PLANNING BOARD

Tuesday, July 8, 2025 at 4:30 PM
Room 24 (Ground Level of City Hall) and Zoom

MEMBERS
Brandon Mazer, Chair
David Silk, Vice Chair
Michael Fox
Nicholas Messina
Kelsey Robertson
Austin Smith
Joseph Zamboni

The Planning Board will conduct this meeting remotely via Zoom pursuant to the Remote Meeting Policy adopted by the Planning Board. Allow your computer to install the free Zoom app to get the best meeting experience. If you are not able to attend live either in person or via Zoom, a recording will be available in the Agenda Center following the meeting. For more information on how to use zoom, please go here: https://content.civicplus.com/api/assets/18148b5d-f26e-472f-8d2c-245db97e5c27?cache=1800

For public comment via Zoom, you will need to use the "raise your hand" feature. To raise your hand via the telephone, please hit *9. You will be un-muted by the host when it is time for public comment.

AGENDA:

WORKSHOP - 4:30 PM

i. Text Amendment to Inclusionary Zoning for Hotel Projects; City of Portland, Applicant. The Planning Board will hold a hybrid workshop to consider potential amendments to the hotel inclusionary zoning requirements of Article 17 of the Land Use Code.

PUBLIC HEARING - 5:30 PM

1. ROLL CALL AND DECLARATION OF QUORUM

2. COMMUNICATION AND REPORTS

3. REPORT OF ATTENDANCE AT THE MEETING HELD ON JUNE 24, 2025.

Public Hearing
61 Preble Street : Fox, Messina, Robertson, Smith, and Zamboni present. Silk absent. Mazer recused.

4. REPORTS OF DECISIONS AT THE MEETING HELD ON JUNE 24, 2025.

i. Major Site Plan; 61 Preble Street; 60 Elm Street, LLC Applicant. Messina motioned and Robertson seconded a motion to approve the major site plan application. Vote 5-0 (Silk absent and Mazer recused). Messina motioned and Robertson seconded a motion to adopt the approval letter as the Planning Board's decision, and to authorize the Board Chair to sign the approval letter as drafted. Vote 5-0 (Silk absent and Mazer recused).

5. NEW BUSINESS

i. Text Amendment to the Pedestrian Activities District (PAD) Overlay; City of Portland, Applicant. The Planning Board will hold a hybrid public hearing where the Board will make a recommendation to the City Council around a proposed amendment to the PAD Overlay of Article 8 of the Land Use Code.

ii. Master Development Plan Amendment; 385 Congress Street; Reger Dasco Properties and The Fathom Companies, Applicant. The Planning Board will hold a hybrid public hearing to consider an application to amend a previously approved Master Development Plan (MDP) to facilitate changes in removing the southwest portion of the MDP boundary, increase the proposed heights of the structures from 150 to 250 feet, and increase the number of structure parking spaces from 337 to 449. The subject properties are located in the B-3 Downtown Business District, Downtown Entertainment Overlay District, and Pedestrian Activities District Overlay District. A project and plan summary are available for viewing on the city's CSS Portal (https://css.portlandmaine.gov/) by referencing Plan Number PL-003359-2025.

iii. Major Site Plan and Traffic Movement Permit; 203 Fore Street; Chatham Lodging Trust, Applicant. The Planning Board will hold a hybrid public hearing to consider a proposal to develop a new 132-room Home 2 Suites hotel with three ground-level retail spaces, a valet parking area with space for 105 vehicles, and a new pocket park along Middle Street. The subject property totals 48,000 square feet and is zoned India Street Form Based Code (ISFBC). A project and plan summary are available for viewing on the city's CSS Portal (https://css.portlandmaine.gov/) by referencing Plan Number PL-002892-2024.

iv. Major Site Plan; 1584 Forest Avenue; Acre Properties, Applicant. The Planning Board will hold a hybrid public hearing to consider a major site plan application to facilitate the development of a 50-unit multi-family development with 50 off-street parking spaces on property located at 1584 Forest Avenue, to be accessed via Belfort Street. The subject property totals 66,650 square feet and is zoned RN-5 Residential and B-1 Neighborhood Business. A

project and plan summary are available for viewing on the city's CSS Portal (https://css.portlandmaine.gov/) by referencing Plan Number PL-003161-2024.

To:	Chair Brandon Mazer & Members of the Planning Board
From:	Matthew Grooms
Date:	July 3, 2025
Re:	Zoning Text Amendment – Article 17
Meeting Date:	July 8, 2025

I. INTRODUCTION

On November 4, 2024, the City Council passed Order 77-24/25 (6-2, Mayor Dion & Councilor Rodriguez – No, Councilor Fournier Absent) (Attachment A) establishing a 180-day moratorium on new hotel projects in the City of Portland. The Council cited multiple factors in consideration of this moratorium, including:

- Current lack of affordable housing within the City;
- Percentage of new jobs created as a result of new hotel development that are expected to pay below 60% of the area median income (AMI);
- Prevalence of new hotel development since the City's Hotel IZ policy went into effect in 2018;
- Lack of new long-term low-income housing developed as part of new hotel development.
- Contribution of only $3,556,000 in fees into the Jill C. Duson Housing Trust Fund;
- Hotel Inclusionary Zoning Ordinance has not been substantially changed since its initial passage in 2019, and is inadequate to provide sufficient affordable housing for hotel employees.

The moratorium took effect on December 4, 2024, and was scheduled to expire on June 2, 2025. On May 5, 2025, the City Council passed Order 177-24/25 (9-0) (Attachment B), extending the moratorium by 180 days. As detailed in Order 77-24/25, the purpose of this moratorium was to provide time for the Housing and Economic Development Committee to review the City's hotel inclusionary zoning ordinance and identify policy concerns for the Planning Board to consider in developing potential amendments to the ordinance.

On April 15, 2025, Planning & Urban Development Department (PUD) staff met with the City Council's Housing and Economic Development Committee to discuss the history, background, and development trends related to the City's hotel inclusionary zoning ordinance (Attachment D). At this meeting, staff presented three alternatives based on an updated linkage fee study completed by the Greater Portland Council of Governments (GPCOG) in March 2025 (Attachment F). At this meeting, one Councilor raised questions regarding the methodology used to generate the City's current inclusionary zoning hotel linkage fee, and the three alternatives presented by staff, which were derived from an identified affordability gap between the median hotel employee household income and the cost to rent a market-rate two-bedroom apartment. The Councilor encouraged staff to explore an alternative methodology that directly correlated the new fee with the cost to

construct new affordable dwelling units as required to serve the demand generated by the hotel development. (A video recording of and meeting materials for the April 15th HEDC Meeting can be found at the following link: https://portlandme.portal.civicclerk.com/event/7340/files/attachment/25813)

Following the April 15th HEDC meeting, staff reviewed other commercial and hotel linkage fee programs to understand how those fees were developed. Staff subsequently developed a fourth alternative for consideration by the Planning Board and City Council.

The purpose of the July 8th Planning Board workshop is to orient the Board to the moratorium, provide background on the City's current hotel inclusionary zoning ordinance, present the potential hotel IZ alternatives prepared by staff, and seek feedback on next steps.

The Planning Board Workshop for this zoning text amendment was advertised in the June 26th and 27th editions of the Portland Press Herald.

II. BACKGROUND

A. History of Hotel Inclusionary Zoning Policy

In 2019, the City proposed and established a hotel inclusionary zoning (IZ) ordinance. The requirement applies to hotel projects with 10 or more rooms and any hotel expansions of 10 or more rooms within any five-year period. To meet the requirement, hotel projects may provide one unit of low-income housing for rent within the city for every 28 hotel rooms. Portland considers a low-income housing unit to mean one that is rented to households earning 80% of the area median income (AMI) or less. The other alternative is for a hotel project to pay a linkage fee (fee-in-lieu) with a 2019 basis of $3,806 per room, which is deposited into the City's Housing Trust Fund at the time the Certificate of Occupancy is issued. The linkage fee is adjusted annually, with the 2025 hotel linkage fee being $4,831 per guest room.

The impetus for creating a hotel inclusionary zoning ordinance was a steady rise in hotel/inn/motel development between 2012 and 2018. Local and national data indicated that job creation in the hospitality industry would involve a considerable number of workforce households at average wage rates below what was required to afford housing in Portland at the time (Attachment D). As a result of the specifics of the industry's profile, and anticipation of a further increase in hotel/inn/motel development in the coming years, the hotel inclusionary zoning ordinance was adopted on January 23, 2019, Order 134-18/19 (Attachment C) and became effective on February 22, 2019.

B. Hotel Development Following the Adoption of the Hotel IZ Ordinance

Since the adoption of the ordinance in 2019, 14 hotel projects have been approved. Of the 14 projects, three hotel projects approved in that timeframe were not subject to hotel inclusionary zoning requirements (Table 1). One project was too small (<10 rooms) to trigger the requirement and the other two were products of approved master development plans (Thompsons Point and

Portland Foreside), which gave them pending proceeding status under the pre-inclusionary zoning code.

Table 1: Approved Hotel Projects Exempt From Hotel IZ Regulations[1]				
Address	Common Name	Approval Year	Total Rooms	Status
148 Coveside Drive	Diamond Cove	2024	8	Approved
Thompson's Point	Forefront Hotel	2023	148	Under Construction
58 Fore Street	Portland Foreside	2023	128	Approved
Total	3		284	

1. Project data related to approved hotel developments, including room counts, status, and fee contributions, was compiled by Planning & Urban Development Department staff based on site plan application records maintained by the City of Portland. Information reflects the status of projects as of July 3, 2025.

Of the 11 remaining projects (Table 2), four have been constructed and completed, resulting in a combined total of 223 rooms. Each of these projects elected to contribute to the Housing Trust Fund, generating a total of $834,373 in contributions. Two additional projects are currently under construction: The Docent's Collection at 178–184 Middle Street, which will contain 19 rooms and contribute $86,602 into the Housing Trust Fund and 215 Commercial Street, which will contain 15 rooms and contribute $70,380 into the housing trust fund. Both are smaller-scale renovations of former office spaces in the Old Port. The remaining five projects have received approval but have not yet begun construction. If built, the five remaining projects would add 623 new rooms. If all 11 projects are constructed as approved, they would collectively generate approximately $3.8 million in contributions to the Housing Trust Fund and 880 hotel rooms.

Table 2: Approved Hotel Projects Subject to Hotel IZ Regulations[1]					
Address	Common Name	Approval Year	Total Rooms	Fee-in-Lieu	Status
121 Middle Street	Docent's Collection	2019	26	$72,314	Construction Complete
1 Center Street	Canopy by Hilton	2019	135	$513,810	Construction Complete
754 Congress Street	The Longfellow Hotel	2020	48	$182,688	Construction Complete
54 Yok Street	The Weldon Hotel	2024	14	$65,562	Construction Complete
178-184-Middle Street	Docent's Collection	2023	19	$86,602	Under Construction

215 Commercial Street	-	2024	15	$70,380	Under Construction
477 Congress Street	Time & Temperature	2023	181	$849,252	Approved
1060 Westbrook Street	Hyatt Jetport	2024	119	$558,348	Approved
465 Congress Street	Monument Hotel	2024	92	$431,664	Approved
385 Congress Street	Fathom	2023	179	$815,882	Approved
245 Commercial Street	Portland Harbor Hotel Expansion	2024	52	$243,984	Approved
Total	**11**		**880**	**$3,890,486**	

1. Project data related to approved hotel developments, including room counts, status, and fee contributions, was compiled by Planning & Urban Development Department staff based on site plan application records maintained by the City of Portland. Information reflects the status of projects as of July 3, 2025

Regarding location, of the 14 projects approved since implementing the Hotel IZ policy, approximately 57% of the eight projects (699 rooms), are located in the City's B-3 Downtown Business zone. This zone spans roughly from Franklin Street to State Street and includes the Old Port and the Arts District, and abuts the City's iconic working waterfront. The B-3 zone is recognized as the region's hub for arts, culture, commerce, and civic life, where hotel development is anticipated and encouraged. For comparison, between 2019 and 2024, the City also approved 1,695 residential dwelling units within the B-3 zone, reflecting strong and balanced growth in both hotel and residential development. This trend aligns with the goals outlined in Portland's Plan 2030, which reinforces downtown as the primary hub of activity for the region.

The remaining hotel projects are also located where hotel development is generally expected. Two projects are in the B-5 zone—one at Thompson's Point and the other at 54 York Street, just outside the B-3 zone near Commercial Street and the Old Port/Waterfront Central neighborhoods. One project, part of the master development plan for the Portland Foreside mixed-use development, is located in the B-6 zone in the Eastern Waterfront. Another is in the Airport Business (A-B) zone, an area commonly associated with airport-related uses and business travel. Finally, one project was approved as part of a contract zone on Great Diamond Island.

Table 3: Approved Hotel Projects by Zone (2019-2024)[1]		
Zone	Total Hotel Projects	Total Rooms Approved
B-2b	1	48
B-3	8	699
B-5	2	162
B-6	1	128
A-B	1	119
Contract Zone	1	8
Total	**14**	**1,164**

1. Project data related to approved hotel developments, including room counts, status, and fee contributions, was compiled by Planning & Urban Development Department staff based on site plan application records maintained by the City of Portland. Information reflects the status of projects as of July 3, 2025

In terms of size, there is no clear evidence of a significant trend toward hotel projects with fewer than 10 rooms as a means of avoiding Hotel IZ requirements. The average size of hotels operating before the adoption of the IZ policy was 89 rooms, compared to an average of 83 rooms for hotels approved since its implementation. Only one project approved since 2019 has had fewer than 10 rooms. However, a notable emerging trend in hotel development is the rise of smaller-scale hotels with fewer than 30 rooms, offering an alternative to traditional accommodations. These boutique-style properties typically feature apartment-style suites with fully equipped kitchens, separate dining and living areas, and private bedrooms. They often operate with limited on-site staff, minimal amenities, rely on mobile check-ins and lack a centralized reception area. Four such projects—121 Middle Street, 178–184 Middle Street (Docent's Collection), 215 Commercial Street, and 54 York Street (The Weldon Hotel)—fit this model. While these developments were still required to comply with Hotel IZ regulations, they reflect a growing and distinct segment of the hospitality market that tends to operate more in the vein of short-term rentals.

C. Recode Zoning Changes

As part of the City's ReCode initiative, adopted by the City Council on November 4, 2024, new hotels are now prohibited in the B-1, B-2b, and TOD-1 zones. The purpose of these zones is to support neighborhood- and community-oriented retail, business, and service establishments within a more urban development pattern. They are intended to foster mixed-use development and moderate-to-high-density housing in urban neighborhoods that align with the City's investment in high-frequency transit infrastructure, encouraging walking, biking, and public transit use. By prohibiting hotels in these zones, the City prioritizes housing and mixed-use developments and directs hotels to designated areas better suited for such uses.

ReCode also included changes to the definition of "hotel" within the land use code. These changes were designed to more clearly define hotels as multi-room commercial facilities with centralized reception, management, and cleaning services, and to address the emerging trend toward non-traditional forms of hotel development more akin to short-term rentals.

III. OVERVIEW OF ALTERNATIVES

A. Updated Fee Amount Based Upon 2025 Updated Linkage Fee Study

Cities often use linkage fees to offset the impacts of new development. Before establishing a linkage fee, communities typically conduct a study that formally and systematically establishes the nexus, or the 'link,' between new development and the fee's purpose. In the case of the City's hotel IZ policy, a linkage fee study was completed in 2018 to document the nexus between hotel development and demand for affordable housing (Attachment E). The basic principle of the study, which was conducted by the Greater Portland Council of Governments (GPCOG), is that new hotel development creates new jobs, attracts new households to fill those jobs, and therefore generates demand for new affordable housing to accommodate those hotel employee households.

When the hotel policy was created, it was also the intent that the linkage fee would be periodically updated. Following the implementation of the hotel moratorium in late 2024, City staff requested an updated linkage fee analysis from GPCOG, which was provided to the City in March of 2025 (Attachment F). It is important to note that GPCOG's current work did not include an evaluation of the 2018 fee study methodology, but instead, simply replicated the original methodology using current-day income and housing cost assumptions. In almost all cases, the current study used the same data sources as the 2018 study. The one exception was for housing cost data, where the original data source was no longer available. Due to this change in the availability of data, GPCOG supplied three possible updated fee-in-lieu figures, reflecting three estimated affordability gaps based on three alternative rental cost data sources (the City of Portland Rent Board reports, American Community Survey, or HUD Fair Market Rent). These figures range from $9,520 to $10,620 to $13,731 per room, depending on the rent data source.

For purposes of comparison, staff conducted an initial analysis of the potential impact of these three possible fees on an average-sized hotel in the City of Portland with 85 rooms. Under the possible fees, the total inclusionary zoning contribution for a hotel of this size would range from $809,164 to $902,720 to $1,167,120. The total contribution for an 85-room hotel at the 2025 hotel IZ figure of $4,831 per room would be $410,635.

B. Review of Peer Community Linkage Fee Nexus Studies

At the April 15th HEDC meeting, a member of the Committee provided feedback to City staff, encouraging staff to explore an alternative methodology to the methodology utilized in the 2018 and updated 2025 hotel linkage fee studies, prepared by GPCOG. As detailed in the preceding section, the current hotel linkage fee is based upon the calculated affordability gap for the typical household of a hotel employee as compared with the median rental rate for a two-bedroom market-rate apartment. The rationale behind this fee is that the hotel developer should be responsible for covering the cost of this identified gap through the linkage fee. The fee is deposited into the City's Housing Trust Fund, and is utilized to help fund or subsidize new affordable housing development as specified in Sec. 17.2.4 in the City of Portland Land Use Code. The concern raised at the April 15th meeting was that the proposed contribution ratio would not align with the cost of constructing the proportionate number of affordable housing units necessary to meet the demand generated by new hotel development.

Following the April 15th meeting, staff evaluated linkage fees established by a range of other communities, including:

1. Boston, MA (Attachment G)
2. Somerville, MA (Attachment (H)
3. San Diego, CA (Attachment I)
4. Los Angeles, CA (Attachment J)
5. Santa Rosa, CA (Attachment K)
6. Culver City, CA (Attachment L)
7. Basalt, CO (Attachment M)

This evaluation aimed to understand how other communities calculate commercial or hotel linkage fees, particularly to address housing affordability related to new employment generation. As a note, Portland's approach is uncommon, as all other peer communities evaluated include a broader array of uses in their linkage fee programs than just hotels, such as retail, office, institutional uses, and industrial uses. Therefore, the nexus studies cited above are broader in scope than the study prepared by GPCOG, and may not specifically target their suggested linkage fees to hotels, but instead, may generally apply fees to commercial development.

In each of the examples reviewed, the linkage fee was similarly based upon a concept of bridging an identified affordability gap for a percentage of households employed by the target industry. Like Portland's linkage fee study, the nexus studies performed by these peer communities identified the number of new jobs generated by various industries and the corresponding number of new households by income tier, the demand for affordable housing, and the affordability gap. This information was then utilized to generate a rational and defensible linkage fee, typically on a cost per square foot basis.

Below is a summary of the methodology utilized in each nexus study by all peer communities that were evaluated.

1. Boston, MA

The study, which was conducted in 2016, estimated that approximately 31,794 new jobs would be created from 14.9 million square feet of new commercial development, projected to occur in Boston over a ten-year period. The study analyzed wages by occupation and household sizes, and conducted a survey to inform estimated relocation rates to determine how many workers would require housing assistance. The linkage fee was informed by calculating the gap between what workers could afford and the cost of creating affordable housing. It was then adjusted to reflect other subsidy sources, which reduced the final fee from a theoretical $80.20/SF to $21.88/SF.

2. Somerville, MA

The analysis projected that 2.2 million square feet of new development would result in approximately 8,899 new jobs. The study then utilized this estimated job growth to determine the

number of households this employment would likely generate, which the study estimated to be 591 new dwelling units across three AMI tiers. The cost to develop these units was compared against what workers at each income level could afford. The fee was scaled back from a maximum of $86.43 per square foot to $8–$10 per square foot to balance policy goals with feasibility.

3. San Diego, CA

The study estimated the number of new jobs likely to be created by different commercial uses, including hotels. It then used wage data to determine how many of these workers would fall into lower income brackets, and then estimated the number of affordable units required to serve those workers. The cost of providing those units was used to set a maximum per-square-foot fee for each use type.

4. Culver City, CA

This study estimated employment per square foot for various commercial uses, then utilized wage data to assign workers in different sectors and occupations to one of several income tiers. It then calculated the gap between what those workers could afford and the actual cost of housing. This affordability gap was then used to estimate a justifiable linkage fee per square foot.

5. Santa Rosa, CA

The study estimated the number of workers created by hotel and other commercial development using employment density assumptions. It used wage data to place workers into income tiers and calculated the cost of producing affordable housing at those income levels. This analysis informed a maximum fee of $75/SF, which was reduced based on economic feasibility.

6. Basalt, CO

The study focused on the impact of short-term rentals and new development on local housing affordability. It used local wage and housing cost data to estimate how much housing would be needed to support the local workforce. Linkage fees were based on the cost to produce these units, applied as a mitigation ratio or fee-in-lieu.

7. Los Angeles, CA

The study projected employment generated by commercial development using land use-based employment ratios. It assigned jobs to income tiers using wage data, then estimated housing needs and affordability gaps per income level. A fee was calculated to reflect the cost of subsidizing housing for the portion of the workforce that would be unable to afford market-rate units.

C. Comparison with Portland's Hotel Linkage Fee Study

Most linkage fee nexus studies, including Portland's, follow a broadly similar methodological framework, grounded in the same core objective: to establish a rational and quantifiable relationship between new commercial development and its corresponding demand for affordable housing. Each study includes an estimation of the number of new jobs generated by development (often using standardized employment density assumptions), and assignment of those jobs to

wage tiers based on occupational or industry-level income data. These studies then evaluate whether those workers can reasonably afford market-rate housing within the jurisdiction. This information is utilized to determine the affordability gap by sector or industry, which is the difference between what a worker can afford and the cost of either producing or acquiring a dwelling unit. This affordability gap typically serves as the basis for determining a maximum justifiable linkage fee. Oftentimes, this fee is substantially reduced in order to ensure that the fee's implementation is feasible, that the developer can absorb the fee, and that the fee does not undermine the community's competitiveness in attracting new development.

Portland's hotel linkage fee study closely mirrors this structure. The study begins by estimating the number of jobs created per hotel room, then converts those jobs into projected households using the City's jobs-to-household ratio. From there, it analyzes the income distribution of hotel employees and compares it against rental benchmarks to determine the housing subsidy necessary to close the affordability gap. This gap, when multiplied by the number of worker households created, yields a per-room linkage fee. Although individual studies vary in their unit of analysis (e.g., per square foot vs. per room), local wage assumptions, or feasibility adjustments, the core methodological foundation is consistent across each of the jurisdictions that were evaluated. Based on this review, Portland's approach is technically sound and consistent with national best practices in nexus-based fee development.

Table 4: Overview of Peer Community Linkage Fees

Jurisdiction	Year of Study	Maximum Defensible Hotel Fee[1]	Current Fee
Boston, MA	2022	$80.20 per SF	$23.09 per SF
Somerville, MA	2017	$86.43 per SF	$3.10 per SF
San Diego, CA	2013	$5-$6 per SF	$1.28 per SF, Adjusted Annually by Consumer Price Index (CPI)
Culver City, CA	2022	$28 per SF	$5 per SF
Santa Rosa, CA	2019	$75 per SF	$3 per SF
Basalt, CO	2023	Variable based on Mitigation Ratio	$538 per SF of Community Housing Required[2]
Los Angeles, CA	2016	$18.60 per SF	$3.86 - $6.44 per SF
Portland, ME	**2025**	**$13,731 per Room**	**$4,831 per Room**

1. As noted above, each of the nexus studies evaluated included a broader set of uses than just hotels. The fee listed would be the fee applicable to hotels, and in certain studies, hotels have a separate fee calculated specifically for hotels, whereas in other studies, the fee may apply to hotels along with other commercial uses.
2. The $538 per square foot figure cited in the Basalt, Colorado nexus study reflects the estimated cost to construct one square foot of community (affordable) housing, including land, hard and soft costs. This is not a linkage fee levied on new commercial development. Rather, it serves as an input in the calculation of the total housing cost attributable to new development. The actual fee charged to development would be significantly lower and based on the proportion of housing need generated per square foot of new commercial space.

D. Converting Portland's Calculation to Per Square Foot

Portland's hotel linkage fee is unique in that it is calculated based upon the number of hotel rooms within the hotel, and not on the basis of the total floor area as is done in other municipalities with a commercial or hotel linkage fee. This makes the comparison of Portland's policy with that of other jurisdictions more challenging. In order to simplify this comparison, staff have converted both the current and potential new rates from a per room to a per square foot ratio, using industry average data (Penner, R. H., Adams, L., & Rutes, W. A. (2013). Hotel design, planning, and development (2nd ed.). Routledge.), which estimates that a typical hotel room results in between 600-750 square feet of floor area (inclusive of common spaces and amenity areas). If an average room size of 675 square feet (averaging the typical range) is assumed, Portland's linkage fee rate would be as follows:

Table 5: Conversion of Portland's Fees to a Per SF Basis

Alternative	Per Room	675 SF Assumption
Current	$4,831.00	$7.16 per SF
Option #1	$9,520.00	$14.10 per SF
Option #2	$10,620.00	$15.73 per SF
Option #3	$13,731.00	$20.34 per SF

E. Alternative Model Based Upon the Cost to Construct Housing

Portland's linkage fee is based upon the affordability gap between the annualized market-rate rental cost for a two-bedroom apartment and the annual income of a typical hotel employee household. This approach allows for a direct comparison between annual housing costs and what the household can reasonably afford to pay, based upon standard affordability thresholds. While housing affordability is often measured by the standard that a household should spend no more than 30% of its gross income on housing costs, Portland's nexus study applies a more conservative 28% affordability threshold to define what constitutes an affordable rent. This methodology focuses specifically on addressing the rental affordability gap within Portland, rather than estimating the full cost of constructing a new affordable housing unit.

In contrast, other studies, such as those conducted in Boston and Somerville, calculate the housing need based on the full development cost of constructing new affordable housing units. These estimates include the cost of land, soft costs (such as design and permitting), and hard construction costs. Boston's study assumes a total cost of $500,000 per unit, while Somerville's assumes $360,000 per unit. Both studies also assume that a portion of these costs would be covered by external subsidies, such as the Low-Income Housing Tax Credit (LIHTC). In the Boston example, the study reduces the public subsidy need from $500,000 to $200,000 per unit, assuming $300,000 in outside funding. The maximum defensible linkage fee of $80.20 per square foot is then calculated based upon this subsidy-adjusted figure and not the full development cost. Additionally, for both Boston and Somerville, the final linkage fee amount implemented in those communities was substantially reduced on the basis of feasibility as detailed in Table 4 above.

In reviewing Portland's linkage fee study against other example studies, this particular difference in methodology stands out as a rational alternative to the current model used in Portland. In theory, this alternative identifies the monetary gap required to fund new affordable housing development to support the City's growing hotel industry.

For discussion purposes, staff have prepared a basic outline of a revised methodology, based on the Boston and Somerville examples, using the data assumptions in the 2025 Hotel Linkage Fee Study Update (Attachment F). The City assumes a typical affordable unit development cost of $300,000, which is informed by the January 2025 report 'Maine's Housing Report' produced by the Maine State Housing Authority (Attachment M). A breakdown of the revised methodology is listed below.

1. Estimate Jobs Created Per Hotel Room
    a. The GPCOG Study estimates that each new hotel room would generate 0.65 jobs per room.
2. Convert Jobs to Households
    a. The GPCOG Study assumes 1.22 jobs per household, meaning some households will have more than one income-earning member.
    b. The GPCOG Study generates households per room by dividing the number of jobs per room by the typical number of jobs per household, which equates to 0.532 households per room.
3. Assume Cost to Construct One Affordable Housing Unit
    a. Instead of calculating a rental affordability gap, this scenario assumes $300,000 as the full cost to build one new affordable housing unit.
4. Calculate the Public Cost per Hotel Room
    a. Multiply the number of worker households generated per room by the cost per unit:
    b. 0.532 households x $300,000 = **$159,836 per hotel room.**
    c. This equates to **$236.79 per square foot**
5. Consider Adjusting the Rate Based Upon a Residency Adjustment Factor
    a. The City of Boston conducted a survey to estimate that just 22.2% of new hotel employee households would choose to locate within the City of Portland.
    b. While the City does not have comparable data for Portland, for illustrative purposes, we've modeled several potential ratios to depict how the maximum defensible fee could be impacted if the City similarly adjusted the ratio by residency.

Table 6: Potential Cost of Construction Alternative Fees		
Residency Factor	Fee Per Room	Fee Per SF (Assuming 675 SF)
None	$159,836.07	$236.79
20%	$31,967.21	$47.36
30%	$47,950.82	$71.04
40%	$63,934.43	$94.72

F. Discussion of Potential Alternatives

1. Option 1: Rental Affordability Gap Model (2025 GPCOG Linkage Fee Study)
   The review of alternative methodologies and nexus studies from peer communities indicates that Portland's current hotel linkage fee structure is grounded in a methodologically sound and broadly consistent framework that Portland's local hotel industry has accepted since its implementation in 2019. Like other jurisdictions, Portland's study quantifies the relationship between job creation and housing need, translating that into a defensible fee based on measurable affordability gaps. While some peer cities, such as Boston, Somerville, and Los Angeles, base their fees on the full cost of constructing affordable housing units, Portland's model focuses instead on the rental affordability gap experienced by the typical household of a hotel worker.

2. Option 2: Cost of Construction Model
   As this memo illustrates, recalibrating Portland's methodology to reflect a construction-cost basis, potentially moderated by a residency adjustment factor, would also be rational and defensible. However, pursuing this approach would require either a new or revised nexus study to validate assumptions and substantiate any revised fee structure. Staff believe that the updated 2025 GPCOG fee scenarios remain defensible and would align the City's fees with current costs. Furthermore, as illustrated above, the alternatives listed in GPCOG's updated 2025 linkage fee study are largely comparable to those assessed by other peer communities, and in some cases, are higher. Other communities, which have utilized a housing construction model, have been required to decrease the fee amount well beneath the maximum defensible fee in order to make the policy feasible to implement. As shown in Table 6, the fees under this alternative model would significant exceed those of other peer communities, even if adjusted on the basis of a residency factor.

3. Example Hotel Project Evaluation
   As noted above, when staff presented to HEDC in April, staff modeled the potential fee alternatives on an average-sized hotel in the City of Portland with 85 rooms. Below is an updated table identifying what the assessed fee would be for each of the alternatives discussed within this memo.

Table 7: Overview of Hotel IZ Fees on Example 85-Room Hotel				
Model	Alternative	Fee Per Room	Fee Per SF (675 SF)	Total Fee
Current	Current Fee	$4,831.00	$7.16	**$410,635.00**
Option 1	COP Rent Board	$9,520.00	$14.10	**$809,200.00**
	ACS Median Rent	$10,620.00	$15.73	**$902,700.00**
	Fair Market Rent	$13,731.00	$20.34	**$1,167,135.00**
Option 2	Unadjusted	$159,836.07	$236.79	**$13,586,065.95**
	20% Residency	$31,967.21	$47.36	**$2,717,212.85**
	30% Residency	$47,950.82	$71.04	**$4,075,819.70**
	40% Residency	$63,934.43	$94.72	**$5,434,426.55**

IV. NEXT STEPS

Staff is seeking feedback and direction from the Planning Board regarding the proposed approach and alternative options outlined in this memo. This input will inform the development of a draft version of the updated hotel inclusionary zoning ordinance, which will be brought back to the Board for further review and consideration. Concurrently, staff will engage a qualified third-party real estate consulting group to conduct a targeted analysis of the various linkage fee alternatives. This review will help evaluate the feasibility, market impact, and legal defensibility of each option, ensuring that any proposed updates to the ordinance are equitable and attuned to Portland's local market conditions.

ORDER ESTABLISHING A 180-DAY MORATORIUM ON NEW HOTEL PROJECTS IN THE CITY OF PORTLAND

WHEREAS, the City of Portland faces a critical shortage of affordable housing;

WHEREAS, in January 2019, by Order 134-18/19, the City Council adopted an inclusionary zoning ordinance for hotel projects as set forth in Section 18.2.5 of the City's Land Use Code (the "Hotel Inclusionary Zoning Ordinance"); and

WHEREAS, hotel projects create many jobs that do not pay employees at a rate sufficient to allow those employees to afford market rate housing in Portland, and the purpose of the Hotel Inclusionary Zoning Ordinance was to address that demand; and

WHEREAS, the Hotel Inclusionary Zoning Ordinance currently requires developers of hotel projects to provide one unit of low-income long-term rental housing for every 28 rooms in the hotel project or to pay a fee-in-lieu of such units to the Jill C. Duson Housing Trust Fund in the amount of $4,692 for each guest room in the hotel project; and

WHEREAS, since 2019, nine hotel projects have been approved, are under review, are under construction, or have been constructed, including 801 guest rooms; and

WHEREAS, the developers of those hotel projects have provided no low-income long-term rental units and will generate only about $3,556,000 in fees to the Jill C. Duson Housing Trust Fund; and

WHEREAS, the hotel projects that have been constructed since 2019 are projected to create approximately 489 jobs, many of which are expected to pay below 60% of the area median income; and

WHEREAS, hotel development continues to be robust and competes with housing development in Portland;

WHEREAS, the Hotel Inclusionary Zoning Ordinance has not been substantially changed since its initial passage in 2019 and is inadequate to prevent serious public harm caused by hotel development, including the lack of sufficient affordable housing for hotel employees employed at new hotels;

WHEREAS, a temporary 180-day prohibition on approval for new hotel projects is appropriate in order to allow the City time to review and amend the Hotel Inclusionary Zoning Ordinance as necessary to ensure that there is sufficient affordable housing for hotel employees and otherwise prevent a worsening of the housing crisis; and

WHEREAS, in the judgment of the City Council for the City of Portland, these facts create an emergency within the meaning of 30-A M.R.S. § 4356(1) (A) and the City Charter, requiring immediate action to prevent serious public harm; and

NOW, THEREFORE, pursuant to its authority in 30-A M.R.S. §§ 3001 and 4356, the Portland City Council hereby ordains that a Moratorium is imposed, effective immediately, on any and all applications and approvals for hotel projects, except that this Moratorium does not apply to any hotel projects that have any applications with the City or the Planning Board that are currently under review by the City or the Planning Board or that have already been approved by the City or Planning Board (the "Existing Hotel Projects"); and

BET IT ORDERED, that that no permit applications for any hotel project, other than the Existing Hotel Projects, shall be accepted, processed, or reviewed by the City or the Planning Board for the period of this Moratorium; and

BE IT FURTHER ORDERED, that those provisions of the City's Land Use Code that are inconsistent or conflicting with the provisions of this Moratorium, are hereby repealed to the extent that they are applicable for the duration of this Moratorium, but not otherwise; and

BE IT FURTHER ORDERED, that during the time that this Moratorium is in effect, the City's Housing and Economic Development Committee shall review the Hotel Inclusionary Zoning Ordinance and identify policy concerns for the Planning Board to consider in developing potential amendments to the ordinance for consideration by the City Council; and

BE IT FURTHER ORDERED, that this Moratorium shall remain in effect until the earlier of the effective date of necessary amendments to the Hotel Inclusionary Zoning Ordinance or June 2, 2025, unless extended, repealed, or modified by the Portland City Council; and

BE IT FURTHER ORDERED, that to the extent any provision of this Moratorium is deemed invalid by a court of competent jurisdiction, the balance of the Moratorium that shall remain shall be considered valid.

ORDER EXTENDING FOR 180 DAYS THE MORATORIUM ON NEW HOTEL PROJECTS IN THE CITY OF PORTLAND ESTABLISHED BY ORDER 77-24/25

WHEREAS, the City of Portland continues to face a critical shortage of affordable housing; and

WHEREAS, in January 2019, by Order 134-18/19, the City Council adopted an inclusionary zoning ordinance for hotel projects as set forth in Section 18.2.5 of the City's Land Use Code (the "Hotel Inclusionary Zoning Ordinance"); and

WHEREAS, hotel projects create many jobs that do not pay employees at a rate sufficient to allow those employees to afford market rate housing in Portland, and the purpose of the Hotel Inclusionary Zoning Ordinance was to address that demand; and

WHEREAS, the Hotel Inclusionary Zoning Ordinance currently requires developers of hotel projects to provide one unit of low-income long-term rental housing for every 28 rooms in the hotel project or to pay a fee-in-lieu of such units to the Jill C. Duson Housing Trust Fund in the amount of $4,692 for each guest room in the hotel project; and

WHEREAS, since 2019, nine hotel projects have been approved, are under review, are under construction, or have been constructed, including 801 guest rooms; and

WHEREAS, the developers of those hotel projects have provided no low-income long-term rental units and will generate only about $3,556,000 in fees to the Jill C. Duson Housing Trust Fund; and

WHEREAS, the hotel projects that have been constructed since 2019 are projected to create approximately 489 jobs, many of which are expected to pay below 60% of the area median income; and

WHEREAS, hotel development continues to be robust and competes with housing development in Portland; and

WHEREAS, the Hotel Inclusionary Zoning Ordinance has not been substantially changed since its initial passage in 2019 and is inadequate to prevent serious public harm caused by hotel development, including the lack of sufficient affordable housing for hotel employees employed at new hotels; and

WHEREAS, a 180-day prohibition on approval for new hotel projects was approved by Order 77-24/25 on November 4, 2024 to allow the City time to review and amend the Hotel Inclusionary Zoning Ordinance as necessary to ensure that there is sufficient affordable housing for hotel employees and otherwise prevent a worsening of the housing crisis; and

WHEREAS, as required by Order 77-24/25, the City's Housing and Economic Development Committee met on April 15, 2025 and received a presentation from Planning staff outlining potential amendments to the Hotel Inclusionary Zoning Ordinance; and

WHEREAS, Planning staff anticipate presenting proposed amendments to the Planning Board in June 2025; and

WHEREAS, the existing Moratorium is scheduled to expire on June 2, 2025, prior to consideration of proposed amendments by the Planning Board and City Council; and

WHEREAS, the conditions that gave rise to the original moratorium persist, and the City is actively working to address them by pursuing amendments in accordance with the process initiated by Order 77-24/25.

NOW, THEREFORE, pursuant to its authority in 30-A M.R.S. §§ 3001 and 4356, the Portland City Council hereby extends the existing Moratorium for an additional one hundred and eighty (180) days through November 29, 2025, effective immediately, on any and all applications and approvals for hotel projects, except that this Moratorium does not apply to any hotel projects that have any applications with the City or the Planning Board that are currently under review by the City or the Planning Board or that have already been approved by the City or Planning Board (the "Existing Hotel Projects"); and

BE IT ORDERED, that no permit applications for any hotel project, other than the Existing Hotel Projects, shall be accepted, processed, or reviewed by the City or the Planning Board for the extended period of this Moratorium; and

BE IT FURTHER ORDERED, that those provisions of the City's Land Use Code that are inconsistent or conflicting with the provisions of this Moratorium, are hereby repealed to the extent that they are applicable for the duration of this Moratorium, but not otherwise; and

BE IT FURTHER ORDERED, that during the time that this extended Moratorium is in effect, the City's Housing and Economic Development Committee, with the assistance of

Housing and Economic Development and Planning staff, shall continue to review the Hotel Inclusionary Zoning Ordinance and identify policy concerns for the Planning Board to consider in developing potential amendments to the ordinance for consideration by the City Council; and

BE IT FURTHER ORDERED, that this Moratorium shall remain in effect until the earlier of the effective date of necessary amendments to the Hotel Inclusionary Zoning Ordinance or November 29, 2025, unless further extended, repealed, or modified by the Portland City Council; and

BE IT FURTHER ORDERED, that to the extent any provision of this Moratorium is deemed invalid by a court of competent jurisdiction, the balance of the Moratorium that shall remain shall be considered valid.

DRAFT MINUTES FROM

HOUSING AND ECONOMIC DEVELOPMENT COMMITTEE MEETING

HELD ON 4/15/2025 RE HOTEL INCLUSIONARY ZONING ORDINANCE

Item #2: Discussion: Hotel Inclusionary Zoning Ordinance and identify policy concerns for the Planning Board to consider in developing potential amendments to the Ordinance for consideration by the City Council

Kevin Kraft presented the history, background, and development trends related to the City's hotel inclusionary zoning ordinance. Nell Donaldson presented GPCOG's Nexus and Linkage Fee Study.

According to lodging license data from the Maine Department of Health and Human Services, there are currently 41 licensed lodging places in the City of Portland, with approximately 3,500 total rooms. 68% of these hotels have been developed since 2000, with 18 (44%) having been developed since 2010. In 2019, the City proposed and established a hotel inclusionary zoning ordinance. In the case of the City's IZ policy, a linkage fee study was completed in 2018 to document the nexus between hotel development and demand for affordable housing. The current linkage fee-in-lieu is $4,831 per guest room. When the hotel policy was created, it was also the intent that the linkage fee would be periodically updated. In early 2025, City staff requested an updated fee-in-lieu analysis from GPCOG. Based on available data sources, GPCOG supplies three possible update fee-in-lieu figures based on three alternative rental cost date sources. These figures range from $9,520 to $10,620 to $13,731 per room, depending on the rent date source used.

Staff is providing three options on moving forward. With committee guidance, staff is recommending the hotel moratorium be extended to allow time for staff to draft proposed Land

Use Code revisions for Planning Board review (in May/June) and eventually for consideration by the full City Council (in June/July).

The Committee held a discussion regarding the study methodology, and intended outcomes. Questions regarding the linkage fee, wage rates, number of hotel employees in Portland, creating housing affordable for hotel employees, and other methods to measure how to address the housing crisis were discussed. The Committee also noted that to create municipal led public housing, there would need to be a massive, revolving housing trust fund. Staff asked the Committee for their goal for the Hotel Inclusionary Zoning ordinance - is it to create the housing units required in the ordinance or is it to support investment into the Housing Trust Fund to leverage funding to create a greater amount of affordable housing?

Councilor Sykes noted the benefits of municipal led public housing is greater efficiency when compared to developers in the private market, and for that reason, leans towards trying to get a larger fee (that is more in line with what it costs to create housing) and try to capitalize a fund the City could use to produce publicly-owned housing.

Councilor Phillips indicated she would like to meet with the Planning Department.

Councilor Michniewicz asked staff to discuss their recommendation for option 2 ("raise IZ fee-in-lieu and reduce applicable threshold").

Staff noted the current fee-in-lieu has not discouraged hotel development, so there is the thought there is room to increase the fee. Also, the current fee was calculated based on data from at least 2018 or earlier, so there is needed updating. Recalibrating the fee includes considering the impact on local developers. The fee should not be set so high that the unintended consequence is limiting the pool of developers from local and large commercial developers to only large commercial developers. Reducing the threshold from applying to projects that include

DRAFT

ten or more guest rooms would maintain consistency with changes made during ReCode.

Councilor Sykes indicated she leans towards option 2, but thinks the fee is far too low. The fee should be at a place that does not completely disincentivize hotel development. Larger corporations that are building hotels are probably in a place that is much easier for them to absorb the fee-in-lieu. Therefore, maybe tier the fee on the cost of the hotel room or ask the developer what the rate would be to rent a room for a week and then have that be the fee-in-lieu.

The Committee held a discussion on directing staff on how to proceed. Staff will implement the changes requested by the Committee, then bring the revised proposal to the Planning Board who would then make a recommendation to the City Council for consideration.

To allow the time necessary to conduct this work and hold the public hearings, the Committee directed staff to bring an extension request to the City Council to extend the moratorium from ending on June 2 to ending an additional six months from that date.

Councilor Ali opened the meeting to public comment. Seeing no one, the public comment period was closed.

On a motion by Council Sykes, seconded by Councilor Michniewicz, the Committee voted 4-0 to recommend to the City Council extension of the current 180-day moratorium on new hotel projects and expansions to allow time for a review of the Hotel Inclusionary Zoning ordinance.

DRAFT

City of Portland | Planning & Urban Development Department
Kevin D. Kraft, AICP *Director*

Staff Memo To:
Housing & Economic Development Committee
Councilor Pious Ali, Chair

MEETING DATE
April 15, 2025

AGENDA ITEM
Agenda Item 2 – Hotel Inclusionary Zoning Ordinance

PURPOSE
An initial discussion on the history, background, and development trends related to the City's hotel inclusionary zoning ordinance, with the committee providing direction on next steps.

COMMITTEE WORK PLAN/CITY COUNCIL GOAL ALIGNMENT
On December 16, 2024, the City Council established its 2025 Common Goals, outlining policy priorities and guiding the development of Council committee work plans. The Housing & Economic Development Committee (HEDC) identified the review and potential revision of the hotel inclusionary zoning ordinance (Chapter 14, Section 17.2.4) as a policy matter aligned with Council Common Goal #2: "*The Council will work to implement solutions to the housing crisis, including building more working class housing, improved support for the unhoused community such as an overdose prevention center as well as continued support for warming shelters. Additionally conduct independent assessment of Efficiencies, Outcomes, and Expenditures.*"

At its January 21, 2025 meeting, the HEDC established its 2025 work plan, which includes reviewing and considering potential revisions to the City's existing hotel inclusionary zoning ordinance.

BACKGROUND/ANALYSIS
On November 4, 2024, the City Council passed Order 77-24/25 (6-2, Mayor Dion & Councilor Rodriguez - No, Councilor Fournier Absent) (Attachment A) establishing a 180-day moratorium on new hotel projects in the City of Portland. The moratorium went into effect on December 4, 2024 and is set to expire on June 2, 2025.

Portland's Hotel Inventory & Development Trends
According to lodging license data from the Maine Department of Health and Human Services, there are currently 41 licensed lodging places in the City of Portland, with approximately 3,500 total rooms. 68% of these hotels have been developed since 2000, and 18 (44%) have been developed since 2010.

History of Hotel IZ policy
In 2019, the City proposed and established a hotel inclusionary zoning (IZ) ordinance. The requirement applies to hotel projects with 10 or more rooms and any hotel expansions of 10 or more rooms within any five-year period. To meet the requirement, hotel projects can provide one unit of low-income housing for rent within the city for every 28 hotel rooms. Portland considers a low-income housing unit to mean one that is rented to households earning 80% AMI or less. The other alternative is for a hotel project to pay a linkage fee (fee-in-lieu) with a 2019 basis of $3,806 per room, which is deposited into the City's Housing Trust Fund at the time the Certificate of Occupancy is issued. The linkage fee is adjusted annually; the 2025 hotel inclusionary fee-in-lieu is $4,831 per guest room.

The impetus for the creation of a hotel inclusionary zoning ordinance was a steady rise in hotel/inn/motel development between 2012 and 2018. Local and national data indicated that job creation in the hospitality industry would involve a considerable amount of workforce households at average wage rates below what was required to afford housing in Portland at the time. As a result of the specifics of the industry's profile and anticipating an increase in hotel/inn/motel development in the coming years, the hotel inclusionary zoning ordinance was adopted on January 23, 2019, Order 134-18/19 (Attachment B) and became effective on February 22, 2019.

Hotel development post IZ policy
Since adoption of the ordinance in 2019, 14 projects have been approved. Of the 14 projects three hotel projects approved in that timeframe were not subject to hotel inclusionary zoning requirements (Table 1). One project was too small (<10 rooms) to trigger the requirement and the other two were products of approved master development plans (Thompsons Point and Portland Foreside), which gave them pending proceeding status under the pre-inclusionary zoning code.

Table 1: Approved Hotel Projects Exempt From Hotel IZ Regulations

Address	Common Name	Approval Year	Total Rooms	Status
148 Coveside Drive	Diamond Cove	2024	8	Approved
Thompson's Point	Forefront Hotel	2023	148	Under Construction
58 Fore Street	Portland Foreside	2023	128	Approved
Total	**3**		**284**	

Of the 11 remaining projects (Table 2), four have been constructed and completed, resulting in a combined total of 223 rooms. Each of these projects elected to contribute to the Housing Trust Fund, generating a total of $834,373 in contributions. Two additional projects are currently under construction: The Docent's Collection at 178–184 Middle Street, which will contain 19 rooms and contribute $86,602 into the Housing Trust Fund and 215 Commercial Street, which will contain 15 rooms and contribute $70,380 into the housing trust fund. Both are smaller-scale renovations of

former office spaces in the Old Port. The remaining five projects have received approval but have not yet begun construction. If built, the five remaining projects would add an additional 623 new rooms. If all 11 projects are constructed as approved, they would collectively generate approximately $3.8 million in contributions to the Housing Trust Fund and 880 hotel rooms.

Table 2: Approved Hotel Projects Subject To Hotel IZ Regulations

Address	Common Name	Approval Year	Total Rooms	Fee-in-lieu	Status
*121 Middle Street	Docent's Collection	2019	26	$72,314	Construction Complete
1 Center Street	Canopy by Hilton	2019	135	$513,810	Construction Complete
754 Congress Street	The Longfellow Hotel	2020	48	$182,688	Construction Complete
54 York Street	The Weldon Hotel	2024	14	$65,562	Construction Complete
178-184 Middle Street	Docent's Collection	2023	19	$86,602	Under Construction
215 Commercial Street	-	2024	15	$70,380	Under Construction
477 Congress Street	Time & Temperature	2023	181	$849,252	Approved
1060 Westbrook Street	Hyatt Jetport	2024	119	$558,348	Approved
465 Congress Street	Monument Hotel	2024	92	$431,664	Approved
385 Congress Street	Fathom	2023	179	$815,882	Approved
245 Commercial Street	Portland Harbor Hotel Expansion	2024	52	$243,984	Approved
TOTAL	**11**		**880**	**$3,890,486**	

121 Middle Street – Awaiting fee-in-lieu payment for 7 additional rooms, which are included in the total room count.

In terms of location, of the 14 projects approved since the implementation of the Hotel IZ policy, approximately 57%, a total of eight projects (699 rooms) are located in the City's B-3 Downtown Business zone. This zone spans from roughly Franklin Street to State Street and includes the Old Port, Arts District, and abuts the waterfront areas recognized as the region's core for arts, culture, commerce, and civic life, where hotel development is both anticipated and encouraged. For comparison, between 2019 and 2024, the City also approved 1,695 residential dwelling units within the B-3 zone, reflecting strong and balanced growth in both hotel and residential

development. This trend aligns with the goals outlined in *Portland's Plan 2030*, which reinforces downtown as the region's primary hub of activity for the region.

The remaining hotel projects are also located in areas where hotel development is generally expected. Two projects are in the B-5 zone—one at Thompson's Point and the other at 54 York Street, just outside the B-3 zone near Commercial Street and the Old Port/Waterfront Central neighborhoods. One project, part of the master development plan for the Portland Foreside mixed-use development, is located in the B-6 zone in the Eastern Waterfront. Another is situated in the Airport Business (A-B) zone, an area commonly associated with airport-related uses and business travel. Finally, one project was approved as part of a contract zone on Great Diamond Island.

Approved Hotel Projects by Zone (2019–2024)

Zone	Total Hotel Projects	Total Rooms Approved
B-2b	1	48
B-3	8	699
B-5	2	162
B-6	1	128
A-B	1	119
Contract Zone	1	8
TOTAL	**14**	**1,164**

In terms of size, there is no clear evidence of a significant trend toward smaller hotel projects (<10 rooms) as a means of avoiding Hotel IZ requirements. The average size of hotels operating prior to the adoption of the IZ policy was 89 rooms, compared to an average of 83 rooms for hotels approved since its implementation. Only one project approved since 2019 has been under 10 rooms. However, a notable emerging trend in hotel development is the rise of smaller-scale hotels with fewer than 30 rooms, offering an alternative to traditional accommodations. These boutique-style properties typically feature apartment-style suites with fully equipped kitchens, separate dining and living areas, and private bedrooms. They often operate with limited on-site staff, minimal amenities, and rely on mobile check-ins and lacking a centralized reception area. Four such projects—121 Middle Street, 178–184 Middle Street (Docent's Collection), 215 Commercial Street, and 54 York Street (The Weldon Hotel)—fit this model. While these developments were still required to comply with Hotel IZ regulations, they reflect a growing and distinct segment of the hospitality market that tend to operate more in the vein of short term rentals.

ReCode Zoning Changes

As part of the City's ReCode initiative, adopted by the City Council on November 4, 2024, new hotels are now prohibited in the B-1, B-2b, and TOD-1 zones. The purpose of these zones is to support neighborhood- and community-oriented retail, business, and service establishments within a more urban development pattern. They are intended to foster mixed-use development and moderate- to high-density housing in urban neighborhoods that align with the City's investment in high-frequency transit infrastructure, encouraging walking, biking, and public transit use. By prohibiting hotels in these zones, the City prioritizes housing and mixed-use developments and directs hotels to designated areas better suited for such uses.

ReCode also included changes to the definition of "hotel" within the land use code. These changes were designed to more clearly define hotels as multi-room commercial facilities with centralized reception, management, and cleaning services, and to address the emerging trend toward non-traditional forms of hotel development more akin to short-term rentals.

Inclusionary Zoning Fee-in-Lieu Assumptions

Linkage fees are often used by cities as a way to offset the impacts of new development. Before establishing a linkage fee, communities typically conduct a study that formally and systematically establishes the nexus, or the 'link,' between new development and the fee's purpose. In the case of the city's hotel IZ policy, a linkage fee study was completed in 2018 to document the nexus between hotel development and demand for affordable housing (Attachment C). The basic principle of the study, which was conducted by the Greater Portland Council of Governments (GPCOG), is that new hotel development creates new jobs and attracts new households to fill those jobs, and that new affordable housing is necessary to accommodate them.

When the hotel policy was created, it was also the intent that the linkage fee would be periodically updated. Although no specific timeframe was established for these updates and in anticipation of upcoming discussions regarding the current Hotel IZ fee amounts, City staff requested an updated fee-in-lieu analysis from GPCOG in early 2025 (Attachment D). It is important to note that GPCOG's current work did not include an evaluation of the 2018 fee study methodology, but instead simply replicated the original methodology using current day income and housing cost assumptions. In almost all cases, the current study used the same data sources as the 2018 study; the one exception was for housing cost data, where the original data source was no longer available. Because of this change in the availability of data, GPCOG supplied three possible updated fee-in-lieu figures, reflecting three estimated affordability gaps based on three alternative rental cost data sources (the City of Portland Rent Board reports, American Community Survey, or HUD Fair Market Rent). These figures range from $9,520 to $10,620 to $13,731 per room, depending on the rent data source used.

For purposes of comparison, staff conducted an initial analysis of the potential impact of these three possible fees, based on an average sized hotel in the City of Portland of 85 rooms. Under the possible fees, the total inclusionary zoning contribution for a hotel of this size would range from $809,164 to $902,720 to $1,167,120. The total contribution for an 85 room hotel at the 2025 hotel IZ figure of $4,831 per room would be $410,635.

NEXT STEPS:

If the summary and recommendations for changes to the existing Hotel IZ ordinance align with the committee's and City Council's priorities, the City can proceed in several possible directions:

1. **Option 1 - Raise IZ fee-in-lieu:** This option would increase the hotel IZ fee-in-lieu based on the estimated affordability gap identified in the 2025 GPCOG study. Staff seeks committee direction on the preferred fee amount based on the rent data source used. Based on the Council's direction, the housing unit per room requirement within hotel inclusionary zoning policy would also be adjusted.

2. **Option 2 - Raise IZ fee-in-lieu & reduce applicability threshold:** In addition to raising the hotel IZ fee-in-lieu based on the estimated affordability gap from the GPCOG study, this option would amend the definition of a "Hotel project" to apply to any size hotel, rather than the current requirement of only applying to projects that include 10 or more guest rooms. Based on the Council's direction, the housing unit per room requirement within hotel inclusionary zoning policy would also be adjusted.

3. **Option 3 - Maintain existing fee-in-lieu & reduce applicability threshold:** This option would retain the existing hotel IZ fee-in-lieu while reducing the applicability threshold. The definition of a "Hotel project" would be amended to include any hotel, rather than only those with 10 or more guest rooms. As in Option 2, the threshold of >10 rooms would be removed, making the IZ requirements applicable to all hotel projects. Based on the Council's direction, the housing unit per room requirement within hotel inclusionary zoning policy would also be adjusted.

FISCAL IMPACT

The hotel IZ policy has resulted in $834,374 in contributions to the housing trust fund, with just over $3 million in anticipated revenues from approved projects pending construction. The fee-in-lieu amount is adjusted annually. If the fee is updated to more accurately reflect current incomes and housing costs, assuming that hotel development trends hold steady, contributions to the housing trust fund could be expected to increase significantly.

CONCLUSION(S)

This item is for discussion and direction. If the committee supports the presented options and provides additional guidance on revisions, staff recommends that the hotel moratorium be extended to allow time for staff to draft proposed Land Use Code revisions. These revisions would then be reviewed by the Planning Board, which will provide a recommendation on a text amendment to update the Hotel Inclusionary Zoning ordinance for consideration by the full City Council. Following the Planning Board's recommendation, the amendment will move forward to the full City Council for consideration and final decision.

