGHT, TITLE, & INTEREST

The applicant has demonstrated sufficient right, title and interest to the parcel involved in this application. The subject lot was conveyed together with associated rights and easements to Acre Properties on May 31, 2022. Conveyance of this parcel is recorded in the Cumberland County Registry of Deeds Book 39465, Page 257.

Full Right, Title and Interest documentation is included as Attachment C.

VII. FINANCIAL & TECHNICAL CAPACITY

In response to Planning Board feedback at the June 10th workshop, the applicant has provided an updated letter of support (Attachment D) from Androscoggin Bank indicating that the bank has a relationship with the applicant, and that the applicant is in good financial standing with the bank, and has a proven track-record of fulfilling financial obligations. Androscoggin Bank notes that a full commitment to finance the project would be subject to underwriting, however they note that there is a reasonable level of confidence that the borrower would have financial capacity to undertake the project. This updated letter was reviewed by Corporation Counsel, and found to be consistent with legally established precedent for confirming financial capacity.

Gorrill Palmer Engineering is an established firm that has demonstrated experience working on projects of a similar scale throughout Maine and New England.

VIII. ZONING ANALYSIS

The site is located primarily within the RN-5 Residential Neighborhood zone. Portions of the site are also located within the B-1 Neighborhood Business zone and the RN-1 Residential Neighborhood zone. The report does not detail the project's compliance within these two zones as the proposed development is occurring within the RN-5 portion of the site, except for a portion of the driveway which is located within the RN-1 zone, and the pedestrian walkway and bus shelter, which are partially located in the B-1 zone.

Relevant sections of the RN-5 purpose statement include:

- RN-5: *"To accommodate existing areas of the city characterized by a residential neighborhood environment of multi-family dwellings at relatively high density, exhibiting a pattern of larger lots and setbacks, as well as generally taller building heights"*

As submitted, this application is consistent with the RN-5 zoning requirements. A zoning analysis of the proposed project is provided in the table below:

	Required	Proposed
Lot Size	None	66,560 SF
Maximum Height (ft)	55 ft.	47 ft.
Minimum Street Frontage	50 ft.	72 ft.
Maximum Building Length	180 ft.	140 ft.
Area Per Dwelling Unit	1,200 SF	1,331 SF
Front Setback	25 ft.	29.5 ft.
Rear Setback	25 ft.	36 ft.
Side Setback	16 ft	16.5 ft.
Open Space	30%	43%
Lot Coverage	60%	24%

A. Inclusionary Zoning

As outlined in Section 17.2.3 of the City of Portland's Land Use Code, this application is subject to Inclusionary Zoning standards and is required to provide at least 25% (13) of the units as workforce housing. The applicant has indicated that they intend to provide the required 13 workforce housing units on-site to meet inclusionary zoning requirements, and provided a memo on June 18th indicating that workforce units would be integrated evenly across both buildings, with no notable distinction between market rate and workforce units, either in terms of access to on-site amenities, or in-unit finishes. The memo further details that the development would include 80 bedrooms in total, of which 20 bedrooms would be located within

workforce units. The proposed workforce unit mixture would consist of seven two-bedroom units and six one-bedroom units. The location of these units are detailed within the applicant's latest submission, and demonstrate full compliance with the City's inclusionary zoning requirements.

IX. SITE PLAN STANDARDS (Section 13.6)

The proposed development has been reviewed by staff for conformance with the relevant review standards of the City of Portland's Site Plan Ordinance, Section 13.6.

1. Transportation Standards (Section 13.6.1)

A. Impact on surrounding street systems

Primary vehicular access to the site is provided via a 20-foot drive aisle connecting to Belfort Street. Belfort Street is a local street with on-street parking currently offered on both sides of the street, measuring 30 feet of paved width. It serves as the only point of access for approximately 75 homes on Belfort, Verrill and Iffley Streets. Belfort Street intersects with Forest Avenue approximately 350 feet northeast of the development's proposed driveway. The intersection of Belfort and Forest is unsignalized.

At the request of Staff, the applicant has provided a traffic study conducted by Gorrill Palmer Engineering (Attachment F). This study focused on the intersection of Belfort Street and Forest Avenue and detailed the following information:

- A trip generation estimate was calculated indicating that the project would generate 28 trips during the highest peak hour. A Traffic Movement Permit (TMP) is not required for this application, as the project falls significantly below the Maine Department of Transportation's threshold, which is triggered when a project is expected to generate 100 or more passenger car equivalent (PCE) trips during the peak hour of traffic generation.
  A capacity analysis was performed at the Forest Avenue/Belfort Street intersection. The analysis indicates that little delay is estimated for vehicles turning onto Forest Avenue, though the exact delay time is not specified.
- A review of safety data indicated two crashes were reported during a three-year period between 2021 and 2023.
- There were 16 pedestrians who crossed Forest Avenue during the 2pm to 6pm study time.
- Sight distance was measured for vehicles turning from Belfort Street onto Forest Avenue. Acceptable sight lines are provided.
- The applicant has noted that driveway and sidewalk conditions along Belfort Street are poor.

The full traffic report is included as Attachment F

In reviewing the traffic study that was prepared by Gorrill Palmer, the City's third-party traffic engineer, Tom Errico, P.E. with T.Y. Lin found the scope and methodology employed in the study to be acceptable, and in coordination with Planning staff and the Department of Public Works

provided recommendations around site and off-site mitigation to limit the impacts of this development on the surrounding neighborhood and street system. (Attachment S3) This would involve the construction of new pedestrian infrastructure within and around the project site, including:

- Walkway with direct connection to a new public transit shelter on Forest Avenue.
- Construction of a sidewalk along the project's driveway and new public sidewalk segment to connect into the existing sidewalk on Belfort Street.
- Construction of a direct pedestrian walkway or path between the project site and the Talbot School property. * Note this is contingent upon State approval of a pathway across the LCFW easement.
- Development of an ADA-compliant crosswalk across Belfort Street at the intersection with Forest Avenue.
- Development of an ADA-compliant crosswalk across Forest Avenue west of the intersection of Belfort Street and Forest Avenue. This crosswalk would include pedestrian signals and a central refuge island for pedestrians.

Additional off-site improvements are also being requested to reduce potential conflicts between vehicles and pedestrians, and to improve vehicle mobility. These include:

- Closure of a curb-cut at Moran's Market immediately adjacent to the Belfort Street and Forest Avenue intersection.
- Closure of the westerly curb cut at Riverton Station Bar & Grill to accommodate the new pedestrian crosswalk.
- Restriping of Forest Avenue to provide a dedicated left-turn lane from Forest Avenue onto Belfort Street.
- Prohibition of on-street parking along the south side of Belfort Street, to improve vehicle mobility along Belfort Street and allow for adequate maneuvering space for emergency vehicle access into the project site.

Figure 2: Belfort Street mitigation

The City has drafted a condition of approval that would require the applicant to finalize the design of their off-site mitigation plan and construct these improvements in coordination with the

Department of Public Works and the Planning Authority, and maintain the existing bicycle facilities within Forest Avenue, as requested by the Planning Board at the June 10th workshop.

Additionally, the City is recommending a second condition of approval, which would require the applicant to complete a speed evaluation of Belfort Street, one year after issuance of a Certificate of Occupancy. The scope of the study would need to be accepted by the Department of Public Works, and would serve as the basis for potential traffic calming measures. In the event that traffic calming is warranted, the installation of traffic calming measures would be the responsibility of the applicant.

Finding of Fact: Based on the submitted application materials, the project's description of components intended to mitigate impacts on the surrounding street system, and the recommended conditions of approval, this standard is determined to be met.

B. Access and circulation

The proposed development would occupy an approximately 1.5-acre parcel of land, which has frontage on both Forest Avenue and Belfort Street. Vehicular access to the development would be provided off of Belfort Street, through a 30-foot wide strip of land that extends between the development site, between two existing single-family homes to Belfort Street. Within this strip of property, the applicant proposes to develop a 20-foot wide driveway which would enable vehicular ingress and egress to the site, along with a four-foot wide walkway, which would connect out to the existing sidewalk along the north side of Belfort Street to Forest Avenue. Staff have drafted a condition of approval requiring the applicant to provide striping between the driveway sidewalk and the building entrances.

Additionally, the applicant is proposing a six-foot wide illuminated walkway between the proposed residential development and Forest Avenue, along the westerly property boundary, running parallel with the Talbot School Driveway. This walkway would provide a direct connection to a newly proposed bus stop with transit shelter, which would provide convenient access for residents to the inbound Route 2 METRO bus. As mentioned under the preceding standard, the applicant would also be responsible for off-site traffic mitigation, which would involve vehicular and pedestrian upgrades along both Belfort Street and Forest Avenue.

Concerning building access, each of the proposed buildings would feature four entrances; a lobby entrance, a parking entrance and two side entrances. Side entrances would provide direct access to the shared courtyard area, parking lot and trash enclosures.

In one of the written public comments received by the Planning Board, a member of the public asked that the City consider relocating the vehicular driveway from Belfort Street to Forest Avenue, through the applicant's property. The City's third-party traffic engineer reviewed this alternative and provided a written comment (Attachment S4.) noting that they would recommend against this alternative. They note in their written comment that a driveway in this location would not comply with the City's requirement that driveways serving a parking area with 10 or more spaces be located a minimum of 100 feet from the nearest intersection (that being the intersection of the Talbot School driveway with Forest Avenue). They also note that the City's technical manual includes a provision which states, "*driveway locations may be rejected based on documentation or anticipated safety or operational concerns*", and in reviewing the alternative against this standard, advised the Board that this would create an unsafe condition, and they therefore, would not be supportive of the driveway in this location.

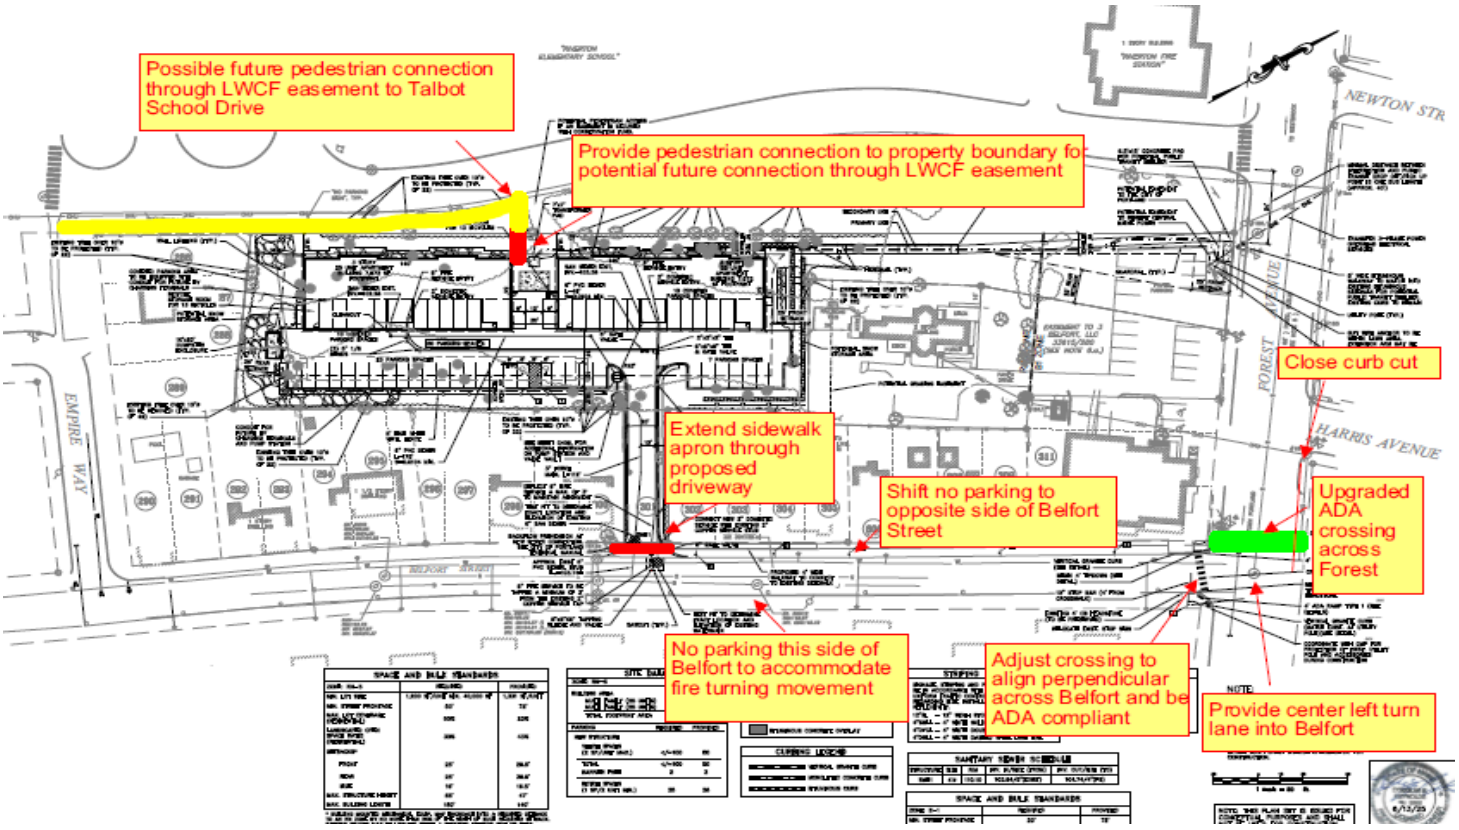

Figure 3: Off-site mitigation and access improvements

Finding of Fact: Based on the submitted application materials, the project's description of components intended to mitigate impacts on the surrounding street system, and the recommended conditions of approval, this standard is determined to be met.

C. Public transit access

This site is directly serviced by METRO's Route 2 along Forest Avenue. The applicant has coordinated with METRO to relocate the in-bound Route 2 stop onto their property's Forest Avenue frontage, and is proposing to install a transit shelter at this location with a direct pedestrian connection to the site. While the development is not subject to the City's public transit access standard, due to its location being less than a quarter of a mile from a fixed-transit stop with transit shelter, the City is supportive of the Applicant's steps to accommodate a shelter at their property, and support this improvement as part of the applicant's off-site traffic mitigation plan and as a parking demand management strategy.

Finding of Fact: Not applicable.

D. Parking

As outlined in Section 18.1.2 of the Land Use Code, off-street vehicle parking is not required. Table 18-A of the Land Use Code establishes parking maximums, which for residential dwellings is two spaces per dwelling unit. This application would provide 50 off-street surface parking spaces and intends to allocate one space per residential unit. Each building would have 10 covered parking spaces on the ground floor. Parking areas would be screened from surrounding properties by fencing and plantings.

As outlined in Table 18-A of the Land Use Code, this application is required to provide one bicycle parking space per two dwelling units (25 spaces). This application proposes storage for up to 26 bicycles, with a secure bike room located on the ground floor of each building.

A total of 10 parking spaces will be equipped with Level-2 EV chargers, with 25 additional spaces served with conduits for future EV charging equipment as needed. This provision satisfies the City's electric vehicle charging requirement as detailed in Section 1 of the Technical Manual, which requires that 20% of proposed off-street parking be equipped with Level-2 chargers, and that an additional 50% of spaces be EV-Ready, as defined in the technical manual.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

E. Transportation demand management (TDM)

As outlined in Section 13.6.1.E this application does not require a TDM Plan.

Finding of Fact: Not applicable.

2. Environmental Quality Standards (Section 13.6.2)

A. Preservation of significant natural features

This application is subject to the City's low-impact development (LID) standard, and the applicant has prepared a narrative detailing the project's compliance with Section 3 of the City's Technical Manual, and has completed an LID scorecard (Attachment M) for the project, which as presented exceeds the required 80 points. The development as proposed avoids impacts to wetlands and or streams, and provides a soil survey, which was utilized to inform the site layout and placement of stormwater management infrastructure. Additionally, the applicant has made design choices which minimize the overall development footprint and amount of new impervious area, for example, utilizing minimum driveway aisle widths and providing off-street parking at a ratio beneath the City's maximum allowable parking requirement as detailed in Article 18.

The applicant has also provided a report from the Maine Ecological Services Field Office of the Department of the Interior, which states that the site does not feature significant wetlands or critical habitat for endangered species.

The City's Water Resources Division with the Department of Public Works provided review comments on the applicant's LID scorecard and narrative (Attachment S5.), and disputed some of the points that the applicant took credit for. For example, the applicant claimed full points for the use of structured parking, where the majority of off-street parking is provided in surface parking spaces. Additionally, the applicant claimed credit for the use of innovative stormwater management practices, and for the implementation of water quality control measures specifically designed to benefit water quality within an urban impaired stream watershed. If taken together, these disputed points, if subtracted, brought the applicant's LID score to well beneath the 80-point requirement. In the City's review comments, staff identified point categories that the applicant was already eligible to take advantage of, which they did not claim, such as the option to claim five points for developing on a site without slopes with a gradient of 15% or more. Additionally, there were multiple additional LID strategies that staff identified, which the applicant could have employed to achieve additional points, such as a commitment to till soils to a certain depth prior to revegetation, or a commitment to low-impact winter maintenance activities as part of the applicant's stormwater maintenance agreement. These strategies, if agreed to, would provide the applicant with a passing LID score. After the City conveyed these comments, the applicant updated their LID scorecard based on the staff's feedback. Staff, in reviewing the applicant's updated scorecard, found the updates to be acceptable.

The application also proposed to maintain 22 existing trees greater than 10 inches in diameter at breast height (DBH) around the perimeter of the development, which complies with the City's requirement that 30% or more of feature mature trees be preserved within setback areas. The Board had requested at the June 10th workshop that the applicant provide a detailed tree preservation plan with associated details addressing how existing trees were to be protected during the course of construction. The applicant has provided a note on their site plan outlining their proposed tree protection measures, which have been deemed appropriate by staff.

Finding of Fact: Based on the submitted application materials, description presented above, and associated condition of approval, this standard is determined to be met.

B. Site landscaping and buffers

The site will feature a mixture of new trees, bushes and low-profile plantings. New trees will be planted along the perimeter of the site and parking area to provide additional screening from surrounding homes. The shared courtyard area will feature perennial plantings and bushes to provide privacy for residents utilizing the space.

The site plan standard requires that a project provide shade trees at a ratio of one tree per every 5,000 square feet of lot area. The City also permits alternative plantings to satisfy this requirement, such as a combination of shrubs, perennials and/or ornamental grasses. The development site totals 66,560 square feet, and would therefore be required to provide 13 shade trees or equivalent alternative plantings in order to meet this standard. The landscape plan that was provided depicts eight shade trees along with numerous additional plantings, that exceed the City's site landscaping requirement.

With regards to street trees, the project is required to provide street trees at a ratio of one tree per every 25 to 35 feet of street frontage. The development site features 102 feet of street frontage, and is therefore required to provide a minimum of three street trees. Given the placement of the proposed transit shelter within the project's Forest Avenue frontage, and the minimal right-of-way width for the proposed driveway into the site off of Belfort Street, the applicant is unable to provide any viable street trees, and will therefore be required to provide a fee in-lieu of the required trees, at a ratio of $400 per tree, as detailed in Sec. 4 of the Technical Manual. This has been drafted as a condition of approval.

The City's parking lot landscaping requirement requires that there be one shade tree for every 750 square feet surface parking area. The applicant provides a total of 13 trees in close proximity to the surface parking area, including five existing mature trees totaling 10-inches DBH or greater, which accounts for 9,700 square feet of surface parking lot. The parking area totals approximately 13,800 square feet, accounting only for surface parking areas and driveway aisles. The applicant intends to pay a fee-in-lieu for the remaining five required trees. This has been drafted as a condition of approval for the Board's consideration.

Concerning buffers and screening, the applicant proposes a screening strategy along the edge of the proposed parking area, consisting of a six-foot-high white vinyl privacy fence, with new trees planted along the southerly property boundary to screen the parking area from adjacent homes. The applicant also proposes to maintain numerous mature trees along the edge of their property adjacent to the Talbot School.

Finding of Fact: Based on the submitted application materials, description presented above, and associated condition of approval, this standard is determined to be met.

C. Water quality/storm water management/erosion control

The project results in the creation of more than 1,000 square feet of new impervious surface and is required to provide for stormwater management in accordance with Maine DEP Chapter 500 and City of Portland Technical Manual Section 5 standards for stormwater management. The applicant has submitted a full stormwater management plan demonstrating compliance with both Section 5 of the Technical Manual and Maine DEP chapter 500 standards. This application will result in the creation of approximately 37,177 square feet of new impervious area.

Stormwater treatment would be accomplished using a subsurface sand filter and stone drip strips to manage stormwater on the site. Per the stormwater management report, these systems have been sized to provide the required level of treatment on the site and would manage flows to prevent an increase in the post-development discharge of stormwater onto adjacent properties.

At the June 10th workshop, the Board heard several public comments regarding the applicant's proposed stormwater treatment, particularly the placement of the stone drip strip at the southeastern corner of the property immediately adjacent to the property at 57 Belfort Street. Staff had similarly raised concerns regarding the placement of this stormwater treatment best management practice (BMP), noting that the placement of this BMP in this location would redirect stormwater to a new location on the property, and may concentrate discharge onto the adjacent property during significant rainfall events.

In response to the concerns raised by staff and the Board, the applicant shifted the location of the stone drip strip to the southwestern corner of the property, closer to the Talbot School, which is more reflective of the current drainage patterns on-site. Staff support the proposed change and have found that the updated plan fully complies with Maine DEP Ch. 500 stormwater management requirements, and the City's local stormwater regulations contained within Sec. 5 of the Technical Manual. The City, in its review, did note that the drainage catchment area servicing the covered parking spaces would need to be collected separately from the rest of the parking lot, and run through an oil water separator and directed to the sanitary sewer system as opposed to the separated drain system in order to comply with the City's Sewers and Storm Drains standards, contained within Section 6 of the Technical Manual. A draft condition of approval is included for the Board's consideration to address this required modification.

Additionally, the applicant's stormwater report does not evaluate site conditions at the Talbot School, where the stormwater would ultimately discharge to, once treated by the proposed stormwater BMP at the southwesterly corner of the site. In light of this, the City recommended that the applicant monitor conditions within the existing drainage channel on the City's property on an annual basis, and be responsible for repairing any erosion or other impacts to the Talbot

School property due to the project's stormwater flow. The applicant has since updated their draft stormwater maintenance agreement and are committing to regular inspections of the area downstream of the site and as necessary, repairing any erosion stemming from this discharge point.

Finding of Fact: Based on the submitted application materials and the description presented above this standard is determined to be met subject to the conditions of approval detailed above.

3. Public Infrastructure and Community Safety Standards (Section 13.6.3)

A. Consistency with City Master Plans

There are no City Master Plans that apply to this application. The project is consistent with the City's Comprehensive Plan, which encourages higher density residential development in locations which are walkable, bikeable, and proximate to public transit, with convenient access to services and amenities. Furthermore, Portland's Plan calls for a mixture of housing options and types within the City's neighborhoods, and for housing that serves households at various income levels.

Finding of Fact: This application is not subject to other master plans, and has been found to comply with the zoning which is directly informed by the Comprehensive Plan.

B. Availability and capacity of public utilities

The site will be served by a 2-inch domestic water service line extending from an existing stub on Belfort Street. Sewer service will be provided by a connection to an existing 8-inch gravity sewer main on Belfort Street. As required by this standard, solid waste will be stored within two separate trash rooms on-site, and will be removed regularly by a third-party waste removal operator, which shall not pick up waste earlier than 7:00 AM.

The applicant notes in their application that they have entered into an agreement with Revision Energy to provide solar-generated power to the development. Documentation from Revision Energy and Central Maine Power is included as Attachment Q

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met.

4. Site Design Standards (Section 13.6.4)

A. Massing, ventilation, and wind impact

The proposed buildings are sited well beyond existing abutting residential developments. The development is proposed to be well-screened to mitigate the visual impact of the project from abutters, and HVAC equipment is located at ground level, to the rear of the proposed residential buildings along the Talbot School driveway, away from abutting residential properties.

This site plan standard also requires that residential projects with nine or more units be designed such that a minimum of 75% of the roof area meets the 'cool roof' solar reflectivity index (SRI) requirement detailed in Sec. 13.6.4.A.3 in the Land Use Code. The applicant has demonstrated that the proposed roof materials have an SRI of between 25 and 28. The proposed roofing materials meet SRI standards.

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met.

B. Shadows

The shadow standard applies to development measuring over 65 feet in height that is adjacent to or near a publicly accessible open space. The height of the proposed buildings is 47 feet, and therefore, this standard would not apply.

Finding of Fact: Not applicable

C. Snow and ice loading

The location of the two residential buildings is not anticipated to impact snow and ice clearing on abutting properties or public rights-of-way. The applicant has detailed snow storage locations on the included plans which provide adequate space for on-site snow storage. The site layout and building design would prevent snow or ice from falling onto or accumulating on adjacent properties or public ways.

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met.

D. View corridors

This application is not within a protected view corridor.

Finding of Fact: Not applicable.

E. Historic resources

This application is not within a historic district, nor is it known to contain any significant archaeological or historic resources. In the event that historic or archaeological resources are identified during the course of construction, the applicant will be required to follow the protocols outlined under this standard.

Finding of Fact: Not applicable.

F. Exterior lighting

The proposed development includes full cutoff / dark sky-compliant light fixtures to minimize light trespass and adverse impacts to ambient light levels. Each building would feature side-mounted lights in the parking lot area. The pedestrian walkway to Forest Avenue would be illuminated with overhead lights. The provided photometric plan (Attachment N) demonstrates that proposed light levels fall within an acceptable range as detailed in Section 8, Table 8-A in the City's Technical Manual, and that there would be no light trespass on abutting property or onto the public right of way. Additionally, both pole-mounted and wall-mounted lights would be installed at heights not exceeding the maximum fixture heights detailed in Section 8, Table 8-D.

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met.

G. Noise and vibration

HVAC, air handling units, and other necessary equipment would be installed at the rear of the property away from abutting homes. Given the location of the proposed buildings, the placement of HVAC generators and other equipment is not anticipated to interfere with abutting residential properties.

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met.

H. Signage and wayfinding

Each building would feature unilluminated mounted lettering above each front doorway to delineate the entrance to each building. Staff find the proposed signage to be appropriate. No wayfinding signage is proposed as part of this application.

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met

I. Zoning-related design standards

This application is subject to a design review as outlined in the City of Portland Design Manual section (i) (*two-family, multi-family, lodging houses, bed and breakfasts and emergency shelters*) design standards, and the application has undergone three separate design reviews by City staff, led by the City's Urban Designer, Sean King, and participated in by Planner Eric Freeman and Senior Planner, Natasha Kypfer. For the most recent design review, please see Attachment S2.

The City's multifamily design standards include five separate standards, which are listed below for the Board's reference.

1. *The exterior design of the proposed structures, including architectural style, façade materials, roof pitch, building form and height, window pattern and spacing, porches and entryways, cornerboard and trim details, and facade variation in projecting or recessed building elements, shall be designed to complement and enhance the nearest residential neighborhood. The design of exterior facades shall provide positive visual interest by incorporating appropriate architectural elements.*
2. *The proposed development shall respect the existing relationship of buildings to public streets. New development shall be integrated with the existing city fabric and streetscape including building placement, landscaping, lawn areas, porch and entrance areas, fencing, and other streetscape elements;*
3. *Open space on the site for all multi-family development shall be integrated into the development site. Such open space in a multi-family development shall be designed to complement and enhance the building form and development proposed on the site. Open space functions may include but are not limited to buffers and screening from streets and neighboring properties, yard space for residents, play areas, and planting strips along the perimeter of proposed buildings;*
4. *The design of proposed dwellings shall provide ample windows to enhance opportunities for sunlight and air in each dwelling in principal living areas and shall also provide sufficient storage areas;*
5. *The scale and surface area of parking, driveways and paved areas are arranged and landscaped to properly screen vehicles from adjacent properties and streets;*

The Planning Board, at their April 8th and June 10th workshops, requested that staff discuss the project's compliance with the applicable design requirements, particularly given the juxtaposition of a larger-scale multi-family development within a predominantly single-family neighborhood. As noted in the June 10th workshop, the City's design standards do not supersede zoning space and bulk requirements, and do not require that a development be scaled down to be comparable in scale, massing, or design to its surrounding context. Design standards are intended as a framework to help integrate new development of varying scales and typologies into an existing context. Staff's design memo openly acknowledges that the proposed form deviates from the prevailing pattern of single-family and small-scale multi-family development, however notes that the design of the proposed buildings is generally compatible, and designed to complement the existing context through such elements as a pitched roof, similar façade materials and trim detailing that delineates the lower and upper floors, and the variation of the roofline through the use of eaves and trim detailing, which helps to reduce the building's massing as observable from surrounding properties. Staff also note that the building is setback well away from abutting residential property, and that a variety of screening elements are utilized to buffer the development from surrounding property.

As noted in the June 18th design memo, staff found that the application met all applicable design criteria, with the exception of the first standard, noting in the design memo that the applicant should

enhance the visibility of the primary building entrances, which are located on the side of each building, fronting the proposed courtyard. The applicant has since modified the design of the primary entrance to include unilluminated signage above the front door of each building to better delineate main entrances. Staff found that this proposed treatment adequately addresses staff's comment from the June 18th design review memo.

Finding of Fact: Based on the submitted application materials and description presented above, this standard is determined to be met.

X. NEIGHBORHOOD MEETING & PUBLIC COMMENT

The applicant held a neighborhood meeting on February 5, 2025 at 5:30 PM. The in-person meeting was held at the Talbot Community School at 1600 Forest Avenue. A total of 40 members of the public were in attendance. Public comment generally centered on:

- Traffic on Belfort Street
- The intersection of Belfort Street and Forest Avenue
- Landscaping and vegetative screening from surrounding homes
- Massing and visual impact

A full sign-in sheet and meeting minutes are included as attachment T.

As of the writing of this report, the City has received a total of 77 public comments. Key themes that emerged from public comment included concerns about the anticipated impacts that this development would have on traffic patterns and pedestrian safety along Belfort Street and Forest Avenue; the potential to connect via the Talbot School access road; the potential for stormwater impacts associated with this development on abutting property; the potential for on-street parking impacts within the surrounding residential neighborhood; and the scale of the development being considered incompatible with the nearby single-family homes. Others expressed support for the proposal, emphasizing its location near a school, community center, and Forest Avenue, a priority corridor identified in the City's Comprehensive Plan, as well as its proximity to services and access to public transit. These topics are addressed throughout this Planning Board report. Furthermore, several members of the public raised concerns about the applicant accessing the property via the Talbot School access road through the LWCF easement area. The City, including Corporation Counsel, informed the applicant that they do not have the legal right to access the property through the conservation easement. The applicant must cease using the access road, or the property owner may be subject to enforcement under Sections 1.5.1 and 1.5.2 of the Land Use Code.

XI. STAFF RECOMMENDATION

Subject to the proposed motions and conditions of approval listed below, Planning & Urban Development Department staff recommends that the Planning Board find that the major site plan application for 1584 Forest Avenue (PL-003161-2024) meets the applicable standards of Portland's Land Use Code.

XII. PROPOSED MOTIONS

A. SITE PLAN REVIEW

On the basis of the application, plans, reports and other information submitted by the applicant; findings and recommendations contained in the Planning Board Report for the public hearing on July 8, 2025 for Application PL-003161-2024 at 1584 Forest Avenue relevant to the site plan regulations; and the testimony presented at the Planning Board hearing, the Planning Board [finds/does not find] that the plan is in conformance with the site plan standards of the land use code, subject to the following conditions of approval:

PRIOR TO APPLYING FOR A BUILDING PERMIT

1. The applicant shall modify their stormwater management plan to provide an oil-water separator to collect runoff from covered parking areas before discharge into the sanitary sewer.

PRIOR TO ISSUANCE OF A BUILDING PERMIT

2. The applicant shall prepare an updated off-site mitigation plan with design details for all off-site mitigation improvements recommended by the City's Third Party Traffic Engineer in their June 18th review comments. This plan shall be reviewed and approved by the Planning Authority and the Department of Public Works.
3. The applicant shall coordinate with the Planning Authority, Department of Public Works, and Corporation Counsel to finalize and execute the stormwater maintenance agreement for the development.
4. The applicant shall enter into an affordable housing agreement (AHA) with the City of Portland, and shall file this agreement as covenant to the 1584 Forest Avenue property deed with the Cumberland County Registry of Deeds.
5. The applicant update their site plan to provide a delineated walkway through the parking lot area between the Belfort street walkway and the building entrances.

PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY

6. The applicant shall construct all off-site mitigation improvements and coordinate with the Department of Public Works to have all off-site improvements inspected and accepted by the City.

7. The applicant shall provide a financial contribution of $1,200 into the City of Portland Tree Fund for the three required street trees and $2,000 for the five additional required parking lot landscaping trees
8. In the event that the applicant elects to provide a fee in-lieu of providing a portion or all of the required workforce housing units on-site, the applicant shall pay into the City's Jill C. Duson Housing Trust Fund at a ratio of $182,830 per required workforce unit, as required under Ch. 14, Sec. 17.2.3.C.6.
9. If found to be acceptable by the State, the applicant shall be responsible for coordinating with the Planning Authority to design and construct a direct pedestrian pathway to the Talbot School.

MONITORING CONDITION

10. The applicant shall conduct a traffic calming monitoring study one-year after full occupancy of the project. The study shall include the collection of speed, traffic volumes, and crash data. The final scope of work and data collection shall be coordinated with the Department of Public Works. If the study identifies unacceptable speed conditions, the applicant shall be responsible for the development of plans for approval by DPW and full implementation of improvements.

XIII. PLANNING BOARD DECISION

On the basis of the findings, conclusions and recommendations contained in the Planning Board report for the public hearing on July 8, 2025 related to application PL-003161-2024 for 1584 Forest Avenue, which is attached to the draft approval letter and incorporated therein, the Planning Board **[adopts/does not adopt]** the approval letter as drafted as the Planning Board's decision for application PL-003161-2024, and authorizes the Planning Board Chair to sign the approval letter as drafted.

Att. S1

Dear Alex Coupe,

The Planning & Urban Development Department has reviewed the latest application materials for the Major Site Plan at 1584 Forest Avenue. Comments are provided below, outlining the outstanding items and identifying the responsible parties for each.

Please resubmit the revised materials once all updates have been completed.

If you have any questions or need further clarification, don't hesitate to reach out.

Eric Freeman

Outstanding Review Items

Standard	*Comments*	*Finding*
Stormwater	Required Update: With the adjustments to the stormwater system design the applicant shall update the stormwater maintenance agreement to include a provision requiring annual inspections of the area immediately downstream of the southwesterly discharge point. The applicant shall be responsible for addressing any erosion or other impacts to the Talbot School property resulting from the project's stormwater discharge.	Update required (applicant)
Inclusionary Zoning	Required Updates: In accordance with Section 17.2.3.C.3, workforce housing units must be integrated into the overall development and share a common entrance with market-rate units. The current application materials do not identify which units are designated as workforce units. The applicant must update the building floor plans to clearly indicate which units will be designated as workforce housing. Please note that these units must be distributed throughout the building and may not be clustered in a single location.	Update required (applicant)

LID Scoresheet	Overview: The applicant submitted a revised LID scoring sheet on Wednesday, June 18, in response to City comments. City staff has received the updated scoring sheet and is currently reviewing the revisions.	City staff is conducting a final review to confirm compliance. (City)
HVAC Screening and fencing	Overview: The applicant's rendering dated May 22, 2025 depicts a white vinyl fence installed along the property line abutting the Talbot School, while the site plan dated May 22, 2025 does not reflect the fence. The applicant shall update the site plan to either include the fence along the property boundary with the Talbot School, or alternatively, incorporate a shorter section of fencing specifically to screen the HVAC units, rather than extending the fence along the entire length of that side of the property.	Update Required (Applicant)
Solar Reflectivity index	Required Update: In accordance with Section 13.6.4.A.3, proposed buildings with an aggregate roof area greater than 2,000 square feet (measured horizontally) and, for residential projects, more than nine residential units, must ensure that at least 75% of the roof area meets the following "cool roof" Solar Reflective Index (SRI) standards: • **Roofs with a slope less than 2:12**: SRI of 82+ (initial) / 64+ (3-year aged) • **Roofs with a slope greater than 2:12**: SRI of 25+ (initial and 3-year aged) Roof areas shaded by structures with an SRI of 39+—including photovoltaic panels—are exempt from the roof area calculations under this standard. The current application materials do not specify how the project complies with this requirement. The site plan must be updated to clearly demonstrate compliance.	Update Required (Applicant)
Tree planting	Required Update: As outlined in Section 13.6.2.B.1.3.a, one tree planting is required for every 750 square feet of uncovered asphalt paved parking area (including drive aisles). Based upon the square footage of the surface parking lot in the provided plans, the applicant will need to provide six additional tree plantings along the	Update Required (Applicant)

	perimeter of the parking area or on the site. If additional trees cannot be planted the applicant may choose to pay a fee-in-lieu to the tree fund.	
Tree Preservation Plan	Required Update: **The applicant shall provide a tree preservation plan within the construction management plan demonstrating how on-site trees being preserved will be protected during the course of construction. This plan should provide specific recommendations for preservation for trees in close proximity to work areas.**	Update Required (Applicant)
Design Standards	Required Revision Each building's primary entrance should feature a portico supported by columns or other architectural distinctive feature to provide covered access, create a defined transition between the exterior and interior, and emphasize the entrance as a focal point—consistent with the surrounding context. The current entrance design appears understated, making it unclear where visitors should be directed upon arrival. Its minimalist and secondary nature does not align with the scale or the traditional character reflected in the overall building design. An example of a larger multifamily building incorporating an entrance with a traditional residential design is provided below for reference. 	Update Required (Applicant)

Design Review
Planning and Urban Development Department

Subject:	1584 Forest Avenue
Zone:	RN-5 Residential Zone
Date of Review:	Friday, May 16, 2025
	Land Use Code Chapter 13.6.4.l Design standards
Reviewer(s):	Eric Freeman (Planner); Natasha Kypfer (Senior Planner); Sean King (Urban Designer)
Project ID:	PL-003161-2024

I. INTRODUCTION

The project at 1584 Forest Avenue for 50 residential units was reviewed according to the *City of Portland Design Manual* section ***(i)*** *two-family,* ***multi-family****, lodging houses, bed and breakfasts and emergency shelters* design standards.

II. STAFF RECOMMENDATIONS FOLLOWING PLANNING BOARD WORKSHOP – APRIL 8th, 2025

Following the Planning Board Workshop held on April 8, 2025, Staff recommends that the Applicant revise design-related comments and resubmit materials at their earliest convenience in advance of next Planning Board agenda item. Staff finds that the scale of the building and primary entrances can be further articulated to enhance the residential character of the proposed buildings.

Staff recommends a more prominent building entrance at the east elevation into the Lobby and recommends that the Applicant explore a porch, canopy, and/or other architectural element incorporated into the building design. Figure 1 is an example of precedent for the Applicant's consideration.

Figure 1: Stacy M. Symbol Apartments in Westbrook, Maine

In addition, Staff recommends the Applicant incorporate additional façade variation at the south elevation and requests the Applicant explore Staff suggestions from the design review memo dated January 22, 2025 related to the exterior design of the proposed structures. Specifically, the Applicant is requested to provide greater articulation through façade detailing, such as trim that reinforces the gable ends sections, façade projections, material variation and/or other architectural elements to reduce the building's scale.

III. DESIGN REVIEW COMMENTS: bold text denotes recent updates met, **red** text denotes standards not met which require resubmission.

Section (i) Multi-family.

1. *The exterior design of the proposed structures, including architectural style, façade materials, roof pitch, building form and height, window pattern and spacing, porches and entryways, cornerboard and trim details, and facade variation in projecting or recessed building elements, shall be designed to complement and enhance the nearest residential neighborhood. The design of exterior facades shall provide positive visual interest by incorporating appropriate architectural elements;*

Staff comment: Staff finds the proposed three-storied multi-family building design is compatible with the nearest residential neighborhood that includes variation in roof pitch, arrangement of windows and trim detailing. Staff recommends additional façade variation with building projections along the south (Belfort Street) elevation for Building A and B to provide greater articulation for this prominent façade facing abutting properties and the street. In addition, Staff requests that the applicant provide exterior façade materials and label onto the architectural elevations.

Staff recommends the relocation of Lobby A in Building A that would provide building entry access at the shared courtyard to provide greater visibility of primary building entries. In addition, Staff recommends the relocation of Building A bike room at the east facade and accommodate a door entry to allow pedestrians to access at proposed walkway. Staff recommends a door entry along the west façade of Building B allow pedestrians to access at proposed walkway.

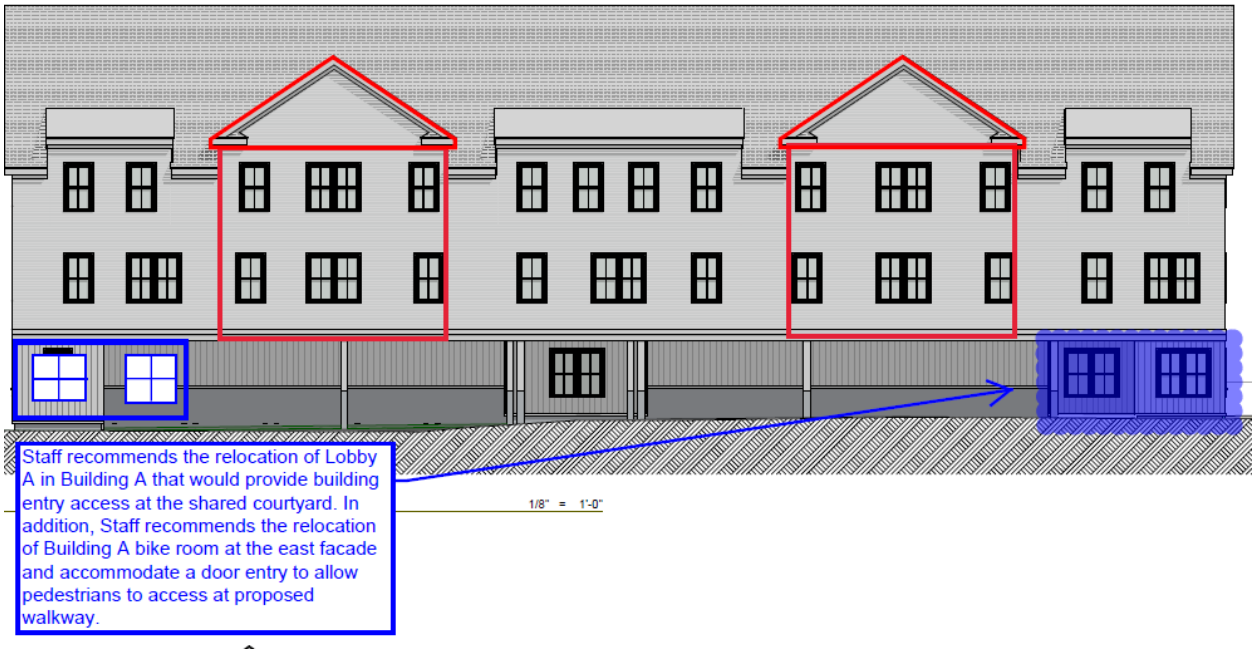

Figure A – Staff diagram onto south (Belfort Street) elevation

2. *The proposed development shall respect the existing relationship of buildings to public streets. New development shall be integrated with the existing city fabric and streetscape including building placement, landscaping, lawn areas, porch and entrance areas, fencing, and other streetscape elements;*

   Staff comment: The proposed development with two multi-family buildings are significantly setback from the street due to the existing lot configuration. Staff prefers that the applicant provide an accessible route with additional site lighting to connect pedestrians to Forest Avenue. An alternative approach to be verified and acceptable by Dept. of Public Works is to shift proposed drive aisle to construct a walkway and extend the sidewalk at Belfort Avenue.

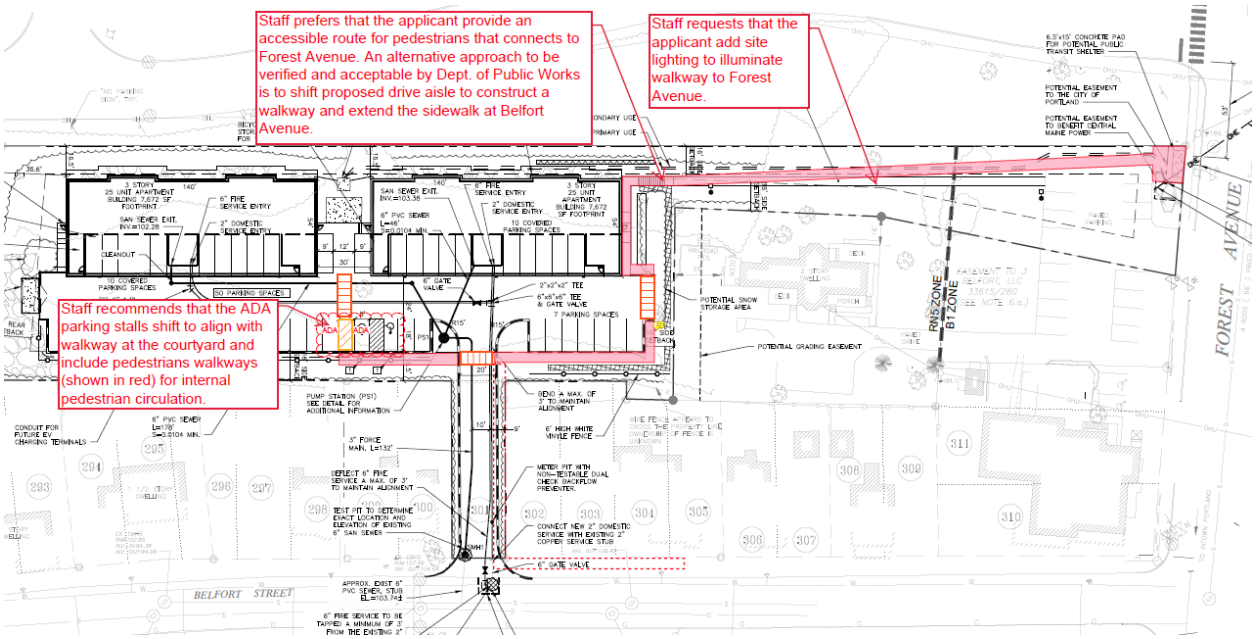

Figure B – Staff diagram onto Site and Utility plan to include areas in red as new walkways for internal circulation, orange as crosswalks, and yellow as ADA stalls

3. *Open space on the site for all multi-family development shall be integrated into the development site. Such open space in a multi-family development shall be designed to complement and enhance the building form and development proposed on the site. Open space functions may include but are not limited to buffers and screening from streets and neighboring properties, yard space for residents, play areas, and planting strips along the perimeter of proposed buildings;*

   Staff comment: Staff finds that open space is integrated into the site by the shared courtyard with seating and landscaping around portions of the site's perimeter. Staff recommends additional screening at the HVAC units located at the rear of the property abutting the public schoolyard property. In addition, Staff requests that the applicant consider a pedestrian walkway to connect residents to the abutting public schoolyard property.

4. *The design of proposed dwellings shall provide ample windows to enhance opportunities for sunlight and air in each dwelling in principal living areas and shall also provide sufficient storage areas;*

   Staff comment: Staff finds that the proposed dwellings provide ample windows and sufficient storage areas within each unit.

5. *The scale and surface area of parking, driveways and paved areas are arranged and landscaped to properly screen vehicles from adjacent properties and streets;*

   Staff comment: Staff finds that the 6-feet white vinyl fence provides sufficient screening for parked vehicles and sufficient landscape screening at the parking lot drive lane from adjacent properties.

Att. S3

1584 Forest Avenue - Final Traffic Review Comments

Tom Errico <thomas.errico@tylin.com> Wed, Jun 18, 2025 at 8:44 AM
To: Eric Freeman <efreeman@portlandmaine.gov>, Matt Grooms <mgrooms@portlandmaine.gov>, Jeremiah Bartlett <JBartlett@portlandmaine.gov>, Kristoffer DeVolder <kdevolder@portlandmaine.gov>
Cc: Kevin Kraft <kkraft@portlandmaine.gov>

Draft for review – let me know if I need to expand or add/edit this. Thanks

Hi Eric – I have reviewed the application materials and have the following final traffic review comments.

- The applicant shall conduct a traffic study with the following scope:
  - An evaluation of conditions at the Forest Avenue/Belfort Street intersection. This shall include an evaluation of traffic operations, safety conditions, pedestrian conditions, sight distance and access management conditions.

Status: The applicant conducted the requested Traffic Evaluation. A summary of each task is presented as follows.

- A trip generation estimate was performed, and the project will generate 28 trips during the highest peak hour. A Traffic Movement Permit is not required.
- A capacity analysis was performed at the Forest Avenue/Belfort Street intersection. The analysis indicates little delay is estimate for vehicles turning onto Forest Avenue. In my experience, heavy peak hour volumes can create long wait times exiting side streets on Forest Avenue. With that said, options are limited for improving traffic mobility (see below for access management improvements – that may simplify turning movements).
- A review of safety data indicated two crashes were reported during the three-year period 2021 – 2023.
- There were 16 pedestrians that crossed Forest Avenue during the 2-6pm afternoon time.
- Sight distance was measured for vehicles turning from Belfort Street and acceptable sight is provided
- The applicant noted that driveway conditions in the Belfort Street intersection area is poor. I concur that driveways conditions are poor and likely contribute to difficulty turning to and from Belfort Street and contribute to a poor environment for pedestrians and bicyclists. It is my recommendation that the applicant develop an improvement plan that addresses non-compliant driveway conditions and include in the plane upgrades to pedestrian facilities to meet ADA standards.

Final Status: I find the contents and methodologies used in the March 3, 2025, Traffic Evaluation prepared by Gorrill Palmer to be acceptable. I would note the following:

- **Traffic counts for the project were performed on February 25th and 26th 2025. While it is the general practice not to perform traffic counts in the winter, Forest Avenue does not exhibit significant seasonal variation. I would note the evaluation did increase traffic volumes by 20% to account for seasonality. It should be further noted that it is important that the counts be conducted when school is in session, and for this location a July or August traffic count would not be relevant. In my professional opinion the traffic volumes used in the evaluation are reasonable and traffic counts performed in**

non-winter times would not alter the recommended improvements identified for the project.

- **The nearby traffic signal at the School Driveway/Newton Street can impact traffic operations at the Forest Avenue/Belfort Street intersection. This influence is likely to increase vehicle delay for vehicle turning to and from Belfort Street. With that said, the inclusion of the School Driveway/Newton Street traffic signal in the analysis would not alter the recommended improvements for the project**

- An evaluation of the pros and cons of providing an access directly to the Riverton School driveway so that access to the traffic signal on Forest Avenue should be performed. The alternatives analysis shall include access scenarios including access only to Belfort Street, access only to the school driveway and access to both the school driveway and Belfort Street.

  Status: Outstanding, although the applicant notes an easement would be required, which it is unclear if this prevents a connection (vehicular or pedestrian) from being feasible. I would note that there currently is an accessway to the Riverton School driveway from the site.

  Final Status: Planning staff has been working with the State on rights for providing a direct connect to the Riverton School. Refer to Planning Staff comments on this issue.

- The following are comments regarding the site plan.
  - The project needs to account for pedestrian activity towards Belfort Street and destinations to the Riverton school campus. I'm assuming DPW is providing comments on this. I would note the sidewalk to Forest Avenue should extend to the Forest Avenue sidewalk.

    Status: Refer to DPW comments on providing a sidewalk connection to Belfort Street.

    Final Status: The proposed plan includes a 4-foot sidewalk from the site to Belfort Street and providing a continuous sidewalk connection along Belfort Street to Forest Avenue. Additionally, the city is working with the State for obtaining an easement from the rear of the project site directly into the school campus. The project would be required to implement this connection if the easement can be obtained. I find these improvements to be acceptable.

  - It is my assumption that all parking spaces interior to the building meet dimensional standards. This should be confirmed. Also, if building columns impact parking space accessibility, this should be noted.

    Status: The applicant shall provide a turning template for one of the proposed parking spaces that have a building column constraining access. The plans shall include dimensions for the covered parking spaces.

    Final Status: Outstanding.

New Comments

- **Please review to DPW comments, but the following improvements shall be implemented by the applicant prior to building occupancy. Final design plans shall be provided to DPW for review and approval.**
  - **The applicant shall implement parking restrictions on Belfort Street per DPW details.**
  - **The applicant shall relocate the crosswalk on Forest Avenue at Belfort Street to the outbound side of the intersection. The crosswalk shall be ADA compliant, and include: a median refuge**

island, warning signs, formal closure of the commercial driveway on the east side of Forest Avenue and any changes to infrastructure to accept this relocated crosswalk.

- **The applicant shall install a left turn lane on outbound Forest Avenue to Belfort Street.**
- **The crosswalk across Belfort Street shall be upgraded to be fully ADA compliant.**
- **The driveway to the Moran's Market located on Belfort Street shall be closed.**
- **The applicant shall conduct a traffic calming monitoring study 1-year after full occupancy of the project. The study shall include the collection of speed, traffic volumes, and crash data. The final scope of work and data collection shall be coordinated with DPW. If the Study identifies unacceptable speed conditions, the applicant shall be responsible for the development of plans for approval by DPW and full implementation of improvements.**

Please contact me if you have any questions.

1584 Forest Ave Public Comment

Tom Errico <thomas.errico@tylin.com> Wed, Jun 18, 2025 at 10:44 AM
To: Kevin Kraft <kkraft@portlandmaine.gov>
Cc: Matthew Grooms <mgrooms@portlandmaine.gov>, Eric Freeman <efreeman@portlandmaine.gov>, Andrew Graminski <agraminski@portlandmaine.gov>

I have reviewed the project as it relates to providing a direct vehicle connection to Forest Avenue along their 72.60 feet frontage. The city's standard for driveway design includes a requirement that for residential developments with greater than 10 parking spaces 100 feet of separation is required between a driveway and an intersection. In this case the intersection is the signalized intersection of the School Driveway/Newton Street. Accordingly, this driveway alternative does not meet city standards for adequate separation. I would further note that there is a provision in the city's technical standards that "driveway locations may be rejected based on documented or anticipated safety or operational issues". In my professional opinion, a driveway located just inbound of the school driveway, would create unsafe conditions, and therefore would not support it.

Subject: 1584 Forest Ave Public Comment

Tom, would you be able to share your thoughts or provide a comment for Eric regarding the public comment about a potential connection directly along Forest Avenue?

1. WHY NOT MAKE THE DRIVEWAY DIRECTLY ON FOREST AVENUE?

We are all completely baffled as to why the developer who owns 50 ft. of road frontage on Forest Ave. would rather place the vehicle access to this site on Belfort St. If the reason is too much "congestion" - his own words - then how does moving that congestion to Belfort St. make any sense? **It does not.** He probably doesn't want the expenditure of re-configuring that 50 ft. road frontage to create vehicle access there, and this is just not a good enough answer. To disrupt and forever alter the flow of our neighborhood for expedience and cost savings to his plan, is simply not an acceptable choice. As a planner, you must look at the logic of his decisions and his options with respect to the existing neighborhood. We have a community here - please consider how this community functions in its current configuration. Please do not disregard our concerns and write us off as "NIMBY". We understand that the planning department has a job to do, and

you have goals to meet. We are not asking for NO DEVELOPMENT. We are asking for some reasonable modifications so that our "life as we know it" isn't completely shattered. It's not too much to ask. We need you to represent us as much as you appear to be focused on the housing goals for the city.

City of Portland ME: Low-Impact Design Requirements				
Owner / applicant name:	Acre Properties			
Representative name:	Alex Coupe			
Project address:	1582 Forest Avenue			
Project CBL:				
Application ID (if known):				
	Maximum Points	**How to Apply**	**Points Awarded**	**LID Standard / Approach**
CORE METHODS: Wetlands, Streams, & Drainage				
Protect natural drainage paths	Required			
Shoreland Zoning	Required			
Meeting DEP and ACOE standards for stream crossings	Required			
Protect wetlands	12	Select one option	12	Select a site that does not have wetlands or vernal pools = 12pts
				Project maintains a 50' set-back / no-disturb buffer to all wetlands = 10pts
				Project maintains a 25' set-back / no-disturb buffer to all wetlands = 7pts
				Project does not place structures in wetlands and avoids wetlands impacts from construction and stormwater discharges = 5pts
				Project replicates impacted wetlands elsewhere on site or within watershed = 3pt
				Project pays wetlands impact fee = 0pts
Permanently protect stream (intermittent and perennial) and riparian buffers *(exclusive of approved stream crossings; must include a no-disturb zone with markers installed and deed restriction recorded at registry of deeds)*	12	Select one option	12	Select a site with no streams = 12pts
				Permanently protect all 100ft shoreline buffers = 10pts
				Permanently protect all 75ft shoreline buffers = 7pts
				Permanently protect all 50ft shoreline buffers (intermittent streams) = 6pts
				Permanently protect all 50ft shoreline buffers (required minimum for perennial streams) = 5pts
				Permanently protect all 25ft shoreline buffers (required minimum for intermittent streams) = 5pts
Stream crossings	12	Select one option	12	Select a site with no streams = 12pts
				Avoid any stream crossings = 10pts
				All stream crossings use a bridge or open bottom culvert structure sized at 1.2 times the bank full width of the stream = 10pts
				All stream crossings use Maine Stream Smart Principles to preserve natural pre-development drainage pathways = 6pts
CORE METHODS: Natural Areas & Habitat				
Preserve threatened or endangered species habitat	Required (Beginning with Habitat Maps at a minimum)			
Protect 30% of trees over 10" DBH	Required (Tree survey required)			
Protect intact, contiguous forests and native trees over 10" DBH	8	Select one option		All development and land disturbance outside of existing wooded/forested areas (no site clearing in prior 10 years) = 8pts
				Protect 50% of trees over 10" DBH = 6pts
				Protect 40% of trees over 10" DBH = 4pt

CORE METHODS: Soils & Slopes				
USDA Web Soil Survey	Required (provide details how soil limitations will be mitigated)			
Avoid steep slope disturbance	5	Select one option		Selecting a site without slopes 15% or greater = 5pts
				Maintain >20' undisturbed vegetated buffer to all slopes 15% or greater = 3pts
				Maintain 10-20' undisturbed vegetated buffer to all slopes 15% or greater = 2pts
				Maintain 1-10' undisturbed vegetated buffer to all slopes 15% or greater = 1pt
			0	Disturbance of any slope 15% or greater = 0pts
Protect soils	5	Select one option		Redevelopment sites = 5pts
			5	Detailed, site-specific soil survey; preparation of a Soil Management and Protection Plan; protect highly permeable soils = 5pts
Limit site disturbance and earthwork	8	Select one option		Redevelopment limits disturbance to existing footprint = 8pts
				New development disturbs less than 50% of existing undeveloped site area = 8pts
				New development disturbs less than 75% of existing undeveloped site area = 6pts
			0	New development disturbs greater than 75% of existing undeveloped site area = 0pts
Soil preparation & minimizing compaction	6	Select all options that apply		Till soils to a depth of at least 10" prior to revegetation = 3pts
				Organic matter amendments as needed based on soil tests = 3pts
CORE METHODS: Landscaping				
Low-Impact Landscaping	6	Select all options that apply		Redevelopment sites reduce lawn area by 50%, provided no increase in impervious area (lawn becomes landscaping) = 2pt
			2	New development results in >50% non-impervious developed area is landscaping = 2pt
				Use only native vegetation for landscaped areas = 2pts
			2	Using only locally-sourced landscape materials = 2pt
CORE METHODS: Impervious Area & SW Management				
Meeting City's stormwater management standards	Required			
Reduce impervious and increase permeable surfaces	10	Select all options that apply, up to a maximum of 10 points		50% or more of proposed hard surfaces are permeable (porous pavers, permeable concrete, porous asphalt) = 6pts
			2 X	Minimize parking impervious area by using only the minimum required number of parking spaces, the minimum required parking lot dimensions, maximizing compact spaces and utilizing low-turnover standard parking space width reductions = 4pt
				25% or more of proposed hard surfaces are permeable (porous pavers, permeable concrete, porous asphalt) = 3pts
			2	Minimize roadway impervious area by developing roadways and driveways at the minimum width and using minimum number of curb cuts = 2pt
			2	Reducing the number of driveways by using a shared driveway design = 2pt
			2	Providing transportation alternatives (such as bike share, car share, or similar) = 2pt
Use GI / natural stormwater treatment systems	12	Select all options that apply		Treatment requirements and conveyance achieved through vegetated systems = 6pts
			3	No more than 1-acre of drainage per treatment system = 3pts
				Increase time of concentration on site (1" 25 year storm event) = 3pts
Limit / eliminate salt use	4	Select one option		Detailed winter maintenance agreement, with annual reporting requirement, limiting chloride use (required in UIS watersheds) = 4pts

Proposing 50 spaces - which is less than max - award partial points

OK with 5 points for structured parking

Bonus Points				
Bonus points are offered for strategies that may go above and beyond typical approaches; may offer particularly innovative site design or engineering ; or may help achieve the larger goal of low-impact development on a regional scale.	10		5 x	Utilizing structured parking = 10pts
	10			Utilizing a green roof for at least 50% of a newly developed or redeveloped building roof = 10pts
	10			Restoration of previously disturbed natural resources (minimum 500 square feet of restoration) = 10pts
	10		x	BMPs designed for known water quality impairment within watershed = 10pts
	10			Connecting to City sewer from a site >200 ft from existing City infrastructure = 10pts
	6		6	Detention of 1.5 times the required volume = 6pts Need calculations showing this
	6			Treatment for 1.5 times the required water quality volume = 6pts
	6		x	Innovative LID site design and/or stormwater improvement = 6pts
	10			Establishing a Traffic Demand Management plan for projects under 50,000ft = 10pts
	Total Possible Points 178		Total Points Awarded d 65	Minimum points required for approval of LID strategies and techniques 80

Do not agree with the points claimed for pollutant-specific BMPs nor innovative site design

To: "efreeman@portlandmaine.gov" <efreeman@portlandmaine.gov>, "planningboard@portlandmaine.gov" <planningboard@portlandmaine.gov>

Dear Members of the Planning Board,

I am writing to raise my concerns about the proposed development of "Belfort Landing." Our community is experiencing significant overdevelopment, leading to increased traffic congestion, inadequate parking, and a shortage of green spaces. I believe that adding a 50-unit development will only worsen these existing issues and set a precedent for further exploitation by developers. We must prioritize the well-being of our community and draw a line at what is acceptable.

Thank you for considering my concerns.

I am writing to express my opinion regarding the proposed Belfort Landing project. This project has many flaws and does not belong in our community. I can appreciate the need for housing in Portland, however this is not the place for a project of this nature. One of the major issues is parking. I don't see how it's feasible to think that a 50 unit building of 1-2 bedroom apartments can be functionable with only 50 parking spaces. The proposed access to the development is also positioned in a place that is a natural blindspot that will only worsen because of the overflow parking that will happen on Belfort. This road does not have sidewalks and will place people/children who are walking in danger. I feel that before this project moves forward a traffic study is imperative to keep our community safe. The issues of increased traffic, parking, safety concerns and the general upkeep of this housing project are just a few issues that would cause this project to be detrimental to our neighborhood. Please strongly consider stopping this from happening.

David Orrico <david.e.orrico@icloud.com> Mar 1, 2025, 11:13:57 AM (2 days ago)
to planningboard@portlandmaine.gov

Good day, my wife and I are 47 year resident s of Belfort Street. We recently attended a public meeting regarding a proposed 50 unit apartment complex with access from Belfort Street and bordering rhe Riverton school access road, While we am keenly aware the city needs additional housing, we are against this project for the following reasons:

- We were advised the project has one parking space per unit and were told this confirms to zoning requirements. We did ask about overflow parking and was told none was included in the plan. Another resident asked about parking on the access road from Belfort Street into the development and were assured by the developer nobody would park on this roadway. We were also advised public transportation was to be encouraged. Our concern is that Belfort Street residents will have to contend with at least 50 additional car exiting and entering the development daily. We would expect the number to be significantly higher given the number of cars per household, currently at more than one, for existing homes on the street as an example. We also feel cars will be parked wherever there is space, and that includes the development access road and Belfort Street as well. There are no sidewalks on Belfort Street and there is already significant pedestrian traffic. While public transportation might be encouraged, it's wishful thinking, given the current level of use, that this will reduce the vehicular traffic.
- The access to the development is near the crest of the hill at the top of Belfort Street in an area where traffic entering Belfort Street and traffic coming up the hill to exit Belfort Street are all merging. This area is literally an accident waiting to happen when factoring in traffic entering and exiting the Belfort Street side of Moran's Market, current cars parked along both sides of Belfort Street and the narrowing of the street due to snow in the winter. Regardless of the time pf year, when entering Belfort Street it's virtually impossible to see what traffic, vehicular and pedestrian, is exiting Belfort Street until one is at the crest of the hill, which is the exact area access to the development is slated for.
- Finally, one meeting attendee asked about access to the development from the Riverton School access road (to make use of the existing traffic light)as well as from 1569 Forest Ave, which the developer also owns. The meeting was told routing the traffic through 1569 Forest Ave would not be workable. The meeting was also told that due to how the land for the Riverton School was deeded, access to the proposed development from the school road was not permitted. AND YET, by his own words, the developer states he uses the school access road to reach the rear of the property he owns at 1569 Forest Ave rather than using access he already owns. He freely admitted to be in violation of the existing rules simply because it's easier for him. We cannot state forcefully enough we have no faith that he will not as carelessly disregard other rules when nobody is looking

Thank you for your time in reading our comments and your service to the city

David and Malinda Orrico
139 Belfort St
Portland, ME 04103

Hi Eric,

My name is Erica Berry, we had spoken a couple of weeks ago about the Belfort Landing project--thanks again for taking my call and answering my initial questions.

I attended the neighborhood meeting for the Belfort Landing project and have a lot of concerns about the proposed project by Alex Coupe--including safety risks due to increased traffic on a small residential street and lack of parking for the number of residents. 50 units and only 50 on site parking spots means the overflow will be on Belfort Street which is a small residential street with no sidewalks. How will fire trucks, plows, anything larger than a car fit down Belfort Street when cars are lined on either side? It's going to cause major traffic issues, it's going to be unsafe for pedestrians. We have children who walk up Belfort Street to catch the bus for school.

The small 20' wide entrance for the proposed complex and its location in the middle of a slope on Belfort poses safety issues for both residents of the complex and residents of Belfort. There is going to be a traffic jam getting out onto Forest Ave. With Moran's Market there, there's already a cluster of cars parked at the top of the street, plus trucks from a local plumber. Add 50 additional households onto our small street and it's going to be dangerous. There will be accidents, people will get hurt. **Will a traffic study be done? And if so, is this commissioned and paid for by Alex Coupe? Why can't the vehicular entrance be on Forest Ave if he owns the property? Will the city conduct their own traffic study? If so, who will pay for this?**

I'm also concerned about privacy and the integrity of the plans.

The renderings presented by Alex Coupe are misleading, and I am concerned that these drawings are going on the record and being considered accurate. The backyard as shown in the renderings will not exist, as that space is actually the existing Talbot School entrance road; nor will the greenery in the front of the building, as that is the backyard of Belfort Street residents.

The renderings also do not show or take into account the land grade of 8 feet, plus the height of a two and a half story building. This will tower over the houses on Belfort Street--shining headlights, parking lot lights, and people's eyeballs directly into backyards and windows. Two and a half stories is taller than any house on Belfort Street, which does not even allow a duplex in its zoning. Given the character of the neighborhood--single family homes--**how is it possible this land was rezoned for this high density?** Belfort Street has only 52 houses, adding this mega complex this will instantly double the residents in a .25 acre space.

Given the sheer size (two mega complexes) and dramatic changes to the land (ie: the 8 foot grade) **how will the city ensure this proposed development won't negatively impact adjacent lots--flooding backyards, basements, etc.? And if it does, how do we get remediation?** According to the site plan, there is a lot of water that's going to be displaced--those numbers below. A house by Alex Coupe at 154 Belfort Street has caused flooding in the basements of the homes on either side of it, something neither homeowner had experienced before, and one resident has lived there for 20 or so years.

- **Total Existing Impervious Area (sf):** 3610
- **Total Impervious Area After Construction (sf):** 37787

During the neighborhood meeting Alex Coupe said it was not lawful for an easement to his proposed complex be allowed on Talbot School road. **If that is the case--is that legal casework public record, and where can I find it? And if that is the case, why is Alex Coupe then currently using the Talbot School entrance road to access the property?** If Alex Coupe is already skirting the system I am greatly concerned what will happen when he's left in charge of a 50 unit mega complex, a scale he's never even come close to managing before. Alex Coupe's largest complex is a 10 unit. He is unproven and putting our neighborhood in danger.

When is the first workshop for the Belfort Landing project proposal?

How do I sign up for notices about changes and updates on the plan? https://selfservice.portlandmaine.gov/EnerGov_Prod/SelfService#/plan/d7216bad-00f8-488a-bb23-9adfd2a1cecd

Have there been any variances on this project?

How would a project like this impact our property values?

Any project should not only benefit the new residents, but also the residents of its surrounding existing neighborhood. Alex Coupe's proposal does not fit with the current character of Belfort Street, and provides absolutely no benefits for the current residents. Alex Coupe's plan is irresponsible and unreasonable for this location. A development of this scope and size will negatively change our neighborhood forever.

I look forward to hearing from you.

Thanks,
Erica

Gwahome@une.edu

To the Members of the Planning Board,

I am writing to express my deep concern regarding the proposed 50-unit apartment complex planned for 1584 Forest Avenue (Plan Number: PL-003161-2024).

As a resident of Belfort Street, I am particularly troubled by the fact that the primary access point for this high-density development is proposed to be through our street. Belfort Street is not a through street—it is part of a small, residential neighborhood consisting of just four streets: Belfort, Empire Way, Verrill Street, and Iffley Street. This is a quiet, family-oriented area that has recently welcomed eight new families with newborns—a testament to the safe and close-knit environment we all value and work hard to preserve. The **safety** of our children and the integrity of our community are paramount.

Compounding this concern is the congestion we already experience. A plumbing business located at the top of the street generates regular commercial traffic and has no designated parking, forcing vehicles to occupy on-street spaces. Additionally, parents frequently park along Belfort Street to drop off their children at the Talbot School to avoid traffic on school grounds. As a result, mornings and afternoons are especially chaotic and dangerous, with cars rushing to get to work or exit onto Forest Avenue.

Parents from adjacent neighborhoods also walk their children to school through Belfort and are often seen flagging down motorists and business vehicles, urging them to slow down. We even had to ask a sheriff who lives on our street to place a speed radar board during school hours in an effort to curb speeding. The addition of a 50-unit apartment complex, with minimal parking, will only force tenants and their visitors to park along Belfort—further increasing the likelihood of another pedestrian being hit.

For me and many of my neighbors, this is not a housing issue—it is a **safety** issue. A building of this magnitude would significantly increase congestion and further endanger pedestrians, cyclists, and families. I know this firsthand: I was struck by a motorist while biking to work. The driver—who had just dropped off a child at the school—was rushing and not paying attention. That incident underscores just how dangerous congestion already is, especially during school and business hours, and highlights why the added pressure of 50 additional units is simply too much.

While I understand the need for more housing and am not opposed to development, a project of this scale is not appropriate for this location. Our roads, infrastructure, and neighborhood layout were never designed to handle this level of density.

Adding to these concerns are statements reportedly made by the developer, Alex, who has claimed that he “has the city in his pocket,” and that the city is offering incentives to push projects like this forward. Whether

true or not, this kind of rhetoric only fuels public distrust and raises real concerns that the voices of residents and the long-term health of our community are being overlooked in favor of aggressive development.

I respectfully urge the Planning Board to reconsider the scale of this project. A smaller, more thoughtfully designed development—perhaps half the size—would better reflect the character of our neighborhood and help preserve the **safety** and quality of life for the families who live here.

Thank you for your time and attention.

Sincerely,
Geoff W

To Whom it May Concern,

I am writing in regard to the proposed 'Belfort Landing' development at 1582 Forest Ave in Portland. I know you've already heard from several of my neighbors, and I share many of their concerns about this proposed project. In addition to permanently changing the character of a hundred year old neighborhood, I have serious concerns about the increase in traffic and pedestrian safety after the addition of 50 housing units/apartments on our quiet, little side street.

My biggest concern personally is parking/traffic, so I will start there. The proposed development will feature only 50 parking spaces for 50 units, despite 30 of these units being two bedrooms. This is simply insufficient and will force overflow parking directly on to Belfort Street, which is not equipped to accommodate it. While many current residents park on the street from time to time, this development will likely lead to the segment of Belfort directly in front of my property (34 Belfort) to be lined on both sides with cars that do not fit in the development's 50 parking spaces. This is both a traffic and safety concern. Several neighbors got together on a recent Saturday and parked on both sides of Belfort to simulate what it would be like with the influx of new vehicles and the results were terrible (see attached pictures). This was done with some snow on the ground, but well before our total snowfall doubled over the course of 10-14 days in mid-late February, shrinking the roadway even further. With vehicles parked on both sides of the road, the result was a single lane that was only 9-10 feet wide. While this is passable for a regular passenger vehicle, larger vehicles like delivery trucks, city plows and first responders (fire trucks and ambulances) may or may not fit through this gap depending on how well people parked. I live on the slope of Belfort; if the road isn't properly plowed I likely will not be able to get out of my driveway and up the hill.

Additionally, there is no light at the top of Belfort (intersection with Forest), which makes turning left onto Forest Ave a challenge at certain times of day. Adding 50-100 more vehicles to the mix will only exacerbate this issue. At peak travel times, it's quite likely the traffic waiting to turn onto Forest from Belfort will stretch down Belfort back into the area that will be the primary overflow parking for this development. This will make the road essentially impassable for anyone turning onto Belfort from Forest.

This overflow parking is also a safety concern, for the same reason it is a traffic concern. There are no sidewalks on Belfort, save for the first 50 feet on one side. But we have significant foot traffic, including a large amount of children walking to and from Talbot School multiple times per day. If Belfort becomes a single lane due to the overflow parking, these children will be forced to share this 9-10 ft wide strip of road with vehicles travelling in both directions. Outside of the safety of these school children, roughly 75% of the homes on Belfort St, Verrill St, Iffley St and Empire Way have dogs. Walking your dog on the Belfort loop has always been a very safe option compared to Forest Ave and the surrounding area because Belfort is not a through street so traffic is limited. The combination of the influx of traffic and the increased amount of on-street parking will make the street much less safe for pedestrians of all ages.

I strongly urge the city to require the developer to pay for a traffic study to assess the true impacts the massive influx of vehicles will have on the neighborhood. While I know this property has been zoned for even more units than are actually planned for this development, even the proposed 50 units is way too much for this small side street to accommodate. I also understand there is little the neighborhood can actually do to prevent this development as long as the developer follows all applicable laws and codes, but I would encourage the City to consider at least scaling this project back to ensure that the development will have sufficient parking onsite making overflow parking on Belfort rare to non-existent.

Finally, I'd like to address the character of the neighborhood and the negative impact this development will have on that. Again, I understand that the development site has been rezoned for multi-unit expansion, but the entirety of Belfort St, Iffley St, Verrill St and Empire Way are single-family homes. The proposed 3-story structure will be built on a raised, back-filled lot and will completely dominate the landscape of the entire neighborhood. I believe it will be in full view from literally every house on all of Belfort, Iffley, Verrill and Empire. There simply is no design aesthetic that will prevent this from being anything but an eyesore for the entire neighborhood. The proposed structure will be particularly intrusive for the several properties that abut it directly. Because the lot will be raised prior to construction, the new structure will tower 20-30 feet over houses that sit within 50 feet of it. This new aesthetic, along with the parking situation are likely to drive down property values, especially for those houses in the immediate vicinity of the proposed build (those within a few hundred feet).

In conclusion, this proposed development is simply too large for the area in which it will be built. I understand cancelling the project entirely is probably unrealistic, but I urge the City to consider at least requiring it to be scaled back (to 25 units or fewer) in order to minimize the negative impacts on the surrounding community. I also request that the developer be required to pay for a traffic study to more fully understand the impact this project will have on this quiet side street.

Sincerely,

Grant Chamberlain

James Spear <jamesspear99@gmail.com> Feb 15, 2025, 7:40:15 PM (3 days ago)
to Eric Freeman, planningboard@portlandmaine.gov, friendsofbelfort@gmail.com, Liz Berg

My name is James Spear,

My home is 111 Verrill St, Portland, ME 04103.

As I am not 500 feet from the proposed Belfort Landing, I was not alerted to the public's information meeting at Riverton Center. Thankfully, word or mouth from concerned citizens allowed me to block out time to attend.
If there were proponents of the development at the meeting they were mute.
The rest of the room was vocal and opposed, as am I.

I realize there are correct political and legal steps to curtail, oppose, and defy a new development within a community. **Let this letter register myself as a concerned citizen against building Belfort Landing.**

50 apartments with 50 parking spaces with one egress, leading to and from a blind access point half way down a hill, leading to a neighborhood proud of the security in their streets for themselves and their children is not in the interest of this tight knit community.

I understand, with the hope to preserve public safety, and as the first initial avenue of opposition, **a traffic study must be performed**. This is my first request. Please request a detailed traffic report, and provide thorough evaluation for all concerned citizens so we may know what to expect.

With this information we will take the next steps to thwart the next step in the path to the future development of this property, and will continue to do so ad infinitum.

I implore you to recognize the implications of said development; Not just on the 500 feet left and right of the proposed "driveway", but also on the broader effects that will occur on Forest Avenue and the surrounding community. Belfort Ave flows into Forest Avenue one traffic light away from the Fire Station and access to the The Gerald E. Talbot Community School.
I work on Commercial Street in downtown Portland. Turning left onto Belfort Ave is already a nightmare - regardless of the time of day. Traffic impeding my access to my home's neighborhood was the one concern I had to justify when purchasing my house in 2012. I bit the bullet and have been happy with the decision ever since. However, if Belfort Landing had been in place when I was searching for a home for my family, I would have kept looking and you would not be receiving this letter from me.

We all suffer enough through Morril's Corner, and then again through Woodfords Corner, and have subjugated ourselves to being powerless to the traffic snarl occuring every morning at Starbucks & Reed St. ... Adding another congestion point directly next to vital community services at the juncture of Forest + Belfort + Harris + Morrans Market + Riverton Gas Station + The Gerald E. Talbot Community School access road + the traffic light, and many other junctures serves no one except one contractor for profit. ... Yes he himself may have a family to feed, but he will not do it freely without the educated diplomacy from the affected neighborhood...

Start first with a traffic ordinance please, and then suffer through every ordinance that must be passed.

The community's collective opposition will be forceful and determined at every turn. We realize it is not going to be easy for us, and are prepared to make it uneasy through the decision process at every turn to create the change we can all agree upon. Most importantly, we want to make it a public record that we have been heard and are not delegated to the casualties of "progress". Singularly I sign this with the backing of a community I may or not know by name, but the result is the same. Save everyone lots of wasted time and money. Prevent the development of "Belfort Landing", and make it easy for everyone with an accurate traffic study that details the absurdity of the proposition.

Insisting,
James Spear

Proposed Belfort Street Apartment Complex

1 message

Jeannie Dorr <jsd84834@gmail.com> Sat, Feb 8, 2025 at 2:32 PM

I am very concerned about this new proposed apartment complex and here are some of my thoughts about this proposal.

Sincerely,
Jeannie Dorr

Planning Board-Portland.docx
14K

I am contacting the Planning Board regarding the proposed 50 unit apartment building with access onto Belfort Street. This property would add 50 to 100 cars to Belfort Street and their access onto Forest Ave. The neighborhood is already overcrowded with traffic from the Talbot School. Many of these families park on Belfort St. and Empire St. to drop off and pick up their children because of lack of parking at the school. The increased traffic from this complex would cause a danger to all of the children walking to the Talbot School each and everyday. The lack of sidewalks on Belfort Street just magnifies this issue.

The City of Portland needs to take a closer look at this project and the hazardous impact it would have on our neighborhood children's safety as they walk to and from school. Is the City of Portland so desperate for rental housing it would allow this too large a project in a very small space to be developed?

I have a couple of questions regarding the access road onto Belfort Street. I would like to know just what the setbacks are for the space between this road and the two houses along side it. Does the developer have to build a buffer zone between the access road and these two houses? Is there going to be a buffer zone between all the houses surrounding this total project? Is there enough space to build this zone with all the parking spaces they will need for 50 to 100 cars plus any overflow? Does this complex have enough space to do winter plowing without moving many of these cars onto Belfort Street?

I attended the initial meeting at Talbot School on Feb. 5th. I wish that the Planning Board had been represented at this meeting and perhaps they would have had a true picture of the impact this development would cause to our neighborhood and their children. All of the voices at this meeting were loud and strong against this project.

Dear Mr Freeman
I live down the road behind Belfort street and am very concerned about this new 50 unit development project. If not for my community I wouldn't have even heard of it since I received no prior info. As things stand right now Belfort has issues with incoming and outgoing cars. It is next to
Impossible at times to make a left hand turn on to Forest Ave. There is a heating/plumbing co right on the corner of Belfort where they park their multiple large vans since their parking area is very small and they share it with a barber shop. Moran's market is on the other side of Belfort where customers exit out of on to Belfort to access Forest Ave. Belfort is not a wide enough street especially when there is snow piled up in the winters. This planned development of 50 units will create a disaster. Most families have multiple cars so with one parking space per unit, the cars will overflow on to Belfort to park. It would than be impossible for emergency vehicles to even get down the street not to mention oil trucks and other large vehicles. We need to have a traffic study done first and foremost before moving forward with this housing project. Please look at all angles before rushing in to this project. Belfort is also a street without sidewalks where kids access the school that is right there as well. Thank you for taking my concerns seriously
Sent from my iPhone

Liz Berg <lbfmgt@yahoo.com> Feb 6, 2025, 7:23:32 PM (13 hours ago)
to planningboard@portlandmaine.gov

To Eric Freedman,

I learned of the subject development plan only this week although I live on Verrill St. We received no prior notification. I learned of the project through the neighborhood grapevine.
This development does not belong in the proposed location. Adding 50 households to a neighborhood of 72 single family homes, an increase of 70 % in density would impact the neighborhood in many unintended ways. If the transportation infrastructure could handle this increase, I would be surprised. Belfort has no sidewalks. School children walk up and down to or from Forest Ave. constantly as they are dropped off at the intersection by school buses. Neighborhood kids ride their bikes up and down the street as well. There simply is not enough road shoulder to absorb the added traffic without some very predictable negative consequences. Pedestrian-vehicle accidents, snow plow accidents/damage to vehicles, fire truck failures due to the narrow passageway between parked vehicles, to name only a few.

Please do not support this development in its current form. It needs to be scaled back to fit the neighborhood in its present condition.

Thank you for your consideration.

Melissa Blanchard <joelmissy1968@gmail.com> Feb 19, 2025, 9:14:44 PM (11 hours ago)
to Eric Freeman, planningboard@portlandmaine.gov

Dear Eric Freeman and Planning Board Members,

My name is Melissa Blanchard and I live at 144 Belfort Street. I am very concerned about the project, Belfort Landing, that Alex Coupe wants to build on Belfort Street.

I understand that the land has been rezoned to build on; however that does not make Belfort Street a suitable place to build this enormous 3 to 4 story building for many reasons.

First and foremost; the traffic flow will increase and overflow parking will be on the side of Belfort and Verrill Street.

We now have several group homes on Belfort and Verrill Street. These group homes sometimes require several staff members to care for the residents.

Their cars are often parked on the side of the street. During snow storms, parked cars on the street are often not moved; thus the city plows can't plow the street properly.

The fact that this proposed development only has one parking space per unit and no overflow parking is very alarming. How many people are allowed per unit in a low-income apartment in

the City of Portland? If individual families move in, with more than one car; where will their second car be parked? This is a huge development and Alex Coupe could not give

us a comparison to other projects of this scale because he said he has not built a project of this size before.

I am not opposed to development but this project is too big for our small street. Single family homes on that land would be most better suited for Belfort Street. At the neighborhood

meeting, Alex Coupe said he did not have enough footage to build single family homes. I would ask that he be given an exception to build single family homes; which would be more

reasonable, and comfortable for the tax paying citizens who live here.

I strongly believe the Planning Board members should require Alex Coupe to pay for a traffic study to determine how a 50 unit, 3 to 4 story, apartment complex would increase traffic on

Belfort, and Verrill Street and Forest Ave.

I have to leave for work earlier than required in order to get out of Belfort Street in the morning. Taking a left to go to work is frustrating because of the traffic on Forest Ave. Even if Alex

Coupe puts a traffic light at the top of Belfort, I still believe the cars trying to get out onto Forest Ave would be too great.

Homeowners walk their children to school, and others drive their children to school, others, like myself, have to turn left every morning to go to work. If I don't turn out by 7 am, traffic

picks up significantly.

Other concerns I have are with the amount of people that potentially could live at the Belfort Landing complex. There is potential for an increase in crime and cars speeding up and

down Belfort and Verrill Street.

Since the homeless shelter was built on Riverside Street several neighbors on Verrill and Belfort have had their cars ransacked and money and computers stolen. I had money

stolen out of my car. Video was taken of a hooded man, near my house, and a stolen computer was traced to the Homeless Shelter on Riverside Street.

Currently, there are people speeding up and down the street; while neighbors are walking their dogs, strolling their babies in baby carriages, walking alone. Also, children ride their bikes and

walk on Belfort and Verrill Street to go to school at Talbot Elementary. It would seem that 50 units with an unknown number of people living in each apartment would increase traffic

on Verrill and Belfort Street significantly; making it a risk to walk on Belfort Street alone, or with dogs and children.

Elected officials of the Planning board, I would ask that you would please come out to our neighborhood and speak with the neighbors on Belfort Street and Verrill street. Discuss with

the residents that live here, what our concerns are, and what we witness living here.

I have lived on Belfort Street since 1969, when my parents built their house at 163 Belfort Street. My grandparents also bought the only house on Verrill Street in 1947 for $5000 dollars.

I have seen many changes on Belfort Street since the 1970's when I was in elementary school, at Riverton School. I was in third grade in 1977, when Riverton school first opened.

I witnessed Verrill Street being developed in 1995 with single family houses after growing up on Verrill with only one house, my grandparents on Verrill Street. I have seen

group homes move into the neighborhood, and now several homes are being rented out. Alex Coupe even built a large house next to my 936 square foot house on Belfort Street.

I can adjust to these changes; however, to put a complex of that size on Belfort Street would be devastating for the tax paying citizens who bought their homes in this neighborhood because

of the way Belfort and Verrill Street are now.

The other concern is flooding. We have clay soil here. My basement has flooded out so many times that in the fall of 2023 I had to spend $18,000 dollars to get mold out of my basement.

When I found out Alex Coupe was going to build a house beside my house, the first thing I discussed with the key City of Portland person in charge was I did not want my basement to flood

out and needed to make sure there was proper drainage.

What is left is standing water; a small pond of water between my house and my neighbors house. I was disappointed that standing water was left in a pond with rocks as a drainage method.

Other questions I have are:

1. What environmental studies have been conducted to assess the impact of this development on local ecosystems, waterways, or wildlife?
2. How do you plan to address increased stormwater runoff and potential flooding issues caused by this development?
3. What sustainable design features exist in the building: Energy conservation; water efficiency; low-impact sustainable material procurement; How will heat and air conditioning be powered?
4. What environmental protection measures will be mandated for construction? And how long will construction go on (duration)?

Infrastructure and Community Resources

4. How will this project impact traffic in the neighborhood? Have traffic studies been conducted?
    a. How is the proposed development going to handle all the extra traffic on Belfort Street? Without a stoplight, it's already tough to turn left onto Forest, and this will make the congestion even worse.
    b. How is the proposed development going to impact when school is in session during the mornings and afternoons when Forest already gets backed up
    c. How is the proposed development going to impact when school is in session during the mornings and afternoons when Morrill's Corner is already overwhelmed with traffic
5. How do you plan to accommodate the increased demand for utilities like water, sewage, and electricity?
6. Have you considered the strain this development might place on local schools, emergency services, or healthcare facilities?

Zoning and Compliance

7. How do you justify the scale or density of this project given the character of the surrounding neighborhood?

Economic and Social Impact

9. What guarantees do you offer that this development will benefit current residents and not just new ones?
10. How do you plan to mitigate potential increases in property taxes or housing costs for existing residents?

Transparency and Accountability

11. What feedback from the community have you incorporated into your plans so far?
12. How will you keep the neighborhood informed about changes or issues during construction?

Aesthetic and Quality of Life

13. How will you ensure this development aligns with the aesthetic and character of the neighborhood?
14. What steps will you take to minimize noise, dust, light and trash, and disruption during construction?
15. What steps will you take to minimize disruption after construction?
    a. **Lighting**: How will the lights from the development parking lot stop from shining in the windows of residents?

i. The plan discusses lights that are in accordance with Portland zoning regulations. Many multi-unit facilities choose wide-arc LED lighting that operates at a very high "color temperature". These "Daylight" levels would be inappropriate for the existing neighborhood. We ask that you ensure exterior lighting for parking lots, door entrances and perimeters to be closer to the 3000-3500K range to minimize the impact of lighting on the bordering properties.

b. **Privacy**: How will the development ensure privacy for Bellfort Street residents? Very close proximity and higher rise than the houses.
c. **Noise**: with a parking lot abutting Belfort Street neighbors, how will the development stop traffic noise at all hours of the day and night?
d. **Smoking**: is there a designated smoking area? How will you ensure folks will not loiter in the parking lot blowing smoke into neighbors yards.
e. **Trash**: how will the development be sure trash does not accumulate and cause stink/littering/animal issues, etc.

Alternatives

15. Have you considered alternative designs, scales, or uses for the property that might meet the scale and density of the existing neighborhood?

Carter Frank <cfrank@portlandmaine.gov>

Major concerns with 50 unit apt. complex going up on Belfort Street.

1 message

Melissa Blanchard <joelmissy1968@gmail.com> Wed, Apr 2, 2025 at 3:14 PM
Reply-To: joelmissy1968@gmail.com
To: planningboard@portlandmaine.gov

Dear Planning Board,

I respectfully urge you to reconsider your decision regarding the proposed construction of a 3-story, 50-unit apartment complex on Belfort Street.

Have any of you had the opportunity to view Belfort Street during peak hours, when cars are parked along both sides of the road? This makes it incredibly difficult to safely exit onto Forest Avenue, especially during the busy morning hours. At times, two vehicles are parked on opposite sides of Belfort Street, forcing me to wait for one of them to move so I can squeeze by. Additionally, business trucks servicing Mietta's Plumbing, located at the top of Belfort Street, further complicate the situation.

My primary concern lies with the lack of parking for the proposed 50-unit complex. With only one parking space allocated per unit, it seems highly insufficient, particularly considering the possibility of multiple occupants per apartment. For instance, could there be as many as 7 occupants per rental unit, as is sometimes allowed in the City of Portland? If each unit holds two occupants with two cars each, this could add up to 100 additional cars, all of which would need parking. The overflow from this would likely spill over onto Belfort Street, worsening the already limited parking situation.

Furthermore, we are already dealing with the impact of two group homes on Belfort and Verrill Streets, which add to the parking congestion due to the numerous staff members required to care for the residents. With these additional vehicles, the current parking shortage is further exacerbated.

Lastly, I am deeply concerned about the increase in traffic that this project will bring. The higher volume of vehicles presents a serious risk to the safety of young children who walk to Talbot Elementary School.

In light of these concerns, I ask that you carefully reconsider the implications of this development on our neighborhood and if the project must go through, please limit this project to single family homes only which is in character with our current neighborhood.

Thank you for your time and consideration.

Sincerely,

Melissa J. Blanchard

1584 Forest Ave Development (PL-003161-2024)

1 message

Mitchell Thomas <mitchell.t.sacks@gmail.com> Tue, Apr 1, 2025 at 2:25 PM

Dear Planning Board,

As Riverton residents – specifically Verrill St – we have been following along with the proposed 50-unit, two-building residential development of 1584 Forest Ave (Plan Number: PL-003161-2024). While we hesitate to add to the "not in our backyard" rhetoric, we want to make our concerns clear to the Planning Board that this proposal, as currently planned, is a bad idea for the Riverton neighborhood and a bad idea for our city. As Portland continues to grow, we recognize the need for increased housing, however we urge the Planning Board to think long-term, strategically, and how development can either hurt communities or strengthen them – on outer Forest Ave, specifically, an opportunity exists to create community development welcomed, celebrated, and enjoyed by EVERYONE. Sacrificing long-term pain for short-term gain (i*n the form of high-density, unappealing, cheaply designed housing*) is not the answer.

With the density being proposed at 1584 Forest Ave, there are a number of negative consequences the residents of Belfort, Verrill, Empire Way, Iffley St and surrounding streets will endure. Below are a few points noting the most critical consequences of this development.

On-Property and Street Parking:

The proposal is for a 50-unit multi-building footprint consisting of **twenty (20) 1-bedroom and thirty (30) 2-bedroom apartments** with only 50 on-property parking spaces. An apartment complex of this footprint could yield **100 residents, if not more.** With certainty, 50 parking spaces will not support the volume of residents living or visiting the proposed complex causing both residents & guests to subsequently park along our neighborhood streets – streets where residents walk dogs, jog, kids ride bikes and play, and people enjoy. These streets cannot support the expected volume of cars that will ultimately **clog our streets, diminish our privacy, and eliminate the quiet enjoyment of our properties**. Furthermore, these streets are **utilized by CHILDREN** walking and riding bikes, often unaccompanied by adults, to the Talbot Elementary School & Riverton Community Center from not just our neighborhood, but many neighboring areas. Without appropriate infrastructure such as wide streets, independent raised sidewalks and bike lanes this development will without doubt jeopardize the safety of these children.

Attached I have included a picture (*Belfort_Congestion.jpg*) showing what will become the norm on Belfort St if the proposed complex is approved as is. This picture was taken during a recent holiday get-together at a household on Belfort. As you can see, parking along both sides of the street will create dangerous congestion on a dead-end neighborhood street.

Other concerns include the following:

- On-property snow removal: Will cars be instructed to leave the lot for snow plowing? If so will they park on neighboring streets and impact the ability of snow removal on streets?
- Emergency service vehicles such as firetrucks and ambulances will not be able to access households within the neighborhood if there is significant on-street parking along Belfort, Empire, and Verrill Streets.

Traffic and Safety:

The density proposed at 1584 Forest Ave will create a significant increase to local traffic on Belfort St and Forest Ave, leading to increased congestion, noise pollution, and safety risks. At peak hours during morning & afternoon commutes and school drop-off/pick-up at the Talbot Elementary school, Forest Ave between Riverside Industrial Parkway and the junction to Stevens Ave becomes a near standstill. From Belfort St, it is already often nearly impossible to make a left-hand turn with the traffic heading towards Portland and the congestion that forms at the redlight for cars making a left turn into Talbot Elementary School.

Further, infrastructure does not exist along outer Forest Ave to support alternative forms of transportation such as bike-commuting that could alleviate congestion. Yes, bike lanes exist along this section of Forest Ave, however they were not designed to promote bike safety. As an avid cyclist who has ridden over 20,000 miles over the last few years across New England and Canada, I am most afraid of riding on Forest Ave than any other place in Maine – it's a commuter route with high traffic, high speed, has many intersecting streets in/out of neighborhoods, and poorly designed bike lanes. I am worried that increased density will diminish pedestrian safety for myself, my family, fellow cyclists, and our community.

We urge the planning board to conduct a **NEEDED** traffic study along Forest Ave at peak hours, including but not limited to:

The Belfort St and Forest Ave junction
The entrance to Talbot Elementary and Forest Ave
From the junction of Riverside Industrial Parkway and Forest Ave to the junction of Forest Ave and Warren Ave

Economic Loss:

As a homeowner in the vicinity of the proposed development, the introduction of a large-scale building in a residential neighborhood will have significant negative consequences on property values. Research has shown that the proximity of high-density developments to single-family homes leads to a decrease in home values. This can occur for various reasons, including changes to the neighborhood's aesthetic,

increased traffic congestion, strain on local infrastructure, and potential concerns about overcrowding or overdevelopment. These factors could alter the character of the neighborhood and deter prospective buyers from purchasing homes nearby. Furthermore, residents who have made significant investments in their homes could find that the return on those investments is compromised by the increased density and accompanying changes to the community's overall appeal. I urge the Planning Board to take into consideration the economic ramifications this development may have on property values. In addition to the immediate impact on home values, there is also the long-term effect of reduced equity for homeowners who could face difficulty selling their properties in the future.

Proposed Development Architecture and Aesthetic:

The neighborhoods along Forest Ave largely consist of single-family Cape style homes, including our neighborhood. The proposed 50-unit complex fails to meet the architecture and character of the area. It is clear from the proposed renderings of the complex that no attempt to implement modern, aesthetically pleasing design elements that mimic the character of our city or neighborhood were considered. Rather, it is clear to us that the only goal of the developer is to build the quickest, cheapest complex possible to maximize their profit. There are some really fantastic examples of "development done well" across New England, however this is not one of those cases. We hope that the planning board and developer can take a community approach to any development being proposed at 1584 Forest Ave so something really great for our community can be created – a residential complex that architecturally blends with the neighborhood, as opposed to an eye-sore monstrosity.

Developer Comments at February 5th Community Meeting:

At a February 5th community meeting regarding the development of 1584 Forest Ave, the developer Alex Coupe (ACRE Properties) failed to address concerns from residents of the community – most concerns or questions were unprofessionally "shrugged off" or unanswered. It was clear that Alex Coupe and ACRE Properties has no interest in making Portland a better place, but rather maximizing his own profits at the expense of our community. Further, I'd like to make the Planning Board of two comments made by Alex. These are:

- Noted that overflow apartment parking will be on the streets
- Noted that "Nothing is stopping him" from using the apartment complex as overflow housing for the sober group home on the adjacent property

We decided to make Verrill St our home because of the low-density, proximity to the Talbot Elementary School & Riverton Community Center, and the character of the neighborhood. We hope this neighborhood can continue to be a desirable place to live, work, and enjoy – we know that the inclusion of a 50-unit apartment complex will negatively forever change the neighborhood we love and its community.

If this proposal for development is ultimately approved, we urge the Planning Board to force the developer to incorporate changes proposed by the community to ensure this will be a win-win for all parties affected.

Sincerely,
M. Sacks

Proposed Belfort St development

1 message

Nicola Kerley <nicolaakerley@gmail.com> Mon, Feb 24, 2025 at 4:19 PM
Reply-To: nicolaakerley@gmail.com
To: planningboard@portlandmaine.gov

Hello,

I own a property on Iffley St with entry through the Belfort and Verril St

I am very concerned about the size, lack of proposed parking, and building time for the proposed development.
I do not wish for this development to negatively effect my tennents and neighbors.
This new proposed residence, even just on paper, does not seem decent for new incoming tennents of the proposed development, as it is proposed to have the absolute minimum parking allotment per unit with only one entrance and exit at the top of Belfort st. Effecting the whole block with a dangerous amount of traffic.
The last time a building proposal was made in the area of this scale, it was turned down due to ground stability.
This new developer has done a private study, that I do not trust, based on living through that early 2000s proposal's denial.
I worry about possible flood and collapse of something to that scale down the line.

This proposed development is also directly in front of the Gerald E. Talbot Community School (formerly Riverton Elementary). Which would be fine, if the building time wasn't a proposed 18 months straight. Effecting the learning of every child that attends that elementary school for two school years, in a time where these kids are still getting their test scores up from the pandemic.

As a kid who grew up on Iffley St; in the past, houses construction was only done in the summer. I remember a house taking a couple of years to build on Verril St, because they only did construction outside of the school year.
At that time our test scores as a state were in the top 5 of the country. We're circling the bottom now. So why would we actively, as a city, work to curb the education further by creating a distraction to these kids for more than one full school year?

I am also very concerned that this proposed development is being touted as "lower income housing" (something the state truely does need), but will cost individual units pay more than the two story house I currently own and rent out.
How are people in lower income ever be able to afford 800 sqft units, if the rent is more expensive than the rent of a two story house on the same block?
Why should anyone pay more for a 800 sqft unit than a two story house?
Why should anyone pay more for a 800 sqft unit in Portland, ME than I do in the San Francisco Bay area, CA? (I am not on any lower income housing in Califonia, and the proposed rent for a single unit is more than my apartment rent where the minimum wage is CONSIDERABLY higher)

I say this, as I love my home city and i care for my tenants. I do not see simply being a landlord or property owner as a job to earn from. Their rent goes directly to property tax, stormwater, etc. It is only my responsibility to ensure that my tenants are comfortable and content with their residence, until I personally come back home and retire there. No one that actually lives in the area is happy with the size or proposed construction of the development, let alone my tenants who will be directly effected by the construction and traffic created by said proposed development.

In the attached photos, is example of how clogged the street can already get without this new development.

I urge for a unbiased traffic study to be done at the corner of Belfort St and Forest Ave, and an unbiased soil test.

If possible, even a decibel reading from the classrooms of the school to construction sounds of where the development is proposed.

I personally, would be okay with a 5-10 unit development- less risk for building, construction, and would make it easier to charge less for rent- more possibility to have a least two parking spots per unit and/ or guest parking- good for any possible tenants of a state that snows- and an exit route to ALSO be on to Forest Ave - to relieve traffic from Belfort St-

The developer took these suggestions as a personal affront, instead of any form of compromise.
Stating, "I don't care, the state will pay me."

Overall leaving a horrible impression for my tenants, old & newer current neighbors, and myself. Especially since the properties were mostly bought off of our deceased and/or widowed neighbors to essentially create personal issue for those alive, instead of creating actual support to those who could actually use it.
That's like if I had jacked up the rent of my property, and removed the driveway just because my parents are dead. And said, "I don't care, I'll have more money."
I could. Legally. It would only be unconscionable.

I beg for your and the planning board's consideration on this matter.

All the Best,
Nicola Kerley

Dear Planning Board,

I am writing to express my deep concern with the Belfort Landing development proposal. (PL-003161-2024)

My husband and I moved into this neighborhood 5 years ago because it is quite, safe and away from the congestion of city life. We had a baby last year, as did several other neighbor/friends on this street. The appeal of this in particular neighborhood, is that it is low traffic, not a through street and safe. Approving this proposal as is, would be detrimental to life as we know it here.

The developer, Alex Coupe, during the proposal meeting was arrogant and dismissive of our concerns and there are many. He also called us NIMBY's which I find both snide and to be gaslighting.

1. This developer is severely underestimating the affects of his no parking plan for such a large number of units. He is proposing 50 units and ONLY 50 parks spots!!! That's insane! Majority of families have at least 2.5 cars, I confirmed that with our home insurance company, State Farm.
2. a. while using public transportation would be ideal, it's unrealistic to think enough people will use it instead of their cars and even if they do, they'll be leaving their cars parked on Belfort and Verrill.
   b. there will be, on the very low end, at least 50 additional cars piling onto Belfort St and that's just for the tenants, let alone their family and friends visiting.
   c. Adding additional traffic and cars is an accident waiting to happen! There are a ton of kids, families and dogs here. Also numerous families who walk their kids to school.
3. We got together as a neighborhood and parked an additional 25 cars at the top of the street and chaos ensued!! Please see the attached photos.
4. a. many people who didn't know we were doing this were overwhelmed by the number of cars and how our street became a single lane road. People had to pull over into someone's driveway to make space for another vehicle to pass.
   b. If you allow well over 50 cars (that's just tenants) to park along our street, that will eliminate any parking for our friends and family who visit.
   c. We don't have side walks.

d. Our neighborhood was not designed with the foresight to accommodate the parking needs of multi-family complexes, it will make navigation a nightmare.

3. i. We will need signage and where will all those cars go during snow storms. The plow is 11 ft, and the distance between 2 cars with snow on both sides of the street is 9 ft. Plows won't be able to plow properly. Where will all those cars go???? there's no parking lots around here.

d. plows, fire trucks and delivery trucks will not be able to pass easily as it will be a long single land road, leading to longer response times.

e. The traffic at the top of Belfort street is already tough, especially at rush hours. There are multiple businesses, so at times, there could be 6-7 cars waiting to pull out of Moran's, the plumber/barber shop, Harris St, Riverton Station, the gas station and the school driveway. Adding so many more cars to come out of a non-through street will be endangering the safety of that area.

5. We already have a problem with vehicles outside the neighborhood driving too fast up and down our street.

6. a. we've had radar speed signs on our street in the past

b. several neighbors have used the Fix-It app to request speed bumps to try and reduce speeding.

7. Noise pollution

8. a. The trees currently buffer the noise from the school and fire station and from the very busy Forest Ave, adding at 50 unit will increase the noise immensely.

9. He has to elevate the land by 8 feet, then build a 3 story building! Talk about invasion of privacy for those of us in front of and across from the monstrous building. Please see the attached photo from a rendering of what it would look like.

10. a. High-density multi-family units mean more people. This translates to increased pressure on existing infrastructure like roads, sewage systems, and public utilities.

11. The walking path on Empire that leads to the school used to be called Wirt St. It was closed due to an increase in traffic and the neighborhood found it too dangerous so they turned it into a walking path instead. Why would we invite such a large number of cars to congest our street again when it was already deemed dangerous. And that was just for school/community center traffic.

12. The developer already admitted he is illegally using the conservation easement on the school driveway to enter the property. He laughed and called himself a 'pirate' due to the piracy of the illegal act. If he's already pulling that, our trust in him is already low.

13. His rendering are very misleading! There will very limited green space and trees left. They don't adequately show the height in comparison with the surrounding cape style homes. Please again, see the rendering.

14. where will the snow go? in the winter he'll have to plow the snow somewhere and that again will eliminate even more parking spots, causing more cars onto our street.

15. The homeless are also a concern for our neighborhood. With the addition of 100 more cars on our street, it makes for an easy target for those experiencing homelessness to attempt car break ins. We have had numerous car break in's in our neighborhood

16. My husband was also hit by a car while riding his bike to work. He was hit right around the corner from Belfort St, on Forest Ave. He suffered immense bruising to his abdomen, thankfully nothing was broken. Receiving that phone call was unbelievably scary and I don't want that to happen to anyone because that could have ended very differently.

Please reference the photos we took of what only 25 cars looks like, imagine 50-100 more!
This project is wreckless, dangerous and irresponsible.

In conclusion, just because something is suddenly re-zoned, doesn't make it the right choice for the area. Approving this project will be an absolute detriment to our livelihood as we know it. You would be approving an irresponsible project that does not benefit current residents, you would be endangering the lives of our children and families. We live here for the quiet and safety that it currently offers. We are already priced out of Portland, most of us cannot afford the current home prices so we will be stuck having to choose between enduring this project or moving. out of Portland completely, which none of us want to do.
He seems to think he has the planning board in his back pocket so I implore you to consider a heavy revision of this proposal and make it reasonable and realistic for what would better suit our neighborhood. He built a 9 unit in Westbrook, that would fit just fine because he can use the rest of the space for parking, like all other apartment complexes in the area offer.

Regards,

Rachelle Lambert

Eric Freeman
Portland Planning Board

Topic: Small Space for Large Buildings

Anyone with a social conscience is aware that the City of Portland has a housing shortage and understands the need to correct this problem. However, the “Belfort Landing” project proposed by Alex Coupe is not a realistic solution.

A 50 unit development on a two acre parcel needs to be intensely scrutinized before any approvals are granted. The “Landing” would have 25 one bedroom units and 25 units with two bedrooms which would conceivably accommodate over 150 residents, but with parking for less than 50 cars. The remaining estimated 100 would be parked on Belfort Street.

This is a laudable project which could help to relieve some of Portland’s housing crisis, but not in this limited space. It needs to be built in a location suited for the amount of people it’s trying to serve.

My numbers are not exact, but an independent study is definitely warranted. The board should also require a comprehensive traffic study before any approvals go forward.

Eric Freeman
Portland Planning Board

Reference: Traffic Study

The neighborhood has been testing the impact of “The Belfort Landing” project on the traffic flow of Belfort Street. With the developer’s limited vehicle accommodation, this street is the obvious alternative for a possible 100 plus cars left without places to park.

It was a telling experiment as drivers tried to maneuver in both directions while Verrill Street traffic tried to merge. With an experiment using only 16 parked cars lining both sides, only a single lane was available for two lane travel. Presently, with just casual parking, drivers have to be courteous to each other to allow safe passage.

The Planning Board needs to require a comprehensive traffic study before any approvals go forward.

Reply-To: thespizuocos@gmail.com
To: planningboard@portlandmaine.gov

In February, "Belforters" created a mini scenario to demonstrate the effects of a possible 100 plus vehicles being forced to park on narrow Belfort Street. Because of the lack of adequate parking at the proposed “Belfort Landing Project” there will be no alternative but this street.

With just 16 cars lining both sides of the street, the snarl of cars piled up in front of my house was very concerning, I quickly realized that anyone with health problems, including myself, should be alarmed. I imagined an ambulance trying to fight if’s way through that sort congestion.

This long existing neighborhood is a mixture of cultures, ages and lifestyles. We deserve the same considerations of all other neighborhoods.
The Planning Board needs to require a comprehensive traffic study before any approvals go forward.

Eric Freeman
Portland Planning Board

Reference: Fire Safety

If the proposed “1582 Forest Avenue Development” comes to fruition, with it's limited parking, there will be no other alternative but for more than 100 overflow vehicles to park on each side of Belfort Street. Our city and the Fire Department should be very concerned about the access to our only fire hydrant and for the ability of emergency vehicles to function effectively on a tightly-parked street.

The Planning Board needs to require a comprehensive traffic study before any approvals go forward.

Eric Freeman
Portland Planning Board

Reference: Traffic to Forest Avenue

As a Belfort Street resident and as a driver, I experience the irritation of trying to turn left onto Forest Avenue on a regular basis.
Adding just half the 150 drivers from the proposed “1582 Forest Avenue Development” to an already difficult situation and there will be extreme frustration for everyone.
Imagine the morning chaos when cars parked on the right, facing downward, trying to turn against the flow of cars heading upward to exit onto Forest Avenue; not to mention the Verrill Street drivers trying to merge.

The Planning Board needs to conduct a comprehensive traffic study before any approvals go forward.

Eric Freeman
Portland Planning Board

Reference: Traffic Survey

The City of Portland needs to support family neighborhoods and the safety of its citizens to maintain its integrity.
The “1582 Forest Avenue Development” has proposed a 50 unit project with possibly 150 residents who would be driving vehicles. It is essential that the Portland Planning Board conducts a comprehensive Traffic Study before any approvals go forward.

Belfort Street will obviously be the parking ground for any and all cars that can’t park by their own units. This will easily be a 100 plus vehicles over-flowing onto a narrow two lane roadway with no sidewalks.

"Belforters" conducted an informal study which proved that this excessive street parking will result in utter chaos.

Reference: Like Housing

My house is a hip roof colonial with two and half stories. It backs up to the “1582 Forest Avenue” lot and seems to be the one that the developer is using as comparative housing. However, this house does not have a car port under it or a full third story. No way does the style, size or impact compare to a 50 unit complex; which will tower over the entire neighborhood.

On a clear day it might be seen from the Observatory on Munjoy Hill. Yes, I'm exaggerating.

Portland needs to support family neighborhoods to maintain the integrity of the city.

Eric Freeman
Portland Planning Board

Reference: Public Transportation?

At the informational meeting held by the “1582 Forest Avenue Developer” in early February, he announced he would be holding educational sessions to inform his new occupants about the benefits of Public Transportation. The audience laughed and so did he.
Out of the estimated 125 people present, only one person was counted as having ridden a bus.

Looking at driveways on this street, there are two to four cars in every yard. Now think of adding more than 75 vehicles with no other option but to park on narrow Belfort Street because of lack of available parking at their new housing; plus the 50 cars that have parking provided. Now, think of trying to maneuver just some of that mess onto Forest Avenue and we’ve got grid lock. No one's gettin No where!

A traffic survey should be required before any further considerations.

Reference: Talbot School Enrollment

With the Belfort Landing Project and its possible 50 families, the educational system needs to consider the impact that the increased enrollment will have on Talbot Elementary School. A good education is the greatest investment in our future. Let's not short change our kids.
Also, the Talbot School driveway will need constant patrolling because of the “convenient”, though illegal, parking for guests of the proposed project.
Casual visitors are not invested in our community and may feel entitled. Not everyone respects the law or the safety of our kids.

Belfort Street has always been a secure community for walkers and runners. Parents with baby carriages, dogs on leashes, people walking to our locally owned corner store; not to mention neighbors just visiting back and forth; have always felt safe with a clear vision of the entire street from top to bottom. With the proposed 50 unit development and a possible 100 vehicle over-flow parking on both sides of narrow Belfort street, that safety will no longer exist. There are no sidewalks here.

Belforters have moved here because we love the safe and casual lifestyle. However, taking a walk could become a dangerous act.

Eric Freeman
Portland Planning Board
Reference: Children's Safety

We have children from Belfort Street and from neighboring streets who walk Belfort as a route to Talbot School. With the "1582 Forest Avenue Development" and the 100 over-flow cars forced to use both sides of Belfort for parking, it's an obvious danger to any pedestrian traffic, especially our kids. There are no sidewalks here.
Imagine an unseen small child stepping out from between parked cars to cross to the school. Now imagine an ambulance trying to rescue that child on this overly parked street.
It may seem unlikely, but that tragedy could easily happen.

Portland needs to support family neighborhoods and their safety to maintain the integrity of the city.

Portland needs more adequate housing, we all agree on that. However, 1582 Forest Avenue project will cause more problems to the community than it's meant to solve.
Problems that need to be addressed:

- Unrealistic number of units for neighborhood
- Lack of proper acreage for resident foot traffic
- Lack of parking spaces within project
- Impact on Talbot School enrollment
- Safety of vehicle traffic on Belfort and Verrill Streets
- Safety for pedestrian with overflow parking on both sides of Belfort
- Integrity of the neighborhood because of lack of homeowner parking

Hi Eric and Planning Board Team,

I am a resident in the Belfort neighborhood (specifically 43 Iffley St). I was unable to make it to the community meeting but heard plenty of details about it, and I'm sure it's clear to you that the neighborhood has very strong feelings about this project.

I'm not 100% against this development- I know the city needs more housing and I do support efforts to create more, however it seems like this particular development is adding more housing at the detriment to its surrounding neighborhood (without providing existing residents with any benefits, yet significantly altering our neighborhood for the worse).

Considering that Belfort Landing feeds directly into Belfort Street, it will have significant negative impacts on the neighborhood and as such, the number of units is far too high. Creating closer to 30 units and ensuring that adequate parking is available within your property, instead of assuming our street will bear much of the burden, would be ideal.

If you've spent much time in our neighborhood, you would know just how many people actively walk through it- with their dogs, their children, and during school drop off and pickup times. Our street has not been designed for excessive street parking, like downtown neighborhoods designed for higher density populations. There are no sidewalks, so significant numbers of cars parked on both sides would both reduce our street to the width of a one-way street (trust us, we parked our cars to determine this), while also eliminating extra room for our residents to safely walk.

From my personal perspective, I am one of the 8+ families who have welcomed babies into the neighborhood this past year. Our neighborhood is incredibly close, and we all hoped to raise our kids together here, but Belfort Landing could change that for us. I used to think this would be the perfect neighborhood for our kids to roam and bike between friends houses. Knowing that 30-50 additional cars could be added to the street (I know from experience, apartment residents often do not take the same consideration driving carefully in places they are just street parking in), that vision for the kids of our neighborhood will not become a reality. I hope you can understand given this context why so many people are upset. (I know there are other concerns too, but this one hits home for all residents, regardless of where our house is placed in the loop)

Thank you in advance for taking the time to read our messages, and I sincerely hope that you will find a way to adapt designs to coexist better with the existing neighborhood.

Sam

To: "efreeman@portlandmaine.gov" <efreeman@portlandmaine.gov>, "planningboard@portlandmaine.gov" <planningboard@portlandmaine.gov>

On Feb 5, 2025, I attended a meeting at the Talbot Community School regarding the proposal of a 50unit apartment complex consisting of 2-3story buildings being built in my little neighborhood.

The meeting was attended by many of my neighbors who voiced opposing this.

At the meeting, the developer/owner of this property, Alex Coupe, was asked if he has any other projects w/50 units, and he replied, that he has only developed up to a 10 unit.
He seemed snide and impatient towards my neighbors, coming across as if his attendance at the meeting was to simply check off a box in order to get his project approved.

Mr. Coupe was asked why he couldn't build a smaller, less dense project, and his reply was that it's his land, and he could've built an even bigger one than he plans for.

Another neighbor, asked Mr. Coupe if he has been *illegally accessing* the land from the school road, and why doesn't he access it from his other property *legally*? He smiled and shrugged.

There is only one way by vehicle in from Forest Ave., to access my street Belfort, Empire, Iffley, and Verrill.

How is this construction going to affect how I get to my home?

How are the construction vehicles going to access the proposed location...will they too, be illegally accessing via the school road?

How is this going to affect my sewer, water, etc., and not to mention the noise and disruption this will cause in such a tight neighborhood?

There will not be enough room left on our streets for people to walk, children to safely ride their bikes and play on Belfort, Empire, Iffley, or Verrill, because of the overflow parking on our streets from such a large complex of 50 units w/only 50 parking spaces?!

Does the developer think that the 2bedroom apartments won't have renters w/2 vehicles?!
Does the developer think that the renters will never have guests or visitors that need parking?!
Does the developer think that there will be plenty of room for those cars to just park on our streets, or park at the school?!

I cannot even imagine the safety issues this will cause...there's barely enough room as it is now for neighborhood visitors, people parking to pick up their kids from the neighborhood school, mail and delivery trucks, garbage trucks, and snow plows to get through safely.
Of course, it is much tighter in winter with snow piles lining the streets.

There's also an incline on Belfort located where the proposed drive-way from the project onto Belfort is...which could potentially create a sort of blind spot for people pulling out onto Belfort.

Crowded streets=dangerous pedestrian traffic situations.

It is also very concerning all the traffic issues this new influx of people and vehicles will cause coming from Forest to Belfort, and Belfort to Forest .

I am asking, at the least, that you make sure that the developer/builder Alex Coupe, does an *extensive traffic study* for this project and makes it public for my neighborhood and the public to read.

-Sharida Perrin

Subject: Concerns - Belfort Street Apartment Complex
To: planni...@portlandmaine.gov <Unknown>, Eric Freeman <Unknown>

Dear Members of the City Planning Board,

I hope this message finds you well. I am writing to express my strong opposition to the proposed development of the new apartment complex in our Belfort Street neighborhood. While I understand the need for housing, I have several concerns that I believe need to be addressed before moving forward with this project.

1. **Water Flow Concerns**: There are significant concerns about whether the existing infrastructure can handle the increased water flow that this development will bring. Proper assessments and improvements must be made to ensure there are no adverse effects on our water systems.
2. **Parking Issues**: The proposed number of parking spaces appears insufficient. This will likely lead to overflow parking on Belfort Street, causing inconvenience and safety issues for current residents.
3. **Traffic Congestion**: The changes in traffic patterns due to this development will exacerbate the already existing congestion in our area. A thorough traffic study should be conducted to understand the full impact and propose viable solutions.
4. **School Admission Availability**: Riverton School is already facing challenges with capacity. Adding more residents without addressing the school's capacity issues will negatively impact the quality of education and accessibility for current and future students.
5. **Loss of Green Space**: The proposed development will result in the loss of valuable green space, which is essential for the well-being of our community. Preserving these areas is crucial for maintaining the quality of life in our neighborhood.
6. **Zoning Concerns**: There are questions about whether this development aligns with the current zoning regulations. It is important to ensure that any new development complies with these regulations to maintain the character and integrity of our neighborhood.

Additionally, I would like to know if a thorough traffic study has been conducted and if the proposed parking on the premises is adequate to meet the needs of the new residents. The 1:1 unit/parking ratio will be inadequate.

I urge the City Planning Board to consider these concerns seriously and to engage with the community to find a more suitable solution that addresses these issues. Thank you for your attention to this matter.

Sincerely,

Toni Giuca

PC.2

For consideration by the planning and zoning board in relation to the “Belfort Landing”

As the plan sits now, I am deeply offended in the audacity and vehemently oppose this current project while understanding the goals and plans of ReCode Portland. I sincerely hope that my comments are absorbed and considered.

Since the Feb 4th neighborhood meeting and especially after the April 8th hybrid meeting, I have been mired in the details on how many things in this proposal are WRONG. Taking a step back from the obvious issues that most residents have expressed. The following is an abbreviated list of my personal additions to the core issues:

1. The Belfort Landing, commonly referred to as 1584 forest ave. is NOT on Forest Ave and should NOT be considered so. to call it this is a blatant falsehood.
   a. Access on forest is for ABUTTING 1584 Forest frontage/hiding behind Morans market parking lot. Honestly, I am not sure HOW the access works and should be looked into. Property in question is ONE FURTHER behind 1584. The plan proposes an exit/entrance on 29 BELFORT st. You have enough comments on traffic and saw in the hybrid meeing the lack of good faith traffic assessments.
   b. I have very little faith on technical “frontage” of at least 50’ required for RN5. Both on Belfort (~30ft) and on Forest (not even physically, or perhaps legally connected).
2. During ReCode 2025, city-wide, most old R3 moved to RN1. This is a welcomed move, even if not perfect. It should increase the number of smaller units on otherwise too small lots by changing offsets and limits. R5 properties were commonly moved to RN3. in fact, about HALF of R5 became RN3. This REDUCED the number of properties that can build absolutely giant structures. At that same time, there are VERY few reZones in the opposite (NEW RN5 additions in ReZone). If you look closely, you might wonder how exactly did this landlocked parcel get approval to rezone into this ridiculous disparity to adjacent properties. To benefit from the ReCode to be insanely massive and dense in comparison to everything in the surrounding neighborhoods, even all commercial space locally (industrial park, the old tortilla flats, anything on riverside) seems suspicious.
3. The design does NOT meet the neighborhood aesthetic or character in any way, nor community approval. Those that argue FOR this have only cited ‘read the ReCode document’ and have not considered the real world effects. Each individual case should be reviewed objectively. A few glaring PHYSICAL problems:
   a. TWO (7600 sq ft each) 3 story, 140 ft long, 50ish wide, 48’tall at the peak. set UP OVER lower belfort by steep RIP RAP wall (4-8" jagged stones) like its the side of a highway. appears to be between 8-10 feet high. Lower neighbors will be dwarfed by 55-65 foot walls. I personally will be able to see this building from commonwealth, over top of almost all the trees.
   b. Huge garbage corral right over lower neighbors. 50 units (30 doubles,20 singles). that is going to be disgusting.
   c. light pollution at night, like a prison on surrounding families.
   d. lack of personal privacy for immediate neighbors.
   e. looming sky rights and shadows/darkness in the day.
   f. will the Talbot school/community center be a de-facto overflow? is that something in the rules regarding that land? or will we have cars up and down forest like when the other local developments have to clear snow, except permanently year round? or worse, belfort st?
4. The developer has not even attempted to compromise on anything since the neighborhood meeting. We all were clearly upset and had real concerns.
   a. The Developers replies in neighborhood meeting were shocking and offensive.
      i. “I could have built 65 units, lucky its only 50” with a sneer. Even now, the latest proposal says 165? units max is possible. which in my opinion is insane for the region (or any land in portland), clearly pointing to the zoning desparity that needs to be addressed in this particular case.
      ii. “Rent will be 2200-2400, lucky it isn't a few years ago, it would be 2800” Rude, ignorant comments and an attitude that our questions don't matter.
   b. His lack of respect for our community and concerns
      i. The NEW proposal is not very different at all and not a single concern has been met.

The current notice rules of 500 ft seems incredibly rude, excluding hundreds of families potentially living in this shadow. Likewise, Current Notice timeline requirements leave little room for working people (regular citizens who don't plan insane commercial buildings on the daily and get paid for it) to review the technical drawings for the building, utilities, site plans, preparation and more. 10 days- minus USPS, for unaware neighbors to review.

Why not two big houses that have great land and single or double family aesthetics? Why not two 12 units? Why not ANY offer other than two warehouses? We are discussing a Cape community, where we aren't even allowed to build a duplex. It just does not make sense.

After further clerical, physical, and visual review/inspection of the Developer and his Associates current properties, His motives seem far from Noble. Arguably Vile. This particular property zoning needs to be investigated and reviewed.

I am saddened that our community feels completely unheard and hopeless. This development is a bad precedent to set. Especially given the clear Absolution against any compromise and seeming disdain for residents. It's difficult to hear our own district representative vouching for this while being hands-off during the neighborhood meeting. Expressing concern for us, but inevitably blindly accepting the Zoning and ReCode as Absolute. The REAL effects of this need to be considered. The Zoning makes no sense in this particular case. Perhaps this property should NOT be RN5.
If this property should stay RN5, I would propose my Commonwealth dr property be moved to RN5 as well so I can build the tallest tower in all of the land.

Respectfully,
Brandon Viger
Commonwealth Drive, Riverton Community, Portland Maine.

To: planningboard@portlandmaine.gov

Hello Planning board members,
I am writing to you as a resident of Belfort Street in Portland. I know a vocal number of my neighbors have spoken out regarding this proposed development. I wanted to write and say that my wife and myself are NOT opposed to it. I realize we have a housing crisis and building more housing is one of the ways to solve it. As such, I do NOT have a problem with an apartment building going in on my street. I would, however, like to see more than one entrance road to the building. Only the access road from Belfort street does seem problematic. Also, can you guarantee a significant number of the apartments will be affordable?

Thank you so much for your time,

Compromising Safety: The Flaws in the Belfort Landing Development Plan

Subscribe

0 views

John Chaisson <jrchaiss@gmail.com> Apr 8, 2025, 2:18:04 PM (18 hours ago)
to planningboard@portlandmaine.gov

Esteemed members of the City Planning Board, my name is John Chaisson and I am a resident of 32 Iffley St, the very end of Belfort. I email you today to express serious concerns regarding the proposed development of two 25-unit buildings in our residential neighborhood, specifically highlighting the significant safety implications posed by the proposed 16-foot wide driveway.

Our neighborhood, as you know, is characterized by single-family homes and a more traditional infrastructure. The current street widths and driveway sizes are designed for lower density living. Introducing 50 additional residential units, potentially housing dozens more vehicles, all relying on a single 16-foot wide driveway, presents a clear and unacceptable safety risk.

Firstly, consider emergency vehicle access. A 16-foot driveway is simply insufficient to allow for the unimpeded passage of fire trucks, ambulances, and police vehicles, especially if cars are parked along either side, as is common in residential settings. In the event of an emergency, precious time could be lost navigating this bottleneck, potentially with devastating consequences for our residents.

Secondly, pedestrian safety is a major concern. With increased traffic flow in and out of 50 units through a narrow driveway, the risk of accidents involving pedestrians, particularly children playing or residents walking, will drastically increase. The limited width offers little margin for error and reduces visibility for both drivers and pedestrians.

Thirdly, the sheer volume of traffic generated by 50 units funneling through a single, narrow access point will create significant congestion on our already established residential streets. This increased traffic will not only disrupt the peaceful nature of our neighborhood but also increase the likelihood of vehicle accidents at the driveway entrance and along adjacent roads. The limited width will make turning movements difficult and potentially hazardous.

Finally, consider the practicalities of daily life. Residents attempting to enter or exit the development simultaneously will face significant challenges and potential conflicts. Deliveries, waste management trucks, and service vehicles will also struggle to maneuver safely within such a constrained space.

Approving this development with such an inadequate driveway poses a direct threat to the safety and well-being of our existing residents and future occupants. It is a fundamental principle of responsible city planning to prioritize safety and ensure adequate infrastructure to support proposed developments. This 16-foot-wide driveway simply does not meet that standard for a 50-unit complex.

I must also draw your attention to another critical safety concern: the severely limited parking provision within this proposed development.