ORDER ESTABLISHING A 180-DAY MORATORIUM ON NEW HOTEL PROJECTS IN THE CITY OF PORTLAND

WHEREAS, the City of Portland faces a critical shortage of affordable housing;

WHEREAS, in January 2019, by Order 134-18/19, the City Council adopted an inclusionary zoning ordinance for hotel projects as set forth in Section 18.2.5 of the City's Land Use Code (the "Hotel Inclusionary Zoning Ordinance"); and

WHEREAS, hotel projects create many jobs that do not pay employees at a rate sufficient to allow those employees to afford market rate housing in Portland, and the purpose of the Hotel Inclusionary Zoning Ordinance was to address that demand; and

WHEREAS, the Hotel Inclusionary Zoning Ordinance currently requires developers of hotel projects to provide one unit of low-income long-term rental housing for every 28 rooms in the hotel project or to pay a fee-in-lieu of such units to the Jill C. Duson Housing Trust Fund in the amount of $4,692 for each guest room in the hotel project; and

WHEREAS, since 2019, nine hotel projects have been approved, are under review, are under construction, or have been constructed, including 801 guest rooms; and

WHEREAS, the developers of those hotel projects have provided no low-income long-term rental units and will generate only about $3,556,000 in fees to the Jill C. Duson Housing Trust Fund; and

WHEREAS, the hotel projects that have been constructed since 2019 are projected to create approximately 489 jobs, many of which are expected to pay below 60% of the area median income; and

WHEREAS, hotel development continues to be robust and competes with housing development in Portland;

WHEREAS, the Hotel Inclusionary Zoning Ordinance has not been substantially changed since its initial passage in 2019 and is inadequate to prevent serious public harm caused by hotel development, including the lack of sufficient affordable housing for hotel employees employed at new hotels;

WHEREAS, a temporary 180-day prohibition on approval for new hotel projects is appropriate in order to allow the City time to review and amend the Hotel Inclusionary Zoning Ordinance as necessary to ensure that there is sufficient affordable housing for hotel employees and otherwise prevent a worsening of the housing crisis; and

WHEREAS, in the judgment of the City Council for the City of Portland, these facts create an emergency within the meaning of 30-A M.R.S. § 4356(1) (A) and the City Charter, requiring immediate action to prevent serious public harm; and

NOW, THEREFORE, pursuant to its authority in 30-A M.R.S. §§ 3001 and 4356, the Portland City Council hereby ordains that a Moratorium is imposed, effective immediately, on any and all applications and approvals for hotel projects, except that this Moratorium does not apply to any hotel projects that have any applications with the City or the Planning Board that are currently under review by the City or the Planning Board or that have already been approved by the City or Planning Board (the "Existing Hotel Projects"); and

BET IT ORDERED, that that no permit applications for any hotel project, other than the Existing Hotel Projects, shall be accepted, processed, or reviewed by the City or the Planning Board for the period of this Moratorium; and

BE IT FURTHER ORDERED, that those provisions of the City's Land Use Code that are inconsistent or conflicting with the provisions of this Moratorium, are hereby repealed to the extent that they are applicable for the duration of this Moratorium, but not otherwise; and

BE IT FURTHER ORDERED, that during the time that this Moratorium is in effect, the City's Housing and Economic Development Committee shall review the Hotel Inclusionary Zoning Ordinance and identify policy concerns for the Planning Board to consider in developing potential amendments to the ordinance for consideration by the City Council; and

BE IT FURTHER ORDERED, that this Moratorium shall remain in effect until the earlier of the effective date of necessary amendments to the Hotel Inclusionary Zoning Ordinance or June 2, 2025, unless extended, repealed, or modified by the Portland City Council; and

BE IT FURTHER ORDERED, that to the extent any provision of this Moratorium is deemed invalid by a court of competent jurisdiction, the balance of the Moratorium that shall remain shall be considered valid.

AMENDMENT TO PORTLAND CITY CODE CHAPTER 14
RE: HOTEL PROJECT INCLUSIONARY ZONING

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF PORTLAND, MAINE IN CITY COUNCIL ASSEMBLED AS FOLLOWS:

That Chapter 14, Sections 14-484, 14-485 and 14-488.1 is hereby amended to read as follows:

Sec.14-484. Purpose.

It is in the public interest to promote an adequate supply of affordable housing for the city's residents. The purpose of this division therefore is to offer incentives to developers to include units of affordable housing within development projects, thereby mitigating the impact of market rate housing construction, or the demonstrated increase in affordable housing needs resulting from the creation of new lower-income jobs, on the limited supply of available land for suitable housing and helping to meet the housing needs of all economic groups within the city. The city believes that this division will assist in meeting the city's comprehensive goals for affordable housing, in the prevention of overcrowding and deterioration of the limited supply of affordable housing, and by doing so promote the health, safety and welfare of its citizens.

...

Sec. 14-485. Definitions.

...

Eligible project means a development project:

...

(d) Projects shall not be considered "eligible projects" solely because they are subject to Section 14-487 ("Ensuring Workforce Housing").

Hotel Project is any hotel, inn or motel, as defined in Section 14-47 of Chapter 14 of the Portland City Code, consisting of 10 or more guest rooms for rent. Any such development that exists prior to the effective date of this Section but expands by 10 or more rooms within any 5 year period will also be considered a hotel project.

...

14-488.1 Inclusionary Zoning for Hotel Projects

(a) **Purpose:** This section is based on City analysis, most specifically the analysis documented in the Greater Portland Council of Government study "Proposed Hotel Linkage Fee: Supportable Range" dated August 29, 2018, that finds that new hospitality developments create a need for new affordable housing. This need is the result of the fact that hospitality developments necessarily create a number of jobs that do not pay employees at a rate sufficient to allow those employees to afford market-rate housing in the City of Portland.

(b) **Hotel Projects Conditional Uses:** Notwithstanding anything to the contrary in Chapter 14, all hotel projects are conditional uses subject to Planning Board review on the condition that they comply with the requirements of this Section 14-489.

(c) **Low Income Housing Minimum.** All hotel projects shall provide one unit of Low Income Housing for rent in the City of Portland for every 28 rooms in the hotel project which shall meet the standards outlined in Section 14-487 and in the implementing regulations governing Low Income Units. This amount shall be rounded up to the nearest increment of 28 rooms. These units shall be deed restricted for the longest period permitted by law; shall not be used for Short Term Rentals of less than 30 days; and must be provided with distinct entrances from the street to delineate them from the hotel itself.

(d) **Fee-in-Lieu Alternative:** As an alternative to providing Low Income Housing units under subsection (c) above, a Hotel Project may pay a fee-in-lieu of $3,806 per hotel guest room. This amount shall be paid into the City's Housing Trust

and used for the purposes set forth in the ordinance and regulations applicable to that trust.

(e) **Annual Adjustments:** The amounts in (d) above shall be adjusted annually in the same way as the fee under Division 29 for Housing Replacement.

(f) **Regulations:** The Planning Board may promulgate implementing regulations based on this ordinance.

(g) **Applicability:** Notwithstanding the provisions of 1 M.R.S. § 302, Sec. 14-489 shall apply retroactively and include any and all actions and proceedings pending on September 26, 2018 or thereafter.

To: Jeff Levine, Planning & Urban Development Director

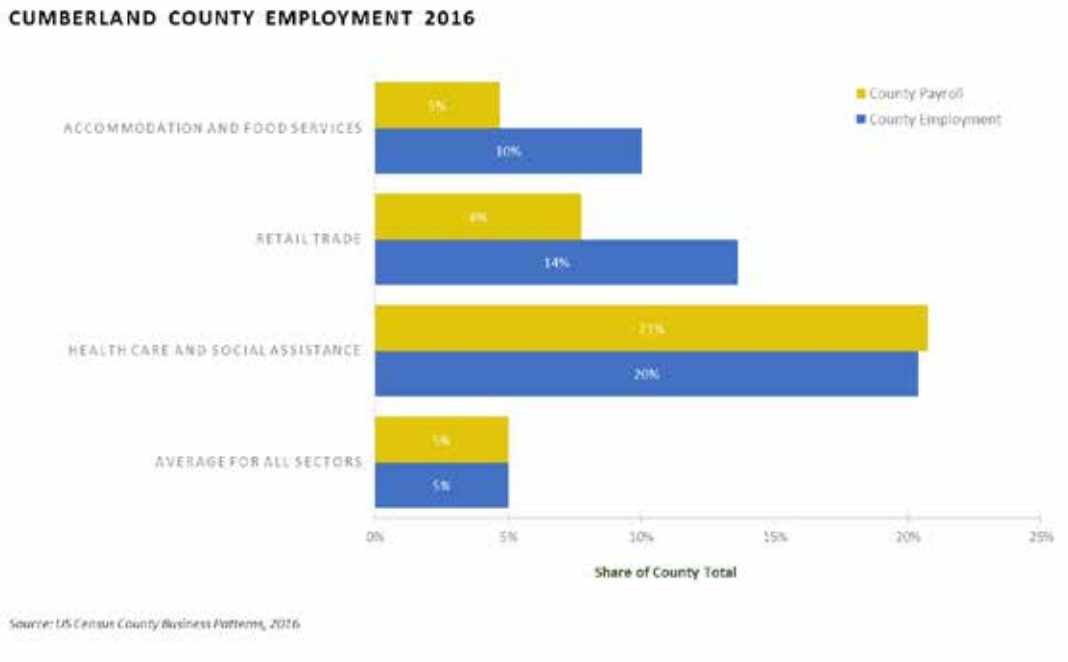
Date: 8/29/18
RE: Proposed Hotel Linkage Fee: Supportable Range

This memo has been expanded and updated based on additional data provided by the Maine Innkeepers Association.

Introduction

The City of Portland's Department of Planning & Urban Development is examining the feasibility of a proposal for assessing hotel linkage fees that would recover the cost of producing housing that is affordable for hotel employees. The purpose of this memo is to provide information to the City regarding the use of linkage fees for this purpose and outline a potential methodology for the calculation of a fee.



We have used the best available data to demonstrate how this methodology could be used to estimate a potential hotel linkage fee, but this does not constitute a recommendation from GPCOG as to the amount the City of Portland should charge for the hotel linkage fee nor is it a recommendation for the City of Portland to enact a hotel linkage fee ordinance.

Background

Linkage fees are fees that cities may choose to implement to help mitigate the impact of new commercial development on the demand and availability of affordable housing. Prior to implementing a fee policy, communities often conduct a study to identify the connection, or "nexus" between new commercial development and the need for additional affordable housing. It is assumed that new commercial development contributes additional workers to a city's workforce and adds new worker households. In many industries, a percentage of these households do not make enough to live and work in the same city. Looking outside the city to find affordable housing often results in longer commute times and higher transportation costs. If implemented, a linkage fee is typically charged to a developer as a condition of approval and it is assessed based on total square footage or number of units in the development.

The City's Comprehensive Plan identifies the increasing demand for affordable housing as an emerging issue and sets a goal of pursuing "policies to enable people who work in Portland to have the option to live in Portland." To be considered affordable, housing should consume no more than 30% of a household's income including rent, mortgage, utilities and other household related costs. Of the 1,130 housing units that were permitted and/or built in Portland between 2010 to 2014,

including apartments, condominiums and single-family homes, just 29% were offered at a rent or sales price affordable to a household earning the median income[i].

The Maine Office of Tourism estimates over 6 million tourists visited Portland in 2017. Hotel development is steadily increasing, with 1,811,050 square feet of hotel development - representing 2,647 units - currently in operation throughout the City. According to the US Census, the accommodation and food service sector is the third largest share of employment in Cumberland County, representing 10% of the County's workforce but only 5% of the County's payroll.

According to the Maine State Housing Authority the average rent (including utilities) for a two-bedroom apartment in Portland is $1,053 per month, and the household income needed to afford the average rent in Portland is $42,111 per year. However, this is the average rent paid by existing renters in Portland and new households moving to Portland will pay the current market rate, which is generally higher than the average rent. As of June 15, 2018, there are roughly 60 two-bedroom apartments listed for rent in Portland on Zillow, with monthly rents ranging between $1,300-$3,500. One third of those apartments are listed with rents between $1,500 and $2,000, and another third of those apartments are listed for more than $2,000 per month. Therefore, a new household moving to Portland will expect to pay between 120%-330% of the average rent to live in the City.

There are a range of estimates available regarding the average wages of a full-time employee in this sector, and all are well below the household income needed to afford housing in Portland. According to the US Census, the average Cumberland County employee in this sector earns $312 a week or $16,227 per year. The Maine Department of Labor (DOL) estimates the median income for a full-time

Cumberland County employee in this sector to be significantly higher, $24,908 per year. Additionally, as of 2017 the minimum wage in Portland is $10.68/hour, so a full-time employee making this salary would earn an annual income of $22,214. This affordability gap may force accommodation workers employed in Portland to seek housing outside of Portland.

Data

The minimum justified fee per square footage of hotel development outlined in this memo is based on data from both the US Census American Community Survey (ACS), and wage data from the Maine Department of Labor (DOL).

The US Census American Community Survey (ACS) data in this memo was used because it is the most comprehensive and consistent data source for demographic and economic characteristics of the population in GPCOG's service area. However, there are some limitations to the ACS data. First, it is 5-year sample data because this is the only data consistently available at the municipal, county, and state level. The drawback to using data pooled over five years is it averages out any short-term changes in income due to economic cycles or Portland's more recent minimum wage increase. Second, the median earnings reported by the ACS are based on what individuals report for their earnings regardless of whether they work full-time or part-time. As a result, these earnings may be skewed lower by individuals who work part-time, which may be more common for employment in the retail, food service, or accommodation sectors.

To balance these limitations, the median weekly wage data from the Maine DOL was also included in the analysis. The Maine DOL wage data is from the Quarterly Census of Employment and Wages (QCEW), which is based on employment and wage data reported to the Unemployment Insurance (UI) of the United States. The Maine DOL data also has some limitations. First, the data are only available at the industry level, so it is not possible to calculate the affordability gap for different occupations in the hotel sector. Second, the average weekly wage reported by the QCEW also does not differentiate between full-time and part-time employment. As a result, the weekly wage data reported by the Maine DOL may be skewed both by higher wage occupations and by part-time employment. The average weekly wage reported by Maine DOL was used to calculate yearly income based on full-time employment. This also assumes individuals employed in the accommodation sector can work full-time if they are willing and able to[ii].

Methodology

Methodologies used to calculate linkage fees vary, but in most cases the analysis begins with an estimation of the number of new employees associated with a typical development, in this case a hotel. In this methodology, a formula is used to calculate the affordability gap between what workers can afford to pay for housing and the average cost of market rate housing.

In Portland's case, a link is established between the creation of new jobs in the hotel sector and the increased demand for affordable housing through the following steps:

- **New Jobs.** Industry data was used to estimate the number of direct jobs that will be created by a new hotel with 180 units. According to the Urban Land Institute the typical hotel employs between 0.5-0.8 employees per hotel room. Using an average value of 0.65 employees per hotel room, it is estimated that a hotel with 180 rooms will employ 117 people. The current ratio of jobs per household was used to estimate how many households will be created by this new employment.

- **Households.** Currently there are 37,737 employed civilians aged 16 and over within the 30,211 total households in Portland. This means that on average there are 1.2 jobs per every household in Portland. Based on this ratio it is estimated that the 117 additional jobs created by a new hotel will create 94 new households in Portland. However, it is assumed employment in these households will be split up between different occupations, such as management, sales, service, and maintenance. The wages for each specific occupation may be higher or lower than the median wage for the hotel industry. Therefore, industry occupation employment and wage data examined from the ACS was used to estimate how many new households will be low income.

EMPLOYED POPULATION PER HOUSEHOLD 2016

	Portland	Cumberland County	Maine
Employed Civilian Population 16+	37,737	155,014	652,638
Total Households	30,211	117,871	551,109
Jobs/Household	1.2491	1.3151	1.1842

Source: American Community Survey 2016 5-year estimate

- **Jobs by Occupation.** Based on industry and occupation employment data from the ACS 64% of jobs in the hotel industry are service occupations, 19% of hotel jobs are management occupations, 13% of hotel jobs are sales and office occupations, and the remainder are maintenance and transportation occupations. The total number of jobs and households that will be created in each occupation was calculated by multiplying the share of hotel employment by occupation by the total number of new hotel jobs created.

NEW JOBS AND HOUSEHOLDS BY OCCUPATION CREATED BY NEW HOTEL EMPLOYMENT

	Share of Hotel Employment	Number of New Jobs	Number of New Households
Service	**64%**	**74**	**60**
Sales and Office	13%	15	12
Transportation	4%	4	3
Maintenance	1%	1	1
Management	19%	22	18
Total - All Occupations	100%	117	94

Source: American Community Survey 2016 5-year estimate; GPCOG Analysis

- **Household Income**. Median wage by occupation data for Cumberland County from the ACS was used to calculate the household income for each household in each occupation category. This calculation assumes 1 person in each new household works full-time in the hotel industry and any additional workers in the household earn the area median income:

NEW HOUSEHOLDS AND HOUSEHOLD INCOME BY OCCUPATION (ACS DATA)

	Number of New Households	Median Wage for Hotel Income Earner	Median Wage for Second Income Earner	Total Household Income
Service	**60**	**$18,109**	**$9,015**	**$27,124**
Sales and Office	**12**	**$30,444**	**$9,015**	**$39,459**
Transportation	**3**	**$31,695**	**$9,015**	**$40,710**
Maintenance	1	$33,421	$9,015	$42,436
Management	18	$52,910	$9,015	$61,925

Source: GPCOG Analysis and American Community Survey 2016 5-year estimates

Median wage by industry data from the Maine DOL was also used to calculate the average household income for the 94 new households created by hotel employment:

NEW HOUSEHOLDS AND HOUSEHOLD INCOME (MAINE DOL DATA)

	Number of New Households	Median Wage for Hotel Income Earner	Median Wage for Second Income Earner	Total Household Income
Accommodation	**94**	**$24,908**	**$12,164**	**$37,072**

Source: GPCOG Analysis and Maine DOL QCEW 2016

- **Affordability Gap.** These estimates for household income by occupation were compared to housing affordability data from the Maine State Housing Authority to show the difference between what the new households created by hotel employment earn and the minimum income needed to afford a two-bedroom apartment in Portland. These results show that households with Service, Sales and Office, and Transportation occupations have a household income that is lower than the minimum income needed to afford rental housing in Portland. This household affordability gap is largest ($14,987) for households with Service occupations, which also represent nearly 2/3 of households created by the new hotel employment.

AFFORDABILITY GAP ANALYSIS (ACS DATA)

	Number of New Households	Total Household Income	Income Needed to Afford Rent in Portland	Household Affordability Gap	Total Affordability Gap
Service	**60**	**$27,124**	**$42,111**	**$14,987**	**$892,820**
Sales and Office	**12**	**$39,459**	**$42,111**	**$2,652**	**$32,048**
Transportation	**3**	**$40,710**	**$42,111**	**$1,401**	**$4,856**
Maintenance	1	$42,436	$42,111	NA	$0
Management	18	$61,925	$42,111	NA	$0
Total					**$929,724**

Source: Maine State Housing Authority, 2017; American Community Survey 2016 5-year estimates

The household affordability gap using the median wage by industry data from the Maine DOL was also calculated:

AFFORDABILITY GAP ANALYSIS (MAINE DOL DATA)

	Number of New Households	Total Household Income	Income Needed to Afford Rent in Portland	Household Affordability Gap	Total Affordability Gap
Accommodation	**94**	**$37,072**	**$42,111**	**$5,039**	**$472,007**

Source: Maine State Housing Authority, 2017; Maine DOL QCEW 2016

- **Aggregate Affordability Gap.** The household affordability gap for each occupation was multiplied by the number of households with employment in each occupation to arrive at a total affordability gap that ranges between $472,007 and $929,724 per year. This number represents the difference between these households' ability to pay for their housing and the market cost of their housing based on the median monthly rent, for one year. In reality these

households may face higher rental housing costs since current Portland rents for new units are significantly higher than the median rent.

- **Final Calculation.** Dividing the affordability gap by the number of new hotel rooms results in an average affordability gap that ranges between $2,622 and $5,165 per room, or between $3.91 and $7.70 per square foot. Therefore, a fee between ***$3.90-$7.70 per square foot*** would cover a minimum justified housing affordability gap for the 94 new households created by a new 180-unit hotel employment for one year. This methodology assumes the median wage for a hotel income earner in the service industry, including full-time and part-time employees, is $18,109 based on US Census ACS data. If it is instead assumed that hotel service industry employees are working full-time at the City's minimum wage of $10.68/hour and making $22,241 annually, then the minimum justified fee would be between $2,622 and $3,806 per room or ***$3.90-$5.67 per square foot*** of hotel development for one year. However, this assumes individuals working in the service sector are able to procure full-time employment, which is not always the case[ii].

This example estimate represents the full cost of the affordability gap for employment in one hotel for one year as calculated by the proposed methodology. Multiple factors could potentially impact the demand for affordable housing and the City may determine a higher or lower percentage of this fee based on these variables. Furthermore, this fee could be re-evaluated periodically as circumstances such as inflation, rents, and rental housing supply change.

[i] Portland 2030 Housing Demand, GPCOG 2015

[ii] According to a 2016 study (https://www.epi.org/publication/still-falling-short-on-hours-and-pay-part-time-work-becoming-new-normal/#epi-toc-21) from the Economic Policy Institute the retail trade and leisure and hospitality sectors contributed to 63% of the growth in part-time employment and 54% of the growth in involuntary part-time employment from 2007-2015. Involuntary part-time employment is defined as individuals who are working part time because full time work could not be found or hours were reduced due to economic conditions (slack work).

MEMO

To: Kevin Kraft, Director of Planning & Urban Development
From: Kristina Egan, GPCOG Executive Director
Date: 3/18/25
Re: Hotel Linkage Fee Update

Introduction

In 2018, the City of Portland asked the Greater Portland Council of Governments (GPCOG) to assess the feasibility of a hotel linkage fee that could be used to help offset the cost of producing affordable housing for hotel employees. The resulting memo outlined the use of linkage fees for this purpose, proposed a methodology for calculating the fee, and provided a range of justifiable figures for implementation. Using this analysis, the City established inclusionary zoning requirements for hotels and an in-lieu fee of $3,806 per guest room. This figure has been adjusted annually in the time since its adoption. The fee-in-lieu for 2025 is $4,831 per guest room.

Recognizing significant market changes since 2018, the City of Portland requested an updated analysis in early 2025. The following memo replicates the original linkage fee methodology to the best extent possible using updated data.

Background

Linkage fees are tools cities can use to offset the impact of new commercial development on affordable housing availability and demand. Before implementing such a policy, communities typically conduct a study to identify the “nexus” between new development and the need for additional affordable housing. The assumption is that commercial growth brings new workers, some of whom may not earn enough to live in the city. This often forces households to seek housing outside the city, resulting in longer commutes and higher transportation costs. If adopted, a linkage fee is typically charged to developers as a condition of project approval, based on the development’s total square footage or number of units.

Data

Where possible, the hotel linkage fee range in this memo is based on the same data sources used in the original 2018 study. To maintain consistency, 2023 data was used across multiple sources, even when newer data was available in some cases.

Employment + Wage Data

This analysis relies on employment and wage data from the U.S. Census American Community Survey (ACS), which provides the most consistent workforce and wage estimates. The previous memo also incorporated wage data from the Maine Department of Labor as a point of comparison; however, the adopted hotel linkage fee was ultimately based on wage data from the ACS.

Housing Cost Data

The 2018 linkage fee study used rental data from the Maine State Housing Authority to establish a baseline housing cost, using a two-bedroom unit as a reference point (due to its ability to accommodate the assumed household size). However, in the time since, Maine Housing has stopped publishing rental data. As a result, this memo relies on several other readily available sources of rental data to estimate housing costs, including the Department of Housing and Urban Development's Fair Market Rent (FMR) Documentation System, the American Community Survey, and the City of Portland's Rent Board Report.

- **Fair Market Rent:** FMR represents the average cost of renting a moderately priced home, including utilities, in a specific area. It is used to set rent limits for housing assistance programs to ensure they align with current market conditions. The Portland, ME HUD Metro FMR Area includes municipalities in Cumberland County and parts of York County. Updated annually, FMR estimates are based on rental market surveys, American Community Survey data, and inflation adjustments.[1]
- **U.S. Census ACS Data:** The ACS provides median gross rent estimates by unit size, accounting for both rent and utilities when not already included. Data is based on five-year samples, which help ensure statistical reliability but smooth out short-term rent fluctuations. Estimates reflect both market-rate and subsidized rentals.[2]
- **City of Portland Rent Board Report:** These annual reports provide data on rental availability, city-wide rent prices, rental market trends, and board actions on rent increases, among other topics.[3]

Methodology

Linkage fee calculations typically estimate the number of new employees and households generated by a development, such as a hotel. Wage and rent data are then used to estimate the gap between what these workers can afford for housing and the average market rent. This memo presents that analysis for Portland, using the most recent and locally relevant data, through the following steps:

Number of New Jobs

To estimate job creation, industry data was applied to a 180-room hotel – chosen as a representative example based on an actual development. While staffing levels vary based on factors such as hotel size, service level, and operational needs, the original linkage fee study assumed a ratio of .65 employees per hotel room, based on numbers from the Urban Land Institute. Using this ratio, a 180-room hotel is expected to generate 117 jobs.

Number of New Households

The current ratio of jobs per household was then used to estimate the number of households represented by this new employment. Portland currently has 39,590 employed civilians aged 16 and over across 32,393 households[4], or an average of 1.22 jobs per household. Using this ratio, the 117 new jobs created by the example 180-room hotel would generate an estimated 96 new households.

Employment and Households by Occupation

The jobs held by hotel employees would span various occupations – management, sales, service, maintenance, etc.— with wages varying by role. To estimate how many of the households employed by a new hotel would be low-income, industry-specific employment and wage data from the American Community Survey was used. The American Community Survey groups Arts, Entertainment, Recreation, Accommodation, and Food Services together, reflecting industries tied to the service sector. While this broad category includes more than just hotel jobs, it offers the best available estimate for occupational distribution. Within this sector, approximately 56% of jobs are in service occupations, 31% in management, 7% in sales and office, 6% in transportation, and 1% in maintenance.[5]

The table below estimates the number of new employees and households created by occupation.

ESTIMATED NEW HOTEL JOBS AND HOUSEHOLDS BY OCCUPATION

	% of Service Sector Employment	# of New Hotel Employees[i]	# of New Households[ii]
Service	55.5%	65	53
Management	30.6%	36	29
Sales and Office	6.8%	8	7
Transportation	5.8%	7	6
Maintenance	1.2%	1	1
Total	100%	117	96

[i] *Calculated by multiplying the percentage of service sector employment by the total estimated 117 hotel employees.*
[ii] *Calculated by multiplying the percentage of service sector employment by the total estimated 96 households.*

Household Incomes

Household income estimates were calculated using Cumberland County's ACS median earnings data by occupation for 2023.[6] This approach reflects the broader region where hotel workers in Portland may reside. The one exception is for service workers, where the City of Portland's 2023 minimum wage of $14/hour was substituted for the ACS median wage. The household income calculations assume one person in each household works full time in the hotel industry and also assumes a second household member makes the area median earnings.[7] The table below presents these estimated household incomes by occupation.

ESTIMATED NEW HOUSEHOLDS AND HOUSEHOLD INCOME BY OCCUPATION (2023 ACS DATA)

	# of New Households	Median Wage for Hotel Employee	Median Wage for 2nd Income Earner[ii]	Total Household Income
Service[i]	53	$29,120	$10,899	$40,019
Management	29	$71,711	$10,899	$82,610
Sales and Office	7	$42,467	$10,899	$53,366
Transportation	6	$40,829	$10,899	$51,728
Maintenance	1	$50,572	$10,899	$61,471

[i] *The Service wage reflects Portland's 2023 minimum wage of $14/hour, as the Census estimate was below the legal minimum.*
[ii] *The second income earner's wage of $10,899 is based on 0.22 of the 2023 Census median earnings for all occupations in Cumberland County ($49,540), reflecting the estimated 1.22 employees per household.*

Affordability Gap

To create a range, the estimated household incomes for each occupation category were then compared to three different rent data sources to assess whether new hotel employees can afford a two-bedroom unit in Portland and to calculate the cumulative 'affordability gap.'

ESTIMATED AFFORDABILITY GAP: 2023 FAIR MARKET RENT FOR PORTLAND METRO AREA
[$1,859 for a two-bedroom unit]

	New Households	Household Income	Income Needed[i]	Affordability Gap (HH)	Total Gap
Service	53	$40,019	$79,671	$39,652	$2,101,556
Management	29	$82,610	$79,671	- $2,939	N/A
Sales and Office	7	$53,366	$79,671	$26,305	$184,135
Transportation	6	$51,728	$79,671	$27,943	$167,658
Maintenance	1	$61,471	$79,671	$18,200	$18,200
Total	96	--	--	--	$2,471,549
				Per Room	***$13,731***

[i]*Annualizing Fair Market Rent ($1,859 * 12 months = $22,308) and dividing by 0.28 yields $79,671, ensuring rent remains just below the 30% housing cost burden threshold.*

ESTIMATED AFFORDABILITY GAP: 2023 ACS MEDIAN GROSS RENT FOR PORTLAND
[$1,664 for a two-bedroom unit]

	New Households	Household Income	Income Needed[i]	Affordability Gap (HH)	Total Gap
Service	53	$40,019	$71,314	$31,295	$1,658,635
Management	29	$82,610	$71,314	- $11,296	N/A
Sales and Office	7	$53,366	$71,314	$17,948	$125,636
Transportation	6	$51,728	$71,314	$19,586	$117,516
Maintenance	1	$61,471	$71,314	$9,843	$9,843
Total	96	--	--	--	$1,911,630
				Per Room	***$10,620***

[i]*Annualizing ACS median rent ($1,664 * 12 months = $19,968) and dividing by 0.28 yields $71,314, ensuring rent remains just below the 30% housing cost burden threshold.*

ESTIMATED AFFORDABILITY GAP: 2023 CITY OF PORTLAND RENT BOARD
[$1,595 for a two-bedroom unit]

	New Households	Household Income	Income Needed[i]	Affordability Gap (HH)	Total Gap
Service	53	$40,019	$68,357	$28,338	$1,501,914
Management	29	$82,610	$68,357	- $14,253	N/A
Sales and Office	7	$53,366	$68,357	$14,991	$104,937
Transportation	6	$51,728	$68,357	$16,629	$99,774
Maintenance	1	$61,471	$68,357	$6,886	$6,886
Total	96	--	--	--	$1,713,511
				Per Room	***$9,520***

[i]*Annualizing ACS median rent ($1,595 * 12 months = $19,140) and dividing by 0.28 yields $68,357, ensuring rent remains just below the 30% housing cost burden threshold.*

Final Calculation

As shown on the previous page, dividing the total affordability gap by the 180 new hotel rooms results in an **estimated per-room affordability gap ranging from $9,520 to $10,620 to $13,731** depending on the rent data source used (City of Portland Rent Board, American Community Survey, or HUD Fair Market Rent). This estimate reflects the full annual affordability gap associated with the jobs generated by a single hotel room based on the methodology from the original 2018 study.

17 HOUSING

17.1 HOUSING PRESERVATION AND REPLACEMENT

17.1.1 Purpose

The purpose of the housing preservation and replacement ordinance is:

A. To promote and facilitate an adequate supply of housing, particularly affordable housing for all economic groups.

B. To limit the net loss of housing units in the city.

C. To preserve housing in zones where housing is permitted in the city for all residents in order to promote the health, safety, and welfare of its citizens.

17.1.2 Applicability

A. Except as otherwise provided in this section, the housing preservation and replacement ordinance shall apply to the loss of three or more dwelling units in a five-year period, provided that such dwelling units were a legally registered residential use as of July 1, 2002. For the purposes of this section, dwelling units shall be as defined in Article 3, but also include rooming units that people rent in or sleep in within lodging houses, dormitories, shelters, and sheltered care group homes.

B. Except as otherwise provided in this section, the housing preservation and replacement ordinance shall also apply to proposals that result in the loss of fewer than three dwelling units which were legally registered residential use as of July 1, 2002 for the purposes of creating surface parking.

C. For the purposes of this section, loss of dwelling units shall mean the elimination or conversion to nonresidential use of a dwelling unit and dwelling units that remain vacant for three years or more or are lost due to demolition unless the vacancy or demolition results from accidents outside of the owner's control, fire, natural disasters, or acts of war.

D. Determination of number of the dwelling units within a structure or structures and the number of units lost will be based on the records of the Building Authority indicating the legal, registered use of the property since July 1, 2002 through the time of application. The actual use of the property for purposes of applicability of this section may be rebutted by the owner by proof of documentary evidence including but not limited to photographs, letters, and sworn affidavits. The Planning Authority may conduct its own investigation of the actual use and shall determine the applicability of this section based on the totality of the evidence.

17.1.3 Exemptions

This section does not apply to:

A. Consolidation, elimination, or reconfiguration of one or more dwelling units within an existing structure, as long as all the resulting units remain as dwelling units after such consolidation, elimination, or reconfiguration, except as provided by (D) below. Conversion of a dwelling unit to a hotel or motel room shall not qualify for the exemption provided by this paragraph.

B. Legally nonconforming dwelling units existing in zones which no longer permit residential uses.

C. Property which has been ordered demolished by the City, pursuant to 17 M.R.S. § 2851, et seq., as amended, except where it is determined by

the Building Authority that the deterioration was caused by neglect or lack of maintenance.

D. Paragraph (A) above notwithstanding, the conversion to a nonresidential use of any dwelling units located on the ground floor of a building within a mixed-use zone.

17.1.4 Planning Authority approval required

Notwithstanding any other provision of this section, a proposal to demolish or to convert three or more dwelling units to a nonresidential use in a zone where such use is otherwise permitted must first obtain approval from the Planning Authority. In addition to any other requirements of the Land Use Code, the applicant must submit a statement certifying the number of dwelling units to be demolished or converted to nonresidential use, as well as a description of the characteristics of each of those units.

17.1.5 Tenant notification requirements

Prior to elimination as a result of demolition or conversion to nonresidential use, the owner shall:

A. Provide the Planning Authority a list containing the name of each tenant currently residing in the dwelling units to be demolished or converted to nonresidential use, as well as verification of compliance with tenant notice requirements of this subsection.

B. Deliver to each tenant who occupies such a dwelling unit a written notice to vacate the unit. The notice shall either be sent by certified mail, return receipt requested, or served in-hand. The notice will grant the tenant not less than 90 days from the date of receipt of the notice to vacate the unit.

C. File proof of service of the notice with the Planning Authority.

17.1.6 Housing replacement requirements

A. The Planning Authority shall require, as a condition of approval, that an owner shall replace any dwelling units that are demolished or converted to nonresidential use.

B. This requirement may be satisfied in any one of the following ways, which may be used in combination:

1. *Construction of units.* The construction of housing units within a new structure or a new addition either on site or off-site.

2. *Residential conversion.* The conversion of a nonresidential building to residential use.

17.1.7 Replacement unit requirement

In addition to the foregoing, all replacement units built pursuant to Subsection 17.1.6.B above shall:

A. Be located within the same United States census block group as the parcel from which the dwelling units are being removed or within 1,500 feet of the dwelling units being removed.

B. Not previously have been on the market as of the date of application.

C. Be situated within a development which has not been a candidate for site plan approval as of the date of the application.

D. Be comparable in size to the units replaced. For the purpose of this section, "comparable in size" means that the aggregate size of the replacement units will be no less than 80% of the size of the aggregate of the original units to be replaced and a similar bedroom mix.

17.1.8 Contribution to the Housing Trust Fund

A. The applicant may meet the requirements of this housing replacement ordinance by depositing $50,000 for each dwelling unit into the City's Housing Trust Fund.

B. Beginning on January 1, 2004 and annually thereafter, the amount of the contribution shall be adjusted by multiplying this amount originally deposited for each unit by a fraction, the denominator of which shall be the "Consumer Price Index for Urban Wage Earners and Clerical Workers ("CPI-W")," U.S. City Average, "All Items Index," as published by the United States Bureau of Labor Statistics ("the index") for January 1, 2003 year, and the numerator of which shall be the index for the same month in each subsequent year. In the event that the index is not then in existence, the parties shall use such equivalent price index as is published by any successor governmental agency then in existence, or, if none, then by such nongovernmental agency as may then be publishing an equivalent price index, in lieu of and adjusted to the index. If the index shall cease to use 1982-84 equals 100 as the basis of calculation, or if a substantial change is made in the terms or number of items contained in the index, the base index shall be adjusted to conform to such change, using such computation thereof, if available, as shall be employed by the United States Department of Labor in computing same. Notwithstanding anything herein to the contrary, contributions made after January 1, 2004 shall not be less than the amount originally required to be deposited for each rooming or dwelling unit.

17.1.9 Performance guarantee

Owners or affiliates must post a performance guarantee in the form of a letter of credit, or other security acceptable to the City attorney, in the amount equivalent to the amount the applicant would have been required to contribute to the City's Housing Trust Fund if the applicant had chosen that option pursuant to Subsection 17.1.8. Such a performance guarantee shall be valid for no more than three years, after which the full amount due shall be provided to the City's Housing Trust Fund if replacement units satisfying the conditions of this housing replacement ordinance do not have certificates of occupancy.

17.1.10 Partial waiver of replacement requirements

A. Any owner who has applied for site plan review for elimination or conversion to nonresidential use of dwelling units may apply to the Zoning Board of Appeals for a partial waiver from the housing replacement requirements of this section. Such waiver may be a downward adjustment of up to 50% of the owner's housing replacement obligation if the owner establishes to the board's satisfaction that:

1. The proposed development is consistent with the Comprehensive Plan.
2. The proposed development provides significant value and benefit to the immediate and surrounding neighborhood, including, but not limited to, community enhancement, social benefits or job creation.
3. The applicant demonstrates with objective evidence that the imposition of the requirements of this section would impose such an economic burden upon the project relative to its scope that it renders the project impossible to develop.
4. The requested relief does not constitute a grant of a special privilege inconsistent with the limitations upon similar properties.

B. The Zoning Board of Appeals must make positive findings on each of the four criteria above in order for any such adjustment to be valid. An applicant aggrieved of a decision of the Zoning Board of Appeals may appeal a decision under this subsection pursuant to the provisions of Article 2.

17.1.11 Effect of other City ordinances

A. Nothing in this section shall permit the demolition or conversion to nonresidential use of dwelling units in residential property protected by Article 16, except as permitted by that ordinance.

B. A conditional zone may not be used to circumvent the application of this section. The terms of this section shall apply to any conditional zone which involves dwelling units affected by this section. Notwithstanding the foregoing, nothing herein shall be deemed to prevent the City and the applicant from agreeing to terms which exceed those imposed by this section by means of a conditional zone.

17.1.12 Appeals

Any applicant aggrieved by a decision of the Planning Authority under this section may appeal to the Zoning Board of Appeals within 30 days of that decision.

17.2 AFFORDABLE HOUSING

17.2.1 Purpose

It is in the public interest to promote an adequate supply of housing that is affordable to a range of households at different income levels. Therefore, the purpose of this section is to offer incentives to developers to include units of affordable housing within development projects and to require the inclusion of affordable housing units in development projects in certain contexts. In so doing, this section will assist the city in meeting its comprehensive goals for affordable housing, in preventing the overcrowding and deterioration of the limited supply of affordable housing, and promote the health, safety, and welfare of its citizens.

17.2.2 Affordable housing incentives

A. Eligible projects. Under this subsection, eligible projects shall include any development project:

1. That is permissible under the provisions of this Land Use Code in the zone in which it is proposed.

2. That creates new dwelling units, among which is at least one low-income or workforce housing unit for rent or sale, through new construction, substantial alteration of existing structures, adaptive reuse or conversion of a nonresidential use to residential use, or any combination of these elements. Affordable housing units for sale or rent may not differ in exterior design from other units within an eligible project.

B. Reduction of fees. Notwithstanding any other provision of this Land Use Code or Chapter 6 to the contrary, development fees, including site plan review and inspection fees, subdivision review and inspection fees, impact fees, administrative fees, and construction and permit fees as described in Chapter 6 of the City of Portland Code of Ordinances, shall be reduced by the City for an eligible project in the manner described in Table 17-A. Development

TABLE 17-A: AFFORDABLE HOUSING FEE REDUCTIONS

% of New Units That are Low-Income or Workforce	Development Fee Discount	Cost of Work (Building Permit) Fees
10% up to but not including 15%	10% reduction	$9.90 per $1,000
15% up to but not including 20%	15% reduction	$9.35 per $1,000
20% up to but not including 25%	20% reduction	$8.80 per $1,000
25% or more	25% reduction	$8.25 per $1,000

TABLE 17-B: BONUSES FOR ELIGIBLE PROJECTS

% Low-income or Workforce Units	Density Permitted[1]
10-19%	1.1 x base
20-29%	1.25 x base
30-49%	1.3 x base
50-74%	2.5 x base
>75%	2.5 x base

[1] "Base" is the number of units allowed under the zoning without this bonus but with any other bonuses applied.

fees do not include any fees charged for review conducted by any party other than the City.

C. **Expedited review.** The Planning Authority shall perform its review of an eligible project in as expedited a manner as is practical, without impairing the scope or thoroughness of the review. The Planning Authority may adopt administrative procedures to prioritize review of eligible projects and facilitate this expedited review. The Planning Board shall make its best efforts to give priority in scheduling workshops and public hearings related to any plans or applications required for an eligible project that are within the Planning Board's jurisdiction, without impairing the scope or thoroughness of its review. At the conclusion of these public meetings, the Planning Board shall promptly issue a decision on all such plans and applications before it for consideration.

D. **Density and height bonuses.** Notwithstanding any other provision of this Land Use Code to the contrary, in order to encourage low-income and workforce units in areas prioritized for growth, eligible projects as defined under Subsection 17.2.2 may avail themselves of the following options:

1. *Density bonuses.* The maximum number of units that would otherwise be allowed under this Land Use Code shall be increased for an eligible project in the manner described in Table 17-B, applicable where residential is allowed as a permitted or conditional use in mainland zones.
2. *Height bonuses.* In mixed-use zones, the TOD zones, and the RN-6, for eligible projects over ten units in size in which over 75% of units are low-income or workforce units, maximum heights as permitted under Article 7 shall be increased by 10 feet.
3. *Unit size.* In order to be eligible for this subsection, the low-income and workforce housing units must meet Subsections 17.2.3(C)(2), (3), and (4).
4. *Term of affordability.* Affordable units under this subsection shall be deed-restricted to remain affordable for 30 years or the longest term permitted under federal, state, and local laws, whichever is longer. Such deed restrictions shall be recorded in the Cumberland County Registry of Deeds.

17.2.3 Ensuring workforce housing

A. Purpose. Based on the City's Comprehensive Plan and the City's 2015 housing study, it is in the public interest to promote an adequate supply of housing that is affordable to a range of households at different income levels. The purpose of this subsection is to ensure that housing developments over a certain size provide a portion of workforce housing units and, by doing so, promote the health, safety, and welfare of Portland citizens.

B. Applicability. This subsection shall apply to site plan applications that create ten or more new dwelling units for rent or for sale through new construction, substantial alteration of existing structures, adaptive reuse or conversion of a nonresidential use to residential use, or any combination of these elements. This subsection shall not apply to projects that otherwise meet or exceed the standards of 17.2.3(C).

C. Standards. Development projects subject to this subsection shall meet to the following requirements:

1. At least 25% of the units in the project shall meet the definition of workforce housing unit for sale or for rent as defined in Article 3. The project shall have the option of paying a partial fee-in-lieu as per (5) below or providing an additional unit on-site for any fractional value.
2. Projects shall not be segmented to avoid compliance with these provisions.
3. Workforce units must be integrated with the rest of the development, must use a common entrance in the case of mixed market rate and workforce buildings, must provide no indication from the exterior or from areas inside the respective buildings that these units are workforce housing units, and must demonstrate general parity in unit design, finishes, and amenities between market and workforce units in the development. Applications shall include a narrative that addresses parity of workforce and market rate units, a description of workforce and market rate unit attributes and amenities, phasing if applicable, and integration into the respective building and site design.
4. Workforce units need not be the same size as other units in the development but the cumulative number of bedrooms in such units shall be no less than 25% of the total number of bedrooms in the development.
5. As an alternative to providing workforce housing units, projects may pay a fee-in-lieu of some or all of the units. In-lieu fees shall be paid into the Housing Trust Fund. The fee for affordable units not provided shall be $150,000 per unit, adjusted annually in the same way as the fee under Subsection 17.1.8.
6. Workforce housing units for sale, if converted to workforce housing units for

TABLE 17-C: MINIMUM TERM OF AFFORDABILITY FOR REQUIRED WORKFORCE UNITS

% of Workforce Units Provided	Minimum Term of Affordability
25%	30 years
50%	20 years
100%	10 years

rent, shall become subject to the income limits and other requirements of such units.

7. The term of affordability for the required 25% workforce units provided shall be defined as shown in Table 17-C.
8. Projects shall be subject to an affordable housing agreement with the City of Portland, unless a project is otherwise subject to such an agreement requiring an equal or greater percentage of affordable units at an equal or lower income target level than required by this section.

D. Density and height bonuses. Projects that are subject to this subsection shall be eligible for density and height bonuses under Subsection 17.2.2(D).

E. Implementation guidance. The Housing & Economic Development Department shall provide guidance on income verification methods, affordable housing agreements, and subsequent monitoring requirements.

F. Reporting to City Council. In conjunction with the annual report on the Housing Trust Fund, the Planning Authority shall annually report on developments subject to this subsection, the number of units produced, the amount of fee-in-lieu collected, and the overall effectiveness of this subsection in achieving its stated purpose.

17.2.4 Inclusionary zoning for hotel projects

A. Purpose. This subsection is based on City analysis, most specifically the analysis documented in the Greater Portland Council of Government study *Proposed Hotel Linkage Fee: Supportable Range* dated August 29, 2018, that finds that new hospitality developments create a need for new affordable housing. This need is the result of the fact that hospitality developments necessarily create a number of jobs that do not pay employees at a rate sufficient to allow those employees to afford market-rate housing in the City of Portland.

B. Hotel projects. For the purposes of this subsection, hotel projects shall include any hotel as defined in Article 3 consisting of 10 or more guest rooms for rent to transient guests or to extended stay guests of up to six months. Any expansion of an existing hotel by 10 or more rooms within any five-year period will also be considered a hotel project.

C. Low-income housing minimum. All hotel projects shall provide one unit of low-income housing for rent in the City of Portland for every 28 rooms in the hotel project, which shall meet the standards outlined in Subsections 17.2.3(C)(2), (3), and (4) and in the implementing regulations governing low-income units. Such units shall contain two bedrooms and be a minimum of 900 SF in floor area. This amount shall be rounded up to the nearest increment of 28 rooms. These units shall be deed restricted for the longest period permitted by law, shall not be used for short-term rentals of less than 30 days, and must be provided with distinct entrances from the street to delineate them from the hotel itself.

D. Fee-in-lieu alternative. As an alternative to providing low-income housing units under Subsection 17.2.4(C) above, a hotel project may pay a fee-in-lieu of $3,806 per hotel guest room. This amount shall be paid into the City's Housing Trust Fund and used for the purposes set forth in the ordinance and regulations applicable to that trust.

E. **Annual adjustments.** The amounts in Subsection 17.2.4(D) above shall be adjusted annually in the same way as the fee under Section 17.1.8.

F. **Implementation guidance.** The Housing & Economic Development Department shall provide guidance on income verification methods, affordable housing agreements, and subsequent monitoring requirements.

17.3 JILL C. DUSON HOUSING TRUST FUND

17.3.1 Purpose

The purpose of enacting this section is:

A. To establish a City of Portland Housing Trust Fund for the promotion, retention, and creation of an adequate supply of housing, particularly affordable housing, for all economic groups and to limit the net loss of housing units in the city.

B. To serve as a vehicle for addressing very low, low, and moderate income housing needs through a combination of funds as set out in this article.

17.3.2 Establishment of the Jill C. Duson Housing Trust Fund

The City Council shall establish a special revenue account under the name "City of Portland Jill C. Duson Housing Trust Fund" (Housing Trust Fund). Deposits into the fund shall include:

A. Contributions from the City's housing replacement ordinance under Subsection 17.1.8.

B. In-lieu fees under Subsections 17.2.3 and 17.2.5.

C. Funds appropriated to be deposited into the fund by vote of the City Council.

D. Voluntary contributions of money or other liquid assets to the fund.

E. Any federal, state, or private grant or loan funds provided to the fund.

F. Interest from fund deposits and investments.

G. Repayments of loans made from the fund.

17.3.3 Management of the trust fund

The City Manager, or their designee, shall serve as the manager of the Housing Trust Fund. The responsibilities of the manager, subject to the orders of the City Council, shall include:

A. Maintaining the financial and other records of the Housing Trust Fund.

B. Disbursing and collecting Housing Trust Fund monies in accordance with the Housing Trust Fund annual plan.

C. Monitoring the use of monies distributed to successful applicants for Housing Trust Fund support to assure on-going compliance with the purposes of the fund and the conditions under which these monies were granted or loaned.

17.3.4 Housing Trust Fund annual plan

A. Each fiscal year, the City Council shall adopt a Housing Trust Fund annual plan. The City Manager shall submit to the City Council a recommended Housing Trust Fund annual plan, utilizing the revenues of the Housing Trust Fund as well as any other funds the manager may propose as appropriate. The housing committee of the City Council or such other committee as the council shall designate shall conduct public hearings on the recommended plan and refer the matter to the council for action.

B. The Housing Trust Fund annual plan shall include:

1. A description of all programs to be funded in part or in full by the Housing Trust Fund.
2. A description of how funds from the Housing Trust Fund will be distributed among very low-income, low-income and moderate-income households.
3. The amount of funds budgeted for programs funded in part or in full from the Housing Trust Fund.

C. Priority for the expenditure of funds collected pursuant to Section 17.1 shall be given to the creation of new housing stock, through either new construction or conversion of nonresidential buildings to residential use.

17.3.5 Distribution and use of the Housing Trust Fund's assets

A. All distribution of principal, interest, or other assets of the Housing Trust Fund shall be made in furtherance of the public purposes set out in Section 17.1.

B. During each year, the Housing Trust Fund shall disburse as grants or loans so much of the Housing Trust Fund's assets as the City Council in its discretion has approved in the Housing Trust Fund annual plan.

C. Funds shall not be used for City administrative expenses.

D. Funds shall not be used for property operating expenses or supporting services.

E. No grants or loans shall be awarded by the Housing Trust Fund to corporations, partnerships, or individuals who are delinquent at the time of application in the payment of property taxes or other fees to the City of Portland, who have been convicted of arson, who have been convicted of discrimination in the sale or lease of housing under the fair housing laws of the State of Maine, or who have pending violations of current City electrical, plumbing, building, or housing codes or zoning ordinances.

17.3.6 Term of affordability

A. Whenever funds from the Housing Trust Fund are used for the acquisition, construction, or substantial rehabilitation of an affordable rental or cooperative unit, the City of Portland shall impose enforceable requirements on the owner of the housing unit that the unit remain affordable for the remaining life of the housing unit, assuming good faith efforts by the owner to maintain the housing unit and rehabilitate it as necessary. The remaining life of the housing unit shall be presumed to be a minimum of 30 years.

B. Whenever funds from the Housing Trust Fund are used for the acquisition, construction, or substantial rehabilitation of ownership housing, the City of Portland shall impose enforceable resale restrictions on the owner to keep the housing unit affordable for the longest feasible time, while maintaining and equitable balance between the interests of the owner and the interests of the City of Portland.

C. The affordability restriction requirements described in this subsection shall run with the land and the City of Portland shall develop appropriate procedures and documentation to enforce these requirements and shall record such documentation in the Cumberland County Registry of Deeds.

17.4 CONDOMINIUM CONVERSION

17.4.1 Purpose

The purpose of this section is to regulate the conversion of rental housing to condominiums, to minimize the potential adverse impacts of such conversion on tenants, to ensure that such converted housing is safe and decent, and to maintain a reasonable balance of housing alternatives within the city for persons of all incomes.

17.4.2 Applicability

This section shall apply to the conversion of any rental unit to a condominium unit. For the purposes of this section, developer shall mean any person or other legal entity, but not including an established lending institution unless it is an active participant in a common promotional scheme, who, whether acting as principal or agent, records a declaration of condominium that includes real estate, any portion of which was previously a rental unit.

17.4.3 Protection of tenants

A. Notice of intent to convert. A developer shall give to each tenant, meaning any occupant in lawful possession of a rental unit, whether by lease, sublease, or otherwise, written notice of intent to convert at least one 120 days before the tenant is required by the developer to vacate. If a tenant has been in possession of any unit within the same building for more than four consecutive years, the notice period shall be increased by 30 additional days for each additional year, or fraction thereof, to a maximum of 240 additional days. The notice shall set forth specifically the rights of tenants under (A), (B), and (C) of this subsection and Subsection 17.4.4, and shall contain the following statement:

If you do not buy your apartment, the developer of this project is required by law to assist you in finding another place to live and in determining your eligibility for relocation payments. If you have questions about your rights under the law, or complaints about the way you have been treated by the developer, you may contact the Department of Permitting & Inspections, City of Portland, 389 Congress Street, Portland, Maine 04101.

B. If the notice specifies a date by which the tenant is required to vacate, the notice may also serve as a notice of termination under the applicable law of forcible entry and detainer, if it meets the requirements thereof. The notice shall be hand delivered to the tenant or mailed, by certified mail, return receipt requested, postage prepaid, to the tenant at the address of the unit or such other address as the tenant may provide. The notice shall be effective when actually received. No tenant may be required by a developer to vacate without having been given notice as required herein, except for the reasons specified in the applicable law of forcible entry and detainer, and in accordance with the procedures thereof. The terms of a tenancy, including rent, may not be altered during the notice period, except as expressly provided in a preexisting written lease. If, within 120 days after a tenant is required by a developer to vacate, the developer records a declaration of condominium without having given notice as required herein, the developer

shall be presumed to have converted in violation of this article.

C. **Option to purchase.** For a 60-day period following the giving of notice as required in Subsection 17.4.3(A), the developer shall grant to the tenant an exclusive and irrevocable option to purchase the unit of which the tenant is then possessed, which option may not be assigned. If the tenant does not purchase or contract to purchase the unit during the 60-day period, the developer may not convey or offer to convey the unit to any other person during the following 180 days at a price or on terms more favorable than the price or terms previously offered to the tenant, unless the more favorable price or terms are first offered exclusively and irrevocably to the tenant for an additional 60-day period. This subsection shall not apply to any rental unit that, when converted, will be restricted exclusively to nonresidential use. If, within two years after a developer records a declaration of condominium, the use of any such unit is changed such that but for the preceding sentence, this subsection would have applied, the developer shall be presumed to have converted in violation of this article.

17.4.4 Relocation payments

If the tenant does not purchase the unit, the developer shall, before the tenant is required by the developer to vacate, make a cash payment to the tenant in an amount equal to the amount of rent paid by the tenant for the immediately preceding two months, provided that this requirement shall not apply to any tenant whose gross income exceeds 80% of the median income of the Portland SMSA, adjusted for family size, as determined by the U.S. Department of Housing and Urban Development at the time notice is given as required in Subsection 17.4.3. Additionally, the developer shall, upon demand, provide assistance to the tenant in the form of referrals to other reasonable accommodations and in determining the tenant's eligibility for relocation payments as provided herein.

17.4.5 Conversion permit

Before conveying or offering to convey a converted unit, the developer shall obtain a conversion permit from the Building Authority. The permit shall issue only upon receipt of a completed application therefore in a form to be devised for that purpose, payment of a fee of $25,000 per converted unit, to be adjusted annually in the same way as the fee under Chapter 14, Section 17.1.8 of this code, at least $1,000 of which shall be appropriated to the Housing Safety Office for the administration and enforcement of the Rent Stabilization Ordinance, Chapter 6, Articles XII and XIII of this code, and the remainder of which shall be paid into the Jill C. Duson Housing Trust Fund, and a finding, upon inspection, that each unit, together with any common areas and facilities appurtenant thereto, is in full compliance with all applicable provisions of Chapter 6, Articles II, III, and V and Chapter 10, Article II of the City of Portland Code of Ordinances, and the Life Safety Code as adopted by the state. The developer shall post a copy of the permit in a conspicuous place in each unit and shall make copies available to prospective purchasers upon request.

17.4.6 Variation by agreement

No provision of or right conferred by this Section 17.4 may be waived by a tenant, by agreement or

otherwise, and any such waiver shall be void. Any attempt to require, encourage, or induce a tenant to waive any provision hereof, or right conferred hereby, shall be a violation of this article. Nothing herein shall be construed to void any term of a lease which offers greater rights than those conferred hereby.

17.5 RELOCATION OF DISPLACED TENANTS

17.5.1 Purpose

The purpose of this section is to encourage the retention of a diverse housing supply throughout the downtown and in areas readily accessible to the downtown, to ensure that persons displaced as the result of redevelopment of residential units to nonresidential uses within the B-3 Downtown Business zone are treated fairly and consistently, and to ensure that persons so displaced will be relocated at the reasonable expense of the developer to comparable housing at a location providing comparable access to services and amenities.

17.5.2 Notice and eligibility for relocation assistance

When a proposed development will result in the displacement of residents of an existing structure, the developer of the property shall give all tenants written notice as set forth below and shall provide relocation assistance as set forth below for any tenant whose gross income is 80% or less of the median income of the Portland SMSA, adjusted for family size, as determined by the U.S. Department of Housing and Urban Development at the time the developer gives the tenant written notice of intent to cause removal of the residential unit. Such written notice shall be given to the tenant at least 120 days before the tenant shall be required to vacate the premises and shall contain the following statement:

> *The developer of this project is required by law to assist you in finding another place to live and in determining your eligibility for relocation payments. If you have questions about your rights under the law, or complaints about the way you have been treated by the developer, you may contact the Department of Planning and Urban Development, City of Portland, 389 Congress Street, Portland, Maine 04101.*

17.5.3 Relocation assistance for all tenants

The developer shall provide, upon demand, assistance to all tenants who will be displaced by the development in the form of referrals to other reasonable accommodations and in determining the tenants' eligibility for relocation payments as provided herein. The developer shall make relocation payments to eligible tenants in accordance with the schedule adopted by the City Council in Subsection 17.5.4.

17.5.4 Schedule of relocation payments for eligible tenants

The developer shall, before the tenant is required by the developer to vacate, make a cash payment to the tenant in an amount equal to the amount of rent paid by the tenant for the immediately preceding two months.

Order 134-18/19
Passage: 9-0 on 1/23/2019 Effective 2/22/2019

PIOUS ALI (A/L)
NICHOLAS M. MAVODONES, JR (A/L)

AMENDMENT TO PORTLAND CITY CODE CHAPTER 14
RE: HOTEL PROJECT INCLUSIONARY ZONING

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF PORTLAND, MAINE IN CITY COUNCIL ASSEMBLED AS FOLLOWS:

That Chapter 14, Sections 14-484, 14-485 and 14-488.1 is hereby amended to read as follows:

Sec.14-484. Purpose.

It is in the public interest to promote an adequate supply of affordable housing for the city's residents. The purpose of this division therefore is to offer incentives to developers to include units of affordable housing within development projects, thereby mitigating the impact of market rate housing construction, or the demonstrated increase in affordable housing needs resulting from the creation of new lower-income jobs, on the limited supply of available land for suitable housing and helping to meet the housing needs of all economic groups within the city. The city believes that this division will assist in meeting the city's comprehensive goals for affordable housing, in the prevention of overcrowding and deterioration of the limited supply of affordable housing, and by doing so promote the health, safety and welfare of its citizens.

...

Sec. 14-485. Definitions.

...

Eligible project means a development project:

...

(d) Projects shall not be considered "eligible projects" solely because they are subject to Section 14-487 ("Ensuring Workforce Housing").

Hotel Project is any hotel, inn or motel, as defined in Section 14-47 of Chapter 14 of the Portland City Code, consisting of 10 or more guest rooms for rent. Any such development that exists prior to the effective date of this Section but expands by 10 or more rooms within any 5 year period will also be considered a hotel project.

...

14-488.1 Inclusionary Zoning for Hotel Projects

(a) **Purpose:** This section is based on City analysis, most specifically the analysis documented in the Greater Portland Council of Government study "Proposed Hotel Linkage Fee: Supportable Range" dated August 29, 2018, that finds that new hospitality developments create a need for new affordable housing. This need is the result of the fact that hospitality developments necessarily create a number of jobs that do not pay employees at a rate sufficient to allow those employees to afford market-rate housing in the City of Portland.

(b) **Hotel Projects Conditional Uses:** Notwithstanding anything to the contrary in Chapter 14, all hotel projects are conditional uses subject to Planning Board review on the condition that they comply with the requirements of this Section 14-489.

(c) **Low Income Housing Minimum.** All hotel projects shall provide one unit of Low Income Housing for rent in the City of Portland for every 28 rooms in the hotel project which shall meet the standards outlined in Section 14-487 and in the implementing regulations governing Low Income Units. This amount shall be rounded up to the nearest increment of 28 rooms. These units shall be deed restricted for the longest period permitted by law; shall not be used for Short Term Rentals of less than 30 days; and must be provided with distinct entrances from the street to delineate them from the hotel itself.

(d) **Fee-in-Lieu Alternative:** As an alternative to providing Low Income Housing units under subsection (c) above, a Hotel Project may pay a fee-in-lieu of $3,806 per hotel guest room. This amount shall be paid into the City's Housing Trust

and used for the purposes set forth in the ordinance and regulations applicable to that trust.

(e) **Annual Adjustments:** The amounts in (d) above shall be adjusted annually in the same way as the fee under Division 29 for Housing Replacement.

(f) **Regulations:** The Planning Board may promulgate implementing regulations based on this ordinance.

(g) **Applicability:** Notwithstanding the provisions of 1 M.R.S. § 302, Sec. 14-489 shall apply retroactively and include any and all actions and proceedings pending on September 26, 2018 or thereafter.

City of Portland | Planning & Urban Development Department
Kevin D. Kraft, AICP *Director*

Staff Memo To:
Housing & Economic Development Committee
Councilor Pious Ali, Chair

MEETING DATE
April 15, 2025

AGENDA ITEM
Agenda Item 2 – Hotel Inclusionary Zoning Ordinance

PURPOSE
An initial discussion on the history, background, and development trends related to the City's hotel inclusionary zoning ordinance, with the committee providing direction on next steps.

COMMITTEE WORK PLAN/CITY COUNCIL GOAL ALIGNMENT
On December 16, 2024, the City Council established its 2025 Common Goals, outlining policy priorities and guiding the development of Council committee work plans. The Housing & Economic Development Committee (HEDC) identified the review and potential revision of the hotel inclusionary zoning ordinance (Chapter 14, Section 17.2.4) as a policy matter aligned with Council Common Goal #2: "*The Council will work to implement solutions to the housing crisis, including building more working class housing, improved support for the unhoused community such as an overdose prevention center as well as continued support for warming shelters. Additionally conduct independent assessment of Efficiencies, Outcomes, and Expenditures.*"

At its January 21, 2025 meeting, the HEDC established its 2025 work plan, which includes reviewing and considering potential revisions to the City's existing hotel inclusionary zoning ordinance.

BACKGROUND/ANALYSIS
On November 4, 2024, the City Council passed Order 77-24/25 (6-2, Mayor Dion & Councilor Rodriguez - No, Councilor Fournier Absent) (Attachment A) establishing a 180-day moratorium on new hotel projects in the City of Portland. The moratorium went into effect on December 4, 2024 and is set to expire on June 2, 2025.

Portland's Hotel Inventory & Development Trends
According to lodging license data from the Maine Department of Health and Human Services, there are currently 41 licensed lodging places in the City of Portland, with approximately 3,500 total rooms. 68% of these hotels have been developed since 2000, and 18 (44%) have been developed since 2010.

History of Hotel IZ policy
In 2019, the City proposed and established a hotel inclusionary zoning (IZ) ordinance. The requirement applies to hotel projects with 10 or more rooms and any hotel expansions of 10 or more rooms within any five-year period. To meet the requirement, hotel projects can provide one unit of low-income housing for rent within the city for every 28 hotel rooms. Portland considers a low-income housing unit to mean one that is rented to households earning 80% AMI or less. The other alternative is for a hotel project to pay a linkage fee (fee-in-lieu) with a 2019 basis of $3,806 per room, which is deposited into the City's Housing Trust Fund at the time the Certificate of Occupancy is issued. The linkage fee is adjusted annually; the 2025 hotel inclusionary fee-in-lieu is $4,831 per guest room.

The impetus for the creation of a hotel inclusionary zoning ordinance was a steady rise in hotel/inn/motel development between 2012 and 2018. Local and national data indicated that job creation in the hospitality industry would involve a considerable amount of workforce households at average wage rates below what was required to afford housing in Portland at the time. As a result of the specifics of the industry's profile and anticipating an increase in hotel/inn/motel development in the coming years, the hotel inclusionary zoning ordinance was adopted on January 23, 2019, Order 134-18/19 (Attachment B) and became effective on February 22, 2019.

Hotel development post IZ policy
Since adoption of the ordinance in 2019, 14 projects have been approved. Of the 14 projects three hotel projects approved in that timeframe were not subject to hotel inclusionary zoning requirements (Table 1). One project was too small (<10 rooms) to trigger the requirement and the other two were products of approved master development plans (Thompsons Point and Portland Foreside), which gave them pending proceeding status under the pre-inclusionary zoning code.

Table 1: Approved Hotel Projects Exempt From Hotel IZ Regulations

Address	Common Name	Approval Year	Total Rooms	Status
148 Coveside Drive	Diamond Cove	2024	8	Approved
Thompson's Point	Forefront Hotel	2023	148	Under Construction
58 Fore Street	Portland Foreside	2023	128	Approved
Total	**3**		**284**	

Of the 11 remaining projects (Table 2), four have been constructed and completed, resulting in a combined total of 223 rooms. Each of these projects elected to contribute to the Housing Trust Fund, generating a total of $834,373 in contributions. Two additional projects are currently under construction: The Docent's Collection at 178–184 Middle Street, which will contain 19 rooms and contribute $86,602 into the Housing Trust Fund and 215 Commercial Street, which will contain 15 rooms and contribute $70,380 into the housing trust fund. Both are smaller-scale renovations of

former office spaces in the Old Port. The remaining five projects have received approval but have not yet begun construction. If built, the five remaining projects would add an additional 623 new rooms. If all 11 projects are constructed as approved, they would collectively generate approximately $3.8 million in contributions to the Housing Trust Fund and 880 hotel rooms.

Table 2: Approved Hotel Projects Subject To Hotel IZ Regulations

Address	Common Name	Approval Year	Total Rooms	Fee-in-lieu	Status
*121 Middle Street	Docent's Collection	2019	26	$72,314	Construction Complete
1 Center Street	Canopy by Hilton	2019	135	$513,810	Construction Complete
754 Congress Street	The Longfellow Hotel	2020	48	$182,688	Construction Complete
54 York Street	The Weldon Hotel	2024	14	$65,562	Construction Complete
178-184 Middle Street	Docent's Collection	2023	19	$86,602	Under Construction
215 Commercial Street	-	2024	15	$70,380	Under Construction
477 Congress Street	Time & Temperature	2023	181	$849,252	Approved
1060 Westbrook Street	Hyatt Jetport	2024	119	$558,348	Approved
465 Congress Street	Monument Hotel	2024	92	$431,664	Approved
385 Congress Street	Fathom	2023	179	$815,882	Approved
245 Commercial Street	Portland Harbor Hotel Expansion	2024	52	$243,984	Approved
TOTAL	**11**		**880**	**$3,890,486**	

121 Middle Street – Awaiting fee-in-lieu payment for 7 additional rooms, which are included in the total room count.

In terms of location, of the 14 projects approved since the implementation of the Hotel IZ policy, approximately 57%, a total of eight projects (699 rooms) are located in the City's B-3 Downtown Business zone. This zone spans from roughly Franklin Street to State Street and includes the Old Port, Arts District, and abuts the waterfront areas recognized as the region's core for arts, culture, commerce, and civic life, where hotel development is both anticipated and encouraged. For comparison, between 2019 and 2024, the City also approved 1,695 residential dwelling units within the B-3 zone, reflecting strong and balanced growth in both hotel and residential

development. This trend aligns with the goals outlined in *Portland's Plan 2030*, which reinforces downtown as the region's primary hub of activity for the region.

The remaining hotel projects are also located in areas where hotel development is generally expected. Two projects are in the B-5 zone—one at Thompson's Point and the other at 54 York Street, just outside the B-3 zone near Commercial Street and the Old Port/Waterfront Central neighborhoods. One project, part of the master development plan for the Portland Foreside mixed-use development, is located in the B-6 zone in the Eastern Waterfront. Another is situated in the Airport Business (A-B) zone, an area commonly associated with airport-related uses and business travel. Finally, one project was approved as part of a contract zone on Great Diamond Island.

Approved Hotel Projects by Zone (2019–2024)

Zone	Total Hotel Projects	Total Rooms Approved
B-2b	1	48
B-3	8	699
B-5	2	162
B-6	1	128
A-B	1	119
Contract Zone	1	8
TOTAL	**14**	**1,164**

In terms of size, there is no clear evidence of a significant trend toward smaller hotel projects (<10 rooms) as a means of avoiding Hotel IZ requirements. The average size of hotels operating prior to the adoption of the IZ policy was 89 rooms, compared to an average of 83 rooms for hotels approved since its implementation. Only one project approved since 2019 has been under 10 rooms. However, a notable emerging trend in hotel development is the rise of smaller-scale hotels with fewer than 30 rooms, offering an alternative to traditional accommodations. These boutique-style properties typically feature apartment-style suites with fully equipped kitchens, separate dining and living areas, and private bedrooms. They often operate with limited on-site staff, minimal amenities, and rely on mobile check-ins and lacking a centralized reception area. Four such projects—121 Middle Street, 178–184 Middle Street (Docent's Collection), 215 Commercial Street, and 54 York Street (The Weldon Hotel)—fit this model. While these developments were still required to comply with Hotel IZ regulations, they reflect a growing and distinct segment of the hospitality market that tend to operate more in the vein of short term rentals.

ReCode Zoning Changes

As part of the City's ReCode initiative, adopted by the City Council on November 4, 2024, new hotels are now prohibited in the B-1, B-2b, and TOD-1 zones. The purpose of these zones is to support neighborhood- and community-oriented retail, business, and service establishments within a more urban development pattern. They are intended to foster mixed-use development and moderate- to high-density housing in urban neighborhoods that align with the City's investment in high-frequency transit infrastructure, encouraging walking, biking, and public transit use. By prohibiting hotels in these zones, the City prioritizes housing and mixed-use developments and directs hotels to designated areas better suited for such uses.

ReCode also included changes to the definition of "hotel" within the land use code. These changes were designed to more clearly define hotels as multi-room commercial facilities with centralized reception, management, and cleaning services, and to address the emerging trend toward non-traditional forms of hotel development more akin to short-term rentals.

Inclusionary Zoning Fee-in-Lieu Assumptions

Linkage fees are often used by cities as a way to offset the impacts of new development. Before establishing a linkage fee, communities typically conduct a study that formally and systematically establishes the nexus, or the 'link,' between new development and the fee's purpose. In the case of the city's hotel IZ policy, a linkage fee study was completed in 2018 to document the nexus between hotel development and demand for affordable housing (Attachment C). The basic principle of the study, which was conducted by the Greater Portland Council of Governments (GPCOG), is that new hotel development creates new jobs and attracts new households to fill those jobs, and that new affordable housing is necessary to accommodate them.

When the hotel policy was created, it was also the intent that the linkage fee would be periodically updated. Although no specific timeframe was established for these updates and in anticipation of upcoming discussions regarding the current Hotel IZ fee amounts, City staff requested an updated fee-in-lieu analysis from GPCOG in early 2025 (Attachment D). It is important to note that GPCOG's current work did not include an evaluation of the 2018 fee study methodology, but instead simply replicated the original methodology using current day income and housing cost assumptions. In almost all cases, the current study used the same data sources as the 2018 study; the one exception was for housing cost data, where the original data source was no longer available. Because of this change in the availability of data, GPCOG supplied three possible updated fee-in-lieu figures, reflecting three estimated affordability gaps based on three alternative rental cost data sources (the City of Portland Rent Board reports, American Community Survey, or HUD Fair Market Rent). These figures range from $9,520 to $10,620 to $13,731 per room, depending on the rent data source used.

For purposes of comparison, staff conducted an initial analysis of the potential impact of these three possible fees, based on an average sized hotel in the City of Portland of 85 rooms. Under the possible fees, the total inclusionary zoning contribution for a hotel of this size would range from $809,164 to $902,720 to $1,167,120. The total contribution for an 85 room hotel at the 2025 hotel IZ figure of $4,831 per room would be $410,635.

NEXT STEPS:

If the summary and recommendations for changes to the existing Hotel IZ ordinance align with the committee's and City Council's priorities, the City can proceed in several possible directions:

1. **Option 1 - Raise IZ fee-in-lieu:** This option would increase the hotel IZ fee-in-lieu based on the estimated affordability gap identified in the 2025 GPCOG study. Staff seeks committee direction on the preferred fee amount based on the rent data source used. Based on the Council's direction, the housing unit per room requirement within hotel inclusionary zoning policy would also be adjusted.

2. **Option 2 - Raise IZ fee-in-lieu & reduce applicability threshold:** In addition to raising the hotel IZ fee-in-lieu based on the estimated affordability gap from the GPCOG study, this option would amend the definition of a "Hotel project" to apply to any size hotel, rather than the current requirement of only applying to projects that include 10 or more guest rooms. Based on the Council's direction, the housing unit per room requirement within hotel inclusionary zoning policy would also be adjusted.

3. **Option 3 - Maintain existing fee-in-lieu & reduce applicability threshold:** This option would retain the existing hotel IZ fee-in-lieu while reducing the applicability threshold. The definition of a "Hotel project" would be amended to include any hotel, rather than only those with 10 or more guest rooms. As in Option 2, the threshold of >10 rooms would be removed, making the IZ requirements applicable to all hotel projects. Based on the Council's direction, the housing unit per room requirement within hotel inclusionary zoning policy would also be adjusted.

FISCAL IMPACT

The hotel IZ policy has resulted in $834,374 in contributions to the housing trust fund, with just over $3 million in anticipated revenues from approved projects pending construction. The fee-in-lieu amount is adjusted annually. If the fee is updated to more accurately reflect current incomes and housing costs, assuming that hotel development trends hold steady, contributions to the housing trust fund could be expected to increase significantly.

CONCLUSION(S)

This item is for discussion and direction. If the committee supports the presented options and provides additional guidance on revisions, staff recommends that the hotel moratorium be extended to allow time for staff to draft proposed Land Use Code revisions. These revisions would then be reviewed by the Planning Board, which will provide a recommendation on a text amendment to update the Hotel Inclusionary Zoning ordinance for consideration by the full City Council. Following the Planning Board's recommendation, the amendment will move forward to the full City Council for consideration and final decision.

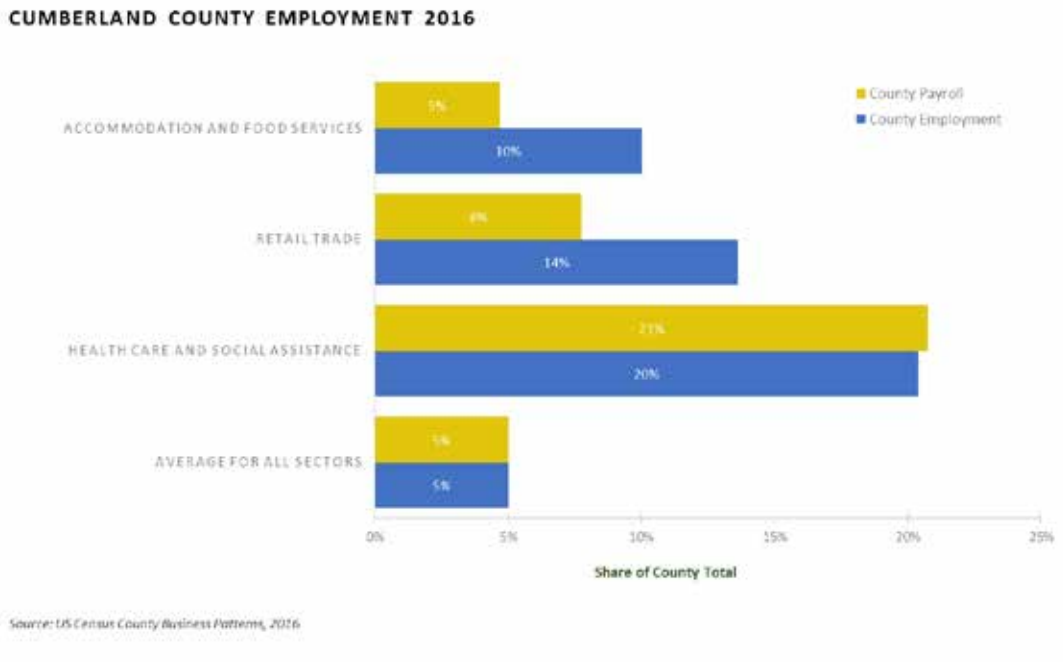
RE: **Proposed Hotel Linkage Fee: Supportable Range**

This memo has been expanded and updated based on additional data provided by the Maine Innkeepers Association.

Introduction

The City of Portland's Department of Planning & Urban Development is examining the feasibility of a proposal for assessing hotel linkage fees that would recover the cost of producing housing that is affordable for hotel employees. The purpose of this memo is to provide information to the City regarding the use of linkage fees for this purpose and outline a potential methodology for the calculation of a fee.



We have used the best available data to demonstrate how this methodology could be used to estimate a potential hotel linkage fee, but this does not constitute a recommendation from GPCOG as to the amount the City of Portland should charge for the hotel linkage fee nor is it a recommendation for the City of Portland to enact a hotel linkage fee ordinance.

Background

Linkage fees are fees that cities may choose to implement to help mitigate the impact of new commercial development on the demand and availability of affordable housing. Prior to implementing a fee policy, communities often conduct a study to identify the connection, or "nexus" between new commercial development and the need for additional affordable housing. It is assumed that new commercial development contributes additional workers to a city's workforce and adds new worker households. In many industries, a percentage of these households do not make enough to live and work in the same city. Looking outside the city to find affordable housing often results in longer commute times and higher transportation costs. If implemented, a linkage fee is typically charged to a developer as a condition of approval and it is assessed based on total square footage or number of units in the development.

The City's Comprehensive Plan identifies the increasing demand for affordable housing as an emerging issue and sets a goal of pursuing "policies to enable people who work in Portland to have the option to live in Portland." To be considered affordable, housing should consume no more than 30% of a household's income including rent, mortgage, utilities and other household related costs. Of the 1,130 housing units that were permitted and/or built in Portland between 2010 to 2014,

including apartments, condominiums and single-family homes, just 29% were offered at a rent or sales price affordable to a household earning the median income[i].

The Maine Office of Tourism estimates over 6 million tourists visited Portland in 2017. Hotel development is steadily increasing, with 1,811,050 square feet of hotel development - representing 2,647 units - currently in operation throughout the City. According to the US Census, the accommodation and food service sector is the third largest share of employment in Cumberland County, representing 10% of the County's workforce but only 5% of the County's payroll.

According to the Maine State Housing Authority the average rent (including utilities) for a two-bedroom apartment in Portland is $1,053 per month, and the household income needed to afford the average rent in Portland is $42,111 per year. However, this is the average rent paid by existing renters in Portland and new households moving to Portland will pay the current market rate, which is generally higher than the average rent. As of June 15, 2018, there are roughly 60 two-bedroom apartments listed for rent in Portland on Zillow, with monthly rents ranging between $1,300-$3,500. One third of those apartments are listed with rents between $1,500 and $2,000, and another third of those apartments are listed for more than $2,000 per month. Therefore, a new household moving to Portland will expect to pay between 120%-330% of the average rent to live in the City.

There are a range of estimates available regarding the average wages of a full-time employee in this sector, and all are well below the household income needed to afford housing in Portland. According to the US Census, the average Cumberland County employee in this sector earns $312 a week or $16,227 per year. The Maine Department of Labor (DOL) estimates the median income for a full-time

Cumberland County employee in this sector to be significantly higher, $24,908 per year. Additionally, as of 2017 the minimum wage in Portland is $10.68/hour, so a full-time employee making this salary would earn an annual income of $22,214. This affordability gap may force accommodation workers employed in Portland to seek housing outside of Portland.

Data

The minimum justified fee per square footage of hotel development outlined in this memo is based on data from both the US Census American Community Survey (ACS), and wage data from the Maine Department of Labor (DOL).

The US Census American Community Survey (ACS) data in this memo was used because it is the most comprehensive and consistent data source for demographic and economic characteristics of the population in GPCOG's service area. However, there are some limitations to the ACS data. First, it is 5-year sample data because this is the only data consistently available at the municipal, county, and state level. The drawback to using data pooled over five years is it averages out any short-term changes in income due to economic cycles or Portland's more recent minimum wage increase. Second, the median earnings reported by the ACS are based on what individuals report for their earnings regardless of whether they work full-time or part-time. As a result, these earnings may be skewed lower by individuals who work part-time, which may be more common for employment in the retail, food service, or accommodation sectors.

To balance these limitations, the median weekly wage data from the Maine DOL was also included in the analysis. The Maine DOL wage data is from the Quarterly Census of Employment and Wages (QCEW), which is based on employment and wage data reported to the Unemployment Insurance (UI) of the United States. The Maine DOL data also has some limitations. First, the data are only available at the industry level, so it is not possible to calculate the affordability gap for different occupations in the hotel sector. Second, the average weekly wage reported by the QCEW also does not differentiate between full-time and part-time employment. As a result, the weekly wage data reported by the Maine DOL may be skewed both by higher wage occupations and by part-time employment. The average weekly wage reported by Maine DOL was used to calculate yearly income based on full-time employment. This also assumes individuals employed in the accommodation sector can work full-time if they are willing and able to[ii].

Methodology

Methodologies used to calculate linkage fees vary, but in most cases the analysis begins with an estimation of the number of new employees associated with a typical development, in this case a hotel. In this methodology, a formula is used to calculate the affordability gap between what workers can afford to pay for housing and the average cost of market rate housing.

In Portland's case, a link is established between the creation of new jobs in the hotel sector and the increased demand for affordable housing through the following steps:

- **New Jobs.** Industry data was used to estimate the number of direct jobs that will be created by a new hotel with 180 units. According to the Urban Land Institute the typical hotel employs between 0.5-0.8 employees per hotel room. Using an average value of 0.65 employees per hotel room, it is estimated that a hotel with 180 rooms will employ 117 people. The current ratio of jobs per household was used to estimate how many households will be created by this new employment.
- **Households.** Currently there are 37,737 employed civilians aged 16 and over within the 30,211 total households in Portland. This means that on average there are 1.2 jobs per every household in Portland. Based on this ratio it is estimated that the 117 additional jobs created by a new hotel will create 94 new households in Portland. However, it is assumed employment in these households will be split up between different occupations, such as management, sales, service, and maintenance. The wages for each specific occupation may be higher or lower than the median wage for the hotel industry. Therefore, industry occupation employment and wage data examined from the ACS was used to estimate how many new households will be low income.

EMPLOYED POPULATION PER HOUSEHOLD 2016

	Portland	Cumberland County	Maine
Employed Civilian Population 16+	37,737	155,014	652,638
Total Households	30,211	117,871	551,109
Jobs/Household	1.2491	1.3151	1.1842

Source: American Community Survey 2016 5-year estimate

- **Jobs by Occupation.** Based on industry and occupation employment data from the ACS 64% of jobs in the hotel industry are service occupations, 19% of hotel jobs are management occupations, 13% of hotel jobs are sales and office occupations, and the remainder are maintenance and transportation occupations. The total number of jobs and households that will be created in each occupation was calculated by multiplying the share of hotel employment by occupation by the total number of new hotel jobs created.

NEW JOBS AND HOUSEHOLDS BY OCCUPATION CREATED BY NEW HOTEL EMPLOYMENT

	Share of Hotel Employment	Number of New Jobs	Number of New Households
Service	**64%**	**74**	**60**
Sales and Office	13%	15	12
Transportation	4%	4	3
Maintenance	1%	1	1
Management	19%	22	18
Total - All Occupations	100%	117	94

Source: American Community Survey 2016 5-year estimate; GPCOG Analysis

- **Household Income**. Median wage by occupation data for Cumberland County from the ACS was used to calculate the household income for each household in each occupation category. This calculation assumes 1 person in each new household works full-time in the hotel industry and any additional workers in the household earn the area median income:

NEW HOUSEHOLDS AND HOUSEHOLD INCOME BY OCCUPATION (ACS DATA)

	Number of New Households	Median Wage for Hotel Income Earner	Median Wage for Second Income Earner	Total Household Income
Service	**60**	**$18,109**	**$9,015**	**$27,124**
Sales and Office	**12**	**$30,444**	**$9,015**	**$39,459**
Transportation	**3**	**$31,695**	**$9,015**	**$40,710**
Maintenance	1	$33,421	$9,015	$42,436
Management	18	$52,910	$9,015	$61,925

Source: GPCOG Analysis and American Community Survey 2016 5-year estimates

Median wage by industry data from the Maine DOL was also used to calculate the average household income for the 94 new households created by hotel employment:

NEW HOUSEHOLDS AND HOUSEHOLD INCOME (MAINE DOL DATA)

	Number of New Households	Median Wage for Hotel Income Earner	Median Wage for Second Income Earner	Total Household Income
Accommodation	**94**	**$24,908**	**$12,164**	**$37,072**

Source: GPCOG Analysis and Maine DOL QCEW 2016

- **Affordability Gap.** These estimates for household income by occupation were compared to housing affordability data from the Maine State Housing Authority to show the difference between what the new households created by hotel employment earn and the minimum income needed to afford a two-bedroom apartment in Portland. These results show that households with Service, Sales and Office, and Transportation occupations have a household income that is lower than the minimum income needed to afford rental housing in Portland. This household affordability gap is largest ($14,987) for households with Service occupations, which also represent nearly 2/3 of households created by the new hotel employment.

AFFORDABILITY GAP ANALYSIS (ACS DATA)

	Number of New Households	Total Household Income	Income Needed to Afford Rent in Portland	Household Affordability Gap	Total Affordability Gap
Service	**60**	**$27,124**	**$42,111**	**$14,987**	**$892,820**
Sales and Office	**12**	**$39,459**	**$42,111**	**$2,652**	**$32,048**
Transportation	**3**	**$40,710**	**$42,111**	**$1,401**	**$4,856**
Maintenance	1	$42,436	$42,111	NA	$0
Management	18	$61,925	$42,111	NA	$0
Total					**$929,724**

Source: Maine State Housing Authority, 2017; American Community Survey 2016 5-year estimates

The household affordability gap using the median wage by industry data from the Maine DOL was also calculated:

AFFORDABILITY GAP ANALYSIS (MAINE DOL DATA)

	Number of New Households	Total Household Income	Income Needed to Afford Rent in Portland	Household Affordability Gap	Total Affordability Gap
Accommodation	**94**	**$37,072**	**$42,111**	**$5,039**	**$472,007**

Source: Maine State Housing Authority, 2017; Maine DOL QCEW 2016

- **Aggregate Affordability Gap.** The household affordability gap for each occupation was multiplied by the number of households with employment in each occupation to arrive at a total affordability gap that ranges between $472,007 and $929,724 per year. This number represents the difference between these households' ability to pay for their housing and the market cost of their housing based on the median monthly rent, for one year. In reality these

households may face higher rental housing costs since current Portland rents for new units are significantly higher than the median rent.

- **Final Calculation.** Dividing the affordability gap by the number of new hotel rooms results in an average affordability gap that ranges between $2,622 and $5,165 per room, or between $3.91 and $7.70 per square foot. Therefore, a fee between ***$3.90-$7.70 per square foot*** would cover a minimum justified housing affordability gap for the 94 new households created by a new 180-unit hotel employment for one year. This methodology assumes the median wage for a hotel income earner in the service industry, including full-time and part-time employees, is $18,109 based on US Census ACS data. If it is instead assumed that hotel service industry employees are working full-time at the City's minimum wage of $10.68/hour and making $22,241 annually, then the minimum justified fee would be between $2,622 and $3,806 per room or ***$3.90-$5.67 per square foot*** of hotel development for one year. However, this assumes individuals working in the service sector are able to procure full-time employment, which is not always the case[ii].

This example estimate represents the full cost of the affordability gap for employment in one hotel for one year as calculated by the proposed methodology. Multiple factors could potentially impact the demand for affordable housing and the City may determine a higher or lower percentage of this fee based on these variables. Furthermore, this fee could be re-evaluated periodically as circumstances such as inflation, rents, and rental housing supply change.

---

[i] Portland 2030 Housing Demand, GPCOG 2015

[ii] According to a 2016 study (https://www.epi.org/publication/still-falling-short-on-hours-and-pay-part-time-work-becoming-new-normal/#epi-toc-21) from the Economic Policy Institute the retail trade and leisure and hospitality sectors contributed to 63% of the growth in part-time employment and 54% of the growth in involuntary part-time employment from 2007-2015. Involuntary part-time employment is defined as individuals who are working part time because full time work could not be found or hours were reduced due to economic conditions (slack work).

GPCOG
GREATER PORTLAND
COUNCIL OF GOVERNMENTS

MEMO

To: Kevin Kraft, Director of Planning & Urban Development
From: Kristina Egan, GPCOG Executive Director
Date: 3/18/25
Re: Hotel Linkage Fee Update

Introduction

In 2018, the City of Portland asked the Greater Portland Council of Governments (GPCOG) to assess the feasibility of a hotel linkage fee that could be used to help offset the cost of producing affordable housing for hotel employees. The resulting memo outlined the use of linkage fees for this purpose, proposed a methodology for calculating the fee, and provided a range of justifiable figures for implementation. Using this analysis, the City established inclusionary zoning requirements for hotels and an in-lieu fee of $3,806 per guest room. This figure has been adjusted annually in the time since its adoption. The fee-in-lieu for 2025 is $4,831 per guest room.

Recognizing significant market changes since 2018, the City of Portland requested an updated analysis in early 2025. The following memo replicates the original linkage fee methodology to the best extent possible using updated data.

Background

Linkage fees are tools cities can use to offset the impact of new commercial development on affordable housing availability and demand. Before implementing such a policy, communities typically conduct a study to identify the "nexus" between new development and the need for additional affordable housing. The assumption is that commercial growth brings new workers, some of whom may not earn enough to live in the city. This often forces households to seek housing outside the city, resulting in longer commutes and higher transportation costs. If adopted, a linkage fee is typically charged to developers as a condition of project approval, based on the development's total square footage or number of units.

Data

Where possible, the hotel linkage fee range in this memo is based on the same data sources used in the original 2018 study. To maintain consistency, 2023 data was used across multiple sources, even when newer data was available in some cases.

Employment + Wage Data

This analysis relies on employment and wage data from the U.S. Census American Community Survey (ACS), which provides the most consistent workforce and wage estimates. The previous memo also incorporated wage data from the Maine Department of Labor as a point of comparison; however, the adopted hotel linkage fee was ultimately based on wage data from the ACS.

Housing Cost Data

The 2018 linkage fee study used rental data from the Maine State Housing Authority to establish a baseline housing cost, using a two-bedroom unit as a reference point (due to its ability to accommodate the assumed household size). However, in the time since, Maine Housing has stopped publishing rental data. As a result, this memo relies on several other readily available sources of rental data to estimate housing costs, including the Department of Housing and Urban Development's Fair Market Rent (FMR) Documentation System, the American Community Survey, and the City of Portland's Rent Board Report.

- **Fair Market Rent:** FMR represents the average cost of renting a moderately priced home, including utilities, in a specific area. It is used to set rent limits for housing assistance programs to ensure they align with current market conditions. The Portland, ME HUD Metro FMR Area includes municipalities in Cumberland County and parts of York County. Updated annually, FMR estimates are based on rental market surveys, American Community Survey data, and inflation adjustments.[1]
- **U.S. Census ACS Data:** The ACS provides median gross rent estimates by unit size, accounting for both rent and utilities when not already included. Data is based on five-year samples, which help ensure statistical reliability but smooth out short-term rent fluctuations. Estimates reflect both market-rate and subsidized rentals.[2]
- **City of Portland Rent Board Report:** These annual reports provide data on rental availability, city-wide rent prices, rental market trends, and board actions on rent increases, among other topics.[3]

Methodology

Linkage fee calculations typically estimate the number of new employees and households generated by a development, such as a hotel. Wage and rent data are then used to estimate the gap between what these workers can afford for housing and the average market rent. This memo presents that analysis for Portland, using the most recent and locally relevant data, through the following steps:

Number of New Jobs

To estimate job creation, industry data was applied to a 180-room hotel – chosen as a representative example based on an actual development. While staffing levels vary based on factors such as hotel size, service level, and operational needs, the original linkage fee study assumed a ratio of .65 employees per hotel room, based on numbers from the Urban Land Institute. Using this ratio, a 180-room hotel is expected to generate 117 jobs.

Number of New Households

The current ratio of jobs per household was then used to estimate the number of households represented by this new employment. Portland currently has 39,590 employed civilians aged 16 and over across 32,393 households[4], or an average of 1.22 jobs per household. Using this ratio, the 117 new jobs created by the example 180-room hotel would generate an estimated 96 new households.

Employment and Households by Occupation

The jobs held by hotel employees would span various occupations – management, sales, service, maintenance, etc.— with wages varying by role. To estimate how many of the households employed by a new hotel would be low-income, industry-specific employment and wage data from the American Community Survey was used. The American Community Survey groups Arts, Entertainment, Recreation, Accommodation, and Food Services together, reflecting industries tied to the service sector. While this broad category includes more than just hotel jobs, it offers the best available estimate for occupational distribution. Within this sector, approximately 56% of jobs are in service occupations, 31% in management, 7% in sales and office, 6% in transportation, and 1% in maintenance.[5]

The table below estimates the number of new employees and households created by occupation.

ESTIMATED NEW HOTEL JOBS AND HOUSEHOLDS BY OCCUPATION

	% of Service Sector Employment	# of New Hotel Employees[i]	# of New Households[ii]
Service	55.5%	65	53
Management	30.6%	36	29
Sales and Office	6.8%	8	7
Transportation	5.8%	7	6
Maintenance	1.2%	1	1
Total	100%	117	96

[i] *Calculated by multiplying the percentage of service sector employment by the total estimated 117 hotel employees.*

[ii] *Calculated by multiplying the percentage of service sector employment by the total estimated 96 households.*

Household Incomes

Household income estimates were calculated using Cumberland County's ACS median earnings data by occupation for 2023.[6] This approach reflects the broader region where hotel workers in Portland may reside. The one exception is for service workers, where the City of Portland's 2023 minimum wage of $14/hour was substituted for the ACS median wage. The household income calculations assume one person in each household works full time in the hotel industry and also assumes a second household member makes the area median earnings.[7] The table below presents these estimated household incomes by occupation.

ESTIMATED NEW HOUSEHOLDS AND HOUSEHOLD INCOME BY OCCUPATION (2023 ACS DATA)

	# of New Households	Median Wage for Hotel Employee	Median Wage for 2nd Income Earner[ii]	Total Household Income
Service[i]	53	$29,120	$10,899	$40,019
Management	29	$71,711	$10,899	$82,610
Sales and Office	7	$42,467	$10,899	$53,366
Transportation	6	$40,829	$10,899	$51,728
Maintenance	1	$50,572	$10,899	$61,471

[i] *The Service wage reflects Portland's 2023 minimum wage of $14/hour, as the Census estimate was below the legal minimum.*

[ii] *The second income earner's wage of $10,899 is based on 0.22 of the 2023 Census median earnings for all occupations in Cumberland County ($49,540), reflecting the estimated 1.22 employees per household.*

Affordability Gap

To create a range, the estimated household incomes for each occupation category were then compared to three different rent data sources to assess whether new hotel employees can afford a two-bedroom unit in Portland and to calculate the cumulative 'affordability gap.'

ESTIMATED AFFORDABILITY GAP: 2023 FAIR MARKET RENT FOR PORTLAND METRO AREA
[$1,859 for a two-bedroom unit]

	New Households	Household Income	Income Needed[i]	Affordability Gap (HH)	Total Gap
Service	53	$40,019	$79,671	$39,652	$2,101,556
Management	29	$82,610	$79,671	- $2,939	N/A
Sales and Office	7	$53,366	$79,671	$26,305	$184,135
Transportation	6	$51,728	$79,671	$27,943	$167,658
Maintenance	1	$61,471	$79,671	$18,200	$18,200
Total	96	--	--	--	$2,471,549
				Per Room	***$13,731***

[i]*Annualizing Fair Market Rent ($1,859 * 12 months = $22,308) and dividing by 0.28 yields $79,671, ensuring rent remains just below the 30% housing cost burden threshold.*

ESTIMATED AFFORDABILITY GAP: 2023 ACS MEDIAN GROSS RENT FOR PORTLAND
[$1,664 for a two-bedroom unit]

	New Households	Household Income	Income Needed[i]	Affordability Gap (HH)	Total Gap
Service	53	$40,019	$71,314	$31,295	$1,658,635
Management	29	$82,610	$71,314	- $11,296	N/A
Sales and Office	7	$53,366	$71,314	$17,948	$125,636
Transportation	6	$51,728	$71,314	$19,586	$117,516
Maintenance	1	$61,471	$71,314	$9,843	$9,843
Total	96	--	--	--	$1,911,630
				Per Room	***$10,620***

[i]*Annualizing ACS median rent ($1,664 * 12 months = $19,968) and dividing by 0.28 yields $71,314, ensuring rent remains just below the 30% housing cost burden threshold.*

ESTIMATED AFFORDABILITY GAP: 2023 CITY OF PORTLAND RENT BOARD
[$1,595 for a two-bedroom unit]

	New Households	Household Income	Income Needed[i]	Affordability Gap (HH)	Total Gap
Service	53	$40,019	$68,357	$28,338	$1,501,914
Management	29	$82,610	$68,357	- $14,253	N/A
Sales and Office	7	$53,366	$68,357	$14,991	$104,937
Transportation	6	$51,728	$68,357	$16,629	$99,774
Maintenance	1	$61,471	$68,357	$6,886	$6,886
Total	96	--	--	--	$1,713,511
				Per Room	***$9,520***

[i]*Annualizing ACS median rent ($1,595 * 12 months = $19,140) and dividing by 0.28 yields $68,357, ensuring rent remains just below the 30% housing cost burden threshold.*

Final Calculation

As shown on the previous page, dividing the total affordability gap by the 180 new hotel rooms results in an **estimated per-room affordability gap ranging from $9,520 to $10,620 to $13,731** depending on the rent data source used (City of Portland Rent Board, American Community Survey, or HUD Fair Market Rent). This estimate reflects the full annual affordability gap associated with the jobs generated by a single hotel room based on the methodology from the original 2018 study.

Executive Summary

Boston established its Development Impact Project (DIP) Exaction policy in 1983 to collect exactions, also known as linkage fees, to mitigate the impact of large scale development projects on: (1) the need for and availability of affordable housing; and (2) job opportunities for low-income and moderate-income residents. Boston's current linkage fees are $13 per square foot (PSF) for affordable housing and $2.39 PSF for jobs, for a combined rate of $15.39 PSF. This report provides an updated nexus study to quantify the impact of future non-residential development on the demand for affordable housing and need for employment and training services in Boston and the linkage fee rates to mitigate these impacts. It also reviews the history of Boston's linkage policies, provides a macroeconomic profile of economic, demographic and housing conditions in the city, considers potential policy changes and recommends new linkage fee rates and policies.

Macroeconomic Profile. Boston had steady job growth from 2010 to 2019 followed by pandemic-induced decline for 2020 and 2021. Total payroll employment, increased by 121,501 jobs or 22%, from 2010 to 2019 before declining by 7.5% in 2020—a loss of 50.121 jobs. Health care and information technology were key drivers of growth over this period, accounting for eight of 15 high-growth industries and 65% of their new jobs from 2010 and the first half of 2021. Just under 30 million SF of new development of commercial or mixed-use buildings over 50,000 square feet occurred from 2011 to 2021. A large pipeline of potential future projects of 65.7 million SF indicates strong confidence in Boston's economy and future demand for non-residential real estate. Strong growth and real estate demand in the Life Science industry has resulted in a boom in the lab development pipeline, with many new lab projects being proposed and existing planned office projects being converted to lab space.

Boston's population grew by 9.4% from 2010 to 2020 to almost 675,000, a faster rate than the state (7.4%). The city's population is quite diverse with 28% foreign born and about 45% identifying their race/ethnicity as White Only, 22% as Black or African American Only, 20% Hispanic and 10% Asian Only. Significant racial disparities exist in household income and poverty rates: the median household income for White Households, at $108,291 is over twice that of Black, Latino and Asian households, at $47,800, $43,337 and $52,326, respectively. Poverty rates for Black, Latino and Asian households, at 21%, 27% and 28%, respectively, are well above the 10% rate for the White, Non-Latino households. With 42% of Boston households housing cost-burdened and 24% severely cost-burdened, there is a large need for affordable housing.

In 2020, Boston had a labor force of 413,366 residents and a labor force participation rate of 69.8%. The city's labor force is highly educated and concentrated in higher skilled occupations but with significant racial disparities. Almost half (49.9%) of Boston's labor force was employed in management, business, science, or art occupations in 2020. However, two-thirds of White workers and almost 59% of Asian workers held jobs in these higher paying occupations, compared to 31.4% for Black/African American workers, 30.4% for Hispanic or Latino workers. Similarly, over two-thirds (67.3%) of White residents 25 or older had a bachelor's degree or higher in 2020 compared to 19.8% and 25.7% for Black and Latino adults, respectively. Consequently, a gap exists between the type of jobs being created in many of Boston's high growth industries and the occupational profile of Boston's less educated labor force and particularly for Black, Latino and multi-racial workers.

Affordable Housing Demand. Based on projected new development of 14,861,000 square feet over the next ten years and the likely mix of tenant industries, 31,794 new jobs are estimated to be generated in Boston by this development. Information on the occupations and earnings of these new employees, in combination with data on the distribution of households by size and number of workers and survey results on the share of employees who moved to or sought housing in Boston when they obtained a job in the city was used to estimate the demand for 4,003 new affordable housing units from the projected new development and employment. This analysis projected the following need for new affordable units by household income level:

- 205 units for extremely low-income households at less than 30% of Area Median Income (AMI);
- 958 units for low-income households at 305 to 60% of AMI;
- 331 units for moderate-income households at 60% to 80% of AMI; and
- 2509 units for middle-income households at 80% to 120% of AMI.

Development Costs and Needed Subsidy. A separate analysis of the development costs and needed subsidy for rental and homeownership units was conducted based on 2,593 ownership units and 1,410 rental units[1]. Development costs were estimated based on the costs for recent comparable affordable housing projects built in Boston. For rental projects, the needed subsidy was calculated as the difference between total development costs and the amount of debt and equity that could be supported by the housing cash flow using affordable rents at 30% of household income and comparable operating costs. For ownership projects, the needed subsidy was calculated as the difference between total development costs and the affordable purchase price based on home mortgage payments, insurance and property taxes at 30% of household income and a 5% down payment. The results of this analysis are:

- Total development costs of $ 2.121 billion; and
- Total needed subsidy of $895.1 million with $127.3 million for the extremely low-income units, $412.5 million for the low-income units, $124.5 million for the moderate-income units and $230.9 million for the middle-income units.

The housing linkage fee needed to provide the full $895.1 million in subsidy is $80.20 per square foot on new non-residential development. However, low- and moderate-income housing development leverages public subsidies from federal and state sources in addition to those provided by local government Overall, the total City funds including NHT and other funds accounted for 14.7% of rental projects, and 58.9% of ownership projects. Applying this percentage to the required subsidy would result in a $21.88 housing linkage fee.

Training Needs and Financing Gap. New DIP development over the next ten years is expected to create almost 10,000 jobs in low- and middle-skill occupations that are the most accessible to low-income and moderate-income workers. Based on an analysis on occupational demand and training supply by the major industries in new development projects, the funding gap to train

[1] This mix is based on all of the extremely low-income and low-income units developed as rental units, 75% of moderate-income units built as rental and 25% as ownership, and 100% of the middle-income units built as ownership units.

Boston residents for 40% and 50% of these jobs was estimated, along with costs for related education and employment services, including English for Speakers of Other Languages (ESOL), Adult Basic Education (ABE), skill upgrading after employment to help workers advance into higher paying positions and stipends to offset lost income while attending training programs. High and low supply estimates for employment and training services was made to account for planned program expansions and the pandemic's impact on participation levels. The estimated total employment training funding gap with 40% resident employment ranged from $35.3 million to $45.4 million for the high and low-supply scenarios, with resulting warranted linkage fee rates of $3.16 to $4.07. At 50% resident employment, the estimated funding gap is $47.3 million to $60.4 million for the high-supply and low-supply scenarios, with resulting warranted linkage fee rates of $4.19 to $5.32.

Impact on Economic Competitiveness and Investment. An important consideration in adjusting Boston's linkage fees is the potential impact of a fee increase on attracting new tenants and the financial feasibility of new development. Boston's current combined linkage fee is below that of Cambridge ($33.34) and 10% above Somerville's rate of $13.98. The maximum combined rate of $85.52, on the other hand, is over two and one-half times Cambridge's fee and six time the rate in Somerville. Higher linkage fees will increase development costs, which can impact project economics in several ways, depending on several factors. Consequently, linkage fee increases were analyzed for their potential impact on tenant rents, developer returns and equity investor returns. If the maximum rate is fully passed on to tenants, it would increase rents by 6.5% to 8.8%, depending on property type and location, erasing Boston's rental advantage over East Cambridge by one-third and eliminating its advantage over Mid-Cambridge. Without any increase in rents, increased development costs would reduce developer returns by up to 32 basis points, potentially making some lab and office projects infeasible. The maximum fee has a larger impact on equity investor returns, reducing them by up to 2.64 percentage points, which would make it difficult for developers to secure the investment capital to undertake projects. Smaller fee increases in the range of $5 and $20 are unlikely to impact Boston's competitiveness in attracting tenants and generating new office and lab development, as they would have a small impact on rents, developer returns and equity investor returns.

Recommendations. Recommendations to simplify, update and improve Boston's linkage policies include: (1) changing the payment schedule to a single payment at certificate of occupancy; (2) eliminating the separate fee payment schedule for projects in the Downtown District; and (3) eliminating the 100,000 SF exemption.

Boston should set higher linkage fees for lab development projects, as their higher rents and returns allow them to make a larger contribution to mitigating impacts. The following proposed fees are based on doubling the total linkage fee rate to $30.78 for lab projects and a 50% increase to $23.09 for projects with other primary uses:

- **Increase the jobs linkage to $3.62** with elimination of the 100,000 SF exemption. If the exemption is not eliminated, the comparable fee level is $4.75
- **Increase the housing linkage fee to $26.78 for projects with a primary lab use** with elimination of the 100,000 SF exemption. If the exemption is not eliminated, the comparable fee level is $35.66.

- **Increase the housing linkage fee to $19.09 for projects with a primary** hotel, office, retail, institutional or other use subject to linkage payment with elimination of the 100,000 SF exemption. If the exemption is not eliminated, the comparable fee level is $25.41.

A final recommendation is that the City and its Office of Workforce Development continue its efforts to establish a consortium to strengthen the training system and improve access to job in the life science industry. This work is critical to creating a pipeline of low- and moderate-income Boston residents to gain jobs within this fast growing industry

Introduction

The City of Boston is experiencing a large increase in commercial development that is expanding the City's job base with the potential to increase local demand for housing including affordable housing for low-income, moderate-income and middle-income households. The City commissioned a study to assess the impact of this new development on affordable housing demand and the potential for a "linkage fee" to be paid by development projects to mitigate the cost to develop this housing. This report provides a nexus study to assist Watertown in deciding whether to establish a linkage fee and, if established, the appropriate fee level and policies. The report quantifies the impact of future non-residential development on the demand for affordable low, moderate, and middle-income housing in Watertown. It then analyzes the proportionate housing linkage fee rate to mitigate these impacts. Finally, it reviews linkage fees in other Massachusetts communities, several policy options and recommends linkage fee options and policies for implementation of a new housing linkage fee.

I. History and Overview of Boston's Linkage Program

Boston has a long standing policy, first approved in 1983, to collect Development Impact Exactions, also known as linkage fees, to address and mitigate the impact of large scale development projects on: (1) the need for and availability of affordable housing; and (2) job opportunities for low- and moderate income residents. To address these dual impacts, Boston levies two separate exactions: a Housing Exactions and a Jobs Exaction. The applicable types of development projects and uses are the same for both exactions but their fee level and payment options are different. This section summarizes Boston's current Development Impact Exaction policies, discusses how the policy and fee levels have changed over time and highlights key policy issues for the city to review and reconsider in conjunction with the Nexus Study.

Current Development Impact Exaction Policy

Boston's Development Impact Exaction Policy is defined under Article 80 of the city zoning code, which addresses development project review, in Section 80B-7. This policy requires housing and jobs exaction contributions for any real estate development that meets the definition of a "Development Impact Project" (DIP). Four characteristics establish a real estate project as a DIP subject to exactions:

1. The project cannot be built "as-of-right" and requires some forms of zoning relief;
2. The project involves either more than 100,000 square feet of new construction, addition to an existing building or renovation of an existing building;
3. Includes the proposed use of more than 100,000 square feet of gross floor area for uses defined as a Development Impact Use (explained below); and
4. Is not wholly owned by a government agency.

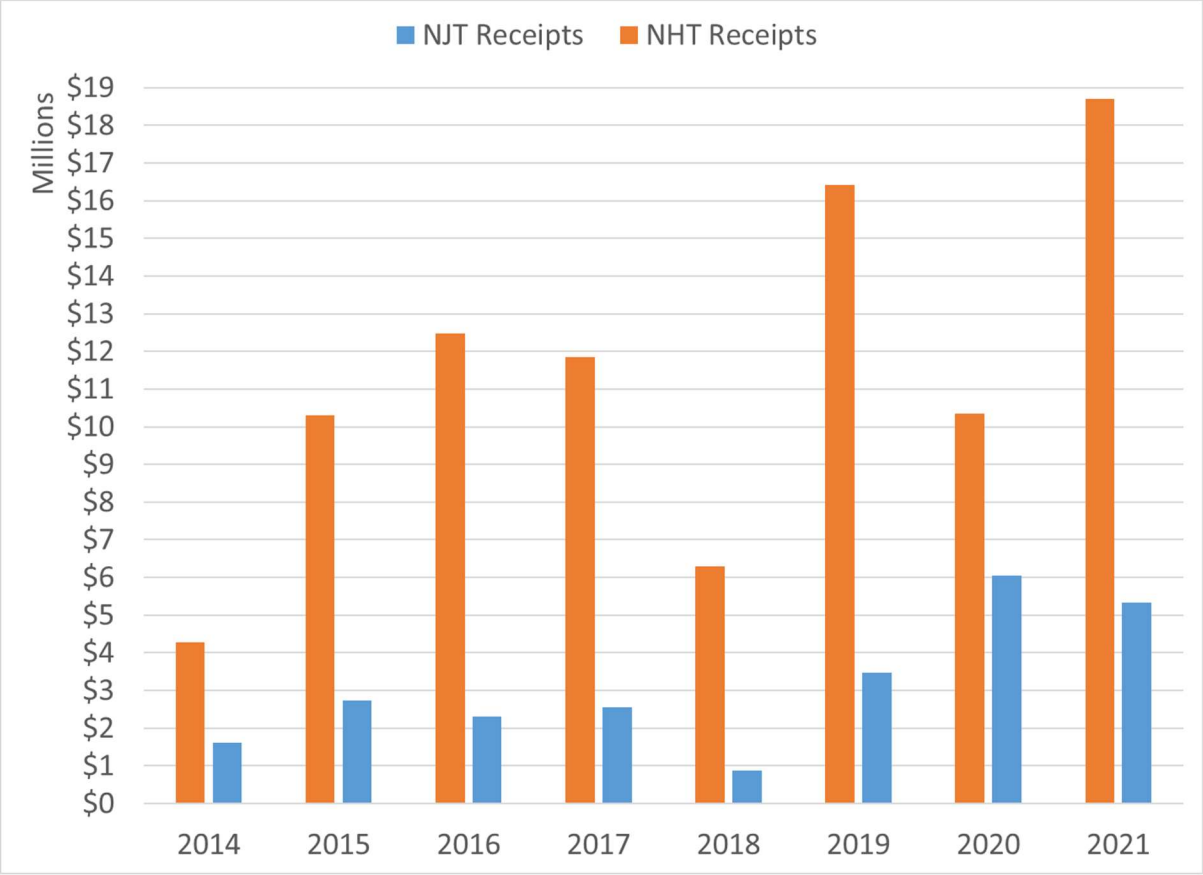
Since virtually all projects over 100,000 square feet require zoning relief, Development Impact Exactions apply to any new construction or renovated non-government owned real estate projects with over 100,000 square feet of "Development Impact Uses." The definition of Development Impact Use (DIU) is very broad and covers 40 distinct uses that fall within seven categories:

- Office;
- Retail Businesses;
- Public Services;
- Other Service Uses;
- Institutional;
- Educational; and
- Hotel/Motel.

The major building uses not subject to Development Exactions are wholesale businesses, storage, industrial uses, and parking.
A complete list of the 40 business/use types under Development Impact Use definition is included in Appendix A.

Housing Exactions are currently paid at a rate of $13.00 per gross square foot for the project square footage above 100,000 square feet. Thus, the first 100,000 square feet of any Development Impact Project is exempt from paying the Housing Exaction (and the Jobs Exaction as noted below). For Institutional Master Plans and Planned Development Areas, the exemptions applies to their overall amount of development in the plan rather than to each individual building projects. Exaction obligations can be met through either payment of a cash grant (Housing Contribution Grant) or by building low or moderate income housing units with cost at least equal to the required Housing Contribution Grant. In practice, virtually all Housing Exactions have been met through the grant option. Grants are paid in seven equal annual installments with the first payment due at the earlier of the Certificate of Occupancy date or 24 months after construction starts. All Housing Contribution Grant payments are allocated to the Neighborhood Housing Trust (NHT), a separate legal trust overseen by seven trustees that include the Boston Collector-Treasurer, five trustees appointed by the Mayor and the City Council President or her or his designee. The NHT awards the funds obtained from Housing Exaction grant receipts to help finance affordable housing developments, through a periodic RFP process.

Job Exactions are currently paid at a rate of $2.39 per project gross square foot above 100,000 square feet. Exaction obligations can be met through either payment of a cash grant (Job Contribution Grant) or creation of a job training program with a cost at least equal to the required Job Contribution Grant. In practice, almost all Job Exactions have been paid through the grant option. Grants are paid in two equal installments with the first payment due at building permit issuance and the second payment one year later. All Job Contribution Grant payments are allocated to the Neighborhood Jobs Trust (NJT), similar to the NHT as a separate legal trust overseen by three trustees-- the Boston Collector-Treasurer, the Director of the Office of Jobs and Community Services and a City Council member appointed by the Mayor. The NJT awards the funds obtained from Job Exaction Grants to finance job training, education and employment programs through a periodic RFP process.



The recent home rule petition (Chapter 365 of the Acts of 2020) changed how the housing and job exaction rates can be adjusted. Previously, the housing and job exaction rates had been set by special state statutes and could be adjusted for inflation every three years by a vote of the BPDA Board of Directors. The new policy allows the Zoning Commission to set the exaction rates from time to time based on the recommendation of the BPDA. These changes to the exaction rates require a new nexus study that shall include an analysis of the following: (1) economic trends, such as real estate development activity, commercial rents per square foot, employment growth and inflation rates; (2) housing trends measured in terms of vacancy rates for affordable housing available to low- and moderate-income residents, and production statistics for new dwelling units; and (3) employment trends such as unemployment rates and statistics on the availability and use of job training programs. Additionally, exaction rates are adjusted automatically every July 1st based on an inflation index[2].

Combined exactions have generated combined over $14 million annually, on average, between FY 2014 and 2021. Detailed figures in **Figure 1-1** and **Table 1-1** on Neighborhood Jobs Trust receipts and Neighborhood Housing Trust receipts show how receipts have varied year-by-year and over

[2] This index is based on 50% of the change in consumer price *index* for all urban consumers or "CPI-U" and 50% of the change in the housing component of said CPI-U for the Boston metropolitan area.

time reflecting the cyclical nature of development projects and the growth of the exaction rate over time (See Figure 1-1). However, there is a clear trend toward higher payments over the period.