The plan allocates only 50 parking spaces for 50 residential units. Given that these are 25 two-bedroom units, and assuming a reasonable likelihood of at least one vehicle per bedroom – a

common reality in our community – we are looking at a potential shortfall of at least 50 parking spaces. Where will this overflow of vehicles go?

The answer, unfortunately, is our existing residential streets, particularly Belfort Street. As many of you know, parking on Belfort Street is already a significant issue. During normal conditions, it can be challenging for residents and visitors to find parking. However, during winter storms, the situation becomes genuinely dangerous.

Our plow trucks, essential for maintaining safe passage during Maine's harsh winters, already struggle to navigate Belfort Street due to parked vehicles. Introducing dozens of additional cars spilling onto our streets due to inadequate on-site parking will exacerbate this problem exponentially. This will not only impede snow removal, creating hazardous driving conditions and potentially blocking emergency access, but also further narrow the already tight roadways, increasing the risk of accidents.

The combination of a dangerously narrow driveway and insufficient on-site parking creates a perfect storm for safety hazards. Imagine emergency vehicles attempting to navigate a congested Belfort Street, potentially blocked by improperly parked overflow vehicles, only to then be further constricted by a 16-foot driveway. The potential for tragic delays is undeniable.

Furthermore, the increased congestion and haphazard parking will negatively impact pedestrian safety, forcing residents to navigate around parked cars in potentially icy conditions.

Approving a development with such a blatant disregard for realistic parking needs is irresponsible and will directly compromise the safety and accessibility of our neighborhood, particularly during critical winter months. We urge the board to consider the severe safety implications of this inadequate parking plan, in addition to the driveway concerns, and reject this proposal until a design that prioritizes the safety and well-being of our community is presented.

Best regards,

John

to planningboard@portlandmaine.gov, Eric Freeman

Hello to the members of the Portland Planning Board and Eric Freeman, City Planner;

I'm writing to urge you to facilitate, rather than hinder, the construction of fifty (or however many) residential units at 1584 Forest Ave. The primary reasons to do so are that it's a legally copacetic use of the land, and that my friends and relations desperately need places to live. Other reasons to support the project (that it will encourage use and therefore frequency of the #2 bus line, that the proposed physical buildings look decent, that I want people to be able to live close to me, etc) are of relatively little weight.

I'm sorry I can't attend tonight's meeting----
---- Mako Bates
96 Irving St,

Hello,

I am a Riverton resident writing to express concerns about the Belfort Landing project. This proposed project site is extremely close to Talbot School and centered in the midst of a busy residential neighborhood. Housing is important, particularly affordable housing, but this project is not well planned and will add a significant amount of traffic to a highly congested area. Children at Talbot (including my kids, who both attend) will be subjected to increased noise levels from eighteen months of construction. It will be much more difficult to get in and out of Talbot, and Belfort Street will surely be lined with an abundance of overflow cars from the large proposed building. Please encourage this developer to build in a vicinity that will be less disruptive.

Sincerely,

Meghann McCluskey

Thomas Law <tomlawpme@gmail.com> Apr 8, 2025, 3:11:24 PM (17 hours ago)

to Eric Freeman, planningboard@portlandmaine.gov

Hello,

I had time to review the submitted traffic study today and wanted to highlight that there seem to be a lot of very basic factual errors with the study - incorrect dates for the project and timelines that do not align with the project as submitted, it misstates location of sidewalks on the street and even the property shown in fig 3 is incorrect.

I am an engineer by trade, and I know if I was handed a study with this many factual issues in the introduction, I would seriously question the validity of the findings.

A second issue I have is that during the neighborhood meeting in February, the property owner, Alex Coupe, asserted they were breaking the law regarding their current use of the Talbot drive to access the property, and stated that they knew it was illegal but did not seem to care, referring to it as "piracy". This sets a very bad precedent for them following any future requirements or regulations and indicates to me that additional oversight is merited.

Overall, I am in support of development of this lot and hope it comes together for the benefit of the community.

As discovery and planning for this project has proceeded, it seems like there are a lot of neighborhood improvements and needs that the developer is pushing to the city - utilities, signage, transportation and pedestrian improvements, and other updates.

I ask that the city manager and planning board postpone approval of this project take the time to put together a more comprehensive plan for the area that includes and considers this project as one component before allowing the development to proceed.

I also ask that a formal regular review process be established for the project as it proceeds due to the aforementioned factual reporting issues, the relative inexperience of the developer, and the public claim of piracy/disregard for law at this early stage.

Regards,
Tom Law

June 9, 2025

Dear Planning Board Members:

My name is Melissa Blanchard and I live at 144 Belfort Street in Portland, Maine.
I am writing to express my deep concerns regarding the proposed construction of two three-story apartment buildings on Belfort Street in Portland, Maine. As a long-time resident and someone who works in the local school system for 32 years, I am worried about the significant impact this development could have on our neighborhood.

My primary concerns are as follows:

Traffic and Safety: The street currently lacks sidewalks, and many families, including myself, walk children, and pets, up and down the street each day. The proposed development includes only one parking space per each unit and just one entrance and exit on Belfort Street, which is also at the base of a steep hill. This creates a dangerous situation with limited visibility for both drivers and pedestrians, especially children. Increased traffic from 50 new units will heighten the risk of accidents. Please observe the amount of children walking up and down Belfort Street before school in the morning and after school.

Parking Overflow: With only one parking space allocated for each unit, it is likely that many renters will have more than one vehicle. This will inevitably lead to overflow parking on Belfort Street, causing congestion and making it even more hazardous for pedestrians.

Noise and Community Impact: The addition of 50 apartment units, including 13 designated as low-income housing, could significantly increase noise levels and potentially bring other challenges to our quiet, close-knit neighborhood. The increase in the number of occupants and vehicles will disrupt the peace and tranquility we have long valued. It also disregards the current tax paying citizens living in the existing residential houses on Belfort and Verrill Street.

Neighborhood Character: Our street has always been a residential, single-family neighborhood. The recent rezoning to allow apartment buildings does not, in my view, make this type of dense development appropriate for our area. The unique character and safety of our neighborhood should be preserved. This concern is not about NIMBYism, but about preserving the integrity and safety of our neighborhood as it was when we purchased our homes—strictly residential, before the recent rezoning that now allows 2-3 story apartment buildings on our street.

We respectfully urge you to reconsider allowing this project to proceed on Belfort Street, as it does not fit the size or character of our neighborhood. A more suitable alternative would be single-family homes that blend with the existing community and provide adequate parking for residents.

Just because a property has been rezoned to permit large apartment complexes does not necessarily mean it is the right choice for our residential neighborhood.

Please take these concerns into account when making your decision.

In closing, I urge the Planning Board to carefully consider the impact this project will have on the safety, character, and quality of life on our street. Please prioritize the well-being of current residents and the integrity of our neighborhood as you review this proposal.

Thank you for your attention to these concerns,

Sincerely,
Melissa J. Blanchard

I live on Belfort Street and I'm writing in regards to the proposed Belfort Landing project.
Myself and many others in my neighborhood are for **responsible development**. I ask that you take into consideration the long term impacts this will have on this neighborhood and the future development of Portland.

There is only one way in and one way out by vehicle in from Forest Ave., to access Belfort, Empire, Iffley, and Verrill.
The plans submitted, show one way in and one way out, from the project's buildings via a less than adequately sized drive-way at the bottom of a hill, (creating a blind spot) onto Belfort.

How will emergency vehicles access the proposed project, and how will the congestion of overflow parking onto the neighborhood streets affect access by emergency vehicles to our homes?

We barely have enough room as it is for plows in the winter.

Putting up "no parking" signs near the end of Belfort is not going to stop overflow parking.

Pedestrian safety will become an issue, and not just at the end of Belfort. There isn't a sidewalk along all of Belfort, and there will be too many cars parked all along Belfort where children used to ride their bikes, and walk to school safely.

How is this 18 month construction going to affect coming and going to our homes on Belfort, Iffley, Verrill, and Empire with one way in and one way out?

How are the construction vehicles going to access the proposed location...will they too, like the developer, be illegally accessing the property via the Talbot School road?

If parking is of no importance, why not get rid of the under building parking spots to bring down the height of these buildings that will be towering the equivalent of 6 stories over our neighborhood?
Little fences and strategic shrubbery will not block out the lights pouring into our neighbors' back yards at night.

Why not build 2- 10 or 12 unit buildings with adequate onsite parking and more greenspace for it's residents?

In the picture of Belfort Landing, provided by Callender+Delaney Architects, there are no longer any older tall trees along Talbot School road?

Once this is built, it cannot be changed. It will affect generations to come, so why not take a little more time to consider the implications and make the right changes now, for all of us, and **for the future of responsible development in Portland?**

-Sharida Perrin

I am writing to express my concerns for this project. At our neighborhood meeting on Saturday Alex said the retaining wall will be at the Forest Avenue side and not Empire side. Our understanding, based on the plans that is incorrect.

1: Can you please confirm where the retaining wall will be?

Due to the amount of fill that is needed, 3000 truck loads (approximate, based on existing plans), PVC pipe groundwater and snow removal drainage right into our backyard/home gives us concerned about contamination/flooding to our home on Empire Way: soil in Maine naturally contains higher levels of arsenic than the EPA allows. Arsenic enters the environment from natural industrial activities, pesticides, industrial waste, smelting of copper lead and zinc ore. It causes acute and chronic toxicity, liver and kidney damage, decreases blood hemoglobin and is a carcinogen. (https://www.usgs.gov/special-topics/water-science-school/science/contamination-groundwater#overview

It feels as though the city could be damaging existing homes and our health, in our cute little neighborhood, in order to provide new housing that will tower above our homes. A smaller 25 unit housing is a way to build more affordable housing without damaging existing homes, structure, health and compromising ethics. There is a high need for housing, but damaging existing homes is not ethical.

Just a few Ethical Considerations:

- Duty of Care: Developers, builders, and contractors have an ethical obligation to ensure that their construction practices do not harm neighboring properties. This means taking precautions and implementing risk mitigation measures to protect adjacent structures during demolition, excavation, and construction.

- Neighborhood responsibility: Building in a way that respects the rights of adjoining landowners and minimizes interference with their enjoyment of their property is essential. This involves using property reasonably and not unduly interfering with the rights of owners of contiguous land.

2: Where does the possible contamination/health and flooding fall within the ethics of property developers, planning board and Kate Sykes?

3: Who is responsible for future damage to our homes and health?

4: Will the existing soil and new land fill be consistently tested for contamination?

5: Can they move the groundwater drainage somewhere else and not into others backyards?

We (existing residents) respectfully urge you to consider the lives of our families and the future we're striving to build. Please support the construction of a 25 unit building that would provide stable housing, and dignity everyone person deserves, even existing homes. This is not just about housing, it's about giving our neighborhood and the people of Maine a real chance at a better tomorrow.

Thank you for your time, support and leadership!

Hi All,

Please let's not ignore the legitimate safety & privacy issues with this project in its current form in order to just push through a plan for much needed housing.

I don't appreciate the developer reducing our concerns over inappropriate scale & safety issues created by poor planning to mere "NIMBYism" as he called it in a TV interview.

From the inconsistent & incorrect details & data, to the major problems that will be created by massive grading & a single entry bottleneck, on Belfort Street of all places, the current plan must not be approved as is.

No one in this neighborhood seeks to stop the project. We ALL just want some sanity & reality to be injected into it so the rush to get more housing, regardless of the consequences, doesn't destroy an existing neighborhood.

Please let's take the time to get this right.

Thank You,
Jeff Heller 64 Belfort St

Dear Eric and Planning Board,

I am writing to you in light of a recent interview that was on the news recently regarding Alex Coupe and the Belfort Landing Development proposal.
We already had a poor first impression during our initial meeting in February, where he referred to himself as a pirate and was extremely dismissive of every concern we brought up. Alex using the term “NIMBY” is not only gaslighting but an attempt at diminishing our concerns to make us seem unreasonable. That was uncalled for and a sign that he genuinely isn’t open to what we’re asking for- collaboration and compromise.

We noticed there is a 325 unit at Thompson’s Point (82 affordable housing units), 320 units on Washington Ave (with 80 workforce units), 90 units and 50 units (½ afforadable housing) on Allen Ave with 18 ADU’s. So maybe seeing these larger projects, a 50 unit in our neighborhood is “nothing” in comparison, but it’s excessive to us. There are 50 houses on Belfort St and about 110 cars, and that’s just what we own, let alone when someone has an event, holiday, party etc. All of Belfort St is now going to be on an approximately 1 acre lot with a narrow entrance and will turn our neighborhood into a parking lot.

It’s also of note, in the Gorrill Palmer report, it does say that the impermeable surface is at moderate risk for erosion. That is concerning, especially with climate change, worsening storms could damage current residents’s properties.

Currently Belfort Street is the best and safest way for children and families who walk to school to get there. Adding high density parking with cars parked along our street with no side walks is going severely diminished that safety. So many children and families rely on Belfort St for school access.

With all the cars parked on the sides of our street, how are plows going to properly plow our street? Will there be a parking bans for major snow storms? Where will all those car go?

So, while multi-family zoning can address certain housing challenges, it’s essential to consider the broader, often unintended, repercussions on established single-home communities. Urban growth and development are inevitable and necessary, but they need to be executed with a keen sense of foresight and empathy toward existing residents. Zoning commissions and planning board committees bear the responsibility of ensuring that growth doesn’t come at the cost of community well-being. They should be cautious about integrating high-density developments into low-density areas and prioritize the interests and voices of those who already call these neighborhoods home.

Thank you for your time and attention,

Rachelle Lambert

Belfort Landing – Request for Updated Proof of Financial Backing

1 message

Erica Berry <eberrypr@gmail.com> Mon, Jun 9, 2025 at 2:26 PM
Reply-To: eberrypr@gmail.com
To: planningboard@portlandmaine.gov, Eric Freeman <efreeman@portlandmaine.gov>
Cc: Rachelle Lambert <friendsofbelfort@gmail.com>

Dear Members of the Planning Board,

I am writing to raise a concern regarding the financial viability of the proposed Belfort Landing development.

At a prior stage in this process, Alex Coupe submitted a letter from Androscoggin Bank to demonstrate his ability to finance the project—based on an estimated project cost of at the time of submission. However, that letter was issued before the recent spike in construction costs, driven by ongoing labor shortages, rising material prices, and new increased tariffs.

Given the current economic climate and the likelihood that the overall project cost has increased substantially, the City should require updated and verified proof of financing. This is a standard and reasonable request for a project of this scale. As I understand it, it's also necessary as part of the application and approval process.

If the developer cannot meet the revised financial burden, the project could stall mid-construction—leaving neighbors and the city with the consequences. The Planning Board has a responsibility to ensure that this development is both feasible and sustainable before granting further approvals.

Best,
Erica Berry

Protect Belfort Neighborhood, NO to Belfort Landing

1 message

Erica Berry <eberrypr@gmail.com> Mon, Jun 9, 2025 at 12:18 PM
Reply-To: eberrypr@gmail.com
To: planningboard@portlandmaine.gov, Eric Freeman <efreeman@portlandmaine.gov>, Rachelle Lambert <friendsofbelfort@gmail.com>

Dear Members of the Planning Board,

I'm writing as a concerned resident of the Riverton neighborhood regarding the proposed Belfort Landing development. I urge you **not to rush this process**—what's being considered is a permanent change to our community, and it deserves the thorough review and planning it requires.

From the beginning, Kevin Kraft and others involved in ReCode emphasized that the process would lead to *incremental changes* in line with the character of existing neighborhoods. The proposed Belfort Landing development is **nowhere near incremental**. It's completely out of scale and out of character with the surrounding single-family homes. As I and many neighbors have said repeatedly, **the scale is the root cause of most of the problems**. Simply scaling back the number of units would resolve much of what's outlined below.

The recent plan revisions—adding a crosswalk, ADA curbing at the top of Belfort, and a 320' No Parking zone—are not significant. These tweaks are **not proportional** to the impact of this development. Offsite mitigation needs to reflect the true scope of the project's impact. The project's impact is not confined to property lines, it extends far into our neighborhoods, and needs to be treated as such.

My most urgent concerns:

• Runoff and Drainage
The current stormwater plan **directs runoff into my backyard**. This is unacceptable. No resident should be placed at environmental risk for the sake of new development. The potential consequences—flooding, water damage, property devaluation—are serious and completely avoidable. What happens when my yard or basement floods? Who is responsible? This is **negligent and reckless**. Diverting water onto my property is **unlawful**.

• Traffic Safety
Belfort Street loop (including Iffley, Verrill and Empire) has only one way in and one way out. Adding 50 units will drastically increase vehicle traffic on a narrow street not designed for it. This poses a **clear and serious safety risk**.

• Forest Avenue Access
Alex Coupe has acknowledged that he could create an entrance on Forest Avenue, where he owns property and has the ability to make modifications. As stated in the Planning Board Workshop Memo (June 10, 2025), "it was determined that the language within the easement does not exclude use of the area by the applicant." Yet he chooses not to—because of *traffic congestion*. That is the **same concern** we have about Belfort Street. The difference is that Forest Ave is **built to handle traffic**. Belfort is not. At minimum, consider requiring **one-way in via Belfort and one-way out via Forest** to reduce risk. The proposed entrance on Belfort is at the bottom of a knoll with **limited visibility**—it's a dangerous location that increases the likelihood of collisions. An even better solution is to make the vehicular entrance/exit directly onto Forest through Alex Coupe's property.

• Congestion and Lack of Planning
This area is already congested during school hours and commuting times. The current plan offers **no meaningful solution** for mitigating the added volume. It's shortsighted and sets us up for **irreversible harm** to the day-to-day livability of the neighborhood.

• Pedestrian Safety
Many families, children, and pets walk this neighborhood daily. Increased traffic without comprehensive pedestrian planning is a recipe for disaster. People will get hurt—and it will be due to lack of adequate planning.
The No Parking zone at the top of Belfort does nothing to address the overflow that will inevitably happen **within the Belfort loop**. That overflow will push vehicles onto surrounding streets, narrowing roadways, obstructing access for plows, trash/recycling, and emergency vehicles, and **putting pedestrians directly in harm's way**. Belfort and Empire are **critical access points** for children walking to school—this plan makes those routes unsafe.

A Scalable Solution

Many of these issues—traffic, parking, safety—could be **significantly mitigated** by **reducing the scale of the project**. Cutting the number of units in half would:

- Allow for **2 cars per unit** to be parked on-site
- Greatly reduce traffic congestion and parking overflow
- Create a development more in line with the character and infrastructure capacity of our neighborhood

---

Final Thoughts

The Planning Board memo **completely excludes** Empire Way residents. This is telling of the lack of knowledge of the area—and is troubling to think those who don't know this neighborhood have the authority to make decisions for it.

This is our neighborhood. We're not opposed to all development, but we do expect the City to **protect the safety and integrity** of our community. That means **getting this right**—not rubber-stamping a flawed plan to stay on schedule or to meet a quota.

That also means the Planning Board, Planning Department, and City Council must look beyond renderings and traffic studies. It means **getting out onto the streets and into our neighborhoods** to understand the actual impact of what's being proposed.

Please remember: This is a permanent change to our community. There is **no undo button** if mistakes are made. If more time is needed, take it. **Schedule another workshop.** Demand better. Don’t pass a plan that puts residents at risk.

If someone gets hurt because of this, the responsibility will lie with those who approved it.

Please think of our families. Our children. Our neighborhood.

Thank you for your time and consideration,

Erica Berry

Belfort Landing – Relocate Trash & Snow Storage

1 message

Erica Berry <eberrypr@gmail.com> Mon, Jun 9, 2025 at 2:33 PM
Reply-To: eberrypr@gmail.com
To: planningboard@portlandmaine.gov, Eric Freeman <efreeman@portlandmaine.gov>
Cc: Rachelle Lambert <friendsofbelfort@gmail.com>

Dear Members of the Planning Board,

I'm writing to express strong opposition to the placement of trash and snow storage on the Empire Way side of the Belfort Landing property per the site plan.

With 50 units (30 doubles, 20 singles), the volume of waste will be substantial—and it's completely unacceptable for neighboring homes to have to live with that in their backyards. It's unsanitary, disruptive, and frankly, disgusting.

Additionally, snow storage in this area will worsen runoff issues I've previously flagged, putting nearby properties at risk of flooding and damage.

Both trash and snow storage should be relocated to the Forest Avenue side of the property—away from the residences that already exist here.

Thank you,

Erica Berry

Hello,

I live on E. Commonwealth Dr which is very close to the proposed housing project on Belfort. There is no room in this area for building a larger scale housing development. The letter (link below) published in the Press Herald perfectly echoes my sentiments. Please do not allow this project to move forward.

https://www.facebook.com/share/p/1Dm1CgUYG9/?

Planning Board Members:
City Council Member:
My neighbor's house and perhaps mine, is built directly into ledge. The kind of ledge that cracks if disturbed. The kind of ledge that doesn't forgive heavy equipment or blasting. The kind of ledge that makes foundations shift, and could result in loss of life.

If this development proceeds without fully understanding the geological risks — especially that unstable stone — it could jeopardize many existing homes and lives.

This is a realistic concern. I will keep a record of this warning in the event that a tragedy does occur. The City, as well as the developers will be held responsible both morally and financially.

to council@portlandmaine.gov, planningboard@portlandmaine.gov

Many of the houses on upper Belfort Street have converted to natural gas. In my recent letter concerning my neighbor's house and perhaps mine, being built directly into ledge, I should have added that information because the ledge described can crack and cause an explosive reaction if disturbed by equipment or blasting.
I repeat. If this development proceeds without fully understanding the geological risks — especially that unstable stone — it could jeopardize the existing gas lines and could cause an explosion.

This is a realistic concern. I will keep a record of this warning in the event that a tragedy does occur. The City, as well as the developers will be held responsible both morally and financially.

Melissa Blanchard <joelmissy1968@gmail.com> 8:18 AM (1 hour ago)
to Eric Freeman, planningboard@portlandmaine.gov, Melissa Blanchard

Dear Eric Freeman and Planning Board Members,

My name is Melissa Blanchard, and I reside at 144 Belfort Street. I am writing to you again to urgently express my deep concerns about the proposed development in our neighborhood.

In my previous correspondence, I outlined several major issues with this project. However, I neglected to mention a critical concern: the proposed driveway entrance and exit at the base of a steep hill at the top of Belfort Street. This location poses a significant safety risk for both drivers and pedestrians. I urge you to consider alternative access points, such as through the Talbot School or the Moran's parking lot, which would be far safer for our community.

Additionally, I am extremely worried about the potential for stormwater runoff and the impact of grading on our properties. These environmental risks could have lasting negative effects on our homes and quality of life.

I firmly believe that this project is not in the best interest of the existing tax-paying residents. It stands to benefit only the developer and the city, at the expense of our established, hardworking community. The long-term ramifications—dramatic increases in population, noise, traffic, and crime, along with a decrease in property values—are simply too great to ignore. Our neighborhood deserves protection from these threats, not to be sacrificed for profit.

The very thought of this massive complex being built here fills me with anxiety and dread. It would jeopardize the safety of our children, adults, and pets who walk Belfort Street daily. Even though the area has been rezoned, this is simply not an appropriate location for such a large-scale development.

I implore each member of the Planning Board to visit the proposed site and walk our neighborhood during peak hours, when many residents are out on the street. Please see firsthand the vibrant, close-knit community that is at risk. Allowing this project to proceed would irreparably damage our way of life and force many of us to leave—yet, in this housing market, we have nowhere else to go. The anxiety and hardship this project would impose on us cannot be overstated. I personally have 5 years before I retire, and I wish to come home to a peaceful place as it stands currently on Belfort Street.

Please, do not allow this development to move forward on Belfort Street. Our community's future depends on your careful and compassionate consideration.

Sincerely,
Melissa Blanchard

144 Belfort Street
Portland, Maine
Educator for 32 years

Dear Eric Freeman and Planning Board members:

My name is Melissa Blanchard and I live at 144 Belfort Street. I have some major concerns and questions that I would like Eric Freeman to get back to

about. I urge you to not pass this project for reasons I will state below, and alternatively allow single family homes only to be built.

While I understand the pressing need for additional housing in the City of Portland, the planning board's decision to rezone a residential street to permit

a large 50-unit apartment complex—especially on a street with no sidewalks—creates significant safety hazards for existing residents. In this

case, the risks to neighborhood safety and quality of life far outweigh the potential benefits of increased housing supply.I

do not feel the developer Alex Coupe demonstrates adequacy in building a 2- unit 3- story ,50 unit apartment complex on Belfort Street in several key areas.

These requirements are designed to ensure the project complies with city codes, fits the neighborhood, and addresses broader community needs.

This project Alex Coup intends to build on Belfort Street, may meet current city codes; however it does not fit this particular neighborhood. This is why

the neighborhood, that I have lived in since 1968, and my parents, since 1947, was always residentially zoned.

I have watched formally Wirt Street now Empire Way, Verrill Street, and Iffley Street being developed, and they were in line with the single family

houses on Belfort Street.

Projects of this scale (two three-story buildings) require comprehensive review of site layout, building design, access, landscaping, utilities, and

environmental impacts which I do not believe has been thoroughly researched by the planning board or Alex Coupe.

Neighborhood Compatibility

The Planning Board must assess whether the proposed buildings are compatible with the surrounding neighborhood. This involves evaluating

building height, massing, setbacks, and architectural design to ensure the new development "respects established building patterns and visual

characteristics," even if it is distinct in style. I strongly feel this project is NOT compatible with the surrounding neighborhood.

The developer must prove adequate provision for utilities (water, sewer, electricity), emergency access, and compliance with building and life

safety codes which I do not believe he has done.

Parking and Transportation

The site plan must still address safe access for vehicles, pedestrians, and emergency services. This building project does not take into

consider the danger it may cause to pedestrians; many who are school children, overload of vehicles and emergency services being halted if

traffic from this development is parked on both sides of Belfort Street.

Environmental and Stormwater Management

The developer must demonstrate compliance with environmental regulations, including stormwater management, erosion control, and

preservation of any protected natural features as required by city and state law. If his systems fail, many hard working citizens who own homes

surrounding this development will suffer immensely financial hardships and displacements from their homes. The current tax paying homeowners

should not be jeopardized.

Additional Considerations

The Planning Board should require documentation of how the project avoids negative impacts on neighboring properties, such as excessive

shadowing, loss of privacy, or traffic congestion. And if the developer cannot adequately provide evidence to the current neighbors that their

concerns such as traffic congestion, and devaluation of our homes, and safety concerns, have been met by him before building this project,

it should not be allowed on Belfort Street.

Traffic and Safety Hazards

The proposed development would funnel all traffic through Belfort Street, the sole entrance and exit, creating significant congestion and safety

hazards, especially for children and families living nearby and those attending the adjacent elementary school

Increased traffic on a small residential street, particularly at the base of a steep hill, poses winter safety risks due to slippery conditions, making

accidents more likely

The street infrastructure is not designed to handle the volume of vehicles associated with a 50-unit apartment complex, leading to further safety

concerns for pedestrians and drivers

Parking Limitations

With only one parking space allocated per unit, there will likely be spillover parking onto the street, exacerbating congestion and reducing available

parking for current residents.

The lack of adequate visitor parking is likely to result in illegal or unsafe parking practices, further impacting neighborhood safety and accessibility

Impact on Neighborhood Character and Quality of Life

The construction of two three-story apartment buildings would fundamentally alter the character of a close-knit, single-family residential

neighborhood, affecting the sense of community and potentially lowering property values.

Noise disturbances and disruptions during both construction and ongoing occupancy—especially for the eight homes directly abutting the new

complex—will negatively impact residents' quality of life.

School Overcrowding and Safety

Proximity to Talbot Elementary raises concerns about increased pedestrian and vehicular traffic during school hours, which could endanger

children walking to and from school.

Winter Safety and Site Topography

The entrance at the base of a steep hill poses unique risks in winter, with an increased likelihood of accidents due to icy or slippery conditions,

which could endanger both new and existing residents.

Population Density and Strain on Infrastructure

A sudden increase in population density will put additional pressure on local infrastructure, including roads, utilities, and emergency services,

potentially reducing the quality of services for current residents.

Crime and Security Concerns

Residents have reported increased crime in the area, including car break-ins which could be exacerbated by a large, dense apartment complex near a school and residential homes.

Concerns about security in multi-family buildings are common, as gated entrances and security measures are often insufficient to prevent unauthorized access and package theft.

Displacement and Community Impact

The project threatens to displace the current 80 residents, disrupting a stable, close-knit community that values single-family homes and neighborhood cohesion.

Request for Alternatives

The planning board in good faith should advocate for the development of single-family homes instead, which would better align with the existing

neighborhood character and minimize the negative impacts outlined above.

Specific Questions and Requests

Occupancy Limits

Local regulations typically determine how many people can live in each one- or two-bedroom unit, often based on square footage and safety

codes. For example, a one-bedroom may be limited to two occupants, and a two-bedroom to four, but this varies by jurisdiction.

To Eric Freeman: What is the square footage of the one bedroom and 2 bedroom apartments and how many residents per unit would be allowed in

the 13 unit low income housing? How many residents in the non-low income apts are allowed? Lastly, what is the rental cost per each 1 and 2

bedroom unit, and how many people could potentially be allowed to live in this 50 unit housing complex?

Traffic Control Measures

The addition of a traffic light at the top of Belfort Street should be considered to address increased vehicle flow and improve pedestrian safety.

In conclusion:

I feel strongly that although the City of Portland rezoned this parcel of land recently from residential, to allow this massive structure on Belfort

Street, it does not meet ethical and safety standards to the current residents on Belfort Street.

A large 50-unit apartment complex—especially on a street with no sidewalks—creates significant safety hazards for existing residents. In this

case, the risks to neighborhood safety and quality of life far outweigh the potential benefits of increased housing supply.

I urge you to please not allow this project to be built in the small parcel of land off Belfort Street for the safety, stress levels, and quality of life the current residents. The threat of this project being built has brought great anxiety, and unrest to me, as a hard working Special Education Educator for 33 years. I am close to retirement and do not want an increase in population on Belfort Street for the reasons stated above.

Thank you for thinking this over thoroughly and doing the right thing that is ethically in the best interests of the current residents living here; not just the best interests of the developer or the city.

Sincerely,

Melissa J Blanchard

Liz Berg <lbfmgt@yahoo.com>
to Eric Freeman, planningboard@portlandmaine.gov, planning@portlandmaine.gov, mdion@portlandmaine.gov, Kate Sykes

Dear Eric,

1. WHY NOT MAKE THE DRIVEWAY DIRECTLY ON FOREST AVENUE?

We are all completely baffled as to why the developer who owns 50 ft. of road frontage on Forest Ave. would rather place the vehicle access to this site on Belfort St. If the reason is too much "congestion" - his own words - then how does moving that congestion to Belfort St. make any sense? **It does not.** He probably doesn't want the expenditure of re-configuring that 50 ft. road frontage to create vehicle access there, and this is just not a good enough answer. To disrupt and forever alter the flow of our neighborhood for expedience and cost savings to his plan, is simply not an acceptable choice. As a planner, you must look at the logic of his decisions and his options with respect to the existing neighborhood. We have a community here - please consider how this community functions in its current configuration. Please do not disregard our concerns and write us off as "NIMBY". We understand that the planning department has a job to do, and you have goals to meet. We are not asking for NO DEVELOPMENT. We are asking for some reasonable modifications so that our "life as we know it" isn't completely shattered. It's not too much to ask. We need you to represent us as much as you appear to be focused on the housing goals for the city.

2. WHY PUT A SUBSTANDARD 20' ACCESS ON A RISE BETWEEN TWO SMALL HOMES ON A CROWDED NARROW STREET?

In fact our concerns go well beyond changes to our community. Our concerns pertain to life safety decisions that may have negative consequences down the line.

3. WORK ON MODIFYING THE CONSERVATION EASEMENT TO THE TALBOT SCHOOL RD. FOR EVENTUAL/PRIMARY ACCESS THERE.

Alex has some great options here. We do not. If he is not required to make the vehicle access directly onto Forest Ave. then:

Although it may take extra time to modify the conservation easement on the Talbot School road, it still would make sense to work on this **in tandem** with any plan that gets approved so that in the end the vehicle access would be moved THERE rather than on Belfort. Even if it means a temporary access were installed onto Belfort in the meantime. We are confident that the hazards of access onto Belfort will become immediately apparent and you will be happy to have the alternative access in the works.

I would like your thoughts and your response to my concerns (1,2,&3) detailed above please.

Thank you!

Liz Berg

Fwd: Formal opposition to Belfort Landing

1 message

Subject: Formal opposition to Belfort Landing
To: efreeman@portlandmaine.gov <efreeman@portlandmaine.gov>, <mgrooms@portlandmaine.gov>

Good morning,

Below and attached, please find my formal objections to the proposed development called Belfort Landing. Please include these objections in the record prior to the Planning Board meeting on July 8th.

Regards,
Kate Keefer

BELFORT LANDING OPPOSITION - MASTER ARGUMENTS

PROJECT OVERVIEW

Proposed Development: 50-unit residential complex at 1582-1584 Forest Avenue
Developer: Alex (Acre Properties)
Key Issue: Developer proposes dangerous single-access via Belfort Street despite safer Forest Avenue alternative

---

🚨 EMERGENCY ACCESS & LIFE SAFETY

Core Problems:

- **Single 20-foot driveway** serving entire 50-unit complex
- **No secondary emergency egress** route available
- **Underground parking** limits emergency vehicle maneuverability
- **Fire truck turning analysis** shows inadequate space for 3-story building

Code Violations:

- **Portland Public Safety Standards (Section 10.3.2)** require "access for Fire Department vehicles to at least two sides of all structures"
- **Table 10.5 Subdivision Standards:** 50 units typically require multiple access roads
- **Planning Board meeting notes:** Fire marshal requested "final confirmation" on turning radius and snow plowing coordination

Developer's Own Admissions:

- Documented "delivery truck collision risks"
- "Challenging conditions for vehicle maneuvering"
- Fire truck turning template missing from current submission

Our Position:

SAFER ALTERNATIVE EXISTS: Developer has legal access to Forest Avenue but chooses dangerous Belfort Street route instead.

🚙 TRAFFIC & ACCESS ANALYSIS

Traffic Study Deficiencies:

- **Contradictory conclusions:** Claims "acceptable operations" while documenting collision risks
- **Winter pedestrian count bias:** Only 43 pedestrians counted in February when school walking naturally suppressed
- **Missing safety analysis:** No assessment of emergency vehicle conflicts with 337 daily trips
- **Admits problems but dismisses them:**
  - "Very poor access management"
  - "Sight distance issues"
  - "Delivery truck collision risks"

Traffic Impact:

- **337 daily vehicle trips** (50 units × 6.74 trips per unit)
- **Single access point** creates bottleneck
- **Belfort Street serves 70+ existing homes** as only access route
- **No sidewalks** on Belfort Street or proposed driveway

Forest Avenue Alternative:

- **Existing easement** provides legal Forest Avenue access
- **124-foot frontage** along Forest Avenue available
- **Would eliminate** dangerous Belfort Street conflicts
- **Preserves emergency access** for existing neighborhood

🏫 PEDESTRIAN & SCHOOL SAFETY

Critical Safety Issues:

- **Belfort Street = school walking route** to/from area schools
- **Zero sidewalks** on Belfort Street or proposed access
- **337 additional daily trips** concentrated at single point
- **Overflow parking** will block sight lines
- **Winter conditions** make narrow street even more dangerous

Children at Risk:

- Traffic study conducted during **winter weather suppression** of walking
- No analysis of **spring/fall pedestrian activity** when school walking peaks
- **Plow trucks don't fit** down Belfort Street (resident testimony)
- Cars parked both sides would create **"one-lane road with zero sidewalks"**

🌧️ STORMWATER & OVER-DEVELOPMENT

Extreme Infrastructure Requirements:

- **125 total chambers** (75 sand filter + 50 channel protection + 25 pre-treatment)
- **Complex pump station** required due to grade limitations
- **2,233 cubic feet water quality volume** required
- **30 mil PVC liner** and extensive geotextile wrapping
- **Massive site regrading** altering natural drainage

Climate Resilience Concerns:

- System designed for **current storm patterns**, not increasing precipitation intensity
- **Complex mechanical systems** vulnerable to failure during extreme weather
- **50-unit density** creates maximum impervious surface
- **Backup/overflow scenarios** not adequately addressed

Our Analysis:

The extraordinary infrastructure required demonstrates this site is being over-developed beyond its natural capacity.

💥 BLASTING SAFETY REQUIREMENTS

Geological Hazards:

- **Ledge runs beneath** proposed access driveway
- **Neighboring houses** have foundations on ledge/half basements
- **Ledge likely extends** into development parcel
- **Foundation cracking/shifting risk** from blasting vibrations

Natural Gas Safety:

- **Many Belfort Street homes** converted to natural gas
- **Ledge fracturing** could cause gas leaks or explosive reactions
- **500-foot leak survey** required before and after blasting

Legal Requirements (Maine/Portland):

- **Fire Marshal blasting permit** required for every project
- **Pre-blast survey:** 1/2 mile radius documentation of existing structures
- **$1 million liability insurance** naming City as additional insured
- **Gas utility inspection** and approval required
- **Water quality testing** of wells within 300 feet

Missing Documentation:

- **Where is the geological survey?**
- **Has Fire Marshal permit been obtained?**
- **Where is the pre-blast survey?**
- **Has gas utility been notified?**

🚫 CONSERVATION EASEMENT VIOLATIONS

Compliance Issues:

- **Tree removal** occurring within protected easement areas
- **City failing to enforce** its own conservation requirements
- **No authorization** for easement modifications/releases
- **Precedent concern:** If easements aren't enforced, what other regulations ignored?

Required Action:

Planning Board must verify conservation easement compliance before approval.

📋 PARKING & ENFORCEMENT

Inadequate Parking:

- **50 parking spaces for 50 units** = 1:1 ratio
- **Realistic need:** 100+ cars plus visitors (2+ cars per unit typical)
- **Overflow parking** will flood Belfort Street
- **No parking enforcement** on narrow street

Winter Complications:

- **Snow storage** will narrow 20-foot driveway further
- **Plowed snow banks** block sight lines
- **Cars parked in no-parking zones** prevent fire truck access
- **DPW coordination** required but not addressed

⚖️ FOREST AVENUE ACCESS RIGHTS

Easement Analysis:

- **2016 easement** grants Moran's Market rights to 124-foot Forest Avenue strip
- **Bernard/Alex reserved** "right to pass and repass through easement area as now traveled"
- **Key question:** Does this allow new access for 1584 development?

Two Scenarios:

1. **If easement allows new access:** Developer should be REQUIRED to use safer Forest Avenue route
2. **If easement limits to existing use:** Developer still may have rights outside easement area

Strategic Advantage:

Either way, Forest Avenue access eliminates the dangerous Belfort Street safety problems.

📢 COMMUNITY IMPACT

Neighborhood Concerns:

- **70+ existing homes** depend on Belfort Street as only access
- **Emergency evacuation** compromised by additional traffic
- **Quality of life** degraded by 337 daily trips on narrow street
- **Property values** at risk from safety hazards

Public Meeting Testimony:

- **Fire truck access concerns** from multiple residents
- **Pedestrian safety** for children, bikers, runners
- **Winter safety** - "plow doesn't fit down the street"
- **Overflow parking** making street "one-lane road"

PROPERTY BOUNDARY/ADVERSE POSSESSION CONCERNS

Maine Law Requirements: Maine's adverse possession statute requires 20 years of "open, notorious, continuous, exclusive, and adverse" possession to gain legal title to property. For boundary disputes involving encroachments like fences, Maine courts apply a "good faith" standard where the possessor must believe they own the land.

Potential Site Access Issues:

- Neighbor's fence has been on what appears to be on the Belfort Street frontage for 40-50 years
- If the fence placement meets Maine's 20-year adverse possession requirement, the neighbor may have acquired legal title to that strip of land

- This could significantly impact the proposed driveway location and site access calculations
- Maine requires "clear and convincing evidence" of the statutory elements, and property boundaries established through adverse possession are legally enforceable

🔥 **Key Questions for Planning Board:**

- "Has a certified boundary survey been conducted to determine exact property lines?"
- "Are the proposed access dimensions based on actual legally-owned property boundaries?"
- "How can the Board approve site plans without resolving potential boundary disputes?"

🎯 PLANNING BOARD RECOMMENDATIONS

Required Actions:

1. **Require Forest Avenue primary access** to eliminate Belfort Street safety hazards
2. **Demand comprehensive geological survey** before blasting approval
3. **Verify all blasting permits** and safety requirements met
4. **Independent traffic analysis** to address study deficiencies
5. **Confirm conservation easement compliance**
6. **Evaluate emergency response capacity** for site design
7. **Assess neighborhood evacuation impact** from 337 additional trips

Key Questions for Developer:

- Why choose dangerous Belfort access when safer Forest Avenue option exists?
- Where are required blasting permits and geological surveys?
- How will emergency vehicles navigate during peak traffic/winter conditions?
- What happens to neighborhood emergency access during evacuation?

Our Position:

We support appropriate housing development but demand modifications ensuring public safety and neighborhood compatibility. The current proposal creates unacceptable risks that can be solved by requiring Forest Avenue access.

📚 SUPPORTING DOCUMENTATION

Legal Requirements Research:

- Maine blasting regulations for residential development
- Portland Fire Marshal permit requirements
- Portland Public Safety Standards Section 10.3.2
- Conservation easement enforcement protocols

Technical Evidence:

- Fire truck turning radius analysis gaps
- Traffic study methodology flaws
- Stormwater over-engineering indicators
- Geological hazard assessments

Community Support:

- Planning Board meeting transcripts
- Resident testimony on safety concerns
- Emergency access documentation

- Winter conditions evidence

This comprehensive argument framework ensures we address every angle while maintaining focus on our core message: ***safer alternatives exist and should be required.***

Formal Comments - Belfort Landing Development Application (1582-1584 Forest Avenue)

3 messages

Kate Keefer <kate.c.keefer@gmail.com> Fri, Jun 27, 2025 at 9:59 AM
To: planning@portlandmaine.gov

Dear Members of the Portland Planning Board,

Please find attached our formal comments regarding the proposed Belfort Landing residential development at 1582 Forest Avenue. These comments represent the concerns of neighborhood residents following our technical review of the submitted plans and engineering documents.

While we support appropriate residential development in our community, our analysis reveals significant safety and infrastructure concerns that warrant careful consideration before approval. Our comments focus on emergency access deficiencies, traffic safety impacts, stormwater system sustainability, and compliance with Portland's development standards.

We respectfully request that the Planning Board address these technical concerns and require modifications to ensure public safety and neighborhood compatibility before approving this application.

Thank you for your consideration of our input. We look forward to participating constructively in the review process.

Respectfully submitted,

Kate Keefer
56 Iffley Street
Portland, ME 04102

Planning Board <planningboard+noreply@portlandmaine.gov> Fri, Jun 27, 2025 at 12:46 PM
To: cfrank@portlandmaine.gov

Hello,

Thank you for your email. We appreciate the time you have taken to offer your thoughts. All comments for projects and proposals being reviewed by the Planning Board (RECEIVED BY NOON THE DAY BEFORE THE SCHEDULED MEETING), will be included in the packet to the board, which is uploaded to the Agenda Center. Comments received (AFTER THIS TIME) will be added to the public record.

If you have any questions or general inquiries, please contact the City of Portland Planning and Urban Development office at planning@portlandmaine.gov.

FORMAL COMMENTS ON BELFORT LANDING DEVELOPMENT

1582-1584 Forest Avenue, Portland, Maine - Planning Board Application Review

EXECUTIVE SUMMARY

We submit these formal comments regarding the proposed Belfort Landing residential development at 1584 Forest Avenue. While we support appropriate residential development in our neighborhood, our technical review of the submitted plans reveals significant concerns regarding public safety, infrastructure capacity, and compliance with Portland's development standards that warrant careful consideration before approval.

Our position: We support housing development but believe this proposal requires substantial modifications to ensure public safety and neighborhood compatibility.

KEY AREAS OF CONCERN

1. **EMERGENCY ACCESS AND LIFE SAFETY**

Primary Concern: Single point of access serving 50 residential units creates dangerous emergency response bottleneck.

Technical Issues:

- Site plans show only one 20-foot driveway serving entire 50-unit complex
- No secondary emergency egress route available
- Underground parking configuration limits emergency vehicle maneuverability
- Portland's Public Safety Standards (Section 10.3.2) require developments to "provide access for Fire Department vehicles to at least two sides of all structures" where possible
- Fire truck turning analysis (Drawing T1) shows inadequate space for ladder trucks to maneuver for 3-story building

Code Violation: Under Table 10.5 Subdivision Standards, 50 units typically require multiple access roads or emergency access lanes, not a single driveway.

Developer Acknowledgment: The applicant has documented concerns about "delivery truck collision risks" and "challenging conditions for vehicle maneuvering" in their own submissions.

2. TRAFFIC STUDY DEFICIENCIES AND BIASED ANALYSIS

Primary Concern: The developer's traffic study contains fundamental methodological flaws and reaches contradictory conclusions that undermine its credibility.

Major Study Problems:

- Contradictory Conclusions: Study concludes "acceptable operations" while simultaneously documenting collision risks, sight distance problems, and "very poor access management"
- Developer's Own Safety Admissions Ignored: Traffic consultants acknowledge "delivery truck collision risks" and "challenging conditions for vehicle maneuvering" but dismiss these concerns
- Inadequate Pedestrian Analysis: Only 43 pedestrians counted during winter weather conditions (February 25-26) when school walking activity is naturally suppressed
- Seasonal Variation Ignored: No adjustment for spring/fall pedestrian activity when school children walking would be significantly higher
- Missing Safety Analysis: No assessment of emergency vehicle conflicts with 337 daily trips through single access point
- No School Safety Evaluation: Despite documenting pedestrian activity, no analysis of school children safety on Belfort Street walking route

Specific Documented Problems the Study Admits But Dismisses:

- "Vehicles parking adjacent to and in front of a local store causes sight-distance issues"
- "Access management in the immediate area is very poor"
- "Challenging conditions for vehicle maneuvering"
- "Delivery truck collision risks"

Impact: The traffic study's biased methodology and contradictory conclusions make it unreliable for assessing the true safety impact of adding 337 daily trips to an already problematic intersection.

3. PEDESTRIAN SAFETY AND TRAFFIC HAZARDS

Primary Concern: Development creates multiple pedestrian safety hazards and traffic conflicts on Belfort Street, a critical neighborhood access route.

Critical Safety Issues:

- No sidewalks on proposed access driveway or Belfort Street itself
- 337 daily vehicle trips (50 units × 6.74 trips per unit) concentrated at single Forest Avenue access point
- School children safety - Belfort Street is a regular walking route to/from area schools
- Neighborhood chokepoint - Belfort Street serves as the only access for 70+ existing single-family homes in closed-loop neighborhood
- Overflow parking from inadequate on-site spaces will block sight lines for pedestrians and other traffic
- No pedestrian infrastructure to safely accommodate foot traffic from 50 additional units

4. STORMWATER INFRASTRUCTURE INTENSITY AND CLIMATE RESILIENCE

Primary Concern: Extreme stormwater infrastructure complexity indicates site is being over-developed beyond its natural capacity.

Evidence from Engineering Plans (C103 Drainage Plan & C102 Grading Plan):

- Extensive storm drain network covering entire site with complex piping systems
- 125 total chambers required (75 sand filter + 50 channel protection + 25 pre-treatment)
- Complex pump station required due to grade limitations
- Massive site regrading altering natural drainage patterns
- 30 mil PVC liner and extensive geotextile wrapping needed
- 2,233 cubic feet water quality volume required
- High-density infrastructure leaves minimal green space for natural absorption

Climate Change Concerns:

- System designed for current storm patterns, not increasing precipitation intensity
- Complex mechanical systems vulnerable to failure during extreme weather events
- 50-unit density creates maximum impervious surface requiring maximum engineered intervention
- Backup/overflow scenarios not adequately addressed for climate-intensified storms

Long-term Sustainability Issues:

- Mechanical pump systems require ongoing maintenance and are prone to failure
- Complex underground infrastructure difficult and expensive to repair
- Altered natural drainage may create downstream flooding impacts
- Over-engineered solution suggests development density exceeds site's natural capacity

Implication: The extraordinary level of stormwater infrastructure required demonstrates that this 50-unit proposal pushes development intensity beyond what the site can naturally accommodate, creating long-term risks for both residents and the broader community.

5. CONSERVATION EASEMENT VIOLATIONS

Primary Concern: Development appears to be proceeding with work in violation of existing conservation easements, raising questions about regulatory compliance and oversight.

Issues: -

- Tree removal and site work occurring within protected easement areas
- City failing to enforce its own conservation easement requirements
- No apparent authorization for easement modifications or releases
- Precedent concern - if easements aren't enforced, what other regulations may be ignored?

Request: Planning Board should verify conservation easement compliance before approving any development plans and ensure all protected areas remain undisturbed.

RECOMMENDATIONS

We respectfully request the Planning Board:

1. **Require Independent Traffic Analysis** - The developer's traffic study contains fundamental flaws:

- Concludes "acceptable operations" while documenting collision risks and sight distance problems

- Admits "access management in the immediate area is very poor" but claims no responsibility
- Fails to analyze emergency vehicle conflicts with 337 daily trips through single access point
- Provides inadequate pedestrian safety assessment based on winter weather data that misses peak school walking activity

2. Require Secondary Emergency Access - Verify compliance with Portland's Public Safety Standards Section 10.3.2 requiring emergency vehicle access to multiple sides of structures, particularly for 50-unit developments with 3-story buildings.

3. Evaluate Emergency Response Capacity - Assess whether fire trucks, utility trucks, and other necessary emergency vehicles can safely navigate the site design, particularly given:

- Developer's admission of "challenging conditions for vehicle maneuvering"
- Turning requirements shown in Drawing T1
- Single access point serving 50 units during emergencies

4. Assess Neighborhood Evacuation Impact - Analyze how 337 additional daily trips affect emergency evacuation for 70+ existing homes dependent on Belfort Street as their only access route.

5. Review Stormwater System Sustainability - Examine whether the extensive infrastructure requirements (125+ chambers, complex drainage) indicate over-development for this site's natural capacity.

6. Require Comprehensive Pedestrian Safety Plan - Address the absence of sidewalks and sight line issues documented in the traffic study, with particular focus on school children's safety during optimal walking weather conditions.

CONCLUSION

We appreciate quality housing development in our neighborhood and recognize Portland's need for additional residential units. However, public safety and infrastructure adequacy must be ensured before approval.

The extensive engineering infrastructure required, combined with the developer's own acknowledgment of safety concerns, suggests this 50-unit proposal exceeds what this site can appropriately accommodate.

Critical public safety concerns include:

- Emergency vehicle access inadequate for 50-unit, 3-story development
- Pedestrian safety compromised by lack of sidewalks and 337 additional daily trips
- School children at risk on Belfort Street walking route
- Neighborhood access compromised for 70+ existing homes

We request the Planning Board work with the applicant to address these concerns through design modifications that maintain housing goals while ensuring public safety and neighborhood compatibility.

We look forward to working constructively toward a development proposal that serves both housing needs and community safety.

Respectfully submitted by concerned neighbors who support appropriate residential development.

To: planningboard@portlandmaine.gov

Thu, Jun 12, 2025 at 4:22 PM

I just want to add my voice to those opposed to this development. It doesn't make common sense. Dangerous for children traveling back & forth to school. Too many parked cars on this street! Increasing traffic that can not travel without long waits on outer Forest Avenue poorly designed traffic flow already! Why is this under consideration in a neighborhood that has been subjected to one more poor idea. Enough is enough!!!

Jacquie Delano
111 Beverly St, Portland

George Rheault <george.rheault@gmail.com> 11:11 AM (1 hour ago)
to Planning Board, kkraft, Matthew Grooms, Michael Goldman, jmy, Kate Sykes

It is incumbent on the Planning Board to ensure accuracy and transparency as part of every project review that comes before it.

Planning staff and their colleagues at the Public Works Department have deliberately introduced misinformation into the transportation review regarding the current status of Belfort Street.

The planning staff memo from the last workshop flatly states that "Belfort Street is a 30-foot-wide local street" but this statement (see quote below) is very misleading.

> 13.6.1.A Impact on Surrounding Streets
> Primary vehicular access to the site would be provided via a 20-foot. drive aisle connecting to Belfort Street. Belfort Street is a 30-foot-wide local street with on-street parking provided on both sides of the street. Belfort Street serves as the only point of access for approximately 75 homes, located on Belfort, Verrill and Iffley Streets. Belfort Street intersects with Forest Avenue approximately 350 ft. northeast of the proposed driveway. The intersection of Belfort Street and Forest Avenue is unsignalized.

IN FACT, Belfort Street in its current condition may be only 30-feet-wide but it has been formally accepted in 1951 by the City of Portland as a 50-foot-wide right-of-way. This means that the City of Portland is perfectly within its rights to expand the roadway and/or add sidewalks at its direct expense or by requiring the developer to share some of the cost of doing so as part of this project.

Homeowners along Belfort Street that purchased their properties were well aware of this (or should have been) and the fact that many of the yards/landscaping and driveways along Belfort Street appear to encroach into the public right-of-way is NOT THE DEVELOPER'S PROBLEM.

See below for an excerpt from a recent survey (attached) that was done for the benefit of the owner of 128 Belfort Street, that makes clear the official status of Belfort Street. This fact should have been easily researched and discoverable by BOTH planning staff and public works staff. The 50-foot-wide right-of-way was baked into the original subdivision for the entire Belfort neighborhood in 1918 (see attached) and should have been made clear as part of the public record from the very first workshop.

The implications of this are that WAY BACK at the start of this project review it should have been clear that some of the traffic and pedestrian issues could have been addressed by simply taking advantage of the 50-foot-wide right of way and making full use of it for sidewalks and a wider drive aisle to better handle on-street parking capacity and maneuverability. While the modest houses that were initially built on Belfort Street (see link to photo of neighborhood in 1959: https://digitalcommons.portlandlibrary.com/pphnegs_images_aerial/110/) may not have been able to afford the full infrastructure of curbs and sidewalks, Portland can certainly afford that now. And incorporating some of that build-out NOW as part of the Belfort Landing project should have been asserted by city staff from the start which would have addressed a lot of the objections from abuttors during the public review process.

> *4) ROAD DEFINITION:*
>
> *4A) BELFORT STREET IS A PUBLIC WAY ACCEPTED ON OCTOBER 19, 1951 WITH A 50' RIGHT OF WAY WIDTH. LOCATION IS PER THE CITY OF PORTLAND RECORDS VOL. 70, PAGE 490 PER PLAN REFERENCE #1.*

[NB: it is not clear to me what document is being referenced as "Vol.70, Page 490" but the City Clerk could easily help planning staff locate the October 19, 1951 acceptance by the City Council of Belfort Street which as my comment here makes clear should have already been done.]

dgroff@maine.rr.com <dgroff@maine.rr.com> Jun 22, 2025, 12:55:15 AM (yesterday)
to Planningboard@portlandmaine.gov, Eric Freeman

To: Planning Board 6/22/2025

City of Portland, Maine

I am writing to you about the **Belfort Landing** project. It is my hope that the Planning Board will require that the developer deploy **all available modern technologies to mitigate the impact** of the proposed project on the surrounding neighborhood .

Because both the **size** of the proposed project and the anticipated traffic congestion will drastically alter the environment for the current homeowners in that neighborhood, I would strongly advocate for the following at a minimum:

- "Dark Sky" exterior lighting to minimize the effects of obtrusive exterior lighting on the smaller surrounding homes.
- Maintaining at least 50% of the existing large (greater than 25 feet tall) trees. Though their initial proposal did reference having trees on the sides of the buildings, maintaining the large trees that encase the property on Belfort Street, the Talbot School entryway, and near the lawn next to Morans Market will provide some measure of privacy and noise reduction for the smaller houses that the project will tower over and will help to preserve the appearance of the Riverton neighborhood for those that travel on Forest Avenue.

Thank you.

Debbie Groff

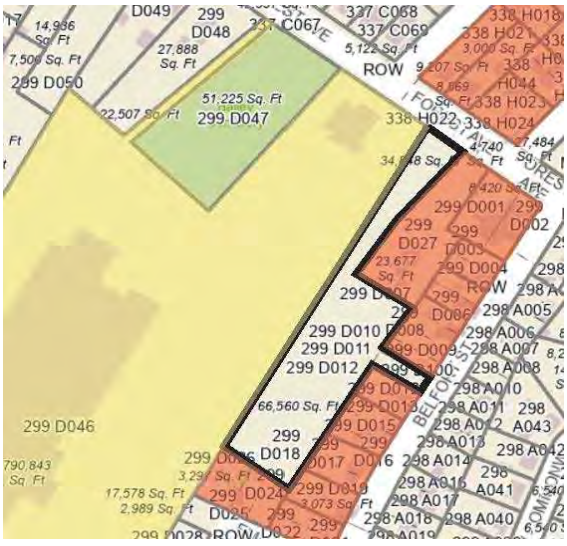
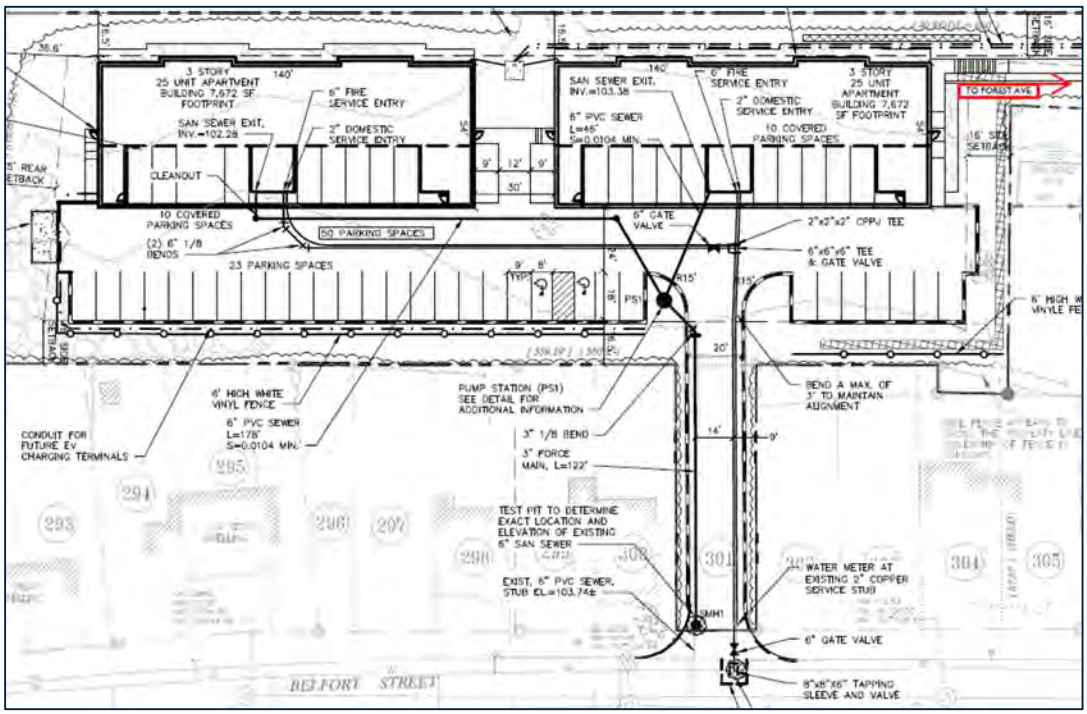
Portland, ME 04101



Subject: Major Site Plan Application
Applicant – Acre Properties
The Belfort Landing at 1582 Forest Avenue, Portland, Maine 04103
Parcel: 299, D1011001

Dear Mr. Kraft:

On behalf of **Acre Properties** (Applicant), our office is pleased to submit the Major Site Plan Application with supporting material for a proposed residential development at 1582 Forest Avenue. The applicant is proposing to construct two, three-story, multi-family dwellings, each with a building footprint of approximately 7,672 square feet. Currently, each dwelling will consist of 25 units for a total of 50 units combined. Approximately 25% of the total unit count (13 units) will be affordable housing at 80% of the Area Median Income (AMI). As the development includes greater than five dwelling units, the site qualifies for Major Site Plan Application and approval from the Planning Board in accordance with Table 14-A of the City of Portland's ReCode Land Use Zoning Ordinance. For clarity purposes, at the time of this application submittal, the City of Portland's ReCode Land Use Zoning Ordinance and associated ReCode Zoning Map has not been finalized therefore the "Final Draft for Planning Board Review" issue was utilized.



Project Overview

Based on the Lot Boundary and Topographic Survey issued July 5, 2022, and performed by Northeast Civil Solutions, the project site is 66,560 S.F. +/-. The City of Portland identifies the property on the Maine Parcel Viewer as Parcel 299, Lot D1011001. As shown in the snippet to the right from said Parcel Viewer, the project site, outlined in black, directly abuts the Gerald E. Talbot Community School site, overlayed in yellow for reference, and residential properties, overlayed in red. Acre Properties (Applicant) currently owns the site as described in the recorded deed at the Cumberland County Registry of Deeds under Book 39465, Page 256. A copy of the deed is included in Attachment 2 of this submission. Currently, the property consists of mostly wooded area with the central portion of the site

appearing to be previously cleared and compacted by vehicles. A paved parking lot, shared with the abutting property identified on the City of Portland's Map Viewer as Parcel 299, Lot D027001, exists at the northerly portion of the site. This abutting property is also owned by the Applicant. The existing parking lot will not serve the proposed development but may allow pedestrian access to Forest Avenue.

The project will consist of constructing two, three-story, multi-family dwellings, each with a building footprint of approximately 7,560 square feet. Generally, both dwellings will contain 25 units for a total of 50 units. The dwellings will be supported by fifty parking spaces, twenty (20) of which will be covered spaces on the ground level of the buildings, and two as designated ADA spaces. As shown in the figure below, the buildings will be located at the south westerly portion of the property. Each building is proposed to have four entrances, one main entrance at the front of the building, two side entrances, and another entrance via the ground floor parking.

The site is proposed to be accessed with a two-way, 20-foot-wide driveway via Belfort Street with pedestrian access available from Forest Avenue by sidewalk. Around 72-feet of frontage exists along Forest Avenue. Utilities for the project will extend from Belfort Street and will include two, 2" domestic water services, a 6" fire service, a 6" gravity sewer service, 3" force main service, and underground power and communication services. Stormwater runoff will be in compliance with the City's stormwater management standards to reduce the predeveloped peak discharge to the greatest extent practicable. The project will ultimately create 34,177 square-feet of impervious area, with the remainder of the site consisting of vegetated developed area.

Zone Requirements

On November 4, 2024, the City of Portland Council voted unanimously to adopt ReCode, Portland's first comprehensive rewrite of the entire land use code and zoning map in over 50 years. At the time of this application, the new ReCode Land Use Zoning Ordinance and associated Zoning Map are issued as "*Final Draft for Planning Board Review*". Although the Final Land Use Zoning Ordinance and Map has not been published, it is anticipated that no major revisions that affect our project site will be made from the Final Draft referenced for this application. As shown in the snippet below, the project site, approximately outlined in black, is split between two zones, RN-5 (orange) and B-1 (pink).

Residential Neighborhood 5 (RN-5) Zone:

Multi-family dwellings are a permitted use in the RN-5 zone in accordance with *Chapter 6 – Use Standards.* No dwelling structures are proposed within the B-1 portion of the property, therefore the RN-5 dimensional and performance standards will mostly apply.

6.8 Performance Standards

Applicable performance standards for the proposed project are provided in italics below, with responses following.

> *6.8.2 Discharges: No discharge shall be permitted at any point into any private sewage disposal system, or stream, or into the ground, of any materials in such a way or of such nature or temperature as to contaminate any water supply, or otherwise cause the emission of dangerous or objectionable elements, except in accordance with standards approved by the Public Health Authority or by the Public Works Authority. No discharge into harbor water areas shall be permitted, unless permitted by the Maine Department of Environmental Protection under a waste discharge license and as approved by the Department of Public Works in accordance with Chapter 24 of the City of Portland Code of Ordinances. All private sewage disposal or private wastewater treatment facilities shall comply with the provisions of Chapter 24.*

No discharge will be permitted into the ground as part of this project. It is intended that the site will be served by public sewer.