Evolution of Boston's Exaction Policy and Rates

Over the past thirty years, Boston's development impact exaction policies have changed through the addition of the jobs exaction, several increases in the exaction rate and other changes. **Table 1-2** provides a timeline of the major policy and rate changes for both the housing and jobs exactions. Boston established the initial housing exaction at $5 per square foot through city council action in 1983, following the recommendations of a mayoral Housing Linkage Advisory Group. In 1986, the jobs exaction was adopted by the City Council, following a report and recommendations by Jerome Kayden, Karl Case and Robert Pollard. The Neighborhood Housing Trust and Neighborhood Jobs Trust were established in 1986 and 1987, respectively, to oversee the allocation of exaction revenue to mitigate development impacts. Legal authority to levy the housing and jobs exactions was codified in state law during 1987 with passage of Chapter 371 of the Acts of 1987. This state law also provided a mechanism for increasing the exaction rates over time through application of the CPI formulas cited earlier. Two additional legal actions occurred in 1996, when the exaction policies were incorporated in Article 80 of Boston Zoning Code, and 2001 when the state legislature, through Chapter 170 of the Acts of 2001 authorized increases in the housing and jobs exaction levels to $7.18 and $1.44, respectively. This act also allowed the payment period for housing exactions by "neighborhood" projects outside the central business district from 12 years to seven years. These legislative changes implemented recommendations from an April 2001 report issued by the Linkage Commission appointed by Mayor Menino. After the 2001 authorized rate increase, the BPDA board made four further increases in the exaction rates by applying the CPI escalation formula, with the most recent change in 2020. These actions brought the housing and jobs exaction rates to the current levels of $13.00 and $2.39, respectively.

Table 1-2. Timeline for Boston's Linkage Program and Housing and Jobs Exactions

Year	Action
1983	Mayor White appoints Housing Linkage Advisory Group
1983	Advisory Group recommends $5 per square foot (psf) housing exaction
1983	Article 26 approved establishing housing exaction
1984	Housing exaction takes affect at $5 psf
1986	Kayden, Case and Pollard skills gap report
1986	Article 26A adds jobs exaction
1986	Jobs exaction takes affect at $1 psf
1986	Neighborhood Housing Trust established
1987	Neighborhood Jobs Trust established
1987	State law (Chapter 371 of the Acts of 1987) provides strong legal authority for exactions
1996	Exactions Incorporated into Article 80
2000	BRA increases fees to $5.49 and $1.09
2001	Menino Commission recommends increase in fees to $7.18 and $1.44
2001	Chapter 170 of the Acts of 2001 updates authority and level of linkage fees
2002	Exactions increased to $7.18 and $1.44
2006	Exactions increased to $7.87 and $1.57
2013	Exactions increased to $8.74 and $1.67
2020	Chapter 365 of the Acts of 2020 provides Boston's Zoning Commission the authority to periodically set new exaction rates
2021	Exactions increased to $13.00 and $2.39

Development Impact Exaction Policy Issues

As Boston looks to update its development impact exaction rates, it faces several common policy issues that cities have addressed in different ways. These core issues, beyond the critical question of the appropriate and warranted exaction rate are fourfold:

- **Applicable projects for exactions**. This policy defines the uses and scale of real estate development projects that are subject to exactions and what zoning status triggers exaction payments. Boston currently applies exactions to a very broad set of uses but has a fairly highly project size threshold at 100,000 square feet and only applies the requirement to projects seeking zoning relief. With the large growth in life science lab development, there may be a need to update applicable uses and their definition to ensure that lab space in its multiple forms are subject to exactions. The city may want to consider lowering the project threshold size and applying it "as-of-right" development. This study includes an analysis of new non-residential development over 50,000 square feet to explore that option.
- **Exaction variation by use**. Housing and job impacts vary by the type of use and business type since the density and wage levels vary considerably across uses and industries. Consequently, some cities and counties have exaction rates that vary by use. Offsetting the benefit of tailoring rates more closely to impacts are the added complexity of this

policy, disincentives it may create for certain uses and how to address a project's change in uses over time.

- **Exemptions.** Boston currently exempts the first 100,000 square feet of any project from exaction payments, which reduces the exactions paid by each project by $1.564 million under current rates. This exemption amount might be eliminated reducing the overall rate needed to provide the desired revenue needed to mitigate impact. On the other hand, reducing the exemption would increase the financial cost of exactions on smaller development projects.
- **Exaction payment schedule**. Boston allows housing exaction obligations to be paid over a seven year period, which slows the receipt of funds needed to build affordable housing. This extended payment schedule might be shortened to pay exactions more quickly and accelerate the supply of needed housing subsidy funds.
- **Present value payment.** Developers have the option to pay exactions in one lump sum, based on a calculation of the present value of the seven year stream of exaction payments. This option is not widely used and there may be value in providing incentives for its greater use, to accelerate the available funds for both trusts. Another policy and administrative issue is how to set the appropriate discount rate used for these calculations.
- **Exaction rate adjustment over time.** The recent home rule petition now allows Boston's Zoning Commission to make changes based on the completion of a nexus study. The City might want to establish a specific time interval for conduction regular nexus studies and updating the exaction rates based on a review of the factors specified in the new legislations.

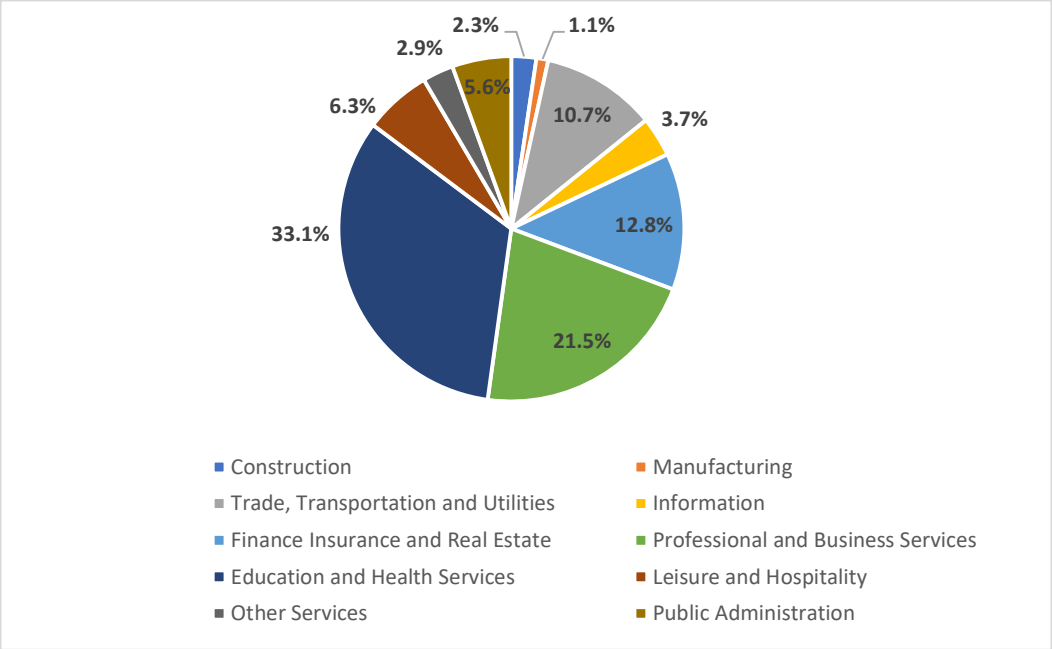
In addition to these policy issues, there may be administrative changes that can improve or streamline how the exactions are calculated, monitored and collected.

II. Boston Macroeconomic Analysis: Economy, Demographics & Housing

Introduction

This report provides a high-level review and analysis of Boston's economy, population and housing market to provide context for the Affordable Housing and Jobs Linkage analysis. It is organized in seven sections. First, an overview of Boston's jobs base and growth trends is provided, focusing on "payroll" employment among firms with employees, as these are the occupants and drivers of Boston's large development projects addressed in the Development Impact exaction policy. Non-residential development activity, the current project pipeline and their relationship to economic trends are addressed in the second section. The third and fourth sections focus on Boston residents with a summary of demographic and household characteristics in Section Four and a labor force profile in Section Five. Key housing market conditions and trends are presented in Section Six. In the last two sections, national trends that may impact Boston's economy, development activity and its relationship to addressing affordable housing and inclusive employment are discussed followed by overall conclusions on how these macroeconomic conditions are likely to influence future non-residential development and its impact on affordable housing and employment opportunities.

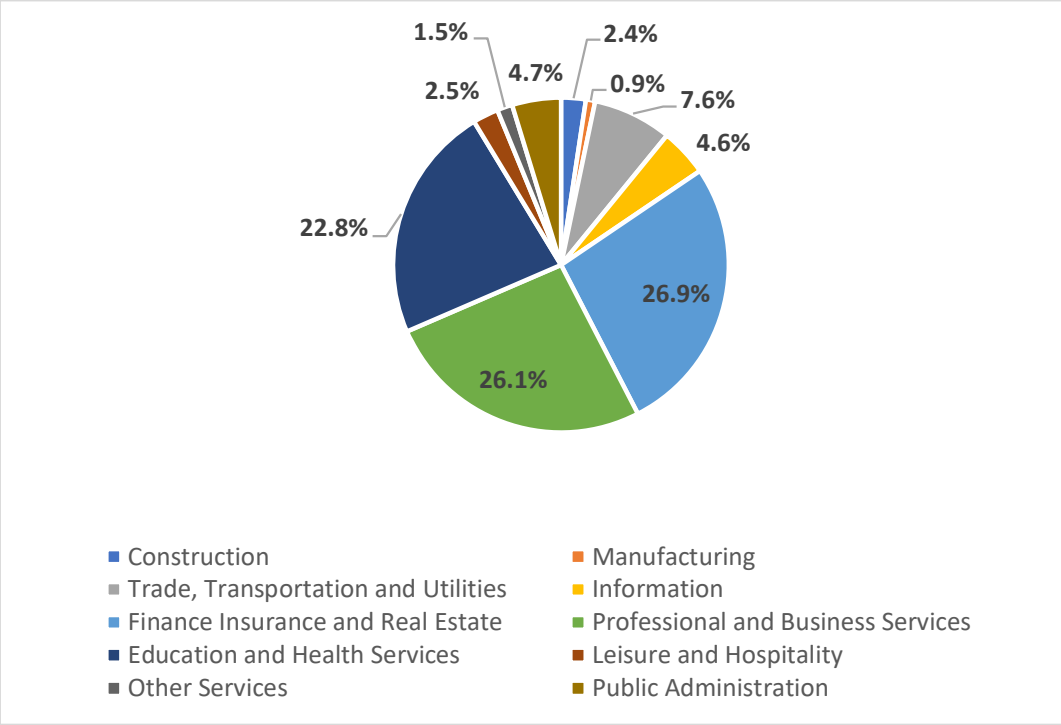
1.0 Boston's Economy and Employment Base



Boston's economy has a large and diverse base of jobs located within the city but has experienced significant losses since the Covid-19 pandemic. Based on estimates by the Boston Planning and Development Agency, combined payroll and non-payroll employment[3] totaled 851,468 in 2019 and declined by 6.9% to 792,420 in 2020. Payroll employment totaled 670,886 and 620,765, respectively, accounted for slightly more than 78% of total employment for 2019 and 2020 but declined at a slightly higher pace (7.5%) than total employment. During the first half of 2021, total payroll employment showed little change, averaging 620,593. However, based on more timely data, the BPDA shows 2.9% growth during 2021 to 639,188.

The balance of this section focuses on payroll employment since this is the basis for the occupancy and employment opportunities that occur in large development projects covered by Boston's Development Impact Exaction Policy (also known as "linkage"). This analysis is based on data provided from the Quarterly Census of Employment and Wages provided by the Massachusetts Department of Labor for the period 2010 to the first six months of 2021. As shown in **Figure 2-1,** Boston's payroll employment is concentrated in two sectors that accounted for almost 55% of total employment for the first half of 2021: Education and Health Care, and Professional and Business Services. The balance of employment is spread across seven other sectors with Finance, Insurance and Real Estate and Trade, Transportation and Utilities the next largest sectors with 12.8% and 10.7% of total payroll employment, respectively. However, annual wages paid (i.e., payroll) is even more concentrated than jobs with three sectors—Education and Health Care, Professional and Business Services and Finance, Insurance and Real Estate—together accounting for three-quarters of the city's entire wages paid in 2020. Professional and Business Services and Finance,

[3] Payroll employment represents jobs at employers that are covered by the unemployment insurance system. Non-payroll jobs represent self-employed workers, sole entrepreneurs without employees, contract and gig workers that occur outside of formal employment relationships.

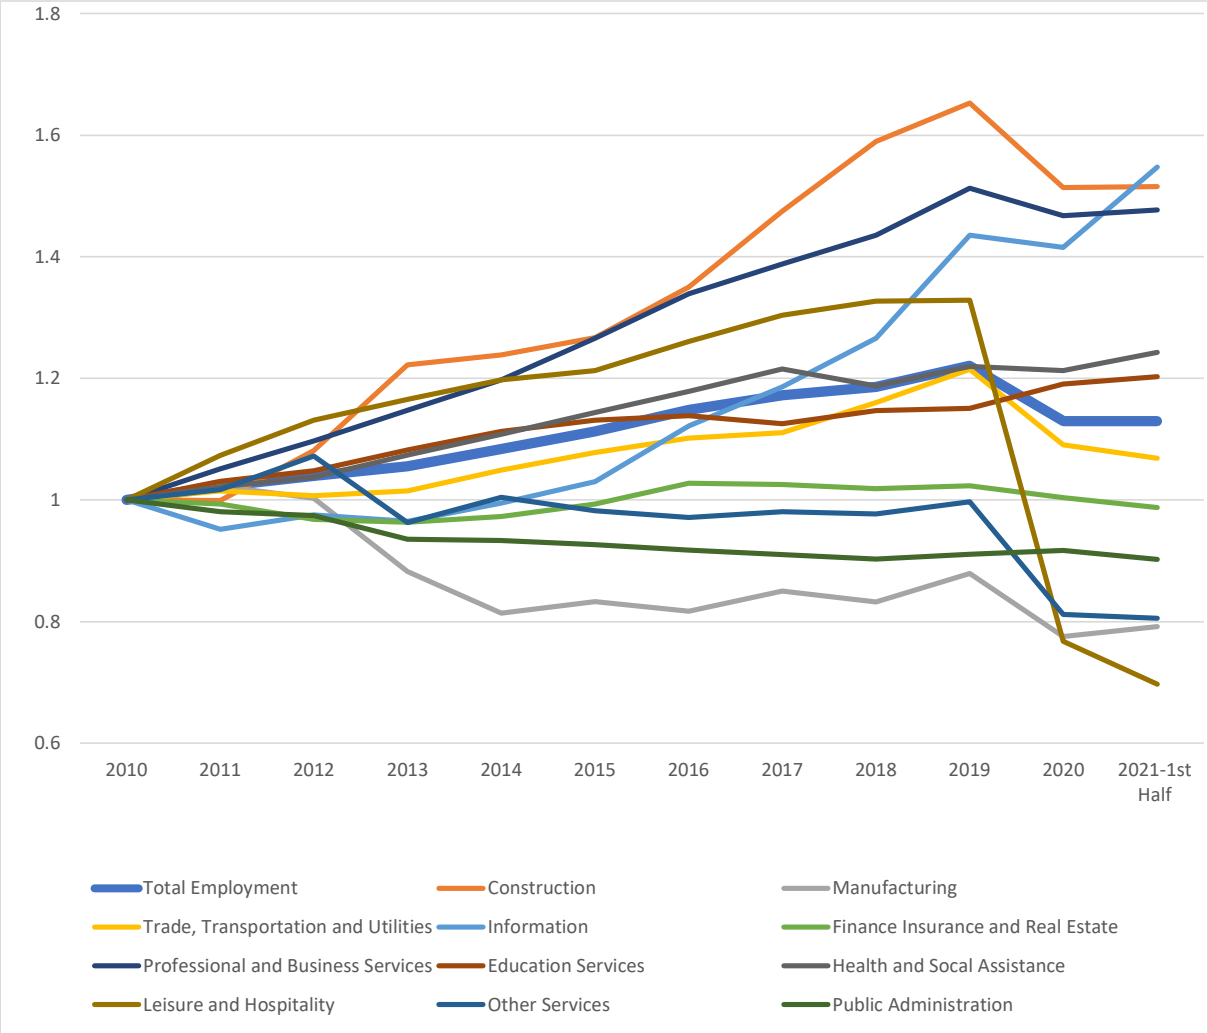


Insurance and Real Estate have a payroll share that is greater than their employment share- indicating that jobs in these sectors pay higher wages, on average, than other sectors in Boston.

Figure 2-1. Boston Payroll Employment by Sector, 2021 First Half

Source: Massachusetts Department of Labor and Workforce Development
Quarterly Census of Employment and Wages (QCEW)

Figure 2-2 Boston Annual Wages (Payroll) by Sector, 2020



Source: Massachusetts Department of Labor and Workforce Development QCEW

Employment trends for Boston show steady overall job growth from 2010 to 2019 followed by pandemic-induced decline for 2020 and 2021. However, job growth varied considerably across sectors. To compare employment growth across sectors of varied size, an index was used that compares a sector's employment for a given year to its employment level in 2010. The index value for any year represents that sector's percentage growth in employment since 2010. **Figure 2-3** shows the index values for Boston's total payroll employment and its major sectors. Total payroll employment, represented by the large blue bar in the middle of the chart, increased by 121,501 jobs or 22%, from 2010 to 2019 before declining by 7.5% in 2020—a loss of 50.121 jobs. Five sectors had growth rates higher than overall employment through the first half of 2021:

- Construction – 52% adding 4,928 jobs
- Information – 55% adding 8,207 jobs
- Professional and Business Services- 48% , adding 43,048 jobs
- Education; 20%, adding 9,649 jobs
- Health Care and Social Assistance, adding 28,927 jobs.

Figure 2-3. Index of Boston Payroll Employment Growth by Sector, 2010 to 2021, First Half

Source: Massachusetts Department of Labor and Workforce Development Employment QCEW

Employment in the Finance, Insurance and Real Estate sector was stable over this period while Manufacturing and Other Services employment was steadily declining—dropping by 21% and 19%, respectively, from 2010 to the first half of 2021. Leisure and Hospitality, which grew steadily through 2019, was severely impacted by the pandemic and experienced steep job losses in 2020 and 2021.

Large and High Growth Industries. Boston has a diverse mix of industries within the sectors that comprise its employment base. In terms of impact on future development, it is important to understand the City's largest industries and those adding the most jobs, as these will likely drive demand for new real estate, tenants that occupy new development and the resulting composition of jobs. The industry- based mix of these new jobs informs employment opportunities for Boston's labor force and the earnings and need for affordable housing among residents employed in these developments.

Boston's largest industries[4], based on a threshold of 12,400 jobs or 2% of total employment, are listed in **Table 2-1**. Thirteen industries with 306,899 jobs meet this threshold and together represent 49.4% of Boston's total employment during the first half (six months) of 2021. Representing Boston's Education and Health Care Sector, the two largest industries, by far, are General Medical & Surgical Hospitals and Colleges and Universities—accounting for 117,496 jobs. Other major industries cut across Boston's diverse sectors, including Finance and Real Estate, Professional and Business Services, Health Care and Social Assistance, Education and Leisure and Hospitality. Two technology-based industries are included: Computer Systems Design; and Scientific Research & Development (largely life science firms).

Table 2-1. Boston's Largest Industries, 2021, 1st Half

Industry	2021 First Half Employment	Percent of Total 2021 First Half Employment	Employment Growth 2010 to 2021 First Half
General Medical & Surgical Hospitals	79,555	12.8%	9,693
Colleges and Universities	37,941	6.1%	6,193
Other Financial Investment Activities	23,580	3.8%	3,818
Restaurants & Other Eating Places	23,572	3.8%	-6,094
Computer Systems Design & Rel Services	22,164	3.6%	16,512
Management & Technical Consulting Svc	17,760	2.9%	6,458
Other Hospitals	17,610	2.8%	4,413
Individual and Family Services	16,020	2.6%	9,288
Legal Services	14,583	2.3%	-287
Insurance Carriers	14,530	2.3%	-403
Scientific Research and Development Svc	13,742	2.2%	6,103
Elementary Education	13,066	2.1%	NA
Employment Services	12,775	2.1%	3,320

Source: Massachusetts Department of Labor and Workforce Development Employment QCEW

Employment growth over the past decade varies across these major industries. While most added several thousand jobs since 2010, three industries reduced employment. Most notably, Restaurants and Oher Eating Places lost 6,094—reflecting the impact of the Covid-19 pandemic. Prior to the pandemic, restaurants were a fast-growing industry that added over 12,000 jobs between 2010 and 2019. Legal Services and Insurance Carriers are large industries with stable employment—each shed a few hundred jobs between 2010 and 2021 but maintained employment between 14,000 and 15,000 throughout the period. Since the employment services industries supplies employees to other businesses, this is not a single industry but represents jobs across a range of Boston industries. Its size and growth indicates the increasing use of temporary and contracted workers among employers.

Table 2-2 lists the 15 industries that added the highest number of jobs between 2010 and the first half of 2021, using a threshold of 2,000. As recent drivers of employment growth, these industries are key generators of demand and tenancy for new development projects. These 15 industries combined to add 94,365 jobs –exceeding Boston's overall net job growth of 71,208. Health care and information technology were key drivers of growth over this period, accounting for eight of

[4] Industries were defined as those at the four-digit NAICS code level.

the 15 high growth industries and 65% of their new jobs. The four IT industries (Computer Systems Design, Electronic Shopping, Software, and Data Processing) had very high growth rates over this period, combined to add 34,258 jobs and represented three of five industries with the highest absolute job growth. Three professional service industries (Management & Technical Consulting, Architecture & Engineering, and Accounting & Bookkeeping) were also important sources of growth, together adding 13,308 jobs. Scientific Research and Development Services—the largest component of Life Science industries—grew by 80% and added 6,103 jobs from 2010 to 2021. This figure understates the overall size and growth among Life Science industries. The BPDA Research Division identified five components with the city's Life Science industry cluster: 1) Pharmaceutical & Medical Manufacturing; 2) Colleges & Universities; 3) Hospitals; 4) Scientific Research & Development; and 5) Medical & Diagnostic Laboratories[5]. Total estimated Life Science Industry employment for all five of these components was 17,381 in the second quarter of 2021- an increase of 5,704 jobs, or 49% , since 2010 (See **Figure 2-3A**).

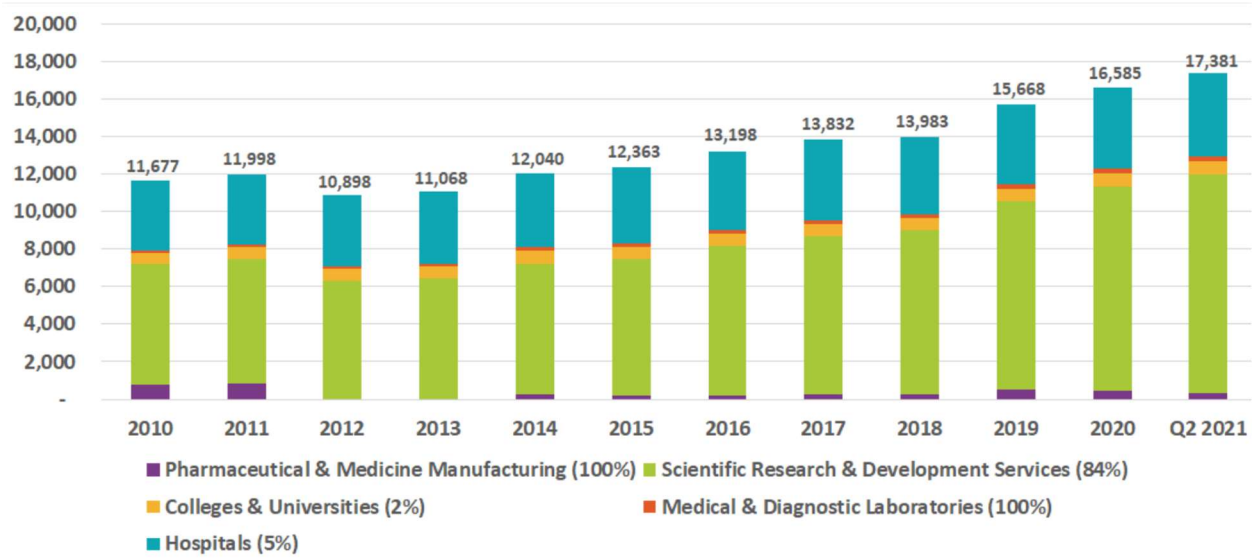


Table 2-2. Boston Industries with Largest Employment Growth 2010 to 2021, 1st Half*

Industry	Employment Growth 2010 to 2021 First Half	Percent Employment Growth 2010 to 2021 First Half
Computer Systems Design & Related Services	16,512	292.1%
General Medical & Surgical Hospitals	9,693	13.9%
Individual and Family Services	9,288	138.0%
Electronic Shopping & Mail-Order Houses	7,913	620.1%
Software Publishers	7,385	766.1%
Management & Technical Consulting Services	6,458	57.1%

Covid-19 Impacts. As noted earlier, the Covid-19 pandemic led to a large decline in Boston's payroll employment from 2019 to 2020. While the City's economy is rebounding, it has not regained all of the lost employment and recovery has varied considerably across sectors (see Figure 2-4). Recovery job growth in a few sectors, such as Health Care and Professional & Business Services, has exceeded the initial job loss, but for most sectors, the original job loss has not been regained. Accommodations & Food Services, Arts, Entertainment & Recreation. Transportation & Warehousing, and Education Services all have regained only a fraction of the jobs lost from the pandemic.

Figure 2-4. Change in Boston Payroll Employment, Crisis and Recovery

2.0 Non-Residential Real Estate Development

Boston's sustained pre-pandemic economic growth generated a strong real estate development market with substantial new non-residential construction from 2011 through early 2022. A large pipeline of projects also exists that includes those in construction, approved projects awaiting the construction stage and projects under review. **Table 2-3** summarizes the total square feet (SF) of development projects with 50,000 SF or more completed from 2011 to 2021 along with those under construction and in pre-construction stages.

Table 2-3. Boston Commercial and Mixed-Use Development Projects 50,000 SF or More by Project Status, April 2022

Project Status	Housing Units	Total SF	New/ Redeveloped Non-Res SF	Percent Non-Res to Total SF
Complete, 2011 through 2021	2,271	29,860,775	25,821,485	86%
Average Annual, 2011 through 2021	*206*	*2,714,616*	*2,347,408*	
Future Development				
In Construction	1,126	9,795,689	8,251,744	84%
Approved	7,585	30,618,748	22,456,587	73%
Under Review	3,338	25,272,575	21,388,844	85%
Total Future Development Potential	**12,049**	**65,687,012**	**52,097,175**	**79%**

Source: City of Boston and ConsultEcon, Inc.

Just under 30 million SF of new development of larger commercial or mixed-use buildings occurred during this period, with 86%, or 25.8 million as non-residential development. The pipeline of potential future projects is even larger at 65.7 million SF with 52.1 million SF (79%) in non-residential square footage—indicating strong confidence in Boston's economy and future demand for non-residential real estate. Moreover, over 8 million SF of non-residential development was under construction as of April 2022—3.5 times the annual average size of completed projects over the prior eleven years.

Based on BPDA's current pipeline, future commercial and mixed-use development will have a different mix of uses than the projects completed from 2011 to 2021 (see **Table 2-4**). While office projects account for the largest share of future development, their share drops to 32%, compared with 45% for completed projects. Far larger amounts of residential mixed-use development and Lab/R&D projects are in the pipeline than were completed during the last decade, at over 15.5 million SF and 10.7 million SF, respectively. The large growth in planned lab development reflects the region's fast-growing Life Sciences industry cluster and is occurring throughout the greater Boston areas.

Table 2-4. Completed and Potential Future Non-Residential Boston Development Projects by Use

Summary Land Use	Completed Projects, 2011 to 2021	Percent of Total		Future Projects 1/	Percent to Total
Commercial	2,534,504	10%		1,819,499	4%

Boston's office real estate market slowed during the pandemic with increases in vacancy and available space. Based on Costar data cited in the BPDA's Research Division's report, Boston's Economy 2022, Boston had close to 115 million SF of office space in 2021 with 48 million SF in Downtown, 17 million in Back Bay, and 15 million in the South Boston Waterfront. Boston's office vacancy rate rose from around 6% in 2019 to 11% by the end of 2021 with office vacancy rates above the citywide average in the South Boston Waterfront, Downtown, Charlestown, and East Boston. Office vacancy rates continued to rise throughout 2021 in Boston's financial district, while beginning to fall from a high level in the Seaport and stabilizing in Back Bay. CoStar forecasts Boston office vacancies to stabilize at around 10%, which is the historical average for the past 15 years. Despite the increase in vacancies, Boston had positive net absorption of over 431, 000 SF in office space during 2021 with Class A space performing well with net absorption of 1.2 million SF[6].

Office space utilization, however, remained low in 2021, below 20% for major downtown building throughout the year.[7] Low worker occupancy of office buildings due to the pandemic reduces sales at stores and restaurants in the city's major business district with negative effects on the retail real estate market. The city's retail vacancy rate increased to 2.4% in 2021, compared to 2.2% in 2020 while retail rents fell from $48.27/sf in 2019 to $46.19/sf in 2020 to $46.00/sf in 2021[8].

Fueled by Boston's growing Life Science industry, the Lab real estate market has been booming in Boston and throughout the region. While Life Science firms were historically centered in

[6] Colliers, *2021 Q4 Boston Office Market Report.*
[7] Cited in BPDA Research Division, *Boston's Economy 2022* from CBRE, https://www.cbre.us/research-and-reports/Boston-Office-Figures-Q3-2021.
[8] BPDA Research Division, *Boston's Economy 2022.*

Cambridge, especially around MIT and Kendall Square, Boston has attracted a growing number of Life Science companies as firms look for lower cost alternatives to Kendall Square and rapid industry growth has outpaced the supply of space. Rapid industry growth has resulted in a large shortage of lab space with vacancy rates close to zero in Boston and Cambridge and at 2% in the suburban market[9]. According to real estate firm CBRE, Boston had positive absorption of 1.3 million SF of life science space in 2021 with rents reaching $103.24 per SF, triple net[10].

Strong growth and real estate demand in the Life Science industry has resulted in a boom in the lab development pipeline with many new lab projects being proposed and existing planned office projects being converted to lab space. Within Boston, new lab/life science projects are being proposed in new parts of the City beyond the Seaport District, including the Fenway, Allston-Brighton, Dorchester and Roxbury. Substantial new lab development is also in the pipeline for Cambridge and the Boston suburbs. According to a recent report by real estate brokerage firm Newmark[11], there is a potential pipeline of over 49 million SF of new lab development in the Boston region, with 14.5 million SF under construction and another 34.6 million in proposed projects. This pipeline is approaching twice the size of the region's 26.8 million SF of existing lab space and if largely developed, poses the risk that the market will become overbuilt and experience increased vacancy and declining rents later this decade.

3.0 DEMOGRAPHIC PROFILE AND TRENDS

Population and Household Size

According to the Census 2020, the population of Boston was about 675,000 and there were 279,000 households. The average household size was 2.35 persons based on the American Community Survey 2020 (5-year) estimates. **Figure 2-5.** shows the population growth in Boston and Massachusetts from 1910 to 2020. Boston grew by 9.4% from 2010 to 2020, faster than the state total (7.4percent) and national total (7.4percent).

Figure 2-5. Population Growth for Boston and Massachusetts by Decade (1910 to 2020)

Source: U.S. Census Bureau, 1900-2020 Decennial Censuses, BPDA Research Division Analysis

Age Characteristics

The age distribution for Boston is shown in **Figure 2-6**. The largest age group in the population was from age 20 to 34, representing 35% of the total population. Boston had 102,000 children under the age of 18 in 2020, making up 15 percent of the total population.

Figure 2-6. Age Distribution for Population of Boston, 2016 to 2020 5-Year ACS Estimates

Age Distribution - 5YR ACS 2016-2020		
Total Population	689,326	
< 5	34,039	4.9%
5 - 14	57,230	8.3%
15 - 17	17,323	2.5%
18- 19	31,301	4.5%
20 - 34	238,796	34.6%
35 - 44	86,463	12.5%

55 - 64	69,854	10.1%
> 65	81,284	11.8%

Source: Boston Public Schools, Boston Public Schools at a Glance 2021-2022, BPDA Research Division Analysis.

Foreign-Born Population

Data in **Figure 2-7** shows the number of Boston residents born in the U.S. and born in foreign countries, as well as citizenship in 2020. Boston had approximately 194,000 foreign-born residents in 2020, representing about 28% of Boston's population, and about 14% of the population was not a U.S. citizen.

Figure 2-7. Nativity for Population of Boston, 2016 – 2020 5-Year ACS Estimates

Nativity - 5YR ACS 2016-2020		
Total Population	689,326	
Native	494,788	71.8%
Foreign Born	194,538	
U.S. Citizen by Naturalization	97,303	14.1%
Not a U.S. Citizen	97,235	14.1%

Source: Boston Public Schools, Boston Public Schools at a Glance 2021-2022, BPDA Research Division Analysis.

Racial and Ethnic Composition

Of the total population in Boston in 2020, about 45% identified their race / ethnicity as White Only. The next two largest racial / ethnic groups were Black or African American Only (22%) and Hispanic Only (20%). The breakdown of race / ethnicity for Boston is shown in **Figure 2-8**. Boston has become more diverse in recent history and Boston's child population is more diverse than its adult population.

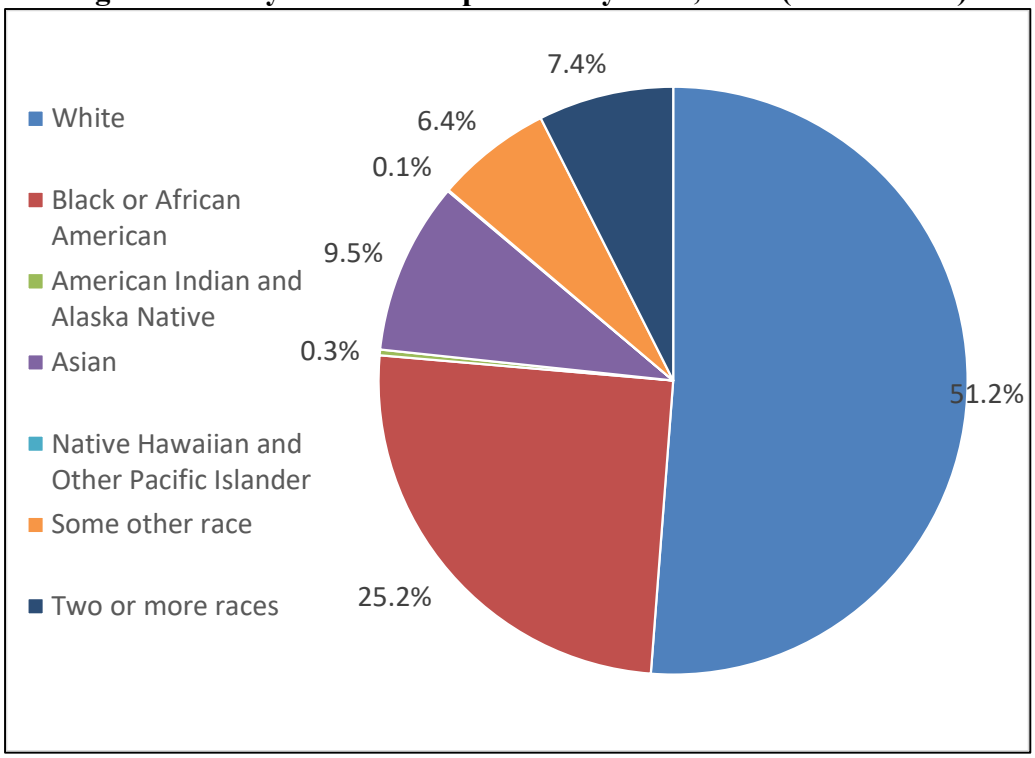

Figure 2-8. Race and Ethnicity for Population of Boston, 2016 – 2020 5-Year ACS Estimates

Race & Ethnicity - 5YR ACS 2016-2020		
Total Population	689,326	
White Only	308,346	44.7%
Black or African American only	151,564	22.0%
American Indian and Alaska Native Only	1,388	0.2%
Asian Only	67,041	9.7%
Native Hawaiian and Pacific Islander Only	331	0.0%
Hispanic Only *	134,703	19.5%
Other Race	4,918	0.7%
Two or More Races	21,035	3.1%

Note: Hispanics can be of any race but are reported separately in this analysis.
Source: Boston Public Schools, Boston Public Schools at a Glance 2021-2022, BPDA Research Division Analysis.

Data in **Figure 2-9** show the 2020 population by race (not including Hispanic ethnicity) in Boston. Just over half of the population is White, and people of Black or African American descent make up just over a quarter of the population. About 17% of total population was of Hispanic or Latino origins, and about 51% of the population was White alone.

Figure 2-9. City of Boston Population by Race, 2020 (ACS 5-Year)

Source: U.S. Census Bureau, 2016 – 2020 5-Year American Community Survey; and ConsultEcon Inc.

Poverty Rates

About 59,000 people, representing 9.1% of the population of Boston for whom poverty status is determined, were at less than 50% of the poverty level. Child poverty during the same period was 12.3%, according to 5-Year ACS Estimates (2016 – 2020). Data in **Figure 2-10** show families in poverty by family type for 2020.

Figure 2-10. City of Boston Families in Poverty by Family Type, 2020

Family Type	Less than 50 percent of the poverty level	Percent of Families in Poverty	Total Population [1/]	Poverty Rate
In family households				
In married-couple family	6,205	10.6%	248,196	2.5%

Source: U.S. Census Bureau, 2016 – 2020 5-Year American Community Survey; and ConsultEcon Inc.

Data in **Figure 2-11** show the population of Boston at or below the poverty line in 2020 by race. While the White population had a relatively lower percentage of the population at or below the poverty line compared to their percentage of the total population (36% versus 51%), the other racial groups had a relatively higher percentage of population at or below the poverty line.

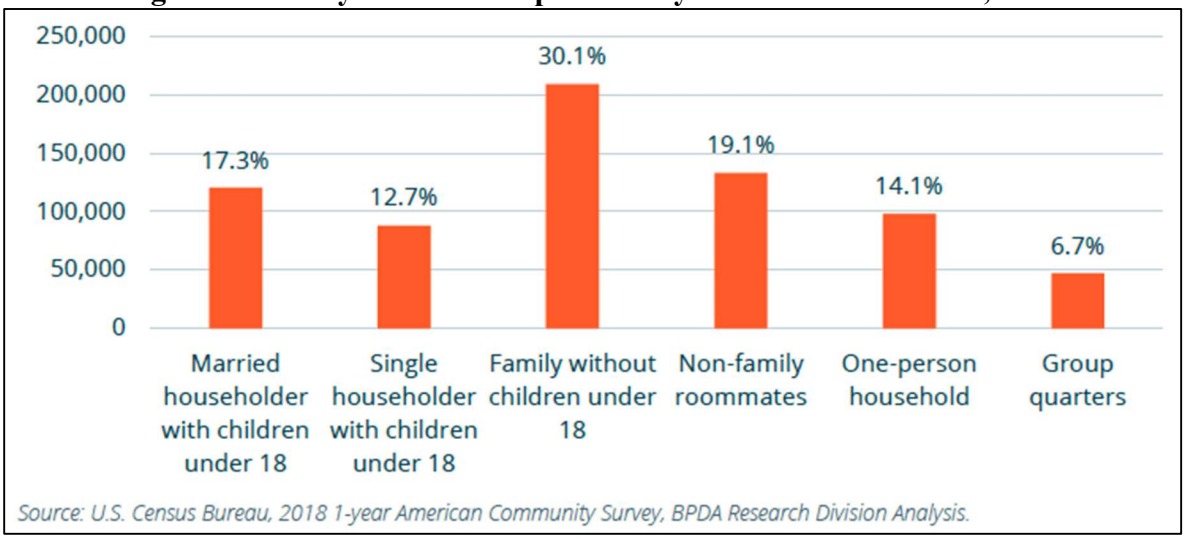
Household Types and Sizes



Of the 273,000 households in Boston in 2020, about half were family households and half were non-family households. The most common household size was 1 person (36%), followed by 2-person (33%), 4-or-more-person (16%), and 3-person households (16%). Data in **Figure 2-12** show households by type and by size. **Figure 2-13** shows more detail on household types in 2018, including families without children (30%), non-family roommates (19%), married households with children (17%), one-person households (14%), single households with children (13%), and group quarters (7%).

Figure 2-12. City of Boston Household Type and Size, 2020

Household Type - 5YR ACS 2016-2020		
Total Households	273,188	
Family Households **	130,052	47.6%
Non-Family Households	143,136	52.4%
Household Size - 5YR ACS 2016-2020		
Total Occupied Housing Units	273,188	
1-Person Household	98,340	36.0%
2-Person Household	88,817	32.5%
3-Person Household	42,226	15.5%

Source: Boston Public Schools, Boston Public Schools at a Glance 2021-2022, BPDA Research Division Analysis.

Figure 2-13. City of Boston Population by Household Structure, 2018

Renter- and Owner-Occupied Households

In 2020, about 92% of housing units in Boston were occupied. Of occupied housing units, about 35% were occupied by owners and about 65% were occupied by renters (shown in **Figure 2-14**).

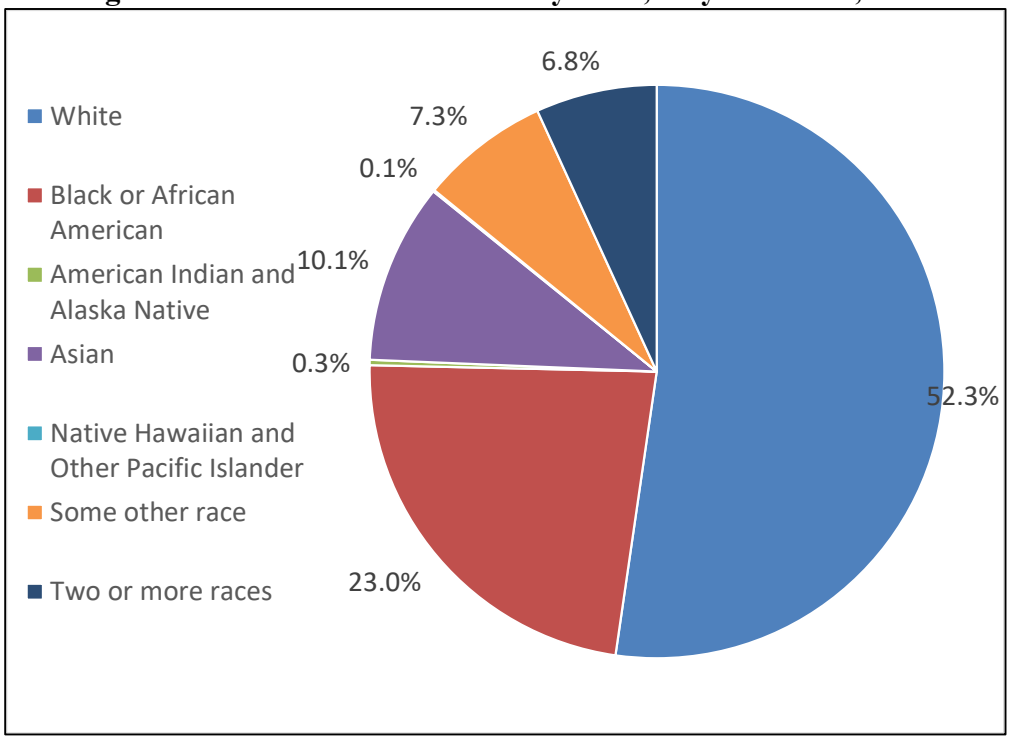

Figure 2-14. City of Boston Housing Units, 2020

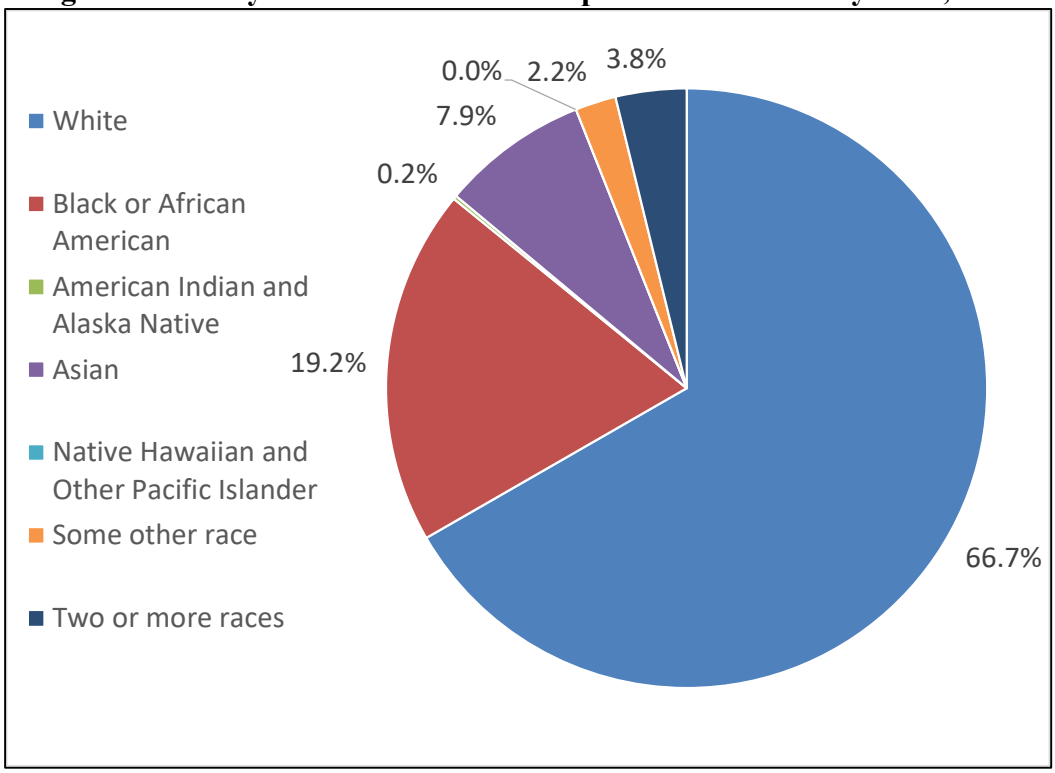
Housing Units - 5YR ACS 2016-2020		
Total Housing Units	298,708	
Occupied	273,188	
Owner-Occupied	96,502	32.3%
Renter-Occupied	176,686	59.2%
Vacant	25,520	8.5%

Source: Boston Public Schools, Boston Public Schools at a Glance 2021-2022, BPDA Research Division Analysis.



Figures 2-15 and **2-16** show the breakdown of renter- and owner-occupied households by race. While the percentage breakdown of renter households by race is like the population percentage breakdown, White households make up an outsized portion of homeowners. While Black or African American households make up more than 25 percent of the total population, they make up less than 20 percent of homeowners.

Figure 2-15. Renter Householder by Race, City of Boston, 2020

Source: U.S. Census Bureau, 2016 – 2020 5-Year American Community Survey; and ConsultEcon Inc.

Figure 2-16. City of Boston Owner Occupant Householder by Race, 2020

Source: U.S. Census Bureau, 2016 – 2020 5-Year American Community Survey; and ConsultEcon Inc.

Household Income Distribution

The median household income in Boston was $76,000 in 2020, with per capita income of $47,000. **Figure 2-17** shows a summary of median income and **Figure 2-18** shows income ranges for households by race in 2020.

Figure 2-17. City of Boston Household Income, 2020

Income (In 2020 Inflation-Adjusted Dollars)- 5YR ACS 2016-2020	
Per Capita Income	$46,845
Median Household Income	$76,298
Median Family Income	$89,270
Median Non-Family Income	$61,649

Source: Boston Public Schools, Boston Public Schools at a Glance 2021-2022, BPDA Research Division Analysis.

There is a distinct disparity of household incomes between racial groups, as shown by data in **Figure 2-18** and in **Figure 2-19**. White households account for 57 percent of all households. They make up 74 percent of households earning over $100,000. Black households account for 22 percent of all households and 12 percent of households earning over $100,000. Asian households account for 9 percent of households and 8 percent of households earning over $100,000. Moreover, the median household income for White Households, at $108,291 is over twice that of Black, Latino and Asian households, at $47,800, $43,337 and $52,326, respectively (see Figures 2-19 and 2-20).

Figure 2-18. City of Boston Households by Household Income Group and by Race, 2020

Household Wealth / Net Worth

Figure 2-21 shows a comparison of median net worth for racial and ethnic groups in the Greater Boston Metro Area from *The Color of Wealth in Boston*, a report from the Federal Reserve Bank of Boston published in 2015[12]. While White households had a median net worth of close to $250,000, U.S.-born Black households had a median net worth of only $8 and Dominican households had median net worth of $0. Caribbean-born Black households and NEC (not elsewhere categorized, mainly respondents that chose more than one race) had median net worth of about $12,000, and Puerto Rican and Other Hispanic households had net worth of $3,000 and $2,700, respectively.

[12] Federal Reserve Bank of Boston, *The Color of Wealth*, 2015.

Figure 2-21. Greater Boston Comparison of White and Non-White Household Median Net Worth, 2015

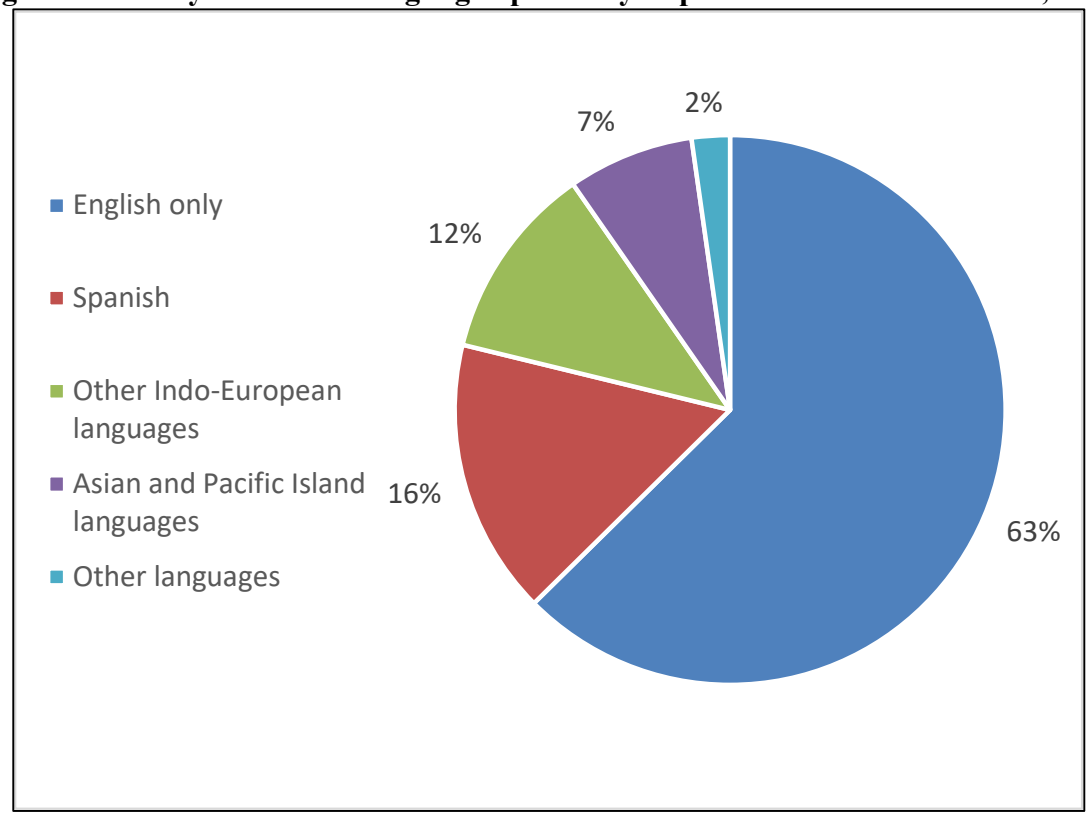
	Median net worth	
	Amount (U.S. dollars)	Nonwhite household percentage of white household median net worth
White	247,500	100.0
U.S. Black	8	0.0***
Caribbean Black	12,000	4.8***
Cape Verdean[b]	–	–
Puerto Rican	3,020	1.2***
Dominican	0	0.0***
Other Hispanic	2,700	1.1***
NEC[a]	12,000	4.8***

Source: NASCC survey, authors' calculations
Note: Difference in findings of nonwhite household median or mean net worth values were statistically significant at the ***99 percent level.
[a] The "not elsewhere classified" (NEC) category includes mainly respondents that chose more than one race.
[b] Net worth values for Cape Verdeans were not calculated because sample sizes were too small.

As of May 2022, a new study will be conducted over 3 years to provide more in depth and accurate data on the underlying causes of the wealth gap, including the outsized impact of student debt on Black families and the engagement of members of the Black community in the high-growth and high-paying life sciences industry in Massachusetts[13]. The 2015 report had small sample sizes – about 70 households led by US-born Black people, 80 white-led households, 130 Hispanic households, and 14 households with Asian backgrounds. The new study is intended "to be broader, to cover racial inequities statewide, with bigger samples (3,000 to 5,000 people) to consider and a broader variety of ethnic groups," according to Boston Fed Executive Vice President Prabal Chakrabarti. The report will also point to strategies to reduce and ultimately eliminate wealth disparities.

English Proficiency and Languages Spoken

Data in **Figure 2-22** show English proficiency for the population of Boston age 5 years and older. About 37% of the population speaks another language at home and about 46% speak English "less than very well". **Figure 2-23** shows the languages spoken by the population age 5 years and older.



[13] Boston Globe, "Fed, business groups to update study that found average Black Boston household had net worth of $8," May 9, 2022. (Link).

Figure 2- 22. City of Boston English Proficiency, 2020

English Proficiency - 5YR ACS 2016-2020		
Total Population (5 Years and Over)	655,287	
Speak Only English at Home	412,091	62.9%
Speak Another Language at Home	243,196	37.1%
Speak English "Very Well"	132,250	54.4%
Speak English "Less than Very Well"	110,946	45.6%

Source: U.S. Census Bureau, 2016 – 2020 5-Year American Community Survey; and ConsultEcon Inc.

Summary

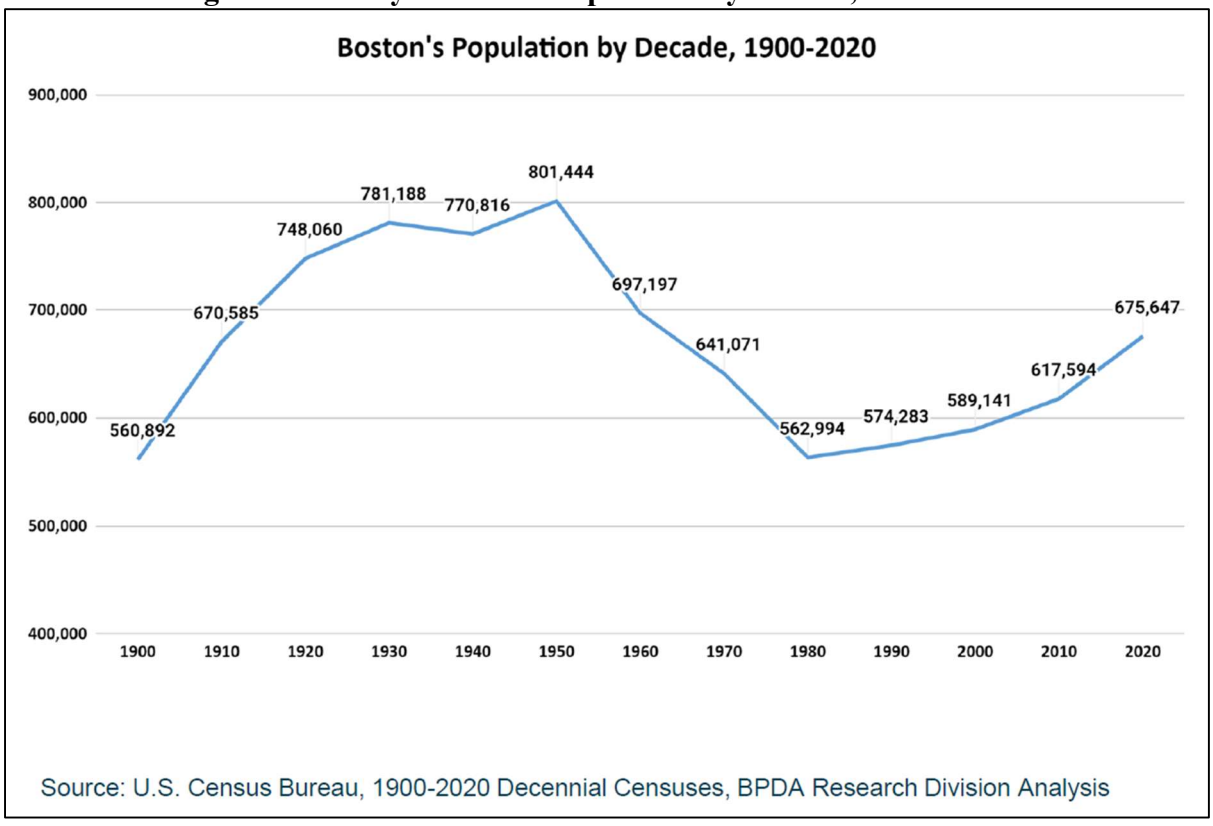
Given the percentage of people in poverty, the number of low-, moderate- and middle-income households, combined with the higher percentage of renter and owner households that are cost burdened, there is a need for affordable housing. Building affordable housing and lowering housing costs means that households are more able to spend on other important categories, such as food, child care and other spending that support households. There is a need to raise incomes, especially for lower income racial and ethnic population groups with higher poverty rates and lower incomes. The new commercial development in the city offers the potential for jobs at new development to help address the need for increasing incomes among Boston's households.

4.0 KEY DEMOGRAPHIC TRENDS, 2010 TO 2020

Population and Household Growth

Figure 2-24 shows the Boston population by decade from 1900 to 2020. Since reaching a low point in 1980, the city has steadily grown in population. From 2010 to 2020, the population grew from 618,000 to 676,000 – about 9%. **Figure 2-25** shows the average household size in Boston from 1950 to 2020. While household size continues to decline, the rate of decline has flattened, decreasing less than 1% from 2010 to 2020.

Figure 2-24. City of Boston Population by Decade, 1900 to 2020



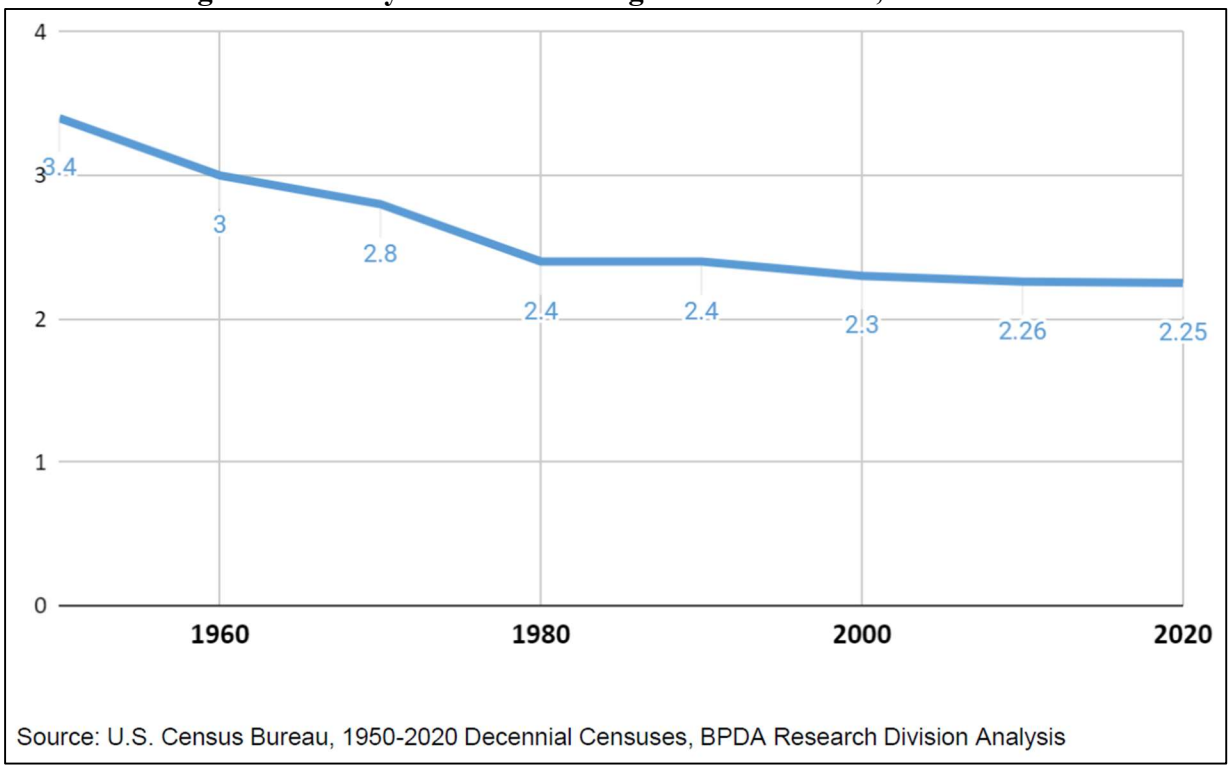


Figure 2-25. City of Boston Average Household Size, 1950 to 2020

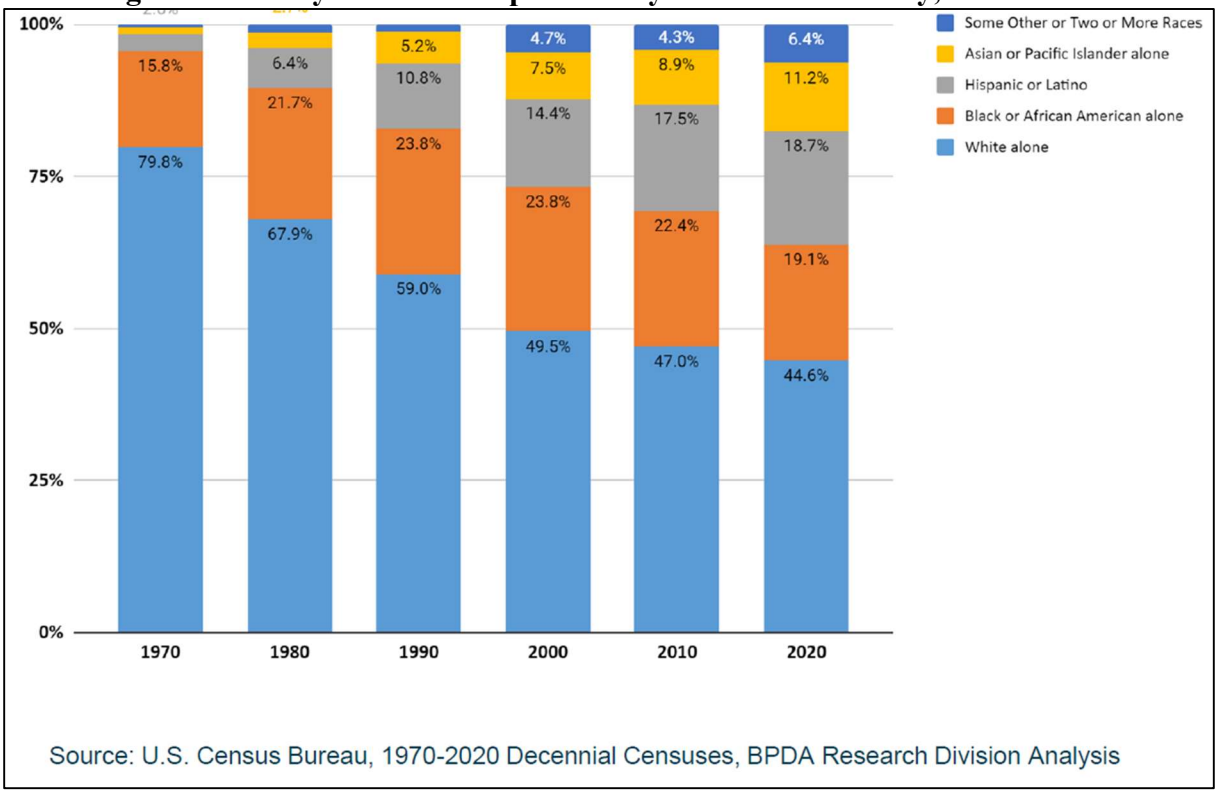
Note: The average household size reported by the American Community Survey 5-Year Estimates (2016 to 2020) was 2.35 persons. The data in this graph is from the decennial census, which reported 2.25 persons.

Changes in Racial Composition of Population

The city of Boston has become more diverse over time, as shown in **Figure 2-26**. From 2010 to 2020, the city's White population continued to represent a smaller portion of the total population, while Black / African American, Hispanic, or Latino, and Asian / Pacific Islander populations, as well as those of some other or two or more races, represent a larger percentage. The Hispanic/Latino and Asian/Pacific Islander share of Boston's population have grown over the last two decades while the share of White Alone and Black/African-American has declined. **Figure 2-27** shows the population by race and ethnicity for children under 18. Children had greater diversity than the total population.

Figure 2-26. City of Boston Population by Race and Ethnicity, 1970 to 2020



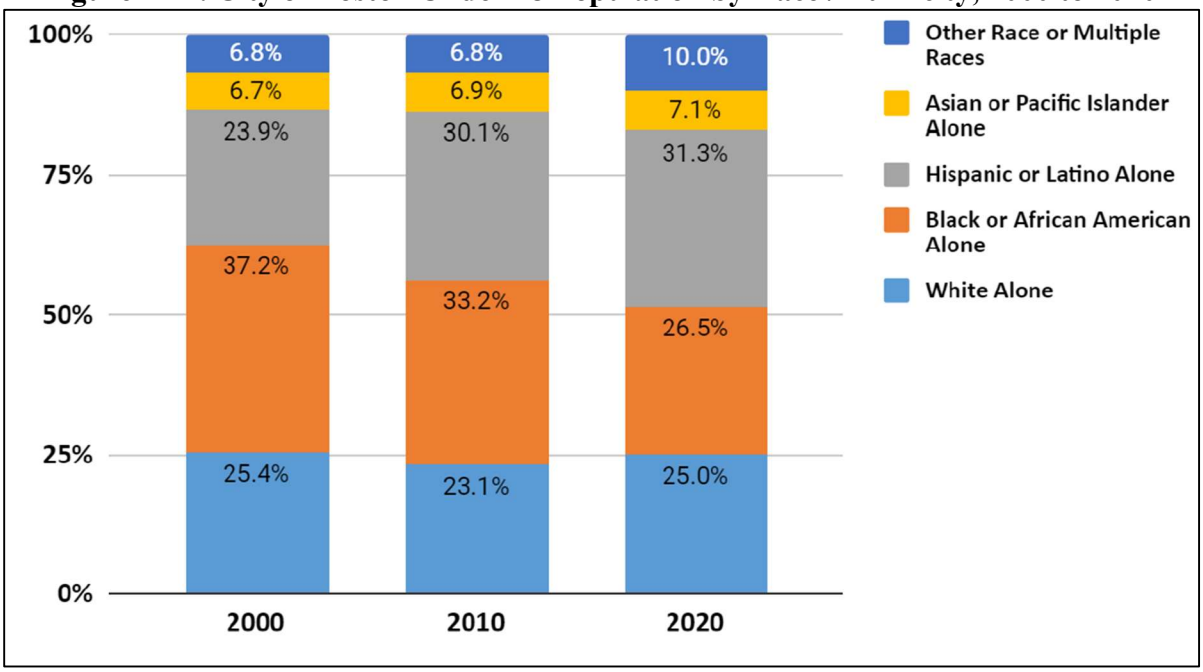


Figure 2-27. City of Boston Under 18 Population by Race / Ethnicity, 2000 to 2020

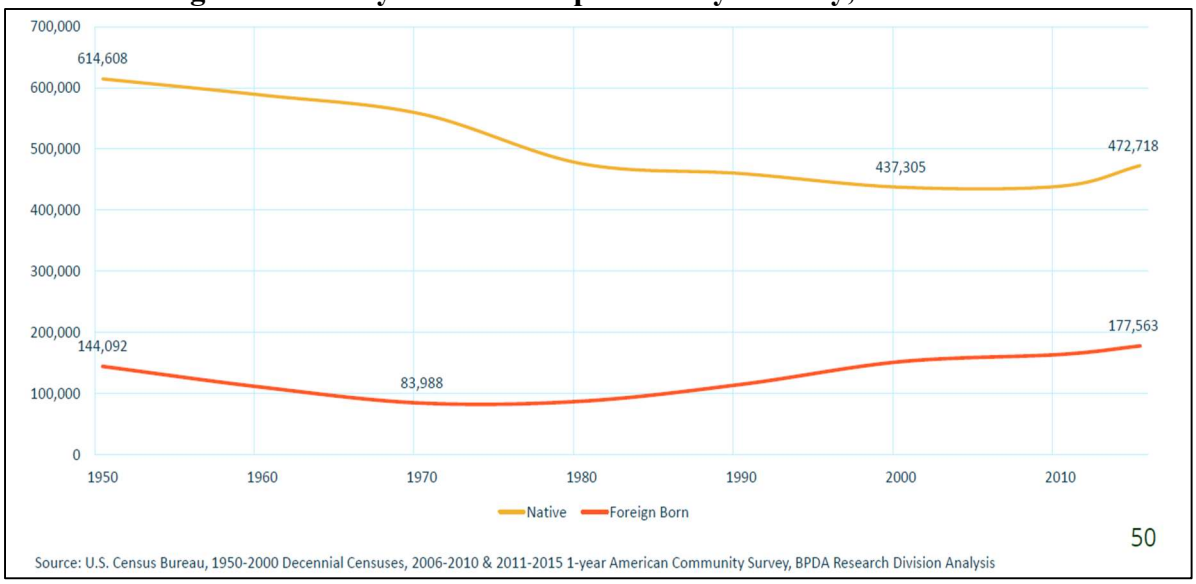

Source: US Census Bureau 2000 to 2020 Census and BPDA Research Division Analysis

Change in Foreign-Born Population

Boston's foreign-born population has more than doubled since 1970. **Figure 2-28** shows the change in Boston's population's nativity from 1950 to 2015. From 2015 to 2020, the population of foreign-born residents grew from 178,000 to 194,000 – an increase of 9%.

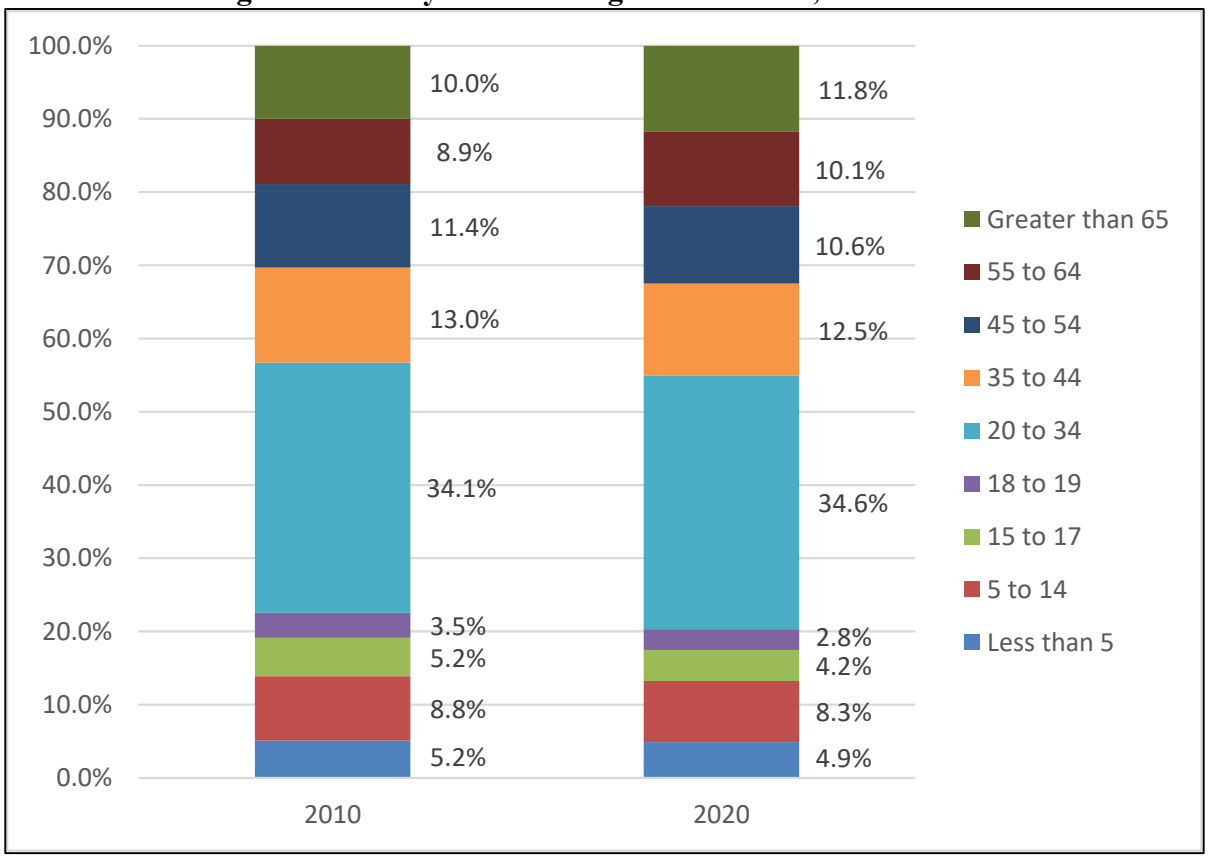

Figure 2-28. City of Boston Population by Nativity, 1950 to 2015

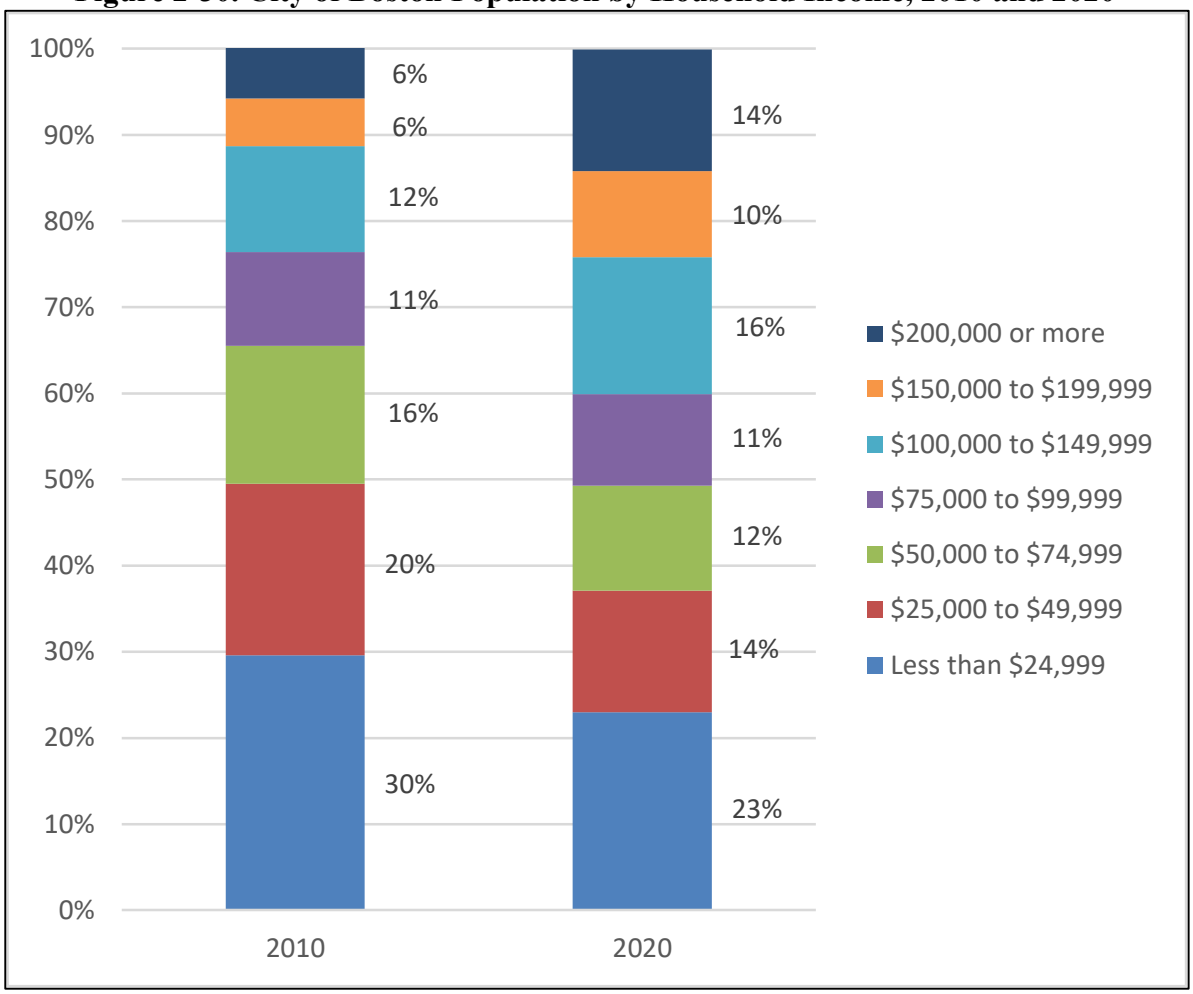
Changes in Age Distribution of Population

Figure 2-29 shows the age distribution of the population of Boston from 2010 to 2020. The population over age 55 and from 20 to 34 increased from 2010 to 2020, while other age groups decreased during the period.

Figure 2-29. City of Boston Age Distribution, 2010 to 2020

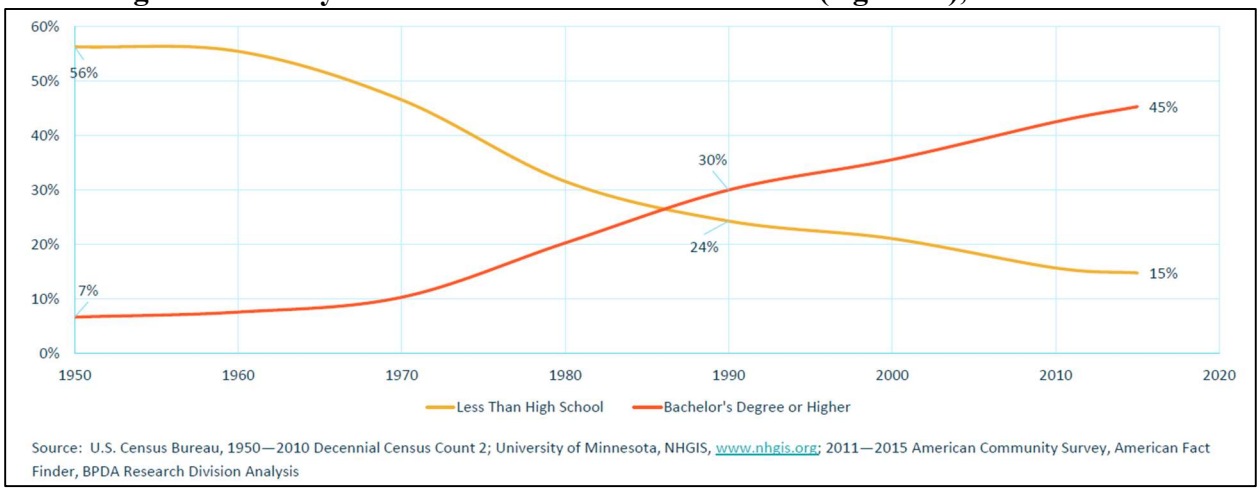


Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

Changes in Income Distribution of Population

From 2010 to 2020, the percentage of Boston's households making $100,000 or more grew from about 24% to 40%, as shown in **Figure 2-30** while the share of households with incomes below $75,000 dropped from 66% to 49% . The city's median household income increased during the period from about $51,000 to $76,000.

Figure 2-30. City of Boston Population by Household Income, 2010 and 2020



Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

Changes in Educational Attainment of Population

Figure 2-31 shows the change in educational attainment from 1950 to 2015. The share of the population over age 25 with a bachelor's degree or higher has continued to grow since the 1980s, and the population with less than a high school diploma has declined.

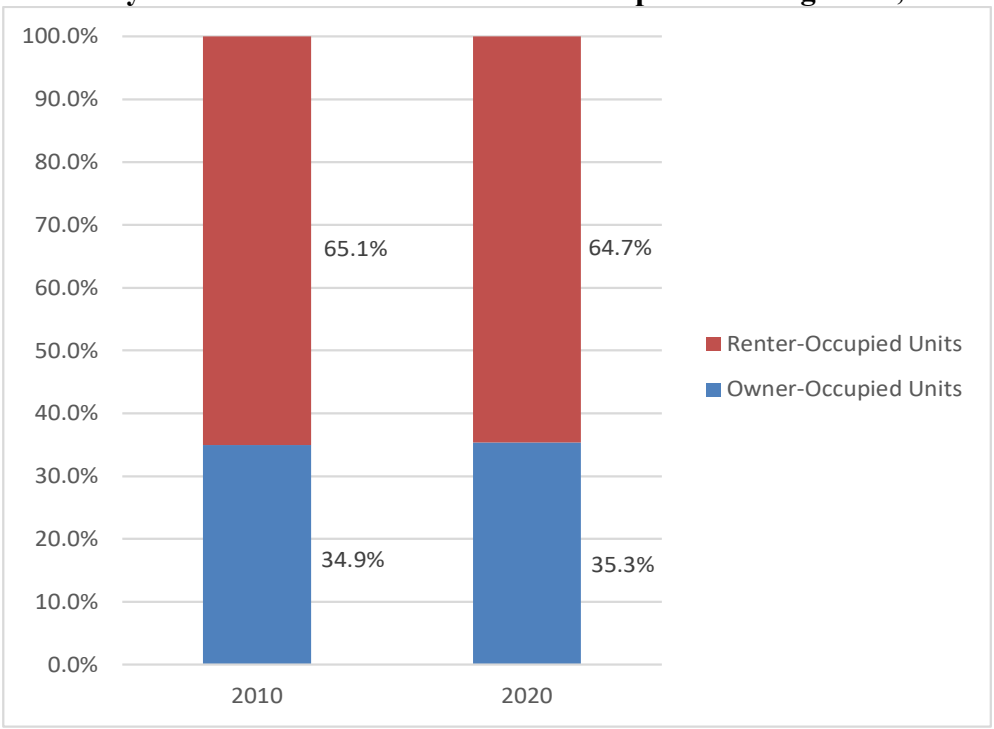


Figure 2-31. City of Boston Educational Attainment (Age 25 +), 1950 to 2015

Changes in Renter- and Owner-Occupied Housing

The percentage of renter- and owner-occupied units stayed fairly steady from 2010 to 2020, shown in **Figure 2-32**.

Figure 2-32. City of Boston Renter- and Owner-Occupied Housing Units, 2010 to 2020

Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

5.0 Boston Labor Force Profile and Trends

This labor force profile and review of labor force trends in Boston utilizes three primary data sources: (1) the 2016-2020 American Community Survey (ACS); (2) comparative data from the 2006-2010 ACS; and (3) Bureau of Labor Statistic Local Area Unemployment data provided by the Massachusetts Department of Unemployment Assistance. ACS data provides five-year estimates, summarizing data from 2016 to 2020, for a range of labor force characteristics and outcomes by age, gender and race while the state data provides the most recent information on overall labor force size, participation and unemployment. For the purpose of this section, ACS five-year estimates are referred to by the last year of their period, either 2010 or 2020. The data analysis is supplemented with qualitative and quantitative information for several recent studies.

Labor Force Profile

Overview. In 2020, Boston's labor force participation rate was 69.8% with 413,366 residents aged 16 and over in the labor force. While there is roughly even representation of men and women in the labor force (49.4% and 50.6% respectively), men's participation rate is slightly higher at 72.5% while women's participation rate is 67.4%.[14] To contextualize Boston's labor force participation rate within the region, the state of Massachusetts experienced its lowest labor force participation rate in March 2020 at 60.5%, though the figure has stabilized at around 65.5% since June 2020.[15] As such, Boston's labor force participation rate continues to exceed that of the state average by roughly four to five percentage points. State estimates for March 2022 show a decline in Boston's labor force by over 16,000 to 397,064[16]. The city's unemployment rate in 2020 was 6.90%, according to the ACS. More recent state estimates report a reduced unemployment rate of 3.1%, below the statewide rate of 4.3%.[17] While slightly above the pre-pandemic rate of 2.7% in 2019, it marks a major reduction in unemployment from Boston's peak of 15.8% in May and June, 2020[18].

Table 2-5. Boston Labor Force Size, Participation Rate, and Unemployment Rate by Educational Attainment, ACS 2016-2020

Educational Attainment Level	Population Count	Labor Force Participation Rate	Unemployment Rate
Less than high school	37,552	66.9%	11.2%
High school graduate (or equivalent)	68,796	75.0%	8.8%
Some college or associate's degree	71,146	81.9%	7.4%
Bachelor's degree or higher	220,086	89.5%	3.4%

Labor force participation rates were lowest and unemployment rates highest in 2020 for individuals with less than a high school level education, at 66.0% and 11.2%, respectively. Labor participation rates increased and unemployment rates declined consistently at higher levels of education (See **Table 2-5**). Labor participation reached 89.5% and the unemployment rate was at 3.4% for individuals with a Bachelor's degree or higher. Individuals between 16 and 24 years of age, likewise, experienced higher unemployment rates and lower labor force participation during this time period relative to other age cohorts. Labor force participation and employment rates peaked for workers between 30 and 44 years old (See **Table 2-6**).

Table 2-6. Boston Labor Force Size, Participation Rate, and Unemployment Rate by Age, ACS 2016-2020

Age Group	Population Count	Labor Force Participation Rate	Unemployment Rate
16-19 years	42,445	40.5%	24.1%
20-24 years	70,569	66.5%	10.7%
25-29 years	93,848	86.0%	5.8%
30-34 years	74,379	89.8%	3.7%
35-44 years	86,463	88.1%	5.5%
45-54 years	73,036	82.9%	7.3%
55-59 years	37,249	74.1%	6.1%
60-64 years	32,605	61.7%	5.0%
65-74 years	46,846	31.4%	5.1%
75 years and over	34,438	7.6%	5.1%

Source: U.S. Census Bureau (2020). *2016-2020 American Community Survey 5-Year Estimates*.

Table 2-7. Boston Population 16+, Participation Rate, and Unemployment Rate by Race/Ethnicity, ACS 2016-2020

Race/Ethnicity	Population Count	Labor Force Participation Rate	Unemployment Rate
White	323,682	72.8%	5.3%
White alone, not Hispanic or Latino	282,781	73.1%	4.9%
Black or African American	133,971	67.8%	9.9%
American Indian and Alaska Native	1,778	50.9%	8.1%
Asian	60,991	59.2%	6.2%
Native Hawaiian and Other Pacific Islander	323	82.0%	1.9%
Other Race	34,586	66.8%	10.9%
Two or More Races	36,547	72.4%	8.3%
Hispanic or Latino origin (any race)	104,328	69.7%	9.2%

.

Considerable racial disparity in Boston's labor participation and unemployment rates exists (See **Table 2-7**). With the exception of the small Native Hawaiian and Other Pacific Islander labor force, White, non-Hispanic workers had the highest labor participation rate, at 73.1% and lowest unemployment rate, 4.9%, in 2020. Unemployment rates were highest, and over twice that of White, non-Hispanic workers, for individuals who identify as another race/ethnicity only (10.9%) and for Black or African American Bostonians (9.9%). Hispanic/Latino workers and those of two or more races also experienced high unemployment rates, at 9.2% and 8.3%, respectively. Labor

force participation rates, for 2020, were lowest among Boston's American Indian and Alaska Native population (50.9%) as well as the Asian population (59.2%).

Occupational Composition

Table 2-8 shows the distribution of occupations for Boston's employed residents over the age of 16 by race. Since earnings vary by occupation, with management, business and science occupations typically providing higher pay than service, sales/office and production/transportation ones, this data indicates how racial disparities in occupational employment contribute to racial income inequality. Almost half (49.9%) of Boston workers were employed in management, business, science, or arts occupations. However, two-thirds of White workers and almost 59% of Asian workers held jobs in these higher paying occupations, compared to 31.4% for Black/African American workers, 30.4% for Hispanic or Latino workers, 35.9% for workers with Two or More races and 28.7% for those identifying as Other Race. The majority of employed Black/African American (52.4%) and Hispanic/Latino (53.1%) Bostonians worked in service and sales/office occupations in 2020. Non-white workers were also far more likely to work in Production/Transportation and Material Moving occupations, ranging from 6.3% for Asians to 26.9% for Native Hawaiian and Pacific Islanders, compared to only 3.2% for White workers.

Table 2-8. Occupational Composition of Boston's Employed Population 16+ by Race, 2020

Race/Ethnicity	Total Employed Population	Percent in management, business, science, and arts occupations	Percent in service occupations	Percent in sales and office occupations	Precent in natural resources, construction, and maintenance occupations	Percent in Production, transportation, and material moving occupations
Asian	33,883	58.7%	18.7%	14.0%	2.4%	6.3%
Black or African American	81,654	31.4%	30.3%	22.1%	4.6%	11.6%
Hispanic or Latino	66,015	30.4%	34.1%	19.0%	6.5%	10.0%
American Indian and Alaska Native	832	34.5%	25.5%	16.1%	10.7%	13.2%
Native Hawaiian and Other Pacific Islander	260	27.7%	24.6%	8.5%	12.3%	26.9%
White	196,210	66.7%	9.6%	17.7%	2.8%	3.2%
Two or More Races	24,182	35.9%	31.5%	17.9%	6.2%	8.4%
Other Race	20,569	28.7%	33.3%	19.7%	7.8%	10.4%
Total, All Races	423,605	49.9%	20.6%	18.6%	4.1%	6.8%

Source: U.S. Census Bureau (2020). *2016-2020 American Community Survey 5-Year Estimates*.

A recent study of the Boston metropolitan region found that Black/African-American workers and Hispanic/Latino workers are over-represented, compared to their percentage of the overall labor force, in occupations with lower pay and less benefits, such as health-care support, transportation and material moving, building and grounds cleaning worker and under-represented in higher-paying life, physical, and social sciences occupations; computer and mathematical jobs; architecture and engineering positions.[19] This study also found the Black and Hispanic/Latino workers in the Boston region are two to three times as likely as White workers to earn less than $15 per hour with Hispanic/Latino immigrants four times as likely. While these data refer to the

[19] Abbie Langston, Justin Scoggins, Matthew Walsh, *Advancing Workforce Equity In Boston: A Blueprint For Action*, National Equity Atlas, 2021

Boston region, similar patterns are likely to exist in Boston given the racial composition of its workforce and the occupation data presented above.

Employment by Industry

Reflecting Boston's employment base, the two largest industry sectors in which Boston residents were employed in 2020 are Educational, Healthcare, and Social services (31.07%); and Professional, Scientific, Management, Administrative, and Waste management services (18.20%). Boston residents employed in the first set of industries were primarily female (69.3%), while male workers were a higher share of Boston residents employed in all other industries except other services (Sed **Table 2-9**).

Table 2-9. Employed Boston Residents, 16+ by Industry, 2020

Industry	**Total**		**Male** *Count and Percent*		**Female** *Count and Percent*	
Agriculture, forestry, fishing, hunting, and mining	545	0.14%	431	79.1%	114	20.9%
Construction	13,146	3.42%	11,767	89.5%	1,379	10.5%
Manufacturing	16,433	4.28%	10,206	62.1%	6,227	37.9%
Wholesale trade	5,607	1.46%	3,582	63.9%	2,025	36.1%
Retail trade	31,017	8.07%	15,728	50.7%	15,289	49.3%

TOTAL	384,240					

Source: U.S. Census Bureau (2020). *2016-2020 American Community Survey 5-Year Estimates*.

Educational Attainment

Educational attainment is another important indicator of access to higher skill and higher paying employment. Over half (55%) of Boston's population age 25 or older had a bachelor's degree or higher in 2020 but educational attainment varied by race and ethnicity (see **Tables 2-10** and **2-11**). The highest share of adults with a bachelor's degree or higher was among Asians (54.4%), Native Hawaiian and Other Pacific Islander (50.9%), and White (67.3%) individuals. Black/African American and Hispanic/Latino adults had among the lowest percentage with a bachelor's degree or higher, at 19.8% and 25.7%, respectively. Hispanic/Latino adults had the highest concentration of individuals (28.1%) with less than a high school level education, followed by those identified as other race (27.1%) and two or more races (26.1%).

Table 2-10. Educational Attainment for Population Aged 25+, 2020

Educational Attainment Level	Population Count	Percent of Total Population Aged 25+
Less than High School	37,552	9.45%

[1]Totals for ACS 2016-2020 estimates by race differ slightly from estimates for the total population 25+

English Language Proficiency

Among Bostonians five years or older, 243,196 (37.1% of the total population) reported speaking a language other than English at home in 2020, with Spanish representing the most common language spoken at home other than English (16.3%). French, Haitian, or Creole (5.1%) as well as Chinese (4.5%) were the second and third most common languages spoken at home other than

English amongst Boston's population. The East Boston, Dorchester, and Brighton neighborhoods had the highest concentration of individuals speaking those languages, respectively.

Table 2-12. English Language Proficiency of Population Five Years and Over, 2020

English Language Proficiency	2020 Population Count	Percent of Total Population
Speak Only English at Home	412,091	62.9%
Speak Another Language at Home	243,196	37.1%
Speak English "Very Well"	132,250	54.5%
Speak English "Less than Very Well"	110,946	45.6%
TOTAL	243,196	100%

Labor Force Trends (2010-2020)

Boston's labor force increased by 17.9%, or 62,723 workers between 2010 and 2020, while its labor force participation rate increased by 1.3 percentage points. The city has likewise experienced an approximately 25% decline in its unemployment rate over the decade.

Table 2-13. Boston Labor Force Size, Participation Rate, and Unemployment Rate (2010-2020)

Year	Labor Force Size	Percent Change	Labor Force Participation Rate	Percent Change	Unemployment Rate	Percent Change
2020	413,366	17.9%	69.80%	1.90%	6.90%	-25.81%
2010	350,643		68.50%		9.30%

Management, business, science, and arts occupations represented the most common occupations for employed Boston residents in both 2010 and 2020. The share of employed workers in these occupations grew from 44.8% to 52.3%, while the number increased by 41.04%. Workers in sales and office occupations are the only occupation group in which the number of employed workers declined between 2010 and 2020, with a drop of 2.6%.

Table 2-14. Occupational Composition of Boston's Employed Workers (2010-2020)

Occupation type	2010 Total	2010 Percent	2020 Total	2020 Percent	Percent Change

Source: U.S. Census Bureau (2010-2020). *2016-2020 American Community Survey 5-Year Estimates* and *2006-2010 American Community Survey 5-Year Estimates*.

The educational attainment of Boston adults 25 and over increased between 2010 and 2020. The number with a bachelor's degree or a higher level of education has increased by almost 70,000, or 46.5% percent over the decade. Those with some college or an associate's degree increased by 15.6%. On the other hand, the number who were high school graduates (or equivalent) dropped by 3.3% while those with less than a high school education had a steeper decline of 10.1% in the last decade.

The percentage of Boston residents over 5 years old that spoke another language at home increased slightly from 35.5% in 2010 to 37.1% in 2020. English language proficiency changed little over the decade with the percentage of residents over 5 who speak only English or speak English very well remaining the same at 83% for the 2006-2010 and 2016-2020 ACS survey estimates.

Table 2-15. Educational Attainment of Population 25+ (2010-2020)

Boston Labor Force and Inclusionary Employment

A key issue as Boston updates its jobs linkage policies is how well future employment growth generated from new development aligns with the city's existing workforce, especially for low-income and racial and ethnic communities that have historically lacked full access to jobs that provide a living wage and career advancement opportunities.

Labor Force Alignment with Industry and Employment Growth. A gap appears to exist between the type of jobs being created in many of Boston's high growth industries and the occupational profile of Boston's Black/African American, Hispanic/Latino and multi-racial work force. Key industries generating the most job growth over the last decade are information technology, life sciences, management and technical consulting and architectural and engineering services. All of these industries have 70% to 85% of their jobs in management, business, science, and arts occupations and their continued growth accompanying new development will create substantial demand for workers in these occupations. However, many Boston residents lack experience and skills in these occupations, as indicated by their low share of employment in these occupations in 2020. Less than 35% of Black/African American, Hispanic/Latino and multi-racial workers in 2020 were employed in these occupations. Investments in expanded education and training programs will be needed to address these occupational gaps for Boston residents, particularly its non-white workers, and connect them to the type of new job opportunities created by Boston's growing technology and professional services industries.

Opportunity and Employment Barriers. Many Boston residents, including low-income and non-white workers, face barriers to stable employment in better quality jobs. These barriers, discussed in several recent reports[20] on the city and regional workforce system, include:

- Basic education levels, limited English language abilities and financial literacy.

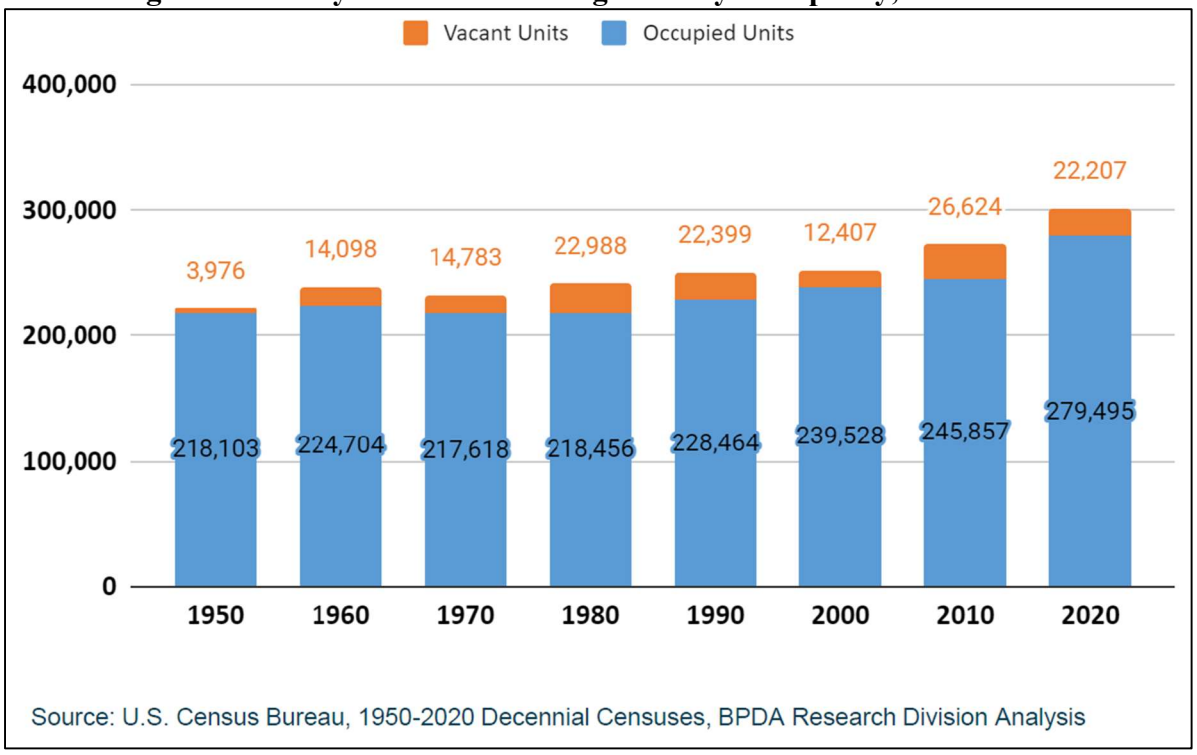
[20] These reports include: *Advancing Workforce Equity In Boston: A Blueprint For Action*, National Equity Atlas, 2021; Preparing for the Future of Work in the Commonwealth of Massachusetts; *The Future of Boston's Workforce: The path forward from COVID-19 Findings*, 2021; *Catapult Forward: Accelerating A Next-Generation Workforce Ecosystem In Greater Boston, 2019;* and *Preparing for the Future of Work in the Commonwealth of Massachusetts*, n.d.

- Criminal background checks.
- Transportation services, access and cost.
- Availability of affordable child-care.
- "Cultural fit" expectations in the job or application process.
- Computers and technology skills as more training and services are provided on-line.
- Basic professional/job readiness skills (e.g., punctuality, dress codes).
- Growing insecurity with increased risk of eviction, food insecurity, and mental health needs-all heightened with the pandemic.

Several themes on how workforce development programs are working to address these barriers include:

- Creating skill-building and employment programs customized to both employer and worker needs.
- A need for stronger bridge programs or "onramps" from basic skills trainings into more advanced courses.
- A growing need for "wraparound services" to address insecurity, mental health and other needs, delivered in partnership with other service providers.

Future investments to connect unemployed and underemployed Boston residents to new jobs created at new development projects will need to address many of these employment barriers.



6.0 HOUSING CONDITIONS AND TRENDS

This section summarizes Boston's current housing market conditions and trends, with an emphasis on changes between 2010 and 2020.

Housing Units and Vacancy Rate

Data in **Figure 2-33** show the number of occupied and vacant housing units in Boston. Boston had 302,000 housing units in 2020, an increase of 10.7% from 2010.

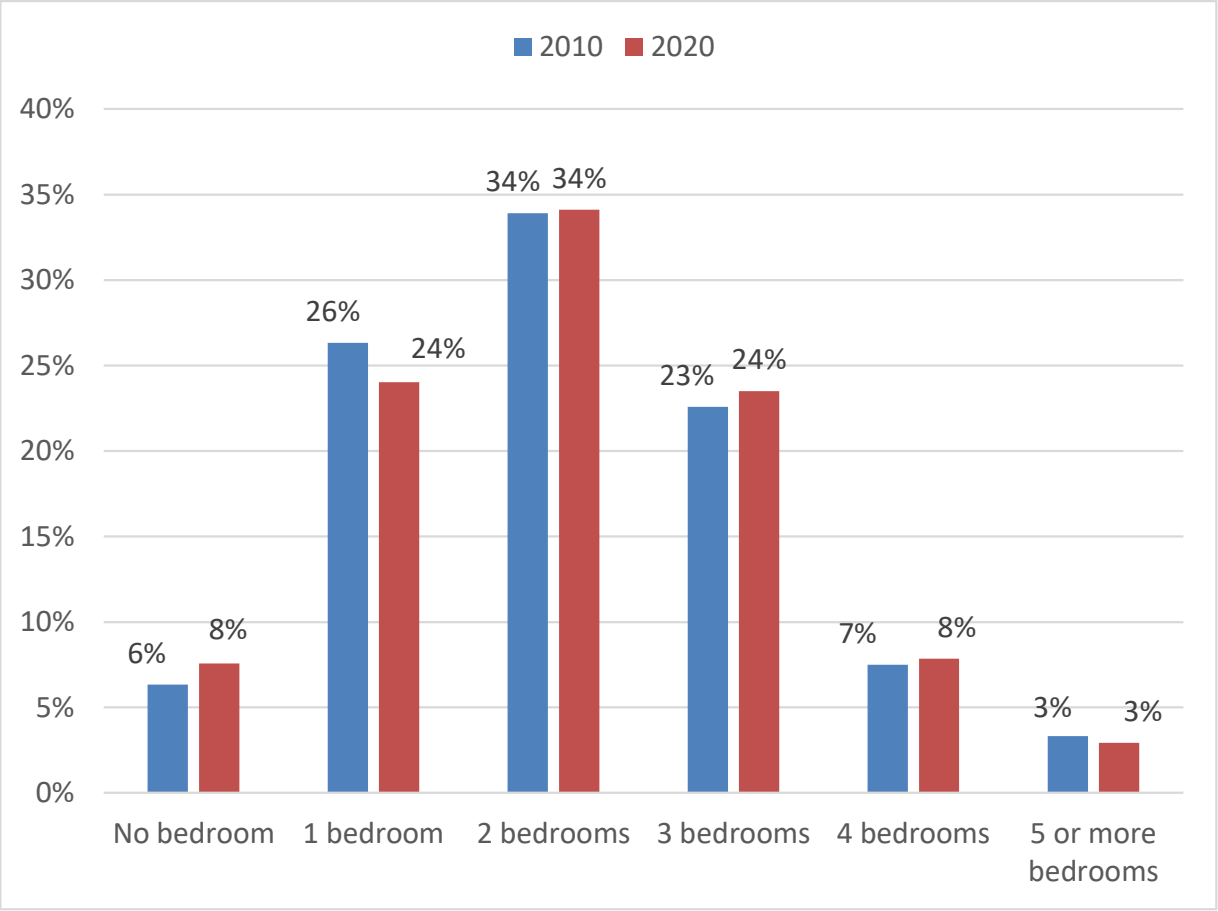


Figure 2-33. City of Boston Housing Units by Occupancy, 1950 to 2020

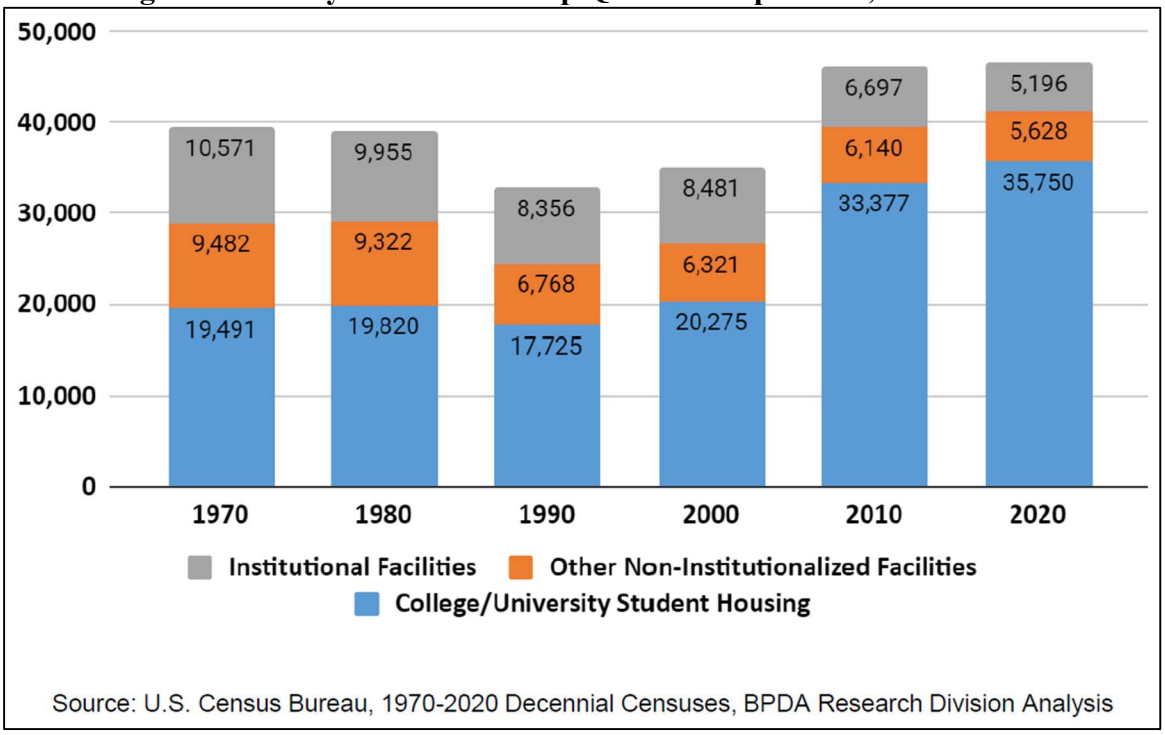
Unit Size

From 2010 to 2020, the number of bedrooms per housing unit stayed relatively the same, with a slight decrease in the number of 1-bedroom units and a slight increase in the number of studio units, 3-bedroom units, and 4-bedroom units (shown in **Figure 2-34**). The most common size for housing units in Boston was 2-bedroom units in both 2010 and 2020.

Figure 2-34. City of Boston Number of Bedrooms per Housing Unit, 2010 and 2020



Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

Group Quarters

In 2020, about 36,000 residents lived in college or university student housing in Boston, up about 7% from 2010, shown in **Figure 2-35**. Institutional facilities include correctional facilities, nursing homes, and psychiatric hospitals and non-institutionalized group quarters include college dorms, military barracks, and worker housing.

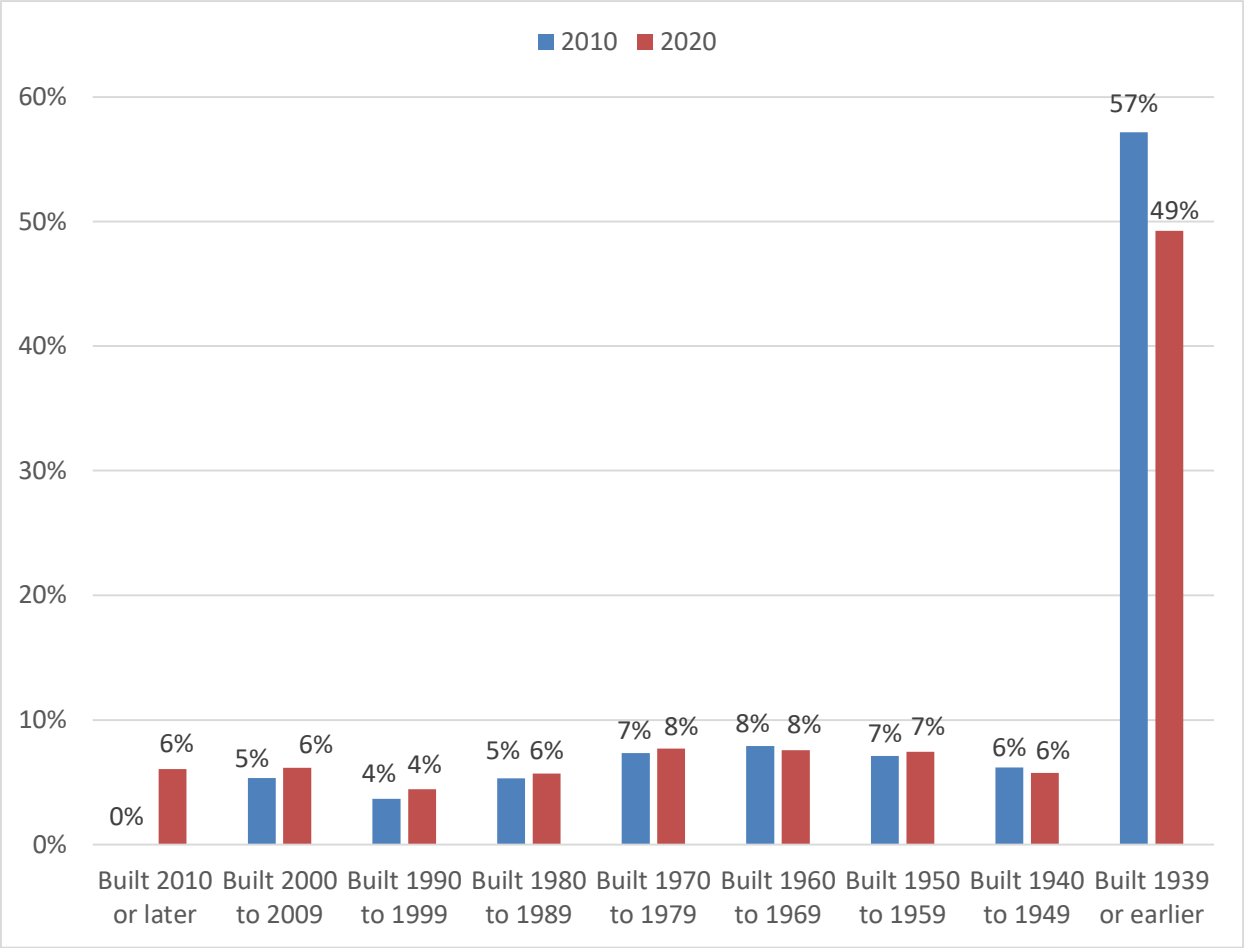


Figure 2-35. City of Boston Group Quarters Population, 1970 to 2020

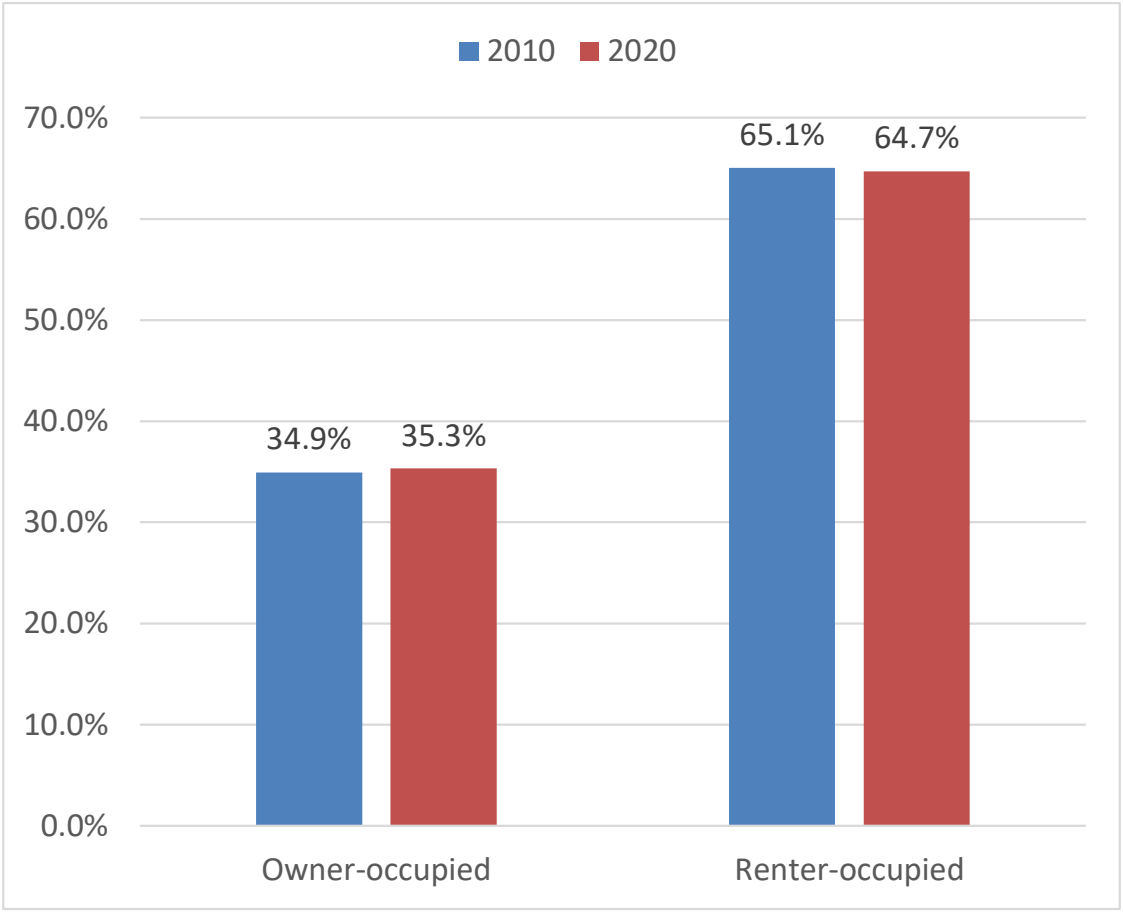
Age of Housing Units

Figure 2-36 shows the age of housing units in Boston in 2010 and 2020. While nearly 60% of units in 2010 were built in 1939 or earlier, only about 50% of units in 2020 were that old. About 6% of housing units in 2020 had been built in 2010 or later.