6.8.4 Exterior lighting: All exterior lighting shall be designed and installed with full cut-off fixtures to direct illumination onto the site and to prevent illumination from such fixtures on neighboring properties in accordance with the City of Portland Technical Manual.

Exterior lighting information provided by Swaney Lighting Associates, Inc., in accordance with the City's of Portland's Ordinance and Technical Manual, is included in Attachment 10.

6.8.6 Noise:

A. *No use shall be operated so as to generate recurring noises that are unreasonably loud, cause injury, or create a nuisance to any person of ordinary sensitivities.*

B. *The maximum permissible sound level of any continuous, regular, or frequent source of sound produced by an activity shall be as shown in Table 6-H.*

Based on MaineDEP regulations, the proposed project is a "development producing a minor noise impact" and does not require a full noise study. Given the nature of the proposed development, the project is not anticipated to generate a significant amount of noise. During the construction phase, noises may exceed the maximum permissible sound levels set forth by the City of Portland, as allowed per Section F. Exemptions. The project will be required to meet the applicable local requirements for noise after construction.

6.8.7 Odor: It shall be a violation of this article to create an odor nuisance. An odor nuisance shall be considered to exist when 10 confirmed complaints relating to odors of such intensity and character as to be detrimental to the public health and welfare occur in an area within two separate 24-hour periods. The 10 confirmed complaints must originate from 10 different households in a residential zone, or from 10 different individuals in a commercial or industrial zone.

It is not anticipated that the proposed development will create any unpleasant odors warranting a complaint.

6.8.12 Waste disposal:

A. *All solid waste disposal, including materials which might cause fumes or dust, or constitute a fire hazard if stored outdoors, shall be only in fully enclosed, covered containers or receptacles. In all nonresidential zones except for the industrial zones, such containers or receptacles shall be within designated, screened areas.*

B. *Containers or receptacles shall not leak or otherwise permit liquids or solids to escape from the container or be transferred beyond lot boundaries by natural causes or forces. Areas attracting large numbers of insects or vermin are prohibited.*

The applicant has retained White Rock Sanitation (Gorham, ME) to collect solid waste from the site during the construction phase (see Attachment 8 for proof of ability to serve). White Rock Sanitation will also provide trash and recycling services for the residential development post construction. A dumpster enclosure is proposed on-site as shown in the attached plan set.

7.3 Dimensional Standards

The following table outlines the Dimensional Standards for the site within the RN-5 zone, as well as applicable portions of the B-1 zone.

Dimensional Standards For RN-5		
	Required	**Provided**
Minimum Lot Area	1200 S.F./UNIT MIN. 40,000 S.F.	1,331 SF/Unit
Minimum Street Frontage	50 FT	72 FT
Maximum Lot Coverage	60%	23%
Minimum Landscaped Open Space Ratio	30%	43%
Building Setbacks*		
Front (Minimum)	25 FT	312 FT
Rear (Minimum)	25 FT	36 FT
Side (Minimum)	16 FT	16.5 FT
*Building mounted mechanical equipment may encroach into a required setback to an RN zone by no more than 50% of the width of such required setback. *Parking spaces may be located within a required interior side or rear setback.		
Maximum Structure Height	55 FT	47 FT
Maximum Building Length	180 FT	140 FT
Dimensional Standards For B-1		
	Required	**Provided**
Minimum Street Frontage	20 FT	72 FT

Based on our review of the Performance and Dimensional Standards, it is the projects intent to satisfy all applicable code provisions.

Site Plan Application Submission Requirements

In accordance with Section 13-6 – Site Plan Review Standards of the City of Portland Land Use and Development Code, the following information is provided.

13.6.1 Transportation standards

A. Impact on surrounding street systems:

The provisions for vehicular loading and unloading, parking, and vehicular and pedestrian circulation on the site and onto adjacent public streets and ways and the incremental volume of vehicular, bicycle, pedestrian, and transit traffic will not:

1. *Create or aggravate any significant hazard to safety on the surrounding street network.*

Given the residential nature of the development, loading and unloading is expected to be minimal. One off-street parking space per unit, two of which are ADA accessible, have been provided in efforts to reduce congestion on Belfort Street and the surrounding area. For internal pedestrian circulation, a walkway is

provided to Forest Avenue, which is a principal arterial roadway. The applicant is also providing a potential public transit shelter at Forest Avenue to support transit traffic. Bicycle storage in accordance with Table 18-A of the Off-Street Parking & Loading Requirements has been provided in the interior of each building which can be accessed from the outside garage area.

As required in the Technical Manual, the proposed access point on Belfort Street, a Local Street, is over 300 feet from the intersection with Forest Avenue, an Arterial Street. The posted speed limit at the access point of the proposed development is 25 MPH. In accordance with the MaineDOT's Chapter 299, Highway Driveway and Entrance Rules, the sight distance at the center of the proposed access drive appears to be greater than 200 feet. Crash data was studied using the MaineDOT's Public Crash Query Tool Map and it appears that no high crash locations are within the immediate area. Furthermore, Timothy McNeill of the MaineDOT was contacted regarding the latest three-year crash history for the surrounding area, as well as collision diagrams for high crash locations. The data provided by the MaineDOT, which is included in Attachment 11, confirmed that there are no high crash locations within the project site area.

2. Substantially increase congestion on any street without mitigation proportionate to the level of impact.

The forecast increase in traffic volume during peak hours was studied and it was concluded that the AM Peak Trip Generation would be 20 and the PM Peak Trip Generation would be 42. Based on this, it is expected that the proposed residential development will have a minimal impact on the operations of the adjacent roadway network and does not require a MaineDOT traffic movement permit.

B. Access and circulation

1. In general

a. All development subject to this article shall provide safe and reasonable access and internal circulation for all users of the site and shall comply with the transportation systems and street design standards of the Technical Manual.

It is the intent of the project to provide safe and reasonable access and internal circulation for all users of the site and be in compliance with the transportation systems and street design standards of the Technical Manual. ADA parking is provided with an accessible route from the ADA spaces to the main entrances of both dwellings.

b. Shared circulation, parking, and transportation infrastructure shall be provided to the extent practicable, with utilization of joint curb cuts, walkways, service alleys, bus pull-out areas, and related infrastructure shared with abutting lots and roadways. Easements for access for abutting properties and shared internal access points at property lines shall be provided where possible to facilitate present or future sharing of access and infrastructure.

Due to the residential use, vehicular circulation, parking, and transportation infrastructure are not proposed to be shared with abutting properties. However, the applicant is proposing a public transit shelter at the northerly portion of the site, which directly abuts the Gerald E. Talbot Community School property, owned by the City of Portland. It is anticipated that an easement to the City of Portland for

Metro services will be required. Additionally, there is a portion of an existing parking lot at the northerly limit of the site. This parking lot currently serves Moran's Market (3 Belfort LLC) and is part of an Easement Deed recorded in the Cumberland Country Registry of Deeds under Book 33615, Page 280. The project intends to abide by the referenced Easement Deed and the existing parking lot will be independent of the proposed residential development. See the site and utility plan on Sheet C101 for the potential easements.

c. Continuous internal walkways shall be provided between existing or planned public sidewalks adjacent to the site, transit stops and street crossings, and building entrances on the site.

An approximately 5-foot wide bituminous walkway exists on Forest Avenue, which abuts the northerly portion of the project site. To accommodate pedestrian traffic flow, a 5-foot wide bituminous walkway is proposed on site from the residential dwellings toward the existing sidewalk on Forest Avenue.

d. Where the site abuts or includes an existing or planned publicly accessible trail, a connection to or integration of such trail shall be provided to the extent practicable, including rights of public access.

The site does not abut nor include an existing established or planned publicly accessible trail.

e. Points of access and egress shall be located to avoid conflicts with turning movements and traffic flows.

The development provides a 20-foot wide primary access driveway in accordance with the Technical Manual with a single ingress lane and single egress lane. Within the parking lot area, 24-foot wide drive aisles are provided. Belfort Street is a low volume, low speed (25 MPH) roadway and no conflicts are expected with other turning vehicles.

2. Curb and sidewalks

a. All development shall provide curb and sidewalks along all frontages, installed to specifications as described in the transportation systems and street design standards of the Technical Manual.

Curb and sidewalk exists along Forest Avenue at the frontage of the site. A walkway is proposed to that existing sidewalk.

b. Where sidewalks already exist but are in substandard condition, they shall be repaired or replaced in conformance with Chapter 25 of the City of Portland Code of Ordinances and the transportation systems and street design standards of the Technical Manual

The existing sidewalk on Forest Avenue appears to be in good condition and ADA compliant therefore no reconstruction is proposed.

c. An applicant may request a waiver from sidewalk installation requirements if they meet two or more applicable waiver criteria as listed below:

i. There is no reasonable expectation for pedestrian usage coming from, going to, and

traversing the site.

ii. There is no sidewalk in existence or expected within 1000 feet and the construction of sidewalks does not contribute to the development of pedestrian oriented infrastructure.

iii. A safe alternative walking route is reasonably available, for example, by way of a sidewalk on the other side of the street that is lightly traveled.

iv. The reconstruction of the street is specifically identified and approved in the first or second year of the current Capital Improvement Program (CIP) or has been funded through an earlier CIP or through other sources.

v. The street has been constructed or reconstructed without sidewalks within the last 24 months. vi. Strict adherence to the sidewalk requirement would result in the loss of significant site features related to landscaping or topography that are deemed to be of a greater public value.

vi. Strict adherence to the sidewalk requirement would result in the loss of significant site features related to landscaping or topography that are deemed to be of a greater public value.

The Applicant is not intending to request a waiver of this standard.

d. An applicant may request a waiver from curb installation requirements if they meet two or more applicable waiver criteria as listed below:

i. The cost to construct the curbing, including any applicable street opening fees, is in excess of 5% of the overall project cost.

ii. The reconstruction of the street is specifically identified and approved in the first or second year of the current CIP or has been funded through an earlier CIP or through other sources.

iii. The street has been rehabilitated without curbing in the last 60 months and the proposed use and design of the site does not necessitate the installation of curbing.

iv. Strict adherence to the curb requirement would result in the loss of significant site features related to landscaping or topography that are deemed to be of a greater public value.

v. Runoff from the development site or within the street does not require curbing for stormwater management

The Applicant is not intending to request a waiver of this standard.

C. Public transit access

1. All residential development consisting of 20 or more dwelling units and all commercial and institutional developments of at least 20,000 square feet gross floor area shall provide a transit shelter adjacent to or within the public right-of-way along its frontage, or at a nearby high-volume transit stop without a transit shelter, when the following criteria are met:

a. The development is proposed along an existing public transit route on a principal or minor arterial roadway, as shown in the Federal Street Classification Map.

b. The nearest existing transit shelter on the route is more than ¼ mile from the site, measured along rights-of-way.

2. Transit facilities shall be connected to the public sidewalk system.

3. All or some of this standard may be waived if the review authority determines that the development is not anticipated to generate public transit usage due to particular characteristics of the development or proposed use.

A public transit shelter is proposed on-site at the back-side of the existing sidewalk along Forest Avenue. The public transit shelter is proposed to be abutting the adjacent property, 1600 Forest Avenue (Gerald E. Talbot Community School), currently owned by the City of Portland. It is intended that the proposed transit shelter will require an easement to benefit the City of Portland as shown on the Site and Utility plan on Sheet C101 of the attached plan set.

D. Parking

1. Vehicular parking

a. Developments shall comply with the parking standards of Article 18.

b. Where provided, parking spaces and aisles shall not be located in front and corner side yards, unless the applicant can demonstrate that site constraints preclude the location of parking elsewhere on the site.

c. Where provided, parking spaces and aisles shall meet applicable dimensional standards as detailed in the transportation systems and street design standards of the Technical Manual.

The applicant has demonstrated compliance with the above requirements set forth in the ordinance for the proposed parking. Please refer to the Site and Utility Plan on Sheet C101 of the attached plan set for further information.

2. Bicycle parking

a. All development shall provide secure bicycle parking in accordance with the parking requirements of Article 18 and the transportation systems and street design standards of the Technical Manual.

b. The review authority may reduce the required number of bicycle parking spaces if it is determined, based on evidence submitted by the applicant, that the proposed development is expected to generate reduced demand for bicycle parking due to particular site characteristics or proposed uses.

As required per Table 18-A of the referenced Ordinance, secure bicycle parking spaces have been provided in the interior of each building which can be accessed from the outside garage area. Refer to the Architectural Plans within Attachment 5 for additional information.

3. Snow storage

a. All developments shall include areas for snow storage or provide an acceptable snow removal plan.

b. Snow storage areas may not encroach on adjacent properties, public ways, and pedestrian walkways, and shall not be located where they would adversely impact the functionality of stormwater management systems. Landscaping in designated snow storage areas shall be such that it can withstand the snow pile.

The applicant has demonstrated compliance with the above requirements set forth in the ordinance. Please refer to Sheet C101 of the attached plan set for snow storage locations.

4. Electric Vehicle (EV) charging. All development shall meet applicable EV standards as provided in Section 1 of the Technical Manual.

In accordance with Section 1 of the Technical Manual, at least 10 spaces are equipped with Level 2 EV Chargers, with 25 spaces served with sufficient conduit and electrical service to allow for future installation of electric vehicle supply equipment. Refer the Site and Utility Plan on Sheet C101 of the attached Plan Set for additional information.

E. Transportation Demand Management (TDM)

1. The following types of development shall design and implement a Transportation Demand Management (TDM) plan:

a. All commercial, institutional, or mixed use developments of 50,000 square feet or more in total floor area.

b. All commercial or institutional uses designed to accommodate 100 or more employees or, for educational institutions, 100 or more students.

2. The TDM Plan shall comply with the standards for transportation studies and plans as contained in the Technical Manual.

A TDM plan does not appear to apply to this project.

13.6.2 Environmental quality standards

A. Preservation of significant natural features

1. All development shall preserve and protect significant natural features by incorporating the principles of Low-Impact Development (LID) in accordance with the LID standards of the Technical Manual.

2. Where complete preservation of significant natural features substantially compromises development of the site as otherwise permitted by zoning, the review authority may reduce the requirement in accordance with the LID standards of the Technical Manual provided that the applicant implements preservation measures to the extent practicable and demonstrates compliance with applicable state and federal regulations.

3. The site plan shall include adequate measures to protect significant natural features to be preserved from construction impacts, in accordance with the LID standards of the Technical Manual.

The project site consists of mostly wooded area with the central portion of the site appearing to be previously cleared and compacted by vehicles. As shown in the National Wetland Inventory map within Attachment 4, there appears to be no delineated wetlands on-site. The site was laid out to preserve the existing tree line to the greatest extent possible. Retaining walls are proposed to prevent soil erosion and create usable space on existing, challenging sloped terrain, as well as reduce the cut/fill efforts.

Efforts have been made by the applicant to contact the State of Maine's Department of Inland Fisheries & Wildlife for information regarding any threatened, endangered, and special status wildlife or fisheries species and/or habitats within the project area. At this time, the State of Maine's Natural Areas Program was also contacted regarding the presence of any unusual natural areas within the project site. A response from the State of Maine's Natural Areas Program was received on November 14, 2024 indicating that "there are no rare botanical features documented specifically within the project area". No response has been received by the Maine's Department of Inland Fisheries & Wildlife at this time, however, the response can be forwarded upon receipt. Environmental correspondences are included within Attachment 9.

B. Site landscaping and buffers

1. On-site landscaping.

a. All development subject to this article shall provide a minimum of one shade tree consisting of species identified on the City of Portland Recommended Tree list or six plantings, defined as one shrub, one ornamental grass, and/or three perennials, per 5,000 square feet of lot area in accordance with the landscaping standards of the Technical Manual.

b. Existing vegetation to be preserved on the site may be counted towards this requirement as described in the landscaping and landscape preservation standards of the Technical Manual.

c. Where site constraints prevent the planting of required shade trees or plantings at the development site, the reviewing authority may approve an alternative as described in the

landscaping standards of the Technical Manual.

The applicant has demonstrated compliance with the above landscaping requirements set forth in the ordinance. Please refer to Sheet L100 of the attached Plan Set for further information.

2. Buffers and screening

a. Loading and servicing areas, trash and recycling areas, storage areas, and roof- and ground-mounted utility structures, except for renewable energy systems, shall be screened from view from public sidewalks, streets and adjacent properties by dense evergreen and deciduous landscaping, fencing, architectural screening products, masonry walls, building walls, or a combination thereof.

b. Where immediately visible from the right-of-way, surface parking areas shall be screened with dense evergreen and deciduous landscaping, fencing, or masonry wall in accordance with the landscaping standards of the Technical Manual.

c. For nonresidential development abutting a residential zone, an evergreen, densely landscaped buffer of not less than 10 feet in depth and six feet tall is required along the side abutting the residential zone. In cases where architectural fencing is used, the depth of the landscaped buffer may be reduced, so long as the fencing is at least six feet in height and a mix of evergreen and deciduous trees spaced no further than 20 feet apart is planted abutting the residential zone.

d. All residential development shall provide and/or preserve evergreen vegetated buffers where necessary to buffer the development from detrimental impacts of existing surrounding development.

As previously mentioned, the project site consists of mostly wooded area with the central portion of the site appearing to be previously cleared and compacted by vehicles. The proposed dwelling structures sit approximately 170 feet from the edge of Belfort Street and approximately 315 feet from the sidewalk on Forest Avenue. It is the projects intent to preserve the existing wooded area to the greatest extent possible, as shown with the proposed tree line in the Landscaping Plan on Sheet L100 of the provided Plan Set. The preserved tree line is anticipated to continue as a buffer to the existing Gerald E. Talbot Community School site from the mounted utility structures on the back of the proposed dwellings. A 6-foot-high white vinyl fence is proposed along the parking spaces at the easterly portion of the site for a buffer between the abutting residential properties and the proposed parking area. The dumpster area is proposed to be enclosed with fencing. Arborvitae trees are also proposed for landscaping and buffering requirements. Refer to Sheets C101 and L100 of the attached Plan Set for additional information.

3. Parking and vehicle display lot landscaping

a. Developments with more than five parking spaces shall include at least one tree for every 750 square feet of uncovered asphalt parking area (including drive aisles), planted in landscaped islands to screen, shade, and break up parking. Trees and shrubs in parking lots may be in informal groups, straight rows, or concentrated in clusters as described in the landscaping standards of the Technical Manual.

b. Landscaped islands shall be distributed so that uninterrupted pavement does not exceed forty parking spaces.

c. Where site constraints prevent implementation of all or a portion of required parking lot landscaping, as determined by the review authority, the reviewing authority may approve an alternative as described in the landscaping standards of the Technical Manual.

The applicant has demonstrated compliance with this standard as reiterated above in *Section 2, Buffers and Screening*. Please refer to Sheets C101 and L100 of the attached plan set for further information.

4. Non-vehicular hardscape. All uncovered paving for non-vehicular use, including pathways and patios, must either have a minimum Solar Reflective Index (SRI) of 33 initially and 28 once aged three years or include one tree for every 750 SF of asphalt paving.

The applicant is aware of this requirement and intends that pathways will be paved with materials adequate for a minimum Solar Reflective Index (SRI) of 33 initially and 28 once aged three years.

5. Street trees

a. All development shall include one street tree per 25-35 linear feet of frontage along a city right-of-way or private roadway as specified in the landscaping standards of the Technical Manual. The provision of measures to enhance tree survival (such as raised planters, irrigation, and structural soils as recommended by the City Arborist) shall be required.

b. Where the applicant can demonstrate that site constraints prevent the planting of required street trees in the city right-of-way, the review authority may permit an alternative subject to the landscaping standards of the Technical Manual.

c. Where the proposed development includes the removal of an existing street tree determined by the City Arborist to be a heritage or feature mature tree, the applicant shall be required to contribute to the Tree Fund at the designated rate in the Technical Manual so that the total replacement cost is significantly higher than planting a new street tree/contributing for a new street tree.

The applicant has demonstrated compliance with this standard as reiterated above in *Section 2, Buffers and Screening*. Please refer to Sheets C101 and L100 of the attached plan set for further information.

C. Water quality, stormwater management, and erosion control

1. All development shall be designed to minimize total area of impervious surface on the site and both the volume and rate of runoff from the lot. Provisions for stormwater management shall demonstrate the following:

a. Any stormwater draining onto or across the lot in its pre-improvement state will not be impeded or redirected so as to create ponding on, or flooding of, adjacent lots.

b. Any increase in volume or rate of stormwater draining from the lot onto an adjacent lot or City

property following the improvement can be handled on the adjacent lot or City property without creating ponding, flooding or other drainage problems and that the owner of the lot being improved has the legal right to increase the flow of stormwater onto the adjacent lot or City property.

c. Any increase in volume or rate of stormwater draining from the lot into the City's storm sewer system can be accommodated in the system without creating downstream problems or exceeding the capacity of the storm sewer system.

The proposed stormwater management system has been designed to minimize peak flow rates to the greatest extent practicable. In addition, the applicant intends to pay the compensation fee to meet the Urban Impaired Stream Standard as outlined in the Stormwater Management Report (see Attachment 6). The applicant is proposing the use of a large subsurface sand filter, and three drip strip systems to treat and detain runoff. The proposed stormwater management system has been designed to detain runoff from upstream properties to minimize post-development flow rates. Through the use of these systems, peak flow rates to the downstream abutting properties to the south are reduced. However, small portions (950 SF total) of new impervious area are unable to be captured and as a result, produce minor increases (less than 0.2 cfs) to the municipal stormwater systems located on Forest Ave and Belfort Street. Additional details are included in the Stormwater Management Report (see Attachment 6) and Erosion and Sedimentation Control Report (see Attachment 7).

2. All development shall comply with the stormwater management standards of the Technical Manual.

The Applicant acknowledges that the development shall comply with the stormwater management standards of the Technical Manual. Additional details are included in the Stormwater Management Report (see Attachment 6).

3. Development shall not pose a risk of groundwater contamination either during or post-construction, as described in the stormwater management and water supply standards of the Technical Manual.

The proposed development does not pose a risk of groundwater contamination either during or post-construction.

4. Applicants shall demonstrate that subsurface and/or any adjacent slope conditions are suitable to support the development, and where determined necessary, shall prepare a geotechnical study to demonstrate that the development as designed will not adversely impact the development site or any abutting property. Soil surveys and/or geotechnical studies shall be prepared in accordance with the requirements of the Technical Manual.

Summit Engineering Services performed soil borings on-site and has provided the associated Exploration Location Plan and Boring Logs. These are included as Attachment 13 heron. Based on the Boring Logs, the subsurface conditions appear suitable to support the development.

13.6.3 Public infrastructure and community safety standards

A. Consistency with City master plans

1. All developments shall be designed so as to be consistent with City Council-approved master plans and facilities plans and with off-premises infrastructure.

2. The site plan shall include suitable easements, rights, and improvements to connect or continue off-premises public infrastructure as may be required by the review authority.

It is the projects intent to be consistent with the City of Portland's Plan 2030. An easement to benefit the City of Portland is proposed at the on-site public transit to allow for connection with the existing sidewalk on Forest Avenue. The public transit is proposed to support the City's goal to develop an efficient system of public facilities and services for anticipated growth and economic development. In efforts to accommodate the State's goal of encouraging and promoting affordable decent, housing opportunities, approximately 25% of the total unit count (13 units) will be affordable housing at 80% of the Area Median Income (AMI).

B. Public safety and fire prevention

1. All development shall incorporate the following public safety principles for Crime Prevention through Environmental Design (CPTED) into site design to enhance the security of public and private spaces and to reduce the potential for crime:

a. Natural surveillance that promotes visibility of public spaces and areas.

b. Access control that promotes authorized and/or appropriate access to the site.

c. Territorial reinforcement that promotes a sense of ownership and responsibility through environmental design.

In accordance with the CPTED guidelines, the site lighting has been designed to the City's standards as outlined in Section 12 of the Technical Manual to enable full observation of the site during both day and night. The layout of the site has been designed as to clearly guide the movement of vehicles and pedestrians along predictable paths.

2. All developments shall be designed to provide adequate emergency vehicle access to the site and comply with the Public Safety standards of the Technical Manual.

The primary site access point will be from Belfort Street. The site has been designed with a 20-foot wide access drive and 24-foot wide drive aisles that provide emergency vehicle access to both dwellings in the form of a hammerhead. Minimal reversing will be required to exit the site. A turning movement graphic, replicating a fire truck, is provided on Sheet T1 of the attached Plan Set.

There is an apparent active hydrant that exists at the Forest Avenue property frontage, which is within 500 feet of the proposed dwelling structures. Both dwellings will be equipped with automatic fire sprinkler systems.

C. Public utilities

1. The development shall not overburden sanitary sewers and storm drains, water lines or supply, or other public infrastructure and utilities. Development shall provide adequate utility infrastructure on-site and in connection to surrounding locations and facilities.

Water*: A 2" copper service stub exists on-site at Belfort Street. This service appears to have been installed in 2012 and is still available. The applicant is proposing a 2" domestic service from the existing stub via a water meter to service both dwellings, as well as a 6" fire service from the existing 8" ductile iron water main in Belfort Street, which will split on-site to service each building separately. A letter was sent to the Portland Water District requesting to confirm their ability to serve the project. The response received from the Portland Water District, confirming their ability to serve, is included within Attachment 8.

Sewer*: On Belfort Street, there is an existing 8" gravity sewer with a 6" gravity service stub for the project site. This service appears to have been installed in 2012 and is still available. The applicant is proposing to use the 6" gravity service stub to a terminus manhole within the City of Portland's right-of-way. The sewage is anticipated to gravity flow from each building to a 6-foot pumpstation on-site, then be pumped via 3" force main to the terminus manhole mentioned above. A letter was sent to the City of Portland's Public Works Department requesting to confirm the City's ability to serve this project. It is our understanding that a response from the Public Works Department indicating the ability to service will be determined as part of the Staff Review of the project.

Solid Waste*: Solid waste generated on-site during and after construction is anticipated to be serviced by White Rock Sanitation. An email indicating that White Rock Sanitation will have the ability to serve the proposed development is included in Attachment 8.

*Refer to the Site and Utility Plan on Sheet C101 of the attached Plan Set for additional information.

2. Electrical service shall be underground unless otherwise specified for industrial uses, or if it is determined to be unfeasible due to extreme cost, the need to retrofit properties not owned by the applicant, or complexity of revising existing overhead facilities.

The applicant has corresponded with Katherine Dumont, a three-phase power advisor at Central Maine Power (CMP) for the layout of electrical services. Electrical and communication services are anticipated to be extended via overhead from the pole within the right-of-way at 1597 Forest Avenue, across Forest Avenue, to a new utility pole located at the northerly portion of the site. Electrical conduits will then be installed underground from the set utility pole. Final service locations and easements will be determined by CMP and coordinated by the Applicant.

3. All sanitary sewer lines, storm drains, water lines, and other utilities proposed as part of the development shall be designed to conform with the sanitary sewer and storm drain and water supply standards of the Technical Manual.

All utilities proposed as part of the development have been designed to conform with the standards set forth in the Technical Manual.

4. All development within 200 feet of a public sanitary collection and treatment system shall connect sanitary sewer lines into the nearest available public sewer. If a public sanitary collection and treatment system is not available, a private wastewater system may be used according to the requirements of Chapter 24 of the City Code and the sanitary sewer and storm drain standards of the Technical Manual.

The applicant has proposed connecting into the existing sanitary sewer line on Belfort Street in accordance with the City Code and Technical Manual.

5. All residential development of 20 units or more, commercial development, and industrial development shall provide for the temporary storage and timely removal of all trash and recyclable materials including, at a minimum, paper, corrugated cardboard, plastics, and metals. Storage containers for recyclable materials shall be separated from trash containers. All exterior storage of trash and recyclables shall be screened from view from public sidewalks, streets, and adjacent properties.

An exterior dumpster enclosure has been provided by the Applicant in accordance with these standards. Please see Sheet C101 of the attached plan set.

13.6.4 Site design standards

A. Massing, ventilation, wind, and heat impact

1. The bulk, location, or height of proposed buildings and structures shall not result in health or safety problems from a reduction in ventilation to abutting structures or changes to the existing wind climate that would result in unsafe wind conditions for users of the site and/or adjacent public spaces.

The proposed buildings are not to cause a reduction in ventilation to abutting structures or make changes to the existing wind climate that would result in unsafe wind conditions for users of the site and/or adjacent public spaces. The apparent nearest abutting structure is approximately 55 feet away from the easterly dwelling.

2. Development shall locate all HVAC venting mechanisms to direct exhaust away from public spaces and residential properties directly adjacent to the site.

HVAC venting mechanisms are proposed to be at the back of the buildings, on the north westerly portion of the site. This portion of the site does not face any residential properties.

3. In proposed buildings or additions with an aggregate roof area greater than 2,000 square feet, measured horizontally, and, for residential projects, greater than nine residential units, a minimum of 75% of the roof area must meet the following "cool roof" Solar Reflective Index (SRI) standards: a. Roofs with a slope less than 2:12: SRI of 82+ (initial)/64+ (3-year aged) b. Roofs with a slope greater than 2:12: SRI of 25+ (initial)/25+ (3-year aged) Roof areas covered by shade structures with an SRI of 39+, including photovoltaic panels that shade the roof, area considered exempt from roof area calculations for the purposes of this standard.

The roof is proposed with an 8:12 slope therefore requires to meet the "cool roof" Solar Reflective Index (SRI) of 25+ (initial). The applicant is intending to use a Certainteed Landmark Solaris *Cool Roof* in Solaris Crystal Gray to accommodate this requirement. Refer to the Cut Sheets and Product Brochure annexed to the Architectural Plans included within Attachment 5.

B. Shadow: All development over 65 feet in height shall be designed to avoid and/or mitigate the adverse impacts of shadows cast by new structures or building additions from falling on publicly accessible open space in accordance with the shadow standards of the Technical Manual.

The proposed development is not over 65 feet in height, therefore this standard is not applicable.

C. Snow and ice loading: All development shall be designed to prevent significant amounts of accumulated snow and ice from loading or falling onto adjacent properties or public ways.

Snow storage in accordance with this ordinance have been provided to prevent significant amounts of accumulated snow and ice from falling onto adjacent properties or public ways.

D. View corridors: The massing, location, and height of development shall not substantially obstruct public view corridors identified in the City of Portland Design Manual.

The proposed development does not appear to obstruct any public view corridors as identified in the City of Portland Design Manual.

E. Historic resources

1. When a development affects a designated landmark or lies within a designated historic district or historic landscape district, such development shall be required to obtain historic preservation approval under Article 16.

The project site and abutting properties do not appear to be within a designated historic district or historic landscape district therefore it is not intended that he project will affect any designated landmark.

2. All development shall document and protect state or local archaeological resources known to exist or discovered on the site.

a. Protection may include leaving archaeological resources untouched beneath a new development through adaptation of foundation design or architectural layout.

b. Where the applicant can demonstrate that complete protection is not feasible, the applicant shall excavate and document archeological resources. Such measures shall be conducted in consultation with the City's historic preservation program and Maine Historic Preservation Commission. For resources of state significance, excavation and documentation shall be conducted by a qualified professional, incoordination with Maine Historic Preservation Commission. Local archeological resources may or may not be recognized by the Maine Historic Preservation Commission as significant and shall include the following:

i. Original seawall structure located landward of Commercial Street.

ii. Inactive historic family cemetery plots.

iii. Historic railroad beds including but not limited to the Portland Lewiston interurban railroad.

iv. Original structure and/or landforms associated with the Cumberland and Oxford Canal.

V. Buried portions of colonial and post-colonial period structures or built features located on the Portland Peninsula predating the Great Fire of 1866.

vi. Pre-colonial occupation sites identified by shell middens or other evidence.

vii. Sites listed or eligible for listing on the National Register of Historic Places.

c. In order to preserve archeological resources, the review authority may waive standards listed in the City of Portland Technical Manual where necessary if it is determined that such a waiver would not jeopardize the health, safety, or welfare of the development's occupants, the public, or the natural environment.

Based on the National Register of Historic Places, the project site and abutting properties are not considered historic places. Additionally, the Applicant has made efforts to contact the State of Maine Historic Preservation Commission requesting information on the presence of any nearby structure or area with historical, architectural, or archeological significance as defined by the National Historic Preservation Act of 1966. No response has been received by the State of Maine Historic Preservation Commission at this time, however, the response can be forwarded upon receipt. Refer to Attachment 9 for the respective correspondence.

F. Exterior lighting

1. Site lighting

a. All exterior site lighting shall be full cutoff with no light emitted above the horizontal plane or spilled onto adjacent properties. Illumination levels shall be adequate but not excessive for the safety, comfort, and convenience of occupants and users of the site, and shall conform to the lighting standards of the Technical Manual.

b. Where light from a proposed development may adversely impact adjacent residential properties, exterior lighting shall employ building side shielding.

2. Architectural and specialty lighting.

a. Architectural and specialty lighting of such features as architectural details, monuments, public art, or other site features shall be designed to illuminate specific details or attributes only and shall meet the lighting standards of the Technical Manual.

b. Up-lighting by any method is prohibited except for public buildings and parklands; clock towers and steeples; landscape features; designated historic landmarks; flags of state, federal, or national

jurisdictions; and public art. Such light fixtures, brackets, conduits, and all other components shall be designed by a lighting professional and shall be scaled and placed to minimize their visibility and installed in accordance with the lighting standards of the Technical Manual.

3. Street lighting. All development shall provide municipal street lighting adequate for the safety and comfort of pedestrians, bicyclists, and motorists and, where applicable, conforming to specific lighting district requirements as specified in the street lighting standards of the Technical Manual.

Exterior lighting information provided by Swaney Lighting Associates, Inc., in accordance with the City's of Portland's Ordinance and Technical Manual, is included in Attachment 10.

G. Noise and vibration: All heating, ventilation and air conditioning equipment (HVAC), air handling units (AHU), emergency generators, and similar equipment shall meet applicable state and federal emissions requirements and shall be located to the interior of the site, away from abutting properties.

HVAC equipment will meet applicable state and federal emission requirements. The equipment is proposed to be on the back of the buildings, at the north westerly portion of the site which does not directly abut any surrounding residential properties.

H. Signage and wayfinding

1. On-site directional traffic signage may be provided to enable users to safely and easily navigate into, around and out of the site.

2. Signage shall not adversely affect visibility at intersections on or off the site.

Appropriate signage has been provided for the development. Please see Sheet C101 of the attached plan set for proposed signage.

I. Design standards

1. Development of certain types and/or proposed in certain zones, as specified in the City of Portland Design Manual, shall meet the design standards of the Design Manual in order to ensure that building and site design contribute to and enhance the goals and policies for specific zones within the city. The City of Portland Design Manual is incorporated by reference as part of this Land Use Code.

It is the intent of the design to be architecturally compactible with the residential buildings in the surrounding neighborhood as required by the City of Portland's Design Manual.

2. If the development is located in a historic district or associated with a historic landmark, the standards of Article 16 shall supersede.

The proposed development is not located in a historic district or associated with a historic landmark as mentioned above.

Closure

The Project Team looks forward to the Department's review of this Major Site Plan Application. If you have any questions with regards to the submission material or need additional copies, please contact our office.

Sincerely,

GORRILL-PALMER

SITE PLAN CHECKLIST & AGENT AUTHORIZATION

Alexander Coupe
27 Cypress Street
Portland, Maine 04103

November 26, 2024

Subject: Agent Authorization
Residential Development
1582 Forest Avenue, Portland, Maine 04103
Parcel: 299, D1011001

To Whom It May Concern:

Alexander P Coupe, President of Acre Properties, authorizes Gorrill-Palmer to execute development permit applications on behalf of Acre Properties for the referenced project.

If you have any questions or if I can be any further assistance, please contact me.

Very truly yours,

Alexander Coupe

MAJOR SITE PLAN
GENERAL DOCUMENT AND DRAWINGS CHECKLIST

Please submit each document as a separate PDF file.
Please confirm by electronically checking the boxes in the left-hand column.

**** PLEASE FILL OUT AND UPLOAD THE ZONING ASSESSMENT TABLE AND WAIVER TABLE SEPARATELY AS NOTED BELOW ****

At the time of application submission, please contact the Department of Public Works regarding E-911 addressing for your project.

GENERAL APPLICATION DOCUMENTS	
Yes NA	**Project Description** • Cover letter with detailed project description
Yes NA	**Completed Checklist** (this document)
Yes NA	**Evidence of Right, Title, and Interest** • Deeds, leases, or purchase and sales agreements
Yes NA	**Evidence of State or Federal Approvals** • Permits or letters of non-jurisdiction, if applicable
Yes NA	**Zoning Assessment** (see Zoning Assessment Table) Summary of compliance with use and dimensional standards of the land use code
Yes NA	**Site Plan Standards Assessment** (see Section 14.6 of the land use code) • Summary of project compliance with site plan standards of the land use code
Yes NA	**Summary of Existing and/or Proposed Easements or Covenants, applicable.** • Evidence of existing easements and any proposed easements, covenants, public or private rights-of-way
Yes NA	**Waiver Requests** (see Waiver Table) • Written request for waiver describing request and compliance with applicable waiver standards
Yes NA	**Financial Capability** • Letter or evidence from a financial institution or third party verifying financial capacity to undertake project
Yes NA	**Technical Capability** • Evidence of technical capability of applicant and consultants – resumes and/or examples of past projects

MAJOR SITE PLAN
STANDARDS AND SUBMISSION CHECKLIST

Provide assessment of compliance with standards and include supplemental documentation, as applicable.
Please submit each document as a separate PDF file.

TRANSPORTATION	
Yes NA	**Impact on Surrounding Street Systems (14-14.6.1(A))** • Describe incremental volume of traffic impacts and mitigation measures. If needed
Yes NA	**Access and Circulation (14-14.6.1(B))** Identify and describe the following: • Site access and internal circulation, including ADA access • Drive-up features, if applicable • Loading and servicing needs, routes, and geometry, providing turning templates for delivery vehicles, if applicable • Sidewalks and condition along street frontages and internal walkways • Engineered details for ADA ramps and public sidewalks, meeting sidewalk material policy and construction requirements (Technical Manual, Section 1)
Yes NA	**Public Transit (14-14.6.1(C)), if applicable** Identify and describe the following: • Existing available transit service and proposed transit improvements, including design details, such as easement, pad base, and shelter
Yes NA	**Off-Street Parking (14-14.6.1(D)), if applicable** Identify and describe the following: • Proposed vehicular and bicycle parking supply (including ADA-compliant parking) in relation to applicable parking requirements in Article 19 of the land use code • Curb cut separation and parking layout (Technical Manual, Section 1) • Construction details for bicycle racks • Management plan for snow storage and removal
Yes NA	**Transportation Demand Management (TDM) (14-14.6.1(E)), if applicable** • Provide TDM plan drafted in accordance with Technical Manual Section 1 requirements

ENVIRONMENTAL		
Yes	NA	**Preservation of Significant Natural Features (14-14.6.2(A)), if applicable** Identify and describe the following: • High and moderate value waterfowl and wading habitat • Aquifers (for Casco Bay Islands) • Waterbodies (including wetlands, watercourses, significant vernal pools and floodplains) • Proposed preservation areas and protection measures • Documentation from environmental compliance consultants and determinations from applicable state and federal agencies
Yes	NA	**Landscape Preservation (14-14.6.2(B))** Identify and describe the following: • Measures to preserve trees, including within required zoning setbacks (Technical Manual, Section 4) • Measures to protect existing vegetation during construction
Yes	NA	**Site Landscaping and Buffers (14-14.6.2(C))** Identify and describe the following: • Overall landscaping approach and consistency with standards • The use of screening and buffering of service areas and between non-residential and residential uses • Existing Heritage or Feature Trees on site and measures to preserve • Compliance with street tree requirements
Yes	NA	**Water Quality, Stormwater Management, and Erosion Control (14-14.6.2(D))** Identify and describe the following: • Erosion and sedimentation control plan and measures • Evidence of compliance with Urban Impaired Stream Standards pursuant to DEP Chapter 500 stormwater law, as applicable • Subsurface sanitary sewage disposal and groundwater protection measures

PUBLIC INFRASTRUCTURE AND COMMUNITY SAFETY	
Yes NA	**Consistency with City Master Plans (14-14.6.3(A))** • Describe proposed easements, rights and improvements to connect or continue off-premises public infrastructure, as applicable
Yes NA	**Public Safety and Fire Prevention (14-14.6.3(B))** Identify and describe the following: • Compliance with Crime Prevention through Environmental Design (CPTED) requirements (Technical Manual, Section 3) • Emergency vehicle access • Consistency with public safety standards (Technical Manual, Section 3)
Yes NA	**Availability and Adequacy of Public Utilities (14-14.6.3(C)) (Technical Manual, Sections 2 & 9)** Identify and describe the following: • Electrical services, including providing underground services • Existing and proposed connections for public utilities and required public utility upgrades • Sewer line connections
SITE DESIGN	
Yes NA	**Massing, Ventilations and Wind Impact (14-14.6.4(A))** Identify and describe the following: • Wind and ventilation impacts on adjoining structures and/or adjacent public spaces, including wind study, if applicable • Bulk, location, or height impacts on adjoining structures
Yes NA	**Shadows (14-14.6.4(B)), if applicable** • Provide shadow analysis of impacts on publicly accessible open space (Technical Manual, Section 11)
Yes NA	**Snow and Ice Loading (14-14.6.4(C))** • Describe building design measures to prevent snow and ice from loading or falling onto adjacent properties or public ways
Yes NA	**View Corridors (14-14.6.4(D)), if applicable** • Describe any protection of designated view corridors (Portland Design Manual, Appendix. 1)
Yes NA	**Historic Resources (14-14.6.4(E)), if applicable** Identify and describe the following: • The site's status as a designated landmark, within a historic district or historic landscape district, or within 100 feet of any designated landmark, historic district, or historic landscape district • Compliance with standards for preservation and documentation of archaeological resources

Yes NA	**Exterior Lighting (14-14.6.4(F))** • Describe how the proposed site lighting will adhere to photometrics requirements as it relates to light trespass and full cutoff fixture design, pursuant to Technical Manual Section 12
Yes NA	**Noise and Vibration (14-14.6.4(G))** • Provide data on noise levels for HVAC and other mechanical equipment, such as design specifications, to demonstrate consistency with state and federal noise emissions requirements as well as City code
Yes NA	**Signage and Wayfinding (14-14.6.4(H)), if applicable** • Provide signage plan showing the location, dimensions, height and setback of all existing and proposed signs • Provide drawings of all commercial and directional signage on site
Yes NA	**Zone-Related Design Standards (14-14.6.4(I))** • Address any applicable design review standards by zone, including compliance with Design Manual

MAJOR SITE PLAN
DRAWINGS CHECKLIST

Please upload the following DRAWINGS with the listed details into e-Plan as separate pdfs.

All drawings must be submitted in a 24 x 36 sheet size.

BOUNDARY SURVEY (stamped by a Maine Licensed Surveyor and drawn as per Technical Manual Sec. 13)

SITE PLAN(s) (stamped by a Maine Licensed Professional Engineer) including:

All sheets – Include a title block with project title and the following information:

- Project street address
- Name and address of property owner & applicant
- Licensed design professional, incl firm that produced plans
- North arrow
- Date of preparation and revision history block
- Tax parcel (chart, block, and lot) number

Existing Conditions Plan with the following:

- Existing structures, with distance from primary building façade(s) to the property line
- Approximate location of structures on abutting properties
- All streets and intersections adjacent to the site
- Existing driveways, pedestrian ways, and bicycle infrastructure, including dimensions and materials
- Existing public transit infrastructure
- Existing vehicle & bicycle parking areas
- Existing utilities on site and within adjacent rights-of-way
- Existing grades (two-foot contours preferred)
- Location of water courses, wetlands, and vegetation, or other significant natural features
- Existing soil conditions and location of test pits and borings
- Zoning boundary lines, including overlays
- Location of all existing easements and rights-of-way

Proposed Site Plan with the following:

- Proposed structures, including distance from primary building façade(s) to property lines
- Ground floor area, and finished floor elevations for all buildings
- Any proposed geometric modifications to streets and intersections adjacent to site
- Location, dimensions and materials of all proposed driveways, vehicle, bicycle, & pedestrian access ways with corresponding curb lines
- Engineered specifications/ cross-sections for proposed driveways, sidewalks & paved areas
- Location and dimensions of proposed loading areas, including turning templates
- Proposed transit infrastructure with dimensions/ engineering specifications
- Location of vehicle and bicycle parking with dimensions and engineering specifications
- Location of all snow storage areas
- Exterior lighting (please see Technical Manual Sec. 12 for photometrics requirements)

- Location of fire hydrants
- Location of solid waste management receptacles
- Location of all proposed HVAC and mechanical equipment, including proposed screening, where applicable
- Location of proposed easements and rights-of-way, including dimensions
- Please utilize color-coding and/or hatches and shading to delineate changes between the pre and post development condition as needed

UTILITY PLAN including:

- Proposed electrical infrastructure
- Location, sizing and directional flows of all proposed sewer and stormwater infrastructure
- Location and dimensions of off-premises public or publicly accessible infrastructure adjacent to site
- Electric utility infrastructure

GRADING AND DRAINAGE PLAN including:

- Proposed grades
- Proposed stormwater management measures meeting Technical Manual (Section 5) standards
- Any proposed alteration of a watercourse or wetlands
- Any groundwater protection measures
- Proposed buffers and preservation measures for wetlands or significant natural features

LANDSCAPE PLAN including:

- Existing vegetation to be preserved and preservation measures
- Proposed landscaping, screening, and street trees, including caliper widths for trees
- Planting schedule, including street trees

ARCHITECTURAL PLANS AND RENDERINGS including:

- Exterior building elevations, color renderings, illustrations of all sides
- Axonometric and street-level views for structures greater than three stories in height
- Provide context drawings, if applicable (Design Manual, page 1)
- Floor plans

CONSTRUCTION MANAGEMENT PLAN including:

- Specifics on traffic control, sidewalk sheds, and pedestrian rerouting
- Include a drawing and written narrative

OTHER

- Details and cross-sections, as necessary

ATTACHMENT 2

EVIDENCE OF TITLE, RIGHT, OR INTEREST

QUITCLAIM DEED

DLN:1002240195733

KNOW ALL PERSONS BY THESE PRESENTS, that, **ALEXANDER COUPE,** of Portland, Maine, for consideration paid, release to **ACRE PROPERTIES,** a Maine Corporation, with a place of business at 1326 Washington Avenue, Portland, ME 04103, the premises in the City of Portland, Cumberland County, Maine, bounded and described as follows:

See Exhibit A attached hereto

IN WITNESS WHEREOF, the said **ALEXANDER COUPE** has caused this instrument to be signed this 31 day of May, 2022.

Witness

ALEXANDER COUPE

State of MAINE
County of CUMBERLAND

On May 31, 2022, personally appeared the above-named **ALEXANDER COUPE** and acknowledged the foregoing to be his free act and deed.

Notary Public/Attorney
Name

Charles H. McLaughlin
Attorney at Law

EXHIBIT A

Description of proposed "Lot B"

A certain lot, or parcel of land, located on the southwesterly side of Forest Avenue, in the City of Portland, County of Cumberland, State of Maine, being bound and described as follows:

Beginning on the southwesterly side of Forest Avenue, at a # 5 rebar w/cap stamped "NCS 2080" located at the easterly corner of land now or formerly (N/F) of City of Portland;

THENCE: S 53°57'26" E, along said Forest Avenue, 72.60', to a point;

THENCE: S 42°50'22" W, through land of the Grantor, 167.22', to a proposed #5 rebar w/cap stamped "NCS 2080";

THENCE: S 33°59'26" W, through land of said Grantor, 115.16', to a proposed #5 rebar w/cap stamped "NCS 2080";

THENCE: S 57°55'04" E, through land of said Grantor, 107.22', to a proposed #5 rebar w/cap stamped "NCS 2080" on the northwesterly line of land N/F of Debra J. Fowler, as described in Book 21492, Page 098;

THENCE: S 32°50'39" W, along said Fowler, 26.00', to a point;

THENCE: N 57°55'04" W, along said Fowler, 9.96', to a point;

THENCE: S 31°34'37" W, along said Fowler, 67.73', to a 1" iron pipe;

THENCE: S 58°44'22" E, along said Fowler, 98.59', to a ¾" iron pipe on the northwesterly side of Belfort Street;

THENCE: S 31°15'38" W, along said Belfort Street, 30.00', to the easterly corner of land N/F of Leroy F. Doucette and Catherine H. Doucette; as described in Book 11388, Page 090;

THENCE: N 58°44'22" W, along said Doucette, 98.76', to a point;

THENCE: S 31°34'37" W, along said Doucette, along land N/F of James P. Spizuoco and Roxanne A. Spizuoco, as described in Book 3002, Page 069, along land N/F of Caroline M. Wagner, as described in Book 33277, Page 049, and along land N/F of Milton W. Farrin and Deanna F. Farrin et. al., as described in Book 31362, Page 298, 261.46', to the

easterly corner of land N/F of Robert J. Kutch and Laura J. Kutch, as described in Book 27093, Page 051;

THENCE: N 53°28'58" W, along said Kutch, 130.98', to land of said City of Portland;

THENCE: N 31°29'06" E, along said City of Portland, 659.48', to the POINT of BEGINNING.

The above described parcel contains 66,560 square feet, more or less.

The bearings for the above described parcel are based on Maine Coordinate System of 1983, West Zone, Grid North.

The above described parcel is subject to an easement to 3 Belfort, LLC by Bernard N. Larsen, dated November 11, 2016, recorded in Book 33615, Page 279.

The above described parcel is shown on plan entitled "Boundary Survey & Lot Split, 1582 Forest Avenue, Portland, Maine", by Northeast Civil Solutions, Inc., dated May 17, 2022, NCS Project No. 41969.01.

Being a portion of the premises conveyed to Alexander Coupe by deed of even or recent date herewith to be recorded in the Cumberland County Registry of Deeds.

Re: Belfort Landing Application

To whom it may concern,

Androscoggin Bank is engaged in early due diligence related to Alex Coupe's request to finance the construction of a 50-unit apartment community in Portland, ME.

While we have yet to begin our formal underwriting process, the Bank has been aware of the applicant's anticipated financing request since 2024. Mr. Coupe has remained transparent and in communication on the project's early progress, including the impact of rising building costs, since initial discussions first began.

Alex Coupe is an existing client of the Bank. All accounts maintained at Androscoggin Bank by Mr. Coupe have been handled as agreed. Past residential construction projects financed by the Bank for the applicant have been completed within the anticipated timeframe and as agreed with respect to design, construction, and as an owner/operator. Therefore (and while this letter indicates neither a commitment to lend nor an approval decision), there is preliminarily a reasonable level of confidence in the Borrower's capacity to execute upon the subject project assuming the project's economics satisfy the Bank's underwriting thresholds and criteria.

You may contact me with any questions at 207-518-6327.

Sincerely,

Matt Buonopane
Vice President, Commercial Banking
Androscoggin Bank
100 Middle Street
West Tower, Suite 303
Portland, ME 04101

Att. E

June 27, 2025

Eric Freeman, City Planner
City of Portland
389 Congress Street
Portland, ME 04101

Subject: Proposed Residential Development
1584 Forest Avenue, Portland, ME
Comment Response Letter #4

Dear Eric:

On behalf of **ACRE Properties**, our office is pleased to provide this letter to respond to comments received from the City of Portland Staff since our latest response letter dated June 13, 2025. We offer the following response for each comment, below. For ease of reference, we have repeated those comments in *italics* followed by our responses for Staff's consideration in **bold.**

City Staff Comments Received June 20th, 2025:

- *With the adjustments to the stormwater system design the applicant shall update the stormwater maintenance agreement to include a provision requiring annual inspections of the area immediately downstream of the southwesterly discharge point. The applicant shall be responsible for addressing any erosion or other impacts to the Talbot School property resulting from the project's stormwater discharge.*

Response: The Stormwater Management System Operation and Maintenance Manual has been revised to include provisions for inspection and maintenance of downstream areas (see Attachment 1). This manual is referenced in the stormwater maintenance agreement and will be appended to the final executed agreement.

- *In accordance with Section 17.2.3.C.3, workforce housing units must be integrated into the overall development and shar a common entrance with market-rate units. The current application materials do not identify which units are designated as workforce units. The applicant must update the building floor plans to clearly indicate which units will be designated as workforce housing. Please note that these units must be distributed throughout the building and may not be clustered in a single location.*

Response: The attached floor plans depict the locations of the 13 workforce housing units. These units are spread out across the 3 floors of the building and include 6 one-bedroom units and 7 two-bedroom units

- *The applicant submitted a revised LID scoring sheet on Wednesday, June 18, in response to City comments. City staff has received the updated scoring sheet and is currently reviewing the revisions.*

Response: No response required.

- *The applicant's rendering dated May 22, 2025 depicts a white vinyl fence installed along the property line abutting the Talbot School, while the site plan dated May 22, 2025 does not reflect the fence. The applicant shall update the site plan to either include the fence along the property boundary with the*

Talbot School, or alternatively, incorporate a shorter section of fencing specifically to screen the HVAC units, rather than extending the fence along the entire length of that side of the property.

Response: The site plan has been revised to depict a white vinyl fence adjacent to the HVAC units to provide screening.

- *In accordance with Section 13.6.4.A.3, proposed buildings with an aggregate roof area greater than 2,000 square feet (measured horizontally) and, for residential projects, more than nine residential units, must ensure that at least 75% of the roof area meets the following "cool roof" Solar Reflective Index (SRI) standards:*
  - *Roofs with a slope less than 2:12: SRI of 82+ (initial) / 64+ (3-year aged)*
  - *Roofs with a slope greater than 2:12: SRI of 25+ (initial and 3-year aged)*

  Roof areas shaded by structures with an SRI of 39+—including photovoltaic panels—are exempt from the roof area calculations under this standard.
  The current application materials do not specify how the project complies with this requirement. The site plan must be updated to clearly demonstrate compliance.

Response: The proposed roofs have a slope greater than 2:12. The elevations specify "Landmark Solaris Cool roof or similar reflective roof system with solar reflective index of min 25+; color Silver Birch, initial SRI 27, aged 28 or crystal gray initial SRI 29 aged 28". Data sheets are included in Attachment 3 of this submission.

- *As outlined in Section 13.6.2.B.1.3.a, one tree planting is required for every 750 square feet of uncovered asphalt paved parking area (including drive aisles). Based upon the square footage of the surface parking lot in the provided plans, the applicant will need to provide six additional tree plantings along the perimeter of the parking area or on the site. If additional trees cannot be planted the applicant may choose to pay a fee-in-lieu to the tree fund.*

Response: Based on conversation with the Landscape Architect there does not appear to be adequate space for the additional required plantings. Therefore, the applicant intends to pay the fee-in-lieu to the tree fund. It is our understanding that this fee would amount to $2,400 ($400/tree x 6 trees) per Section 4.1.3.B of the Technical Manual.

- *The applicant shall provide a tree preservation plan within the construction management plan demonstrating how on-site trees being preserved will be protected during the course of construction. This plan should provide specific recommendations for preservation for trees in close proximity to work areas.*

Response: The following tree preservation note has been added to the site plan and landscaping plan to outline how trees will be protected during the course of construction; "The contractor shall install construction fencing or approved equal to delineate and protect critical root zones associated with the trees to be preserved (noted on this plan). Critical root zones and protective barriers shall be inspected by the landscape architect. The contractor shall be responsible for all costs associated with damaged trees that are required to be protected, including but not limited to replacing the tree and/or paying fines."

- *Each building's primary entrance should feature a portico supposed by columns or other architectural distinctive features to provide covered access, create a defined transition between the exterior and interior, and emphasize the entrance as a focal point—consistent with the surrounding context. The current entrance design appears understated, making it unclear where visitors should be directed*

upon arrival. Its minimalist and secondary nature does not align with the scale or the traditional character reflected in the overall building design. An example of a larger multifamily building incorporating an entrance with a traditional residential design is provided below for reference.

Response: Based on discussions with city staff, this comment was drafted with the understanding that the main entrance to the buildings were located on the north side of the buildings (plan east). Upon clarifying that the main entrances are located in the northeast corner of the buildings under the cantilevered portion of the building, city staff agreed that a portico would not be appropriate. The elevations also depict signage above the main entrances ("Belfort Landing North/South") to direct visitors to the main entrances.

City Staff Comments Received June 24th, 2025:

- *The site plan and renderings do not appear to show any sidewalks or pathways connecting the development areas, or linking the building entrances to the rest of the site. As shown, it seems that people would enter and exit directly through the driveway and parking lot, with no delineation or curbing, which may not provide safe or intentional pedestrian circulation or place making. Please clarify how building access and circulation are intended to function.*

Response: Our circulation analysis is based on the fact that pedestrians will typically take the shortest route to get to their destination. For this reason, we would typically have a sidewalk running along the front of the building as it is the shortest route to the entrance. With the parking under the building, a curbed sidewalk in front is not feasible. However, the proposed building design features a 4'-9" walkway behind the 18' parking spaces to allow for safe pedestrian access. Additionally, to support the City's (and the applicant's) desire to promote alternative forms of transportation (walking, bus, & biking), we have provided walkways along Belfort Street as well as a walkway from Forest Avenue to facilitate pedestrian access from public areas to the site.

The only additional place we could add sidewalk is in front of the uncovered parking spaces which would require pedestrians to walk further away from their destination (the building) to use this sidewalk. Additionally, pedestrians would still have to traverse across the drive aisle. Therefore, we are of the opinion that a sidewalk in this location would see very little use (if any) and just add to the impervious footprint.

Attachment 4 includes a sketch depicting several anticipated pedestrian routes to the buildings. Given the low volume nature of residential developments and the 90 degree turn that vehicles will have to take to access parking spaces (which reduces speeds), we do not anticipate major conflicts with pedestrians crossing the drive aisle.

CLOSURE

We look forward to your review of this response package which includes revisions to accommodate the staff, planning board, and public comments received to date. Acre Properties and their representative(s) plan to attend the Planning Board Meeting scheduled for July 8, 2025. Please do not hesitate to contact our office if additional information is required, or if you have any questions about the information being submitted.

Sincerely,

GORRILL-PALMER

MEMORANDUM
TRAFFIC EVALUATION
1582 FOREST AVE
PORTLAND, ME
March 3, 2025

INTRODUCTION

It is our understanding that Acre Properties would like to propose the construction of two, three-story, multi-family dwellings as new residential development in Portland, Maine. Each dwelling will consist of 25 units for a total of 50 units combined. The residential development is proposed to be accessed via Belfort Street from Forest Avenue. The physical address for the site is 1582 Forest Avenue and is currently an undeveloped 1.5-acre site.

Gorrill Palmer received a comment response on their major site plan submission from Portland City Planner Eric Freeman stating that "1. *The applicant shall conduct a traffic study with the following scope: An evaluation of conditions at the Forest Avenue / Belfort Street intersection. This shall include an evaluation of traffic operations, safety conditions, pedestrian conditions, sight distance and access management conditions."*

This memorandum includes an evaluation of the following:

- Capacity Analysis
- Safety Conditions
- Pedestrian Conditions
- Sight distance and access management

TRIP GENERATION

Trip generation for the site has been calculated using the Institute of Transportation Engineers' (ITE) publication, *Trip Generation,* 11th Edition, the most recent edition accepted by MaineDOT. The proposed residential development will include 50 units. After review of the Land Use Codes (LUCs) provided in the 11th Edition of *Trip Generation*, the following was selected to calculate the trip generation for the proposed uses:

Proposed Trip Generation Variables

- LUC 220 – Multifamily Housing (Low-Rise)

The ITE provides two methodologies for determining trip generation; fitted curve and average rate. Because the number of units for the ITE studies are over 200, and 50 units are being proposed, using the fitted curve equation does not appear to yield realistic results. Therefore, the average rate was used for this evaluation. Trip generation calculations are provided in Attachment A.

The following Table 1 summarizes the trip generation for Multifamily Housing (Low-Rise)

Table 1 – Trip Generation (LUC 220 – 50 units**)**

Time Period	Trip Generation (Trip Ends)	
	Trip Gen Rates	Trip Generation
Weekday	6.74	337
AM Peak Hour of Adjacent Street	0.40	20
PM Peak Hour of Adjacent Street	0.51	26
AM Peak Hour Generator	0.47	24
PM Peak Hour Generator	0.57	28
Saturday Peak Hour Generator*	0.41	21

* Trip gen rates based on one study

TRAFFIC COUNT

Gorrill Palmer (GP) completed a turning movement count at the intersection of Forest Avenue / Belfort Street on Tuesday, February 25, 2025, from 2:00 PM – 6:00 PM and on Wednesday, February 26, 2025, from 7:00 AM – 9:00 AM. These time periods were approved by the City prior to counting. Raw traffic volumes on Forest Avenue were adjusted to peak summer conditions using the 2024 weekly group mean factors (1.04 / 0.87 = 1.20). This site is expected to be constructed in 2025, therefore it does not require an annual growth adjustment. Traffic figures are located in Attachment B.

CAPACITY ANALYSIS

A capacity analysis was completed for the intersection of Forest Avenue / Belfort Street for two scenarios; AM & PM peak hours for the predevelopment and postdevelopment conditions, Figures 2 & 4 respectively.

Capacity analysis was completed using Synchro/SimTraffic computer analysis software (Version 12). Hard copies of the capacity analysis are provided in Attachment D. Level of service rankings are similar to the academic rankings system where an 'A' is good with little control delay and an 'F' represents poor traffic conditions. If the level of service falls below a 'D' an evaluation should be made to determine if mitigation is warranted.

The following Table 2 summarizes the level of service for an unsignalized intersection based on the Highway Capacity Manual.

Table 2 – Unsignalized Intersection

Level of Service	Control Delay per Vehicle (s)
A	Less than 10.0
B	10.1 to 15.0
C	15.1 to 25.0
D	25.1 to 35.0
E	35.1 to 50.0
F	Greater than 50.0

The following Table 3 summarizes the results of AM pre & postdevelopment conditions.

Table 3 – AM Capacity Analysis

Intersection Movement*	Predevelopment (delay sec./LOS)		Postdevelopment (delay sec./LOS)	
Belfort Street NB LR	9	A	10	A
Forest Avenue SEB TR	2	A	2	A
Forest Avenue NWB LT	2	A	2	A

**L=left, T=Through, R=Right, EB=Eastbound, NB=Northbound, SB=Southbound*

The following Table 4 summarizes the results of PM pre & postdevelopment conditions.

Table 4 – PM Capacity Analysis

Intersection Movement*	Predevelopment (delay sec./LOS)		Postdevelopment (delay sec./LOS)	
Belfort Street NB LR	8	A	8	A
Forest Avenue SEB TR	2	A	2	A
Forest Avenue NWB LT	3	A	4	A

**L=left, T=Through, R=Right, EB=Eastbound, NB=Northbound, SB=Southbound*

Based on the results from Tables 3 & 4, the intersection movements are forecast to operate at acceptable LOSs for all movements. The addition of the residential development is not forecast to have a significant impact on the operations of the intersection. Capacity analysis results are provided in Attachment C

SAFETY CONDITIONS

Gorrill Palmer requested and reviewed the latest three-year MaineDOT crash history (2021-2023) for the anticipated study area. Crash history is provided in Attachment D.

To evaluate whether a location has a crash problem, MaineDOT uses two criteria to define a High Crash Location (HCL). Both criteria must be met to be classified as an HCL.

1. A critical rate factor (CRF) of 1.00 or more for a three-year period. A CRF compares the actual crash rate to the rate for similar intersections in the state. A CRF of less than 1.00 indicates a rate of less than average **and**:

2. A minimum of eight crashes over the same three-year period.

Based on a review of the crash history, there were two crashes at the Belfort St. / Forest Ave. intersection in the three-year time period 2021-2023. There are no high crash locations in the immediate study area.

In addition, GP reviewed the safety information on the MaineDOT Crash Query website for the period of 2021-2023 to check for pedestrian and bicycle crashes. There are no reported pedestrian or bicycle crashes in the immediate study area.

PEDESTRIAN CONDITIONS

Overall pedestrian counts were completed for the intersection of Forest Avenue / Belfort Street. The pedestrian count was completed for the full time period of 7:00 AM – 9:00 AM and 2:00 PM – 6:00 PM with no peak hour designation. There was a total of approximately 10 pedestrians that crossed Belfort Street and a total of approximately 10 pedestrians that crossed Forest Avenue at the crosswalk from 7:00 AM – 9:00 AM. There was a total of approximately 33 pedestrians that crossed Belfort Street and a total of approximately 16 pedestrians that crossed Forest Avenue at the crosswalk from 2:00 PM – 6:00 PM.

There are sidewalks provided on both sides of Forest Avenue and Belfort Street. A crosswalk is striped directly to the right exiting Belfort Street with no crosswalk striped across Belfort Street. There are not pedestrian landings provided at the Forest Avenue crosswalk ends or on either corner of Belfort Street. This is an existing condition and not the responsibility of the proposed project.

There is a bicycle lane provided on both sides of Forest Avenue.

SIGHT DISTANCE & ACCESS MANAGEMENT

The site is proposed to be accessed via one full movement unsignalized driveway off Belfort Street. Per the request of the City, sight distance was measured at the intersection of Forest Avenue / Belfort Street.

Sight Distance:

The City of Portland and MaineDOT use the same standards for sight distance. The following Table 5 presents the sight distance standards for MaineDOT.

Table 5 – Standards for Sight Distance

Speed Limit (mph)	Passenger Vehicle – MaineDOT (ft)
25	200
30	250
35	305
40	360
45	425

MaineDOT sight distance evaluation methodology is as follows:

Driveway Observation Point:	10 feet from traveled way
Height of Eye at Driveway:	3.5 feet above the ground
Height of Approaching vehicle:	4.25 feet above the ground

Based on the MaineDOT Map Viewer, Forest Avenue in the site vicinity is 30 mph. This speed was used for the sight distance evaluation.

The following Table 6 summarizes the measured sight distances exiting Belfort Street onto Forest Avenue looking left and right.

Table 6 – Sight Distance Summary

Driveway	Passenger Vehicle Required (feet)	Observed Looking Left (feet)	Observed Looking Right (feet)
Belfort Street	250	Approximately 270 to intersection	400+

As seen from the results in Table 6, the available sight distances exceed MaineDOT minimum requirements, provided parked vehicles in the area do not block sight distances.

It was observed during the traffic count that vehicles parking adjacent to and in front of a local store on the southwesterly corner of the intersection causes sight-distance issues looking to the left leaving Belfort Street.

This is a long-standing existing condition and is not the responsibility of the proposed development to address.

Access Management:

The adjacent store has two significantly wide curb cuts (greater than 50 feet each) on Forest Avenue and a third curb cut located on Belfort Street approximately 25 feet from the intersection with Forest Avenue. In addition to the store, the business on the opposite side of Belfort Street, also has a significantly wide curb cut (approximately 100 feet) close to Forest Avenue.

In our opinion, the access management in the immediate area is very poor, but it is a long-standing existing condition that is not the responsibility of the proposed development to address.

Trip Generation

Land Use: 220
Multifamily Housing (Low-Rise)

Description

Low-rise multifamily housing includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have two or three floors (levels). Various configurations fit this description, including walkup apartment, mansion apartment, and stacked townhouse.

- A walkup apartment typically is two or three floors in height with dwelling units that are accessed by a single or multiple entrances with stairways and hallways.
- A mansion apartment is a single structure that contains several apartments within what appears to be a single-family dwelling unit.
- A fourplex is a single two-story structure with two matching dwelling units on the ground and second floors. Access to the individual units is typically internal to the structure and provided through a central entry and stairway.
- A stacked townhouse is designed to match the external appearance of a townhouse. But, unlike a townhouse dwelling unit that only shares walls with an adjoining unit, the stacked townhouse units share both floors and walls. Access to the individual units is typically internal to the structure and provided through a central entry and stairway.

Multifamily housing (mid-rise) (Land Use 221), multifamily housing (high-rise) (Land Use 222), affordable housing (Land Use 223), and off-campus student apartment (low-rise) (Land Use 225) are related land uses.

Land Use Subcategory

Data are presented for two subcategories for this land use: (1) not close to rail transit and (2) close to rail transit. A site is considered close to rail transit if the walking distance between the residential site entrance and the closest rail transit station entrance is ½ mile or less.

Additional Data

For the three sites for which both the number of residents and the number of occupied dwelling units were available, there were an average of 2.72 residents per occupied dwelling unit.

For the two sites for which the numbers of both total dwelling units and occupied dwelling units were available, an average of 96.2 percent of the total dwelling units were occupied.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip

generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

For the three sites for which data were provided for both occupied dwelling units and residents, there was an average of 2.72 residents per occupied dwelling unit.

It is expected that the number of bedrooms and number of residents are likely correlated to the trips generated by a residential site. To assist in future analysis, trip generation studies of all multifamily housing should attempt to obtain information on occupancy rate and on the mix of residential unit sizes (i.e., number of units by number of bedrooms at the site complex).

The sites were surveyed in the 1980s, the 1990s, the 2000s, the 2010s, and the 2020s in British Columbia (CAN), California, Delaware, Florida, Georgia, Illinois, Indiana, Maine, Maryland, Massachusetts, Minnesota, New Jersey, Ontario (CAN), Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, and Washington.

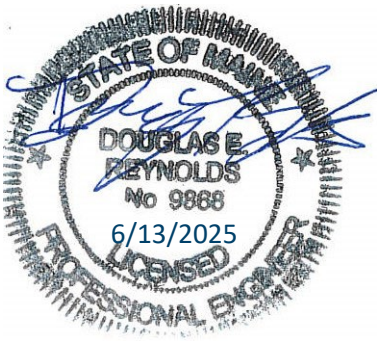
BASIC STANDARDS

EROSION AND SEDIMENTATION CONTROL REPORT

THE BELFORT LANDING

RESIDENTIAL DEVELOPMENT

PORTLAND , MAINE



Prepared for

ACRE PROPERTIES
27 CYPRESS STREET
PORTLAND, ME 04103

Prepared by

Gorrill Palmer
300 Southborough Drive – Suite 200
South Portland, Maine 04106
207.772.2515

JUNE 2025

Overview

This Exhibit demonstrates the developer has made adequate provision for controlling erosion and sedimentation.

Gorrill Palmer has been retained by ACRE Properties to prepare an Erosion and Sedimentation Control Report for a proposed two building 50-unit residential development in Portland, Maine.

Figure 1 is a map showing the project location. This narrative contains the general erosion and sedimentation control measures, which are appropriate for the construction of the project.

This narrative contains the general erosion and sedimentation control measures, which are appropriate for the construction of the project. Erosion and sedimentation control plans and details have also been prepared by Gorrill Palmer to accompany this report.

Existing Conditions and Soil Types

The proposed project site is 66,560 S.F. +/-. The City of Portland identifies the property on the Maine Parcel Viewer as Parcel 299, Lot D1011001. Based on field reconnaissance, the existing site is currently undeveloped with the central portion of the site appearing to be previously cleared and compacted by vehicles

Topography in the area of the proposed construction slopes in a generally southerly direction towards Empire Way with slopes in the range of 2% to 10%. A portion of the site drains to the north towards Forest Avenue, to the municipal stormwater system. Another portion of the site drains southeast directly onto Belfort Street into the same closed drainage system. The drainage is conveyed further southeast via a closed drainage system to the end of Belfort Street, which appears to ultimately drain to Capisic Brook.

Abutting land uses include:

- North –Residential Homes and Forest Avenue
- West – Gerald E. Talbot Community School (Developed)
- South – Residential Homes and Empire Way
- East – Residential Homes and Belfort Street

The Medium Intensity Soil Survey for Cumberland County as prepared by the Natural Resources Conservation Service was utilized in identifying the on-site soils. The soil report for this vicinity follows this page. The susceptibility of soils to erosion is indicated on a relative "K" scale of values over a range of 0.02 to 0.69. The higher values are indicative of the more erodible soils. The following table lists the soils found in the proposed development area and their K values:

Map Symbol	Soil Type	K Value	Hydrologic Soil Group
EmB	Elmwood Fine Sandy Loam	0.32	B
WmB	Windsor Loamy Sand	0.17	A

Based on the review of the K Values, the on-site soils have moderate susceptibility to erosion.

Existing Erosion Problems

Gorrill Palmer is not aware of any existing erosion problems at the project site.

Protected Natural Resources

Preliminary review of available data published by the State of Maine suggests that no significant habitats or protected natural resources lie within the area proposed for development. According to the National Wetland Inventory database it appears no wetlands are present on the proposed parcel.

Based upon the FEMA maps, the site is not located in a 100-year floodplain.

Critical Areas

No critical areas that would require special attention during construction are present on site.

Erosion Control Measures and Site Stabilization

The primary emphasis of the erosion/sedimentation control plan, which will be implemented for this project, is as follows:

- Development of a careful construction sequence.
- Rapid revegetation of denuded areas to minimize the period of soil exposure.
- Rapid stabilization of drainage paths to avoid rill and gully erosion.
- The use of on-site measures to capture sediment (hay bales/stone check dams/silt fence, etc.)

The following temporary and permanent erosion and sediment control devices will be implemented as part of the site development. These devices shall be installed as indicated on the plans or as described within this report. For further reference, see the latest edition of the Maine Erosion and Sediment Control Practices Field Guide for Contractors.

A. Dewatering

Water from construction trench dewatering shall pass first through a filter bag or secondary containment structure (e.g. hay bale lined pool) prior to discharge. The discharge site shall be selected to avoid flooding, icing, and sediment discharges to sensitive areas. If dewatering is anticipated to discharge to City infrastructure, the Contractor shall submit a dewatering plan and application as detailed in the City of Portland Rules and Regulations for Use of the Sewer System. The written plan and application detailing the operating procedures, equipment and devices to be used for removing sediment, and if required, petroleum or hazardous substances, from approved discharges will be provided from the contractor and approved by the City prior to commencement of construction.

B. Inspection and Construction Monitoring

Maintenance measures shall be applied as needed during the entire construction season. Before and within 24 hours after each wet weather event that produces more than 0.5 inch of rainfall in a consecutive 24-hour period, snowstorm, or period of thawing and runoff, the qualified contractor knowledgeable of DEP standards shall perform a visual inspection of all installed erosion control measures and perform repairs as needed to insure their continuous function. Additionally, inspections shall be performed at least once a week. Following the temporary and/or final seeding and mulching, the contractor shall in the spring inspect and repair any damages and/or unestablished spots. Established vegetative cover means a minimum of 90% of areas vegetated with vigorous growth.

C. Temporary Erosion Control Measures

The following measures are planned as temporary erosion/sedimentation control measures during construction:

1. A crushed stone-stabilized construction entrance shall be placed at the approved access drive as depicted on the plans.

2. Siltation fence or wood waste compost berms shall be installed downstream of any disturbed areas to trap runoff- borne sediments until grass areas are revegetated. The silt fence and/or wood waste compost berms shall be installed per the details provided in this package and inspected at least once a week and before and immediately after a storm event of 0.5 inches or greater, and at least daily during

prolonged rainfall. Repairs shall be made if there are any signs of erosion or sedimentation below the fence or berm line. If there are signs of undercutting at the center or the edges, or impounding of large volumes of water behind the fence or berm, the barrier shall be replaced with a stone check dam. Wood waste compost berms are not to be used adjacent to wetland areas that are not to be disturbed.

3. Straw or hay mulch including hydroseeding is intended to provide cover for denuded or seeded areas until revegetation is established. Mulch placed between April 15th and October 15th on slopes of less then 15 percent shall be anchored by applying water; mulch placed on slopes of equal to or steeper than 15 percent shall be covered by a fabric netting and anchored with staples in accordance with manufacturer's recommendation. Fabric netting and staples shall be used on disturbed areas within 50' of lakes, streams, and wetlands regardless of the upstream slope. Mulch placed between October 15th and April 15th on slopes equal to or steeper than 8 percent shall be covered with a fabric netting and anchored with staples in accordance with the manufacturer's recommendations. Slopes steeper than 3:1 and equal to or flatter than 2:1, which are to be revegetated, shall receive curlex blankets by American Excelsior or equal. Slopes steeper than 2:1 shall receive riprap as noted on the plans. The mulch application rate for both temporary and permanent seeding is 75 lbs per 1000 sf as identified in Appendix A of this section. Mulch shall not be placed over snow.

4. Temporary stockpiles of stumps, grubbings, or common excavation will be protected as follows:

   a.) Temporary stockpiles shall not be located within 50 feet of any wetlands which will not be disturbed and shall be located away from drainage swales.

   b.) Stockpiles shall be stabilized within 7 days by either temporarily seeding the stockpile by a hydroseed method containing an emulsified mulch tackifier or by covering the stockpile with mulch, such as hay, straw, or erosion control mix.

   c.) Stockpiles shall be surrounded by sedimentation barrier at the time of formation.

5. All denuded areas that are within 50 feet of an undisturbed wetland, which have been rough graded and are not located within a building pad, parking area, or access drive subbase area, shall receive mulch or erosion control mesh fabric within 48 hours of initial disturbance of soil. All areas within 100 feet of an undisturbed wetland shall be mulched prior to any predicted rain event regardless of the 48 hour window. In other areas, the time period may be extended to 7 days.

6. For work, which is conducted between October 15th and April 15th of any calendar year, all denuded areas, shall be covered with hay mulch or erosion control mix, applied at twice the normal application rate and anchored with a fabric netting. The time period for applying mulch shall be limited to 2 days for all areas.

7. Belfort Street shall be swept to control mud and dust as necessary.

8. During grubbing operations stone check dams shall be installed at any evident concentrated flow discharge points and as directed on the Erosion Control Plans.

9. Silt fencing with a minimum stake spacing of 6 feet shall be used, unless the fence is supported by wire fence reinforcement of minimum 14 gauge and with a maximum mesh spacing of 6 inches, in which case stakes may be spaced a maximum of 10 feet apart. The bottom of the fence shall be anchored.

10. Wood waste compost/bark berms may be used in lieu of siltation fencing. Berms shall be removed and spread in a layer not to exceed 3" thick once upstream areas are completed and a 90% catch of vegetation is attained.

11. Water and/or calcium chloride shall be furnished and applied in accordance with MDOT specifications – Section 637 – Dust Control.

12. Loam and seed is intended to serve, as the primary permanent revegetative measure for all denuded areas not provided with other erosion control measures, such as riprap. Application rates are provided in Appendix A of this section. Seeding shall not occur over snow.

D. Permanent Erosion Control Measures

The following permanent erosion control measures have been designed as part of the Erosion and Sedimentation Control Plan:

1. All areas disturbed during construction, but not subject to other restoration (paving, riprap, gravel subbase, etc.) will be loamed, limed, fertilized, mulched, and seeded. Fabric netting, anchored with staples, shall be placed over the mulch in areas as noted in Temporary Erosion Control Measures paragraph 4 of this report. Native topsoil shall be stockpiled and reused for final restoration when it is of sufficient quality.

2. All storm drain pipe outlets shall have riprap aprons at their outlet to protect the outlet and receiving channel from scour and deterioration. Installation details are provided in the plan set. The aprons shall be installed and stabilized to the extent practicable prior to directing runoff to the tributary pipe or culvert.

Implementation Schedule

The following construction sequence shall be required to ensure the effectiveness of the erosion and sedimentation control measures are optimized:

It is anticipated that construction will begin in spring of 2025, with first occupancy anticipated in the fall of 2026.

Note: For all grading activities, the contractor shall exercise extreme caution not to overexpose the site, this shall be accomplished by limiting the disturbed area. Area shall be limited to no more than the contractor can mulch in one day.

1. Install stabilized construction entrances at the approved location(s).
2. Install perimeter silt fence and/or wood waste berms.
3. Install diversion dikes, or check dams (clear only those areas necessary to install BMP's)
4. Clear and grub site. Install stone check dams at any evident concentrated flow discharge points.
5. Commence installation of drainage appurtenances.
6. Commence earthwork for stormwater facilities.
7. Commence earthwork and grading to subgrade.
8. Commence installation of retaining walls.
9. Commence installation of water and sewer lines.
10. Continue earthwork and grading to subgrade as necessary for construction.
11. Complete installation of underground utilities to within 5' of future buildings.
12. Install light pole foundations and light poles.
13. Complete remaining earthwork operations.

14. Complete installation of drainage appurtenances.

15. Install sub-base and base gravel within parking areas, walkways, and all driveways.

16. Install curbing in parking areas as needed.

17. Install base course paving for drives and parking area as well as concrete surfaces.

18. Loam, lime, fertilize, seed and mulch disturbed areas and complete all landscaping.

19. Install surface course paving for drives and parking areas. Stripe per plan.

20. Once the site is stabilized and a 90% catch of vegetation has been obtained, remove all temporary erosion control measures.

21. Touch up loam and seed.

Prior to construction of the project, the contractor shall submit to the owner a schedule for the completion of the work, which will satisfy the following criteria:

1. The above construction sequence should generally be completed in the specified order; however, several separate items may be constructed simultaneously. Work must also be scheduled or phased to reduce the extent of the exposed areas as specified below. The intent of this sequence is to provide for erosion control and to have structural measures such as silt fence and construction entrances in place before large areas of land are denuded.

2. The work shall be conducted in sections which shall:

    - Limit the amount of exposed area to those areas in which work is expected to be undertaken during the proceeding 30 days.

    - Revegetate disturbed areas as rapidly as possible. All areas shall be permanently stabilized within 7 days of final grading or before a storm event; or temporarily stabilized within 48 hours of initial disturbance of soil for areas within 50 feet of an undisturbed wetland and 7 days for all other areas. Areas within 50 feet of an undisturbed wetland shall be mulched prior to any predicted rain event regardless of the 48 hour window.

    - Incorporate planned inlets and drainage system as early as possible into the construction phase. The ditches shall be immediately lined or revegetated as soon as their installation is complete.

Erosion, Sedimentation and Stabilization Control Plan

The Erosion Control information is included in the plan set.

Details and Specifications

The Erosion Control details and specifications are included in the plan set.

Winter Stabilization Plan

The winter construction period is from November 1 through April 15. If the construction site is not stabilized with pavement, a road gravel base, or riprap by November 15 then the site needs to be protected with over-winter stabilization. An area considered open is any area not stabilized with pavement, vegetation, mulching, erosion control mats, riprap or gravel base on a road.

Winter excavation and earthwork shall be completed such that any area left exposed can be controlled by the contractor. Limit the exposed area to one acre or an area that can be mulched in one day prior to any snow event.

All areas shall be considered to be denuded until the subbase gravel is installed in parking areas or the areas of future loam and seed have been loamed, seeded and mulched. Hay and straw mulch rate shall be a minimum of 150 lbs./1,000 square-feet (3 tons/acre) and shall be properly anchored.

For work, which is conducted between October 15th and April 15th of any calendar year, all denuded areas, shall be covered with hay mulch or erosion control mix, applied at twice the normal application rate and anchored with a fabric netting. The time period for applying mulch shall be limited to 2 days for all areas.

The contractor shall install any added measures which may be necessary to control erosion/sedimentation from the site dependent upon the actual site and weather conditions. Continuation of earthwork operations on additional areas shall not begin until the exposed soil surface on the area being worked has been stabilized, in order to minimize areas without erosion control protection.

1. **Soil Stockpiles**

   Stockpiles of soil or subsoil shall be mulched for over winter protection with hay or straw at twice the normal rate or at 150 lbs./1,000 square-feet (3 tons per acre) or with a four-inch layer of wood waste erosion control mix. This shall be done within 24 hours of stocking and re-established prior to any rainfall or snowfall. Any soil stockpile shall not be placed (even covered with hay or straw) within 50 feet from any natural resources.

2. **Natural Resources Protection**

   Any areas within 75 feet from any natural resources, if not stabilized with a minimum of 90% mature vegetation catch, shall be mulched by December 1 and anchored with plastic netting or protected with erosion control mats. During winter construction, a double line of sediment barriers (i.e. silt fence backed with hay bales or erosion control mix) shall be placed between any natural resource and the disturbed area. Projects crossing the natural resource shall be protected a minimum distance of 75 feet on either side from the resource. Existing projects not stabilized by December 1 shall be protected with the second line of sediment barrier to ensure functionality during the spring thaw and rains.

3. **Sediment Barriers**

   During frozen conditions, sediment barriers shall consist of wood waste filter berms as frozen soil prevents the proper installation of hay bales and sediment silt fences.

4. **Mulching**

   An area shall be considered denuded until areas of future loam and seed have been loamed, seeded and mulched. Hay and straw mulch shall be applied at a rate of 150 lb. per 1,000 square feet or 3 tons/acre (twice the normal accepted rate of 75-lbs./1,000 square-feet or 1.5 tons/acre) and shall be properly anchored. Mulch shall not be spread on top of snow. The snow shall be removed down to a one-inch depth or less prior to application. After each day of final grading, the area shall be properly stabilized with anchored hay or straw or erosion control matting. An area shall be considered to have been stabilized when exposed surfaces have been either mulched with straw or hay at a rate of 150 lb. per 1,000 square feet (3 tons/acre) and adequately anchored that ground surface is not visible through the mulch.

   Between the dates of November 1 and April 15, all mulch shall be anchored by peg line, mulch netting, asphalt emulsion chemical, or wood cellulose fiber. When ground surface is not visible

through the mulch then cover is sufficient. After November 1st, mulch and anchoring of all bare soil shall occur at the end of each final grading workday.

5. **Mulching of Slopes and Ditches**

   Slopes shall not be left exposed for any extended time of work suspension unless fully mulched and anchored with peg and netting or with erosion control blankets. Mulching shall be applied at a rate of 230 lbs./1,000 square feet on all slopes greater than 8%.

   Mulch netting shall be used to anchor mulch in all drainage ways with a slope greater than 3% for slopes exposed to direct winds and for all other slopes greater than 8%. Erosion control blankets shall be used in lieu of mulch in all drainage ways with slopes greater than 8%. Erosion control mix can be used to substitute erosion control blankets on all slopes except ditches.

6. **Seeding**

   Between the dates of October 15 and April 1st, loam or seed will not be required. During periods of above freezing temperatures finished areas shall be fine graded and either protected with mulch or temporarily seeded and mulched until such time as the final treatment can be applied. If the date is after November 1st and if the exposed area has been loamed, final graded with a uniform surface, then the area may be dormant seeded at a rate of 3 times higher than specified for permanent seed and then mulched. Dormant seeding may be selected to be placed prior to the placement of mulch and fabric netting anchored with staples. If dormant seeding is used for the site, all disturbed areas shall receive 4" of loam and seed at an application rate of 5 lbs./1,000 square-feet. All areas seeded during the winter shall be inspected in the spring for adequate catch. All areas insufficiently vegetated (less than 90% catch) shall be revegetated by replacing loam, seed, and mulch. If dormant seeding is not used for the site, all disturbed areas shall be revegetated in the spring.

7. **Winter Construction Inspection**

   After each rainfall, snowstorm or period of thawing and runoff, the qualified contractor knowledgeable of DEP standards shall perform a visual inspection of all installed erosion control measures and perform repairs as needed to insure their continuous function. Inspections shall be performed a minimum of once per week and shall be conducted in accordance with the Erosion Control Measures and Site Stabilization within the Erosion Control Report.

Standards for Timely Stabilization of Construction Sites During Winter

1. Standard for the timely stabilization of ditches and channels - The applicant shall construct and stabilize all stone-lined ditches and channels on the site by November 15. The applicant shall construct and stabilize all grass-lined ditches and channels on the site by September 1. If the applicant fails to stabilize a ditch or channel to be grass-lined by September 1, then the applicant will take one of the following actions to stabilize the ditch for late fall and winter.

Install a sod lining in the ditch - The applicant shall line the ditch with properly installed sod by October 1. Proper installation includes the applicant pinning the sod onto the soil with wire pins, rolling the sod to guarantee contact between the sod and underlying soil, watering the sod to promote root growth into the disturbed soil, and anchoring the sod with jute or plastic mesh to prevent the sod strips from sloughing during flow conditions.

Install a stone lining in the ditch - The applicant shall line the ditch with stone riprap by November 15. The applicant shall hire a registered professional engineer to determine the stone size and lining thickness

needed to withstand the anticipated flow velocities and flow depths within the ditch. If necessary, the applicant shall regrade the ditch prior to placing the stone lining so to prevent the stone lining from reducing the ditch's cross-sectional area.

2. Standard for the timely stabilization of disturbed slopes - The applicant shall construct and stabilize stone-covered slopes by November 15. The applicant shall seed and mulch all slopes to be vegetated by September 1. The department shall consider any area having a grade greater than 15% to be a slope. If the applicant fails to stabilize any slope to be vegetated by September 1, then the applicant shall take one of the following actions to stabilize the slope for late fall and winter.

Stabilize the soil with temporary vegetation and erosion control mats - By September 1 the applicant shall seed the disturbed slope with winter rye at a seeding rate of 3 pounds per 1,000 square feet and apply erosion control mats over the mulched slope. The applicant shall monitor the growth of the rye over the next 30 days. If the rye fails to grow at least three inches or cover at least 75% of the disturbed slope by November 1, then the applicant shall cover the slope with a layer of wood waste compost as described in item iii of this standard or with stone riprap as described in item iv of this standard.

Stabilize the slope with sod - The applicant shall stabilize the disturbed slope with properly installed sod by September 1. Proper installation includes the applicant pinning the sod onto the slope with wire pins, rolling the sod to guarantee contact between the sod and underlying soil, and watering the sod to promote root growth into the disturbed soil. The applicant shall not use late-season sod installation to stabilize slopes having a grade greater than 33% (3H:1V).

Stabilize the slope with wood waste compost - The applicant shall place a six-inch layer of wood waste compost on the slope by November 15. Prior to placing the wood waste compost, the applicant shall remove any snow accumulation on the disturbed slope. The applicant shall not use wood waste compost to stabilize slopes having grades greater than 50% (2H:1V) or having groundwater seeps on the slope face.

Stabilize the slope with stone riprap - The applicant shall place a layer of stone riprap on the slope by November 15. The applicant shall hire a registered professional engineer to determine the stone size needed for stability and to design a filter layer underneath the riprap.

3. Standard for the timely stabilization of disturbed soils - By September 15 the applicant shall seed and mulch all disturbed soils on areas having a slope less than 15%. If the applicant fails to stabilize these soils by this date, then the applicant shall take one of the following actions to stabilize the soil for late fall and winter.

Stabilize the soil with temporary vegetation - By September 1 the applicant shall seed the disturbed soil with winter rye at a seeding rate of 3 pounds per 1000 square feet, lightly mulch the seeded soil with hay or straw at 75 pounds per 1000 square feet and anchor the mulch with plastic netting. The applicant shall monitor growth of the rye over the next 30 days. If the rye fails to grow at least three inches or cover at least 90% of the disturbed soil before November 1, then the applicant shall mulch the area for over-winter protection as described below.

Stabilize the soil with sod - The applicant shall stabilize the disturbed soil with properly installed sod by September 15. Proper installation includes the applicant pinning the sod onto the soil with wire pins, rolling the sod to guarantee contact between the sod and underlying soil, and watering the sod to promote root growth into the disturbed soil.

Stabilize the soil with mulch - By November 15 the applicant shall mulch the disturbed soil by spreading hay or straw at a rate of at least 150 pounds per 1000 square feet on the area so that no soil is visible through the mulch. Prior to applying the mulch, the applicant shall remove any snow accumulation on the disturbed area. Immediately after applying the mulch, the applicant will anchor the mulch with plastic netting to prevent wind from moving the mulch off the disturbed soil.

Maintenance of Facilities

The stormwater facilities will be maintained by the Applicant, ACRE Properties, LLC or their assigned heirs. The contract documents will require the contractor to designate a person responsible for maintenance of the sedimentation control features during construction as required by the Erosion Control Report. Long-term operation/maintenance recommended for the stormwater facilities is presented below.

The responsible party may contract with such professionals, as may be necessary in order to comply with this provision and may rely on the advice of such professionals in carrying out its duty hereunder, provided, that the following operation and maintenance procedures are hereby established as a minimum for compliance with this section. A maintenance log of the inspections shall be kept by the responsible party.

Inspection and Maintenance Frequency and Corrective Measures:

The following areas, facilities, and measures will be inspected and the identified deficiencies will be corrected. Clean-out must include the removal and legal disposal of any accumulated sediments and debris.

Culverts: Inspect culverts 2 times per year (preferably in Spring and Fall) to ensure that the culverts are working in their intended fashion and that they are free of debris. Remove any obstructions to flow; remove accumulated sediments and debris at the inlet, at the outlet, and within the conduit and repair any erosion damage at the culvert's inlet and outlet.

Vegetated Areas: Inspect slopes and embankments early in the growing season to identify active or potential erosion problems. Replant bare areas or areas with sparse growth. Where rill erosion is evident, armor the area with an appropriate lining or divert the erosive flows to on-site areas able to withstand the concentrated flows. The facilities will be inspected after major storms and any identified deficiencies will be corrected.

Roadways and Parking Surfaces: Clear accumulations of winter sand in parking lots and along roadways at least once a year, preferably in the spring. Accumulations on pavement may be removed by pavement sweeping. Accumulations of sand along road shoulders may be removed by grading excess sand to the pavement edge and removing it manually or by a front-end loader. Repair potholes and other roadway obstructions and hazards. Plowing and sanding of paved areas shall be performed as necessary to maintain vehicular traffic safety.

Stormdrain Outlets: Inspect outlets 2 times per year (preferably in Spring and Fall) to ensure that the outlets are working in their intended fashion and that they are free of debris. Remove any obstructions to flow; remove accumulated sediments and debris at the outlet and within the conduit Repair any erosion damage at the stormdrain outlet.

Ditches, Swales and other Open Stormwater Channels: Inspect 2 times per year (preferably in Spring and Fall) to ensure they are working in their intended fashion and that they are free of sediment and debris. Remove any obstructions to flow, including accumulated sediments and debris and vegetated growth. Repair any erosion of the ditch lining. Vegetated ditches will be mowed at least annually or otherwise maintained to control the growth of woody vegetation and maintain flow capacity. Any woody vegetation growing through riprap linings must also be removed. Repair any slumping side slopes as soon as practicable. If the ditch has a riprap lining, replace riprap on areas where any underlying filter fabric or underdrain gravel is showing through the stone or where stones have dislodged. Correct any erosion of the channel's bottom or sideslopes. The facilities shall be inspected after major storms and any identified deficiencies shall be corrected.

Stone Bermed Level Lip Spreader: Inspect 2 times per year (preferably in Spring and Fall) to ensure that they are free of debris and no undesirable growth is impeding water flow through the berm. In addition, the stone bermed level lip spreaders shall be inspected to ensure that runoff is not bypassing the bermed spreader.

Subsurface Detention Chambers: Inspect chambers per manufacturer's recommendation. At a minimum inspect chambers 2 times per year (preferably in Spring and Fall) to ensure that the structures are working in their intended fashion and that they are free of debris. Remove sediment from Isolator row when depth of sediment reaches 3 inches.

Drip Strips: The drip strip will be inspected within the first three months after construction; thereafter the filter will be inspected 2 times per year (preferable in Spring and Fall) to ensure that the filter is draining within 24 to 48 hours of a rain event to equivalent to 1" or more. Adjustments will be made to the outlet valve to ensure that the drip strip drains within 24 to 48 hours. Failure to drain in 72 hours will require part or all of the soil filter media to be removed and replaced with new material meeting the soil filter gradation. The facilities will be inspected after major storms and any identified deficiencies will be corrected. Inspect for unwanted and invasive plants and remove as necessary. Remove debris from the surface. Since the Roofline Drip edge is part of the approved stormwater management plan, it cannot be paved over or altered in any way. Gutters shall not be installed along the roofline.

Recertification

As part of the Stormwater Permit, the applicant is required to meet the standards in Appendix B of the Chapter 500 Rules. Appendix B states that a project must submit a certification of the following to the department within three months of the expiration of each five-year interval from the date of issuance of the permit.

(a) Identification and repair of erosion problems. All areas of the project site have been inspected for areas of erosion, and appropriate steps have been taken to permanently stabilize these areas.

(b) Inspection and repair of stormwater control system. All aspects of the stormwater control system have been inspected for damage, wear, and malfunction, and appropriate steps have been taken to repair or replace the system, or portions of the system.

(c) Maintenance. The erosion and stormwater maintenance plan for the site is being implemented as written, or modifications to the plan have been submitted to and approved by the department, and the maintenance log is being maintained.

(d) Proprietary Systems. All proprietary systems have been maintained according to the manufacturer's recommendations. Where required by the Department, the permittee shall execute a 5-year maintenance contract with a qualified professional for the coming 5-year interval. The maintenance contract must include provisions for routine inspections, cleaning, and general maintenance.

Annual report: The owner or operator of a BMP shall hire a professional Qualified to perform Post-Construction BMP Annual Inspections (as defined in Section 32-1 of the local ordinance), to provide on or by June 30 of each year, a completed and signed certification to the DPW in a form provided by the DPW, certifying that the person has inspected the BMP(s) and that they are adequately maintained and functioning as intended by the approved post-construction stormwater management plan. If, at the time of inspection, the BMP(s) required maintenance or repair, the professional Qualified to perform Post Construction BMP Annual Inspections (as defined in Section 32-1 of this ordinance) hired by that person shall provide of the deficiency and corrective action(s) taken to the DPW in no later than 60 days following the date the deficiency was identified. If 60 days is not possible, then the DPW must establish an expeditious schedule for the owner or operator of the BMP to complete the maintenance and establish a record of the deficiency and corrective action(s) taken.

Appendix C – Good Housekeeping

The City of Portland requires a Good Housekeeping and Pollution Prevention Plan as part of a Comprehensive ESC Plan. As required by the City of Portland the Erosion Control Plan shall discuss the following:

Spill Prevention. Controls must be used to prevent pollutants from construction and waste materials stored on-Site from entering stormwater, which includes storage practices to minimize exposure of the materials to stormwater. The Site contractor or operator must develop, and implement as necessary, appropriate spill prevention, containment, and response planning measures.

Groundwater protection. During construction, liquid petroleum products and other hazardous materials with the potential to contaminate groundwater may not be stored or handled in areas of the Site draining to an infiltration area. An infiltration area is any area of the Site that by design or as a result of soils, topography, and other relevant factors accumulates runoff that infiltrates into the soil. Dikes, berms, sumps, and other forms of secondary containment that prevent discharge to groundwater may be used to isolate portions of the Site for the purposes of storage and handling of these materials.

Fugitive sediment and dust. Actions must be taken to ensure that activities do not result in noticeable erosion of soils or fugitive dust emissions during or after construction. Oil may not be used for dust control, but other water additives may be considered as needed. A stabilized construction entrance shall be included to minimize tracking of mud and sediment. If off-Site tracking occurs, public roads shall be swept immediately and no less than once a week and prior to significant storm events. Operations during dry months, that experience fugitive dust problems, shall wet down unpaved access roads once a week or more frequently as needed with a water additive to suppress fugitive sediment and dust.

Debris and other materials. Minimize the exposure of construction debris, building and landscaping materials, trash, fertilizers, pesticides, herbicides, detergents, sanitary waste, and other materials to precipitation and stormwater runoff. These materials must be prevented from becoming a pollutant source. Sediment generated by concrete or mortar mixing, brick cutting & saw cutting activities must be contained (e.g., sausage boom, straw bales, etc.) and cleaned up using dry methods (i.e., sweeping or vacuuming) to prevent it from entering drainage structures or water resources. These activities shall be done on vegetated areas whenever possible and away from drainage structures and water resources.

Excavation dewatering. Excavation dewatering is the removal of water from trenches, foundations, coffer dams, ponds, and other areas within the construction area that retain water after excavation. In most cases the collected water is heavily silted and hinders correct and safe construction practices. The collected water removed from the ponded area, either through gravity or pumping, must be spread through natural wooded buffers or otherwise treated to collect the maximum amount of sediment possible, like a coffer dam sedimentation or sediment filter bag. Avoid allowing the water to flow over Disturbed Areas of the Site. If the Maine DEP has approved equivalent measures, provide proof of approval. Note that discharge of excavation dewater fluids from the Site must be visually clear (no visible suspended or settleable solids). Any dewatering discharges from a site to the City right-of way or infrastructure are prohibited unless the City has provided

approval of a Dewatering Plan and Application submitted by the Contractor. Discharges from the Site into the City's storm drain or sewer system must first obtain City approval through the Dewatering Program, as detailed in the Rules and Regulations for Use of the Sewer System.

Washout from concrete, stucco, paint, curing compounds, or other construction materials. If washout/cleanout is to be completed on the Site, a designated area(s) shall be established and marked on the Erosion and Sedimentation Control Plan. This area shall be a minimum of 50 feet from all drainage structures, ditches, waterbodies, and resource areas, as well as property boundaries if possible. The area shall not have an outlet to discharge wastes or flows. No detergents shall be used or vehicles washed in this location. A leak-proof pit or container shall be established in the washout area(s), to which washings shall be directed. This area shall be used for washout containment and dewatering by evaporation only. The pit shall not allow infiltration to occur. To prevent clean water from entering the pit, the washout area shall be covered during precipitation events. Inspections of the pit shall be conducted daily to ensure no leaks are present and no discharge is occurring

Authorized non-stormwater discharges. Identify and prevent contamination by non-stormwater discharges. Where allowed non-stormwater discharges exist, they must be identified and steps should be taken to ensure the implementation of appropriate pollution prevention measures for the non-stormwater component(s) of the discharge. Authorized non-stormwater discharges are:

1. Discharges from firefighting activity;
2. Discharges from firefighting activity;
3. Fire hydrant flushings;
4. Vehicle washwater if detergents are not used and washing is limited to the exterior of vehicles (engine, undercarriage and transmission washing is prohibited);
5. Dust control runoff in accordance with permit conditions and Appendix (C)(3);
6. Routine external building washdown, not including surface paint removal, that does not involve detergents;
7. Pavement washwater (where spills/leaks of toxic or hazardous materials have not occurred, unless all spilled material had been removed) if detergents are not used;
8. Uncontaminated air conditioning or compressor condensate;
9. Uncontaminated groundwater or spring water;
10. Foundation or footer drain-water where flows are not contaminated;
11. Uncontaminated excavation dewatering (see requirements in Appendix C(5));
12. Potable water sources including waterline flushings; and
13. Landscape irrigation.

Unauthorized non-stormwater discharges. The Department's approval under this Chapter does not authorize a discharge that is mixed with a source of non stormwater, other than those discharges in compliance with Appendix C (6). Specifically, the Department's approval does not authorize discharges of the following:

1. Wastewater from the washout or cleanout of concrete, stucco, paint, form release oils, curing compounds or other construction materials;

2. Fuels, oils or other pollutants used in vehicle and equipment operation and maintenance;
3. Soaps, solvents, or detergents used in vehicle and equipment washing; and
4. Toxic or hazardous substances from a spill or other release.

Conclusion

The Applicant has provided temporary and permanent erosion control measures as well as specifying a sequence of construction as measures to minimize erosion and sedimentation.

Seeding Plan

SEEDING PLAN

Project: Residential Development – Portland, ME

Site Location: Portland, ME

☐ Permanent Seeding ☒ Temporary Seeding

1. Instruction on preparation of soil: Prepare a good seed bed for planting method used.
2. Apply lime as follows: _____# / acres, OR 138 # /M Sq. Ft.
3. Fertilize with _____ pounds of _____ N-P-K/ac. OR 13.8 pounds of 10-10-10 N-P-K/M Sq. Ft.
4. Method of applying lime and fertilizer: Spread and work into the soil before seeding.
5. Seed with the following mixture:

   50% Winter Rye

   50% Annual Rye

6. Mulching instructions: Apply at the rate of _____per acre, OR 75 pounds per M. Sq. Ft.

	Amount	Unit # Tons. Etc.
7. TOTAL LIME	138	#/1000 sq. ft.
8. TOTAL FERTILIZER	13.8	#/1000 sq. ft.
9. TOTAL SEED	1.03	#/1000 sq. ft.
10. TOTAL MULCH	75	#/1000 sq. ft.
11. TOTAL other materials, seeds, etc.		
12. REMARKS		

Spring seeding is recommended; however, late summer (prior to September 1) seeding can be made. Permanent seeding should be made prior to August 5 or as a dormant seeding after the first killing frost and before the first snowfall. If seeding cannot be done within these seeding dates, temporary seeding and mulching shall be used to protect the site. Permanent seeding shall be delayed until the next recommended seeding period.

APPENDICES

Appendix 1 – Summary Checklist for Inspection and Maintenance

Appendix 2 – Inspection Logs

Appendix 3 – Stormwater Drainage System Maintenance Agreement

Appendix 4 – Permits for Project

I. INTRODUCTION

Runoff from developed areas, may contain a number of contaminants especially when emanating from rooftops, paved or lawn areas. This runoff can contain a significant amount of non-point contaminants, which can have an adverse impact on the receiving waters. The installation of soil media filters can significantly reduce the non-point pollution discharge from the developed area.

The effectiveness of stormwater facilities and other components of the system are dependent on their upkeep and maintenance to assure they meet their design function over an extended period of years. It is critical that the stormwater management facilities are inspected on a regularly scheduled basis, and that maintenance is performed on an as needed basis. It must also be recognized that the effectiveness of these facilities, and their maintenance requirements, are related to the stormwater drainage facilities that transport the flow to the ponds or treatment measures. Thus, maintenance should be directed to the total system.

The purpose of this document is to define in detail the inspection and maintenance requirements deemed necessary to assure that the stormwater management facilities function as intended on a long-term basis for the Belfort Landing project. This Operations and Maintenance Manual is specific to the existing and proposed stormwater measures utilized to execute a successful stormwater management plan. Subsequent sections identify individual maintenance items, give a brief commentary of the function and need of the item, a description of the work required, and a suggested frequency of accomplishment. While the suggested programs and schedules must be adapted to specific projects, the material presented should provide guidance for a successful long-term program.

A. Guidelines Overview

A summary of the individual components of stormwater management facilities for this project has been prepared. The format used in the summary is as follows:

Preface: A general description of what function/benefit the element is intended to provide. This is a short summary and not intended to provide the design basis, which can be found in other sources.

Inspection: This section provides the inspection requirements for the individual component.

Maintenance: The section provides general information on the routine maintenance requirements of this element.

Frequency: This section outlines the best judgment of the designer of the system to the frequency of maintenance.

Comments: This section provides any particular comment on the site-specific features of this element. This is a summary only. The owner/operator should review the design drawings and documents carefully to understand the particular elements of the project. The end of this section should allow the owner/operator to make notes on the specific

program. This may include the selected maintenance procedure, cross-references to applicable design drawings, etc.

A list of the individual inspection/maintenance elements is provided in the table of contents. The guidelines are proposed for initial use with adjustments made as appropriate based upon specific project experience.

This report includes the Operation and Maintenance requirements for any potential BMP identified in the Stormwater Management Report for this project.

B. Responsible Party

The responsible party for operation and maintenance of the stormwater and other site infrastructure will be the applicant or their agents or assigns. The applicant or their agents or assigns must adhere to the City of Portland Technical Manual Section 6 Erosion and Sedimentation Control Standards and the Chapter 32 of the City of Portland Code of Ordinances. A copy of an unexecuted Stormwater Drainage System Maintenance Agreement is included in Appendix 3.

II. PROJECT OVERVIEW

Key permits issued (or applied for) on the project include:

- City of Portland Major Site Plan Approval

A copy of the permits should be appended to this manual as Appendix 4. The Owner/Operator of the stormwater management system should review these permits for a general description and background of the project, as well as any specific permit conditions or requirements of the project.

The applicant has retained Gorrill Palmer for civil engineering for the development project. Gorrill Palmer has prepared the design for the stormwater management facilities and may be contacted at:

Gorrill Palmer
300 Southborough Drive, Suite 200
South Portland, Maine 04106
207.772.2515

The applicable plans and design documents which apply to the project are:

1. Civil Site Plans Prepared by Gorrill Palmer
2. The Erosion Control/Sedimentation Control Plan for the project
3. The Stormwater Management Plan for the project

A copy of these documents should be retained with this manual.

The proposed design includes inlets, stormwater conveyance lines, subsurface sand filter, and drip strips.

The site is ultimately tributary to Capisic Brook located to the south of the site.

The manual is intended for general guidance; however, any substituted deviations from the manual should be reviewed with respect to provisions of Appendix 4.

III. STANDARD INSPECTION/MAINTENANCE DESCRIPTIONS

The following narratives describe the inspection/maintenance provisions for the Stormwater Management system. Proper O&M is necessary to make sure the system will provide its intended purpose of conveying runoff, removing a substantial amount of the suspended solids, and other contaminants in the stormwater runoff.

A. Stormwater Inlets

Preface: The success of any stormwater facility relies on the ability to intercept stormwater runoff at the design locations. Stormwater inlets include catch basins, open culverts, and field inlets. Inlets exist throughout the property.

Inspection: The inspection of inlet points will need to be coordinated with other maintenance items, these include:

- Building maintenance areas
- Grounds maintenance

The key elements of the inspection are to assure the inlet entry point is clear of debris and will allow the intended water entry.

Maintenance: The key maintenance is the removal of any blockage which restricts the entry of stormwater to the inlet. The removed material should be taken out of the area of the inlet and placed where it will not reenter the runoff collection system. Snow should be removed from inlets on parking lots. Grass clippings and leaves should be bagged and removed particularly near the yard inlets near the buildings and exposed culvert inlets.

Frequency: All inlets should be inspected on a quarterly basis, and after/during significant storm events i.e. >1" rainfall).

Maintenance Personnel: The maintenance personnel will perform the normal maintenance/ inspections of the inlets and tributary drainage system.

Comments: Maintenance of inlets is critical on this project.

B. Tributary Drainage System

Preface: Stormwater from most of the project will be directed through a conveyance (tributary) system which transports the flow to the proposed BMPs, and ultimately to the Capisic Brook. This conveyance system will be principally overland flow discharging to piped drain systems. Most of the sediment carried by the drainage system is intended to be trapped in structures. Maintenance of this system can play a major role in the long-term maintenance

costs and the effectiveness of the onsite systems. The primary pretreatment measure for the site will be through deep sumped catch basins with hooded outlets.

Inspection: The tributary drainage system should be periodically inspected to assure that it is operating as intended, and that the carrying capacity has not been diminished by accumulations of debris and sediment or other hydraulic impediments. On piped systems, the inlets must be inspected to ensure the rims are set at the proper elevation to optimize flow entry and are not clogged with debris.

The level of sediment in the sumps should be checked to assure their effectiveness. Pipelines connecting the inlets should be checked to determine if siltation is occurring. This will be most critical on drain lines laid at minimal slopes. This can usually be accomplished by a light and mirror procedure.

Maintenance: Maintenance of the storm drainage system must assure that it continues to serve its design function on a long-term basis, and that its operation does not transport excessive sediments to any downstream treatment device or the receiving waters. Elevations on the rim of catch basins should be adjusted as needed to assure optimal water entry. Depending on the frost susceptibility of the soil, the rims may become elevated over time causing flow to circumvent the inlet. If a temporary filter bag has been designated for the inlet during construction, silt or other deleterious materials, can significantly reduce capacity and the bags should be removed with the sediment and replaced during construction. Catch basin cleaning would normally be accomplished with vacuum trucks contracted as a maintenance service for the Development. The removed material must be disposed of at an approved site for such materials.

If sediment in the pipeline is observed, it should be removed. This may be accomplished by hydraulic flushing, or by mechanical means. If hydraulic flushing is used the downstream conditions should be analyzed.

Frequency: The tributary drainage system should be inspected on an annual basis. Adjustment of inlet rim elevations should be on an as needed basis. Cleaning catch basin sumps and pipelines will depend on the rate of accumulation.

C. Subsurface Sand Filter

Preface: The subsurface sand filter consists of storage and pretreatment chambers above a sand filter layer for the applicable surface treatment. Stormwater runoff is conveyed to the filter through a closed pipe system from surface runoff. Flow is controlled using a gate valve which can be adjusted to ensure a drainage time between 24-48 hours.

Inspection: The subsurface sand filter will have control structures and maintenance ports to inspect the pretreatment row and storage layer. Inspect system to see if runoff is draining through the system at the outlet and inlet devices. Visual inspections should also occur after large storm events (i.e. >1”).

Maintenance: The procedures for maintenance are as follows:

Inlets and Outlets

Inlets and outlets to the subsurface sand filter should be kept open and in good working condition. This is particularly important for the inlet at the pretreatment rows. Outlets should be cleared and, if necessary flushed of any build-up.

Storage Layer

Remove and dispose of any sediment and build-up in the storage layer.

Sedimentation (or Clogging) of Soil Filter Area

If the sand filter appears to be holding water for a period longer than 48-72 hours, the sand mix has, more than likely, become clogged with sediment and/or the underdrains have clogged. To correct a standing water problem, the following remedial actions are recommended:

1. Check to make sure the outlet control valve is open.
2. Evaluate the drainage area to the sand filter area to identify any potential sources of sediment, such as an erosive condition, that may be contributing to the clogging of the device. If a source is identified, it is recommended that that source be eliminated to the fullest extent practicable before proceeding with the remaining recommendations provided below.
3. Flush the underdrains. Use cleanouts to flush the underdrains. Sediment in the drains may be preventing the sand filter from draining. Make sure to provide a way to capture any flushed sediment before it enters the stream environment or storm drain system downstream of the device. If, after flushing the underdrains, the device continues to hold water, the sand filter may be contaminated and need to be replaced.

Frequency: The subsurface sand filter should be inspected semi-annually and maintained as necessary.

Comments: Pretreatment in catch basin sumps and pretreatment row is crucial to long-term function of sand filter.

D. Level Lip Spreader

Inspections should occur at least once a year and following major storms, the level spreader pool should be inspected for sand accumulation and debris that may reduce its capacity. Sediment build-up within the swale should be removed when it has accumulated to approximately 25% of design volume or channel capacity. Remove debris such as leaf litter, branches and tree growth from the spreader. Dispose of the sediments and debris appropriately. The reconstruction of the level spreader may be necessary when sheet flow from the spreader channelize into the buffer. Do not store snow within the area of the level spreader.

E. Drip Strips

Preface: The Drip Strip is critical to the stormwater management plan for the project. It will consist of a stormwater reservoir, filter layer, and a 4" underdrain pipe embedded in the underdrain layer.

Inspection/Monitoring: The drip strip will be inspected within the first three months after construction; thereafter the filter will be inspected 2 times per year (preferably in Spring and Fall) to ensure that the filter is draining within 24 to 48 hours of a rain event equivalent to 1" or more. Failure to drain in 72 hours will require pipe flushing, or it may require part or all of the filter media to be removed and replaced with new material meeting the filter gradation. The facilities will be inspected after major storms and any identified deficiencies will be corrected. Harvesting and weeding of excessive growth shall be performed as needed. Inspect for unwanted or invasive plants and remove as necessary.

Maintenance: Remove unwanted vegetation and excess leaves, sticks and debris from the filter area. Pipes may require flushing if drip strip fails to drain within 72 hours.

Frequency: Inspect the basin in the late summer or early fall at the end of the growing season. Cutting and removal of additional grass will be required for lengths in excess of 6"-8". The basin should be inspected bi-annually and weeded as necessary.

Comments: None

F. Outlet Control Devices

Preface: Outlet control devices of assorted sizes are commonly utilized to control discharge from stormwater management features. This project uses gate valves and orifices to control discharge from the bio-retention filters and subsurface sand filters.

Inspection: Inspection of gate valves should be performed after each major rainfall event to ensure that stormwater runoff is able to discharge through the gate valve and that it is not clogged or needs to be adjusted.

Maintenance: The gate valve should be opened, and all debris flushed from the pipe. Clogs may be checked with mirror and flashlight method.

Frequency: The outlet control devices should be inspected semi-annually and maintained as needed.

Comments: None

G. Ditches, Swales, and Other Open Stormwater Channels

Inspect 2 times per year (preferably in Spring and Fall) to ensure they are working in their intended fashion and that they are free of sediment and debris. Remove any obstructions to flow, including accumulated sediments and debris and vegetated growth. Repair any erosion of the ditch lining. Vegetated ditches will be mowed at least annually or otherwise maintained to control the growth of woody vegetation and maintain flow capacity. Any woody vegetation

growing through riprap linings must also be removed. Repair any slumping side slopes as soon as practicable. If the ditch has a riprap lining, replace riprap on areas where any underlying filter fabric or underdrain gravel is showing through the stone or where stones have dislodged. Correct any erosion of the channel's bottom or sideslopes. The facilities shall be inspected after major storms and any identified deficiencies shall be corrected.

H. Roadways and Parking Surfaces

Clear accumulations of winter sand in parking lots and along roadways at least once a year, preferably in the spring. Accumulations on pavement may be removed by pavement sweeping. Accumulations of sand along road shoulders may be removed by grading excess sand to the pavement edge and removing it manually or by a front-end loader. Repair potholes and other roadway obstructions and hazards. Plowing and sanding of paved areas shall be performed as necessary to maintain vehicular traffic safety.

I. Litter

Litter should be removed as a matter of course by workers and as part of the ground's maintenance contract.

IV. PROGRAM ADMINISTRATION

A. General

A reliable administrative structure must be established to assure implementation of the maintenance programs described in the foregoing section. Key factors that must be considered in establishing a responsive administrative structure include:

1. Administrative body must be responsible for long-term operation and maintenance of the facilities. (Maintenance continues for the lifespan of the development in accordance with this document)

2. Administrative body must have the financial resources to accomplish the inspection and maintenance program over the life of the facility.

3. The administrative body must have a responsible administrator to manage the inspection and maintenance programs.

4. The administrative body must have the staff to accomplish the inspection and maintenance programs or must have authority to contract for the required services.

5. The administrative body must have a management information system sufficient to file, retain, and retrieve all inspection and maintenance records associated with the inspection and maintenance programs.

6. A qualified post construction inspector shall be retained by the Owner. His/her duties shall include preparing schedules for the Owner's maintenance, summarizing the results of this maintenance and preparing an annual report on the operation, maintenance, and repair of the stormwater system which must be copied to the City

of Portland. (The Owner shall be responsible for retaining a separate entity to perform maintenance which cannot be performed by the management of building and property grounds.) This person shall also participate in troubleshooting of the stormwater management system if a problem develops.

If any of the above criteria cannot be met by the entity assigned inspection and maintenance responsibilities, it is likely that the system will fail to meet its water quality objectives at some point during its life. While each of the above criteria may be met by a variety of formats, it is critical to clearly establish the assigned administrative body in a responsible and sustainable manner.

B. Record Keeping

Records of all inspections and maintenance work accomplished must be kept and maintained to document facility operations. These records should be filed and retained for a minimum 5-year time span. The filing system should be capable of ready retrieval of data for periodic reviews by appropriate regulatory bodies. Where possible, copies of such records should also be filed with the designated primary regulatory agency for their review for compliance with permit conditions. Typical inspection and maintenance record forms are attached hereto as Appendix 2.

Beyond the initial 5-year time span of the original approval and maintenance plan, the stormwater management system will need to be recertified through the Maine Department of Environmental Protection every 5 years to confirm that there is conformance with the original permit documents. This process will ensure all systems function properly over time. This document will remain valid throughout any subsequent recertification processes.

On or by June 30 of each year, the qualified post construction inspector shall provide a completed and signed certification to the Department of Public Works certifying that the person has inspected, cleaned, and maintained the stormwater management facilities, describing any deficiencies found during inspection of the stormwater management facilities, and certifying that the person has repaired any deficiencies in the stormwater management facilities noted during the annual inspection.

C. Contract Services

In some instances, or at specific times, the Maintenance Personnel may not have the staff to conduct the required inspection and/or maintenance programs as outlined in this document. In such cases, the work should be accomplished on a contractual basis with a firm or organization that has the staff and equipment to accomplish the required work.

The service contract for inspection and maintenance should be formal, well written legal document which clearly defines the services to be provided, the contractual conditions that will apply, and detailed payment schedules. Liability insurance should be required in all contracts.

APPENDIX 1

Summary Checklist
Inspection and Maintenance

Stormwater Management System Maintenance Program Summary Checklist						
Item	**Commentary**	**Frequency**				
		Monthly	**Quarterly**	**Semi-Annual**	**Annual**	**Long Term**
Stormwater Inlets	Stormwater inlets allow flow entry from a surface swale to a piped system. Entry may or may not be equipped with a bar rack. Inspect entry for debris accumulation. Remove debris to allow unimpeded entry. Lawn clippings and leaves should be removed from yard areas.		X		X Clearing	
Tributary Drainage System	Inspect to assure that the carrying capacity has not been diminished by debris, sediment or other hydraulic impediments.				X	
Subsurface Sand Filter	Inspect maintenance ports after rain events >1" and remove sediment. Check for signs of clogging and flush underdrains if necessary. Remove sediment from isolator row when depth of sediment reaches 3 inches.			X		
Level Lip Spreader	Remove any trash and debris from spreader and swale. Check integrity of spreader and that it does not channelize flow.			X		
Drip Strips	Remove debris from filter area. Inspect after major storm events and clear debris from orifice. May require flushing of pipes. Excessive growth shall be removed as needed.			X		
Orifice Control Devices	Inspect after major storm events and clear debris from orifice. May require flushing of pipes.			X		
Ditches Swales and Other open Stormwater Channels	Inspect to ensure the ditch is not eroding or blocked by debris.			X		
Roadways and Parking Surfaces	Remove accumulated sand.				X	
Litter	Litter should be removed daily.					

APPENDIX 2

Sample Inspection Logs

ACRE Properties
PORTLAND, MAINE

STORMWATER MANAGEMENT
SAMPLE STORMWATER INSPECTION & MAINTENANCE LOG

This log is intended to accompany the Operation and Maintenance Manual for Stormwater Management and Related Facilities. All stormwater BMPs shall be maintained in effective operating condition. A person with knowledge of erosion and stormwater control, including the standards and conditions of the DEP Stormwater Permit, shall conduct inspections of the facilities as described in the O&M Manual and on this form, and identified deficiencies must be corrected. This log shall be kept on file for a minimum of five (5) years.

B. Stormwater Inlets (Catch Basins)	**Observations**
Frequency: Annually in the spring	
Accumulated sediments from inflow channels and pipes between basins have been removed and legally disposed of	☐ Yes ☐ No ☐ NA
Floating debris and large sediment particles have been removed from inlets.	☐ Yes ☐ No ☐ NA
Stormwater Inlet Notes:	

C. Tributary Drainage System	**Observations**
Frequency: Annually spring or late fall and after heavy rains	
Remove and legally dispose of sediments	☐ Yes ☐ No ☐ NA
Remove floatables and other objects	☐ Yes ☐ No ☐ NA
Check for overgrown vegetation impeding flow	☐ Yes ☐ No ☐ NA
Check pipelines for siltation and clogging	☐ Yes ☐ No ☐ NA
Repair any slumping side slopes or erosion	☐ Yes ☐ No ☐ NA
Replace any riprap on areas where any underlying fabric or underlying gravel is exposed.	☐ Yes ☐ No ☐ NA
Tributary Drainage System Notes:	

D. Subsurface Sand Filter	Observations
Frequency: Semi-annually	
Inspect for debris	☐ Yes ☐ No ☐ NA
Sediment greater than 3”	☐ Yes ☐ No ☐ NA
System working in their intended fasion	☐ Yes ☐ No ☐ NA
Subsurface Detention Chamber Notes:	

E. Level Lip Spreader	Observations
Frequency: Semi-annually	
Inspect for debris	☐ Yes ☐ No ☐ NA
Undesirable growth impeding water flow	☐ Yes ☐ No ☐ NA
Ensure runoff is not bypassing the bermed spreader, repair as necessary	☐ Yes ☐ No ☐ NA
Level Lip Spreader Notes:	

F. Drip Strip	Observations
Frequency: Semi-annually	
Check for signs of clogging, or water is not draining within 48-72 hours	☐ Yes ☐ No ☐ NA
Inspect for debris	☐ Yes ☐ No ☐ NA
No excessive growth, remove as necessary	☐ Yes ☐ No ☐ NA
Roofline / Infiltration Drip Strip Notes:	

F. Outlet Control Devices	Observations
Frequency: Semi-annually	
Check for debris blocking orifice	☐ Yes ☐ No ☐ NA
If applicable, flush underdrain pipe	☐ Yes ☐ No ☐ NA
Roofline / Infiltration Drip Strip Notes:	

G. Ditches, Swales, and Other Open Stormwater Channels	Observations
Frequency: Semi Annually spring and late fall and after heavy rains	
Remove and legally dispose of sediments	☐ Yes ☐ No ☐ NA
Remove floatables and other objects	☐ Yes ☐ No ☐ NA
Check for overgrown vegetation impeding flow.	☐ Yes ☐ No ☐ NA
Mow to control growth and maintain flow capacity.	☐ Yes ☐ No ☐ NA
Repair any slumping side slopes or erosion	☐ Yes ☐ No ☐ NA
Replace any riprap on areas where any underlying fabric or underlying gravel is exposed.	☐ Yes ☐ No ☐ NA
Ditches Swales and Other Channel Notes:	

H. Roadways and Parking Surfaces	**Observations**
Frequency: Annually preferably in spring	
Remove and legally dispose of accumulated winter sand	☐ Yes ☐ No ☐ NA
Repair potholes and other roadway obstructions and hazards.	☐ Yes ☐ No ☐ NA
Roadways and Parking Surfaces Notes:	

APPENDIX 3

Stormwater Drainage System Maintenance Agreement

STORMWATER DRAINAGE SYSTEM
MAINTENANCE AGREEMENT

ACRE Properties, LLC/City of Portland
City of Portland, Maine – The Belfort Landing at 1582 Forest Street

IN CONSIDERATION OF the site plan approval granted by the Planning Board of the City of Portland to the proposed **The Belfort Landing ID PL- [__TBD__] -** shown on the Overall Site Layout Plan, Grading, & Drainage Plan and Stormwater Management Plan (Exhibits A, B and C) prepared by Gorrill Palmer Consulting Engineers of 300 Southborough Drive, South Portland, Maine dated last revised [__TBD__] and pursuant to a condition thereof, ACRE Properties LLC, a Maine limited liability company with a principal place of business in Portland, Maine, and having a mailing address of 27 Cypress Street, Portland, Maine 04103, the owner/operator of The Belfort Landing, does hereby agree, for itself, its successors and assigns (the "Owner"), as follows:

Maintenance Agreement

That it, its successors and assigns, will, at its own cost and expense and at all times in perpetuity, maintain in good repair and in proper working order the subsurface sand filter, drip strips, and related onsite drainage infrastructure, (hereinafter collectively referred to as the "stormwater system"), as shown on the Stormwater Management Plan in Exhibit C and in strict compliance with the approved Stormwater Inspection and Maintenance Manual prepared for the Owner by Gorrill Palmer Consulting Engineers (copy attached in Exhibit D) and Chapter 32 of the Portland City Code.

Owner of the subject premises further agrees, at its own cost, to keep a Stormwater Maintenance Log. Such log shall be made available for inspection by the City of Portland upon reasonable notice and request and be made part of the annual Stormwater reporting duties of the applicant to the City.

Said agreement is for the benefit of the said City of Portland and all persons in lawful possession of said premises and abutters thereto; further, that the said City of Portland and said persons in lawful possession may enforce this Agreement by an action at law or in equity in any court of competent jurisdiction; further, that after giving the Owner written notice and a stated time to perform, the said City of Portland, by its authorized agents or representatives, may, but is not obligated to, enter upon said premises to maintain, repair, or replace said stormwater system in the event of any failure or neglect thereof, the cost and expense thereof to be reimbursed in full to the said City of Portland by the Owner upon written demand. Any funds owed to the City under this paragraph shall be secured by a lien on the property.

This Agreement shall also not be construed to allow any change or deviation from the requirements of the subdivision and/or site plan most recently and formally approved by the Planning Board of the City of Portland.

This agreement shall bind the undersigned only so long as it retains any interest in said premises, and shall run with the land and be binding upon the Owner's successors and assigns as their interests may from time to time appear.