Figure 2-36. City of Boston Age of Housing Units, 2010 and 2020



Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

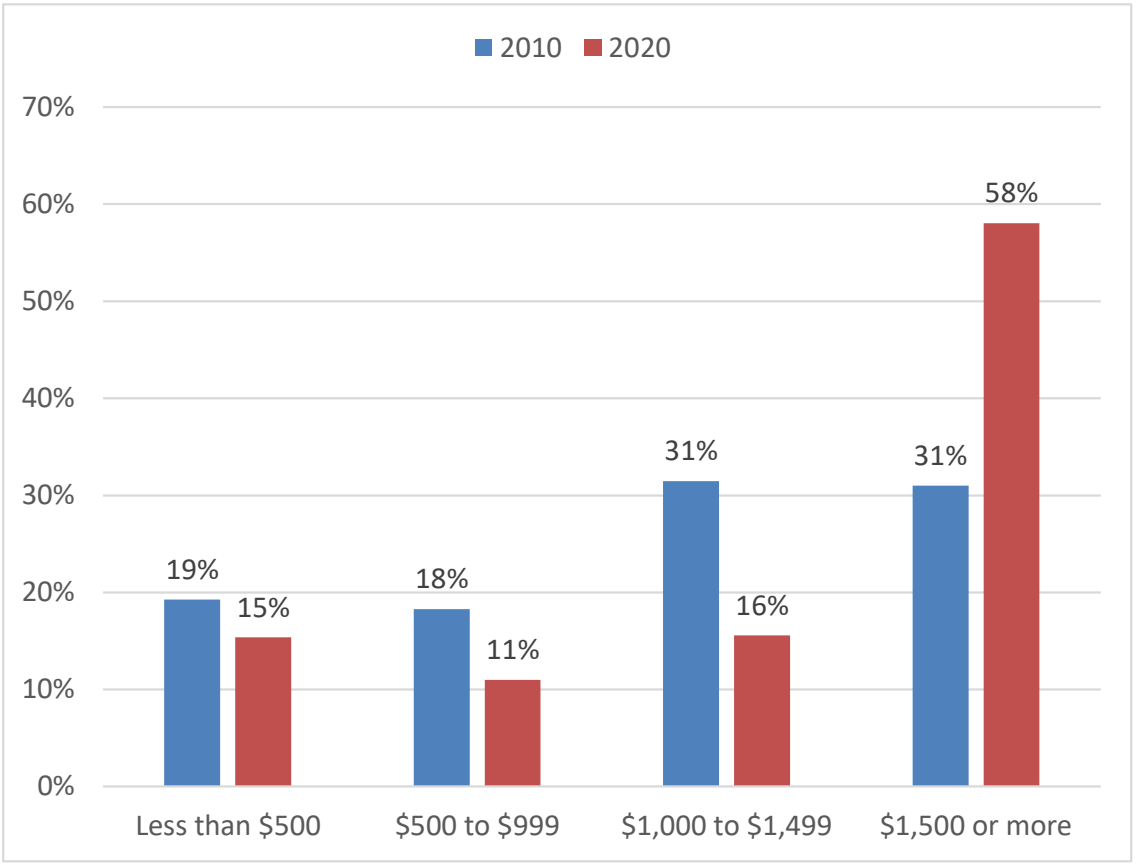
Tenure of Housing Units

The share of housing units occupied by owners and renters in Boston stayed about the same from 2010 to 2020, as shown in **Figure 2-37** About two-thirds of housing units were occupied by renters.

Figure 2-37. City of Boston Owner-Occupied and Renter-Occupied Housing Units, 2010 and 2020

Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

Gross Rents



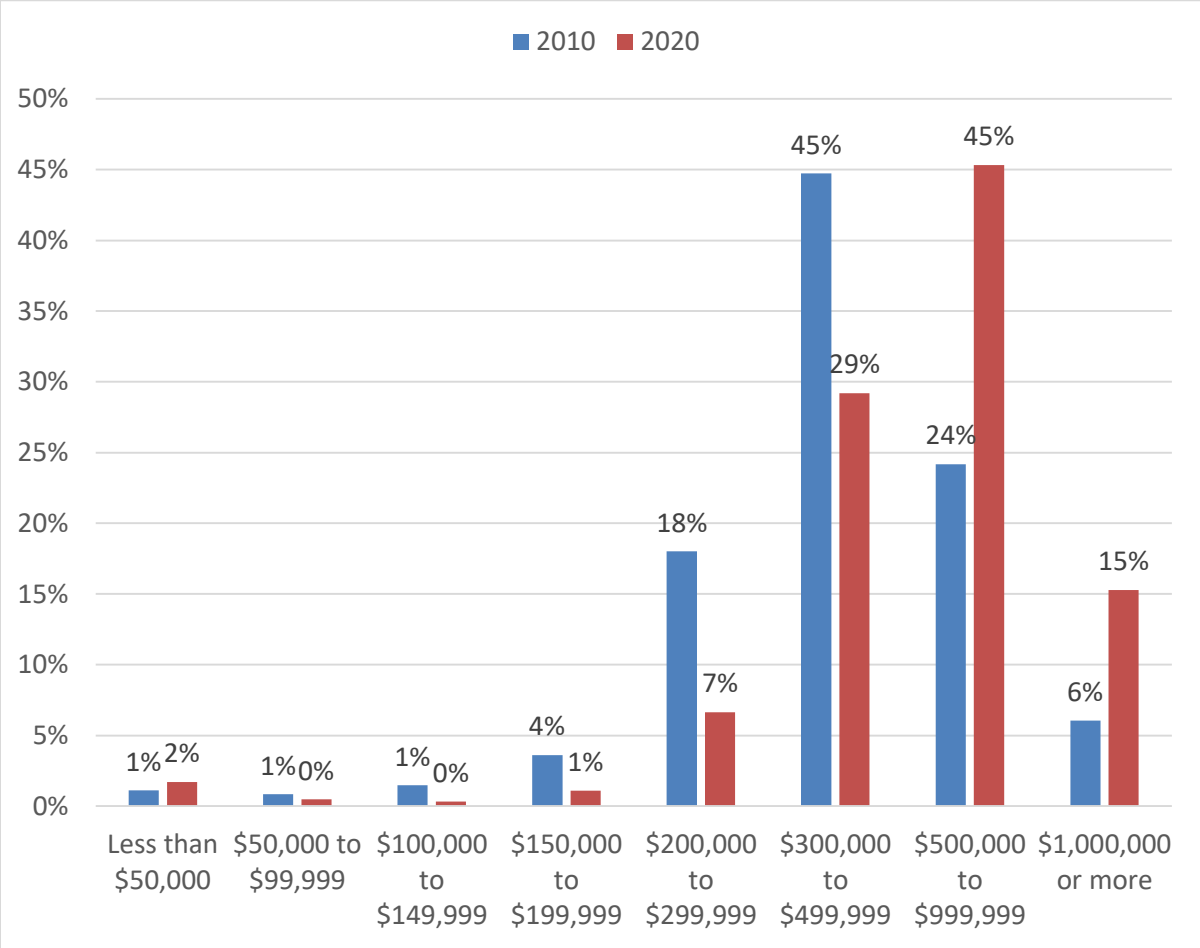
The median rent in 2020 was $1,685, an increase of about 41% and nearly $500 from $1,199 in 2010. Data in **Figure 2-38** shows the gross rents for renter-occupied housing units in Boston in 2020 and **Figure 2-39** shows the gross rents for renter-occupied housing units in 2010 and 2020. The number of housing units with rent costing $1,500 per month or more nearly doubled from 31% in 2010 to about 58% in 2020.

Figure 2-38. City of Boston Gross Rents for Renter-Occupied Housing Units, 2020

Gross Rents	Housing Units	Percent to Total
Less than $500	26,641	15%
$500 to $999	19,076	11%
$1,000 to $1,499	26,991	16%
$1,500 to $1,999	37,616	22%
$2,000 to $2,499	28,661	17%
$2,500 to $2,999	15,679	9%
$3,000 or more	18,615	11%
Occupied units paying rent	**173,279**	**100%**
No rent paid	3,407	
Median (dollars)	**$1,685**	

Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

Figure 2-39. City of Boston Gross Rents by Rent Amount for Renter-Occupied Housing Units, 2010 and 2020

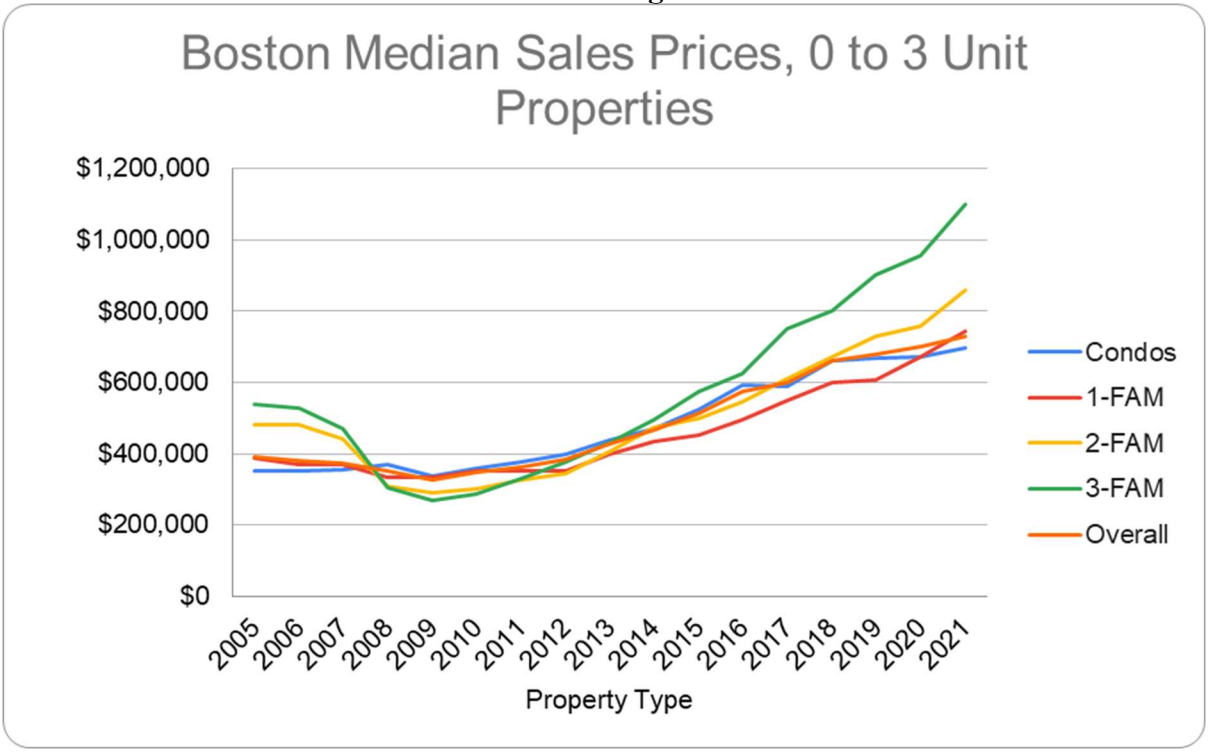


Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

Housing Values

The median home value[21] for owner-occupied units was $581,200 in 2020, an increase of nearly 50% from $395,200 in 2010. **Figure 2-40** shows the home values for owner-occupied housing units in Boston in 2010 and 2020. The largest percentage of housing units in 2010 had a home value between $300,000 and $499,999 (about 45%) and in 2020 the largest percentage had a home value from $500,000 to $999,999 (about 45%). The percentage of housing units worth more than $1,000,000 grew from 6% to 15% during the 10 year period.

Figure 2-41. City of Boston Home Values for Owner-Occupied Housing Units, 2010 and 2020



Source: U.S. Census Bureau, 2016 – 2020 and 2006 – 2010 5-Year American Community Survey; and ConsultEcon Inc.

[21] The definition of home value from the U.S. Census Bureau is as follows – Value is the respondent's estimate of how much the property (house and lot) would sell for if it was for sale. Data includes only specified owner-occupied housing units – single family houses on less than 10 acres without a business or medical office on the property.

Housing Sales

In 2020 and 2021, the city averaged 7,700 condo, single family, 2 family and 3 family houses. Data in **Figure 2-42** shows trends in housing prices for these property types. Prices are the highest they've ever been for each type of property. The median sales price increased 4 percent between 2020 to 2021 from $700,000 to $730,000. A household would need more than $150,000 in annual income in order to afford a house at these median sales prices.

Figure 2-42. City of Boston Single Family, Two and Three Family and Condominium Sales, 2005 through 2021

Source: City of Boston.

Trends in Housing Inventory

Boston had 301,702 total housing units in 2020, an increase of 10.7% from 2010. According to the U.S. Census Bureau, 7.4% of Boston housing units were vacant in April 2020. Of the occupied units, 68% were occupied by homeowners and 32% were occupied by renters.

Affordable Housing Stock

As shown in **Figure 2-43,** nearly 1 in 5 housing units in the city 20% of 56,695 are income-restricted, affordable housing in five units. 95% of these units are rental units. As shown in **Figure 2-45,** in the past 10 years, Boston has permitted 8,420 income-restricted units, which is 28% of total housing production during that time. In 2021, 36% of all housing production was income restricted (767 units). The vast majority (85%) of income-restricted units are for low-income households with less than 60% of Area Median Income (AMI) with 27% for extremely low-income households below 30% AMI ((see Figure 6-10).

Figure 2-43. Income-Restricted Units as a Percentage of Total Housing Stock City of Boston

	ALL UNITS	RENTAL	OWNER

Affordable Housing Production

There were over 7,200 new affordable housing units produced in the city between 1989 and 2022, as shown in **Figure 2-46**. Eighty-six percent of these units were rental units and 14% ownership units. Over the same period, 770 units of market rate housing were converted to affordable housing and 5,800 affordable rental units were preserved. About 59% of the new housing produced was targeted to moderate-income households and 34% to low-income households, with the remaining 7% to middle income households.[22] Most housing units produced and in the pipeline, have been 1- and 2-bedroom units, with fewer studios and 3+ bedrooms.

For projects that are under construction or awarded funding, a greater proportion of rental units are targeted to low-income households than was targeted in projects completed from 1989 to April 2022.

Figure 2-46. Selected Characteristics of Completed and Future Affordable Housing Projects, City of Boston, 1989 through April 2022

	Completed, 1989 to 2022	Percent to Total	In construction or DND/ Awarded/ Ready to Issue	Percent to Total
New Affordable Units by Tenure				
Afford New Owner Units	1,007	13.9%	77	3.9%

Total	**5,874**	**100.0%**	**1,816**	**100.0%**

Source: City of Boston, Department of Neighborhood Development, and ConsultEcon, Inc.

[22] Low-income group is households earning less than 50% of area median income, moderate-income group is household earning between 50% and 80% of AMI and middle income group is households earning 80% to 120% of AMI.

Multi-Family Property Vacancy Rates
There was a total of 102,000 multi-family inventory units in 2,900 buildings in Boston in 2022, representing about 2.2% growth in units from the prior year[23]. About 3,400 of those units were vacant in 2022, a decrease of nearly 40% from 2021. Vacancy peaked in 2020 during the global pandemic. The vacancy rate in 2022 was 3.4%, compared to 5.4% in 2021.

Multi-Family Property Market Rents per Unit
The weighted average market rent per unit for multi-family properties in Boston in 2022 was about $2,800 per month, a 9% increase from 2021[24]. Rents had been increasing steadily up to 2020, when rent prices dipped slightly during the global pandemic. Rent prices across the city increased about $200 per unit from 2021 to 2022, and are projected to continue rising at a steeper rate than prior to the pandemic.

Housing Cost-Burdened Households
Data in **Figure 2-47** show the extent of housing cost burden, measured as housing costs as a percentage of household income, for Boston owner- and renter-households in 2020. Households with housing costs above 30% of income are considered housing-cost burdened and those with housing costs above 50% of income are considered to have a severe housing cost burden[25]. Among all households, 42% are housing cost-burdened and 24% are severely cost-burdened. There are more renter households in the city and 50% of them are cost burdened while 28% of owner households are cost burdened.

Based on Census data, 19% of owner households without a mortgage, 32% of owner households with a mortgage, and 49% of renter households pay more than 30% of their income on housing costs.

Figure 2-47. Housing Cost Burden for Owner and Renter Households, 2016 to 2020, City of Boston

	Total Households	Paying 30-49% of income on housing	Paying 50%+ of income on housing	Total Cost Burdened	Total Cost Burden as a Percent of Tenure	Total Cost Burden as a Percent of Total Burdened	Total Severely Burdened as a Percent of Tenure
Renter Households	177,652	36,361	52,820	89,181	50%	77%	30%

Housing Cost-Burdened Households by Race/Hispanic

Black and Hispanic or Latino households in Boston are more likely than white renters to be severely costs burdened, as shown by data in the **Figure 2-48** for renter households and **Figure 2-49** for renter households.

Figure 2-48. Housing Cost Burden for Renter Households, by Race/Ethnicity, 2016 to 2020, City of Boston

Source: 2016-2020 American Community Survey, PUMS Data; MOH analysis

Summary

Due to the high cost of both rental and ownership housing, a large share of households are spending more than 30 percent of their income on housing costs. This cost burden can be alleviated by providing more housing that is affordable to low-, moderate- and middle-income households. The employment in the region is driven by in new non-residential development. This employment opportunity attracts people from inside and outside of the region, some of whom will look for and perhaps purchase or rent housing in Boston because of the convenience that job proximity offers. Some of those jobs are for low-, moderate- and middle-income households, which will create new

demand from households in these groups. This is problematic because there is already a shortage of affordable housing for these groups and this demand exacerbates the shortage. Therefore, policies like the linkage policy can mitigate the impact of this new affordable housing demand.

7.0 Local and National Trends

Several trends have the potential to influence Boston's economic development and housing market conditions over the next decade. This section highlights key trends and discusses their potential impact.

Increase in remote and hybrid work arrangements. The pandemic resulted in the widespread use of remote work along with hybrid arrangements in which workers split their time between the employer's office and remote work. The extent to which these alternative work arrangements will become permanent is uncertain but it is expected that both remote and hybrid work will grow, in part due to the employee's desire for these arrangements and the need of employers to accommodate these preferences to attract and retain workers. Significant growth in remote and hybrid work may impact Boston in several ways:

- Reducing the amount of space that employers need to occupy, lowering the demand for office space, reducing its net absorption and the amount of future development that occurs[26].
- Lowering daily occupancy of space by employees with a resulting decrease in retail, food, and service spending among office workers. This reduced spending may reduce occupancy and employment among restaurants, bars, stores and service businesses that are highly dependent on worker spending.
- Lowering demand for housing in Boston due to a remote work option among Boston employers, which may reduce these workers' desire to live in Boston and seek housing in the city, especially given the availability of lower-cost housing options in the Boston region and even outside the region. Reduced housing demand could slow the growth in housing costs if housing supply continues to grow. It might also slow the development of new housing, especially if developers believe that remote work will reduce demand and the rents and sales prices that they will obtain.
- Increasing the importance of access to computers, high-speed internet access and computer literacy for accessing jobs and education and training services, many of which shifted to on-line delivery during the pandemic.[27] This disproportionately impacts low-income workers and neighborhoods which lack resources to acquire computers and afford high speed internet services.

[27] Will Dorsey Eden, Joseph Fuller, and Rachel Lipson, The Future of Boston's Workforce: The path forward from COVID-19, The Project on Workforce at Harvard and The Boston Foundation, 2021.

Inflation, Federal Reserve Policy and Interest Rates. The current high rate of inflation and the Federal Reserve Bank's response in raising interest rates will affect the national and local economy with multiple potential impacts:

- Higher interest rates will slow economic growth as the cost of investment and large consumer purchases grows, and will increase the risk of an economic recession. Slower economic and employment growth will reduce demand for new office and other non-residential space and likely increase real estate vacancies. These weakened market conditions may cause developers to delay or abandon some development projects.
- Higher interest rates also will increase the cost of capital, which may make some planned projects infeasible for investment and delay and/or lower non-residential and residential development activity.
- Higher interest rates will increase the cost of buying and owning housing, making home ownership less affordable for more Boston residents.

Stock market decline and the bear market for tech stocks. Boston's innovation and technology economy depends on a steady flow of venture capital and initial public stock offerings that finance the start-up and growth of new and early stage ventures, particularly in the Life Science and Information Technology-related industries. The bear market in tech stocks will reduce the supply of venture capital, shift investment away from tech sectors with poor stock market returns and make it more difficult for growing firms to raise capital on the stock market.[28] This reduced supply of capital will reduce demand for lab and office space in Boston, as fewer start-ups will get launched and existing firms shrink or slow expansion to conserve their capital until the financing environment improves. There is already evidence that tech companies are freezing or slowing employment growth in part due to preserve capital.[29]

Growing Racial Income and Wealth Inequality. The long-standing and growing racial disparities in income and wealth is both a national and local trend that impacts Boston's economy and housing market in many ways. Several examples are:

- Slower economic growth: a recent report estimated that racial gaps in wages and employment within the Boston regional economy resulted in almost $45 billion in lost economic activity in 2018 and that equal wages for Black and Latino worker would have added 10% to the region's GDP[30].
- Increasing income inequality and the high cost of housing in Boston may push more low- and moderate-income residents and people of color to move out of Boston, adding an additional barrier to accessing jobs in the city[31].

[28] Pitchbook, Analysts Advise on Key Trends to Watch as Markets Return to Turmoil, May 17, 2022.
[29] Aaron Pressman, "This one is different': Tech companies brace for impact amid market plunge," *Boston Globe, May 26, 2022.*
[30] Abbie Langston, Justin Scoggins, Matthew Walsh. *Advancing Workforce Equity In Boston: A Blueprint For Action, National Equity Atlas*, 2021.
[31] Tracie Neuhaus, Kaitlin Terry Canver, & Heena Khoja. Catapult Forward: Accelerating A Next-Generation Workforce Ecosystem In Greater Boston, Boston Foundation, 2019.

- Reduced access to home ownership for Black, Latino and other people of color due to the lack of savings needed for home purchase down-payments and insufficient incomes to obtain a home purchase mortgage.
- Higher barriers to stable employment and good quality jobs for Black, Latino and minority workers due to greater economic insecurity and a lack of financial resources needed for higher education, transportation, child care, technology and other "social determinants" of employment[32].

Tight Labor Market Conditions and Automation. The decline in labor force participation post - pandemic, combined with low unemployment rates and recent strong economic growth has created a tight labor market in which it is difficult to find and hire workers, with several potential impacts:

- Economic and employment growth may slow if firms and institutions are unable to attract the number and type of workers needed to respond to market demand and undertake growth plans.
- Employers are likely to speed adoption of automation to save costs and address the challenges of recruiting workers in a very tight labor market. This trend may reduce the level of employment growth that results from new development in some industries and disproportionately impact Black, Latino, and Native American workers who are overrepresented in the transportation and accommodation and food services sectors, which are facing a higher risk of automation[33].
- Increased employer interest in working with the workforce development system to train, hire workers and alter hiring practices and bias that have historically created barriers to employment and better quality jobs for immigrants, non-white workers and those without a college education.

Conclusion

Boston has a strong and diversified economy that will continue to grow in the next decade, generating significant new non-residential development and employment growth. This development and job growth will generate the need for affordable housing to accommodate new workers. It will also create opportunities to expand stable employment and earnings for Boston residents, particularly unemployed and low-income workers, and to reduce current racial disparities in income and employment in higher paying occupations.

The following sections of the report provide more detailed analysis to estimate the projected impacts on future non-residential development on affordable housing and employment opportunities, the costs to mitigate these impacts and the linkage fees rates needed to fund these costs.

III. Boston Development Trends and Future Development

Boston's diverse and growing economy generated significant new development over the past decade. As noted in the prior section, it faces new challenges with the pandemic's impact on office occupancy, a growing risk of recession and financial market conditions. This section reviews recent development trends and market conditions that inform the scale of Development Impact Projects (DIP) subject to linkage fees and the industries that will occupy new DIP development over the next decade. It concludes with a ten-year forecast of future development and employment by use and industry that will be used to estimate impacts on demand for affordable housing and employment and training services for Boston residents.

Table 3-1. Gross Floor Area of DIP Projects by Use and Development Status, Completed January 2012 to April 2022 and Permitted as April 2022

Development Category	Construction Complete	Permitted / Under Construction	Board Approved	Grand Total
DIP Uses by Type	**Square Feet**			
Office	7,777,283	1,794,492	12,332,612	21,904,387
RnD	233,500	413,951	5,872,505	6,519,956
Institutional	1,515,982	1,390,000	3,586,418	6,492,400
Hotel	2,227,827	1,493,510	1,198,107	4,919,444
Retail	1,034,883	234,410	1,160,425	2,429,718
Total DIP Uses	**12,789,475**	**5,326,363**	**24,150,067**	**42,265,905**
DIP Uses by Type	**Percent of Total**

Over the past ten years, from 2012 to the first quarter of 2022, 12.8 million square feet (SF) of DIP projects were completed in Boston (see **Table 3-1**). Office and lab/research and development uses (R&D) accounted for 63% of the developed space with hotels generating 17% and institutional uses representing 12%. Boston's development pipeline in April 2022 was much larger with 5.3 million SF of DIP projects under construction and almost 24.2 million SF approved by the Boston Planning and Development Agency (BPDA) but not under construction. A larger share of DIP projects under construction are for hotel and institutional use, 26% and 28%, respectively, than for completed projects while the share for office/R&D use (42%) is lower. However, office/R&D uses dominate board approved projects at 75%, which reflects the plans by many developers to build new space for the region's growing life sciences sector. Hotel projects, on the

other hand, account for only 4% of board approved projects. Retail space is a relatively small share of SF, ranging from 8% in completed projects to 4% for those under construction.

Market Demand and Absorption

Although Boston's large DIP project pipeline suggests the potential for almost 30 million SF of new development in the next decade, actual development and its occupancy will depend on the absorption of newly developed space by new and expanding employers and the city's success in attracting business growth within the region. This section reviews historic trends in Boston's supply, vacancy and absorption of office and Lab space, and discusses recent development trends and the city's competitive position in the region, particularly in the fast-growing life science lab market.

Strong pre-pandemic growth in office space supply and healthy absorption have slowed while lab space development and absorption have increased. From 2012 through 2021, Boston added almost 6 million SF of office space and 2.5 million SF of lab space—averaging 571,114 SF and 252,282 SF annually, respectively (see **Table 3-2)**. Average annual absorption of space mirrored the supply increase during this period, at 590,190 for offices and 266,121 SF for labs. Moreover, in the decade before the pandemic , net absorption office space was even greater, averaging 943,600 SF per year-over five times absorption of lab space. However, this pattern has reversed in the last five years, as the pandemic reduced demand for office space and generated significant new vacancies. From 2017-2021, office space absorption was negative –reducing occupancy by 594,000 SF (an average of -118,839 SF per year) while net absorption of lab space averaged over 368,000 annually.

Table 3- 2. Boston Office and Lab Space Growth and Absorption, 2012 to 2021

Metric	Office	Lab
Increase in Supply , 2012 - 2021	5,952,845	2,514,827
Average Annual Supply Increase, 2012-2021	571,114	252,283
Average Annual Net Absorption , 2012-2021	590,190	266,121
Increase in Supply , 2017 - 2021	898,777	1,544,489
Average Annual Supply Increase, 2017-2021	233,269	308,898
Average Annual Net Absorption , 2017-2021	(118,839)	368,329
Average Annual Supply Increase, 2010-2019*	699,121	184,826
Average Annual Net Absorption , 2010-2019*	943,600	171,888

Source: Colliers International and Karl F. Seidman Consulting Services *Pre-pandemic period

Demand for lab space throughout the Boston region has been very strong over the past several years, fueling rapid growth in the life science sector and medical research and development. **Table 3-3** summarizes the absorption of lab space from 2019 through the first quarter of 2022 in the Boston region. Annual net absorption more than tripled from almost 611,000 SF in 2019 to over 2 million SF in 2021, and averaged almost 1.3 million SF for the three years. The majority (57%) of absorbed space occurred in the suburbs, with Boston accounting for 24% of total net absorption. Boston's share increased over the period from 29% in 2019 to 38% for the first quarter of 2022.

Table 3- 3. Net Absorption of Lab Space, Boston Region and Sub-markets, 2019 to Q1, 2022

Year	Total	Boston	Cambridge	Suburbs	Boston %
2019	610,972	178,433	222,184	210,355	29%
2020	1,242,691	98,762	384,183	759,746	8%
2021	2,037,676	609,966	316,011	1,111,699	30%
2022 , Q1	459,500	176,000	-103,728	387,228	38%
Total	4,350,839	1,063,161	818,650	2,469,028	24%
Average, 3 years	1,297,113	295,720	307,459	693,933	23%

Source: Colliers International and Karl F. Seidman Consulting Services

Strong market demand for lab space and the associated increase in rents[34] has resulted in developers in Boston and throughout the region planning new lab development projects, including converting existing office buildings to lab use and converting projects originally planned for office development into planned lab buildings. Consequently, there is an extremely large pipeline of planned lab space in Boston, Cambridge and throughout the region that could lead to an oversupply of lab space in the next three to four years. According to a recent report by real estate brokerage firm Newmark[35], there is a potential pipeline of over 49 million SF of new lab development in the Boston region, with 14.5 million SF under construction and another 34.6 million in proposed projects. This pipeline is approaching twice the size of the region's 26.8 million SF of existing lab space. While Kendall Square and East Cambridge historically have been the center and most desirable location of life science firms, the Seaport District has emerged as a key alternative and lower cost location. In addition to the Seaport, lab projects are under construction and/or being planned for several other Boston neighborhoods, including Allston, Dorchester, Fenway, Longwood, Roxbury, and Suffolk Downs. Lab development in Boston, however, will face new competition, beyond Cambridge, in the next decade from expanding inner suburban lab districts, including Watertown, with an existing supply of 1.1 million SF and another 2 million SF under construction, and Somerville, which has almost 1.8 million SF under construction in Assembly Square and Union Square/Boynton Yards.

The large regional pipeline of lab projects creates the potential for an oversupply of lab space with growing amounts of vacant space and lower rents. If such an oversupply materializes, some Boston lab projects with board approval and in planning stages may not get built or may get delayed for many years. Thus, actual lab development in Boston over the next decade is likely to be less than the large scale of planned projects.

Interviews with developers and real estate professionals indicated considerable optimism about the outlook for Boston's economic growth and development. The combination of a diversified economy, strong growth among life science firms and Boston's advantages with a robust transportation network, strong workforce and urban amenities is expected to continue to generate demand for new lab and office development. Although overall office space demand and absorption

[34] Asking rents were $111.98/SF in East Cambridge and $110.10 in Boston during the first quarter of 2022, according to the Lincoln Property Company's *Lab Market Report*

[35] Newmark, *2021 Year End Life Science Overview and Market Clusters*

has declined, brokers and developers report strong demand for new high quality space, which companies view as a magnet for attracting talent and bringing workers back to the office. A combination of existing Boston tenants and firms moving to Boston from the suburbs (including consolidating multiple locations into a new Boston office) is driving demand for new office space. Nonetheless, future office demand is expected to fall below pre-pandemic levels and vacancies in existing older Class A and Class B buildings are likely to increase. Opinions on the outlook for life science lab development were mixed: some developers reported a slowdown in lab demand during 2022 while others see the market remaining strong, in part due to continued growth and acquisitions among large pharmaceutical companies.

Future Development and Employment Projection

Based on its market position, pipeline of projects under construction, and absorption and new development in recent years, **Boston is projected to absorb and spur new development of 14.861 million SF in office, laboratory, institutional (hospital and college/university) and ground retail/restaurants/service space over the next ten years.** The components of this projection by use (see **Table 3-4**) and key assumption used for the projections are:

- **Office:** 5.67 million SF of new development based on annual absorption at 90% of the pre-Covid level with a 2-year reduction in absorption from an economic slowdown or recession. Net new Boston occupancy is expected to be 3.827 million SF due to an expected 10% vacancy rate and 75% of the occupancy from new or growing Boston tenants and the other 25% of occupied space from relocations of existing firms and jobs within Boston.
- **Lab/Life Science:** 3.51 million SF of new development based on Boston attracting 30% of average annual regional absorption from 2019 to 2021 and a 2-year slowdown. Net new occupancy of 3.37 million SF due to a 4% vacancy and 100% new Boston tenants.
- **Hotel:** 1.78 million SF assuming that new development occurs at 80% of the level for the past ten years due to current low level of hotel occupancy.
- **Retail/restaurants/ground floor services:** 918,000 SF of new development based on 10% of office and lab SF and net occupancy of 826,000 SF, assuming a 10% vacancy rate.
- **Institutional:** 2.983 million SF of new development, including 2.013 million by hospitals and 970,000 by colleges and universities, generated by projects that are currently approved and/or included in institutional master plans and deemed likely to be built based on input from BPDA and institution staff .

Table 3-4. Summary of Projected Boston Development and Occupancy by Use, 2022 to 2031

Use	Gross Developed SF	Newly Occupied SF
Lab	3,510,000	3,370,000
Office	5,670,000	3,826,000
Retail/Ground Floor	918,000	826,000
Hotel	1,780,000	1,780,000
Hospital	2,013,000	2,013,000
College/University	970,000	970,000
Total	14,861,000	12,785,000

Source: Karl F. Seidman Consulting Services

Expected Tenant Businesses

To determine the likely jobs and earnings from this new development, the industries likely to occupy the new large developments need to be projected. Since linkage fees are tied to **new development,** this type of new business and employment growth will differ from Boston's overall or net job growth, which reflects growth in existing businesses, loss of jobs from firms' contractions and relocations, and new businesses locating in smaller projects, under 100,000 SF.

As discussed in the macroeconomic analysis, Boston has a diverse economy with a large share of jobs in education and health care, professional and business services and financial services (see Figure 2-1 and Table 2-1 in Section II). Recent employment growth is a better indicator of the likely industry composition of new development than the overall employment base since growing industries are the likely source of new tenants. Table 2-2 listed 15 industries that added the most jobs between 2010 and the first half of 2021; together they added 94,365 jobs—above Boston's overall net job growth of 71,208 during this period. Health care and information technology were key drivers of growth over this period, accounting for eight of the 15 high growth industries and 65% of their new jobs. Four IT industries (Computer Systems Design, Electronic Shopping, Software, and Data Processing) combined to add 34,258 jobs and represented three of five industries with the highest absolute job growth. Three professional service industries (Management & Technical Consulting, Architecture & Engineering, and Accounting & Bookkeeping) were also important sources of growth, together adding 13,308 jobs. These high growth IT and professional service industries are projected to occupy new office development, along with one growing financial services industry. Scientific Research and Development Services—the largest component of Life Science industries—grew by 80% and added 6,103 jobs from 2010 to 2021 and is expected to occupy the new project lab development space.

The projections for businesses in new ground floor retail space reflect the mix of businesses in Boston's growing development districts, with 50% restaurants and the other 50% a mix of stores and services, including grocery stores, pharmacies, clothing and home furnishing stores, bank branches, day care and medical offices.

Table 3-5 summarizes the overall projected development by tenant industry and employment over the next ten years. These projections will be used to estimate occupations and wage levels for new employees working in the expected new buildings. Employment projections assume the amount of space occupied per new employee will be: 300 SF for office users; 450 SF for private and hospital life science occupants; 500 to 675 SF for retail, bank and day care tenants; 275 SF for medical offices; 120 SF for restaurants; 2,000 SF for hotels; 740 SF for colleges/universities; and 385 SF for hospital clinical space [36].

Table 3-5. Projected New Boston Development by Use and Tenant Type, 2022 to 2031

Industry	Square Feet	SF/Employee	Number of Employees
Scientific Research & Development /Life Science	3,370,000	450	7,489
Computer Systems Design	1,148,000	300	3,827
Electronic Shopping & Mail-Order Houses	574,000	300	1,913
Software	574,000	300	1,913
Management and Technical Consulting	383,000	300	1,277
Architectural and Engineering Services	287,000	300	957
Other Financial Investment Activities	287,000	300	957
Accounting and Bookkeeping Services	191,000	300	637
Data Processing, Hosting & Related Services	191,000	300	637
Management of Companies and Enterprises	191,000	300	637
Restaurant	413,000	120	3,442
Clothing Stores	41,000	675	61

[36] These figures reflect existing ratios among employers obtained from transportation planning surveys.

IV. Impact of Large Scale Development on Affordable Housing Demand

Using the 10-year development scenario and employment projections summarized in Table 3-6, this section forecasts the demand for affordable housing in Boston that will result from this development. Since this analysis utilizes several data sources and assumptions to prepare the forecast, a full explanation of the methodology used is provided along with the results. **Figure 4-1** provides an overview of the analytical steps and data sources for the housing demand projections.

Figure 4-1. Methodology and Data Sources for Housing Demand Analysis

Since demand for affordable housing is tied to household income, the first step projects the distribution of new jobs by earnings. Using May 2021 data for the occupational distribution by industry in Massachusetts[37], the number of new jobs in 22 occupational categories was calculated for each of the 20 industries expected to occupy new development. Earnings were then estimated for these occupations based on the median annual earnings for the respective occupations in May 2021 for the Boston Workforce Development Area[38], and adjusted for inflation by the Boston region Consumer Price Index to estimate earnings as of May 2022. These calculations yielded the projected number of jobs at different annual earning levels by occupation and industry.

Since new employees will live in a variety of communities, it is necessary to determine the share that will demand housing in Boston. To estimate the percent of new employees who will demand housing within the city, the results from a survey of employees in office, laboratory, institutional, hotel and retail buildings conducted in May and June 2022 were used. This survey measured demand by asking employees whether, as a result of obtaining a job in Boston, they either moved to the city or sought housing in Boston but did not move to the city due to housing costs. Based on the survey results, the percentage of new employees who are expected to demand housing in Boston is 22.2%. This percentage was multiplied by the gross number of new jobs in each industry to estimate the number of new workers who will demand housing in Boston, which equals 7,058. The occupational distribution for each industry was then applied to the number of workers in that industry who were expected to seek housing in Boston to estimate their earnings distribution.

The next step to project demand for affordable housing units among the 7,058 employees who are expected to seek housing in Boston required estimating the distribution of households for these workers by both the number of wage-earners and size. Since the employees in Boston's new developments will be drawn primarily from the greater Boston area, data for the distribution of households by number of earners and household size in the Boston metropolitan area were used to estimate the type of households for these employees[39]. Workers in each occupation expected to demand housing in Boston were first divided into one-, two-, three- and four-or-more-person households based on the metro area distribution[40]. Then each household size group was divided into one, two and three worker households, using the American Community Survey metro area percentages (see **Table 4-1**).

[37] Bureau of Labor Statistics (BLS) Occupational and Wage Statistics by State and Industry, May 2021 Estimates, https://www.bls.gov/oes/2021/may/oes_research_estimates.htm

[38] BLS Occupational Employment and Wage Statistics, https://lmi.dua.eol.mass.gov/LMI/OccupationalEmploymentandWageAllIndustries

[39] This data was from the 2020 five-year American Community Survey for the Boston-Cambridge-Newton MA-NH Metropolitan Area.

[40] From the 2020 five-year ACS, the ratios are: 27.6% one-person, 33.1% two-person 16.7% three person and 22.6% four or more.

Table 4-1. Household Size by Number of Wage-Earners, Boston-Cambridge-Nashua MA-NH NECTA

Number of Workers	One Worker	Two Workers	Three Workers	Total
One Person Household	100.0%	0.0%	0.0%	100.0%
Two Person Household	40.4%	59.6%	0.0%	100.0%
Three Person Household	30.3%	48.4%	21.2%	100.0%
Four or More Person Household	23.8%	47.4%	28.4%	100.0%

Source: US Census 2020 Five-Year American Community Survey

For single-earner households, the median wage for the occupation was used to estimate their household income and determine if they fell below the extremely low-income, low-income, moderate-income or middle-income thresholds for their respective household size (see **Table 4-2** for the respective income levels). Among the single earner households who are expected to demand Boston housing, 205 are estimated to be extremely low-income (less than 30% of area median income), 958 are projected to be low-income (between 30% and 60% of area median income), 248 are projected to be moderate-income (between 60% and 80% of area median income) and 1614 are estimated as middle-income (80% to 120% of area median income) for a total demand of 3,025 affordable housing units. Projecting affordable housing demand among multiple-earner households required estimating the earnings from the additional wage earners. To simplify this analysis, it was assumed that the second worker's earnings equaled the median annual wage for all occupations in the Boston Workforce Area, which was $74,154 adjusted for inflation to May 2022. This resulted in an additional 978 dual-worker households from new development that will demand housing in Boston, 83 in the moderate-income level and 895 in the middle-income category. No three-worker households fall within the moderate or middle-income ranges.

Table 4-2. Maximum Income Levels by Income Category, City of Boston, June 2022

Income Level	Description	One-Person Household	Two-Person Household	Three-Person Household	Four-Person Household
Extremely low-income	less than 30% of median income	$29,450	$33,650	$37,850	$42,050
Low-Income	30 to 60 % of median income	$58,920	$67,320	$75,720	$84,120
Moderate-Income	60 to 80% of median income	$78,550	$89,750	$100,950	$112,150
Middle-Income	80 to 120% of AMI	$117,800	$134,600	$151,450	$168,250

Source: City of Boston Mayor's Office of Housing

Across all household sizes and income groups, the total number of affordable housing units needed to meet the demand generated by new office and retail development is 4,003 units. **Table 4-3** summarizes the total projected demand for new housing by household size and among low-income, moderate-income and middle-income households.

Table 4-3 New Affordable Housing Demand in Boston from New Development Impact Project Developments* by Income Type and Household Size, 2022 to 2031

V. Subsidy Required to Address Affordable Housing Demand

This section builds upon the framework established in the earlier sections to project the total subsidy required to address the projected increased demand for affordable housing generated by large-scale developments in Boston. Housing affordability is a function of household income and the cost of available rental and for-sale housing units in each real estate market. The City of Boston and the surrounding region suffer from a well-known and demonstrated lack of sufficient affordable housing. This section calculates the subsidy needed to create new affordable housing that satisfies the demand generated by new workers in new commercial and institutional development by comparing the total development cost of new affordable housing units to the housing prices that can be supported by extremely low-, low-, moderate-, and middle-income households. Before calculating the projected subsidy required, current housing conditions in Boston are reviewed to provide background and context.

Estimate of Required Affordable Housing Subsidy Contribution

The previous section projected the demand for affordable housing from new commercial development as 4,003 units for extremely low-, low-, moderate-, and middle-income households ranging in size from one person to four or more persons. This section determines the projected subsidy required to construct housing that is affordable for those households.

Following is a summary of data and analyses used in calculating the total per square foot subsidy from new non-residential development required to support development of new affordable housing for workers. The subsidies would be for extremely low-, low, moderate and middle-income households whose jobs would be in Boston's new commercial buildings over the next 10 years.

The analyses establish that affordable rents and affordable sales prices do not currently support development of new housing production due to high development costs. Therefore, to stimulate affordable housing development, subsidies or other incentives must be provided. This analysis estimates the amount of subsidy required to meet new affordable housing demand created by employees in the new commercial development. The total required subsidy is the estimated difference between the total development costs of producing new affordable housing units and the capitalized value of affordable rent and unit sale proceeds. The required subsidy is presented as a per square foot housing contribution for projected non-residential development over a 10-year period.

Methodology

The following methodology was used to calculate the subsidy required to produce sufficient housing to satisfy projected ten-year affordable housing demand generated by new development non-residential buildings.

- Estimate the number of extremely low-income, low-income, moderate-income, and middle-income households moving to or seeking to live in Boston that would be generated by new nonresidential development.
- Specify demand by number of persons in the household, number of bedrooms, and by tenure (i.e., renter-occupied units and owner-occupied units).

- Estimate the total development costs of affordable units to satisfy the demand generated based on the actual per-unit development costs of 30 new affordable housing developments completed recently in the City of Boston.
- Estimate the potential capitalized revenue due to annual rents and sales proceeds of affordable units segmented by middle-income, moderate-income, low-income, and extremely low-income households.
- Calculate the difference between the total development costs and the capitalized revenue that is internally generated by renters and owners. This amount is the total subsidy required to produce the targeted new affordable units created by demand from new workers in new non-residential developments.
- Divide the total subsidy required by the total non-residential square feet subject to the housing contribution. This amount is the per square foot subsidy projected to be required to produce the new affordable units created by demand from new workers in new nonresidential developments.

Most state and federal funding programs for affordable housing are targeted to low-income and moderate-income households. The state has a new workforce housing initiative that funds middle-income housing as well. Nonetheless, federal and state tax credits are the largest subsidy source for new affordable housing projects, and they prioritize creation of units for households below 50 percent AMI and 60 percent AMI. Therefore, because of the targeting of available subsidy sources of funding, it is likely that much of the new affordable housing created in Boston will be targeted to these income levels. As the following analysis shows, the amount of subsidy required to create housing for extremely low-income and low-income households is substantial. Yet moderate-income and middle-income households are also increasingly finding housing to be unaffordable in Boston's housing market.

The following key assumptions were made to calculate the housing subsidy required.

Unit Distribution for New Affordable Housing

The distribution of households by number of persons and income levels was derived in a prior section. The household sizes range from one person to four or more persons. One-person households are allocated as 75 percent studio units and 25 percent one-bedroom units. Two-person households are allocated as 20 percent to one bedroom units and 80 percent to two-bedroom units. Three-person households are allocated 80 percent to two-bedroom units and 20 percent to three-bedroom units. All four or more person households are allocated to three-bedroom units. Data in **Table 5-1** show the estimated distribution of housing units by size and income levels (extremely low-low-moderate-middle).

Mix of Rental and Ownership Units

New affordable housing has primarily been supplied through rental housing, due to the available subsidy from federal and state sources. This analysis assumes that the affordable housing to be supplied will be a mix of rental and ownership units. The estimated required subsidy in this analysis assumes that:

- All the units for middle-income households will be ownership units.
- 25 percent of units for moderate-income households will be ownership units and the remaining 75 percent will be rental.
- All the units for extremely low-income and low-income households will be rental units.

Data in **Table 5-2** show the distribution of rental and home ownership housing units by size and income level.

Calculation of Needed Subsidy

The following presents the analysis of estimated total development costs, supportable financing, and needed subsidy for affordable housing units that must be created to satisfy the new demand generated by workers in new commercial developments in Boston over the next 10 years. The analysis only presents selected tables that summarize the calculation of the needed subsidy. Additional tables in the Appendix detail all assumptions and intermediate calculations that underlie required subsidy calculation.

Development Project Costs

The costs metrics used to calculate the Total Development Cost are based on an inventory of 30 Boston housing projects recently completed, under construction or in pre-development as of May 2022, as well as other more current development cost estimates in funding applications to the city through August 2022. Data in **Table 5-3** show the calculation of the total development costs of 1,410 rental units and data in **Table 5-4** show the calculation of the total development costs of 2,593 ownership units.

Table 5-3. Calculation of Total Development Costs of Affordable Rental Housing Units in Boston over a 10-Year Period

Project and Cost Assumptions		
Number of Units	1,410	
Average Unit Size GSF [1/]	1,038	
Total Project GSF	1,464,000	
Cost Assumptions [2/]		
Soft Costs, including Design, Permitting, Overhead, Profit, and Contingency, as a Percent of Construction Cost	34.1%	
Construction Cost and Construction Contingency per SF	$337	
Land/Acquisition per Unit Costs [3/]	$39,000	
"Off Budget" per Unit Costs [4/]	$18,000	
Development Costs	**Costs**	**Percent to Total**
Soft Costs, including Design, Permitting, Overhead, and Developer's Fee, and Project Contingency	$167,965,000	22.7%
Construction Cost and Construction Contingency	492,782,000	66.5%
Land/Acquisition	54,990,000	7.4%
"Off Budget" Costs	25,380,000	3.4%
Total Development Costs (TDC)	**$741,117,000**	**100.0%**
TDC per Unit	***$525,615***	
TDC per GSF	***$506***	

1/ See Table A-1 in Appendix for mix of units by size.

2/ Development cost assumptions are based on average costs for recent experience of selected housing projects in Boston, including high-rise and mid-rise new construction projects and substantial and moderate renovation projects. Due to the variation in the size of the units demanded, construction costs are based on project size in square foot costs, with percentage increase for soft costs and per unit

3/ Rounded average per unit for affordable housing development projects where acquisition costs exceeded $250,000. Some projects will have no or low acquisition costs, city owned land for instance.

4/ The City of Boston has a total development cap of $500,000/unit for developers to obtain financing. With current increases on construction, acquisition, insurance and interest rates, project unit costs are exceeding that cap. To show costs lower and obtain funding, developers are getting creative by taking items off budget (or calling them extraordinary). Recent construction costs for projects submitted for fundings have a weighted average cost of $525,000 per unit.

Development Project Revenue

Project revenue generation and the underlying development economics are different for rental and ownership housing.

Rental Housing

An important step in calculating the subsidy required to create new affordable housing units is to define the rental housing development project's revenue that will be used to support the development and operations of new affordable housing. This analysis assumes that the new rental housing will be solely supported by rental income from tenant households and ownership housing will be supported by the sales of affordable units. Affordable rents and sales prices are derived based on household income. In prior sections of this report, annual occupational wages were the input for establishing the demand for affordable housing among extremely low-, low-, moderate-, and middle-income households of new workers in new commercial development in Boston. The weighted average annual household income for each income level[41], as shown by the data in **Table 5-5**, is the basis for calculating affordable rents and sales prices that in turn support the development of affordable housing.

Table 5-5. Weighted Average Household Income by Income Group and Household Size, Households of Workers in Projected Non-Residential Development

	Households by Number of Persons			
	One Person	Two Person	Three Person	Four Person
Distribution of Weighted Average Income				
Extremely Low-income	NA	$33,487	$33,487	$36,050
Low-Income	$43,638	$49,384	$50,421	$55,027
Moderate-Income	$65,747	$83,373	$93,697	$105,084
Middle-Income	$105,015	$112,230	$115,136	$123,624

Source: Bureau of Labor Statistics, Karl F. Seidman Consulting Services; and, ConsultEcon, Inc.

The needed subsidy for new affordable rental housing is calculated first, followed by the calculation of the needed subsidy for affordable ownership housing.

[41] This average is based on the weighted average for annual household earnings based on median annual earnings for the occupations projected for extremely low, low, moderate and middle-income household as discussed in a prior section.

Affordable Rent Levels

The affordable rents for rental units are based on the estimated annual income of workers in the new commercial developments in Boston. Construction of the 1,410 rental units of affordable housing projected in this analysis are supported by rental revenue from tenants with subsidies used to fill the gap between rental revenue and the cost to develop the housing. In general, the federal Department of Housing and Urban Development (HUD) is a source of many affordable housing subsidies. HUD defines housing costs as affordable to a household when the total cost of shelter consumes no more than 30 percent of gross (total) income. For this analysis, households are assumed to pay 30 percent of household income in rent. Data in **Table 5-6** detail the assumed income levels of households to derive the total gross rental revenue for the 1,410 units, based on the distribution of households by size and income. Total annual gross rental revenue for the units is estimated at $22.8 million.

Table 5-6. Annual Rental Revenue by Household Income and Size of Household

Household Size	Annual Income [1/]	Applicable Monthly Rent [2/]	Number of Households	Total Annual Rent
Extremely Low-Income Households				
1 Person	NA	NA	NA	NA
2 Persons	$33,487	$837	103	$1,034,532

1/ Weighted average annual earnings based on anticipated mix of occupations and wages in new non-residential development in Boston.

2/ Assumed at 30% of monthly income. Rents are rounded to nearest $1.

Note: Rounding may affect totals.

Source: City of Boston; Karl F. Seidman Consulting Services; and ConsultEcon, Inc.

To calculate the rental revenue available to support the total development costs described above, the gross rents must be adjusted to reflect lost revenue due to periodic vacancies and the operating costs of maintaining and managing housing. As shown by data in **Table 5-7**, vacancy is assumed at 4 percent of gross rental revenue. Operating costs typically include such items as building management, janitorial services, trash removal, building maintenance, landscaping, marketing and other administrative costs. For this analysis, the full cost of utilities is also included.

MHP's portfolio contains operating expense comps from 32 comparable urban metro Boston projects from 2020-2021 property financial audits or operating statements. The average was $12,833 per unit in operating cost. For the purposes of this analysis, it is assumed that the operating costs of newer and more efficient construction would be 15 percent lower than the average of the existing properties. This would bring total operating costs to $10,880 per unit or $15.3 million total. Net rental income after deducting vacancy and operating costs is estimated at $6.5 million.

Rental Affordability Gap and Needed Subsidy

The next step is to find the gap in project finance between the permanent mortgage and developer equity that the net rental income can support and the total development costs of the 1,410 rental units. In general, the loan amount that lenders will approve is based on the income stream from the project. In this case, the annual net income from rents is $6.5 million. However, lenders prefer to build into their mortgage calculations a cushion between projected net income from rents and the annual debt service needed to pay down the loan. The debt coverage ratio (ratio of net income to allowable debt) reduces the effective amount of net income that can be used to support a mortgage. This analysis assumes a debt coverage ratio of 1.15, based on permanent financing programs offered by the Massachusetts Housing Partnership. After adjusting the net income by the debt coverage ratio, the project has $5.7 million in annual net income with which to pay the debt service on a permanent mortgage.

The total allowable permanent loan is calculated by dividing the net income by the mortgage constant, based on a 6.604 percent mortgage constant, (assuming the available current Massachusetts Housing Partnership financing rate amortized over a 30-year period). The permanent loan that could be supported by the resident households is $85.9 million. The annual revenue not required for the mortgage is then available to support equity investment. Based on a required return of 8 percent, this revenue would support $12.2 million in equity investment. Given the total development costs of $741 million, the subsidy required to create 1,410 new affordable rental housing units is $643 million, approximately 87 percent of the total development cost (TDC).

Financing Gap as a Percent of TDC		*86.8%*	*100.0%*	*92.2%*	*60.1%*	*0.0%*

1/ Variation in TDC per unit for various income levels is due to the differing mix of units. In reality, most developments would be mixed income, targeted to multiple income levels, and the mix of units would vary from project to project.

2/ Source: City of Boston.

3/ Based on 85% of Massachusetts Housing Partnership average operating expenses per unit ($12,800) for affordable multi-family developments in portfolio in Metro Boston. Costs are typical of CAM expenses–Administrative, Utilities, Maintenance, Insurance, Property Taxes--that would be charged to the renter or the building owner would absorb.

4/ NOI is negative based on this model. In practice, any negative income based on supportable rents at 30% would be offset by income from units available at to higher incomes at mixed income developments or offset by other sources of subsidy such as housing vouchers.

Ownership Housing Development Project Revenue

The average sales price of affordable units sold in Boston is the basis for estimating the sales proceeds available to support the creation of 2,593 affordable ownership units in Boston. Of the total, 84 units are for moderate-income households and 2,509 units are for middle-income households.

As shown by analysis in **Table 5-8**, the "affordable" sales price is derived based on 30 percent of gross income spent on housing and estimates of housing costs, the same as rental housing. Housing costs for ownership units include mortgage payments based on 5% down payment on the home, real estate taxes and condo fees. (Private Mortgage Insurance is not included in this analysis as it is waived through a housing lending program offered by the Massachusetts Housing Partnership.) It is assumed that all extremely low- and low-income units are all rental units, so estimates of sales prices based on low-income earnings were not prepared.

Table 5-8. Aggregate Affordable Ownership Unit Sales by Household Income and Size of Unit

Household Size	Annual Income [1/]	Monthly Housing Costs [2/]	Number of Households	Supportable Sales Price [4/]	Total Sales
Moderate Income					
Studio	$73,965	$1,849	2	$279,835	$559,670

Ownership Housing Needed Subsidy

The affordability gap in project financing of ownership units is the difference between the TDC and the proceeds from the sale of the estimated required 2,593 ownership units. Based on the mix of units and the assumed sales prices, the total estimated sales proceeds are $1.12 billion. Assuming TDC of $1.38 billion, the estimated financing gap for 2,593 affordable home ownership units is $255 million, which is approximately 19 percent of the TDC. Data in **Table 5-9** summarize the subsidy needed for ownership units.

Table 5-9. Calculation of Financing Gap for Affordable Ownership Housing Units

				By Household Type	
			All Units	Moderate Income	Middle Income
Potential Development Costs					
Number of Units			2,593	84	2,509

Subsidy Needed to Satisfy Ten-Year Affordable Housing Demand

The total development costs for rental and ownership units in Boston that satisfy the demand for new affordable housing from workers in new non-residential developments is $2.12 billion. The total financing gap for the 4,003 rental and ownership units is $895 million, approximately 42 percent of the TDC. The total subsidy is then divided by the total estimated commercial development building area.

Based on an estimated 14.8 million square feet of non-residential space projected over 10 years that are subject to the current housing exaction standards, the total subsidy required is estimated at $80.20 per SF of non-residential development, as shown by data in **Table 5-10**. This represents the maximum linkage fee level that is warranted based on the legal test that linkage fees must be proportional to impact they serve to mitigate.

Table 5-10
Derivation of Financing Gap for New Affordable Rental and Ownership Units per Square Foot of Projected Commercial Development

	All Units	Extremely Low Income	Low Income	Moderate Income	Middle Income
Total Development Cost [1/]	$2,120,599,000	$127,311,000	$447,195,000	$223,113,000	$1,322,980,000
Total Financing Gap Required [1/]	$895,081,000	$127,311,000	$412,451,000	$124,505,000	$230,814,000
Percent of TDC that is the Financing Gap	42.2%	100.0%	92.2%	55.8%	17.4%
Derivation of Commercial Square Footage Subject to Housing Exaction					
Total Commercial Square Footage	14,861,000	14,861,000	14,861,000	14,861,000	14,861,000
Square Footage Exempt from the Housing Exaction under Current Policy [1/]	3,700,000	3,700,000	3,700,000	3,700,000	3,700,000
Commercial Square Footage Subject to the Housing Exaction	11,161,000	11,161,000	11,161,000	11,161,000	11,161,000
Financing Gap per Square Foot of New Commercial Development [2/]	**$80.20**	**$11.41**	**$36.95**	**$11.16**	**$20.68**

1/ Per the City of Boston Incentive Zoning Ordinance, the first 100,000 SF of non-residential building area is exempt from the Housing Exaction. It is assumed that non-residential projects in the future average approximately 400,000 GSF, based on the average project over 100,000 SF that is board approved. Across 37 projects, 3.7 million SF is assumed to be exempt from the Housing Exaction, per the current ordinance.

2/ Total Financing Gap divided by the total Commercial Square Footage Subject to the Housing Exaction.

Note: Rounding may affect totals.

Source: City of Boston; Karl F. Seidman Consulting Services; and ConsultEcon, Inc.