The Owner agrees to record a copy of this Agreement in the Cumberland County Registry of Deeds within thirty (30) days of final execution of this Agreement. The Owner further agrees to provide a copy of this Agreement to any successor or assign and to forward to the City an Addendum signed by any successor or assign in

which the successor or assign states that the successor or assign has read the Agreement, agrees to all its terms and conditions and the successor or assign will obtain and forward to the City's Department of Public Services and Department of Planning and Urban Development a similar Addendum from any other successor or assign.

For the purpose of this agreement and release "Owner" is any person or entity who is a successor or assign and has a legal interest in part, or all, of the real estate and any building. The real estate shown by chart, block and lot number in the records on file in the City Assessor's office shall constitute "the property" that may be entered by the City and liened if the City is not paid all of its costs and charges following the mailing of a written demand for payment to the owner pursuant to the process and with the same force and effect as that established by 36 M.R.S.A. §§ 942 and 943 for real estate tax liens.

Any written notices or demands required by the agreement shall be complete on the date the notice is attached to one or more doors providing entry to any buildings and mailed by certified mail, return receipt requested or ordinary mail or both to the owner of record as shown on the tax roles on file in the City Assessor's Office.

If the property has more than one owner on the tax rolls, service shall be complete by mailing it to only the first listed owner. The failure to receive any written notice required by this agreement shall not prevent the City from entering the property and performing maintenance or repairs on the stormwater system, or any component thereof, or liening it or create a cause of action against the City.

APPENDICES

Appendix 1 – Summary Checklist for Inspection and Maintenance

Appendix 2 – Inspection Logs

Appendix 3 – Stormwater Drainage System Maintenance Agreement

Appendix 4 – Permits for Project

I. INTRODUCTION

Runoff from developed areas, may contain a number of contaminants especially when emanating from rooftops, paved or lawn areas. This runoff can contain a significant amount of non-point contaminants, which can have an adverse impact on the receiving waters. The installation of soil media filters can significantly reduce the non-point pollution discharge from the developed area.

The effectiveness of stormwater facilities and other components of the system are dependent on their upkeep and maintenance to assure they meet their design function over an extended period of years. It is critical that the stormwater management facilities are inspected on a regularly scheduled basis, and that maintenance is performed on an as needed basis. It must also be recognized that the effectiveness of these facilities, and their maintenance requirements, are related to the stormwater drainage facilities that transport the flow to the ponds or treatment measures. Thus, maintenance should be directed to the total system.

The purpose of this document is to define in detail the inspection and maintenance requirements deemed necessary to assure that the stormwater management facilities function as intended on a long-term basis for the Belfort Landing project. This Operations and Maintenance Manual is specific to the existing and proposed stormwater measures utilized to execute a successful stormwater management plan. Subsequent sections identify individual maintenance items, give a brief commentary of the function and need of the item, a description of the work required, and a suggested frequency of accomplishment. While the suggested programs and schedules must be adapted to specific projects, the material presented should provide guidance for a successful long-term program.

A. Guidelines Overview

A summary of the individual components of stormwater management facilities for this project has been prepared. The format used in the summary is as follows:

Preface: A general description of what function/benefit the element is intended to provide. This is a short summary and not intended to provide the design basis, which can be found in other sources.

Inspection: This section provides the inspection requirements for the individual component.

Maintenance: The section provides general information on the routine maintenance requirements of this element.

Frequency: This section outlines the best judgment of the designer of the system to the frequency of maintenance.

Comments: This section provides any particular comment on the site-specific features of this element. This is a summary only. The owner/operator should review the design drawings and documents carefully to understand the particular elements of the project. The end of this section should allow the owner/operator to make notes on the specific

program. This may include the selected maintenance procedure, cross-references to applicable design drawings, etc.

A list of the individual inspection/maintenance elements is provided in the table of contents. The guidelines are proposed for initial use with adjustments made as appropriate based upon specific project experience.

This report includes the Operation and Maintenance requirements for any potential BMP identified in the Stormwater Management Report for this project.

B. Responsible Party

The responsible party for operation and maintenance of the stormwater and other site infrastructure will be the applicant or their agents or assigns. The applicant or their agents or assigns must adhere to the City of Portland Technical Manual Section 6 Erosion and Sedimentation Control Standards and the Chapter 32 of the City of Portland Code of Ordinances. A copy of an unexecuted Stormwater Drainage System Maintenance Agreement is included in Appendix 3.

II. PROJECT OVERVIEW

Key permits issued (or applied for) on the project include:

- City of Portland Major Site Plan Approval

A copy of the permits should be appended to this manual as Appendix 4. The Owner/Operator of the stormwater management system should review these permits for a general description and background of the project, as well as any specific permit conditions or requirements of the project.

The applicant has retained Gorrill Palmer for civil engineering for the development project. Gorrill Palmer has prepared the design for the stormwater management facilities and may be contacted at:

Gorrill Palmer
300 Southborough Drive, Suite 200
South Portland, Maine 04106
207.772.2515

The applicable plans and design documents which apply to the project are:

1. Civil Site Plans Prepared by Gorrill Palmer
2. The Erosion Control/Sedimentation Control Plan for the project
3. The Stormwater Management Plan for the project

A copy of these documents should be retained with this manual.

The proposed design includes inlets, stormwater conveyance lines, subsurface sand filter, and drip strips.

The site is ultimately tributary to Capisic Brook located to the south of the site.

The manual is intended for general guidance; however, any substituted deviations from the manual should be reviewed with respect to provisions of Appendix 4.

III. STANDARD INSPECTION/MAINTENANCE DESCRIPTIONS

The following narratives describe the inspection/maintenance provisions for the Stormwater Management system. Proper O&M is necessary to make sure the system will provide its intended purpose of conveying runoff, removing a substantial amount of the suspended solids, and other contaminants in the stormwater runoff.

A. Stormwater Inlets

Preface: The success of any stormwater facility relies on the ability to intercept stormwater runoff at the design locations. Stormwater inlets include catch basins, open culverts, and field inlets. Inlets exist throughout the property.

Inspection: The inspection of inlet points will need to be coordinated with other maintenance items, these include:

- Building maintenance areas
- Grounds maintenance

The key elements of the inspection are to assure the inlet entry point is clear of debris and will allow the intended water entry.

Maintenance: The key maintenance is the removal of any blockage which restricts the entry of stormwater to the inlet. The removed material should be taken out of the area of the inlet and placed where it will not reenter the runoff collection system. Snow should be removed from inlets on parking lots. Grass clippings and leaves should be bagged and removed particularly near the yard inlets near the buildings and exposed culvert inlets.

Frequency: All inlets should be inspected on a quarterly basis, and after/during significant storm events i.e. >1" rainfall).

Maintenance Personnel: The maintenance personnel will perform the normal maintenance/ inspections of the inlets and tributary drainage system.

Comments: Maintenance of inlets is critical on this project.

B. Tributary Drainage System

Preface: Stormwater from most of the project will be directed through a conveyance (tributary) system which transports the flow to the proposed BMPs, and ultimately to the Capisic Brook. This conveyance system will be principally overland flow discharging to piped drain systems. Most of the sediment carried by the drainage system is intended to be trapped in structures. Maintenance of this system can play a major role in the long-term maintenance

costs and the effectiveness of the onsite systems. The primary pretreatment measure for the site will be through deep sumped catch basins with hooded outlets.

Inspection: The tributary drainage system should be periodically inspected to assure that it is operating as intended, and that the carrying capacity has not been diminished by accumulations of debris and sediment or other hydraulic impediments. On piped systems, the inlets must be inspected to ensure the rims are set at the proper elevation to optimize flow entry and are not clogged with debris.

The level of sediment in the sumps should be checked to assure their effectiveness. Pipelines connecting the inlets should be checked to determine if siltation is occurring. This will be most critical on drain lines laid at minimal slopes. This can usually be accomplished by a light and mirror procedure.

Maintenance: Maintenance of the storm drainage system must assure that it continues to serve its design function on a long-term basis, and that its operation does not transport excessive sediments to any downstream treatment device or the receiving waters. Elevations on the rim of catch basins should be adjusted as needed to assure optimal water entry. Depending on the frost susceptibility of the soil, the rims may become elevated over time causing flow to circumvent the inlet. If a temporary filter bag has been designated for the inlet during construction, silt or other deleterious materials, can significantly reduce capacity and the bags should be removed with the sediment and replaced during construction. Catch basin cleaning would normally be accomplished with vacuum trucks contracted as a maintenance service for the Development. The removed material must be disposed of at an approved site for such materials.

If sediment in the pipeline is observed, it should be removed. This may be accomplished by hydraulic flushing, or by mechanical means. If hydraulic flushing is used the downstream conditions should be analyzed.

Frequency: The tributary drainage system should be inspected on an annual basis. Adjustment of inlet rim elevations should be on an as needed basis. Cleaning catch basin sumps and pipelines will depend on the rate of accumulation.

C. Subsurface Sand Filter

Preface: The subsurface sand filter consists of storage and pretreatment chambers above a sand filter layer for the applicable surface treatment. Stormwater runoff is conveyed to the filter through a closed pipe system from surface runoff. Flow is controlled using a gate valve which can be adjusted to ensure a drainage time between 24-48 hours.

Inspection: The subsurface sand filter will have control structures and maintenance ports to inspect the pretreatment row and storage layer. Inspect system to see if runoff is draining through the system at the outlet and inlet devices. Visual inspections should also occur after large storm events (i.e. >1”).

Maintenance: The procedures for maintenance are as follows:

Inlets and Outlets

Inlets and outlets to the subsurface sand filter should be kept open and in good working condition. This is particularly important for the inlet at the pretreatment rows. Outlets should be cleared and, if necessary flushed of any build-up.

Storage Layer

Remove and dispose of any sediment and build-up in the storage layer.

Sedimentation (or Clogging) of Soil Filter Area

If the sand filter appears to be holding water for a period longer than 48-72 hours, the sand mix has, more than likely, become clogged with sediment and/or the underdrains have clogged. To correct a standing water problem, the following remedial actions are recommended:

1. Check to make sure the outlet control valve is open.
2. Evaluate the drainage area to the sand filter area to identify any potential sources of sediment, such as an erosive condition, that may be contributing to the clogging of the device. If a source is identified, it is recommended that that source be eliminated to the fullest extent practicable before proceeding with the remaining recommendations provided below.
3. Flush the underdrains. Use cleanouts to flush the underdrains. Sediment in the drains may be preventing the sand filter from draining. Make sure to provide a way to capture any flushed sediment before it enters the stream environment or storm drain system downstream of the device. If, after flushing the underdrains, the device continues to hold water, the sand filter may be contaminated and need to be replaced.

Frequency: The subsurface sand filter should be inspected semi-annually and maintained as necessary.

Comments: Pretreatment in catch basin sumps and pretreatment row is crucial to long-term function of sand filter.

D. Level Lip Spreader

Inspections should occur at least once a year and following major storms, the level spreader pool should be inspected for sand accumulation and debris that may reduce its capacity. Sediment build-up within the swale should be removed when it has accumulated to approximately 25% of design volume or channel capacity. Remove debris such as leaf litter, branches and tree growth from the spreader. Dispose of the sediments and debris appropriately. The reconstruction of the level spreader may be necessary when sheet flow from the spreader channelize into the buffer. Do not store snow within the area of the level spreader.

E. Drip Strips

Preface: The Drip Strip is critical to the stormwater management plan for the project. It will consist of a stormwater reservoir, filter layer, and a 4" underdrain pipe embedded in the underdrain layer.

Inspection/Monitoring: The drip strip will be inspected within the first three months after construction; thereafter the filter will be inspected 2 times per year (preferably in Spring and Fall) to ensure that the filter is draining within 24 to 48 hours of a rain event equivalent to 1" or more. Failure to drain in 72 hours will require pipe flushing, or it may require part or all of the filter media to be removed and replaced with new material meeting the filter gradation. The facilities will be inspected after major storms and any identified deficiencies will be corrected. Harvesting and weeding of excessive growth shall be performed as needed. Inspect for unwanted or invasive plants and remove as necessary.

Maintenance: Remove unwanted vegetation and excess leaves, sticks and debris from the filter area. Pipes may require flushing if drip strip fails to drain within 72 hours.

Frequency: Inspect the basin in the late summer or early fall at the end of the growing season. Cutting and removal of additional grass will be required for lengths in excess of 6"-8". The basin should be inspected bi-annually and weeded as necessary.

Comments: None

F. Outlet Control Devices

Preface: Outlet control devices of assorted sizes are commonly utilized to control discharge from stormwater management features. This project uses gate valves and orifices to control discharge from the bio-retention filters and subsurface sand filters.

Inspection: Inspection of gate valves should be performed after each major rainfall event to ensure that stormwater runoff is able to discharge through the gate valve and that it is not clogged or needs to be adjusted.

Maintenance: The gate valve should be opened, and all debris flushed from the pipe. Clogs may be checked with mirror and flashlight method.

Frequency: The outlet control devices should be inspected semi-annually and maintained as needed.

Comments: None

G. Ditches, Swales, and Other Open Stormwater Channels

Inspect 2 times per year (preferably in Spring and Fall) to ensure they are working in their intended fashion and that they are free of sediment and debris. Remove any obstructions to flow, including accumulated sediments and debris and vegetated growth. Repair any erosion of the ditch lining. Vegetated ditches will be mowed at least annually or otherwise maintained to control the growth of woody vegetation and maintain flow capacity. Any woody vegetation

growing through riprap linings must also be removed. Repair any slumping side slopes as soon as practicable. If the ditch has a riprap lining, replace riprap on areas where any underlying filter fabric or underdrain gravel is showing through the stone or where stones have dislodged. Correct any erosion of the channel's bottom or sideslopes. The facilities shall be inspected after major storms and any identified deficiencies shall be corrected.

H. Roadways and Parking Surfaces

Clear accumulations of winter sand in parking lots and along roadways at least once a year, preferably in the spring. Accumulations on pavement may be removed by pavement sweeping. Accumulations of sand along road shoulders may be removed by grading excess sand to the pavement edge and removing it manually or by a front-end loader. Repair potholes and other roadway obstructions and hazards. Plowing and sanding of paved areas shall be performed as necessary to maintain vehicular traffic safety.

I. Litter

Litter should be removed as a matter of course by workers and as part of the ground's maintenance contract.

J. Downstream Areas

Areas immediately downstream of the southwesterly discharge point shall be inspected annually. The applicant shall be responsible for addressing any erosion or other impacts to the Talbot School property resulting from the project's stormwater discharge.

IV. PROGRAM ADMINISTRATION

A. General

A reliable administrative structure must be established to assure implementation of the maintenance programs described in the foregoing section. Key factors that must be considered in establishing a responsive administrative structure include:

1. Administrative body must be responsible for long-term operation and maintenance of the facilities. (Maintenance continues for the lifespan of the development in accordance with this document)

2. Administrative body must have the financial resources to accomplish the inspection and maintenance program over the life of the facility.

3. The administrative body must have a responsible administrator to manage the inspection and maintenance programs.

4. The administrative body must have the staff to accomplish the inspection and maintenance programs or must have authority to contract for the required services.

5. The administrative body must have a management information system sufficient to file, retain, and retrieve all inspection and maintenance records associated with the inspection and maintenance programs.

6. A qualified post construction inspector shall be retained by the Owner. His/her duties shall include preparing schedules for the Owner's maintenance, summarizing the results of this maintenance and preparing an annual report on the operation, maintenance, and repair of the stormwater system which must be copied to the City of Portland. (The Owner shall be responsible for retaining a separate entity to perform maintenance which cannot be performed by the management of building and property grounds.) This person shall also participate in troubleshooting of the stormwater management system if a problem develops.

If any of the above criteria cannot be met by the entity assigned inspection and maintenance responsibilities, it is likely that the system will fail to meet its water quality objectives at some point during its life. While each of the above criteria may be met by a variety of formats, it is critical to clearly establish the assigned administrative body in a responsible and sustainable manner.

B. Record Keeping

Records of all inspections and maintenance work accomplished must be kept and maintained to document facility operations. These records should be filed and retained for a minimum 5-year time span. The filing system should be capable of ready retrieval of data for periodic reviews by appropriate regulatory bodies. Where possible, copies of such records should also be filed with the designated primary regulatory agency for their review for compliance with permit conditions. Typical inspection and maintenance record forms are attached hereto as Appendix 2.

Beyond the initial 5-year time span of the original approval and maintenance plan, the stormwater management system will need to be recertified through the Maine Department of Environmental Protection every 5 years to confirm that there is conformance with the original permit documents. This process will ensure all systems function properly over time. This document will remain valid throughout any subsequent recertification processes.

On or by June 30 of each year, the qualified post construction inspector shall provide a completed and signed certification to the Department of Public Works certifying that the person has inspected, cleaned, and maintained the stormwater management facilities, describing any deficiencies found during inspection of the stormwater management facilities, and certifying that the person has repaired any deficiencies in the stormwater management facilities noted during the annual inspection.

C. Contract Services

In some instances, or at specific times, the Maintenance Personnel may not have the staff to conduct the required inspection and/or maintenance programs as outlined in this document. In such cases, the work should be accomplished on a contractual basis with a firm or organization that has the staff and equipment to accomplish the required work.

The service contract for inspection and maintenance should be formal, well written legal document which clearly defines the services to be provided, the contractual conditions that

will apply, and detailed payment schedules. Liability insurance should be required in all contracts.

will apply, and detailed payment schedules. Liability insurance should be required in all contracts.

Stormwater Management System Maintenance Program Summary Checklist						
Item	**Commentary**	**Frequency**				
		Monthly	**Quarterly**	**Semi-Annual**	**Annual**	**Long Term**
Stormwater Inlets	Stormwater inlets allow flow entry from a surface swale to a piped system. Entry may or may not be equipped with a bar rack. Inspect entry for debris accumulation. Remove debris to allow unimpeded entry. Lawn clippings and leaves should be removed from yard areas.		X		X Clearing	
Tributary Drainage System	Inspect to assure that the carrying capacity has not been diminished by debris, sediment or other hydraulic impediments.				X	
Subsurface Sand Filter	Inspect maintenance ports after rain events >1" and remove sediment. Check for signs of clogging and flush underdrains if necessary. Remove sediment from isolator row when depth of sediment reaches 3 inches.			X		
Level Lip Spreader	Remove any trash and debris from spreader and swale. Check integrity of spreader and that it does not channelize flow.			X		
Drip Strips	Remove debris from filter area. Inspect after major storm events and clear debris from orifice. May require flushing of pipes. Excessive growth shall be removed as needed.			X		
Orifice Control Devices	Inspect after major storm events and clear debris from orifice. May require flushing of pipes.			X		
Ditches Swales and Other open Stormwater Channels	Inspect to ensure the ditch is not eroding or blocked by debris.			X		
Roadways and Parking Surfaces	Remove accumulated sand.				X	
Litter	Litter should be removed daily.					
Downstream Areas	Inspect to ensure downstream areas are not eroding as a result of the proposed development. Stabilize ditch and sideslopes if necessary.				X

Sample Inspection Logs

ACRE Properties
PORTLAND, MAINE

STORMWATER MANAGEMENT
SAMPLE STORMWATER INSPECTION & MAINTENANCE LOG

This log is intended to accompany the Operation and Maintenance Manual for Stormwater Management and Related Facilities. All stormwater BMPs shall be maintained in effective operating condition. A person with knowledge of erosion and stormwater control, including the standards and conditions of the DEP Stormwater Permit, shall conduct inspections of the facilities as described in the O&M Manual and on this form, and identified deficiencies must be corrected. This log shall be kept on file for a minimum of five (5) years.

B. Stormwater Inlets (Catch Basins)	**Observations**
Frequency: Annually in the spring	
Accumulated sediments from inflow channels and pipes between basins have been removed and legally disposed of	☐ Yes ☐ No ☐ NA
Floating debris and large sediment particles have been removed from inlets.	☐ Yes ☐ No ☐ NA
Stormwater Inlet Notes:	

C. Tributary Drainage System	**Observations**
Frequency: Annually spring or late fall and after heavy rains	
Remove and legally dispose of sediments	☐ Yes ☐ No ☐ NA
Remove floatables and other objects	☐ Yes ☐ No ☐ NA
Check for overgrown vegetation impeding flow	☐ Yes ☐ No ☐ NA
Check pipelines for siltation and clogging	☐ Yes ☐ No ☐ NA
Repair any slumping side slopes or erosion	☐ Yes ☐ No ☐ NA
Replace any riprap on areas where any underlying fabric or underlying gravel is exposed.	☐ Yes ☐ No ☐ NA
Tributary Drainage System Notes:	

D. Subsurface Sand Filter	Observations
Frequency: Semi-annually	
Inspect for debris	☐ Yes ☐ No ☐ NA
Sediment greater than 3”	☐ Yes ☐ No ☐ NA
System working in their intended fasion	☐ Yes ☐ No ☐ NA
Subsurface Detention Chamber Notes:	

E. Level Lip Spreader	Observations
Frequency: Semi-annually	
Inspect for debris	☐ Yes ☐ No ☐ NA
Undesirable growth impeding water flow	☐ Yes ☐ No ☐ NA
Ensure runoff is not bypassing the bermed spreader, repair as necessary	☐ Yes ☐ No ☐ NA
Level Lip Spreader Notes:	

F. Drip Strip	Observations
Frequency: Semi-annually	
Check for signs of clogging, or water is not draining within 48-72 hours	☐ Yes ☐ No ☐ NA
Inspect for debris	☐ Yes ☐ No ☐ NA
No excessive growth, remove as necessary	☐ Yes ☐ No ☐ NA
Roofline / Infiltration Drip Strip Notes:	

F. Outlet Control Devices	Observations
Frequency: Semi-annually	
Check for debris blocking orifice	☐ Yes ☐ No ☐ NA
If applicable, flush underdrain pipe	☐ Yes ☐ No ☐ NA
Roofline / Infiltration Drip Strip Notes:	

G. Ditches, Swales, and Other Open Stormwater Channels	Observations
Frequency: Semi Annually spring and late fall and after heavy rains	
Remove and legally dispose of sediments	☐ Yes ☐ No ☐ NA
Remove floatables and other objects	☐ Yes ☐ No ☐ NA
Check for overgrown vegetation impeding flow.	☐ Yes ☐ No ☐ NA
Mow to control growth and maintain flow capacity.	☐ Yes ☐ No ☐ NA
Repair any slumping side slopes or erosion	☐ Yes ☐ No ☐ NA
Replace any riprap on areas where any underlying fabric or underlying gravel is exposed.	☐ Yes ☐ No ☐ NA
Ditches Swales and Other Channel Notes:	

H. Roadways and Parking Surfaces	**Observations**
Frequency: Annually preferably in spring	
Remove and legally dispose of accumulated winter sand	☐ Yes ☐ No ☐ NA
Repair potholes and other roadway obstructions and hazards.	☐ Yes ☐ No ☐ NA

APPENDIX 3

Stormwater Drainage System Maintenance Agreement

STORMWATER DRAINAGE SYSTEM
MAINTENANCE AGREEMENT

ACRE Properties, LLC/City of Portland
City of Portland, Maine – The Belfort Landing at 1582 Forest Street

IN CONSIDERATION OF the site plan approval granted by the Planning Board of the City of Portland to the proposed **The Belfort Landing ID PL- [__TBD__] -** shown on the Overall Site Layout Plan, Grading, & Drainage Plan and Stormwater Management Plan (Exhibits A, B and C) prepared by Gorrill Palmer Consulting Engineers of 300 Southborough Drive, South Portland, Maine dated last revised [__TBD__] and pursuant to a condition thereof, ACRE Properties LLC, a Maine limited liability company with a principal place of business in Portland, Maine, and having a mailing address of 27 Cypress Street, Portland, Maine 04103, the owner/operator of The Belfort Landing, does hereby agree, for itself, its successors and assigns (the "Owner"), as follows:

Maintenance Agreement

That it, its successors and assigns, will, at its own cost and expense and at all times in perpetuity, maintain in good repair and in proper working order the subsurface sand filter, drip strips, and related onsite drainage infrastructure, (hereinafter collectively referred to as the "stormwater system"), as shown on the Stormwater Management Plan in Exhibit C and in strict compliance with the approved Stormwater Inspection and Maintenance Manual prepared for the Owner by Gorrill Palmer Consulting Engineers (copy attached in Exhibit D) and Chapter 32 of the Portland City Code.

Owner of the subject premises further agrees, at its own cost, to keep a Stormwater Maintenance Log. Such log shall be made available for inspection by the City of Portland upon reasonable notice and request and be made part of the annual Stormwater reporting duties of the applicant to the City.

Said agreement is for the benefit of the said City of Portland and all persons in lawful possession of said premises and abutters thereto; further, that the said City of Portland and said persons in lawful possession may enforce this Agreement by an action at law or in equity in any court of competent jurisdiction; further, that after giving the Owner written notice and a stated time to perform, the said City of Portland, by its authorized agents or representatives, may, but is not obligated to, enter upon said premises to maintain, repair, or replace said stormwater system in the event of any failure or neglect thereof, the cost and expense thereof to be reimbursed in full to the said City of Portland by the Owner upon written demand. Any funds owed to the City under this paragraph shall be secured by a lien on the property.

This Agreement shall also not be construed to allow any change or deviation from the requirements of the subdivision and/or site plan most recently and formally approved by the Planning Board of the City of Portland.

This agreement shall bind the undersigned only so long as it retains any interest in said premises, and shall run with the land and be binding upon the Owner's successors and assigns as their interests may from time to time appear.

The Owner agrees to record a copy of this Agreement in the Cumberland County Registry of Deeds within thirty (30) days of final execution of this Agreement. The Owner further agrees to provide a copy of this Agreement to any successor or assign and to forward to the City an Addendum signed by any successor or assign in

which the successor or assign states that the successor or assign has read the Agreement, agrees to all its terms and conditions and the successor or assign will obtain and forward to the City's Department of Public Services and Department of Planning and Urban Development a similar Addendum from any other successor or assign.

For the purpose of this agreement and release "Owner" is any person or entity who is a successor or assign and has a legal interest in part, or all, of the real estate and any building. The real estate shown by chart, block and lot number in the records on file in the City Assessor's office shall constitute "the property" that may be entered by the City and liened if the City is not paid all of its costs and charges following the mailing of a written demand for payment to the owner pursuant to the process and with the same force and effect as that established by 36 M.R.S.A. §§ 942 and 943 for real estate tax liens.

Any written notices or demands required by the agreement shall be complete on the date the notice is attached to one or more doors providing entry to any buildings and mailed by certified mail, return receipt requested or ordinary mail or both to the owner of record as shown on the tax roles on file in the City Assessor's Office.

If the property has more than one owner on the tax rolls, service shall be complete by mailing it to only the first listed owner. The failure to receive any written notice required by this agreement shall not prevent the City from entering the property and performing maintenance or repairs on the stormwater system, or any component thereof, or liening it or create a cause of action against the City.

Dated at Portland, Maine this _____ day of _____, 2025.

12.1 Overview

ACRE Properties has retained Gorrill Palmer to prepare plans and permit applications for a proposed residential development located at 1582 Forest Avenue in Portland, ME. Currently, Acre Properties is seeking a Building/Land Use Permit from the City of Portland, and a Stormwater Law Permit under the City's Delegated Review.

The proposed development is required to meet the requirements of the City of Portland Stormwater Management Plans for New Development. The proposed project is subject to a Major Site Plan Application with the City of Portland, which requires the development to meet Maine DEP Chapter 500 Stormwater Management Rules, including General, Flooding, Urban Impaired Streams standards.

Runoff from the site is tributary to Capisic Brook which is listed as an Urban Impaired Stream. Therefore, the proposed development is required to comply with the Urban Impaired Stream Standard pursuant to Maine DEP Chapter 500 Stormwater Management Rules.

12.2 Development Description

This narrative contains the stormwater management report for the construction of the project. The plans prepared by GP include the infrastructure necessary to serve the project.

Gorrill Palmer (GP) has been retained by ACRE Properties to prepare a Stormwater Management Report for the proposed residential development of two, three-story, multi-unit dwellings, each with a building footprint of approximately 7,672 square feet, associated parking areas, an access drive via Belfort Street, landscaping and stormwater treatment facilities. Based on the Lot Split and Topographic Survey and prepared by Northeast Civil Solutions, dated July 5, 2022, the project site is 66,560 S.F. +/-. The City of Portland identifies the property on the Maine Parcel Viewer as Parcel 299, Lot D1011001.

In total, the proposed buildings, parking lots, and associated infrastructure will create approximately 34,177 square feet (0.78 acres) of new impervious area and 46,406 square feet (1.07 acres) of new developed area onsite. Abutting land uses include:

- North –Residential Homes and Forest Avenue
- West – Gerald E. Talbot Community School (Developed)
- South – Residential Homes and Empire Way
- East – Residential Homes and Belfort Street

Preliminary review of available data published by the State of Maine suggests that no significant habitats or protected natural resources lie within the area proposed for development. According to the National Wetland Inventory database it appears no wetlands are present on the proposed parcel.

Under the General Standard, the project is required to meet the BMP standards identified in Chapter 500 and described in Volume III of the Stormwater BMP manual. The design of this development will include a stormwater treatment system in the form of a subsurface sand filter and three drip strip systems. These

practices are described in depth under Section 12.9 Approach and Analysis for Water Quality.

The MaineDEP Basic Standard will be met as presented in the Erosion and Sedimentation Control report for this project.

12.3 Surface Water

The surface hydrology within the site conveys runoff to three Points of Interest (POIs) as shown on the Watershed Maps (see Attachment B). POI 1 is located downstream of the site to the south. POI 2 is located at the most northern part of the site and is tributary to the closed drainage system on Forest Avenue. POI 3 is a closed drainage system on Belfort Street.

No streams have been identified on or directly adjacent to the site and the site is not affected by buffers/setbacks from natural resources.

12.4 General Topography

The topography and terrain for the planned development area varies in elevation from approximately 99 to 121 feet. Most of the existing sites contain slopes ranging from approximately 2% to 10%.

12.5 Flooding

The site is not located within a mapped FEMA 100-year floodplain.

12.6 Natural Drainage Ways

The project as currently proposed does not include alteration of any natural drainage ways.

12.7 Alterations to Land Cover

Based on field reconnaissance, the existing site is currently undeveloped with the central portion of the site appearing to be previously cleared and compacted by vehicles. Changes in land cover will include the conversion of wooded and exposed dirt areas to two residential buildings with paved parking, access drives, and landscaping surrounding the building.

12.8 Stormwater Management Control

The proposed development is required to meet the requirements of the City of Portland stormwater management requirements. Since the proposed project is subject to a Major Site Plan Application the development shall submit a stormwater management plan pursuant to the regulations of Maine DEP Chapter 500 Stormwater Management Rules, including the Basic, General, Flooding, Urban Impaired Stream standards. The proposed development is required to detain runoff such that the rate of flow does not exceed pre-development rates for the 2, 10, 25-year 24-hour storm to meet the requirements of MDEP. The development is anticipated to result in approximately 0.78 acres of new impervious area on-site. The Basic Standard is presented in the Erosion Control Report included in this application package. The General Standard and Flooding Standard are presented as follows.

The development will be required to meet the MDEP's water quality and quantity standards. To meet the water quality standard, the project will utilize a subsurface sand filter and three drip strip systems. The facilities will be utilized to control the post development runoff for the 2, 10, and 25-year storm events where applicable.

The Maine Department of Environmental Protection rules and regulations regarding stormwater concentrate on four stormwater management objectives:

- Effective Pollutant Removal
- Cooling
- Channel Protection
- Flood Control

These objectives may be met either directly by providing BMP's that manage and treat the runoff after it has been created, or indirectly by incorporating low impact development site planning concepts to minimize production and contamination of runoff by maximizing infiltration and evapotranspiration.

12.9 Approach and Analysis for Water Quality

The following narrative discusses the Basic Standard and General Standard of the MaineDEP Stormwater Law. The proposed development will be required to meet the Basic Standard, and BMP Standard under the General Standard. Additionally, the project is required to meet the urban impaired stream standard by which the Applicant proposes the payment of a compensation fee. Information on meeting the urban impaired stream standard can be found in Section 12.9.3 of this report. The project is not required to meet the Phosphorous Standard as the development site is not tributary to a lake watershed. Based upon review of the five recommended and approved methods for mitigating the increased frequency and duration of channel erosive flows, as required by the BMP Standards, the applicant is proposing to construct a subsurface sand filter and three drip strip systems.

The proposed development will treat no less than 95% of the impervious area and no less than 80% of the developed area in accordance with the MaineDEP Chapter 500 Section 4.C.2(a). Water quality calculations for this portion of the site are presented in Section 12.9.2 below.

12.9.1 New Developed Required Treatment

The proposed overall development will treat no less than 95% of the impervious threshold area and no less than 80% of the developed threshold area in accordance with the MDEP Chapter 500 Section 4.C.2(a). Table 1 below outlines the required treatments for this area.

TABLE 1 – PROPOSED DEVELOPMENT TREATMENT SUMMARY

Type	Total Area (sf)	Treatment Threshold	Area Required to be Treated (sf)
Impervious	34,177	95%	32,469
Developed	46,406	80%	37,125

12.9.2 Stormwater Quality Treatment

The following section summarizes the subsurface sand filters and drip strip systems that serve as the Stormwater BMP's being utilized for the proposed development.

Subsurface Sand Filter

Subsurface Sand Filters are defined in Volume III, Chapter 7.3 of the Stormwater Management Best Management Practices Manual published by the Maine Department of Environmental Protection. The subsurface sand filter has been sized to provide the treatment of the water quality volume of at least 1.0 inch times the subcatchment's impervious area plus 0.4 inch times the subcatchment's landscaped developed area. The surface area of the filter is required to be at least 5% of the subcatchment's impervious area, plus 2% of the subcatchment's landscaped area.

The sand filter consists of 75 Stormtech SC-310 Chambers and surrounding aggregate over an 18" thick sand filter and a 12" thick underdrained drainage layer (see sheet C301 for details). An additional 50 Stormtech SC-310 Chambers without a filter layer have been incorporated into the designs to provide additional channel protection storage to meet flooding control standards.

Runoff from Subcatchment 1A and 1F will be directed into catch basins throughout the driveway and parking areas and conveyed via a stormdrain network into the pre-treatment chambers. Offsite developed areas on the abutting properties tributary to the subsurface sand filter are not required to be treated and are not included as "treated area" in these calculations. Runoff from these areas are tributary to the system for detention purposes only.

Initial stormwater flows will enter the pretreatment rows of the system. From there it will flow into the rest of the water quality chambers that are sized for the water quality volume. Stormwater will then flow vertically through a sand filter section before being collected in underdrain pipes that connect to the closed conveyance system that ultimately drains to POI 1. The subsurface sand filter section was designed in accordance with Section 7.3 of the BMP's Technical Design Manual dated May 2016 and the DEP approval letter for the Stormtech Isolator Row dated July 29, 2016. Yearly maintenance of the sand filter will include monitoring the outflow after a rainfall event to ensure the outflow time is within the required parameters.

The smaller storms which generate runoff volume equal to or less than the channel protection volume will be conveyed through the pre-treatment row, sand filter, and underdrain system. A valve will be installed on the underdrain pipe which can be field adjusted to ensure that the water quality volume drains within 24-48 hours. Larger storms will be conveyed through the pre-treatment row and through the outlet control structures. Runoff greater than the water quality volume will be conveyed over a weir or 12" pipe, set at the water quality elevation, which conveys runoff to the channel protection chambers. The chambers and stone provide storage for the 2-, 10-, and 25-year storms assuming a 40% void ratio for the stone. The following table presents the sand filter sizing and design calculations:

TABLE 2 – SUBSURFACE SAND FILTER SIZING		
	Required	**Provided**
Impervious Area (sq. ft.)		24,667
Vegetated Area (sq. ft.)		3,667
Developed Area (Imp. + Landscaped) (sq. ft.)		28,334
Treatment Volume (cu. ft.)	2,178	2,233
Filter Surface Area (sq. ft.)	1,307	2,084
Pond Outflow (cfs)		0.03
Pond Release Time	24-48 Hours	24 Hours
1-Year Inflow		1.29
Isolator Row Chambers	13	25
WQV Elevation		104.07

Drip Strips

Drip Strip filtration will be utilized for the roof areas of both buildings on site and a portion of the developed area to the north of the buildings. The drip strips have been designed in accordance with Section 7.5 of the BMP's Technical Design Manual dated May 2016. The drip strips have been sized to provide the treatment of the water quality volume of at least 1.0 inch times the subcatchment's impervious area plus 0.4 inch times the subcatchment's landscaped developed area. The storage of the water quality volume is provided in the 18" thick reservoir layer of the drip strips, assuming a 40% void ratio for the stone.

Runoff from each subcatchment will be directed to the drip strips via overland flow. The smaller storms which generate runoff volume equal to or less than the channel protection volume will be conveyed through the 12" filter layer, and underdrain system. A valve will be installed on the underdrain pipe which can be field adjusted to ensure that the water quality volume drains within 24-48 hours. Runoff greater than the water quality volume will be conveyed away from the buildings via overland flow, or via an open grate catch basin (Drip Strip #3) to a ditch which ultimately drains to POI 1 (see sheet C302 for details).

Table 3 below shows the sizing calculations for each drip strip.

TABLE 3 – DRIP STRIP SIZING		
Drip Strip #1		
	Required	**Provided**
Impervious Area (sq. ft.)		3,892
Vegetated Area (sq. ft.)		0
Developed Area (Imp. + Landscaped) (sq. ft.)		3,892
Treatment Volume (cu. ft.)	324	420
Pond Outflow (cfs)		0.005
Pond Release Time	24-48 Hours	24 Hours
Drip Strip #2		
	Required	**Provided**
Impervious Area (sq. ft.)		3,892
Vegetated Area (sq. ft.)		0
Developed Area (Imp. + Landscaped) (sq. ft.)		3,892
Treatment Volume (cu. ft.)	324	420
Pond Outflow (cfs)		0.005
Pond Release Time	24-48 Hours	24 Hours
Drip Strip #3		
	Required	**Provided**
Impervious Area (sq. ft.)		778
Vegetated Area (sq. ft.)		2,297
Developed Area (Imp. + Landscaped) (sq. ft.)		3,075
Treatment Volume (cu. ft.)	141	201
Pond Outflow (cfs)		0.002
Pond Release Time	24-48 Hours	24 Hours

12.9.3 Conclusion – Water Quality

Table 4 below summarizes the proposed total treatment for the proposed development, which does not include future development.

TABLE 4 – OVERALL TREATMENT FOR DEVELOPMENT		
	IMPERVIOUS	DEVELOPED (Impervious + Landscaped)
Area Treated by Drip Strip #1 (sf)	24,667	28,334
Area Treated by Drip Strip #2 (sf)	3,892	4,638
Area Treated by Drip Strip #3 (sf)	3,892	4,638
Area Treated by Subsurface Sand Filter (sf)	778	3,075
Total Area Treated (sf)	33,229	40,685
Area Untreated (sf)	948	5,721
Total Area (sf)	34,177	46,406
Percent Treated	97.3%	87.7%
Percent Required	95%	80%

Table 5 below summarizes the proposed total treatment for the project.

TABLE 5 – TOTAL NEW DEVELOPMENT TREATMENT SUMMARY		
	Required Treatment (sf)	Proposed Treatment (sf)
Impervious	32,469	33,299
Developed	37,125	40,685

The project provides stormwater quality treatment to meet the General Standards for Chapter 500 and will not cause degradation of the receiving waters due to the stormwater runoff from the site.

12.9.4 Urban Impaired Stream

The unnamed stream northwest of the site is categorized as an urban impaired stream and is subject to the Maine DEP Urban Impaired Stream Standards. To meet the urban impaired stream standard, the applicant proposes the payment of a compensation fee to the approved compensation fee utilization plan for the City of Portland. The resulting fee of $7,875 was calculated based on the overall new impervious and new landscaped areas draining to all POI's. The breakdown of new impervious and developed areas and the resulting fees as outlined in MaineDEP Chapter 501 Section 3.A. (1) are provided in the table below:

TABLE 6 – URBAN IMPAIRED STREAM FEE CALCULATIONS			
Cover Type	**Area (acres)**	**Compensation Rate (per acre)**	**Fee**
Roof	0.36	$5,000	$1,800
Paved	0.43	$12,500	$5,375
Landscaped	0.28	$2,500	$1,075
Total	**1.07**		**$7,875**

12.10 Approach and Analysis for Stormwater Quantity

The stormwater management study provides an analysis of predevelopment and post development stormwater runoff rates.

The SCS TR-20 methodology, using the HydroCAD program, was employed by Gorrill Palmer to analyze predevelopment and post-development conditions. A 24-hour, SCS Type III storm distribution for the 2, 10, and 25-year storm frequencies was used. The corresponding rainfall amounts for these storms are 3.1", 4.6", and 5.8" respectively.

The USDA NRCS Medium Intensity Soil Survey identifies the site soils to be comprised of:

Map Symbol	Soil Type	K Value	Hydrologic Soil Group
EmB	Elmwood Fine Sandy Loam	0.32	B
WmB	Windsor Loamy Sand	0.17	A

See Figure 1 'U.S.D.A Medium Intensity Soil Survey – Map K Factor, Whole Soil' on the next page. The full report for the medium intensity soil survey is included in Attachment A.

Land use cover and delineations of watershed flow paths were obtained using the following data:

- Portland West 7.5 Minute Quadrangle Maps prepared by the U.S.G.S.
- Geotechnical Evaluation performed by Summit Geoengineering Services, Inc.
- Ground survey information from Lot Split and Topographic Survey prepared by Northeast Civil Solutions, Inc.
- Aerial photography of the project site, obtained from the Maine Office of GIS.
- Field Reconnaissance

12.10.1 Predevelopment Conditions

The drainage study analyzes the watersheds in the predevelopment condition as depicted on the Predevelopment Watershed Map WS1 in Attachment B.

Subcatchment 1S consists of a large portion of the property and a portion of the abutters properties which ultimately drain towards the site, and to the south beyond the site to POI 1. This area includes wooded and newly graded dirt areas onsite, and developed grassed and impervious areas on the abutters properties.

Subcatchment 2S is located along the northeast side of the lot along Forest Avenue (Route 302) and includes grassed cover, and a small portion of the existing parking lot. This subcatchment is ultimately tributary to POI 2 located along the northern corner of the property.

Subcatchment 3S is located along the southeast boundary of the lot along Belfort Street consists of a small wooded area that ultimately drains to a catch basin located on Belfort Street (POI 3).

Table 7 presents the peak flow rates at the point of interest in the predevelopment condition.

TABLE 7– PREDEVELOPMENT PEAK FLOW RATES (TYPE III 24-HR)

Point of Interest	Peak Flow (CFS)		
	2 Year	10 Year	25 Year
POI 1	0.21	1.08	2.09
POI 2	0.05	0.22	0.40
POI 3	0.00	0.00	0.00

Copies of the calculations for the predevelopment conditions are included in Attachment C.

12.10.2 Post development Conditions

Analysis for the post development condition consists of determining post development peak flows and limiting the post development flows to predevelopment levels for the 2, 10, and 25-year storm events. The post development condition has been modeled as five subcatchments tributary to the three POIs as described below.

Subcatchment 1A consists of new roof, driveway/parking areas, and grassed areas associated with the proposed development. This subcatchment is tributary to the subsurface sand filter and ultimately POI 1.

Subcatchment 1B consists of a portion of the building roof that is tributary to Drip Strip #1 and ultimately drains to POI 1.

Subcatchment 1C consists of a portion of the building roof that is tributary to Drip Strip #2 and

ultimately drains to POI 1.

Subcatchment 1D consists of new walkway area and grassed area associated with the proposed development. In addition, this subcatchment also includes previously developed areas upstream of the site on abutting properties. Runoff from these areas tributary to Drip Strip #3 and ultimately drains to POI 1.

Subcatchment 1E consists of developed and undeveloped vegetated area throughout the lot which is not treated. Runoff from these areas is tributary to POI 1.

Subcatchment 1F consists of previously developed areas upstream of the site on abutting properties which drain to the proposed stormwater collection facilities. This subcatchment is tributary to the subsurface sand filter and ultimately POI 1.

Subcatchment 2S is located along the northeast side of the lot along Forest Avenue (Route 302) and includes existing grassed cover, a small portion of the existing parking lot, and a portion of the proposed walkway for access to the site. This subcatchment is ultimately tributary to POI 2 located along the northern corner of the property.

Subcatchment 3S is located along the southeast boundary of the lot along Belfort Street consists of a small portion of the driveway that ultimately drains to a catch basin located on Belfort Street (POI 3).

A watershed map for the post development conditions is attached to this section as drawing number WS2 in Attachment B. Attachment C includes the TR-20 pond calculations.

A comparison of pre and post development flow without detention is presented in the following table.

TABLE 8– PEAK FLOW COMPARISON WITHOUT DETENTION

Point of Interest	Peak Flow (CFS)		
	2 Year	10 Year	25 Year
POI 1			
Pre	0.21	1.08	2.09
Post	1.41	2.86	4.22
POI 2			
Pre	0.05	0.22	0.40
Post	0.08	0.29	0.49
POI 3			
Pre	0.00	0.00	0.00
Post	0.02	0.04	0.05

As shown in the table above, the peak flow to POI 1 greatly increases, emphasizing the need for peak flow detention. The following table presents a comparison of peak flow with the proposed stormwater management system in the form of a subsurface sand filter, and the three drip strips.

TABLE 10 – PEAK FLOW COMPARISON WITH DETENTION			
Point of Interest	**Peak Flow (CFS)**		
	2 Year	**10 Year**	**25 Year**
POI 1			
Pre	0.21	1.08	2.09
Post	0.21	1.06	2.08
POI 2			
Pre	0.05	0.22	0.40
Post	0.08	0.29	0.49
POI 3			
Pre	0.00	0.00	0.00
Post	0.02	0.04	0.05

12.10.3 Conclusion – Water Quantity

As can be seen from Table 10 above, the peak flows at the abutter properties (POI 1) have been maintained to be at or below predevelopment peak levels. By inspection, the peak flows to POI 2 and POI 3 increase by a less than 0.2 cfs. These flows are tributary to the municipal stormwater system and it is our understanding that the municipal stormwater system has the capacity to accommodate these minor increases in flow. Therefore, the project is not anticipated to have any adverse impact on abutting downstream properties, or the municipal system due to stormwater runoff.

12.11 Construction BMPs

Additional water quality treatment will be provided during construction by best management practices (BMP). Standard BMPs to be employed include siltation fencing around the downslope construction perimeter, rip rap pipe outlets, stabilized construction entrances, and erosion control fabrics applied to slopes prior to revegetation.

12.12 Maintenance of Facilities, Recertification and Housekeeping

See Maintenance of Facilities, Recertification and Housekeeping sections of the Erosion and Sedimentation Control Report included in this application package.

12.13 Conclusion

Gorrill Palmer has been retained by ACRE Properties to prepare plans and permit applications for a

proposed residential development on the proposed parcel in Portland, Maine. Based upon the attached calculations, the proposed project meets or exceeds the water quality and water quantity regulations of the City of Portland and Chapter 500 of the MDEP to the greatest extent practicable and will not cause degradation of the receiving waters from the site or likely have an adverse impact on abutting or downstream properties due to the stormwater runoff.

Therefore, the proposed development meets the requirements of the MaineDEP and the City of Portland.

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Cumberland County and Part of Oxford County, Maine

EmB—Elmwood fine sandy loam, 0 to 8 percent slopes

Map Unit Setting

National map unit symbol: blh8
Elevation: 10 to 900 feet
Mean annual precipitation: 36 to 55 inches
Mean annual air temperature: 39 to 46 degrees F
Frost-free period: 90 to 195 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Elmwood and similar soils: 88 percent
Minor components: 9 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Elmwood

Setting

Landform: Stream terraces
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Coarse-loamy glaciolacustrine deposits

Typical profile

H1 - 0 to 8 inches: fine sandy loam
H2 - 8 to 25 inches: sandy loam
H3 - 25 to 65 inches: silty clay loam

Properties and qualities

Slope: 0 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Moderately well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately high (0.00 to 0.20 in/hr)
Depth to water table: About 18 to 36 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 9.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: B
Ecological site: F144BY402ME - Clay Hills
Hydric soil rating: No

Minor Components

Swanton

Percent of map unit: 7 percent
Landform: Stream terraces
Landform position (two-dimensional): Toeslope

Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Whately

Percent of map unit: 2 percent
Landform: Stream terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Down-slope shape: Concave
Across-slope shape: Concave
Hydric soil rating: Yes

WmB—Windsor loamy sand, 0 to 8 percent slopes

Map Unit Setting

National map unit symbol: 2w2x2
Elevation: 0 to 1,410 feet
Mean annual precipitation: 36 to 71 inches
Mean annual air temperature: 39 to 55 degrees F
Frost-free period: 140 to 240 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Windsor and similar soils: 85 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Windsor

Setting

Landform: Outwash terraces, deltas, outwash plains, dunes
Landform position (three-dimensional): Tread, riser
Down-slope shape: Linear, convex
Across-slope shape: Linear, convex
Parent material: Loose sandy glaciofluvial deposits derived from granite and/or loose sandy glaciofluvial deposits derived from schist and/or loose sandy glaciofluvial deposits derived from gneiss

Typical profile

Oe - 0 to 1 inches: moderately decomposed plant material
A - 1 to 3 inches: loamy sand
Bw - 3 to 25 inches: loamy sand
C - 25 to 65 inches: sand

Properties and qualities

Slope: 0 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Excessively drained
Runoff class: Low

Capacity of the most limiting layer to transmit water (Ksat): Moderately high to very high (1.42 to 99.90 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Maximum salinity: Nonsaline (0.0 to 1.9 mmhos/cm)
Available water supply, 0 to 60 inches: Low (about 4.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2s
Hydrologic Soil Group: A
Ecological site: F144BY601ME - Dry Sand
Hydric soil rating: No

Soil Information for All Uses

Soil Properties and Qualities

The Soil Properties and Qualities section includes various soil properties and qualities displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each property or quality.

Soil Erosion Factors

Soil Erosion Factors are soil properties and interpretations used in evaluating the soil for potential erosion. Example soil erosion factors can include K factor for the whole soil or on a rock free basis, T factor, wind erodibility group and wind erodibility index.

K Factor, Whole Soil

Erosion factor K indicates the susceptibility of a soil to sheet and rill erosion by water. Factor K is one of six factors used in the Universal Soil Loss Equation (USLE) and the Revised Universal Soil Loss Equation (RUSLE) to predict the average annual rate of soil loss by sheet and rill erosion in tons per acre per year. The estimates are based primarily on percentage of silt, sand, and organic matter and on soil structure and saturated hydraulic conductivity (Ksat). Values of K range from 0.02 to 0.69. Other factors being equal, the higher the value, the more susceptible the soil is to sheet and rill erosion by water.

"Erosion factor Kw (whole soil)" indicates the erodibility of the whole soil. The estimates are modified by the presence of rock fragments.

Factor K does not apply to organic horizons and is not reported for those layers.

Map Scale: 1:1,200 if printed on A portrait (8.5" x 11") sheet.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cumberland County and Part of Oxford County, Maine
Survey Area Data: Version 21, Aug 26, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 19, 2020—Sep 20, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background

Pond SF: Sand Filter

City of Portland ME: Low-Impact Design Requirements				
Owner / applicant name:	Acre Properties			
Representative name:	Alex Coupe			
Project address:	1582 Forest Avenue			
Project CBL:				
Application ID (if known):				
	Maximum Points	**How to Apply**	**Points Awarded**	**LID Standard / Approach**
CORE METHODS: Wetlands, Streams, & Drainage				
Protect natural drainage paths	Required			
Shoreland Zoning	Required			
Meeting DEP and ACOE standards for stream crossings	Required			
Protect wetlands	**12**	Select one option	**12**	Select a site that does not have wetlands or vernal pools = 12pts
				Project maintains a 50' set-back / no-disturb buffer to all wetlands = 10pts
				Project maintains a 25' set-back / no-disturb buffer to all wetlands = 7pts
				Project does not place structures in wetlands and avoids wetlands impacts from construction and stormwater discharges = 5pts
				Project replicates impacted wetlands elsewhere on site or within watershed = 3pt
				Project pays wetlands impact fee = 0pts
Permanently protect stream (intermittent and perennial) and riparian buffers *(exclusive of approved stream crossings; must include a no-disturb zone with markers installed and deed restriction recorded at registry of deeds)*	**12**	Select one option	**12**	Select a site with no streams = 12pts
				Permanently protect all 100ft shoreline buffers = 10pts
				Permanently protect all 75ft shoreline buffers = 7pts
				Permanently protect all 50ft shoreline buffers (intermittent streams) = 6pts
				Permanently protect all 50ft shoreline buffers (required minimum for perennial streams) = 5pts
				Permanently protect all 25ft shoreline buffers (required minimum for intermittent streams) = 5pts
Stream crossings	**12**	Select one option	**12**	Select a site with no streams = 12pts
				Avoid any stream crossings = 10pts
				All stream crossings use a bridge or open bottom culvert structure sized at 1.2 times the bank full width of the stream = 10pts
				All stream crossings use Maine Stream Smart Principles to preserve natural pre-development drainage pathways = 6pts
CORE METHODS: Natural Areas & Habitat				
Preserve threatened or endangered species habitat	Required (Beginning with Habitat Maps at a minimum)			
Protect 30% of trees over 10" DBH	Required (Tree survey required)			
Protect intact, contiguous forests and native trees over 10" DBH	**8**	Select one option		All development and land disturbance outside of existing wooded/forested areas (no site clearing in prior 10 years) = 8pts
				Protect 50% of trees over 10" DBH = 6pts
				Protect 40% of trees over 10" DBH = 4pt

CORE METHODS: Soils & Slopes				
USDA Web Soil Survey	Required (provide details how soil limitations will be mitigated)			
Avoid steep slope disturbance	5	Select one option	5	Selecting a site without slopes 15% or greater = 5pts
				Maintain >20' undisturbed vegetated buffer to all slopes 15% or greater = 3pts
				Maintain 10-20' undisturbed vegetated buffer to all slopes 15% or greater = 2pts
				Maintain 1-10' undisturbed vegetated buffer to all slopes 15% or greater = 1pt
				Disturbance of any slope 15% or greater = 0pts
Protect soils	5	Select one option		Redevelopment sites = 5pts
			5	Detailed, site-specific soil survey; preparation of a Soil Management and Protection Plan; protect highly permeable soils = 5pts
Limit site disturbance and earthwork	8	Select one option		Redevelopment limits disturbance to existing footprint = 8pts
				New development disturbs less than 50% of existing undeveloped site area = 8pts
				New development disturbs less than 75% of existing undeveloped site area = 6pts
			0	New development disturbs greater than 75% of existing undeveloped site area = 0pts
Soil preparation & minimizing compaction	6	Select all options that apply	3	Till soils to a depth of at least 10" prior to revegetation = 3pts
			3	Organic matter amendments as needed based on soil tests = 3pts
CORE METHODS: Landscaping				
Low-Impact Landscaping	6	Select all options that apply		Redevelopment sites reduce lawn area by 50%, provided no increase in impervious area (lawn becomes landscaping) = 2pt
			2	New development results in >50% non-impervious developed area is landscaping = 2pt
			2	Use only native vegetation for landscaped areas = 2pts
			2	Using only locally-sourced landscape materials = 2pt
CORE METHODS: Impervious Area & SW Management				
Meeting City's stormwater management standards	Required			
Reduce impervious and increase permeable surfaces	10	Select all options that apply, up to a maximum of 10 points		50% or more of proposed hard surfaces are permeable (porous pavers, permeable concrete, porous asphalt) = 6pts
			2	Minimize parking impervious area by using only the minimum required number of parking spaces, the minimum required parking lot dimensions, maximizing compact spaces and utilizing low-turnover standard parking space width reductions = 4pt
				25% or more of proposed hard surfaces are permeable (porous pavers, permeable concrete, porous asphalt) = 3pts
			2	Minimize roadway impervious area by developing roadways and driveways at the minimum width and using minimum number of curb cuts = 2pt
			2	Reducing the number of driveways by using a shared driveway design = 2pt
			2	Providing transportation alternatives (such as bike share, car share, or similar) = 2pt
Use GI / natural stormwater treatment systems	12	Select all options that apply		Treatment requirements and conveyance achieved through vegetated systems = 6pts
			3	No more than 1-acre of drainage per treatment system = 3pts
				Increase time of concentration on site (1" 25 year storm event) = 3pts
Limit / eliminate salt use	4	Select one option		Detailed winter maintenance agreement, with annual reporting requirement, limiting chloride use (required in UIS watersheds) = 4pts

Bonus Points				
Bonus points are offered for strategies that may go above and beyond typical approaches; may offer particularly innovative site design or engineering ; or may help achieve the larger goal of low-impact development on a regional scale.	10		5	Utilizing structured parking = 10pts
	10			Utilizing a green roof for at least 50% of a newly developed or redeveloped building roof = 10pts
	10			Restoration of previously disturbed natural resources (minimum 500 square feet of restoration) = 10pts
	10			BMPs designed for known water quality impairment within watershed = 10pts
	10			Connecting to City sewer from a site >200 ft from existing City infrastructure = 10pts
	6		6	Detention of 1.5 times the required volume = 6pts
	6			Treatment for 1.5 times the required water quality volume = 6pts
	6			Innovative LID site design and/or stormwater improvement = 6pts
	10			Establishing a Traffic Demand Management plan for projects under 50,000ft = 10pts
	Total Possible Points		**Total Points Awarded**	**Minimum points required for approval of LID strategies and techniques**
	178		**80**	**80**

FEATURES

- Low profile LED area/site luminaire with a variety of IES distributions for lighting applications such as retail, commercial and campus parking lots
- Featuring Micro Strike Optics which maximizes target zone illumination with minimal losses at the house-side, reducing light trespass issues
- Visual comfort standard
- Compact and lightweight design with low EPA
- 3G rated for high vibration applications including bridges and overpasses
- Control options including photo control, occupancy sensing, NX Distributed Intelligence™ and 7-Pin with networked controls
- Best in class surge protection available

CONTROL TECHNOLOGY

SERVICE PROGRAMS

	Weight	EPA at 0°
RAR1	13.5 lbs / 6.1 kg	.45ft.² / .13m²
RAR2	24 lbs / 10.9 kg	.55ft.² / .17m²

SPECIFICATIONS

CONSTRUCTION

- Rectilinear form mimics the traditional shoebox form factor keeping a similar but updated style and appearance, ideal for retrofit applications
- Die-cast housing with hidden vertical heat fins that are optimal for heat dissipation while keeping a clean smooth outer surface
- Corrosion resistant, die-cast aluminum housing with powder coat paint finish

OPTICS

- Entire optical aperture illuminates to create a larger luminous surface area resulting in a low glare appearance without sacrificing optical performance
- 80, 160, 320 or 480 midpower LEDs
- 3000K, 4000K or 5000K (70 CRI) CCT
- Zero uplight at 0 degrees of tilt
- Field rotatable optics

INSTALLATION

- Standard square arm mount, compatible with B3 drill pattern
- Optional universal mounting block for ease of installation during retrofit applications. Available as an option or accessory for square and round poles.
- Knuckle arm fitter option available for 2-3/8" OD tenon. Max tilt of 60 degrees with 4 degree adjustable increments. (Restrictions apply for 7-pin options)

ELECTRICAL

- Universal 120-277 VAC or 347-480 VAC input voltage, 50/60 Hz
- Ambient operating temperature -40˚C to 40˚C
- Drivers have greater than 90% power factor and less than 20% THD
- LED drivers have output power over-voltage, over-current protection and short circuit protection with auto recovery
- Field replaceable surge protection device provides 20kA protection meeting ANSI/IEEE C62.41.2 Category C High and Surge Location Category C3; Automatically takes fixture off-line for protection when device is compromised

CONTROLS

- Photo control, occupancy sensor and wireless available for complete on/off and dimming control
- 7-pin ANSI C136.41-2013 photocontrol receptacle option available for twist lock photocontrols or wireless control modules (control accessories sold separately)
- 0- 10 V Dimming Drivers are standard and dimming leads are extended out of the luminaire unless control options require connection to the dimming leads. Must specify if wiring leads are to be greater than the 6" standard
- NX Distributed Intelligence™ available with in fixture wireless control module, features dimming and occupancy sensor

CERTIFICATIONS

- DLC® (DesignLights Consortium Qualified), with some Premium Qualified configurations. Not all product variations on this page are DLC Qualified. Refer to www.designlights.org for the most up-to-date list.
- Listed to UL1598 and CSA C22.2#250.0-24 for wet locations and 40˚C ambient temperatures
- 3G rated for ANSI C136.31 high vibration applications
- Fixture is IP66 rated
- Meets IDA recommendations using 3K CCT configuration at 0 degrees of tilt
- This product meets federal procurement law requirements under the Buy American Act (FAR 52.225-9) and Trade Agreements Act (FAR 52.225-11). See Buy America(n) Solutions (link to https://www.currentlighting.com/resources/america-solutions)

WARRANTY

- 5 year limited warranty
- See HLI Standard Warranty for additional information

Mounting	
ASQ	Arm mount for square pole/flat surface
ASQU	Universal arm mount for square pole/flat surface- Does not include round pole adapt or B3 drill pattern
Mounting Round Poles	
A_	Arm mount for round pole[1] B3 drill pattern
A_U	Universal arm mount for round pole[1]
Mounting Other	
WB	Wall bracket
MAF	Mast arm fitter for 2-3/8" OD horizontal arm
K	Knuckle

Color	
BLT	Black Matte Textured
BLS	Black Gloss Smooth
DBT	Dark Bronze Matte Textured
DBS	Dark Brone Gloss Smooth
GTT	Graphite Matte Textured
LGS	Light Grey Gloss Smooth
PSS	Platinum Silver Smooth
WHT	White Matte Textured
WHS	White Gloss Smooth
VGT	Verde Green Textured
Color Option	
CC	Custom Color

Control Options Network	
NXWS16F	NX Networked Wireless Enabled Integral NXSMP2-LMO PIR Occupancy Sensor with Automatic Dimming Photocell and Bluetooth Programming [6,7]
NXWS40F	NX Networked Wireless Enabled Integral NXSMP2-HMO PIR Occupancy Sensor with Automatic Dimming Photocell and Bluetooth Programming [6,7]
NXW	NX Networked Wireless Radio Module NXRM2 and Bluetooth Programming, without Sensor [6,7]
Control Options Other	
SCP_F	Programmable occupancy sensor [3,4]
7PR	7-Pin twist lock receptacle
7PR-SC	7-Pin receptacle with shorting cap
7PR-MD40F	Low voltage sensor for 7PR
7PR-TL	7-Pin PCR with photocontrol
ADD	AutoDim Timer Based Dimming
ADT	AutoDim Time of Day Dimming
BTS-14F	Bluetooth® Programmable, BTSMP-LMO PIR Occupancy Sensor with Automatic Dimming Photocell and 360° Lens [9]
BTS-40F	Bluetooth® Programmable, BTSMP-LMO PIR Occupancy Sensor with Automatic Dimming Photocell and 360° Lens [9]
BTSO-12F	Bluetooth® Programmable, BTSMP-OMNI-O PIR Occupancy Sensor with Automatic Dimming Photocell and 360° Lens [9]

Options	
BC	Backlight control [8]
F	Fusing [5]
TB	Terminal block
2PF	2 power feed with 2 drivers[2]

Notes:
1 Replace "_" with "3" for 3.5"-4.13" OD pole, "4" for 4.18"-5.25" OD pole, "5" for 5.5"-6.5" OD pole
2 Not available with 25, 50, 255, 295 & 340W configurations
3 At least one SCPREMOTE required to program SCP motion sensor
4 Replace "_" with 8F or 40F lens
5 Must specify voltage
6 Networked Controls cannot be combined with other control options
7 Not available with 2PF option
8 BC not available on 4F distributions
9 BTS and BTSO available for 50 Watts or higher and only on 120-277 voltage

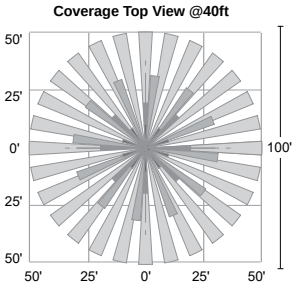
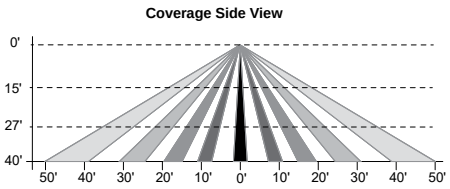
COVERAGE PATTERNS FOR SCP_F





PROGRAMMED CONTROLS

ADD-AutoDim Timer Based Options

- Light delay options from 1-9 hours after the light is turned on to dim the light by 10-100%. To return the luminaire to its original light level there are dim return options from 1-9 hours after the light has been dimmed previously.