Modified Subsidy Required Based on Other Subsidy Sources

This analysis calculates the full cost of the financing gap due to the housing demand generated by workers of households in projected large-scale developments in the City of Boston. Boston has relatively high affordable housing development costs, given the scarcity of vacant land, and high costs. The purpose of affordable housing is to limit the rental or mortgage payments of low-income households to 30% which is considered "affordable"; this creates a limited revenue stream to finance development costs. Therefore, the City and developers are challenged to find additional sources of funding to fill the gap between the rents and sales proceeds that extremely low, low, and moderate-income families can afford and the development financing that would be incurred by affordable housing developers. Since most affordable housing developers layer multiple funding sources to support the construction of new housing units, the housing exaction will work in conjunction with other financing sources to fill the $895 million financing gap.

The housing exaction due to new commercial development is contributed to the Neighborhood Housing Trust (NHT). Because there are other sources of funding available for development of new affordable housing in Boston, the housing exaction to the NHT does not have to provide all the gap funds needed to build affordable housing. In practice, the NHT has only been needed to cover 4.1% of the of the total financing gap used in recent affordable rental housing projects and none of the gap for recent affordable ownership housing projects in Boston, as shown by data in **Table 5-11**. Overall, the total City funds including NHT and other funds accounted for 14.7% of rental projects, and 58.9% of ownership projects. It should be noted that most of the funds for affordable housing are available only to projects targeting extremely low and low-income households.

Table 5-11. Sources of Funds for Recent NHT Supported Housing Projects in Boston

All Sources of Funds for Affordable Housing	Rental Projects [1/] Residential TDC	Rental Projects [1/] Percent to Total Sources	Ownership Projects [1/] Residential TDC	Ownership Projects [1/] Percent to Total Sources	Total Residential TDC	Total Percent to Total Sources

3/ NHT or total City contribution divided by the Total Financing Gap Funds.

4/ The leverage ratio is equal to the Other Sources of Financing Gap Funds divided by NHT or total City contribution.

Source: City of Boston; Karl F. Seidman Consulting Services; and ConsultEcon, Inc.

Housing Exaction Level Scenarios

Data in **Table 5-12** show housing exaction level scenarios including scenarios that model two fee increase scenarios of $10 and $20, as well as applying the historic ratio of NHT and total City funds to total funds needed to fill the full financing gap. Increasing NHT's share of the required financing gap to leverage more state funds and counteract the decline in federal funds may be required to produce the level affordable housing required to satisfy the new demand from commercial development. NHT funding is an important component of the City's affordable housing production and has a substantial impact because the Commonwealth requires the City to provide matching funding as a way of investing in its own affordable housing projects. Without City generated sources like NHT and IDP, the City would not have the primary sources of funding to leverage state funds effectively.

Table 5-12. Housing Exaction Scenarios for the City

	Factor	Rental + Ownership
Total Financing Gap per Square Foot of Commercial Development		$80.20
Current Linkage Fee	***16.2%***	***$13.00***
Current NHT Share of Existing Affordable Housing Funds to Fill the Financing Gap [1/]	2.9%	$2.36
Current Total City Share of Existing Affordable Housing Funds to Fill the Financing Gap [1/]	27.3%	$21.88
Housing Exaction Scenarios		
$10 fee increase	28.7%	$23.00
$20 fee increase	41.1%	$33.00

1/ The factors used in this analysis are weighted based on the mix of rental and owner units in the calculation of the financing gap of affordable housing demand due to commercial development. For 24 NHT rental projects in the past, the NHT accounted for 4.1% of financing gap funds and total City sources accounted for 14.7% of financing gap funds. For 6 NHT ownership projects in the past, the NHT accounted for **NONE** of financing gap funds and total City sources accounted for 58.9% of financing gap funds.

NA = Not applicable.

VI. Employment Impact and Subsidy Required to Address Resident Employment, Education and Training

Boston's new non-residential development will create thousands of new jobs that can provide employment opportunities for Boston residents and increase the earnings for the city's low-income and moderate-income workers. Boston's job linkage policy provides funding for employment and training programs and related service to help these workers gain access to the non-manufacturing jobs that dominate new development in Boston. City policy allows jobs linkage funding awarded through the Neighborhood Jobs Trust (NJT) to be used for: occupational skills training; other forms of job training; Adult Basic Education (ABE); and English for Speakers of Other Languages (ESOL). Funding can also be used for post-secondary credentials that help connect residents to job opportunities. Furthermore, the NJT requires programs to include services beyond direct education and training that advance successful job placement and retention for participants, including career educational and counseling, support services, job placement, and post-placement/retention services[42]. As noted in Section II, there also are significant racial disparities in employment rates, higher-paying occupations and educational attainment (see Tables 2-7, 2-8 and 2-11) that contribute to the racial disparities in income and wealth among Boston residents (see Figures 2-19 and 2-20). Programs and services funded through jobs linkage can capitalize on the jobs in new development projects to help overcome historic and structural barriers to better paying occupations among workers of color in Boston and help reduce these racial disparities.

Methodology

This section estimates the jobs linkage fee level needed to fill the funding gap for employment and training services needed to connect low-income and moderate-income workers with jobs in Boston's projected new development over the next decade. The methodology for this analysis has four components:

1. Forecasting the demand by occupation for 31,794 new jobs projected to be created by new development over the next ten years. This forecast uses the May 2021 occupational distribution by industry for Massachusetts prepared by the US Bureau of Labor statistics[43] and focuses on jobs that do not require a college degree. Two demand scenarios were used: 1) Boston residents fill 40% of these jobs, which reflects the current share of jobs within the city held by Boston residents; 2) Boston residents fill 50% of jobs, which reflects an increase in city resident employment that may be feasible and desirable for the city and employers, given the challenges in hiring workers during a tight labor market and the potential environmental benefits from having a higher share of workers living and commuting within Boston.
2. Estimating the supply of Boston workers from occupational training programs in the existing education and training ecosystem, based on several parameters that include the number of participants and the share who graduate, are placed in jobs and are Boston residents. Data for these estimates came from a variety of sources, including interviews with training providers, directories of training providers from the Boston Private Industry Council and MassHire, the national Integrated Postsecondary Education Data System

[42] Request for Proposals Neighborhood Jobs Trust, FY2022
[43] https://www.bls.gov/oes/2021/may/oes_research_estimates.htm

*(*IPEDS*)* database for community college associate degrees and certificates, Boston Public School data on vocational program graduates and data on the use of Individual Training Account (ITA) vouchers under the federal Workforce Innovation and Opportunities Act (WIOA). For programs in which data was not available, assumptions for parameters were made based on data for similar programs. Since these training programs will place workers with employers in existing buildings and new development, 40% of the projected supply was assumed to fill jobs at new development projects[44]. Low-supply and high-supply estimates were prepared taking into account planned expansions in some training programs and post-pandemic increase in program participation and use of ITAs.

3. Estimating the gap between employer demand and system supply for specific occupations and groups of occupations and the cost to provide additional training to fill this gap. Cost estimates were based on data from the Neighborhood Jobs Trust and individual training providers on the cost to training a worker for different occupations. In some cases, these costs include services beyond skills training that improve participant training completion, job placement and post-employment support.
4. Estimating the cost for related education and support that are critical for workers to access and succeed in occupational training, including English for Speakers of Other Languages (ESOL), Adult Basic Education, including High School equivalency programs (ABE), skill upgrading after employment to help workers advance into higher paying positions and stipends to offset lost income while attending training programs.

Overall Occupational Demand

Table 6-1 and Table 6-2 present the ten-year projected employment from new development by industry and occupation, respectively. The projected new jobs are heavily concentrated in four industries that account for 80% of the total: life science (including hospital research) at 27.3%; information technology (IT) at 26.1%; health care (hospitals and medical offices) at 13.1%; and hospitality (restaurants and hotels) at 13.6%. Since the vast majority of projected new jobs are in these four industries, and the training ecosystem is different for each industry, a separate analysis of occupation demand, the training supply and the supply gap for each industry is discussed below, followed by a final analysis of the remaining jobs.

[44] This percentage reflects the projected ten-year job growth in tenant industries as a percentage of Boston's job growth in these industries over the past ten years.

Table 6-1. Projected Employment by Industry for New Boston Development, 2022 to 2031

Source: Karl F. Seidman Consulting Services

The occupational distribution in Table 6-2 shows that over two-thirds (67.7%) of the projected employment will occur in higher skill occupational groups that largely require at least a college degree, including, Management, Business & Financial Operations, Computer & Mathematical, Architectural & Engineering, Life, Physical & Social Science, Legal, Educational, Training & Library and Health Care Practitioners & Technicians. However, this percentage overstates the share of jobs that require a college degree, since there are jobs in these occupational groups that do not require a college degree, e.g., Computer Network Support Specialists in the Computer & Mathematical Group and Pharmacy Technicians within Health Care Practitioners & Technicians. These jobs will be included and discussed below for each of the four key industries. Among the one-third of projected new jobs in occupational groups that primarily do not require a college degree, 77% are in three categories: 1) Food Preparation & Serving, 2) Sales and Related Occupations; and 3)Office & Administrative. While these occupations are important sources of entry-level jobs for workers with limited work experience and/or education, they are low-paying occupations. While the median annual earnings, as of May 2021, for all occupations in the Boston Workforce Development Area was $68,973, the median annual earnings for Food Preparation & Serving, Sales and Office & Administrative occupations were $31,147, $48,900 and $48,294,

respectively. This highlights the importance of funding skill upgrading and career advancement training to help these entry-level workers increase their earnings over time.

Life Science

Occupational Demand

A total of 8,667 new jobs at life science firms and hospital research labs are expected from new development projects in Boston. The vast majority of these jobs are in occupations that require a bachelor's degree or higher. A recent report by TEConomy Partners, LLC for the Massachusetts Biotechnology Educational Foundation found that 11% of life science industry jobs in Massachusetts don't require a bachelor's degree[45]. Based on this figure, 953 jobs would be accessible to Boston residents without a college degree. Interviews with training providers indicated that the 11% figure covers statewide employment that includes manufacturing jobs and thus may be too high for firms in Boston lab buildings, that will focus on research and development. Based on the state occupational distribution for the life science research and development industry, there will be 690 engineering/lab/research technician jobs among the 8,667 industry jobs. These technician jobs had average 2021 median annual earnings of $54,873. While the skills for these technician jobs can be developed through specialized training programs and do not require a bachelor's degree, some employers do require a four-year college degree for technician jobs. Based on these data, the estimated life science industry demand for entry-level and middle-skill jobs that do not require a bachelor's degree is 820. This translates into 410 and 328 jobs for Boston residents based on 50% and 40% resident employment, respectively.

Training Supply

Current training capacity for life science industry jobs is modest with limited participation by Boston residents and employers. The existing training programs targeted to the life science occupations and firms are:

- Three non-profit programs at Just-A-Start, Lab Central, Jewish Vocational Services (JVS). The JVS program prepares people for additional education at Quincy College rather than for employment;
- Two apprenticeship programs at Massachusetts Biotechnology Education Foundation- one for Biomanufacturing Technician and a second for Clinical Research Associate;
- Certificate and associate degrees at four community colleges-Ben Franklin Institute of Technology (BFIT), Bunker Hill Community College (BHCC), Quincy College (QC) and Roxbury Community College (RCC); and
- Boston Public Schools biotechnology vocational education program.

Collectively, these programs graduate 225 trainees with 74 estimated to be placed into employment. However, data from training providers indicate that Boston residents represent a small share of participants—18% for the Mass Biotechnology Education Foundation and 8% of the Quincy College graduates. Moreover, some programs do not place many graduates with Boston firms. Consequently, the current life science training system is estimated have 10% of its graduates as Boston residents placed in jobs at Boston firms—7 per year and 70 over the ten-year

[45]TEConomy Partners, LLC, *2022 Massachusetts Life Sciences Employment Outlook,* June 2022

period. Training capacity is likely to grow over the next decade with multiple providers planning program expansions to add to the range of occupations covered and open new training facilities, including several in Boston. These expansions are estimated to increase the annual number of Boston residents trained and placed in jobs to 27, yielding a ten-year high-supply estimate of 270 positions.

Combining occupational demand and the low training supply projection, there is a ten-year gap of 258 and 340 training seats for the 40% and 50% resident employment scenarios, respectively. Under the high training supply estimate, the gap is 124 seats under the 40% resident employment scenario and 208 seats for 50% resident employment.

Information Technology

Occupational Demand

Demand for workers in IT occupations is projected at 4,657-this includes jobs within IT-related industries and positions across other industries, many of which have some demand for IT workers. Approximately 21%, or 999 of these jobs are estimated to be accessible for workers without a bachelor's degree and include Network Support Specialists, User Support Specialists and Web Design, a portion of the Computer Programs and Software Developer positions. These IT occupations are especially good-paying positions with average median annual earnings of $91,011 in 2021($78,800 without programmers & software developers). Programmers and Software Developers, which constitute half of the projected IT jobs, typically require a bachelor's degree. However, there are a growing number of training programs providing an alternative pathway for these jobs and increased employer interest in skill-based rather than degree-based job requirements. Based on interviews with training providers and researchers, 10% of the Computer Programmer and Software Developer jobs are estimated to be accessible to workers with industry-based skills training without a college degree. These 999 jobs translate into 500 and 400 jobs for Boston residents based on 50% and 40% resident employment, respectively.

Training Supply

A large and diverse training system for IT occupations exists in Boston that includes:

- Twenty-four different certificate and associate degree programs at BHCC, Bay State College, BFIT, Quincy College and RCC[46]; and
- Over a dozen non-profit and for-profit providers, some training for multiple occupations and jobs, that use different program formats and lengths that include coding bootcamps, on-line courses, extended courses and long-term programs with apprenticeships.

Boston's Private Industry Council manages an IT/Tech collaborative of leading technology and IT professionals working to expand the talent supply pipeline and address issues employers experience in finding workers. The collaborative is undertaking initiatives to build awareness of IT and other tech careers in the high schools through internships and other programs, and works regionally to advance innovations in IT education, training, and internships for nontraditional,

[46] Incomplete data was available on the number of community college IT program graduates going into jobs versus pursuing further education and the following assumptions were made: 80% to employment for certificate programs and 35% to 50% for associate degrees, depending on the type of degree.

underserved populations. Through these efforts and plans at existing IT providers, the supply of IT training and graduates is likely to increase over the next ten years.

These programs currently graduate between 964 to 1139 annually with 159 to 206 estimated to be Boston residents entering employment. Based on 40% of these Boston graduates entering jobs at new development projects, the ten-year supply of graduates for jobs in new development projects is estimated at 390 to 620[47].

Combining occupational demand and the low training supply projection, there is ten-year gap of 10 and 100 training seats for the 40% and 50% resident employment scenarios, respectively. Under the high training supply estimate, there is enough capacity to address employer demand and no training supply gap would exist.

Health Care

Massachusetts has experienced a shortage of workers for many health care occupations for over a decade with some studies projecting that workforce shortages in the state could more than triple between 2017 and 2024.[48] The pandemic worsened this shortage as nurses and other workers left the industry and the pipeline of new workers was interrupted due to delays in education, clinical placements and licensing exams[49]. The shortage of health care workers in Boston was confirmed through interviews with a major health care system that reported continued difficulty finding workers and that the capacity of the existing education and training system does not meet existing demand. Health care training providers also indicated that employer demand for their graduates significantly exceeds the current number of graduates. Given this situation, the current training supply may only function to address the existing shortage of health care workers, with linkage funding needed for expand capacity to fill 100% of the occupational demand for entry-level and middle-skill health care jobs generated from new development. This assumption is used to estimate the training gap and costs under the low-supply scenario discussed below.

Occupational Demand

Projected development of new hospital clinical facilities together with expected medical offices and pharmacies in office and lab projects is expected to generate 4,277 new jobs, including 797 technicians and health care support occupations and 1,098 registered nurses. Hospitals largely hire registered nurses with a BSN degree for these jobs. However, with the current nursing shortage, there is the potential for hospitals to change this requirement and hire some applicants with an associate nursing degree (and perhaps assist them to complete their BSN over time). Therefore, the occupational demand analysis includes projecting that 10% of the demand for new RNs (110 jobs) will be accessible for workers with an associate degree. This results in the demand for 907 entry-level and middle-skills jobs from new development, which translates into 457 jobs for Boston residents with 50% resident employment and 363 under 40% resident employment.

[47] These estimates include an adjustment to deduct for training funded by the Neighborhood Jobs Trust with linkage fee revenue.
[48] The Project on Workforce, Covid-19 and the Changing Massachusetts Health Care Workforce, p.7
[49] The Project on Workforce, Covid-19 and the Changing Massachusetts Health Care Workforce, p.8, 13 and 15.

Earnings for health care occupations are mixed. The myriad technician occupations pay fairly well averaging $67,612 annually in 2021, close to the median WDA annual earnings. Registered Nurses in the Boston WDA had a median wage of just over $102,000. Health care support occupations, which include Nursing Assistants and Phlebotomists have significantly lower earnings with average median annual earning of $43,856 in 2021.

Another 548 medical office/administrative positions resulting from new development are addressed as part of office and administrative occupations.

Training Supply

Boston benefits from a large array of health care training programs, with considerable capacity in the local community colleges and non-profit agencies. Several large health care systems also have internal programs to support additional education and training among their workers to move up career ladders. Boston Healthcare Careers Consortium, comprised of healthcare organizations, educational institutions, labor organizations, the public workforce system and others from the City of Boston focuses on identifying and addressing barriers to an aligned and efficient education and training system. This regional partnership works to build career ladders within the health care industry and ensure that healthcare providers have the staff that they need to deliver the best care possible to patients in a culturally competent environment.

Skills training programs within the current system include:

- Extensive certificate and associate degree programs at 7 area community colleges, including Bay State College, BFIT, BHCC, Laboure College, QC, RCC, and the Urban College of Boston. The occupations addressed in these programs include EMT Technician, LPN, Nursing Aid, RN, Physical Therapy Assistant, Phlebotomist, Substance Abuse Counseling, Medical Assistant, Cardiovascular Technician, Electro-neurodiagnostic Technician, Radiology Technician, Sonograph/ultrasound Technician, and Surgical Technician
- Multiple non-profit and private providers providing training primarily geared toward health care support occupations, although some provide training for technician position, e.g., JVS has a Pharmacy Technician program.

The programs generated an estimated 183 annual graduates entering employment who are Boston residents[50]. As noted above, the low-supply estimate assumes this all of this supply goes to address the current shortage of health care workers with none filling jobs at new development. The high-supply estimate assumes 40% of this capacity goes to new development, supplying 72 workers per year or 720 over the ten-year period.

Combining occupation demand and the low training supply projection, there is ten-year gap of 363 and 457 training seats for the 40% and 50% resident employment scenarios, respectively. Under the high training supply estimate, there is enough capacity to address employer demand and no training supply gap would exist.

[50] These estimates include an adjustment to deduct for training funded by the Neighborhood Jobs Trust with linkage fee revenue.

Hospitality

Occupational Demand
Growth in restaurant and hotel employment from new development is projected to create 2,829 new largely entry-level jobs in Food Preparation and Serving and Building and Grounds Cleaning and Maintenance occupations, with 1,312 and 1,415 jobs for Boston residents at 40% and 50% resident hiring, respectively.

Hospitality jobs are among the lowest paying occupations in Boston with 2021 median annual earnings of $31,143 for Food Preparation and Serving occupations and $38,391 the median for Building and Grounds Cleaning and Maintenance occupations. However, earnings at unionized hotels are considerably higher, e.g., the starting hourly pay for a room attendant/housekeeper is $26.67—over $55,000 annually for a full-time position.

Training Supply
Training for hospitality jobs is provided through several BHCC certificate programs, a BPS career and technical education, JVS and other providers approved for ITA vouchers. Best Hospitality is a non-profit organization that trains workers for union hotel jobs in the Boston region[51]. The estimated existing annual supply of graduates from these programs that are Boston residents and go into employment is 37 and 370 over ten years, with 148 of these graduates (40%) projected to fill jobs in new development projects. Since the pandemic reduced recent employment and hiring in the hospitality industry and the level of training, a high-supply estimate was made that assumed a doubling of the annual number of ITA vouchers used for hospitality industry training and a 50% increase at the JVS program. Under this high-supply scenario, the ten-year supply of employed graduates who are Boston residents increases to 450 with 180 working at new developments.

Combining occupation demand and the low training supply projection, there is ten-year gap of 989 and 1,267 training seats for the 40% and 50% resident employment scenarios, respectively. Under the high training supply estimate, the training supply gap is 952 and 1,235 seats for the 40% and 50% resident employment level, respectively.

Administrative and Other Occupations

Occupational Demand
An additional 4,438 jobs in occupations not requiring a bachelor's degree are expected to be generated by new development projects over the next ten years. Office and administrative occupations account for 68% of these jobs inclusive of 2,488 non-medical and 547 medical office and administration positions. The remaining 1,342 jobs are in other occupations including sales, repair and maintenance, production and transportation/material moving. Estimated employment for Bostonians in these occupations is 1,751 and 2,189 for 40% and 50% resident employment, respectively.

Training Supply

[51] Since Boston residents trained by Best Hospitality are funded through the Neighborhood Jobs Trust and linkage funding, its graduates are not included in the figures for existing system supply.

Multiple programs provide training for these additional occupations, primarily for office and administrative positions, including at BHCC certificate programs, several non-profit agencies (JVS, Operation Able, the YMCA) and other providers approved for ITA vouchers. These programs currently supply an estimated 76 annual graduates who enter employment and are Boston residents, or 760 over ten years, with 300 (40%) assumed to be in jobs at new development projects. Under the high-supply estimate, with increases in annual ITAs and expansion at non-profit training providers, the ten year supply of Boston residents entering employment is 1,050 over ten years, of which 420 are expected to fill jobs at new development projects.

Median earnings within these occupational groups are well below the overall median for the Boston WDA. Production and Transportation/Materials Moving jobs have the lowest earnings, with the 2021 median annual pay at $37,939 and $38,415, respectively. Median annual earnings for Sales and Office/Administrative occupations are higher at over $48,000. Moreover, there are positions within these two occupational groups with considerably higher median annual pay. Examples include:

- Executive Secretaries/Administrative Assistants: $73,761;
- Legal Secretaries and Administrative Assistants: $67,631;
- Financial Clerks, All Other: $62,720;
- Brokerage Clerks: $61,525;
- Advertising Sales Agents: $61,518;
- Insurance Sales Agents: $78,811; and
- Sales Representatives, Wholesale and Manufacturing Products: $77,882.

Combining occupation demand and the low training supply projection, there is a ten-year gap of 1,451 and 1,899 training seats for the 40% and 50% resident employment scenarios, respectively. Under the high training supply estimate, the training supply gap is 1,331 and 1,769 seats for the 40% and 50% resident employment level, respectively.

Skills Training Fund Gap

Table 6-4 summarizes the skills training supply gap by industry/occupational area and the required funding amount to address these gaps under 40% resident employment. The total funding gap is $17.2 million under the high-supply scenario and $24.2 million under the low-supply estimate. The funding gap for 50% resident employment is $23.5 million under the high-supply estimate and $32 million with the low-supply estimate (see **Table 6-5)** The per participant training costs used to calculate the required funding levels, based on averages for existing programs, are shown in **Table 6-3.**

Table 6-3. Occupational Skills Training Costs

Training Industy/Occupation	Cost per Participant
Life Science	$19,000
Information Technology	$7,500
Health Care Technicians	$12,557
Health Care Support	$6,000
Hospitality	$5,800
Office/Administrative and Other Occupations	$7,000

Additional Employment and Training Services

ESOL and ABE Education

Part of the Boston labor force faces language and educational barriers to skills training and to accessing the job opportunities generated by new development. Funding and delivering these services is closely aligned with the goals for the jobs linkage policy and the Neighborhood Jobs Trust. The need for ESOL education services was based on the percentage of unemployed who do not speak English well based on data from the 2016 to 2020 5-year American Community Survey, which is 11.4%. This percentage was applied to the 4,971 needed training positions to yield an estimate of 567 ESOL seats. The cost to provide this level of ESOL education is $1,927,800, based on a cost of $3,400 per participant[52].

Two estimates were prepared for the cost of needed Adult Basic Education services. The low estimate assumes 15.3% of trainees (761) will lack a high school diploma, based on the share of Boston's unemployed workers without a high school education from the 2016-2020 American Community Survey. A high estimate is based on 21.5% of trainees (1,069) needing ABE services, assuming that one-quarter of trainees with a high school diploma or its equivalent will lack high school level competency and thus will need educational services to reach this skill level. Based on a $3,500 average cost per participant, the required funding for ABE services is $2,663,500 and $3,741,500 for the low and high estimate, respectively.

Skills Upgrading and Training Stipends

As noted above, many of the projected jobs, particularly in entry-level positions, at new development projects pay wages well below the citywide median annual earnings of $68,973 and below the estimated Suffolk County living wage of $74,069 for a four-person household with two working adults[53]. To address this situation, the Neighborhood Jobs Trust can fund skills upgrading and career advancement training for workers after they are employed at new development projects. Based on Massachusetts' industry occupational distributions, there are 2,421 entry-level jobs not requiring a college degree for the 40% Boston resident employment scenario and 3,030 under the 50% resident scenario. The estimated cost to provide skills upgrading training for these employed workers is $4.3 million and $5.4 million, respectively, based a cost per worker of $1,788[54].

Participation in education and skills training programs entails a loss of income for trainees for the time required to attend training. Some programs, particularly in the health care field, have a required number of workplace externships to obtain certification that are typically uncompensated. This loss of income is a major barrier to obtaining skills training, particularly for the low-income and moderate-income workers targeted by the jobs linkage policy, who critically need this income to cover the living expense during training. The estimated cost to provide a single training stipend is $4,412 based on an average training program period of 271 hours for non-apprenticeship training

[52] This costs for ESOL and ABE services are based on the average cost per participant in FY2023 as funded by the Massachusetts Department of Elementary and Secondary Education (DESE), rounded to the nearest hundred dollars.
[53] From the MIT Living Wage Calculator (https://livingwage.mit.edu/counties/25025).
[54] This cost estimate is the average cost for incumbent worker skills training funded by the Massachusetts Commonwealth Corporation's Workforce Training Fund in FY2021.

programs[55] and an hourly rate of $16.28—Boston's current living wage standard for vendors. Since most life science training programs and some IT training programs already pay a stipend, the cost estimate for stipends excludes all life science training seats and 20% of IT training seats to avoid double counting stipend costs for these programs. **Table 6-6** summarizes stipend cost estimates under the different scenarios, which range from $10.1 million to $16.3 million.

Providing stipends to trainings can have unintended consequences when the stipend income results in increased tax liabilities and/or loss of social safety net benefits if the trainees income with the stipend exceeds program income limits. The City of Boston will need to evaluate and consider these potential impacts before deciding on policies related to funding stipends through linkage and the Neighborhood Jobs Trust, including whether either existing program regulations or new regulatory changes can exclude training stipend income from income limits.

Table 6-6. Estimated Cost for Training Stipends under Different Scenarios

Training Supply Scenario	40% Resident Employment	50% resident employment
	Number of Stipends	
High supply training scenario	2,283	3,004
Low supply training scenario	2,799	3,701
	Stipend Cost	
High supply training scenario	$10,072,596	$13,253,648
Low supply training scenario	$12,349,188	$16,328,812

Source: Karl F. Seidman Consulting Services

Total Job Training Funding Gap and Warranted Jobs Linkage Fee

The total funding gap and associated linkage fee to address the combined employment and training needs for entry-level and middle-skill jobs at the projected new development under the 40% resident employment scenario are summarized in **Table 6.7.** Excluding the cost for stipends, the gap is $25.2 million under the high training supply estimate and $33 million for the low training supply estimate. These translate into PSF linkage fees of $2.26 and $2.96 using a basis of 11,611,000 square (total projected development of 14,861,000 SF less 3,700,000 in exempt space[56]). When stipends are included the jobs linkage fee increases to $3.16 and $4.07 for the high training supply and low training supply scenarios, respectively.

[55] Apprenticeship programs were excluded as participants are typically paid during the non-classroom work portion of the program and the breakdown of hours for classroom vs. work portions of these programs was not available.
[56] The exemption amount assumes 37 development projects with an average gross floor area of 400,000 SF.

Table 6-7. Total Funding Gap and Jobs Linkage Fee, 40% Resident Employment

Type of Service	High Training Supply Estimate	Low Training Supply Estimate
Skills Training	$17,194,600	$24,188,120
ABE/ESOL	$3,668,200	$4,529,200
Career Advancement	$4,328,748	$4,328,748
Total	$25,191,548	$33,046,068
PSF Jobs Linkage Fee	$2.26	$2.96
Training Stipend	$10,072,596	$12,349,188
Total with Stipend	$35,264,144	$45,395,256
PSF Jobs Linkage Fee with Stipend	$3.16	$4.07
Current Exaction	$2.39	$2.39

Table 6-8 details the funding gap and linkage fee levels for the 50% resident employment scenario. Without stipends, the gap is $33.8 million under the high training supply estimate and $43.7 million for the low training supply estimate. These translate into PSF linkage fees of $3.00 and $3.86 using the basis of 11,611,000 square feet of projected new development subject to linkage fees. When stipends are included the jobs linkage fee increases to $4.19 and $5.32 for the high training supply and low training supply scenarios, respectively.

Table 6-8. Total Funding Gap and Jobs Linkage Fee, 50% Resident Employment

Type of Service	High Training Supply Estimate	Low Training Supply Estimate
Skills Training	$23,460,000	$31,973,100
ABE/ESOL	$4,591,300	$5,669,300
Career Advancement	$5,417,640	$5,417,640
Total	$33,818,940	$43,730,040
PSF Jobs Linkage Fee	$3.00	$3.86
Training Stipend	$13,474,248	$16,655,300
Total with Stipend	$47,293,188	$60,385,340
PSF Jobs Linkage Fee with Stipend	$4.19	$5.32
Current Exaction	$2.39	$2.39

VII. Review of Linkage Fee Policy Options

Cities across the country have implemented linkage policies to generate funding to address the impact of commercial development on affordable housing demand for over three decades—from several California cities to Denver and Seattle, and communities in Florida and New Jersey. Locally, Boston and Somerville have implemented housing and jobs linkage fees, and Cambridge has a housing linkage fee. Watertown and Chelsea also recently submitted home rule petitions to establish linkage fees, with Watertown's proposed fee dedicated to affordable housing and Chelsea's fee applicable to multiple purposes. This section reviews the linkage fees in nearby communities and several cities nationwide, considers several changes to Boston's current linkage policies, and assesses the impact of changes to the city's linkage fee rate on the financial returns and feasibility of future commercial development.

Linkage Fee Policies in Other Communities

Current linkage fee rates and policies for Boston, Cambridge, Somerville and several comparable national cities are summarized in **Table 7-1**. Housing linkage fees range from under $1.00 per SF for some uses in Denver, San Diego and San Jose to a high of $69.80 for some office projects in San Francisco. Locally, Boston's combined Housing and Jobs fee rate of $15.29 is below that of Cambridge ($33.34) and above Somerville ($13.98). Cambridge recently raised its fee to $33.34 and Somerville is currently undertaking a Nexus Study that may result in rate changes over the next several months. Nationally, Boston's rate is above that for Denver and San Diego but below the highest rates in San Jose ($15.79) and Seattle ($25.30). All four of these cities vary linkage fees by use, and all except San Diego also vary rates by location, so some projects in San Jose and Seattle face lower rates than in Boston. San Francisco has the highest rates by far, with lab projects between $31 and $39 and office projects over 50,000 SF paying almost $47 to just under $70 per SF.

Boston differs from other cities in having the highest project size threshold to trigger linkage payments (San Jose has a 100,000 SF threshold for projects in some districts) and the largest exemption, both at 100,000 SF. Providing an exemption for some amount of space is not common among the comparison cities—present only in Boston, Cambridge[57], Somerville and Seattle. A single full payment of linkage obligations is the most common payment schedule, typically prior to issuance of the building permit or certificate of occupancy. Boston and Somerville are the only cities that allow payment over multiple years. However, San Diego allows application for a two-year deferral and San Jose provides a 20% discount for early payment prior to the final building inspection date. All comparison cities, except San Jose, provide for annual inflation adjustment tied to the CPI or other index.

[57] Cambridge recently added a 30,000 SF exemption for projects of 60,000 SF of less and for rebuilding of existing space without a change of use over a three-year period.

Table 7-1 . Linkage Fee Policies in Boston and Other Cities

City	Year Established	Exaction/Linkage Fee Rate (per SF)	Project Size Threshold (SF)	Exemption (SF)	Payment Schedule	Rate Adjustments	Other Policies
Boston	1983	Housing: $13.00	100,000	100,000	Housing: Downtown district: 5 payments at building permit date & 4 anniversary dates; elsewhere: 7 payments at COO date & 6 anniversary dates	Automatic annual adjustment based on a "combined index" of the CPI for Urban Consumers and CPI Housing Component. At other times as recommended by the BRA based on a consideration of economic trends, housing trends and other factors.	Housing creation option allows a developer to make all or a portion of their linkage obligation via a financial contribution to a specific income restricted housing project.
	1986	Jobs: $2.39			Jobs: two payments at building permit date & one-year anniversary		Job linkage obligation can be met through either cash payments or creation of a job training program with a cost at least equal to the required linkage fee contribution.
Cambridge	1988	Housing: $33.34	30,000	30,000 for projects with 60,000 SF or less & the rebuilding of existing space without a change of use	One payment at COO	Annual Adjustment (in October or November) based on Boston CPI Housing Index Recalculation after three years or longer.	
Somerville	1990	Housing: $11.23	30,000 for housing and jobs fees	30,000 for housing	Housing fee made in three payments at COO & next two anniversary dates. Jobs fee made in two payments at building permit & COO	Reevaluation every five years. Annual adjustment March 1 based on Boston CPI.	
	2017	Jobs: $2.75	15,000 for jobs	15,000 for jobs			
Denver, CO	2017	.96 to 3.65 depending on use (7/1/2022) and market area for some uses; annual scheduled increases to $2.50 to $9.00 in 2025.	None	None	One payment before building permit issuance	Annual adjustment based on change in CPI for Urban Consumers.	Applies to housing project with 9 or fewer units; lowest fees for industrial uses; highest for commercial, civic, public and institutional uses in high market area.
San Diego	1990	.80 to 2.12 PSF depending on use	None	None	One payment prior to building permit; can apply for 2 year deferral	No automatic inflation adjustments.	Exemptions for projects in Enterprise Zone, with certain 1st source hiring agreements & with primary uses that include manufacturing wholesale, and urgent care, hospitals, intermediate care & nursing homes.
San Francisco	1996	Fees vary by use, size and date of permit application. Highest fees are for office projects > 50,000 SF and range from $46.98 to $69.60. Lab fees range from $31.43 to 38.37.	Increase by 25,000 SF or more by any combination of entertainment, hotel, office, laboratory, retail, and/or Small Enterprise Workspace		Prior to certificate of occupancy	Annual adjustment per changes in the Annual Infrastructure Construction Cost Inflation Estimate prepared by City's Capital Planning Group.	Free-standing pharmacies <50.000 SF and grocery stores <75,000 SF are exempt.
San Jose	2020	Fees vary from 0 to $15.79 by use, location in one of four districts and timing of payment. Highest fee for downtown office use.	Office & Industrial R&D above 50,000 or 100,000 for some districts	None	By final building inspection date; 20% discount if paid before building permit	Annual adjustment per changes in the Engineering News Record (ENR) Construction Cost Index.	
Seattle	2015	Fees vary by detailed development zone within the downtown/SM-SLU/SM-U 85 area vs. outside, by commercial vs. residential use, & date vested in Land-use code. Commercial rates range from $9.76 to $25.30.	4,000 SF for commercial uses	4,000 SF; may vary by zone	Prior to master use permit or building permit	Annual CPI adjustment.	Applies to any project with rezoning that increases the maximum height or floor area ratio (FAR), or establishes a different zoning designation.

Administrative and Policy Issues

Beyond updating the housing and jobs linkage fee rate, Boston may want to consider updating several administrative and policy issues related to these fees. The key issues reviewed in this section, are:

- Changing the current 100,000 SF project size threshold;
- Changing the current 100,000 SF exemption for determining the gross floor area for which the fee is applied;
- Changing the current multi-year payment schedule; and
- Altering the current single uniform fee rate by use and/or development district.

Size Threshold and Exemption.
Communities vary in the size threshold that triggers the application of housing contributions or linkage fees. As noted above, Boston has the highest threshold at 100,000 SF compared to Cambridge and Somerville. Denver and San Diego have no minimum size threshold for the application of commercial linkage fees and collect them from projects independent of size.
Boston's larger threshold reflects the larger size of development projects in the city, which average over 400,000 SF over the past decade, compared to average project sizes close to 270,000 in Cambridge and 200,000 SF in Somerville.

One option is reducing the linkage fee threshold to 50,000 SF to be consistent with the trigger for large project review under Article 80 of the Zoning Code. Based on BPDA data, there were 37 projects completed between 2011 and April 2022. with uses subject to linkage fees between 50,000 and 100,000 SF totaling 2.8 million SF of new development. This equals 22% of the completed development for projects over 100,000 SF subject to linkage over the period total development. Any increase in linkage revenues from lowering the threshold would be less than 22% since it will depend on the change in the exemption level, which will reduce the actual SF subject to linkage for the smaller projects and increase the linkage fee base and revenue for larger projects. One consideration in reducing the project threshold is the impact that imposing linkage fees would have on project economics and feasibility. Although linkage fees constitute a small share of development costs and typically do not impact feasibility, smaller projects face more challenging economics as they have less space and rental income to recoup fixed costs for land and other fixed expenses that do not vary with project size. Smaller projects also tend to be located in neighborhoods outside Boston's high rent districts, and thus rely on lower SF rents to achieve feasibility. Twenty-one, or 57%, of the 37 projects between 50,000 and 100,000 SF were located in Boston neighborhoods outside the city's major development districts including Allston (3), Brighton (3), Dorchester (2), East Boston, Hyde Park, Mattapan (3), Mission Hill, Roxbury (3), and the South End (4).

Boston currently exempts the first 100,000 SF of a project from the base used to determine linkage fees. The exemption reduces a project's linkage payments but increases the fee level needed to raise a given amount of linkage funding. There is not a strong policy case for having an exemption since the exempted space generates employment that affects the demand for affordable housing and job training. The exemption does serve to shift the overall cost of linkage payments from

smaller to larger projects, which may help enhance project returns and feasibility for projects close to the 100,000 SF threshold.

Payment Timing Schedule.
Boston's current multi-year payment schedule adds complexity and cost to linkage fee administration. Jobs linkage is paid in two installments and housing payments are made in five or seven installments depending on whether a project is located inside or outside the designated Downtown District. The first payment date also differs between jobs linkage and housing linkage in the Downtown District (building permit date) and housing linkage outside the Downtown District (certificate of occupancy date). Multiple payments create administrative complexity since additional record-keeping, invoicing and collection efforts are needed to track and collect payments over multiple years. The extended payment periods also slow the receipt of linkage revenue and the City's ability to deploy funds for affordable housing and job training.

There is a financial benefit to developers in extending the payments over time but this benefit does not have much impact on developer returns and is not realized by all developers. To compare the financial value of the extended payment period, the present value of payments over five-year and seven-year periods were compared to a single payment using a discount rate of 6.5% based on a $20 fee increase and average project of 400,000 SF. This increase made as a single payment is $6 million. The present value with payments over five years is $5,310,958—a $689,042 reduction. Discounted over seven years, the present value is $5,006,583- a savings of $993,417. When these saving are applied to the total development costs to calculate their impact on a developer's return on cost, the impact is very small—increasing returns by less than 2 basis points, or 2/100ths of a percentage point (see **Table 7-2**).

Table 7-2. Impact of Multi-Year Linkage Payments on Developer Return on Cost

Development Project	Single Payment	5 Year Payment	7 Year Payment
Office Development at $1000 PSF	6.384%	6.395%	6.400%
Lab Development at $1200 PSF	7.361%	7.372%	7.376%

Variation of Housing and Employment Impacts by Use.
Boston may want to consider varying linkage payments by use for two reasons: (1) differential impacts on the demand for affordable housing and job opportunities for low- and moderate-income workers; and (2) differences in project economics and financial returns by primary use. Three primary factors influence how affordable housing and job impacts vary by use: (1) the density of employees in the occupied space; (2) the share of employees with earnings at the low-, moderate- and middle-income levels; and (3) the share of jobs in occupations not requiring a college degree. The first two factors impact the need for affordable housing and housing linkage fees while the first and third factors shape the job opportunities and training needs for low- and moderate-income workers and thus, the jobs linkage fee. **Table 7-3** summarizes how these factors vary across the six projected uses for future development in Boston

Restaurants have the greatest impacts related to affordable housing and jobs linkage since they have the highest employee density, the largest share of jobs that pay annual wages below a middle-income level and almost all (97%) of restaurant jobs do not require a college degree. Hotels have a low impact due to their very low employee density. While hotels have a high share of jobs below

the middle-income level and that do not require a college degree, the fact that they create so few jobs per 1,000 SF of development mitigates their overall impact. Office uses have the second highest employee density but also the second lowest share of jobs paying below middle-income wages and not requiring a college degree—both reducing the impact of their relatively high density. Lab, institutional, and retail/personal services use have similar employee densities, but lab uses have a lower impact on the demand for affordable housing with the lowest share of jobs paying below the middle-income level. Lab use, with only 11% of job opportunities not requiring a bachelor's degree and low employee density also have a low impact in terms of generating jobs that do not require a college degree but also have a low supply of skills training for these jobs, which requires more linkage funding to address the training supply gap.

Table 7-3. Factors Affecting the Impact on Housing Demand by Use

Use	Employees per 1,000 SF	Percent of Jobs with Annual Wages at Low, Moderate and Middle-Incomes	Percent of Jobs Not Requiring a Bachelor's Degree
Lab	2.22	69%	11%
Office+	3.33	80%	27%
Hotel	.5	92%	90%
Institutional+	2.13	89%	35%
Restaurant	8	97%	97%
Retail/Personal Services+	2.12	95%	69%

Source: Karl F. Seidman Consulting Services
+ Weighted average for industries within use category *Estimated base on occupational group

As shown in the section below on the impact of fee increases on project economics, there are large differences in the financial returns between lab, office and hotel development projects—the primary uses in for-profit commercial development projects in Boston. Lab projects generate the highest returns to developers, estimated at 6.4% to 7.5%, due to the strong demand and high rents for lab space. Office projects generate lower returns, estimated at 5.4% to 6.5%, with projects at the high end of development costs not financially feasible based on required developer returns. Hotel projects are generally not feasible as they generate too little net income under current market condition to repay debt and support investment. Thus, based on financial feasibility considerations, a higher linkage fee is warranted for lab projects.

Based on impact and the financial capacity to pay higher fees, there is a case for varying the linkage fees by use. However, transitioning from a single fee level to varying linkage fees by use will add administrative complexity and require thinking through the associated definitions and policies. For example, how will mixed-use buildings be treated? Many life science firms combine office and lab uses, which can be interspersed in the same floor, making it difficult to calculate floor area for each use. This might be dealt with by setting the fee based on the primary use. Another issue is that a building's intended or actual use may change over the development process, e.g., a building might be approved and built for lab use but actually leased to office tenants based on market conditions and tenant interest. Similarly, actual uses for ground floor space in mixed-use commercial building may differ from initial planes and often change over time. Boston could

address this issue by basing the linkage fee on the initial use. However, this might create inequitable results between buildings with long-term stable use and those for which uses change more often.

Variation of Contribution Rates by District

Market demand and rent levels vary by neighborhood in Boston, which impacts the financial return on development across different parts of the city. **Table 7-4** shows average asking office rents in several Boston neighborhoods during the 2nd quarter of 2022. There is considerable variation in rents with the highest rent locations 60% to 75% above the lower rent districts. Although these figures may overstate the differences as they likely reflect differences in building quality and age, rent differences by neighborhoods for comparable buildings exist. Since the capacity to support additional costs is related to the rental income that a project can generate, there is a case for varying housing and employment contributions for lower and higher rent development districts. Several cities including Denver, San Jose and Seattle use this approach, varying their affordable housing impact fees by development zone. On the other hand, property acquisition costs are impacted by expected rents and, therefore, likely are lower for lower rent neighborhoods, helping to offset feasibility challenges from lower rents. Varying fees by district or neighborhood would add administrative and policy complexity to linkage fees, particularly around determining appropriate district boundaries and fee variations that accurately reflect differences in projected financial returns.

Table 7-4. Office Rents by Boston Neighborhood, 2022 Second Quarter

Neighborhood	Average Office Asking Rent
Central Business District	$77.08
Back Bay	$74.25
Seaport	$71.30
Fenway/Kenmore	$85.00
North Station/Waterfront	$77.49
Midtown	$48.35
South Station	$55.20
Charlestown/East Boston	$49.91
Dorchester/South Boston	$48.69
Allston/Brigton/Longwood	$51.43

Impact on Linkage Fee Increases on Development Economics

An important consideration in establishing the housing and job linkage fees is its potential impact on attracting future development and tenants. An increase in linkage fees will increase development costs. Developers can offset this additional cost by either paying less for their development site, reducing other development costs or collecting higher rents from tenants. When developers are unable to offset the added costs, e.g., if they acquired their site before the linkage fee was increased or market conditions prevent them from increasing rents, the higher costs will reduce the return on investment for the developer and its investment partners. Since the impact of a new linkage fee on the economics of development is not certain and can vary under different

circumstances, this section analyzes three ways in which a linkage fee may affect Boston's competitive position for future development:

1. The cost of the linkage fee is passed on to tenants as higher rents. If the rent increase is large, then it may affect Boston's competitiveness in attracting businesses to new development projects.
2. The linkage fee cost is fully paid by developers without any rent increase or offsetting reduction in acquisition or other development costs. With higher development costs and the same rental income, developers will experience a reduction in their financial return for the project. Many developers have a return threshold that a project must meet to be deemed financially feasible and to be undertaken. If the added cost of the linkage fee significantly reduces the financial return, developers may forego undertaking a project in Boston and pursue opportunities in other communities. A developer's return on cost[58], a common financial return measure that developers use to assess project feasibility, is used for this analysis to assess the potential impact of linkage fee increase options for lab, office and hotel development projects.
3. The linkage fee cost is fully paid by the project's equity investors without the added cost either passed on as a rent increase, offset by lower acquisition and/or other development costs, or funded with an increase in debt financing. Developers need to raise equity financing to cover the portion of project costs that cannot be financed with debt. If the full cost of the linkage fee must be financed by equity[59], it will reduce the equity investors' return on investment since they must provide more capital but the project's income will not increase. If the cost of the linkage significantly reduces their investment return, then equity investors may choose not to invest in Boston projects. The inability to raise sufficient equity investment may prevent some developers from being able to undertake projects and reduce future development and investment in Boston.

Potential Impact on Rents

Table 7.5 shows the dollar and percentage impact on Boston lab and office rents for linkage fee increases ranging from $5 to the maximum warranted increase of $70.13[60]. The maximum fee, when fully passed on to tenants, would increase annual rent by $7.01 per SF—a 6.5% to 8.8% increase depending on property type and location. Potential rent increases are modest at $1 and 1.3% or less under a $5 or $10 linkage fee increase and slightly higher at $2 or up to 2.5% with a $20 increase. With the exception of the maximum fee increase, these potential rent increases are small when compared to the large growth in lab rents during recent years and current rates of inflation.

[58] Return on cost is the ratio of a project's net income to its total development costs.

[59] This result is likely since without an increase in a project's rent and net cash flow, lenders are unlikely to increase the amount of debt they will provide.

[60] This is based on increasing the housing fee to $80.20 and the jobs fee to $5.32

Table 7-5. Impact of Linkage Fee Options on Boston Rents

Linkage Fee Level	Potential Impact on Annual Per Square Foot Rent*	Percent of Boston Class A Office Rent	Percent of Seaport Class A Lab Rent	Percent of Longwood/Fenway Class A Lab Rent
$5 per square foot	$0.50	0.6%	0.5%	0.5%
$10 per square foot	$1.00	1.3%	1.0%	0.9%
$20 per square foot	$2.00	2.5%	1.9%	1.9%
$70.13 per square foot	$7.01	8.8%	6.7%	6.5%
*Fee cost amortized over a 10 year lease				

Source: Karl F. Seidman Consulting Services

To assess the impact of these potential rent increases on Boston's competition for tenants, **Table 7-6** compares lab rents on Boston's two largest lab development areas with key competing locations: East and West Cambridge, the 128-West market area (which includes Waltham and Lexington) and Watertown. Boston's lab rents are higher than all the competing areas, and exceed East Cambridge, with which it has a lower differential of $17 to $20 dollars PSF. Since Boston provides a lower cost alternative to East Cambridge, it is important to maintain this rent differential. A linkage fee increase in the area of $20 or less, even if fully passed on to tenants, would allow Boston rents to remain close to $15 PSF below those in East Cambridge.

Table 7-6. Class A Lab Rents in Boston and Key Competing Market Areas

Location	Class A Lab Asking Rent	Differential from Seaport	Differential from Longwood/Fenway
Boston Seaport	$105		
Boston-Longwood/Fenway	$108		
East Cambridge	$125	$20	$17
West Cambridge	$95	-$10	-$13
128-MassPike	$85	-$20	-$23
Watertown	$100	-$5	-$8

Source: CRESA Greater Boston Life Science 2022 Market Insight Report & CBRE Boston Metro Lab Report 4Q21

Similar to the lab market, Boston Class A office rents exceed those in all competing markets except East Cambridge and Mid-Cambridge (see **Table 7-7**). Boston is a unique location with important competitive advantages including extensive public transportation options, rich amenities for employees and proximity to a wealth of business and professional services. These advantages make Boston less likely to compete with other locations based on price and less sensitive to increases in rent differentials, particularly for tenants seeking high quality Class A space found in new developments. Given Boston's competitive position, any rent increase passed on to tenants from linkage fee increases of $20 or less is unlikely to impact the city's competitiveness in attracting and retaining office tenants. The maximum linkage fee increase of $70.13, %, if fully passed on to tenants as a rent increase, would erase Boston's rental differential with Mid-Cambridge and increase its rent premium over West Cambridge by 35% and over the 128/Mass Pike area by 205, and thus has a greater potential to impact tenant location decisions.

Table 7-7. Class A Office Rents in Boston and Key Competing Market Areas

Location	Class A Office Asking Rent	Differential from Boston
Boston	$80	
East Cambridge	$106	$26
Mid-Cambridge	$85	$5
West Cambridge	$60	-$20
128 Mass Pike	$44	-$36

Source: JLL Boston Office Insight Q2 2022

Impact of Developer Returns

Tables 7-8 and Table 7-9 show the estimated impact of linkage fee increases, ranging from $5 to $70.13 on development costs and developer returns for lab and office development projects, respectively. This analysis is based on an average size project of 400,000 SF of gross floor area and under high- cost and low-cost development scenarios. Based on interviews with ten developers, most return- on-cost investment thresholds are in the 6 to 7% range.

Under the maximum $70.13 fee increase, development costs increase by $21.039 million. This added cost reduces the return on cost for the lab project from 6.39% to 6.16%--a decline of 23 basis points[61] for the high cost scenario and from 7.43% to 7.14% (a 31 basis point decline) for the low cost scenario. This level of increase is unlikely to prevent lab projects at the lower development cost level from going forward but could make some projects with high development costs of $1400 PSF infeasible, since they are currently at the low end of return thresholds without a fee increase. For office developments, only projects at $1000 PSF meet developers' return thresholds and are feasible. A $70.13 fee increase would reduce the return on cost for this project by 32 basis points from 6.48% to 6.16%, potentially making some projects infeasible.

Fee increases in the $5 to $20 range have modest impacts on developer returns, reducing them between 2 and 10 basis points. This level of change in developer returns is unlikely to make a project infeasible and prevent its development—a developer willing to undertake a project with a 6.4% or 7.5% return is likely to still view the project as viable at a 6.3% or 7.4% return.

[61] A basis point is 1/100th of a percentage point.

Table 7-8. Estimated Impact of Linkage Fee Increase Options on Lab Development Costs and Developer Returns

Lab Development at $1400 PSF	No Fee Increase	$5 Fee Increase	$10 Fee Increase	$20 Fee Increase	$70.13 Fee Increase

Source: Karl F. Seidman Consulting Services

Table 7-10 shows the estimated impact of linkage fee increases from $5 to $70.13 on development costs and developer returns for a hotel development under average occupancy and room rates and operating costs in the current market. This analysis is based on an average size hotel project with 200,000 SF of gross floor area with an occupancy rate, room rental rate and operating cost under current market conditions. It is for a hotel without meeting, conference and catering facilities and revenue. In the current market environment, this type of hotel project is not viable, as the net income provides a return on cost below 1% and is too low to cover debt service costs and attract investor equity. Occupancy rates and room rates will need to increase considerably for most hotel projects to be financially feasible. In this situation, market conditions, not linkage fees, are the critical barrier to new hotel development. Nonetheless, the added development costs under all the fee increase scenarios reduces the projected return on cost, although the impact is small. Returns

drop from 0.919% with no fee increase to 0.917% (.2 basis points) with a $5 increase and to 0.888% (3.1 basis points) under a $70.13 increase.

Table 7-10. Estimated Impact of Linkage Fee Increase Options on Hotel Development Costs and Developer Returns

Hotel Development at 1000/SF	No Fee Increase	$5 Fee Increase	$10 Fee Increase	$20 Fee Increase	$70.13 Fee Increase
TDC	$200,000,000	$200,500,000	$201,000,000	$202,000,000	$207,013,000

Impact on Investor Returns

Table 7-11 and Table 7-12 summarize the potential impact of linkage fee options on the financial returns for equity investors for the lab and office projects scenarios presented above that meet developer return thresholds. This analysis assumes that equity investors finance 35% of total development costs without the linkage fee and then finance 100% of the additional development costs due to the linkage fee increases, and that their required return is 20%. Developers reported a range of required returns for equity investors from 12% at the low end to 20% at the high end. The higher 20% return is used for the analysis since fee increases will have a larger impact for investors with the higher threshold—thus providing the scenario with the greatest impact on investor returns from a given fee increase.

The annual percentage return on equity is reduced due to the added investment capital needed to fund linkage fee costs. At the maximum fee increase of $70.13/SF, investment returns for lab projects decrease from 20% to 18.06% at the higher development cost level ($1400/SF) and to 17.77% for the lower cost scenario (17.77%). For office development at $1000/SF, investor returns drop from 20% to 17.39% with a $70.13 fee increase. These impacts are large enough to deter investment from some equity investors and make it more difficult for developers to raise needed capital to undertake projects. The impact is considerably less with lower fee increases between $5 and $20 options. For lab projects, the reductions in investor returns range from a low of 15 basis points to a high of 69 basis points. For office development, a $5 fee increase is estimated to reduce investor returns by 21 basis points, which grows to an 82 basis point increase with a $20 increase. Whether these impacts are large enough to deter equity investment in Boston projects will depend on how strictly investors stick to their return threshold and the availability of alternative investments that will meet the 20% return requirement. With linkage fee increases up to $20, investors would still be within 70 basis points of their investment target and earning over 19%.

Table 7-11. Estimated Impact of Linkage Fee Increase Options on Equity Investor Returns for Laboratory Projects

Lab Projet at $1400 PSF	No Fee Increase	$5 Fee Increase	$10 Fee Increase	$20 Fee Increase	$70.13 Fee Increase

Differential		**-0.21%**	**-0.42%**	**-0.82%**	**-2.61%**

When weighed across all three potential impacts, adopting a combined housing and jobs linkage fee between $10 and $20 is unlikely to make Boston an uncompetitive location either for new laboratory development or for attracting future tenants to new development projects. However, the weaker market conditions for office and hotel projects and the challenges to financial feasibility faced by these projects warrant a more cautious approach to fee increases for these development types.

VIII. Recommended Linkage Fee Policies

The analysis detailed in this report supports an increase in Boston's jobs and housing linkage fee rates. Projected new construction of 14.9 million square feet in Development Impact Projects over the next ten years is expected to generate almost 32,000 jobs. This employment growth will create demand for 4,003 new units of affordable housing and a need for expanded employment education and training services to secure access to these jobs for the city's low-income and moderate-income workers. An estimated financing gap of $895 million will exist to reach the $2.12 billion in total development costs necessary to build an additional 4,033 housing units. For workforce development services, a funding gap of $47.3 million to $60.4 million is needed to ensure resident access to 50% of the entry-level and middle-skill jobs generated by this development. The maximum warranted housing and jobs exactions to fill these financing gaps are $80.20 per square foot and $5.62 per square foot, respectively, under Boston's current linkage polices with a 100,000 square foot exemption. Several long-standing linkage policies and administrative practices also would benefit from updating to better reflect current market conditions and simplify processes.

The following recommendations advance two goals: (1) simplifying linkage fee policies and administration to generate linkage revenue more quickly, and bring Boston's policies more in line with other cities; and (2) addressing the need for increased linkage revenue to mitigate the impacts of future development while ensuring that Boston remains a competitive location for continued investment and economic development.

Administrative and Policy Changes

The following changes are recommended to simplify, update and improve Boston's linkage policies:

- **Change the payment schedule to a single payment at certificate of occupancy**. This will simplify fee collection and administration and will bring Boston's payment schedule in line with Cambridge. In addition to shortening and simplifying fee payment, it shifts the initial payment for all projects to when projects are completed and beginning to generate revenue, reducing their need to secure more costly pre-development financing for linkage fees. The shorter payment period is unlikely to impact project financial feasibility since many projects already reserve or escrow funds for the multi-year linkage payment upfront and the shorter payment period has a very small impact on developer returns, in the range of .7 to 2.5 basis points.
- **Eliminate the different fee payment schedule for projects in the Downtown District.** This change is aligned with the prior policy recommendation and eliminates an outdated distinction between a small Downtown District (that primarily corresponds to the financial district) and other development areas. The existing policy dates to when Boston's financial district was the city's strongest and highest rent office location and thus deemed able to pay linkage fees at a faster schedule. However, Boston now has several active non-residential development districts with rents comparable to the financial district.

- **Eliminate the 100,000 SF exemption**. Removing the exemption serves to better align linkage fee payments with a project's development impact since all of the development space in a project generates the housing and employment impacts that linkage fees are designed to mitigate.