EX: ADD-6-5-R6

ADD Control Options	Configurations Choices	Example Choice Picked
Auto-Dim Options	1-9 Hours	6 - Delay 6 hours
Auto-Dim Brightness	10-100% Brightness	5 - Dim to 50% brightness
Auto-Dim Return	Delay 0-9 Hours	R6 - Return to full output after 6 hours

ADT-AutoDim Time of Day Based Option

- Light delay options from 1AM-9PM after the light is turned on to dim the light by 10-100%. To return the luminaire to its original light level there are dim return options from 1AM-9PM after the light has been dimmed previously.

EX: ADT-6-5-R6

ADD Control Options	Configurations Choices	Example Choice Picked
Auto-Dim Options	12-3 AM and 6-11 PM	6 - Dim at 6PM
Auto-Dim Brightness	10-100% Brightness	5 - Dim to 50%
Auto-Dim Return	12-6 AM and 9-11P	R6 - Return to full output at 6AM

CONTROLS

Control Options	
Standalone	
SCPREMOTE	Order at least one per project location to program and control
Networked – Wireless	
WIR-RME-L	LightGRID+ External Fixture Module[1,2]
NX Networked – Wireless	
NXOFM-1R1D-UNV	NX Wireless, Daylight Harvesting, BLE, 7 pin twisted lock

Notes:

1 Works with external networked photosensor

2 LightGRID+ Gateway required for system programming

OPTIONS AND ACCESSORIES - STOCK (ORDERED SEPARATELY)

	Catalog Number	Description
☐	**RARRPA3DB**	Round pole adapter 3.5" to 4.13" for ASQ arm, 3.5" to 4.13" OD pole, dark bronze finish
☐	**RARA3UDB**	Universal mount for square pole or round pole 3.5" to 4.13", dark bronze finish
☐	**RARBC80L**	Ratio backlight control 80L
☐	**RARBC160L**	Ratio backlight control 160L
☐	**RARBC320L**	Ratio backlight control 320L
☐	**RARBC480L**	Ratio backlight control 480L

ACCESSORIES AND REPLACEMENT PARTS - MADE TO ORDER

	Catalog Number	Description
☐	**RAR–ASQU–XX**	Universal arm mount for square pole/flat surface[2]
☐	**RAR–A_U-XX**	Universal arm mount for round poles[1,2]
☐	**RAR–RPA_–XX**	Round pole adapter[1, 2]
☐	**SETAVP-XX**	4" square pole top tenon adapter, 2 3/8" OD slipfitter[2]
☐	**RETAVP-XX**	4" round pole top tenon adapter; 2 3/8" OD slipfitter for max. Four fixtures (90o); order 4" round pole adapters separately[2]
☐	**BIRD–SPIKE–3**	Ratio size 1 bird deterrent/spikes
☐	**BIRD–SPIKE–4**	Ratio size 2 bird deterrent/spikes
☐	**RARWB–XX**	Wall bracket - use with Mast Arm Fitter or Knuckle[2]

1 Replace "_" with "3" for 3.5"-4.13" OD pole, "4" for 4.18"-5.25" OD pole, "5" for 5.5"-6.5" OD pole

2 Replace "XX" with desired color/ paint finish

LUMINAIRE AMBIENT TEMPERATURE FACTOR (LATF)

Ambient Temperature		Lumen Multiplier
0˚ C	32˚ F	1.03
10˚ C	50˚ F	1.01
20˚ C	68˚ F	1.00
25˚ C	77˚ F	1.00
30˚ C	86˚ F	0.99
40˚ C	104˚ F	0.98
50˚ C	122˚ F	0.97

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

PROJECTED LUMEN MAINTENANCE

Ambient Temperature	OPERATING HOURS					
	0	25,000	TM-21-11 L90 36,000	50,000	100,000	L70 (Hours)

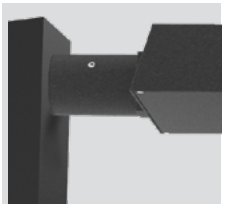
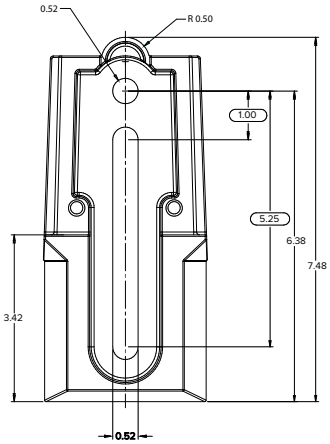
ADDITIONAL INFORMATION



MOUNTING

Arm Mount – ASQ: Fixture ships with integral arm for ease of installation.

Knuckle – Knuckle mount 15° aiming angle increments for precise aiming and control, fits 2-3/8" tenons or pipes.



MAF – Fits 2-3/8" OD arms Roadway applications.

Wall Mount – Wall mount bracket designed for building mount applications.

Universal Mounting – Universal mounting block for ease of installation. Compatible with drill patterns from 2.5" to 4.5" and S2 and B3 drill patterns

PROGRAMMED CONTROLS

ADD-AutoDim Timer Based Options

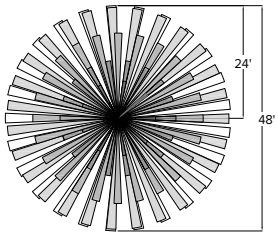
- Light delay options from 1-9 hours after the light is turned on to dim the light by 10-100%. To return the luminaire to its original light level there are dim return options from 1-9 hours after the light has been dimmed previously.

EX: ADD-6-5-R6

ADD Control Options	Configurations Choices	Example Choice Picked
Auto-Dim Options	1-9 Hours	6
Auto-Dim Brightness	0-9% Brightness	5
Auto-Dim Return	Delay 0-9 Hours	R6

ADT-AutoDim Time of Day Based Option

- Light delay options from 1AM-9PM after the light is turned on to dim the light by 10-100%. To return the luminaire to its original light level there are dim return options from 1AM-9PM after the light has been dimmed previously.



EX: ADT-6-5-R6

ADD Control Options	Configurations Choices	Example Choice Picked
Auto-Dim Options	12-3 AM and 6-11 PM	6
Auto-Dim Brightness	0-9% Brightness	5
Auto-Dim Return	12-6 AM and 9-11P	R6

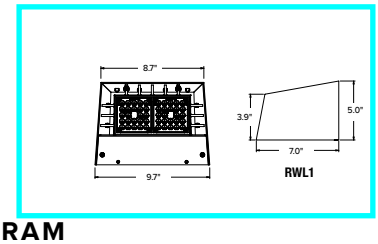
TYPE: | PROJECT:



CATALOG #:

MICROSTRIKE | OPTICS STRIKE

FEATURES

- Low profile LED wall luminaire with a variety of IES distributions for lighting applications such as retail, commercial and industrial building mount
- Featuring Strike and Micro Strike Optics which maximizes target zone illumination with minimal losses at the house-side, reducing light trespass issues
- Visual comfort standard
- Control options including photo control, occupancy sensing, NX Distributed Intelligence™, LightGRID+ and 7-Pin with networked controls
- Battery Backup options available for emergency code compliance
- Quick-mount adapter allows easy installation/maintenance
- 347V and 480V versions for industrial applications and Canada

CONTROL TECHNOLOGY

NX CONNECT NX WIRED NX WIRELESS LIGHTGRID

SERVICE PROGRAM

QS10

	Weight
RWL1	6.5 lbs / 2.95 kg
RWL2	16.5 lbs / 7.48 kg

SPECIFICATIONS

CONSTRUCTION

- Die-cast housing with hidden vertical heat fins that are optimal for heat dissipation while keeping a clean smooth outer surface
- Corrosion resistant, die-cast aluminum housing with powder coat paint finish
- Powder paint finish provides durability in outdoor environments. Tested to meet 1000 hour salt spray rating

OPTICS

- Entire optical aperture illuminates to create a larger luminous surface area resulting in a low glare appearance without sacrificing optical performance
- 48 or 160 midpower LEDs
- 3000K, 4000K or 5000K (70 CRI/80 CRI) CCT
- Zero uplight distributions
- LED optics provide IES type II, III and IV distributions. Type II only available in RWL2 configurations

INSTALLATION

- Quick-mount adapter provides easy installation to wall or to recessed junction boxes (4" square junction box)
- Designed for direct j-box mount.
- Integral back box contains 1/2" conduit hubs
- Integral back box standard with Dual Driver, Dual Power Feed, NX, LightGRID+ and battery versions (battery versions for RWL1 only)

ELECTRICAL

- 120V-277V universal voltage 50/60Hz 0-10V dimming drivers
- 347V and 480V dimmable driver option for all wattages above 35W
- Ambient operating temperature -40˚C to 40˚C
- Driver RoHS and IP66

ELECTRICAL (CONTINUED)

- 10kV Surge Protector optional
- Drivers have greater than .90 power factor and less than 20% Total Harmonic Distortion
- Dual Driver option provides 2 drivers within luminaire but only one set of leads exiting the luminaire, where Dual Power Feed provides two drivers which can be wired independently as two sets of leads are extended from the luminaire. Both options can not be included in one same fixture.
- Dimming drivers are standard and dimming leads are extended out of the luminaire unless control options require connection to the dimming leads. Must specify if wiring leads are to be greater than 6" standard.

CONTROLS

- Photo control, occupancy sensor and wireless available for complete on/off and dimming control
- Button photocontrol is suitable for 120-277V operation
- 7-pin ANSI C136.41-2013 photocontrol receptacle option available for twist lock photocontrols or wireless control modules (control accessories sold separately)
- NX Distributed Intelligence™ available with in fixture wireless control module, features dimming and occupancy sensor LightGRID+ available with in fixture wireless control module, features dimming and occupancy sensor
- Integral Battery Backup provides emergency lighting for the required 90 minute path of egress
- Battery Backup suitable for operating temperatures -25˚C to 40˚C. RWL1 battery is 12.5W RWL2 battery is 18W

CONTROLS (CONTINUED)

- Dual Driver and Dual Power Feed options creates product configuration with 2 internal drivers for code compliance
- Please consult brand or sales representative when combining control and electrical options as some combinations may not operate as anticipated depending on your application.
- LightGRID+ available with in fixture wireless control module, features dimming and occupancy sensor. Also available in 7-pin configuration

CERTIFICATIONS

- Certified to UL 1598 and CSA 22.2#250.0-24 for wet locations
- IP65 rated housing
- DLC® (DesignLights Consortium Qualified), with some Premium Qualified configurations. Not all product variations listed in this document are DLC® qualified. Refer to http://www.designlights.org for the most up-to-date list.
- Emergency battery backup options are California Energy Commission (CEC) Title 20 Compliant
- Meets IDA requirements using 3K CCT configuration at 0 degrees or tilt

WARRANTY

- 5 year limited warranty

CONSERVATION FUND AGREEMENT

STATE OF MAINE
BUREAU OF PARKS & RECREATION

LAND & WATER CONSERVATION FUND
and
MUNICIPAL RECREATION FUND
PROJECT AGREEMENT

Political Subdivision City of Portland

Project Title Riverton School Park

Project Period 6/23/75 to 12/31/77 Project No. 23-00276

Project Scope: This project consists of the development by the City of Portland of six (6) tennis courts and a softball field located in the Riverton School Park in the Riverton section of Portland, Cumberland County.

The development will be accomplished in one stage and will include a portion of the Master Site Planning, Engineering, Site Preparation, Paving, Fencing, Backstops, Walks and Finish Grading.

THIS AGREEMENT is hereby made between the STATE OF MAINE, by and through the BUREAU OF PARKS AND RECREATION, hereinafter called the STATE, and the (City) ~~(Town)~~ of Portland, hereinafter called the RECIPIENT.

WITNESS:

WHEREAS, the United States of America, represented by the Director, Bureau of Outdoor Recreation, United States Department of the Interior, and the State of Maine have entered into an agreement (which with its attachments and all regulations and provisions incorporated therein, is hereinafter referred to as the "Agreement") pursuant to the Land & Water Conservation Fund Act of 1965, 78 Stat. 897, (1964) providing for the acquisition and/or construction of the above described project (hereinafter referred to as the "Project"), for the benefit of the RECIPIENT; and,

WHEREAS, the Agreement between the United States of America and the STATE imposes responsibilities upon the STATE which the STATE has assured will apply to the RECIPIENT and which the RECIPIENT agrees to perform;

NOW, THEREFORE, for valuable consideration, the STATE and the RECIPIENT agree as follows:

1. The Agreement is hereby attached and made a part hereof this agreement, and the RECIPIENT hereby agrees to discharge, perform, and fully satisfy all provisions of the Agreement directly or indirectly applicable to the RECIPIENT, and the RECIPIENT further agrees that it shall not, through any act or omission, violate any provision of the Agreement.

2. In connection with all phases of the Project, including all work to be performed in the development thereof, the RECIPIENT agrees as follows:

   A. RECIPIENT shall comply with the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (P. L. 91-646; 84 Stat. 1894) including amendments thereto and regulations thereunder, as permitted by Title I M.R.S.A. Chapter 23.

   B. RECIPIENT agrees to execute and complete the Project strictly within the above referenced Project Scope. Subsequent to this Agreement, any change in the use or the substantial change in the design or arrangement of the Project must have the prior written approval of the STATE and the Bureau of Outdoor Recreation of the U. S. Department of the Interior.

   C. RECIPIENT shall not advertise any work on the Project for bidding, enter into any contract for work to be performed, or undertake any work on the Project unless and until the RECIPIENT shall have submitted reasonably detailed plans and specifications of the Project to the STATE for approval and shall have received the written approval of the STATE.

   D. All contracts for work on the Project in excess of $2,500 shall be awarded through competitive bidding.

   E. RECIPIENT shall establish a separate account for all funds received and expended in connection with the Project and shall preserve (and permit inspection of) such financial records for a period of three (3) years following final completion of the Project.

   F. The eligibility of any cost incurred or proposed to be incurred in connection with the Project shall be determined by the criteria set forth in the Bureau of Outdoor Recreation Grants-in-Aid Manual.

3. The RECIPIENT agrees that after completion of the Project it will, at its sole expense, retain the land acquired and/or improvements thereon developed (as the case may be) as a result of the Project (hereinafter referred to as the "Facilities") and operate the Facilities in a first-class manner for the service of the general public for the lifetime of the Facilities. In addition, the RECIPIENT shall comply with the following particular requirements:

A. The Facilities shall be retained by the RECIPIENT and not transferred or encumbered and shall be used exclusively for public outdoor recreation. The use of the Facilities shall not be changed from that contemplated and approved as of the date hereof, unless prior written approval of such a change is obtained from the STATE and the Bureau of Outdoor Recreation. The Facilities shall be kept open at reasonable hours and times of the year consistent with the type of recreation offered and shall be open to use and entry by all members of the public, regardless of race, color, creed, national origin, sex, or residence, who are otherwise eligible according to reasonable published rules applicable to use of the Facilities.

B. The Facilities shall be operated and maintained to present an attractive and inviting appearance to the public. Sanitation and sanitary facilities shall be provided and maintained at least in accordance with applicable State and Local public health laws or regulations. The Facilities shall be kept reasonably safe for public use and shall be kept in good and operable condition and repair, reasonable wear only excepted, throughout the lifetime of the Facilities.

4. If the RECIPIENT fails to comply with any provision of this agreement, including particular provisions relating to operation, maintenance, and repair of the Facilities, the STATE may, in addition to other legal rights it may have, operate the Facilities or perform the required maintenance and repairs, in which event the RECIPIENT, shall, promptly upon request, reimburse the STATE for all funds expended for the operation of and for the maintenance or repairs performed by or at the direction of the STATE.

5. The RECIPIENT shall post in a prominent place on the Facilities, and maintain in good condition, a sign giving permanent public acknowledgment of assistance from the Land and Water Conservation Fund.

6. The Project and Facilities and all records pertaining thereto shall, at all reasonable times, be available for inspection by the STATE OR ITS AGENTS OR DESIGNEES.

7. The STATE shall obligate from the Municipal Recreation Fund (Title 12 M.R.S.A. § 602 Sub § 14) to the RECIPIENT $____----____, and tender to the RECIPIENT that portion of the obligation which is required to pay the STATE's share of the cost of the Project, which share is to be at a percentage rate of ____-----____%.

8. The following special terms and conditions are made a part of this agreement:

COMPLETE DEVELOPMENT

Project Cost

Total Cost	$	140,200
Fund Support		50 %
Fund Amount	$	70,100
Cost of this Stage	$	140,200
Assistance this Stage	$	70,100

The following attachments are hereby incorporated into this agreement:

1. General Provisions dtd. Dec., 1965
2. Project Proposal
3. _____
4. _____

BOR 8-92
(Rev. April 1974)

The United States of America, represented by the Director, Bureau of Outdoor Recreation, United States Department of the Interior, and the State named above (hereinafter referred to as the State), mutually agree to perform this agreement in accordance with the Land and Water Conservation Fund Act of 1965, 78 Stat. 897 (1964), and with the terms, promises, conditions, plans, specifications, estimates, procedures, project proposals, maps, and assurances attached hereto and hereby made a part hereof.

The United States hereby promises, in consideration of the promises made by the State herein, to obligate to the State the amount of money referred to above, and to tender to the State that portion of the obligation which is required to pay the United States' share of the costs of the above project stage, based upon the above percentage of assistance. The State hereby promises, in consideration of the promises made by the United States herein, to execute the project described above in accordance with the terms of this agreement.

The following special project terms and conditions were added to this agreement before it was signed by the parties hereto:

Pre-agreement costs incurred from January 1, 1974 to date of project approval in an amount not to exceed $10,000 shall be allowable under this agreement.

The State agrees to turn over to the City of Portland all funds granted hereunder.

Section B.2d and D.4 of the General Provisions dated December, 1965 are not binding upon this project.

Reference to $10,000 in B.2(a), (b) and (c) of the General Provisions is changed to $2,500.

In witness whereof, the parties hereto have executed this agreement as of the date entered below.

EASEMENT DEED

Maine Statutory Short Form

KNOW ALL MEN BY THESE PRESENTS that BERNARD N. LARSEN of Portland, Cumberland County, Maine for consideration paid, grants to 3 BELFORT, LLC, a Maine limited liability company with a mailing address of 1584 Forest Avenue, Portland, ME 04103, with quitclaim covenant, an easement over a portion of property located in Portland, Cumberland County, Maine, and more particularly described as follows:

A perpetual easement encumbering a portion of the premises described in deeds recorded in the Cumberland County Registry of Deeds in Book 3150, Page 622 and Book 3150, Page 626 (the "Burdened Property"). Said easement is bounded and described as follows:

Commencing on the westerly side of Forest Avenue at the corner of land now or formerly of Almon D. Mann; thence running southeasterly by said Forest Avenue One Hundred Twenty-Four (124) feet, more or less, to land conveyed by Albert S. Cressey to Elizabeth M. Murray; thence southwesterly by said Murray land One Hundred Twenty-Seven and Fifty-Five hundredths (127.55) feet; thence northwesterly on a line parallel with the westerly line of said Forest Avenue One Hundred Twenty-Four feet, more or less, to said Mann land; thence northeasterly by said Mann land to said Forest Avenue at the point of beginning.

The Benefited Property is described in a deed dated November 9, 2016 from the Grantor herein to the Grantee herein, which property abuts the easement property described above. The above easement shall run with the respective properties benefited and burdened by the easement.

Without limitation, the permitted purposes for which this easement may be used are:

1. As a means for ingress and egress to and from the Benefitted Property;
2. As a parking area benefiting said property and any business conducted thereon;
3. As an area to be used for the plowing, removal, and deposit of snow removed from said property and the easement area;
4. As a space for outdoor activities benefiting said property (e.g. dining or farmer's market); and
5. To construct one building for any purposes reasonably related to the Benefitted Property and any business conducted thereon (e.g. food sales).

The easement rights also include, without limitation, the right to pave and stripe the easement area and to install and maintain such utility services, including, without limitation, such lighting as may be reasonably necessary for the use and enjoyment of this easement.

Excepting and reserving to the grantor, his heirs and assigns, the right to pass and repass through the above described easement area as now traveled.

Being a portion of the premises described in Warranty Deed and Quitclaim Deed to the Grantor herein and Dorothy A. Larson as joint tenants, and recorded in said Registry of Deeds in Book 3150, Page 622 and Book 3150, Page 626 respectively. Dorothy A. Larsen died on January 12, 2012 as a resident of Portland, Maine. Her estate was probated in the Cumberland County Registry of Probate, Docket No. 2012-0368.

Witness my hand and seal this 11th day of November, 2016.

Signed, Sealed and Delivered
in the presence of

Bernard N. Larsen

STATE OF MAINE
CUMBERLAND, SS. November 11, 2016

Then personally appeared the above-named Bernard N. Larsen and acknowledged the foregoing instrument to be his free act and deed.

RE: 1582 Forest Ave
Portland, Maine
Letter of Ability to Serve Request

SAP TBD
Project Description:
The project proposes to build (2) 3 story apartment buildings with 25 units in each building located at 1582 Forest Ave Portland Maine.

CMP has the ability to serve the proposed project in accordance with our CMP Handbook (web link below). We can provide you the desired pad or pole mounted transformers per your request and city approval, in accordance with our CMP Handbook of Standard Requirements. If you have any questions on the process, or need help in completion of the documents, please contact CMP at 800-565-3181.

Here is our typical process for getting your three phase or CT rated single phase service installed. If you have any questions, please let us know. The underlined links will redirect you to the appropriate site for additional information.

Service Milestones for Three Phase Services and CT Rated Single Phase Services. There are additional requirements for primary metered Solar Service Installations listed in the Chapter 324 Interconnections section below. Please refer to CMP Installation Checklists for other installations.

- Call 800-750-4000 option 4 to establish a new account (if needed) and an SAP work order. Please provide both of these to me.
- Submit Load information. Please complete the attached EDET (excel file) using load information. Please complete this and email back to me. If the loads are over 500 kw, more in depth load studies may be required with our Distribution Planning and Transmission Planning Departments. Be advised that these involve more detailed load information, a load study agreement (signed contract), as well as other items. This additional study process may add up to two additional months to completion of the job.
- Submit the easement information worksheet, including where any CMP structures may be on ANY private property (Poles, Wires, Anchors). You are responsible for obtaining all information for all required easements. Please complete this form and either email or fax back to me.
- Submit any electronic drawings (PDF (preferred) or DWG files) of the site layout and proposed electrical connections.
- For Primary Metered installations (including PV), please have the access road in for pole staking.

Central Maine Power
An Avangrid company

- Preliminary meetings with CMP Advisor and Engineer to determine details of job (I will need to schedule with your electrician/contractor-please let me know who this is)
- Field planner design appointment scheduled once the preliminary information is complete. This will allow us to cost out the job and develop a CMP Invoice. The invoice is typically generated 5-6 weeks after the design appointment. This expires after 90 days from the invoice date.
- Submit completed W9 so that your bill can be properly processed. This is a new CMP process.
- CMP submits invoice to the customer for payment (typically via email). Payment received from customer.
- Easements (based on easement information worksheet) sent out, signed and originals returned to CMP.
- Job scheduled for completion after the electrical inspection has been received.

This process can take several months, depending upon several factors including transformer or materials delivery, return of completed paperwork, and other jobs in the system that may be ahead of yours. In addition, contact with the other utilities, including telephone and cable, should be commenced as soon as practical. They may have additional work or charges in addition to the CMP work required to bring your project online.

As you may be aware, there are global supply chain issues impacting the utility industry. CMP is closely monitoring and managing their inventory to serve our customers. Larger padmount transformers may not be readily available for the date that you will need to be energized. Please consider this as part of your construction plan. The energy service advisor will continue to work closely with you and let you know as soon as the transformer becomes available. Should you have any questions or concerns throughout this process, please do not hesitate to contact your ESA directly at the number or email provided.

Please complete the attached forms (the specific instructions are on each form) and email them back to me at your earliest convenience.

For your convenience, here is a link to the CMP Website which contains our Handbook with details on most service requirements: CMP Handbook of Standard Requirements An additional resource is our Distribution Construction Standards: CMP Distribution Construction Standards CMP Distribution Construction Standards.

You will be responsible for installing the customer connections, conduits, and metering in accordance with the CMP Handbook of Standard Requirements The transformer will be sized based on your submitted load sheets.

Your deposit amount will be typically based on an estimated two month bill, calculated from your completed load sheet unless otherwise determined by CMP.

In addition, we have recently added on an online map that shows single phase and three phase power locations within CMP. Here is that link: CMP ArcGIS Information

Central Maine Power
An Avangrid company

Metering:

All metering (including locations) must be preapproved by CMP. If you have any questions, please consult the CMP Handbook of Standard Requirements

Chapter 324 Interconnections:

Please be advised that if you plan to install solar/wind/hydro generation, you must complete an application under the MPUC mandated Chapter 324 Interconnection Standards. If you go to Chapter 324 Interconnection Standards and follow the instructions for the Small Generator Interconnection Procedures, CMP can do this work in parallel to your service request that will be handled by me. If you project is under 660 KW You will be able to have a Customer Net Energy Billing contract. Information concerning Customer Net Energy Billing can be accessed thru the Chapter 324 website or by clicking here: Net Energy Billing

Reallocation/Line Extensions:

Recently, changes were made to the three-phase construction policy, which require CMP to reallocate construction costs paid by customers. If applicable, those projects identified as "developments" do not qualify for reallocation of funds. Please see this document at our website for details about the reallocation conditions. Any reallocation charges will be specifically denoted on your invoice. The website address for this is: PolyphaseLineExtension.

This line extension will be part of Central Maine Power's distribution system. In the event the property served under this Agreement is sold or otherwise conveyed, all rights and obligations of the Agreement shall stay with the property. Please note that if you rent or lease this property to another and you want to receive the reimbursement payments, you must make special arrangements with the Central Maine Power Company. Otherwise, any reimbursement payments will be sent to the "Customer" taking service at the service location.

Central Maine Power
An Avangrid company

Electricity Supplier Information:

Central Maine Power Company (CMP) will provide your facility with electric delivery service. If you don't already have a provider, you will need to make arrangements with a competitive electricity provider in order to receive electricity supply for your facility. In the event you fail to choose a competitive electricity provider, you will receive Standard Offer service arranged by the Maine Public Utilities Commission. If you wish to be served by a competitive electricity provider immediately upon establishment of delivery service, you must arrange for this service directly through your chosen competitive electricity provider, who must enroll your account no later than 5 PM on the business day prior initiation of delivery service by CMP. An up-to-date list of competitive suppliers can be found at the:

1. Maine Public Utilities Commission (MPUC) web site- **Maine PUC**
2. By calling the MPUC at (207) 287-3831

Multiple Family Dwelling Units	2-Bedroom	30	180	5400
Net Change				**+ 7,800**
*Values based on STATE OF MAINE: SUBSURFACE WASTEWATER DISPOSAL RULES, most recent edition				

Comments:
The Department of Public Works, which includes the Water Resource Division, have reviewed and determined that the downstream sewers from the project address have the capacity to convey the estimated dry weather wastewater flows which will be generated from this development.

However, storm drainage and sanitary sewer flows in this project area drain to the City's combined sewer system. Lack of wet weather capacity results in frequent system wide combined sewer overflows. City wide mitigation of combined sewer overflows is required as part of the City's CSO consent decree administered by the EPA and Maine DEP.

Section 5.2.4 of the City's Technical Manual requires DPW Water Resources approval when rain water is being proposed to discharge into a sewer which conveys sanitary waste. Applicable projects proposing to make a stormwater connection into the City's combined sewer system shall:
1. Provide a minimum on-site stormwater detention volume equal to the greater of:

a. 1" of rainfall times the TOTAL impervious area within the project's disturbance limits;
b. The project's proposed increase in average daily sewer flow being added to the combined sewer system.

2. Control stormwater discharge rates into the City's combined sewer system to a maximum flow rate of 0.1 CFS until the on-site detention system reaches its design capacity.

You are also reminded that new connections into the combined sewer system shall be equipped with backflow prevention in accordance with Section 2.6.10 of the City's Technical Manual.

If the City can be of further assistance, please contact me at 207-874-8840 or brad@portlandmaine.gov

Sincerely,

Bradley A. Roland, P.E.,
Senior Project Engineer

Portland Water District
FROM SEBAGO LAKE TO CASCO BAY

December 9, 2024

Kassey Northrop
Gorill Palmer
300 Southborough Drive, Suite 200
South Portland, ME 04106

Re: 1584 Forest Avenue, PO
Ability to Serve with PWD Water

Dear Ms. Northrop:

The Portland Water District has received your request for an Ability to Serve Determination for the noted site submitted on November 20, 2024. Based on the information provided per plans dated December 9, 2024, we can confirm that the District will be able to serve the proposed project as further described in this letter. **Please note that this letter constitutes approval of the water system as currently designed and is valid for eighteen (18) months after the date of issue. Any changes affecting the approved water system will require further review and approval by PWD.**

Conditions of Service

The following conditions of service apply:

- A new 6-inch fire service may be installed from the water main in Belfort Street to serve the proposed development. The service shall enter the property along its frontage on Beforst Street, no closer than 10' to any side property line.
- The existing 2-inch domestic water service in Belfort Street may be used to provide domestic service to the site. A 1-inch meter will be required. Because the length of this service line will exceed 300-feet, a meter pit will be required. The meter pit shall be located on private property within 10-20 feet of the property line at Belfort Street unless otherwise approved by PWD.
- An approved backflow prevention device (non-testable dual check on domestic service line and testable double check on fire service line) must be installed on each service line directly after the meter and before the sprinkler riser prior to service activation. Please refer to the PWD website for more information on cross-connection control policies.
- The Portland Water District does not have record of any other existing infrastructure in public roads and recommends a survey and test pitting be performed by the development team prior to construction. Any conflicts that arise during construction are at the risk of the developer and may result in job shutdown until new plans are submitted by the developer and reviewed and approved by PWD.
- The Portland Water District acknowledges all occupants of a multi-unit building as customers of the District. As such, all tenants of the building must be able to access the water meter. The method of access to the meter by the tenants is at the discretion of the owner of the building, provided that the tenants can freely access the meter in accordance with the Portland Water District Terms & Conditions.

Prior to construction, the owner or contractor will need to complete a Service Application and pay all necessary fees for each proposed service. When the project is ready for construction, an Application for each service can be requested by contacting the MEANS Group at MEANS@pwd.org or 207-774-5961 ext. 3199. Once a completed Application has been submitted with payment, please allow seven (7) days for processing.

Existing Site Service

According to District records, the project site does currently have existing water service. Please refer to the "Conditions of Service" section of this letter for requirements related to the use of this service.

Water System Characteristics

According to District records, there is an 8-inch diameter ductile iron water main in Belfort Street and a public fire hydrant located approximately 350 feet from the site. The estimated static pressure in the area is 73 psi.

Public Fire Protection

The installation of new public hydrants to be accepted into the District water system will most likely not be required. It is your responsibility to contact the City of Portland Fire Department to ensure that this project is adequately served by existing and/or proposed hydrants.

Domestic Water Needs

The data noted above indicates there should be adequate pressure and volume of water to serve the domestic water needs of your proposed project.

Private Fire Protection Water Needs

You have indicated that this project will require water service to provide private fire protection to the site. Please note that the District does not guarantee any quantity of water or pressure through a fire protection service. Please share these results with your sprinkler system designer so that they can design the fire protection system to best fit the noted conditions. If the data is out of date or insufficient for their needs, please contact MEANS to request a hydrant flow test and we will work with you to get more complete data.

Should you disagree with this determination, you may request a review by the District's Internal Review Team. Your request for review must be in writing and state the reason for your disagreement with the determination. The request must be sent to MEANS@PWD.org or mailed to 225 Douglass Street, Portland Maine, 04104 c/o MEANS. The Internal Review Team will undertake review as requested within 2 weeks of receipt of a request for review.

If the District can be of further assistance in this matter, please let us know.

Sincerely,
Portland Water District

Robert A. Bartels, P.E.
Senior Project Engineer

ATTACHMENT 6

NEIGHBORHOOD MEETING PACKAGE

Neighborhood Meeting Certification

I, Doug Reynolds, P.E., hereby certify that a neighborhood meeting was held on Wednesday, February 5, 2025 at the Talbot Community School at 1600 Forest Avenue, Portland, Maine at 5:30 P.M.

I also certify that on January 24, 2025, invitations were mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes property owners within 500 feet of the proposed development.

2. Residents on the "Interested parties" list.

Signed,

Doug Reynolds, P.E.

February 6, 2025

(date)

Attached to this certification are:

1. Copy of notice sent

2. Sign-in sheet

3. Record of feedback

GORRILL PALMER
An LJB Engineering Company

300 Southborough Drive, Suite 200, South Portland, ME 04106
(207) 772-2515 | GorrillPalmer.com

January 24, 2025

Dear Neighbor:

Please join ACRE Properties, for a Neighborhood Meeting to discuss their proposed 50-unit residential development consisting of two, three-story, multi-family dwellings, each with a building footprint of approximately 7,560 square feet at 1582 Forest Avenue, Portland, ME. The City of Portland identifies the property on the Maine Parcel Viewer as Parcel 299, Lot D1011001. The site is to be accessed via Belfort Street with pedestrian access via Forest Avenue.

Meeting Location: Talbot Community School

Meeting Date: February 5th, 2025

Meeting Time: 5:30pm-6:30pm

The City Code requires that the applicant shall mail notice to all property owners within 500 feet of the subject property boundaries, at least 10 calendar days prior to the neighborhood outreach or event. We will take attendance and submit a sign-in sheet to the Planning Board. The meeting will last no more than 60 minutes. If you have any questions, please feel free to contact Doug Reynolds 207.772.2515.

Sincerely,

GORRILL-PALMER

Douglas E. Reynolds, PE
Project Manager
Phone 207-772-2515
DReynolds@GorrillPalmer.com

Note: Under Section 13.5.5(B) Neighborhood Outreach of the City Code of Ordinances, an applicant for a Major Site plan development is required to mail notice to all property owners within 500 feet of the subject property boundaries, at least 10 calendar days prior to the neighborhood outreach or event. The notice shall contain a brief description of the proposal and information about how to access the neighborhood outreach (e.g. the date, time, and place of the neighborhood meeting or event or other relevant information regarding approved forms of neighborhood outreach). A digital copy of the neighborhood notice shall be sent to the Planning Authority, which shall be distributed to the City's list of interested citizens. Should you wish to offer additional comments on this proposed development, you may contact the Planning Division at 874-8683 or send written correspondence to the Planning and Urban Development Department, Planning Division 4th Floor, 389 Congress Street, Portland, ME 04101.

RECORD OF FEEDBACK

Project: **1582 Forest Avenue, Portland, Maine**

Job #: **4292**

Date: **February 5, 2025**

Time: **5:30 P.M. – 6:30 P.M.**

Location: **Talbot Community School**

Subject: **Neighborhood Meeting**

Attendees: **See Attached Sign-In Sheet**

In accordance with the City of Portland's Major Site Plan Requirements, a Neighborhood Meeting was scheduled to discuss the proposed 50-unit residential development consisting of two, three-story, multi-family dwellings, each with a building footprint of approximately 7,560 square feet.

The meeting was held on Wednesday, February 5, 2025 at 5:30 P.M. and Alex Coupe, President of ACRE Properties, LLC (Applicant), as well as Kassey Northrop and Ethan Chadwick, representatives from Gorrill Palmer, were present on site from 5:15 P.M. – 7:00 P.M. Please note that there were approximately seventy-six (76) attendees at the meeting, however only forty-one (41) members of the public were willing to sign in.

GENERAL NOTES

GENERAL NOTES

1. TOPOGRAPHIC DATA BOUNDARY SURVEY AND EXISTING CONDITIONS WERE PREPARED BY NORTHEAST CIVIL SOLUTIONS OF SCARBOROUGH, MAINE IN JULY OF 2022.

2. THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT THE LOCATION AND/OR THE ELEVATION OF THE EXISTING UTILITIES AS SHOWN ON THESE PLANS IS BASED ON RECORDS OF THE VARIOUS UTILITY COMPANIES AND WHERE POSSIBLE MEASUREMENTS TAKEN IN THE FIELD. THIS INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR MUST CALL THE APPROPRIATE UTILITY COMPANY AND DIG SAFE AT LEAST 72 HOURS PRIOR TO ANY EXCAVATION TO REQUEST EXACT FIELD LOCATION OF UTILITIES. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO RELOCATE ALL EXISTING UTILITIES WHICH CONFLICT WITH THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS.

3. MAINTENANCE OF EROSION CONTROL MEASURES IS OF PARAMOUNT IMPORTANCE TO THE OWNER AND THE CONTRACTOR IS RESPONSIBLE FOR COMPLYING WITH ALL EROSION CONTROL MEASURES SHOWN ON THE PLANS. ADDITIONAL EROSION CONTROL MEASURES SHALL BE INSTALLED IF DEEMED NECESSARY BY ON-SITE INSPECTIONS OF THE OWNER, THE CITY OF PORTLAND OR THEIR REPRESENTATIVES AT NO ADDITIONAL COST TO THE OWNER.

4. ALL MATERIAL SCHEDULES SHOWN ON THE PLANS ARE FOR GENERAL INFORMATION ONLY. THE CONTRACTOR SHALL PREPARE HIS OWN MATERIAL SCHEDULES BASED UPON HIS PLAN REVIEW. ALL SCHEDULES SHALL BE VERIFIED IN THE FIELD BY THE CONTRACTOR PRIOR TO ORDERING MATERIALS OR PERFORMING WORK.

5. ALL MATERIALS AND CONSTRUCTION METHODS SHALL CONFORM TO MAINE DEPARTMENT OF TRANSPORTATION SPECIFICATIONS AND CITY OF PORTLAND SPECIFICATIONS.

6. PAVEMENT SECTIONS AT BELFORT STREET AND FOREST AVENUE MUST BE RESTORED TO THE EXISTING DEPTH WHEN DISTRUBED. A MINIMAL 1-FOOT WIDE, 1.5" DEPTH MILL FROM THE SAW CUT LIMIT MUST BE PERFORMED FOR A PROPER JOINT

PERMITTING NOTES

1. THIS PROJECT IS SUBJECT TO THE TERMS AND CONDITIONS OF A SITE PLAN APPROVAL FROM THE CITY OF PORTLAND WHICH WILL BE MADE A PART OF THE CONTRACT BID DOCUMENTS. THE CONSTRUCTION WILL BE GOVERNED BY THE CITY OF PORTLAND LAND USE CODE WHICH IS AVAILABLE FOR VIEWING AT THE OFFICE OF THE ENGINEER OR THE MUNICIPAL OFFICE.

2. THE CONTRACTOR SHALL REVIEW THE ABOVE REFERENCED PERMITS PRIOR TO SUBMITTING A BID FOR THIS PROJECT, AND INCLUDE COSTS AS NECESSARY TO COMPLY WITH THE CONDITIONS OF THESE PERMITS.

LAYOUT NOTES

1. ALL DIMENSIONING, UNLESS NOTED OTHERWISE, IS TO THE FACE OF CURB.

2. OFFSETS TO CATCH BASINS AND MANHOLES ARE TO THE CENTER OF THE FRAME.

3. PIPE LENGTH EQUALS THE CENTER TO CENTER DISTANCES BETWEEN CATCH BASINS AND/OR MANHOLES MINUS ONE-HALF OF THE DIAMETER OF EACH CATCH BASIN OR MANHOLE.

4. PROPERTY LINE AND R.O.W. MONUMENTS SHALL NOT BE DISTURBED BY CONSTRUCTION. IF DISTURBED, THEY SHALL BE RESET TO THEIR ORIGINAL LOCATIONS AT THE CONTRACTOR'S EXPENSE, BY A MAINE LICENSED LAND SURVEYOR.

5. PROPOSED RIGHT OF WAY MONUMENTS AND PROPERTY LINE PINS SHALL BE INSTALLED UNDER THE DIRECTION OF A MAINE LICENSED LAND SURVEYOR.

UTILITY NOTES

1. THE LOCATION OF THE PROPOSED UNDERGROUND ELECTRICAL SERVICE IS APPROXIMATE AND THE CONTRACTOR SHALL COORDINATE THE EXACT LOCATION WITH CENTRAL MAINE POWER COMPANY.

2. TEST PITS AT ALL UTILITY CROSSINGS SHALL BE COMPLETED TWO WEEKS IN ADVANCE OF THE START OF CONSTRUCTION OR ORDERING OF MATERIALS. TEST PIT INFORMATION SHALL BE PROMPTLY PROVIDED TO ENGINEER FOR REVIEW.

3. ALL WATER UTILITY MATERIALS AND INSTALLATION METHODS SHALL CONFORM TO PORTLAND WATER DISTRICT STANDARDS. ALL WATER DISTRIUBUTION PIPING SHALL BE CLASS 52 DUCTILE IRON PIPE, DOUBLE CEMENT LINED AND BITUMINOUS COATED CONFORMING TO AWWA/ANSI C104/A21.4. DISINFECTION OF WATER LINES SHALL CONFORM TO AWWA STANDARD C651, LATEST REVISION.

4. THRUST BLOCKS OR LOCKING RETAINER GLANDS SHALL BE PLACED ON THE WATER DISTRIBUTION LINES AT ALL BENDS, TEES, VALVES, CHANGES IN DIRECTION, ETC. THE THRUST BLOCKS OR LOCKING RETAINER GLAND SHALL MEET THE REQUIREMENTS OF THE PORTLAND WATER DISTRICT STANDARDS.

5. THE CONTRACTOR SHALL RECEIVE THE CITY OF PORTLAND'S PUBLIC WORKS AUTHORITY ABILITY TO SERVE PRIOR TO MAKING ANY SEWER CONNECTIONS. IT IS INTENDED THAT THE ABILITY TO SERVE WILL BE DECIDED AS PART OF THE MAJOR SITE PLAN APPLICATION.

GRADING AND DRAINAGE NOTES

1. UNLESS OTHERWISE NOTED, ALL STORM DRAIN PIPE SHALL BE IN ACCORDANCE WITH MDOT SPECIFICATIONS SECTION 603— PIPE CULVERTS AND STORM DRAINS, LATEST REVISION WITH THE EXCEPTION THAT THE ONLY ACCEPTABLE TYPES OF PIPE ARE AS FOLLOWS:

REINFORCED CONCRETE PIPE, CLASS III
POLYVINYL-CHLORIDE (PVC) PIPE
SMOOTH BORE POLYETHYLENE – ADS OR HANCOR

2. TOPSOIL STRIPPED IN AREAS OF CONSTRUCTION THAT IS SUITABLE FOR REUSE AS LOAM SHALL BE STOCKPILED ON SITE AT A LOCATION TO BE DESIGNATED BY THE OWNER. UNSUITABLE SOIL SHALL BE SEPARATED, REMOVED AND DISPOSED OF AT AN APPROVED DISPOSAL LOCATION OFF SITE.

3. THE CONTRACTOR SHALL ANTICIPATE THAT GROUNDWATER WILL BE ENCOUNTERED DURING CONSTRUCTION AND SHALL INCLUDE SUFFICIENT COSTS WITHIN THEIR BID TO PROVIDE DEWATERING AS NECESSARY. NO SEPARATE PAYMENT SHALL BE MADE TO THE CONTRACTOR FOR DEWATERING.

EROSION CONTROL NOTES

1. LAND DISTURBING ACTIVITIES SHALL BE ACCOMPLISHED IN A MANNER AND SEQUENCE THAT CAUSES THE LEAST PRACTICAL DISTURBANCE OF THE SITE.

2. PRIOR TO BEGINNING ANY CLEARING/LAND DISTURBING ACTIVITIES, THE CONTRACTOR SHALL INSTALL THE SILT SACKS.

3. ALL GROUND AREAS DISTURBED FOR CONSTRUCTION WILL BE GRADED, LOAMED AND SEEDED AS SOON AS POSSIBLE. PERMANENT SEED MIXTURE SHALL CONFORM TO THE SEEDING PLAN CONTAINED IN THE EROSION CONTROL REPORT PREPARED FOR THIS PROJECT.

4. PRIOR TO PAVING, THE CONTRACTOR SHALL FLUSH SILT FROM ALL STORM DRAIN LINES.

5. ALL STORM DRAIN INLETS & OUTLETS ARE TO RECEIVE RIPRAP PROTECTION APRONS DURING CONSTRUCTION.

6. ALL CATCH BASINS WITH OUTLET PIPES 15" DIAMETER OR LESS SHALL BE PROVIDED WITH OUTLET HOOD (SNOUT) PER DETAIL.

7. THE MAINTENANCE SCHEDULE FOR THE CATCH BASIN SEDIMENT SUMPS IS AS FOLLOWS:
THESE DEVICES SHALL BE INSPECTED IN APRIL AND OCTOBER OF EACH YEAR. ACCUMULATED SEDIMENT SHALL BE REMOVED FROM THE CATCH BASIN WHEN THE DEPTH OF THE SEDIMENT IS GREATER THAN ONE FOOT. THE SEDIMENT WILL BE REMOVED FROM THE SITE AND DISPOSED OF IN ACCORDANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS.

8. THE CONTRACTOR IS CAUTIONED THAT FAILURE TO COMPLY WITH THE SEQUENCE OF CONSTRUCTION, EROSION/SEDIMENT CONTROL PLAN, AND OTHER PERMIT REQUIREMENTS BASED UPON ANY THIRD PARTY REVIEW (ie MDEP) MAY RESULT IN MONETARY PENALTIES. THE CONTRACTOR SHALL BE ASSESSED ALL SUCH PENALTIES AT NO COST TO THE OWNER OR PERMITTEE.

9. ALL NON-PAVED AREAS DISTURBED DURING CONSTRUCTION SHALL BE LOAMED AND SEEDED, UNLESS OTHERWISE DIRECTED BY THE OWNER.

10. ALL DISTURBED AREAS ARE TO RECEIVE A MINIMUM OF 4" OF TOPSOIL PRIOR TO PERMANENT SEEDING.

   TOTAL LOT AREA IS: 87,277 S.F. OR 2.00 Ac.

2. THE PARCEL SURVEYED IS IDENTIFIED ON THE CITY OF PORTLAND TAX ASSESSOR'S MAP 299, BLOCK D, PARCEL 027.

3. THE BEARINGS SHOWN ON THIS PLAN ARE BASED ON MAINE COORDINATE SYSTEM OF 1983, WEST ZONE, GRID NORTH.

4. PLAN REFERENCES:
   a. "PORTLAND VILLA SITES, PORTLAND, CUMBERLAND CO. MAINE, OWNED BY J.W. WILBUR CO., INC." BY ERNEST W. BRANCH, CIVIL ENGINEER, DATED JULY 9, 1918, RECORDED IN PLAN BOOK 14, PAGE 7.

   b. "VERRILL & WIRT STREETS, PORTLAND, MAINE, AMENDED RECORDING PLAT" BY LAND USE CONSULTANTS, DATED JULY 10, 1989, RECORDED IN PLAN BOOK 184, PAGE 15.

   c. "SUBDIVISION SITE PLAN FOR DAVID CHASE, VERRILL & WIRT STREETS" BY DOWNEAST SURVEYING AND DEVELOPMENT, DATED DECEMBER 15, 1998, RECORDED IN PLAN BOOK 199, PAGE 129.

   d. STREET LINE RECORDS PROVIDED BY CITY OF PORTLAND PUBLIC WORKS

5. THE WIDTH OF FOREST AVENUE IS 66' BASED ON CITY OF PORTLAND RECORDS. THE LAYOUT OF THE RIGHT-OF-WAY LIMITS IS BASED ON SAID RECORDS AND MONUMENTATION FOUND.

6. REFERENCE IS MADE TO THE FOLLOWING EASEMENTS OF RECORD:
   a. EASEMENT FROM BERNARD N. LARSEN TO 3 BELFORT, LLC FOR INGRESS, EGRESS, PARKING, UTILITIES, OUTDOOR ACTIVITIES AND CONSTRUCTION OF 1 BUILDING RELATED TO THE USE OF THE EASEMENT, DATED NOVEMBER 11, 2016, RECORDED IN BOOK 33615, PAGE 280.

7. AS OF THE ORIGINAL DATE OF THIS PLAN, THE PARCEL SURVEYED IS LOCATED IN THE R3 ZONE. OTHER MUNICIPAL AND STATE OVERLAY ZONES MAY EXIST AND APPLY. BEFORE PROCEEDING ON ANY PROJECT WE RECOMMEND VERIFYING CURRENT ZONE AND ALL APPLICABLE SETBACKS AND RESTRICTIONS WITH THE APPROPRIATE AGENCIES.

8. ELEVATIONS AND CONTOURS ARE BASED ON NAVD 1988 DATUM OBTAINED BY RTK-GPS. SEE PLAN FOR TBM DESCRIPTION.

9. THE UTILITIES SHOWN ON THIS PLAN WERE FROM FIELD OBSERVATION ONLY. THERE MAY BE OTHER UTILITIES EXISTING THAT ARE NOT SHOWN. CONTACT DIG-SAFE (888)DIG-SAFE PRIOR TO ANY EXCAVATION WORK.

10. THE 25' X 127.55' PARCEL WAS ONCE PART OF THE ABUTTING PARCEL INCLUDED WITH LOTS 310 & 311 (SEE BOOK 2176, PAGE 164, MURRAY TO MURRAY'S THRIFT STORE). THE NEXT CONVEYANCE IN THIS CHAIN OF TITLE (BOOK 2357, PAGE 457 MURRAY'S THRIFT STORE TO THOMAS MORAN, JR. & DOROTHY MORAN), AND SUBSEQUENT DEEDS THEREAFTER, APPEAR TO DROP THE 25' X 127.55' PARCEL. THE LAST KNOWN OWNER OF THIS PARCEL IS MURRAY'S THRIFT STORE. TITLE ATTORNEY SHOULD BE CONSULTED TO RESOLVE OWNERSHIP OF THIS AREA.

NOTES:

1. CONTRACTOR SHALL SCHEDULE A WATER RESOURCES INSPECTOR TO INSPECT THE PROPOSED FORCE MAIN/GRAVITY SEWER TRANSITION MANHOLE (SMH-1) CONNECTION TO THE EXISTING 6" PVC SEWER STUB IN BELFORT STREET.

2. CONTRACTOR SHALL REMOVE THE EXISTING VERTICAL GRANITE CURB AS NEEDED WITHIN THE LIMITS OF THE PROPOSED SPOT IMPROVEMENTS AT THE BELFORT STREET AND FOREST AVENUE INTERSECTION FOR CONSTRUCTION.

3 THE CONTRACTOR SHALL INSTALL CONSTRUCTION FENCING OR APPROVED EQUAL TO DELINEATE AND PROTECT CRITICAL ROOT ZONES ASSOCIATED WITH THE TREES TO BE PRESERVED (NOTED ON THIS PLAN). CRITICAL ROOT ZONES AND PROTECTIVE BARRIERS SHALL BE INSPECTED BY THE LANDSCAPE ARCHITECT PRIOR TO THE START OF CONSTRUCTION.THE CONTRACTOR SHALL NOT DISTURB THE ESTABLISHED CRITICAL ROOT ZONES WITHOUT PRIOR WRITTEN APPROVAL FROM THE LANDSCAPE ARCHITECT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COSTS ASSOCIATED WITH DAMAGED TREES THAT ARE INTENDED TO BE PRESERVED, INCLUDING BUT NOT LIMITED TO; REPLACING THE TREE AND PAYING FINES.

COURTYARD PLANTING DETAIL
1"=5'

GENERAL PLANTING NOTES

1. CALL DIG-SAFE (1-888-344-7233) PRIOR TO BEGINNING WORK. THE LANDSCAPE CONTRACTOR IS ADVISED OF THE PRESENCE OF UNDERGROUND UTILITIES AND SHALL VERIFY THE EXISTENCE AND LOCATION OF SAME BEFORE COMMENCING AND DIGGING OPERATIONS. THE LANDSCAPE CONTRACTOR SHALL REPLACE OR REPAIR UTILITIES PAVING, WALKS, CURBING, ETC. DAMAGED IN PERFORMANCE OF THIS JOB AT NO ADDITIONAL COST TO OWNER.
2. CONTRACTOR SHALL THOROUGHLY FAMILIARIZE HIMSELF WITH ALL SITE CONDITIONS PRIOR TO CONSTRUCTION BIDDING.
3. DO NOT SCALE FROM DRAWINGS. ANY OMISSIONS IN DIMENSIONING SHALL BE REPORTED IMMEDIATELY TO THE LANDSCAPE ARCHITECT. ANY DISCREPANCIES BETWEEN DRAWINGS, PLANT QUANTITIES, DETAILS, NOTES AND SPECIFICATIONS SHALL BE IMMEDIATELY REPORTED TO THE LANDSCAPE ARCHITECT FOR FURTHER DIRECTION AND RESOLUTION BEFORE ANY ADDITIONAL WORK PROCEEDS.
4. PROVIDE SMOOTH TRANSITION WHERE NEW WORK MEETS EXISTING CONDITIONS.
5. CONTRACTOR SHALL FURNISH AND PLACE 18 INCHES OF LOAM IN ALL SHRUB BEDS, 30 INCHES IN ALL TREE PITS, AND 6 INCHES UNDER ALL TURF AREAS. THE LANDSCAPE CONTRACTOR SHALL COORDINATE SUBGRADE PREPARATION WITH THE GENERAL CONTRACTOR PRIOR TO PLACING LOAM.
6. ALL PLANT MATERIAL INSTALLED SHALL MEET THE SPECIFICATIONS OF "AMERICAN STANDARDS FOR NURSERY STOCK BY THE AMERICAN ASSOCIATION OF NURSERYMEN".
7. ALL PLANT MATERIAL SHALL BE FREE FROM INSECTS AND DISEASE.
8. ALL PLANTING SHALL BE DONE IN ACCORDANCE WITH ACCEPTABLE HORTICULTURAL PRACTICES. THIS IS TO INCLUDE PROPER PLANTING MIX, PLANT BED AND TREE PIT PREPARATION, PRUNING STAKING OR GUYING WRAPPING, SPRAYING, FERTILIZATION, PLANTING AND ADEQUATE MAINTENANCE UNTIL ACCEPTANCE FROM THE OWNER.
9. ALL GRASS, OTHER VEGETATION AND DEBRIS SHALL BE REMOVED FROM ALL PLANTING AREAS PRIOR TO PLANTING.
10. EXISTING TREES TO BE PRESERVED SHALL BE PROTECTED DURING CONSTRUCTION AND SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR.
11. THE CONTRACTOR SHALL INSTALL CONSTRUCTION FENCING OR APPROVED EQUAL TO DELINEATE AND PROTECT CRITICAL ROOT ZONES ASSOCIATED WITH THE TREES TO BE PRESERVED (NOTED ON THIS PLAN). CRITICAL ROOT ZONES AND PROTECTIVE BARRIERS SHALL BE INSPECTED BY THE LANDSCAPE ARCHITECT PRIOR TO THE START OF CONSTRUCTION.THE CONTRACTOR SHALL NOT DISTURB THE ESTABLISHED CRITICAL ROOT ZONES WITHOUT PRIOR WRITTEN APPROVAL FROM THE LANDSCAPE ARCHITECT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COSTS ASSOCIATED WITH DAMAGED TREES THAT ARE INTENDED TO BE PRESERVED, INCLUDING BUT NOT LIMITED TO; REPLACING THE TREE AND PAYING FINES.
12. ANY DEVIATION FROM THE LANDSCAPE PLAN, INCLUDING PLANT LOCATION, SELECTION, SIZE, QUANTITY, OR CONDITION SHALL BE REVIEWED AND APPROVED BY THE OWNER AND LANDSCAPE ARCHITECT (AND MUNICIPAL AUTHORITY, IF APPLICABLE) PRIOR TO INSTALLATION ON SITE.
13. WHERE INDICATED ON PLAN, PLANTING SOIL MIXTURE FOR GROUND COVER AND PERENNIAL BED AREAS SHALL CONSIST OF FOUR PARTS TOPSOIL, TWO PARTS SPHAGNUM PEAT MOSS, AND ONE PART HORTICULTURAL PERLITE BY VOLUME. PEAT MOSS MAY BE SUBSTITUTED WITH WELL-ROTTED OR DEHYDRATED MANURE OR COMPOST. ROTOTILL BEDS TO A DEPTH OF 8 INCHES.
14. DAMAGE TO EXISTING SITE IMPROVEMENTS DURING INSTALLATION OF LANDSCAPE MATERIAL SHALL BE THE RESPONSIBILITY OF THE LANDSCAPE CONTRACTOR.
15. CONTRACTOR SHALL COORDINATE INSPECTION OF PLANT MATERIAL AND LOCATIONS WITH PROJECT LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. ALL PLANT MATERIAL SHALL BE ON-SITE AND PLACED BEFORE INSPECTION CAN BE COMPLETED. A MINIMUM OF 48 HOUR NOTIFICATION SHALL BE REQUIRED.
16. MAINTENANCE REQUIREMENTS: PRUNE DEAD OR DAMAGED BRANCHES, MAINTAIN GUY POSTS AND WATER AS REQUIRED UNTIL PROJECT COMPLETION AND ACCEPTANCE BY OWNER.
17. WATERING: ALL PLANTINGS SHALL BE THOROUGHLY WATERED UPON INSTALLATION, AND THEN WEEKLY WHENEVER ANY DRY SPELLS OCCUR, UNTIL ACCEPTANCE BY OWNER.
18. LANDSCAPE CONTRACTOR OR PLANT SUPPLIER SHALL GUARANTEE PLANTS AND PROVIDE REPLACEMENTS FOR TWO YEARS FROM INSTALLATION.
19. CONTRACTOR SHALL PLACE 3" SHREDDED BARK MULCH AROUND SHRUB BEDS AND TREE PITS.
20. CONTRACTOR SHALL TILL SOILS TO A DEPTH OF 10" PRIOR TO REVEGETATION.
21. CONTRACTOR SHALL AMEND SOIL WITH ORGANIC MATTER AS DIRECTED BY THE LANDSCAPE ARCHITECT.

Landmark, shown in Solaris Aged Cedar

SAINT-GOBAIN

The Heat Reflects Away, And Your Home Stays Cool.

The CertainTeed Cool Roof Shingle Collection is a brilliant breakthrough that puts cool roof technology to work for you.

The secret is in CertainTeed's advanced roofing granules that reflect solar energy and radiant heat far better than traditional roofing shingles, reducing your roof's temperature in the summer. By lowering roof temperature, Solaris shingles can help reduce home cooling costs.

Cool roof performance, combined with CertainTeed's palette of rich, authentic colors makes Solaris an easy choice for eco-friendly living.

So cool, it's rated for rebates.

CertainTeed Cool Roof Shingles may qualify for credits/points in LEED®, NAHB® and other "green" programs.

And some utility companies offer a rebate for CertainTeed Cool Roof Shingles that can put as much as $600 back into a homeowner's pocket for an average 3,000 sq. ft. roof.

Integrity Roof System™

A COMPLETE APPROACH TO LONG LASTING BEAUTY AND PERFORMANCE

With as much care as you take in selecting the right contractor, choosing the right roof system is equally as important. A CertainTeed Integrity Roof System combines key elements that help ensure you have a well-built roof for long-lasting performance.

1. Waterproofing Underlayment

The first step in your defense against the elements. Self-adhering underlayment is installed at vulnerable areas of your roof to help prevent leaks from wind-driven rain and ice dams.

2. Water-Resistant Underlayment

Provides a protective layer over the roof deck and acts as a secondary barrier against leaks.

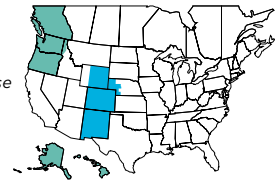
3. Starter Shingles

Starter Shingles are the first course of shingles that are installed and designed to work in tandem with the roof shingles above for optimal shingle sealing and performance.

4. Shingles

Choose from a variety of Good-Better-Best styles to complement any roof design and fit your budget.

5. Ventilation



A roof that breathes is shown to perform better and last longer. Ridge Vents, in combination with Intake Vents, allow air to flow on the underside of your roof deck, keeping the attic cooler in the summer and drier in the winter.

6. Hip & Ridge Caps

Available in numerous profiles, these accessories are used on the roof's hip and ridge lines for a distinctive finishing touch to your new roof.

Available in areas shown

Green: Northwest Region
Blue: Serviced by Denver Warehouse

Technical Data Sheet

Landmark Solaris®

PRODUCT INFORMATION

Landmark Solaris® innovative technology produces a shingle that reflects solar energy in a traditional color palette. All colors are rated by Cool Roof Rating Council (CRRC) and meet California's Title 24 requirements for cool steep slope roofing. Landmark Solaris shingles are manufactured using the same high standards as all CertainTeed roofing products and are covered by the same superior warranty protection. These shingles are available in "Metric" dimensions 13 1/4" x 38 3/4". This product also features CertainTeed's NailTrak® that offers a wider nailing area.

Landmark Solaris algae-resistant (AR) shingles have the additional attribute of resisting the growth of algae especially in damp regions. AR shingles are not available in all regions.

Colors: Please refer to product brochure or CertainTeed website for the colors available in your region.

Color	Solar Radiative Properties							Energy Star Certified?

Weathered Wood **	0668-0119	0.20	0.21	0.91	0.91	19	21	No

* Aged SRI is calculated using the California Energy Commission's Solar Reflective Index (SRI) Calculation Worksheet.
** Product meets the cool roofing requirements of Green Building Standards Code of Los Angeles County for residential buildings.

Limitations: Use on roofs with slopes greater than 2" per foot. Low-slope applications (2:12 to < 4:12) require additional underlayment. In areas prone to snow and ice, apply CertainTeed WinterGuard® Waterproofing Shingle Underlayment, or its equivalent along the eaves, according to application instructions provided with the product and on the shingle package.

Product Composition: Landmark Solaris shingles are composed of a fiber glass mat base. Ceramic-coated mineral granules with high solar reflectance are tightly embedded in carefully refined, water-resistant asphalt. Two pieces of the shingle are firmly laminated together in special tough asphaltic cement. All Landmark Solaris shingles have self-sealing adhesive strips.

Applicable Standards:

ASTM E108 Class A Fire Resistance
UL 790 Class A Fire Resistance
ASTM D3462
ASTM D3018 Type I
ASTM D3161 Class F Wind Resistance
Miami-Dade County Product Control Approved
Meets TDI Windstorm Requirements
ASTM D7158 Class H Wind Resistance
CSA Standard A123.5
ICC-ES ESR-1389 & ESR-3537
Florida Product Approval # FL5444
Can be used to comply with California Title 24, Part 6 (Steep Slope)

Technical Data:

Weight/Square (approx.)	216 lb
Shingles/Square (approx.)	66 *
Dimensions (overall)	13 1/4" x 38 3/4"
Weather Exposure	5 5/8"

*Based on 100 sq. ft. of exposed area.

INSTALLATION

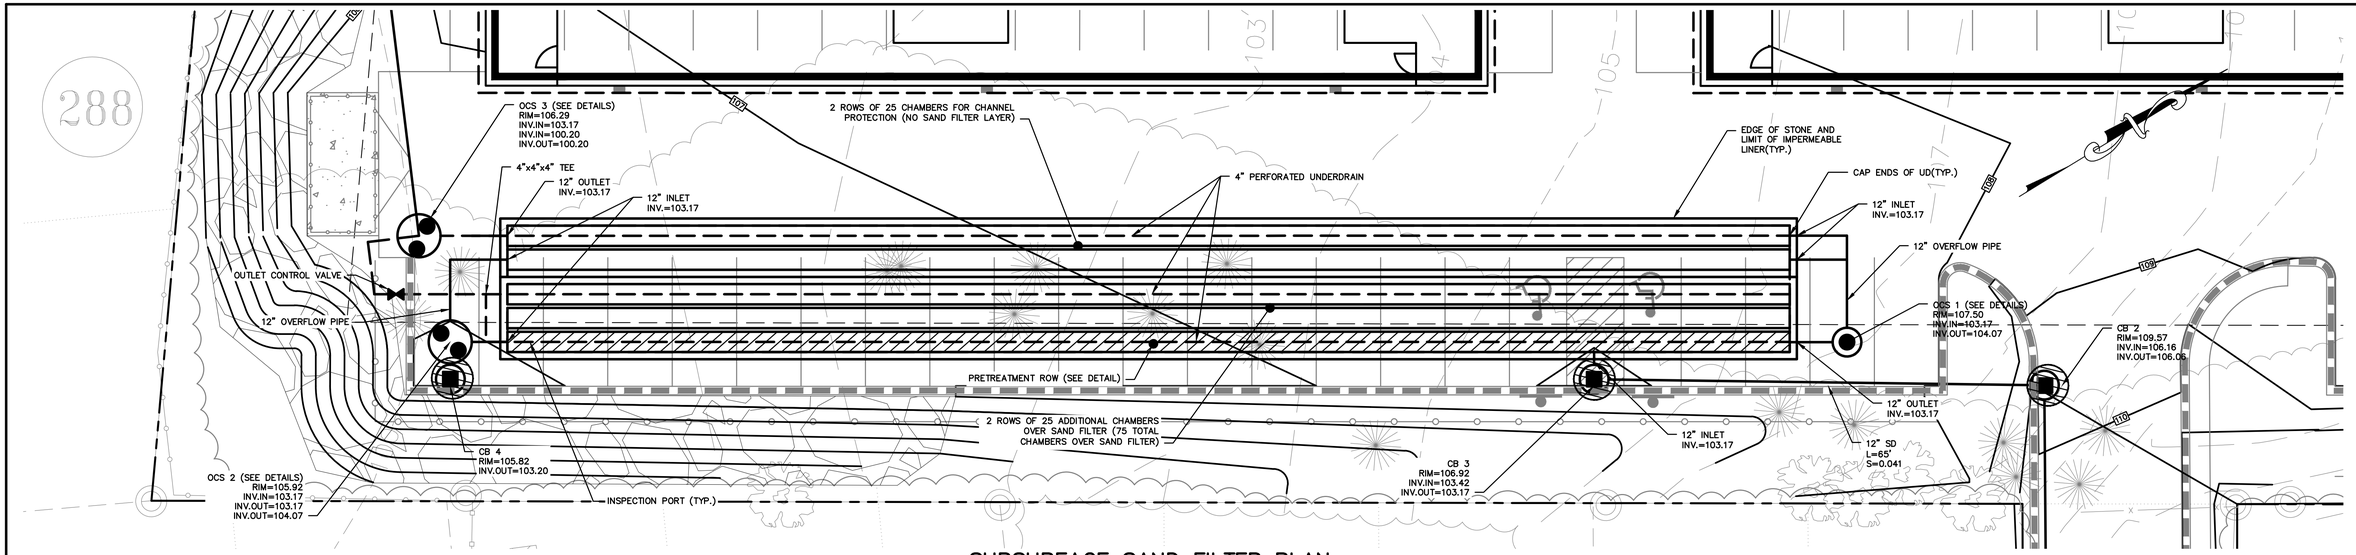
Detailed installation instructions are supplied on each bundle of shingles and must be followed. Separate application sheets may also be obtained from CertainTeed.

Hips and Ridges: Use CertainTeed Shadow Ridge® or Mountain Ridge® shingles of a like color for capping hips and ridges.

MAINTENANCE

These shingles do not require maintenance when installed according to manufacturer's application instructions. However, to protect the investment, any roof should be routinely inspected at least once a year. Older roofs should be looked at more frequently.

WARRANTY



Landmark Solaris shingles carry a Lifetime Limited Warranty and 10-year SureStart™ protection when applied to stated CertainTeed application instructions for this product. Landmark Solaris AR shingles carry a 10-year algae resistance warranty. For specific warranty details and limitations, refer to the warranty itself (available from the local supplier, roofing contractor or on-line at www.certainteed.com).

STORMTECH PRODUCT SPECIFICATIONS

1.0 GENERAL

1.1 STORMTECH CHAMBERS ARE DESIGNED TO CONTROL STORMWATER RUNOFF. AS A SUBSURFACE RETENTION SYSTEM, STORMTECH CHAMBERS RETAIN AND ALLOW EFFECTIVE INFILTRATION OF WATER INTO THE SOIL. AS A SUBSURFACE DETENTION SYSTEM, STORMTECH CHAMBERS DETAIN AND ALLOW FOR THE METERED FLOW OF WATER TO AN OUTFALL.

2.0 CHAMBER PARAMETERS

2.1 THE CHAMBER SHALL BE INJECTION MOLDED OF POLYPROPYLENE RESIN TO BE INHERENTLY RESISTANT TO ENVIRONMENTAL STRESS CRACKING (ESCR), AND TO MAINTAIN ADEQUATE STIFFNESS THROUGH HIGHER TEMPERATURES EXPERIENCED DURING INSTALLATION AND SERVICE.

2.2 THE NOMINAL CHAMBER DIMENSIONS OF THE STORMTECH SC-740 SHALL BE 30.0 INCHES TALL, 51.0 INCHES WIDE AND 90.7 INCHES LONG. THE NOMINAL CHAMBER DIMENSIONS OF THE STORMTECH SC-310 SHALL BE 16.0 INCHES TALL, 34.0 INCHES WIDE AND 90.7 INCHES LONG. THE INSTALLED LENGTH OF A JOINED CHAMBER SHALL BE 85.4 INCHES.

2.3 THE CHAMBER SHALL HAVE A CONTINUOUSLY CURVED SECTION PROFILE.

2.4 THE CHAMBER SHALL BE OPEN-BOTTOMED.

2.5 THE CHAMBER SHALL INCORPORATE AN OVERLAPPING CORRUGATION JOINT SYSTEM TO ALLOW CHAMBER ROWS OF ALMOST ANY LENGTH TO BE CREATED. THE OVERLAPPING CORRUGATION JOINT SYSTEM SHALL BE EFFECTIVE WHILE ALLOWING A CHAMBER TO BE TRIMMED TO SHORTEN ITS OVERALL LENGTH.

2.6 THE NOMINAL STORAGE VOLUME OF A JOINED STORMTECH SC-740 CHAMBER SHALL BE 74.9 CUBIC FEET PER CHAMBER WHEN INSTALLED PER STORMTECH'S TYPICAL DETAILS (INCLUDES THE VOLUME OF CRUSHED ANGULAR STONE WITH AN ASSUMED 40% POROSITY). THIS EQUATES TO 2.2 CUBIC FEET OF STORAGE/SQUARE FOOT OF BED. THE NOMINAL STORAGE VOLUME OF AN INSTALLED STORMTECH SC-310 CHAMBER SHALL BE 31.0 CUBIC FEET PER CHAMBER WHEN INSTALLED PER STORMTECH'S TYPICAL DETAILS (INCLUDES THE VOLUME OF CRUSHED ANGULAR STONE WITH AN ASSUMED 40% POROSITY). THIS EQUATES TO 1.3 CUBIC FEET OF STORAGE/SQUARE FOOT OF BED.

2.7 THE CHAMBER SHALL HAVE FORTY-EIGHT ORIFICES PENETRATING THE SIDEWALLS TO ALLOW FOR LATERAL CONVEYANCE OF WATER.

2.8 THE CHAMBER SHALL HAVE TWO ORIFICES NEAR ITS TOP TO ALLOW FOR EQUALIZATION OF AIR PRESSURE BETWEEN ITS INTERIOR AND EXTERIOR.

2.9 THE CHAMBER SHALL HAVE BOTH OF ITS ENDS OPEN TO ALLOW FOR UNIMPEDED HYDRAULIC FLOWS AND VISUAL INSPECTIONS DOWN A ROW'S ENTIRE LENGTH.

2.10 THE CHAMBER SHALL HAVE 14 CORRUGATIONS.

2.11 THE CHAMBER SHALL HAVE A CIRCULAR, INDENTED, FLAT SURFACE ON THE TOP OF THE CHAMBER FOR AN OPTIONAL 4-INCH INSPECTION PORT OR CLEAN-OUT.

2.12 THE CHAMBER SHALL BE ANALYZED AND DESIGNED USING AASHTO METHODS FOR THERMOPLASTIC CULVERTS CONTAINED IN THE LRFD BRIDGE DESIGN SPECIFICATIONS, 2ND EDITION, INCLUDING INTERIM SPECIFICATIONS THROUGH 2001. DESIGN LIVE LOAD SHALL BE THE AASHTO HS20 TRUCK. DESIGN SHALL CONSIDER EARTH AND LIVE LOADS AS APPROPRIATE FOR THE MINIMUM TO MAXIMUM SPECIFIED DEPTH OF FILL.

2.13 THE CHAMBER SHALL BE MANUFACTURED IN AN ISO 9001:2000 CERTIFIED FACILITY.

3.0 END CAP PARAMETERS

3.1 THE END CAP SHALL BE INJECTION MOLDED OF POLYPROPYLENE RESIN TO BE INHERENTLY RESISTANT TO ENVIRONMENTAL STRESS CRACKING, AND TO MAINTAIN ADEQUATE STIFFNESS THROUGH HIGHER TEMPERATURES EXPERIENCED DURING INSTALLATION AND SERVICE.

3.2 THE END CAP SHALL BE DESIGNED TO FIT INTO ANY CORRUGATION OF A CHAMBER, WHICH ALLOWS: CAPPING A CHAMBER THAT HAS ITS LENGTH TRIMMED; SEGMENTING ROWS INTO STORAGE BASINS OF VARIOUS LENGTHS.

3.3 THE END CAP SHALL HAVE SAW GUIDES TO ALLOW EASY CUTTING FOR VARIOUS DIAMETERS OF PIPE THAT MAY BE USED TO INLET THE SYSTEM.

3.4 THE END CAP SHALL HAVE EXCESS STRUCTURAL ADEQUACIES TO ALLOW CUTTING AN ORIFICE OF ANY SIZE AT ANY INVERT ELEVATION.

3.5 THE PRIMARY FACE OF AN END CAP SHALL BE CURVED OUTWARD TO RESIST HORIZONTAL LOADS GENERATED NEAR THE EDGES OF BEDS.

3.6 THE END CAP SHALL BE MANUFACTURED IN AN ISO 9001:2000 CERTIFIED FACILITY.

STORMTECH GENERAL NOTES

1. STORMTECH LLC ("STORMTECH") REQUIRES INSTALLING CONTRACTORS TO USE AND UNDERSTAND STORMTECH'S LATEST INSTALLATION INSTRUCTIONS PRIOR TO BEGINNING SYSTEM INSTALLATION.
2. OUR TECHNICAL SERVICES DEPARTMENT OFFERS INSTALLATION CONSULTATIONS TO INSTALLING CONTRACTORS. CONTACT OUR TECHNICAL SERVICES REPRESENTATIVE AT LEAST 30 DAYS PRIOR TO SYSTEM INSTALLATION TO ARRANGE A PRE-INSTALLATION CONSULTATION. OUR REPRESENTATIVES CAN THEN ANSWER QUESTIONS OR ADDRESS COMMENTS ON THE STORMTECH CHAMBER SYSTEM AND INFORM THE INSTALLING CONTRACTOR OF THE MINIMUM INSTALLATION REQUIREMENTS BEFORE BEGINNING THE SYSTEM'S TO SPEAK TO A TECHNICAL 1-888-892-2694 CONSTRUCTION. CALL TO WWW.STORMTECH.COM SERVICE REPRESENTATIVE OR VISIT RECEIVE A COPY OF OUR INSTALLATION INSTRUCTIONS.
3. STORMTECH'S REQUIREMENTS FOR SYSTEMS WITH PAVEMENT
DESIGN (ASPHALT, CONCRETE PAVERS, ETC.): MINIMUM COVER IS 18 INCHES NOT INCLUDING PAVEMENT; MAXIMUM COVER IS 96 INCHES INCLUDING PAVEMENT. FOR INSTALLATIONS THAT DO NOT INCLUDE PAVEMENT, WHERE RUTTING FROM VEHICLES MAY OCCUR, MINIMUM REQUIRED COVER IS 24 INCHES, MAXIMUM COVER IS 96 INCHES.
4. THE CONTRACTOR MUST REPORT ANY DISCREPANCIES WITH CHAMBER FOUNDATION MATERIALS BEARING CAPACITIES TO THE DESIGN ENGINEER.
5. AASHTO M288 CLASS 2 NON-WOVEN GEOTEXTILE (FILTER FABRIC) MUST BE USED AS INDICATED IN THE PROJECT PLANS.
6. STONE PLACEMENT BETWEEN CHAMBERS ROWS AND AROUND PERIMETER MUST FOLLOW INSTRUCTIONS AS INDICATED IN THE MOST CURRENT VERSION OF STORMTECH'S INSTALLATION INSTRUCTIONS.
7. BACKFILLING OVER THE CHAMBERS MUST FOLLOW REQUIREMENTS AS INDICATED IN THE MOST CURRENT VERSION OF STORMTECH'S INSTALLATION INSTRUCTIONS.
8. THE CONTRACTOR MUST REFER TO STORMTECH'S INSTALLATION INSTRUCTIONS FOR A TABLE OF ACCEPTABLE VEHICLE LOADS AT VARIOUS DEPTHS OF COVER. THIS INFORMATION IS ALSO AVAILABLE AT STORMTECH'S WEBSITE: WWW.STORMTECH.COM. THE CONTRACTOR IS RESPONSIBLE FOR PREVENTING VEHICLES THAT EXCEED STORMTECH'S REQUIREMENTS FROM TRAVELING ACROSS OR PARKING OVER THE STORMWATER SYSTEM. TEMPORARY FENCING, WARNING TAPE AND APPROPRIATELY LOCATED SIGNS ARE COMMONLY USED TO PREVENT UNAUTHORIZED VEHICLES FROM ENTERING SENSITIVE CONSTRUCTION AREAS.
9. THE CONTRACTOR MUST APPLY EROSION AND SEDIMENT CONTROL MEASURES TO PROTECT THE STORMWATER SYSTEM DURING ALL PHASES OF SITE CONSTRUCTION PER LOCAL CODES AND DESIGN ENGINEER'S SPECIFICATIONS.
10. STORMTECH PRODUCT WARRANTY IS LIMITED. SEE CURRENT PRODUCT WARRANTY FOR DETAILS. TO ACQUIRE A COPY CALL 1-888-892-2694 STORMTECH OR VISIT WWW.STORMTECH.COM.

SUBSURFACE DETENTION SYSTEMS MAY BE SUBSTITUTED WITH AN ENGINEER APPROVED EQUAL WHICH PROVIDES EQUAL DETENTION STORAGE AND WATER QUALITY TREATMENT

METER PIT AND COVER

1. SPECIAL APPROVAL BY PWD IS REQUIRED, PRIOR TO CONSTRUCTION, FOR ALL PROPOSED METER PIT INSTALLATIONS.
2. TESTABLE BACKFLOW PREVENTION DEVICES MAY NOT BE INSTALLED WITHIN SMALL METER PITS.
3. METER PIT SHALL BE LOCATED ON PRIVATE PROPERTY BETWEEN 10' AND 20' FROM THE PROPERTY LINE UNLESS OTHERWISE APPROVED BY PWD.
4. THE METER PIT SHALL BE MADE OF PRECAST CONCRETE OF SUFFICIENT SIZE TO PROVIDE 5.5' MINIMUM GROUND COVER FROM FINISHED GRADE TO THE TOP OF THE SERVICE PIPE.
5. ALL SEAMS BETWEEN CONCRETE SECTIONS SHALL BE SEALED WITH MASTIC JOINT. ALL OPENINGS IN THE CONCRETE FOR SERVICE PIPING SHALL BE SEALED WITH A MODULAR SEAL (LINK-SEAL OR SIMILAR).
6. METER PIT INTERIOR MUST BE AT LEAST 48" IN DIAMETER. THE OPENING MUST BE AT LEAST 30" IN DIAMETER, WITH A CAST IRON FRAME. THE COVER SHALL BE CAST IRON OR STEEL, 32" MINIMUM IN DIAMETER, AND BE EITHER PERMANENTLY LABELLED "WATER" OR HAVE NO LABEL. STEEL PLATE MATERIAL SHALL BE COATED WITH A RUST INHIBITOR PAINT.
7. WALL-MOUNTED LADDER RUNGS ARE NOT TO BE INSTALLED WITHIN METER PIT.
8. ALL PIPING INSIDE AND EXTENDING THROUGH THE METER PIT WILL BE MADE OF COPPER, WITH A MINIMUM OF 6" CLEARANCE FROM THE METER PIT FLOOR. USE BLOCKING AS NEEDED TO SUPPORT THE PIPE.
9. CUSTOMER SHALL ENSURE THE METER PIT AND COVER ARE PROPERLY RATED FOR TRAFFIC FLOW, IF APPLICABLE.

METER INSTALLATION

10. ONLY PWD PERSONNEL ARE AUTHORIZED TO INSTALL WATER METERS. PWD PERSONNEL ARE ADDITIONALLY AUTHORIZED TO OPERATE METER VALVES AS NEEDED FOR INSTALLATION AND MAINTENANCE.
11. PWD WILL SUPPLY THE WATER METER. ALL OTHER FITTINGS, INCLUDING A METER RESETTER FOR 1" OR SMALLER METERS, SHALL BE SUPPLIED AND INSTALLED BY CUSTOMER.
12. FOR 1.5" AND 2" METERS, CUSTOMER WILL INSTALL A FLANGED METER SPOOL PIECE, SUPPLIED BY PWD AT NO ADDITIONAL CHARGE, PRIOR TO METER SET. THE METER SPOOL WILL BE MADE AVAILABLE FOR CUSTOMER PICKUP AT PWD CUSTOMER SERVICE, 225 DOUGLASS STREET, PORTLAND DURING NORMAL BUSINESS HOURS.
13. CUSTOMER WILL INSTALL TWO BALL VALVES AT LEAST 24" APART FOR METER INSTALLATION, ALLOWING FOR THE WATER METER TO BE CENTERED UNDER THE METER PIT OPENING. THE BALL VALVES SHALL BE SOLDERED IN PLACE.

CONDUIT TYPE SCHEDULE				
SERVICE	CONDUIT SIZE	GRASS & PAVED AREAS	UTILITY	REMARKS
A	2–5"	SCHEDULE 40 PVC ELECTRICAL GRADE	PRIMARY POWER	SEE NOTE
B	2–4"	SCHEDULE 40	TELEPHONE	SEE NOTE
C	2–4"	SCHEDULE 40	CABLE	SEE NOTE
D	2–4"	SCHEDULE 40 PVC ELECTRICAL GRADE	SPARES	SEE NOTE

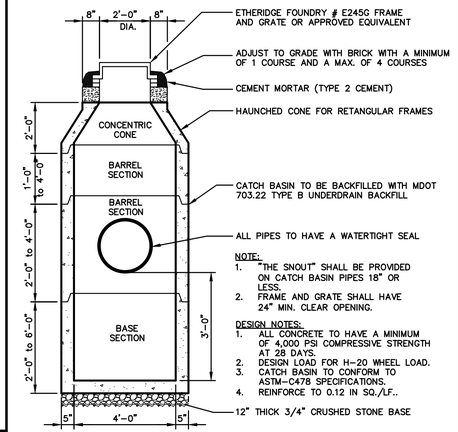
NOTE:
ONE CONDUIT CAPPED FOR SPARE, PROVIDE GALVANIZED STEEL
LONG SWEEP AT RISER POLE AND EXTEND GALVANIZED CONDUIT
TO 10" ABOVE GRADE AT POLE WITH STAND-OFF BRACKETS.

UTILITY TRENCH – PRIMARY AND SECONDARY POWER, TELEPHONE, AND CABLE

NOT TO SCALE

1. THE BEARING SURFACE OF THE THRUST BLOCK SHALL BE THE SURFACE AREA OF THE THRUST BLOCK WHICH IS CAST AGAINST THE TRENCH WALL. THE BEARING SURFACE SHALL NOT EXCEED THE FOLLOWING LOADINGS:

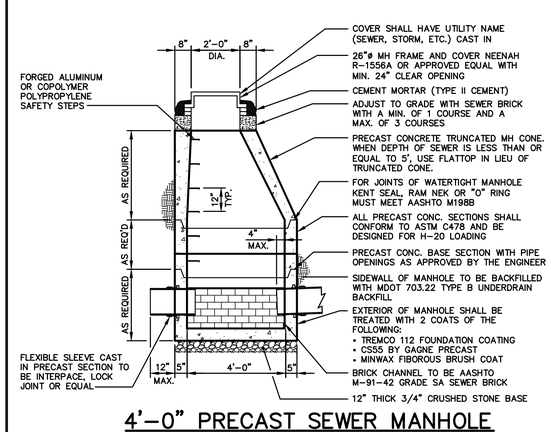
IN-SITU CONDITION	ALLOWABLE
BEDROCK	3,000 psf
SAND OR OUTWASH DEPOSITS	1,500 psf
OTHER SOILS	1,000 psf



THE THRUST SHALL BE COMPUTED ON THE BASIS OF 150 psi x THE CROSS SECTIONAL AREA OF THE PIPE. FOR EXAMPLE, A THRUST BLOCK FOR A 1/4 BEND ON AN 8" WATER MAIN BEARING AGAINST CLAY WOULD REQUIRE A BEARING SURFACE OF 7.5 s.f.

$$\frac{150 \text{ psi} \times 50 \text{ sq. in.}}{1{,}000 \text{ psf}} = 7.5 \text{ s.f.}$$

2. INSTALL POLY BARRIER BETWEEN PIPE AND ALL THRUST BLOCKS.



3. ANY WORK RELATED TO WATER PIPING OR DETAILS SHALL BE IN ACCORDANCE WITH THE MAINE WATER COMPANY SPECIFICATIONS.

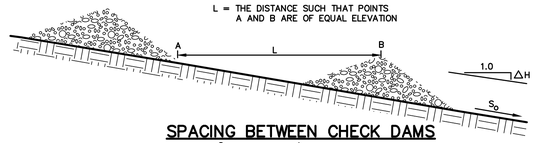
SPECIFIC APPLICATION

THIS METHOD OF INLET PROTECTION IS APPLICABLE WHERE HEAVY FLOWS ARE EXPECTED AND WHERE AN OVERFLOW CAPACITY IS NECESSARY TO PREVENT EXCESSIVE PONDING AROUND THE STRUCTURE.



NOTES:

1. PLACE CONCRETE BLOCKS LENGTHWISE ON THEIR SIDES IN A SINGLE ROW AROUND THE PERIMETER OF THE INLET, WITH THE ENDS OF ADJACENT BLOCKS ABUTTING. THE HEIGHT OF THE BARRIER CAN BE VARIED, DEPENDING ON DESIGN NEEDS, BY STACKING COMBINATIONS OF 4", 8" AND 12" WIDE BLOCKS. THE BARRIER OF BLOCKS SHALL BE AT LEAST 12 INCHES HIGH, AND NO GREATER THAN 24" HIGH.
2. WIRE MESH SHALL BE PLACED OVER THE OUTSIDE VERTICAL FACE (WEBBING) OF THE CONCRETE BLOCKS TO PREVENT STONE FROM BEING WASHED THROUGH THE HOLES IN THE BLOCKS. HARDWARE CLOTH OR COMPARABLE WIRE MESH WITH 1/2" OPENINGS SHALL BE USED.
3. STONE SHALL BE PILED AGAINST THE WIRE TO THE TOP OF THE BLOCK BARRIER, AS SHOWN IN DETAIL. THE STONE FILTER SHALL BE 3/4" CRUSHED STONE.
4. IF THE STONE FILTER BECOMES CLOGGED WITH SEDIMENT, SO THAT IT NO LONGER ADEQUATELY PERFORMS ITS FUNCTION, THE STONE MUST BE PULLED AWAY FROM THE BLOCKS, CLEANED AND REPLACED.

NOTES:

1. THE WOOD WASTE COMPOST/BARK MIX SHALL CONFORM TO THE FOLLOWING STANDARDS:
   - A. MOISTURE CONTENT – 30–60%
   - B. pH – 5.0 – 8.0.
   - C. SCREEN SIZE – 100% LESS THAN 3", MAX. 70% LESS THAN 1".
   - D. NO LESS THAN 40% ORGANIC MATERIAL (DRY WEIGHT) BY LOSS OF IGNITION.
   - E. NO STONES LARGER THAN 2" IN DIAMETER.
   - F. SILTS, CLAYS OR SUGAR SANDS ARE NOT ACCEPTABLE IN THE MIX.
2. THE COMPOST BERM SHALL BE PLACED, UNCOMPACTED, ALONG A RELATIVELY LEVEL CONTOUR.
3. THE WOOD WASTE COMPOST/BARK FILTER BERM MAY BE USED IN LIEU OF SILTATION FENCE, AT THE TOE OF SHALLOW SLOPES, ON FROZEN GROUND, LEDGE OUT CROPS, VERY ROOTED FORESTED AREA OR AT THE EDGE OF GRAVEL PARKING AREAS.
4. BERMS SHALL REMAIN IN PLACE UNTIL UPSTREAM AREA IS COMPLETED OR 70% CATCH OF VEGETATION IS ATTAINED. BERMS SHALL BE REMOVED BY SPREADING SUCH THAT NATIVE EARTH CAN BE SEEN BELOW.
5. WOODWASTE COMPOST BARK FILTER SHALL NOT BE USED IN WETLAND AREAS.

WOOD WASTE COMPOST/BARK FILTER BERM DETAIL
NOT TO SCALE

NOTE: THIS PLAN SET IS ISSUED FOR CONCEPTUAL PURPOSES AND SHALL NOT BE USED FOR CONSTRUCTION.

EROSION CONTROL MEASURES AND SITE STABILIZATION

THE PRIMARY EMPHASIS OF THE EROSION/SEDIMENTATION CONTROL PLAN, WHICH WILL BE IMPLEMENTED FOR THIS PROJECT, IS AS FOLLOWS:

- DEVELOPMENT OF A CAREFUL CONSTRUCTION SEQUENCE.
- RAPID REVEGETATION OF DENUDED AREAS TO MINIMIZE THE PERIOD OF SOIL EXPOSURE.
- RAPID STABILIZATION OF DRAINAGE PATHS TO AVOID RILL AND GULLY EROSION.
- THE USE OF ON-SITE MEASURES TO CAPTURE SEDIMENT (HAY BALES/STONE CHECK DAMS/SILT FENCE, ETC.)

THE FOLLOWING TEMPORARY AND PERMANENT EROSION AND SEDIMENT CONTROL DEVICES WILL BE IMPLEMENTED AS PART OF THE SITE DEVELOPMENT. THESE DEVICES SHALL BE INSTALLED AS INDICATED ON THE PLANS OR AS DESCRIBED WITHIN THIS REPORT. FOR FURTHER REFERENCE, SEE THE LATEST EDITION OF THE MAINE EROSION AND SEDIMENT CONTROL PRACTICES FIELD GUIDE FOR CONTRACTORS.

A. DEWATERING

WATER FROM CONSTRUCTION TRENCH DEWATERING SHALL PASS FIRST THROUGH A FILTER BAG OR SECONDARY CONTAINMENT STRUCTURE (E.G. HAY BALE LINED POOL) PRIOR TO DISCHARGE. THE DISCHARGE SITE SHALL BE SELECTED TO AVOID FLOODING, ICING, AND SEDIMENT DISCHARGES TO A PROTECTED RESOURCE. IN NO CASE SHALL THE FILTER BAG OR CONTAINMENT STRUCTURE BE LOCATED WITHIN 50 FEET OF A PROTECTED NATURAL RESOURCE.

B. INSPECTION AND CONSTRUCTION MONITORING

MAINTENANCE MEASURES SHALL BE APPLIED AS NEEDED DURING THE ENTIRE CONSTRUCTION SEASON. BEFORE AND WITHIN 24 HOURS AFTER EACH WET WEATHER EVENT THAT PRODUCES MORE THAN 0.5 INCH OF RAINFALL IN A CONSECUTIVE 24-HOUR PERIOD, SNOWSTORM, OR PERIOD OF THAWING AND RUNOFF, THE QUALIFIED CONTRACTOR KNOWLEDGEABLE OF DEP STANDARDS SHALL PERFORM A VISUAL INSPECTION OF ALL INSTALLED EROSION CONTROL MEASURES AND PERFORM REPAIRS AS NEEDED TO INSURE THEIR CONTINUOUS FUNCTION. ADDITIONALLY, INSPECTIONS SHALL BE PERFORMED AT LEAST ONCE A WEEK. FOLLOWING THE TEMPORARY AND/OR FINAL SEEDING AND MULCHING, THE CONTRACTOR SHALL IN THE SPRING INSPECT AND REPAIR ANY DAMAGES AND/OR UNESTABLISHED SPOTS. ESTABLISHED VEGETATIVE COVER MEANS A MINIMUM OF 90% OF AREAS VEGETATED WITH VIGOROUS GROWTH.

THE FOLLOWING STANDARDS MUST BE MET DURING CONSTRUCTION.

1. INSPECTION AND CORRECTIVE ACTION. AN ENGINEER OR SOMEONE WITH KNOWLEDGE OF EROSION AND STORMWATER STANDARDS AS DESCRIBED IN THE CONDITIONS OF THE PERMIT SHALL INSPECT DISTURBED AND IMPERVIOUS AREAS, EROSION CONTROL MEASURES (INCLUDING CATCH BASIN INLET PROTECTION MEASURES, SEDIMENT FILTER MEASURES, AND STABILIZATION OF SLOPES), MATERIALS STORAGE AREAS THAT ARE EXPOSED TO PRECIPITATION, AND LOCATIONS WHERE VEHICLES ENTER OR EXIT THE SITE. INSPECT THESE AREAS AT LEAST ONCE A WEEK AS WELL AS BEFORE AND WITHIN 24 HOURS AFTER A STORM EVENT (WET WEATHER EVENT THAT PRODUCES MORE THAN 0.5 INCH IN A CONSECUTIVE 24-HOUR PERIOD), AND PRIOR TO COMPLETING PERMANENT STABILIZATION MEASURES.
2. MAINTENANCE. IF EROSION AND SEDIMENTATION CONTROL (ESC) MEASURES NEED TO BE REPAIRED, THE REPAIR WORK SHOULD BE INITIATED UPON DISCOVERY OF THE PROBLEM BUT NO LATER THAN THE END OF THE NEXT WORKDAY. THE CONTRACTOR IS RESPONSIBLE FOR ALL MAINTENANCE ASSOCIATED WITH THESE INSPECTIONS. IF ADDITIONAL ESC MEASURES OR SIGNIFICANT REPAIR OF ESC MEASURES ARE NECESSARY, IMPLEMENTATION MUST BE COMPLETED WITHIN 7 CALENDAR DAYS AND PRIOR TO ANY STORM EVENT (WET WEATHER EVENT THAT PRODUCES MORE THAN 0.5 INCH IN A CONSECUTIVE 24-HOUR PERIOD). ALL MEASURES MUST BE MAINTAINED IN EFFECTIVE OPERATING CONDITION UNTIL AREAS ARE PERMANENTLY STABILIZED.
3. DOCUMENTATION. KEEP A LOG (REPORT) SUMMARIZING THE INSPECTIONS AND ANY CORRECTIVE ACTION TAKEN. THE LOG MUST INCLUDE THE NAME(S) AND QUALIFICATIONS OF THE PERSON MAKING THE INSPECTIONS, THE DATE(S) OF THE INSPECTIONS, AND MAJOR OBSERVATIONS ABOUT THE OPERATION AND MAINTENANCE OF EROSION AND SEDIMENTATION CONTROLS, DISTURBED AND IMPERVIOUS AREAS, MATERIALS STORAGE AREAS, AND VEHICLES ACCESS POINTS TO THE PARCEL. MAJOR OBSERVATIONS MUST INCLUDE ESC MEASURES THAT NEED MAINTENANCE, THAT FAILED TO OPERATE AS DESIGNED OR PROVED INADEQUATE FOR A PARTICULAR LOCATION, AND LOCATION(S) WHERE ADDITIONAL ESC MEASURES ARE NEEDED. FOR EACH ESC MEASURE REQUIRING MAINTENANCE, NEEDING REPLACEMENT, AND LOCATION NEEDING ADDITIONAL ESC MEASURES, NOTE IN THE LOG THE CORRECTIVE ACTION TAKEN AND WHEN IT WAS TAKEN.

THE LOG MUST BE MADE ACCESSIBLE TO DEPARTMENT STAFF AND A COPY MUST BE PROVIDED UPON REQUEST. THE PERMITTEE SHALL RETAIN A COPY OF THE LOG FOR A PERIOD OF AT LEAST THREE YEARS FROM THE COMPLETION OF PERMANENT STABILIZATION.

C. TEMPORARY EROSION CONTROL MEASURES

THE FOLLOWING MEASURES ARE PLANNED AS TEMPORARY EROSION/SEDIMENTATION CONTROL MEASURES DURING CONSTRUCTION:

1. A CRUSHED STONE-STABILIZED CONSTRUCTION ENTRANCE SHALL BE PLACED AT THE APPROVED ACCESS DRIVE AS DEPICTED ON THE PLANS.
2. SILTATION FENCE OR WOOD WASTE COMPOST BERMS SHALL BE INSTALLED DOWNSTREAM OF ANY DISTURBED AREAS TO TRAP RUNOFF-- BORNE SEDIMENTS UNTIL GRASS AREAS ARE REVEGETATED. THE SILT FENCE AND/OR WOOD WASTE COMPOST BERMS SHALL BE INSTALLED PER THE DETAILS PROVIDED IN THIS PACKAGE AND INSPECTED AT LEAST ONCE A WEEK AND BEFORE AND IMMEDIATELY AFTER A STORM EVENT OF 0.5 INCHES OR GREATER, AND AT LEAST DAILY DURING PROLONGED RAINFALL. REPAIRS SHALL BE MADE IF THERE ARE ANY SIGNS OF EROSION OR SEDIMENTATION BELOW THE FENCE OR BERM LINE. IF THERE ARE SIGNS OF UNDERCUTTING AT THE CENTER OR THE EDGES, OR IMPOUNDING OF LARGE VOLUMES OF WATER BEHIND THE FENCE OR BERM, THE BARRIER SHALL BE REPLACED WITH A STONE CHECK DAM. WOOD WASTE COMPOST BERMS ARE NOT TO BE USED ADJACENT TO WETLAND AREAS THAT ARE NOT TO BE DISTURBED.
3. STRAW OR HAY MULCH INCLUDING HYDROSEEDING IS INTENDED TO PROVIDE COVER FOR DENUDED OR SEEDED AREAS UNTIL REVEGETATION IS ESTABLISHED. MULCH PLACED BETWEEN APRIL 15TH AND OCTOBER 15TH ON SLOPES OF LESS THEN 15 PERCENT SHALL BE ANCHORED BY APPLYING WATER; MULCH PLACED ON SLOPES OF EQUAL TO OR STEEPER THAN 15 PERCENT SHALL BE ANCHORED WITH A FABRIC NETTING AND STAPLES IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATION. FABRIC NETTING AND STAPLES SHALL BE USED ON DISTURBED AREAS WITHIN 50' OF LAKES, STREAMS, AND WETLANDS REGARDLESS OF THE UPSTREAM SLOPE. MULCH PLACED BETWEEN OCTOBER 15TH AND APRIL 15TH ON SLOPES EQUAL TO OR STEEPER THAN 8 PERCENT SHALL BE COVERED WITH A FABRIC NETTING AND ANCHORED WITH STAPLES IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS. SLOPES STEEPER THAN 3:1 AND EQUAL TO OR FLATTER THAN 2:1, WHICH ARE TO BE REVEGETATED, SHALL RECEIVE CURLEX BLANKETS BY AMERICAN EXCELSIOR OR EQUAL. SLOPES STEEPER THAN 2:1 SHALL RECEIVE RIPRAP AS NOTED ON THE PLANS. THE MULCH APPLICATION RATE FOR BOTH TEMPORARY AND PERMANENT SEEDING IS 75 LBS PER 1000 SF AS IDENTIFIED IN ATTACHMENT A OF THIS SECTION. MULCH SHALL NOT BE PLACED OVER SNOW.
4. TEMPORARY STOCKPILES OF STUMPS, GRUBBINGS, OR COMMON EXCAVATION WILL BE PROTECTED AS FOLLOWS:
   - A.) TEMPORARY STOCKPILES SHALL NOT BE LOCATED WITHIN 50 FEET OF ANY WETLANDS WHICH WILL NOT BE DISTURBED AND SHALL BE LOCATED AWAY FROM DRAINAGE SWALES.
   - B.) STOCKPILES SHALL BE STABILIZED WITHIN 7 DAYS BY EITHER TEMPORARILY SEEDING THE STOCKPILE BY A HYDROSEED METHOD CONTAINING AN EMULSIFIED MULCH TACKIFIER OR BY COVERING THE STOCKPILE WITH MULCH, SUCH AS HAY, STRAW, OR EROSION CONTROL MIX.
   - C.) STOCKPILES SHALL BE SURROUNDED BY SEDIMENTATION BARRIER AT THE TIME OF FORMATION.
5. ALL DENUDED AREAS THAT ARE WITHIN 50 FEET OF AN UNDISTURBED WETLAND, WHICH HAVE BEEN ROUGH GRADED AND ARE NOT LOCATED WITHIN A BUILDING PAD, PARKING AREA, OR ACCESS DRIVE SUBBASE AREA, SHALL RECEIVE MULCH OR EROSION CONTROL MESH FABRIC WITHIN 48 HOURS OF INITIAL DISTURBANCE OF SOIL. ALL AREAS WITHIN 100 FEET OF AN UNDISTURBED WETLAND SHALL BE MULCHED PRIOR TO ANY PREDICTED RAIN EVENT REGARDLESS OF THE 48 HOUR WINDOW. IN OTHER AREAS, THE TIME PERIOD MAY BE EXTENDED TO 7 DAYS.
6. FOR WORK, WHICH IS CONDUCTED BETWEEN OCTOBER 15TH AND APRIL 15TH OF ANY CALENDAR YEAR, ALL DENUDED AREAS, SHALL BE COVERED WITH HAY MULCH OR EROSION CONTROL MIX, APPLIED AT TWICE THE NORMAL APPLICATION RATE AND ANCHORED WITH A FABRIC NETTING. THE TIME PERIOD FOR APPLYING MULCH SHALL BE LIMITED TO 2 DAYS FOR ALL AREAS.
7. BELFORT STREET SHALL BE SWEPT TO CONTROL MUD AND DUST AS NECESSARY.
8. DURING GRUBBING OPERATIONS STONE CHECK DAMS SHALL BE INSTALLED AT ANY EVIDENT CONCENTRATED FLOW DISCHARGE POINTS AND AS DIRECTED ON THE EROSION CONTROL PLANS.
9. SILT FENCING WITH A MINIMUM STAKE SPACING OF 6 FEET SHALL BE USED, UNLESS THE FENCE IS SUPPORTED BY WIRE FENCE REINFORCEMENT OF MINIMUM 14 GAUGE AND WITH A MAXIMUM MESH SPACING OF 6 INCHES, IN WHICH CASE STAKES MAY BE SPACED A MAXIMUM OF 10 FEET APART. THE BOTTOM OF THE FENCE SHALL BE ANCHORED.
10. WOOD WASTE COMPOST/BARK BERMS MAY BE USED IN LIEU OF SILTATION FENCING. BERMS SHALL BE REMOVED AND SPREAD IN A LAYER NOT TO EXCEED 3" THICK ONCE UPSTREAM AREAS ARE COMPLETED AND A 90% CATCH OF VEGETATION IS ATTAINED.
11. WATER AND/OR CALCIUM CHLORIDE SHALL BE FURNISHED AND APPLIED IN ACCORDANCE WITH MDOT SPECIFICATIONS -- SECTION 637 -- DUST CONTROL.
12. LOAM AND SEED IS INTENDED TO SERVE, AS THE PRIMARY PERMANENT REVEGETATIVE MEASURE FOR ALL DENUDED AREAS NOT PROVIDED WITH OTHER EROSION CONTROL MEASURES, SUCH AS RIPRAP. APPLICATION RATES ARE PROVIDED IN ATTACHMENT A OF THIS SECTION. SEEDING SHALL NOT OCCUR OVER SNOW.

D. PERMANENT EROSION CONTROL MEASURES

THE FOLLOWING PERMANENT EROSION CONTROL MEASURES HAVE BEEN DESIGNED AS PART OF THE EROSION/SEDIMENTATION CONTROL PLAN:

1. ALL AREAS DISTURBED DURING CONSTRUCTION, BUT NOT SUBJECT TO OTHER RESTORATION (PAVING, RIPRAP, GRAVEL SUBBASE, ETC.) WILL BE LOAMED, LIMED, FERTILIZED, MULCHED, AND SEEDED. FABRIC NETTING, ANCHORED WITH STAPLES, SHALL BE PLACED OVER THE MULCH IN AREAS AS NOTED IN TEMPORARY EROSION CONTROL MEASURES PARAGRAPH 4 OF THIS REPORT. ALL AREAS WITHIN 50 FEET OF AN UNDISTURBED WETLAND SHALL BE MULCHED PRIOR TO ANY PREDICTED RAIN EVENT REGARDLESS OF THE 48-HOUR WINDOW. NATIVE TOPSOIL SHALL BE STOCKPILED AND REUSED FOR FINAL RESTORATION WHEN IT IS OF SUFFICIENT QUALITY.
2. ALL STORM DRAIN PIPE OUTLETS SHALL HAVE RIPRAP APRONS AT THEIR OUTLET TO PROTECT THE OUTLET AND RECEIVING CHANNEL FROM SCOUR AND DETERIORATION. INSTALLATION DETAILS ARE PROVIDED IN THE PLAN SET. THE APRONS SHALL BE INSTALLED AND STABILIZED TO THE EXTENT PRACTICABLE PRIOR TO DIRECTING RUNOFF TO THE TRIBUTARY PIPE OR CULVERT.

IMPLEMENTATION SCHEDULE

THE FOLLOWING CONSTRUCTION SEQUENCE SHALL BE REQUIRED TO ENSURE THE EFFECTIVENESS OF THE EROSION AND SEDIMENTATION CONTROL MEASURES ARE OPTIMIZED:

IT IS ANTICIPATED THAT CONSTRUCTION WILL BEGIN IN SPRING OF 2025, WITH FIRST OCCUPANCY ANTICIPATED BY THE END OF 2025.

NOTE: FOR ALL GRADING ACTIVITIES, THE CONTRACTOR SHALL EXERCISE EXTREME CAUTION NOT TO OVEREXPOSE THE SITE, THIS SHALL BE ACCOMPLISHED BY LIMITING THE DISTURBED AREA. AREA SHALL BE LIMITED TO NO MORE THAN THE CONTRACTOR CAN MULCH IN ONE DAY.

1. INSTALL STABILIZED CONSTRUCTION ENTRANCES AT THE APPROVED LOCATIONS.
2. INSTALL PERIMETER SILT FENCE AND/OR WOOD WASTE BERMS.
3. INSTALL DIVERSION DIKES, OR CHECK DAMS (CLEAR ONLY THOSE AREAS NECESSARY TO INSTALL BMP'S)
4. CLEAR AND GRUB SITE. INSTALL STONE CHECK DAMS AT ANY EVIDENT CONCENTRATED FLOW DISCHARGE POINTS.
5. COMMENCE INSTALLATION OF DRAINAGE APPURTENANCES.
6. COMMENCE EARTHWORK FOR STORMWATER FACILITIES.
7. COMMENCE EARTHWORK AND GRADING TO SUBGRADE.
8. COMMENCE INSTALLATION OF RETAINING WALLS (IF NECESSARY).
9. COMMENCE INSTALLATION OF WATER AND SEWER LINES.
10. CONTINUE EARTHWORK AND GRADING TO SUBGRADE AS NECESSARY FOR CONSTRUCTION.
11. COMPLETE INSTALLATION OF UNDERGROUND UTILITIES TO WITHIN 5' OF FUTURE BUILDINGS.
12. INSTALL LIGHT POLE FOUNDATIONS AND LIGHT POLES.
13. COMPLETE REMAINING EARTHWORK OPERATIONS.
14. COMPLETE INSTALLATION OF DRAINAGE APPURTENANCES.
15. INSTALL SUB-BASE AND BASE GRAVEL WITHIN PARKING AREAS, WALKWAYS, AND ALL DRIVEWAYS.
16. INSTALL CURBING IN PARKING AREAS AS NEEDED.
17. INSTALL BASE COURSE PAVING FOR DRIVES AND PARKING AREA AS WELL AS CONCRETE SURFACES.
18. LOAM, LIME, FERTILIZE, SEED AND MULCH DISTURBED AREAS AND COMPLETE ALL LANDSCAPING.
19. INSTALL SURFACE COURSE PAVING FOR DRIVES AND PARKING AREAS. STRIPE PER PLAN.
20. ONCE THE SITE IS STABILIZED AND A 90% CATCH OF VEGETATION HAS BEEN OBTAINED, REMOVE ALL TEMPORARY EROSION CONTROL MEASURES.
21. TOUCH UP LOAM AND SEED.

PRIOR TO CONSTRUCTION OF THE PROJECT, THE CONTRACTOR SHALL SUBMIT TO THE OWNER A SCHEDULE FOR THE COMPLETION OF THE WORK, WHICH WILL SATISFY THE FOLLOWING CRITERIA:

1. THE ABOVE CONSTRUCTION SEQUENCE SHOULD GENERALLY BE COMPLETED IN THE SPECIFIED ORDER; HOWEVER, SEVERAL SEPARATE ITEMS MAY BE CONSTRUCTED SIMULTANEOUSLY. WORK MUST ALSO BE SCHEDULED OR PHASED TO REDUCE THE EXTENT OF THE EXPOSED AREAS AS SPECIFIED BELOW. THE INTENT OF THIS SEQUENCE IS TO PROVIDE FOR EROSION CONTROL AND TO HAVE STRUCTURAL MEASURES SUCH AS SILT FENCE AND CONSTRUCTION ENTRANCES IN PLACE BEFORE LARGE AREAS OF LAND ARE DENUDED.
2. THE WORK SHALL BE CONDUCTED IN SECTIONS WHICH SHALL:
   - LIMIT THE AMOUNT OF EXPOSED AREA TO THOSE AREAS IN WHICH WORK IS EXPECTED TO BE UNDERTAKEN DURING THE PROCEEDING 30 DAYS.
   - REVEGETATE DISTURBED AREAS AS RAPIDLY AS POSSIBLE. ALL AREAS SHALL BE PERMANENTLY STABILIZED WITHIN 7 DAYS OF FINAL GRADING OR BEFORE A STORM EVENT; OR TEMPORARILY STABILIZED WITHIN 48 HOURS OF INITIAL DISTURBANCE OF SOIL FOR AREAS WITHIN 50 FEET OF AN UNDISTURBED WETLAND AND 7 DAYS FOR ALL OTHER AREAS. AREAS WITHIN 50 FEET OF AN UNDISTURBED WETLAND SHALL BE MULCHED PRIOR TO ANY PREDICTED RAIN EVENT REGARDLESS OF THE 48 HOUR WINDOW.
   - INCORPORATE PLANNED INLETS AND DRAINAGE SYSTEM AS EARLY AS POSSIBLE INTO THE CONSTRUCTION PHASE. THE DITCHES SHALL BE IMMEDIATELY LINED OR REVEGETATED AS SOON AS THEIR INSTALLATION IS COMPLETE.

EROSION, SEDIMENTATION AND STABILIZATION CONTROL PLAN

THE EROSION CONTROL INFORMATION IS INCLUDED IN THE PLAN SET.

DETAILS AND SPECIFICATIONS

THE EROSION CONTROL DETAILS AND SPECIFICATIONS ARE INCLUDED IN THE PLAN SET.

WINTER STABILIZATION PLAN

THE WINTER CONSTRUCTION PERIOD IS FROM NOVEMBER 1 THROUGH APRIL 15. IF THE CONSTRUCTION SITE IS NOT STABILIZED WITH PAVEMENT, A ROAD GRAVEL BASE, OR RIPRAP BY NOVEMBER 15 THEN THE SITE NEEDS TO BE PROTECTED WITH OVER-WINTER STABILIZATION. AN AREA CONSIDERED OPEN IS ANY AREA NOT STABILIZED WITH PAVEMENT, VEGETATION, MULCHING, EROSION CONTROL MATS, RIPRAP OR GRAVEL BASE ON A ROAD.

WINTER EXCAVATION AND EARTHWORK SHALL BE COMPLETED SUCH THAT ANY AREA LEFT EXPOSED CAN BE CONTROLLED BY THE CONTRACTOR. LIMIT THE EXPOSED AREA TO ONE ACRE OR AN AREA THAT CAN BE MULCHED IN ONE DAY PRIOR TO ANY SNOW EVENT.

ALL AREAS SHALL BE CONSIDERED TO BE DENUDED UNTIL THE SUBBASE GRAVEL IS INSTALLED IN PARKING AREAS OR THE AREAS OF FUTURE LOAM AND SEED HAVE BEEN LOAMED, SEEDED AND MULCHED. HAY AND STRAW MULCH RATE SHALL BE A MINIMUM OF 150 LBS./1,000 SQUARE-FEET (3 TONS/ACRE) AND SHALL BE PROPERLY ANCHORED.

FOR WORK, WHICH IS CONDUCTED BETWEEN OCTOBER 15TH AND APRIL 15TH OF ANY CALENDAR YEAR, ALL DENUDED AREAS, SHALL BE COVERED WITH HAY MULCH OR EROSION CONTROL MIX, APPLIED AT TWICE THE NORMAL APPLICATION RATE AND ANCHORED WITH A FABRIC NETTING. THE TIME PERIOD FOR APPLYING MULCH SHALL BE LIMITED TO 2 DAYS FOR ALL AREAS.

THE CONTRACTOR SHALL INSTALL ANY ADDED MEASURES WHICH MAY BE NECESSARY TO CONTROL EROSION/SEDIMENTATION FROM THE SITE DEPENDENT UPON THE ACTUAL SITE AND WEATHER CONDITIONS. CONTINUATION OF EARTHWORK OPERATIONS ON ADDITIONAL AREAS SHALL NOT BEGIN UNTIL THE EXPOSED SOIL SURFACE ON THE AREA BEING WORKED HAS BEEN STABILIZED, IN ORDER TO MINIMIZE AREAS WITHOUT EROSION CONTROL PROTECTION.

1. SOIL STOCKPILES

   STOCKPILES OF SOIL OR SUBSOIL SHALL BE MULCHED FOR OVER WINTER PROTECTION WITH HAY OR STRAW AT TWICE THE NORMAL RATE OR AT 150 LBS./1,000 SQUARE-FEET (3 TONS PER ACRE) OR WITH A FOUR-INCH LAYER OF WOOD WASTE EROSION CONTROL MIX. THIS SHALL BE DONE WITHIN 24 HOURS OF STOCKING AND RE-ESTABLISHED PRIOR TO ANY RAINFALL OR SNOWFALL. ANY SOIL STOCKPILE SHALL NOT BE PLACED (EVEN COVERED WITH HAY OR STRAW) WITHIN 50 FEET FROM ANY NATURAL RESOURCES.

2. NATURAL RESOURCES PROTECTION

   ANY AREAS WITHIN 75 FEET FROM ANY NATURAL RESOURCES, IF NOT STABILIZED WITH A MINIMUM OF 90% MATURE VEGETATION CATCH, SHALL BE MULCHED BY DECEMBER 1 AND ANCHORED WITH PLASTIC NETTING OR PROTECTED WITH EROSION CONTROL MATS. DURING WINTER CONSTRUCTION, A DOUBLE LINE OF SEDIMENT BARRIERS (I.E. SILT FENCE BACKED WITH HAY BALES OR EROSION CONTROL MIX) SHALL BE PLACED BETWEEN ANY NATURAL RESOURCE AND THE DISTURBED AREA. PROJECTS CROSSING THE NATURAL RESOURCE SHALL BE PROTECTED A MINIMUM DISTANCE OF 75 FEET ON EITHER SIDE FROM THE RESOURCE. EXISTING PROJECTS NOT STABILIZED BY DECEMBER 1 SHALL BE PROTECTED WITH THE SECOND LINE OF SEDIMENT BARRIER TO ENSURE FUNCTIONALITY DURING THE SPRING THAW AND RAINS.

3. SEDIMENT BARRIERS

   DURING FROZEN CONDITIONS, SEDIMENT BARRIERS SHALL CONSIST OF WOOD WASTE FILTER BERMS AS FROZEN SOIL PREVENTS THE PROPER INSTALLATION OF HAY BALES AND SEDIMENT SILT FENCES.

4. MULCHING

   AN AREA SHALL BE CONSIDERED DENUDED UNTIL AREAS OF FUTURE LOAM AND SEED HAVE BEEN LOAMED, SEEDED AND MULCHED. HAY AND STRAW MULCH SHALL BE APPLIED AT A RATE OF 150 LB. PER 1,000 SQUARE FEET OR 3 TONS/ACRE (TWICE THE NORMAL ACCEPTED RATE OF 75-LBS./1,000 SQUARE-FEET OR 1.5 TONS/ACRE) AND SHALL BE PROPERLY ANCHORED. MULCH SHALL NOT BE SPREAD SO THICK THAT IT SMOTHERS GROWTH DOWN TO A ONE-INCH DEPTH OR LESS PRIOR TO APPLICATION. AFTER EACH DAY OF FINAL GRADING, THE AREA SHALL BE PROPERLY STABILIZED WITH ANCHORED HAY OR STRAW OR EROSION CONTROL MATTING. AN AREA SHALL BE CONSIDERED TO HAVE BEEN STABILIZED WHEN EXPOSED SURFACES HAVE BEEN EITHER MULCHED WITH STRAW OR HAY AT A RATE OF 150 LB. PER 1,000 SQUARE FEET (3 TONS/ACRE) AND ADEQUATELY ANCHORED THAT GROUND SURFACE IS NOT VISIBLE THROUGH THE MULCH.

   BETWEEN THE DATES OF NOVEMBER 1 AND APRIL 15, ALL MULCH SHALL BE ANCHORED BY PEG LINE, MULCH NETTING, ASPHALT EMULSION CHEMICAL, OR WOOD CELLULOSE FIBER. WHEN GROUND SURFACE IS NOT VISIBLE THROUGH THE MULCH THEN COVER IS SUFFICIENT. AFTER NOVEMBER 1ST, MULCH AND ANCHORING OF ALL BARE SOIL SHALL OCCUR AT THE END OF EACH FINAL GRADING WORKDAY.

5. MULCHING OF SLOPES AND DITCHES

   SLOPES SHALL NOT BE LEFT EXPOSED FOR ANY EXTENDED TIME OF WORK SUSPENSION UNLESS FULLY MULCHED AND ANCHORED WITH PEG AND NETTING OR WITH EROSION CONTROL BLANKETS. MULCHING SHALL BE APPLIED AT A RATE OF 230 LBS./1,000 SQUARE FEET ON ALL SLOPES GREATER THAN 8%

   MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL DRAINAGE WAYS WITH A SLOPE GREATER THAN 3% FOR SLOPES EXPOSED TO DIRECT WINDS AND FOR ALL OTHER SLOPES GREATER THAN 8%. EROSION CONTROL BLANKETS SHALL BE USED IN LIEU OF MULCH IN ALL DRAINAGE WAYS WITH SLOPES GREATER THAN 8%. EROSION CONTROL MIX CAN BE USED TO SUBSTITUTE EROSION CONTROL BLANKETS ON ALL SLOPES EXCEPT DITCHES.

6. SEEDING

   BETWEEN THE DATES OF OCTOBER 15 AND APRIL 1ST, LOAM OR SEED WILL NOT BE REQUIRED. DURING PERIODS OF ABOVE FREEZING TEMPERATURES FINISHED AREAS SHALL BE FINE GRADED AND EITHER PROTECTED WITH MULCH OR TEMPORARILY SEEDED AND MULCHED UNTIL SUCH TIME AS THE FINAL TREATMENT CAN BE APPLIED. IF THE DATE IS AFTER NOVEMBER 1ST AND IF THE EXPOSED AREA HAS NOT BEEN LOAMED, FINAL GRADED WITH A UNIFORM SURFACE, THEN THE AREA MAY BE DORMANT SEEDED AT A RATE OF 3 TIMES HIGHER THAN SPECIFIED FOR PERMANENT SEED AND THEN MULCHED. DORMANT SEEDING MAY BE SELECTED TO BE PLACED PRIOR TO THE PLACEMENT OF MULCH AND FABRIC NETTING ANCHORED WITH STAPLES. IF DORMANT SEEDING IS USED FOR THE SITE, ALL DISTURBED AREAS SHALL RECEIVE 4" OF LOAM AND SEED AT AN APPLICATION RATE OF 100 LBS. PER 1,000 SQUARE-FEET. ALL AREAS SEEDED DURING THE WINTER SHALL BE INSPECTED IN THE SPRING FOR ADEQUATE CATCH. ALL AREAS INSUFFICIENTLY VEGETATED (LESS THAN 90% CATCH) SHALL BE REVEGETATED BY REPLANTING, LOAM, SEED AND MULCH. IF DORMANT SEEDING IS NOT USED FOR THE SITE, ALL DISTURBED AREAS SHALL BE REVEGETATED IN THE SPRING.

7. WINTER CONSTRUCTION INSPECTION

   AFTER EACH RAINFALL, SNOWSTORM OR PERIOD OF THAWING AND RUNOFF, THE QUALIFIED CONTRACTOR KNOWLEDGEABLE OF DEP STANDARDS SHALL PERFORM A VISUAL INSPECTION OF ALL INSTALLED EROSION CONTROL MEASURES AND PERFORM REPAIRS AS NEEDED TO INSURE THEIR CONTINUOUS FUNCTION. INSPECTIONS SHALL BE PERFORMED A MINIMUM OF ONCE PER WEEK AND SHALL BE CONDUCTED IN ACCORDANCE WITH THE EROSION CONTROL MEASURES AND SITE STABILIZATION WITHIN THE EROSION CONTROL REPORT.

STANDARDS FOR TIMELY STABILIZATION OF CONSTRUCTION SITES DURING WINTER

1. STANDARD FOR THE TIMELY STABILIZATION OF DITCHES AND CHANNELS -- THE APPLICANT SHALL CONSTRUCT AND STABILIZE ALL STONE-LINED DITCHES AND CHANNELS ON THE SITE BY NOVEMBER 15. THE APPLICANT SHALL CONSTRUCT AND STABILIZE ALL GRASS-LINED DITCHES AND CHANNELS ON THE SITE BY SEPTEMBER 1. IF THE APPLICANT FAILS TO STABILIZE A DITCH OR CHANNEL TO BE GRASS-LINED BY SEPTEMBER 1, THEN THE APPLICANT WILL TAKE ONE OF THE FOLLOWING ACTIONS TO STABILIZE THE DITCH FOR LATE FALL AND WINTER.

   INSTALL A SOD LINING IN THE DITCH -- THE APPLICANT SHALL LINE THE DITCH WITH PROPERLY INSTALLED SOD BY OCTOBER 1. PROPER INSTALLATION INCLUDES THE APPLICANT PINNING THE SOD ONTO THE SOIL WITH WIRE PINS, ROLLING THE SOD TO GUARANTEE CONTACT BETWEEN THE SOD AND UNDERLYING SOIL, WATERING THE SOD TO PROMOTE ROOT GROWTH INTO THE DISTURBED SOIL, AND ANCHORING THE SOD WITH JUTE OR PLASTIC MESH TO PREVENT THE SOD STRIPS FROM SLOUGHING DURING FLOW CONDITIONS.

   INSTALL A STONE LINING IN THE DITCH -- THE APPLICANT SHALL LINE THE DITCH WITH STONE RIPRAP BY NOVEMBER 15. THE APPLICANT SHALL HIRE A REGISTERED PROFESSIONAL ENGINEER TO DETERMINE THE STONE SIZE AND LINING THICKNESS NEEDED TO WITHSTAND THE ANTICIPATED FLOW VELOCITIES AND FLOW DEPTHS WITHIN THE DITCH. IF NECESSARY, THE APPLICANT SHALL REGRADE THE DITCH PRIOR TO PLACING THE STONE LINING SO TO PREVENT THE STONE LINING FROM REDUCING THE DITCH'S CROSS-SECTIONAL AREA.

2. STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SLOPES -- THE APPLICANT SHALL CONSTRUCT AND STABILIZE STONE-COVERED SLOPES BY NOVEMBER 15. THE APPLICANT SHALL SEED AND MULCH ALL SLOPES TO BE VEGETATED BY SEPTEMBER 1. THE DEPARTMENT SHALL CONSIDER ANY AREA HAVING A GRADE GREATER THAN 15% TO BE A SLOPE. IF THE APPLICANT FAILS TO STABILIZE ANY SLOPE TO BE VEGETATED BY SEPTEMBER 1, THEN THE APPLICANT SHALL TAKE ONE OF THE FOLLOWING ACTIONS TO STABILIZE THE SLOPE FOR LATE FALL AND WINTER.

   STABILIZE THE SOIL WITH TEMPORARY VEGETATION AND EROSION CONTROL MATS -- BY SEPTEMBER 1 THE APPLICANT SHALL SEED THE DISTURBED SLOPE WITH WINTER RYE AT A SEEDING RATE OF 3 POUNDS PER 1,000 SQUARE FEET AND APPLY EROSION CONTROL MATS OVER THE MULCHED SLOPE. THE APPLICANT SHALL MONITOR THE GROWTH OF THE RYE OVER THE NEXT 30 DAYS. IF THE RYE FAILS TO GROW AT LEAST THREE INCHES OR COVER AT LEAST 75% OF THE DISTURBED SLOPE BY NOVEMBER 1, THEN THE APPLICANT SHALL COVER THE SLOPE WITH A LAYER OF WOOD WASTE COMPOST AS DESCRIBED IN ITEM III OF THIS STANDARD OR WITH STONE RIPRAP AS DESCRIBED IN ITEM IV OF THIS STANDARD.

   STABILIZE THE SLOPE WITH SOD -- THE APPLICANT SHALL STABILIZE THE DISTURBED SLOPE WITH PROPERLY INSTALLED SOD BY SEPTEMBER 1. PROPER INSTALLATION INCLUDES THE APPLICANT PINNING THE SOD ONTO THE SLOPE WITH WIRE PINS, ROLLING THE SOD TO GUARANTEE CONTACT BETWEEN THE SOD AND UNDERLYING SOIL, AND WATERING THE SOD TO PROMOTE ROOT GROWTH INTO THE DISTURBED SOIL. THE APPLICANT SHALL NOT USE LATE-SEASON SOD INSTALLATION TO STABILIZE SLOPES HAVING A GRADE GREATER THAN 33% (3H:1V).

   STABILIZE THE SLOPE WITH WOOD WASTE COMPOST -- THE APPLICANT SHALL PLACE A SIX-INCH LAYER OF WOOD WASTE COMPOST ON THE SLOPE BY NOVEMBER 15. PRIOR TO PLACING THE WOOD WASTE COMPOST, THE APPLICANT SHALL REMOVE ANY SNOW ACCUMULATION ON THE DISTURBED SLOPE. THE APPLICANT SHALL NOT USE WOOD WASTE COMPOST TO STABILIZE SLOPES HAVING GRADES GREATER THAN 50% (2H:1V) OR HAVING GROUNDWATER SEEPS ON THE SLOPE FACE.

   STABILIZE THE SLOPE WITH STONE RIPRAP -- THE APPLICANT SHALL PLACE A LAYER OF STONE RIPRAP ON THE SLOPE BY NOVEMBER 15. THE APPLICANT SHALL HIRE A REGISTERED PROFESSIONAL ENGINEER TO DETERMINE THE STONE SIZE NEEDED FOR STABILITY AND TO DESIGN A FILTER LAYER UNDERNEATH THE RIPRAP.

3. STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED S