Housing and Job Fee Recommendations

In setting new linkage fees, Boston should differentiate between life science lab development and other projects. Lab projects achieve higher returns and financial returns than other uses and therefore can afford to make a larger contribution to mitigating impacts. Since the recommended fees are well below the maximum warranted fees, the higher proposed fee for lab projects will still meet the legal standard of proportionality, in which fees must be proportional to what is needed to mitigate impacts. The proposed fees are based on doubling the total linkage fee rate for lab projects and a lesser 50% increase for projects with other primary uses, including office, hotel, retail and institutional use. Based on these considerations, the following linkage fee rates are recommended:

- **A new jobs linkage fee of $3.62**, which is an increase of $1.23. This is the fee level necessary to generate the funding at the mid-point of the estimated funding gap to advance 50% resident employment in entry and middle-skill jobs at new development projects, with elimination of the 100,000 SF exemption. If the exemption is not eliminated the comparable jobs fee level is $4.75
- **A new housing linkage fee of $26.78 for development projects with a primary lab use,** an increase of $13.78 which will double the total linkage fee from $15.39 to $30.78 with elimination of the 100,000 SF exemption. If the exemption is not eliminated the comparable housing fee level is $35.66.
- **A new housing linkage fee of $19.09 for development projects with a primary** hotel, office, retail or institutional use, an increase of $6.09, which will increase the total linkage fee to $23.09. If the exemption is not eliminated, the comparable housing fee level is $25.41.

A financial analysis of the impact of the proposed fee increases indicate that they are likely to have a modest impact on developer and equity investor returns:

- For lab development projects, a developer's return on cost would be lowered from 6.39% to 6.32% for a project with development costs of $1,400 PSF and from 7.45% to 7.36% for a building with development costs of $1,200 PSF. Equity investors would see an estimated decrease in their investment return from 20% to 19.39% and to 19.29% % for lab projects with development costs of 1,400 PSF and $1,200 PSF, respectively.
- For office development projects at $1,000 PSF, a developer's return on cost would be lowered from 6.48% to 6.43%. Equity investors would see an estimated decrease in their investment return from 20% to 19.57%.

The above recommendations and analyses were formulated for linkage fees alone. In setting the final fee rates, the City should consider additional fees or exactions that may be implemented and their combined impact on the economics of development and Boston's competitive position.

Boston's Life Science Workforce Development System

The research for this report highlighted that Boston will experience substantial growth in life science industry employment over the next decade but has an underdeveloped system to connect and train Boston workers for these jobs. Boston is working to create a consortium that will bring together employers, education and training providers, and workforce and support organizations to strengthen the training system and improve access to and pathways for jobs in life science and other STEM industries. Establishing this consortium and working with it to expand the capacity of the life science workforce development system to create a pipeline of low- and moderate-income Boston residents to gain jobs within this fast growing industry needs to be a city priority. It is critical to ensure that new funds raised through the jobs linkage fee can be effectively deployed to connect Boston workers to this increasingly important source of employment and income.

Appendix A: Definitions of Uses Included in Development Impact Project Definition[62]

Most recent state legislation (2020) states that "'exaction' uses (include) (1) office; (2) retail business or service; (3) institutional or educational; (4) hotel or motel, but not including an apartment hotel or lodging house; or (5) other uses as determined by the zoning commission.

Following are exaction uses per the Article 80 ordinance.

	Uses	Use Item Numbers
(a)	Office	39, 39A, 40, 41, 42
(b)	Retail Business;	30, 31, 32, 34, 34A, 35, 36,
	Service; Public	36A, 37, 37A, 38, 38A, 43, 44,
	Service Uses	45, 46, 47, 48, 49, 60, 60A, 61
(c)	Institutional;	16, 16A, 18, 19, 20, 20A, 21,
	Educational	22, 22A, 23, 24, 29
(d)	Hotel; Motel	15 (excluding apartment hotel)

Office

39- Office of accountant, architect, attorney, dentist, physician, or other professional person, not accessory to a main use
39A- Clinic not accessory to a main use
40- Real estate, insurance or other agency office
41- Office building, post office, bank (other than drive-in bank) or similar establishment
42- Office or display or sales space of a wholesale, jobbing or distributing house

Retail

30- Private club (including quarters of fraternal organizations) operated for members only
31- Public service pumping station; public service sub-station, automatic telephone exchange; telecommunications data distribution center; outdoor payphone
32- Telephone exchange (other than automatic)
34- Store primarily serving the local retail business needs of the residents of the neighborhood, but not constituting a business as described in Use Item No. 34A, including, but not limited to, store retailing one or more of the following: food, baked goods, groceries, packaged alcoholic beverages, drugs, tobacco products, clothing, dry goods, books, flowers, paint, hardware and minor household appliances

[62] Numbers refer to use items in Article 8 of Boston's Zoning Code

34A- A shop for the barter, rental or sale of printed matter, pictures or motion picture film, if such shop is not open to the public generally but only to one or more classes of the public excluding any minor by reason of age; or if such shop keeps a part of such stock segregated as available to only one or more classes of the public excluding any minor by reason of age; or shop for the barter, rental or sale of printed matter, pictures or motion picture film bearing a legend restricting it to adults only or to one or more classes of the public excluding any minor by reason of age
35- Department store, furniture store, general merchandise mart, or other store serving the general retail business needs of a major part of the city, including accessory storage
36- Indoor sale of motor vehicles

Service; Public

36A- Sale over the counter, not wholly incidental to a use listed under Use Item No. 34 or Use Item No. 37 or Use Item No. 50, of on-premises prepared food or drink for off-premises consumption or for on-premises consumption if, as so sold, such food or drink is ready for take-out

Eating Places and Entertainment

37- Lunch room, restaurant, cafeteria or other place for the service or sale of food or drink for on-premises consumption, provided that there is no dancing nor entertainment other than phonograph, radio and television, and that neither food nor drink is served to, or consumed by, persons while seated in motor vehicles
37A- The maintenance and operation of any amusement game machine in a private club, dormitory, fraternity or sorority house, or similar noncommercial establishment (other than as an accessory use described in Use Item No. 86a)
38- Place for sale and consumption of food and beverages (other than drive-in restaurant) providing dancing or entertainment or both; theater (including motion picture theater but not drive-in theater); concert hall; dance hall; skating rink; bowling alley; pool room; billiard parlor; other social, recreational or sports center conducted for profit; or any commercial establishment maintaining and operating any amusement game machine (other than as an accessory use described in Use Item No. 86b or 86c); provided that such establishment is customarily open to the public at large and does not exclude any minor by reason of age as a prevailing practice
38A- Any of the uses enumerated in Use Items 38 and 52 if such establishment is customarily not open to the public generally but only to one or more classes of the public excluding any minor by reason of age
43- Barber shop; beauty shop; shoe repair shop; self-service laundry; pick-up and delivery station of laundry or dry-cleaner; or similar use
44-Tailor shop; hand laundry; dry- cleaning shop

Service Uses

45- Laundry plant; dry-cleaning plant; rug cleaning plant
46-Caterer's establishment; photographer's studio; printing plant; taxidermist's shop; upholsterer's shop; carpenter's shop; electrician's shop; plumber's shop; radio and television repair shop

47- Funeral home; undertaker's establishment; mortuary
48- Research laboratory; radio or television studio
49- Animal hospital or clinic; kennel; pound
60- Repair garage; gasoline service station; car wash
60A, Sale and installation within a building of batteries, seat covers, tires and similar automotive parts and accessories
61-Rental agency, storing, servicing, and/or washing rental motor vehicles and trailers

Institutional

16- Elementary or secondary school attendance at which satisfies the requirements of the compulsory education laws of the Commonwealth of Massachusetts
16A-College or university granting degrees by authority of the Commonwealth of Massachusetts
18- Trade, professional or other school
19- Machine shop or other noisy activity accessory to a school, college or university
20- Library or museum, not conducted for profit and **not accessory** to a use listed under Use Item No. 16A, 18, 22, 23, or 24
20A-Library or museum not conducted for profit, and **accessory to** a use listed under Use Item No. 16A, 18, 22, 23, or 24, whether or not in the same lot
21-Place of worship; monastery; convent; parish house

Educational

22-Hospital or sanatorium not providing custodial care for drug addicts, alcoholics or mentally ill or mentally deficient persons; clinic or professional offices accessory to a hospital or sanatorium whether or not on the same lot
22A- Convalescent, nursing or rest home; home for the aged; orphanage; or similar institution not for correctional purposes
23-Any use listed under Use Item No. 22 or 22A providing custodial care for drug addicts, alcoholics or mentally ill or mentally deficient persons
24-Scientific research and teaching laboratories not conducted for profit and accessory to a use listed under Use Item No. 16, 16A, 18, 22, or 23, whether or not on the same lot, provided that all resulting cinders, dust, flashing, fumes, gases, odors, refuse matter, smoke and vapor are effectively confined to the lot or so disposed of as not to be a nuisance or hazard to health or safety; and provided also that no noise or vibration is perceptible without instruments more than fifty feet from the lot or any part of the lot
29-Adult education center building; community center building; settlement house

Hotel; Motel

15-Hotel; motel; apartment hotel

Appendix A: Definitions of Economic Sectors 82

Executive Summary

Somerville established a Housing linkage policy in 1990, codified under Section 15 of the Somerville Zoning Ordinance. Under the city linkage policy, as amended in 2013, non-residential development projects exceeding 30,000 gross square feet pay a linkage fee of $5.15 per square foot on the amount of space over 30,000 square feet. In August 2016, the State Legislature and Governor approved a home rule petition to allow Somerville to establish a jobs linkage fee to fund education and job training programs to prepare Somerville residents to secure new jobs created at new developments in the city. This report provides an updated nexus study to quantify the impact of future non-residential development on the demand for affordable housing and need for employment and training services in Somerville and the linkage fee rates to mitigate these impacts. It also recommends linkage fee rates, policies and administrative practices.

Housing Demand. Based on projected new development of 2.21 million square feet over the next ten years and the likely mix of tenant businesses, 8,899 new jobs are estimated to be generated in Somerville by this development. Information on the occupations and earnings of these new employees was combined with data on the distribution of households by size and number of workers and the likely percentage of these new workers who will move to the city to estimate their impact on the demand for new housing units by income level. This analysis projected the need for 591 new housing units over the next ten years, including 133 very low-income units, 182 low-income units and 276 moderate-income units[1].

Development Costs and Financing Gap. A separate analysis of the development costs and financing gap was conducted based on 110 ownership units and 482 rental units[2]. Development costs were estimated from recent comparable affordable housing projects built in Somerville. For rental projects, the financing gap was calculated as the difference between total development costs and the amount of debt and equity that could be supported by the housing cash flow using affordable rents at 30% of household income and comparable operating costs. For ownership projects, the financing gap was the difference between total development costs and the affordable purchase price based on home mortgage payments, insurance and property taxes at 30% of household income and a 5% down payment. The results of this analysis are:

- Total development costs of $248.03 million; and total financing gap of $162.48 million with a gap of $56.95 million for the very low-income units, $52.39 million for the low-income units and $52.14 million for the moderate-income units; and

- The linkage fee rate on non-residential development projects needed to provide the full $162.48 million financing gap is $86.43 per square foot.

[1] A very low-income unit is for a household with income less than 50% of the Boston region's area median income, a low-income unit is for a household between 50 and 80%, and a moderate-income unit is for a household between 81% and 110% of area median income.

[2] This mix is based on all of the very low-income units developed as rental units, 90% of low- income units built as rental and 10% ownership, and moderate-income units divided into 33% ownership housing and 67% rental housing units. Total units were increased by one unit to 592 due to the rounding of fractional units that occurred from the distribution of housing demand among rental and ownership units and households of different sizes.

Since affordable housing development leverages other federal and state funding, linkage fees only need to address a portion of the financing gap. In recent years, Somerville's Affordable Housing Trust fund has supplied 22.8% of the financing gap for affordable housing projects, while all city funds supplied 31.7% of the gap. The housing linkage fee levels that would fill these proportions of the financing gap are $19.73 and $27.36 per square foot, respectively.

Training Needs and the Financing Gap. Somerville's non-residential development over the next ten years is expected to create 4,434 jobs in low-skill and middle-skill occupations that are the most accessible to low-income and moderate-income workers. Using the 30% resident employment goal that Somerville applied to Assembly Square development projects, the jobs linkage fee would support training for Somerville residents to fill 1,330 of these jobs, at an estimated cost of $6.055 million. An additional $1.62 to $1.89 million is needed to provide English language, adult basic education services, and career advancement services so that Somerville residents have the educational level and competencies required for training programs and can advance from entry-level to better paying jobs once employed. After adjusting for training provided by the vocational education system and other programs, the net financing gap to be addressed by the jobs linkage fee is $4.58 to $5.05 million. A maximum jobs linkage rate of $2.44 to 2.69 per square foot is needed to fund this educational and job training funding gap.

Impact on Competitiveness. An important consideration in adjusting Somerville's linkage fees is the rate's potential impact on attracting new development and tenants. This is particularly important since the maximum combined rate of $89.12 per square foot is seventeen times the current rate of $5.15, more than six times the rate in Cambridge ($13.50), and almost nine times Boston $10.01 linkage fees. If the maximum rate is fully passed on to tenants as higher rents, it represents a 21% increase in Somerville's Class A office rent. This would leave rent differentials of almost $10 with Boston's Financial District and over $26 with Kendall Square, but erase the city's advantage over the Alewife section of Cambridge and make Somerville less competitive with suburban locations by more than doubling its rent premium over Waltham and inner suburbs. If developers cannot pass on the fee increase to their commercial tenants, they will need to increase their required equity investment and reduce their rate of return. Based on the maximum exaction increase of $83.97 per square foot being fully paid with developer equity, the annual return on investment is estimated to decrease by 41% for a 200,000 square feet building; this impact on returns is likely to reduce investment in Somerville's office development.

For two alternative scenarios,in which combined linkage fees are set at $22.17 (the housing linkage fee at $19.73 and the jobs linkage fee at $3.44) and $11.00 (the housing linkage fee at $8.50 and the jobs linkage fee at $2.50) and the increase in other city exactions ($7.74) are also considered, the impact on rents and returns is greatly reduced. Rents would increase by 6.1% and 3.4%, respectively, if the full fee increase is passed on to tenants. Investment returns would drop by .61 to 1.36 percentage points, respectively, if the full fee cost was paid by increases in developer equity.

Recommendations. Since adoption of the maximum determined contribution rate is likely to impair Somerville's regional competitiveness, and because its parity in linkage fees with Boston

and Cambridge is important as the city seeks to expand its role as an employment center, it is recommended that Somerville establish combined linkage fees in the range of $10.00 to $12.50. At this fee level, the housing linkage fee should be between $8.00 and $10.00 per square foot and the jobs linkage fee between $2.00 and $2.50. The recommended policy for deploying jobs linkage fees is a hybrid approach in which fees collected from a project would first be reserved for—and efforts made to create job training and education services linked to—employers and jobs at the project. When "project-linked" job training is not feasible, the fees would go into the Municipal Job Creation and Retention Trust's general fund and used for citywide programs selected through a competitive request for proposal process.

Recommended Housing and Jobs Linkage Fee Rates

Fee Type	Recommended Linkage Fee Rate
Jobs Fee Rate	$2.00 to $2.50
Housing Fee Rate	$8.00 to $10.00
Combined Rate	$10.00 to $12.50

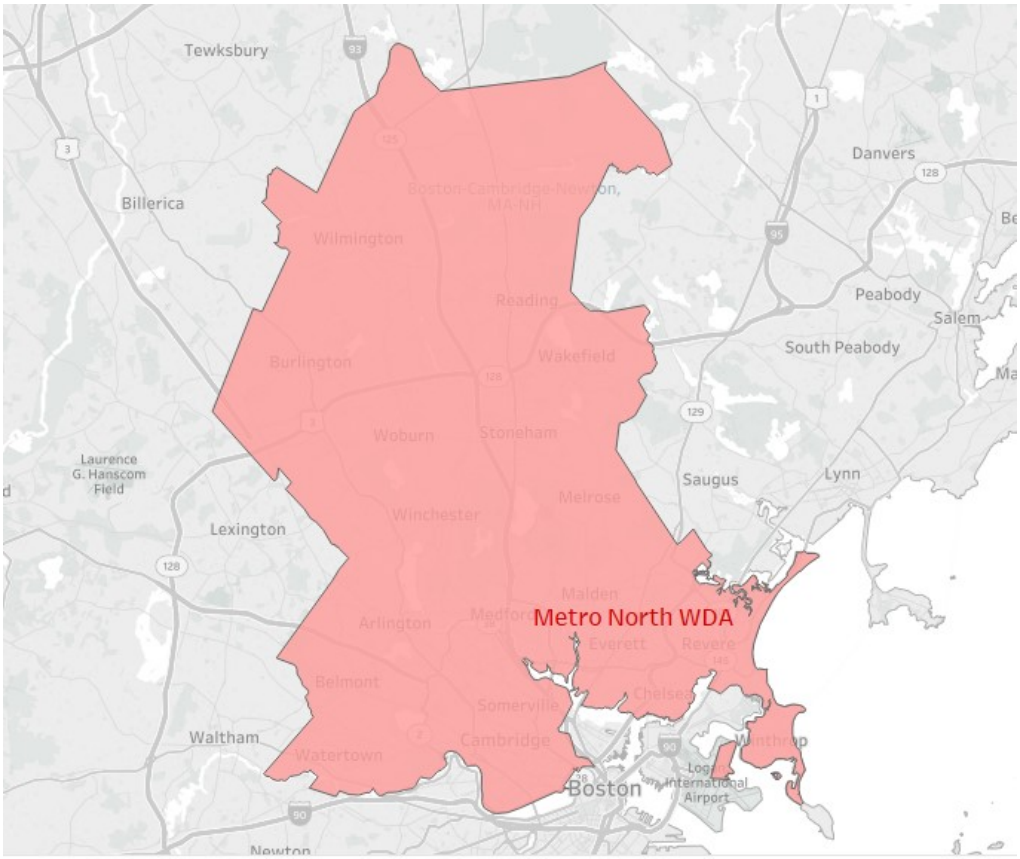
Source: Karl F. Seidman Consulting Services

Several changes to Somerville's current linkage fee policies are recommended to simplify policies and their administration, and accelerate fee collection:

- Shorten the housing linkage fee payment schedule to three payments made at the building Certificate of Occupancy date; one year after C of O and two years after C of O;
- Use of a single payment at the building permit date for the jobs linkage fee to provide the upfront payment needed to fund job training in advance of building occupancy and employment;
- Consolidate the payment schedule for each annual payment after C of O to January 15 (for initial C of O between January 1 and June 30) and July 15 (for initial C of O between July 1 and December 31) to simplify book keeping and administration of fee collection;
- Continue the current policy of reevaluating and updating linkage fees based on a nexus analysis every five years; and
- Establish an annual inflation rate adjustment based on the Boston CPI or alternative index.

Introduction

The City of Somerville established a Housing linkage policy in 1990, codified under Section 15 of the Somerville Zoning Ordinance. Under the city linkage policy, as amended in 2013, non-residential development projects exceeding 30,000 gross square feet pay a linkage fee of $5.15 per square foot on the amount of space exceeding 30,000 square feet. Developers can pay the linkage fee either in one installment or over five years through equal annual payments. Linkage fees are paid to the Somerville Affordable Housing Trust Fund, which allocates the funds to supply housing for low-income and moderate-income households in Somerville.



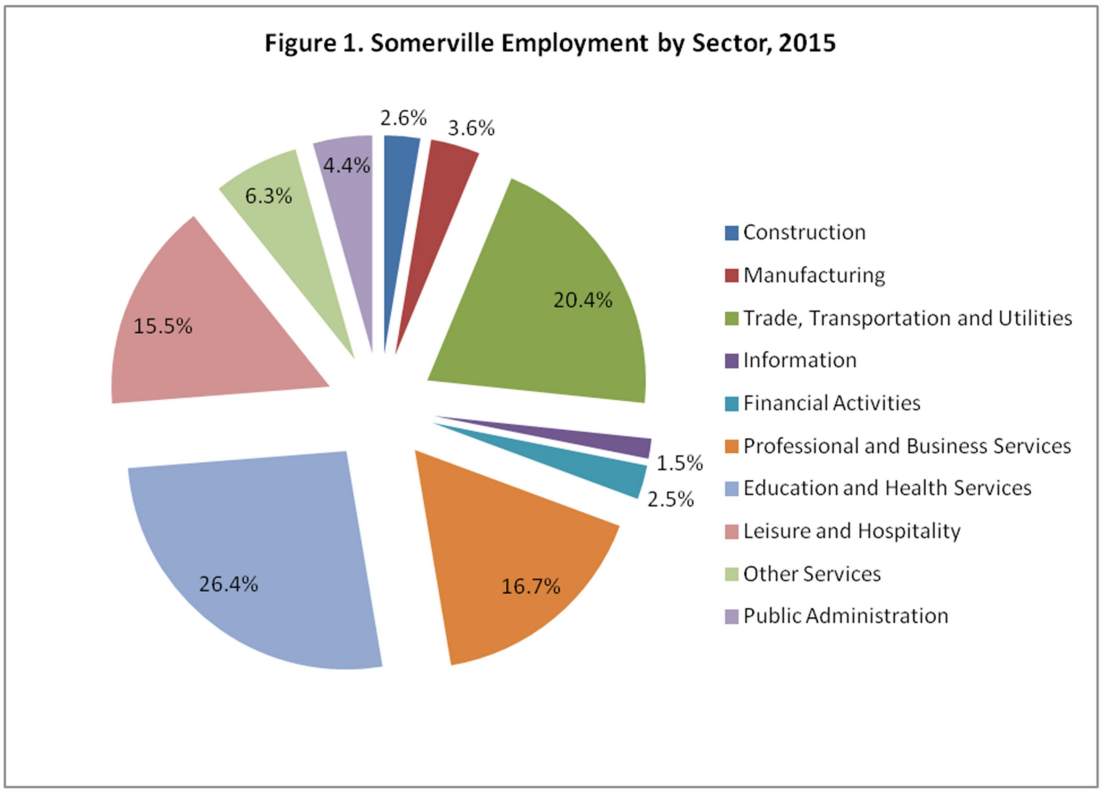
Based on the recommendations from a 2013 study, Somerville passed a Home Rule Petition submitted to the Massachusetts legislature to allow Somerville to establish a jobs linkage fee to be levied on non-residential development projects. The jobs linkage fee would fund education and job training programs to prepare Somerville residents to secure new jobs created at new commercial developments in the city. In August of 2016, the State Legislature and Governor approved the Home Rule Petition, giving the City the authority to create the Somerville Municipal Job Creation and Retention Trust and fund it through a linkage fee.

The City of Somerville selected Karl F. Seidman Consulting Services and ConsultEcon, Inc. to complete a new nexus study to update and review policies for its current housing linkage fee and recommend the appropriate rate for the newly authorized job linkage fee along with policies to implement this fee. Since the prior 2013 Nexus study, important changes have occurred in Somerville's economy and real estate market that impact the type of new development, the associated jobs created in Somerville, and their income levels and workforce needs. Housing market conditions also have changed, with increased housing development costs, rents and prices and changes to the financing environment for affordable housing development. These housing market conditions affect the funding needed to build affordable housing to address the impacts of new development and the associated housing linkage fees. This report details the analysis undertaken to assess the impact of economic and market conditions on Somerville's future development and associated employment training and affordable housing needs to ensure that Somerville sets appropriate linkage fee levels and effectively implements the new jobs linkage fee.

Somerville Economic and Development Trends and Future Development

Somerville's future development and associated impacts will be shaped by the nature of economic growth in the city and region. This section summarizes the city's economic composition and recent growth trends, and how these trends have translated into new real estate development and leasing activity. Since Somerville's development is influenced by surrounding cities, this analysis includes trends for the Metro North Workforce Development Area[3] (WDA), an area in the Boston region used for workforce development planning that includes Somerville, shown in Map 1. Similarly, real estate market conditions and trends in surrounding cities are also considered.

Map 1. Metro North Workforce Development Area



Source: http://lmi2.detma.org/lmi/map_box.asp

[3] This area includes the following 20 communities**:** Arlington, Belmont, Burlington, Cambridge, Chelsea, Everett**,** Malden, Medford, Melrose, North Reading, Reading, Revere, Somerville, Stoneham, Wakefield, Watertown, Wilmington, Winchester, Winthrop, and Woburn.

Existing Employment Base

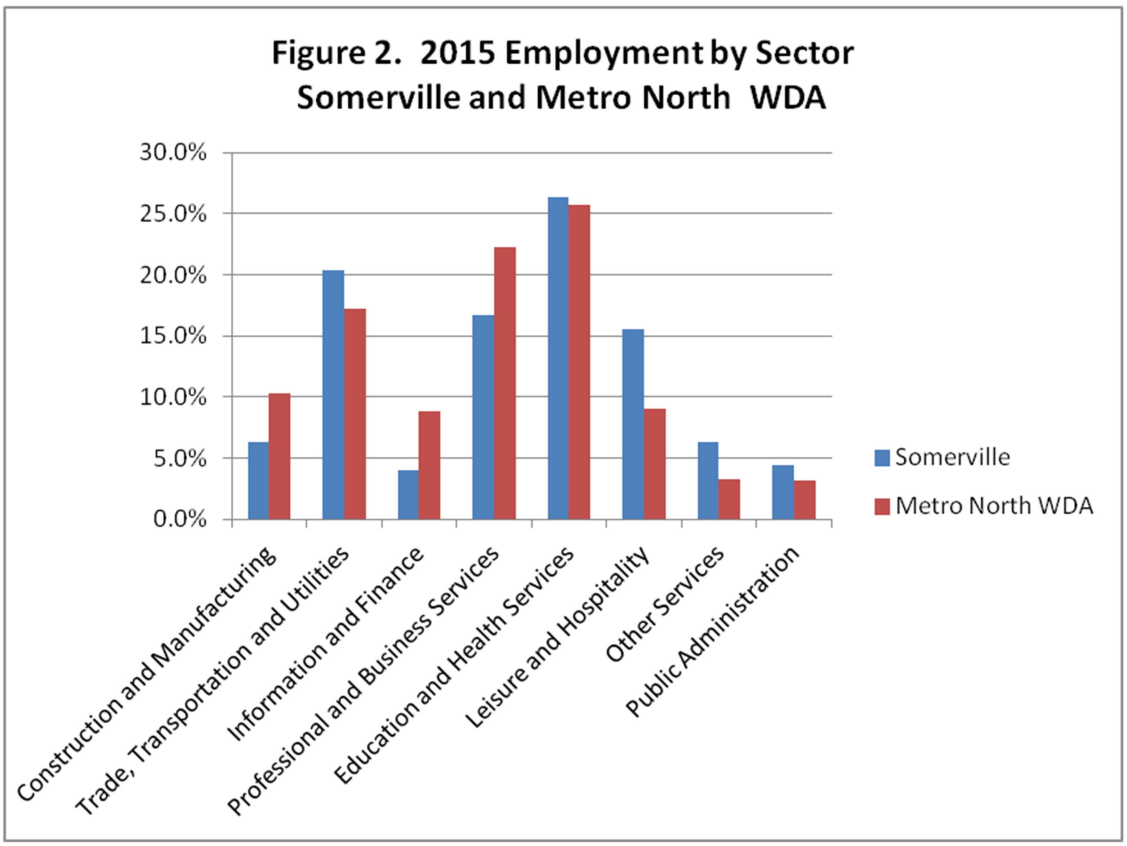
As shown in Figure 1, Somerville's employment[4] located within the city in 2015 (the last full year for which city employment data is available) was concentrated in four sectors[5]: Education and Health Services, Trade Transportation and Utilities, Professional and Business Services and Leisure and Hospitality, which together provided 79% of the city's 26,188 jobs. Other sectors are much smaller, contributing from 1.5% (Information) to 6.3% (Other Services) of total jobs.

Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

Employment is further concentrated within these sectors (see Table 1), reflecting Somerville's emergence as a center for retail and dining with sizable health care, education, and service activities. Retail stores employed 3,630 workers in 2015 and accounted for 68% of the Trade, Transportation and Utilities sector and 14% of all Somerville jobs. Restaurants and drinking

[4] Employment in this report refers to jobs located within Somerville or other indicated areas. Employment data is from the ES-202 data series (also known as the Quarterly Census of Employment and Wagers), which covers all jobs subject to unemployment insurance system. Part-time and full-time employment is included for all people working one or more days in each of 13 weeks during a calendar year, or are paid wages of $1,500 or more in any calendar quarter. Not included are members of the armed forces, self-employed workers, proprietors, domestic workers, unpaid family workers, and railroad workers covered by the railroad unemployment insurance system. Labor force or work force refers to non-institutionalized civilian residents 16 or older within the area who are employed or unemployed and looking for work.

[5] See Appendix A for the definitions of economic sectors. Several similar sectors were combined to simplify the presentation of data on the 19 non-agricultural sectors. These combinations are explained in Appendix A.



places were almost as large with 3,446 workers, which constituted 75% of the Leisure and Hospitality Sector and 11.6% of total city employment. Education and Health Services jobs were more evenly distributed across the five main industries, with Ambulatory Care and Hospitals the largest components at 2,489 and 1,791 jobs, respectively. Professional and Business Services include many specialized industries, most of which employ 116 to 330 people in Somerville. The major exception is Administrative and Support Services, which employed over 2,200 workers in 2015. Architecture, Engineering and Design Services and Computer Systems Design were also relatively large with 441 and 567 employees, respectively.

Table 1. Industry Mix for Somerville's Largest Sectors, 2015

Sector and Industry	2015 Payroll Jobs	Percent of Sector Total
Trade, Transportation and Utilities	5,333	
Wholesale Trade	445	8.3%
Retail Trade	3,630	68.1%
Transportation and Warehousing	1,078	20.2%
Utilities	180	3.4%
Education and Health Care	6.912	
Educational Services	1,317	19.0%
Ambulatory Health Care Services	2,489	36.0%
Hospitals	1,791	25.9%

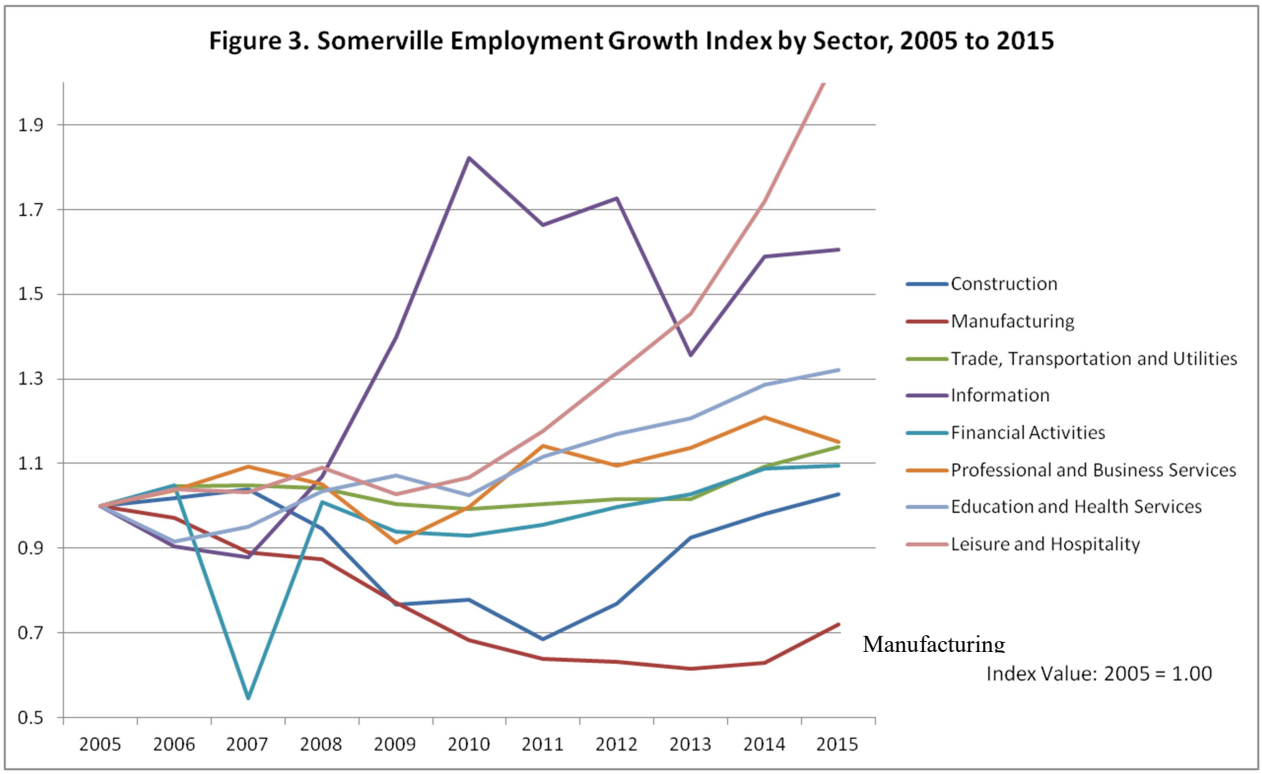
Accommodation	128	3.1%
Food Services and Drinking Places	3,446	84.9%

Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

When compared to the Metro North WDA, Somerville has a much larger share of employment in the Leisure and Hospitality sector and slightly higher concentrations in Trade, Transportation and Utilities and Education and Health Services. However the Metro North region has higher employment shares for Construction and Manufacturing, Information and Finance and Professional and Business Services.

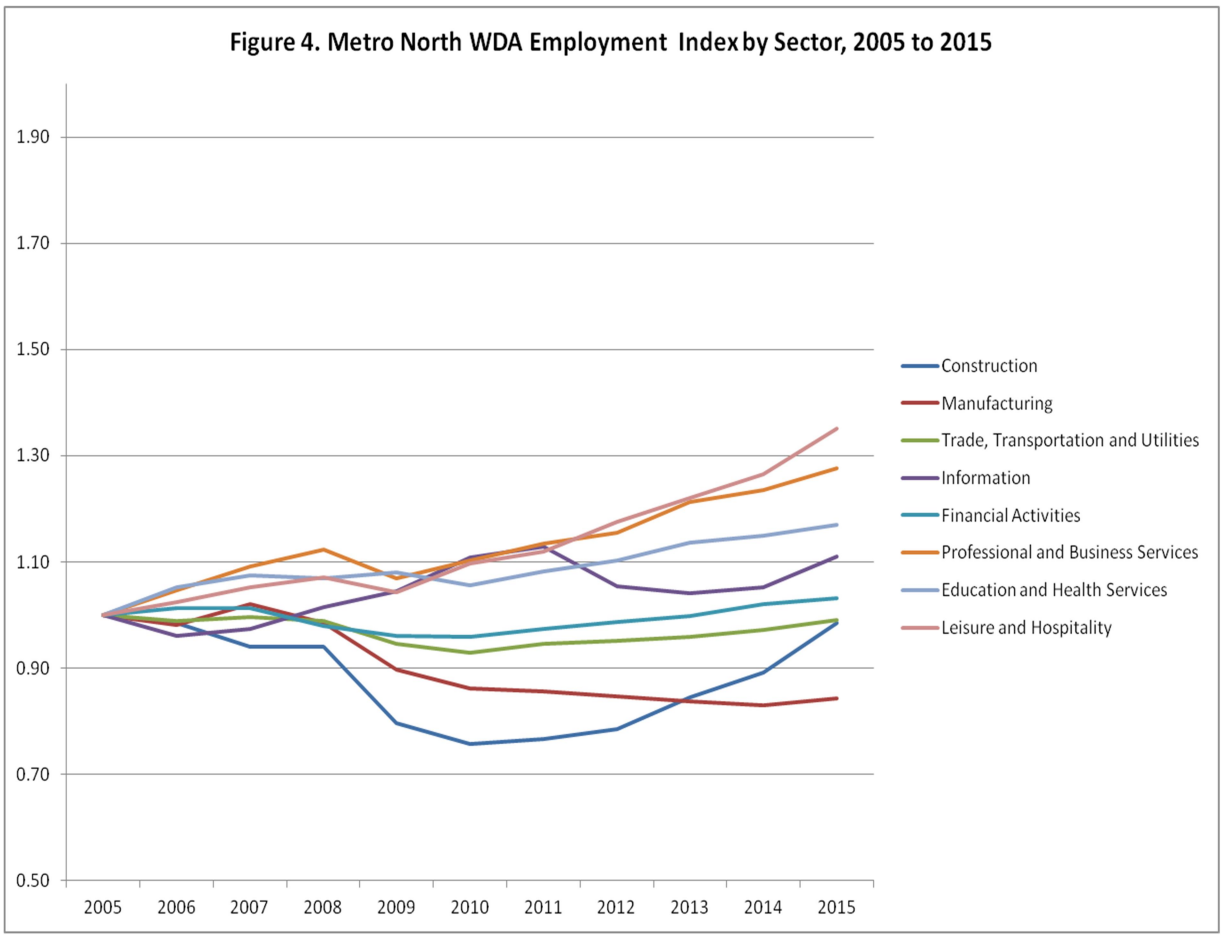


Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

Employment Trends and Growth Industries

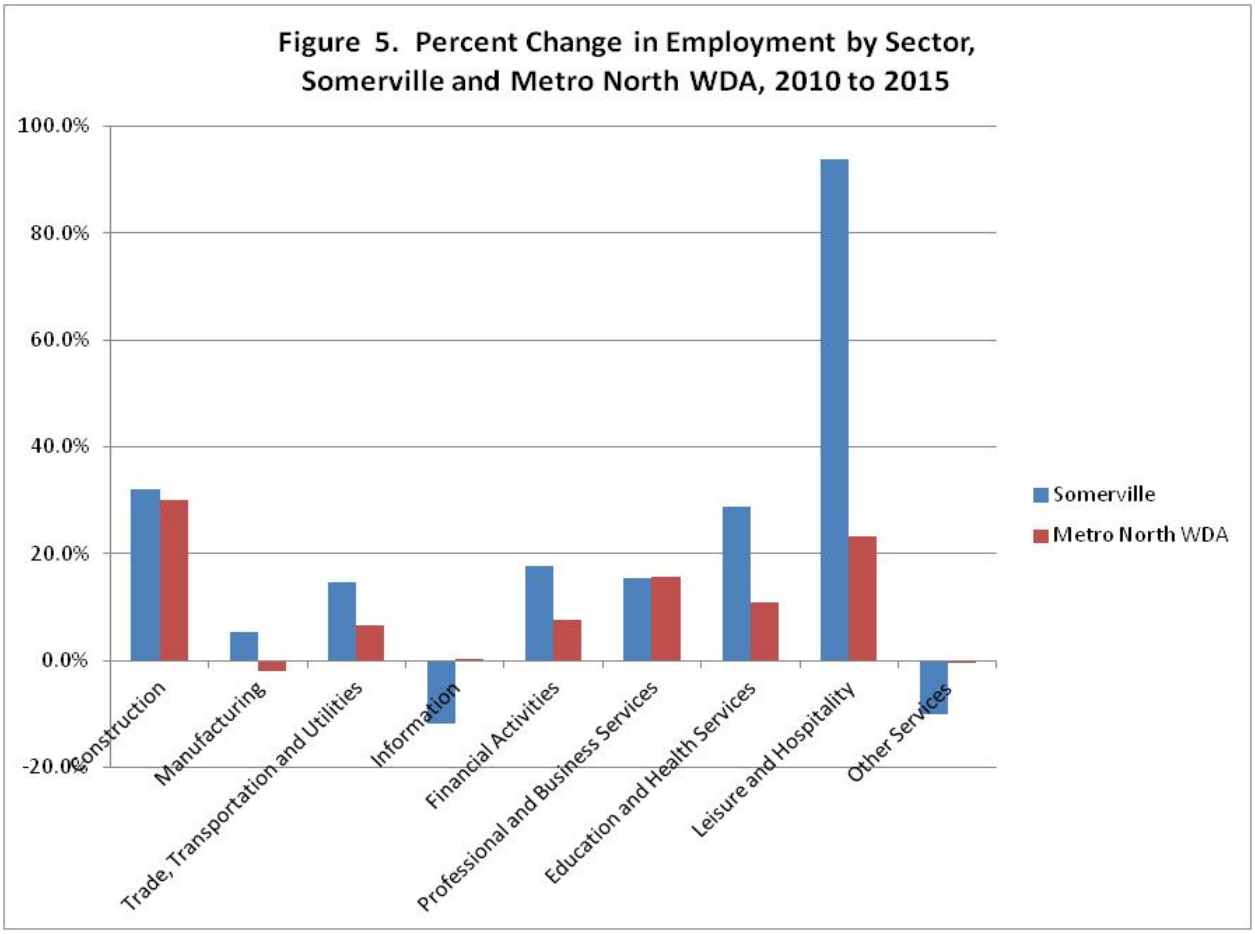
Somerville's economy had strong job growth from 2005 to 2015, significantly exceeding the growth rate for the Metro North WDA region, and adding employment across multiple sectors and industries. Somerville added 5,150 total jobs between 2005 and 2015, with payroll employment expanding from 21,038 to 26,188, a 24.5% increase. Between December 2007 and August 2009[6], during the great recession, Somerville had a net loss of 1,691 jobs but the city's economy has rebounded very well since 2010. Between 2010 and 2015, total payroll employment grew by 4,913 jobs, averaging almost 1,000 net new jobs per year—an average annual growth rate of 4.2%. In contrast, total payroll employment for the Metro North WDA grew 12.2% from 2005 to 2015, and during the post-recessionary period, the WDA region grew at one-half the rate of Somerville, or 2% average annual employment growth.

[6] The official end of the recession was June 2009 but the low point of Somerville's employment was August 2009.



Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

Somerville and the Metro North WDA's recent employment growth provide a good indicator for the likely sector and industry composition of future development. An employment index that tracks job growth relative to 2005 by major sector from 2005 to 2015 is presented for Somerville in Figure 3 and the Metro North WDA in Figure 4. In comparing trends for these areas, it is important to recognize that Somerville has a much smaller employment base that constitutes 6.4% of total jobs in the Metro North region.



Both areas had steady job growth for Leisure and Hospitality and Education and Health Services, with Somerville growing at a faster rate. This was especially notable for Leisure and Hospitality in which Somerville's employment doubled from 2005 to 2015 compared to 35% growth for the WDA. The Metro North WDA had stronger employment growth for Professional and Business Services, increasing by 28% over the period compared to a 15% increase in Somerville. Manufacturing declined in both areas, although more steeply in Somerville, and the city's construction employment was very cyclical dropping by close to 30% before rebounding in 2011.

Employment changes were more erratic for Somerville in several sectors, most notably Information and Professional and Business Services. This is not surprising since Somerville has a much smaller economic base that is 1/15 that of the Metro North region and thus any given shift in employment, such as the loss of a medium sized employer or major expansion or addition of a new firm, will have a much greater relative impact on the city.

Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

Growth patterns shifted during the post-recession period from 2010 to 2015, as shown in Figure 5. Somerville had higher percentage employment growth in most sectors with the differences most pronounced for Leisure and Hospitality and Education and Health Services. Growth rates were almost equal for Professional and Business Services, a marked improvement from 2005 to 2010 when Somerville was flat but the WDA grew by 10%.

Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

Since sector data combines patterns across many component industries, more detailed industry level data was examined to identify the industries with the largest job gains from 2005 to 2015. Table 2 presents absolute job growth from 2005 to 2015 for expanding Somerville industries that had the largest employment increases and added at least 100 jobs during this period. Fifteen industries meet this criterion and combined to add 5,244 jobs. Restaurants, Health Care and Retail were key sources of growth over this period. Restaurants and Other Eating Places accounted for one-third (33.8%) of these new jobs. Three health-related industries (Ambulatory Health Services[7], Hospitals, and Individual and Family Services) combined to generate 1,569 new jobs, or 30% of the growth, among the 15 fastest growing industries. Five retail store types together expanded to add 842 jobs. Technology-based industries lagged these other sectors but

[7] Offices and clinics for medical practitioners.

were still important sources of growth, with Computer Systems Design and Related Services generating 439 new jobs and Scientific Research and Development adding 100 jobs.

Table 2. Somerville Industries with Largest Job Growth, 2005 to 2015[8]

Industry	Job Growth	Percent of Total for 15 Industries
Restaurants and Other Eating Places	1,773	33.8%
Ambulatory Health Care Services	1,038	19.8%
Computer Systems Design	439	8.4%
Individual and Family Services	362	6.9%
Clothing and Clothing Accessories Stores	312	5.9%
Hospitals	169	3.2%
Office Supply, Stationery & Gift Stores	155	3.0%
Dry Cleaning and Laundry	152	2.9%
Educational Services	150	2.9%
Food and Beverage Stores	144	2.7%
General Merchandise Stores	126	2.4%
Offices of Real Estate Agents and Brokers	119	2.3%
Furniture and Home Furnishings Stores	105	2.0%
Amusement, Gambling and Recreation	100	1.9%
Scientific Research and Development	100	1.9%
Total	5,244	100.0%

Source: Massachusetts Department of Labor and Workforce Development ES-202 Data Series

There was considerable overlap in the industries driving job growth for the Metro North region. Sixteen industries added at least 1,000 jobs in Metro North from 2005 to 2015. Eight of these were also on Somerville's list of the largest sources of new jobs, including Restaurants, Computer Systems Design, all three of the health care industries, Educational services and grocery stores. However, technology-based industries were more significant job generators for Metro North than for Somerville, accounting for 32% of job growth among the top sixteen industries, compared to 10% for Somerville. On the other hand, restaurants, retail, and health care industries were less important sources of job growth for the region than for Somerville. Finally, the Metro North WDA benefited from growth in several industries that did not add many jobs in Somerville, including insurance, Other Professional and Technical Services, and Administrative and Support Services.

[8] These figures do not include the 4,500 new jobs at Partners Health Care's headquarters in Assembly Square which was occupied in the summer of 2016.

Table 3. Industries in the Metro North WDA Region with Largest Job Growth, 2005 to 2015

Industry	Job Growth	Percent of Total for 16 Industries
Computer Systems Design	8,119	14.6%
Restaurants and Other Eating Places	7,946	14.3%
Scientific Research and Development	6,103	11.0%
Employment Services	4,818	8.7%
Administrative and Support Services	4,679	8.4%
Ambulatory Health Care Services	4,235	7.6%
Individual and Family Services	4,167	7.5%
Grocery Stores	2,695	4.9%
Elementary and Secondary Schools	2,647	4.8%

Somerville Development Trends

Somerville has build-out capacity and plans to support new retail and commercial development. The SomerVision comprehensive plan calls for developing 10.5 million square feet of new development over the next 20 years to house 30,000 new jobs. The bulk of this new development is envisioned through utilizing buildable land in five targeted transformation areas: Assembly Square, Inner Belt, Brickbottom, Boynton Yards and Union Square. Assembly Square and Union Square/Boynton Yards account for the vast majority of the planned new development. Assembly Square is well under development as a commercial and employment center with two new fully leased office buildings and the Assembly Row retail and entertainment center. An additional 2,683,000 square feet of retail, office and hotel development is planned but not yet permitted for Assembly Square. The Union Square Neighborhood Plan calls for a major employment center in Union Square catalyzed, in part, by expansion of the MBTA Green Line. At full development, the plan includes 4.2 million square feet of new commercial development, including office (3,592,000 SF), retail (546,000 SF) and arts/creative economy space (90,000 SF). Substantial new commercial development in Union Square is expected to occur with completion of the Green Line expansion and therefore is several years away from permitting and construction.

Considerable non-residential development has taken place in Somerville in recent years, fueled by strong regional economic growth. Table 4 summarizes Somerville's non-residential development projects over 30,000 square feet (i.e., projects subject to current housing linkage

fees) completed from 2010 to 2016 along with projects under construction and those that are permitted but have not yet begun construction. Almost two million square feet of non-residential development has been built in Somerville over this period with another 573,000 square feet under construction and permitted.

Table 4. Somerville Development Projects
2010 to 2016 Development Completed, under Construction and Planned

Development Use	Completed	Under Construction	Permitted Preconstruction
Retail Square Feet	447,307	100,802	29,974
Office/Commercial Square Feet	1,016,346	78,534	17,652
Hotel Square Feet	0	112,000	0
Other Uses	425,886	38,311	195,229
Total	1,889,539	329,647	242,855

Market Demand and Expected Absorption

Housing demand and the need for job training will result from Somerville's success in attracting business growth within the Boston region. Based on interviews with developers and brokers, Somerville is competing for tenant businesses with Cambridge, parts of the Boston office market and nearby suburbs along I-95/Route 128. Thus, future commercial development in Somerville is linked to demand in these real estate markets. Historic absorption data for these market areas are an important indicator for the level of planned and permitted development that is likely to be built. Costar, a private database of commercial buildings and leasing activity, was the source of this information. Table 5 summarizes the supply and absorption of office space for Somerville and these competing markets. Two periods are used for space absorption: (1) the ten year period from 2007 through the first quarter of 2017; and (2) the more recent five-year period from 2012 to 2016. The latter period reflects recent trends and sustained growth without a recession. The increase in the total supply of space is reported just for the ten year period from 2007 to the present.

Table 5. Class A Office Market Real Estate Supply and Absorption, Somerville and Competing Markets

	Total Change in Supply, 2007-Present	Average Annual Change in Supply, 2012-Present	Supply, 2017	Vacant SF 2017	Vacant % 2017	Average Annual Net Absorption, 2007 to 2017	Average Annual Net Absorption, 2012 to 2016	2017 Average Base Rent

*Back Bay, Charlestown/East Boston, Financial District, Seaport, Source: Costar Database
Absorption figures for 2017 covers the first quarter only

Based on this data from Costar, the supply of office space in these five market areas grew by 11.6 million square feet since 2007. Somerville added just over 1 million square feet or 9% of the increase. Cambridge and the Boston submarkets accounted for 85% of the growth, adding 9.9 million square feet. Annual net absorption of new office space in this geography averaged 1.81 million square feet from 2007 to the present, as follows:

- Somerville accounted for 117,717 square feet or 10% of net absorption, which was one-fifth and one-quarter of the space absorbed in Cambridge and Boston, respectively;
- From 2012 through 2016, net absorption has been much higher, averaging 2.1 million square feet, 92% of which occurred in Cambridge and Boston;
- Somerville's net absorption was boosted by Partners HealthCare's new building in Assembly Square. In the 2010 to 2016 period, without this project, Somerville's share of average net absorption was 2.2%
- Neighboring suburban markets are attracting far less development and absorption of space than the urban markets. The Malden/Medford and Arlington/Lexington areas added 672,000 square feet of space since 2007, most of which was built before 2010. Annual net absorption averaged slightly below 78,000 square feet since 2007 and almost 111,000 from 2012 to 2016.

Vacant space is moderate at 7% of total supply but is especially tight in Somerville and Cambridge. This indicates that new development will be needed to accommodate business needs if the region's steady economic growth continues. The low vacancy rate and recent levels of absorption in Cambridge also increase the opportunity for Somerville to attract tenants who might have difficulty securing space in Cambridge.

Somerville is well positioned to increase its absorption of new Class A office and lab space over the next decade. The strong demand for space among major pharmaceutical and technology companies may crowd out small and mid-sized East Cambridge businesses. Furthermore, Kendall Square rents are now the highest in the region and are likely to cause more tenants to seek less costly alternatives when their current leases expire. Assembly Square is now a developed urban alternative to Boston and Cambridge with the addition of an Orange Line station and the dining, shopping and entertainment amenities at Assembly Row. With completion of the Green Line expansion, Union Square, which is already developed with urban amenities, has the potential to become another Somerville alternative to Cambridge and Boston for a range of industries.

Somerville has also seen significant new retail development in the past decade, led by the Assembly Row project. According to City of Somerville records, almost 500,000 square feet of new retail development has been built since 2010, with the vast majority of this development in the Assembly Square area and 90% occurring in larger buildings over 30,000 square feet.

Interviews with brokers and developers confirm that Somerville can be a competitive location for a range of businesses but is currently constrained by the lack of available space. Assembly Square has successfully leased space to several early stage life science companies that were priced out of Cambridge along with the new Partners HealthCare building. It has attracted interest to its planned new office building among information technology, life science and financial service firms from Boston, Cambridge and suburban locations. However, developers and brokers note that Somerville needs to provide a sizable rent discount to Cambridge and Boston's Seaport and Financial districts to be competitive.

A growing area of demand is among small early stage product-focused technology firms that are leaving incubators and laboratories. These firms are seeking smaller amounts (several thousand square feet) of multiuse space that includes offices, production space, and a research area. In some cases, they are reclaiming and converting former car repair, retail, and smaller industrial buildings. Consequently, these firms are unlikely to occupy new office buildings and when they occupy converted existing buildings, they are likely to fall below the 30,000 square foot threshold for linkage fees.

With large amounts of new development approved in Cambridge and Boston, Somerville will still face considerable competition for tenants to fill future development projects. Despite the intensive development that has already occurred in East Cambridge, the city has permitted 4.5 million square feet of new office and laboratory space, including 1.8 million square feet at Northpoint and 1.75 million square feet in four projects in Kendall Square[9]. Redevelopment of the Volpe Center site in Kendall Square may add another large block of commercial space. As of mid-2016, Boston had over 12.1 million square feet of development permitted but not yet built, with close to half of this space for non-institutional office development.

[9] Cambridge Development Log, October to December 2016

Projected New Office, Retail and Hotel Development

Based on a growing local economy with strong demand for commercial space and Somerville's improving market position, Somerville is projected to build 1.68 million square feet of new office space over the next decade. This amount reflects combined net absorption of office space within Boston, Cambridge, and Somerville and nearby suburbs at the recent rate of 2.1 million square feet per year with Somerville gaining 10% of this regional demand. Allowing for two to three years of little or no development due to a recession, Somerville would absorb an average of 210,000 square feet over eight years for a total of 1.68 million square feet[10]. An additional 420,000 square feet of retail space is also projected at 20% of new office development. This ratio is below the 40% ratio of retail/office that was built from 2010 to 2016 and closer to the 15% retail/office proportion in the Union Square Neighborhood Plan. Given the amount of retail and restaurant space already built in Assembly Square, the next wave of development in this area is likely to have a lower proportion of retail space, closer to that planned for Union Square. An increment above 20% is projected to account for some mid-size retail projects outside the main employment center, such as a supermarket. Somerville is also projected to add another hotel project with 110,000 square feet, comparable to the current hotel project in Assembly Square.

The components of projected new development in Somerville over the next decade, as summarized in Table 6, include:

- 1.68 million square feet of office space;
- 420,000 square feet of retail and restaurant space; and
- 110,000 square feet of new hotel development.

Table 6. Summary of Expected Development, 10 Year Period

Type of Use	Projected Square Feet of New Development
Office Development	1,680,000
Retail and Restaurant	420,000
Hotel	110,000
Total	2,210,000

Expected Tenant Businesses

To determine the likely jobs and earnings from this new development, the industries likely to occupy newly built space must be projected. Since new development in Somerville is competing for tenants with Boston, Cambridge and surrounding suburbs, new tenants are likely to reflect the diversity of growth industries within the region, not only Somerville, and thus have a larger share of information technology, financial and professional services and research and development industries than the city's current economic base. Moreover, since housing and job linkage fees

[10] Cambridge Development Log, October to December 2016.

are tied to new development**,** the projections used for this analysis focus on new business and employment growth, which will also differ from Somerville and the region's overall net job growth. Somerville has experienced a decline in some parts of the economy, such as construction, manufacturing, and financial services, which offsets growth in other sectors to yield overall net employment changes. Since the growing sectors require different facilities, have different workforce needs and provide the basis for new development, it is Somerville's growth industries that occupy new large development growth projects and the resulting employment that will generate new housing and labor demand and constitute the nexus for the housing and job linkage fees to address this demand.

Based on Somerville's market position and trends in the Metro North regional economy, the distribution of tenants for the estimated 1.68 million square feet of new office development over the next decade is expected to be:

- Research and Development Services 20%
- Computer Systems Design and Related Services 20%
- Software Publishers 10%
- Data Processing and Related Services 5%
- Ambulatory Health Services 10%
- Individual and Family Services 5%
- Other Professional and Technical Services 5%
- Advertising and Related Services 5%
- Architecture and Engineering Services 5%
- Management of Companies and Enterprises 5%
- Employment Services 5%
- Insurance 5%

The first three are fast growing industries that are likely to continue expanding, support demand for new space and be willing to pay the higher rents associated with new development. Consequently, they are projected to account for 50% of new office space. The balance of absorption is divided among 9 industries, all of which have been growing in Somerville or the region and most of which have an existing base in the city. Although Ambulatory Health Care (health practitioners' offices) accounted for over 25% of the job growth among the city's high growth industries in the past decade, they are now expected to be a smaller share of occupants for new large office development as they are more likely to be spread across the city and less likely to occupy new buildings with higher rents. Furthermore, many Individual and Family Services tenants are small firms and non-profit organizations that are not able to afford the high rents in newly constructed large office buildings.

Retail Tenants

Based on the fast growth in restaurants and diverse growth across various types of retail stores, the projected growth in retail space is concentrated in restaurants (40% of space) with the balance occupied by growing retail sectors that include food and beverage stores, pharmacies and

miscellaneous stores (e.g., florists, gift stores, office supply stores, etc.) along with day care centers, bank branches and real estate offices. A sizable share of retail space (15%) is projected for arts, entertainment, and recreation related businesses, reflecting the Union Square Plan for a 5% requirement for creative space and the role these types of businesses have played in both the Davis Square and Assembly Square development.

Table 7 summarizes the projected development by use, tenant type and employment over the next ten years. Employment projections are based on square feet per employee on parameters used for the Union Square Neighborhood Plan along with industry wide data for restaurants.
The projected job growth in this report may differ from figures in the SomerVision plan because the SomerVison Plan addresses a longer time period, includes job growth from development projects under 30,000 square feet and also includes new jobs from growth of existing firms. These projections in Table 7 will be used to estimate the occupations and wage levels for new employees working in the expected new buildings and the associated impact on housing and workforce training needs.

Table 7. Projected New Development and Employment by Use and Industry, 2018 to 2027

Use/Tenant Type	Projected Square Feet	Square Feet per Employee	Estimated New Employment

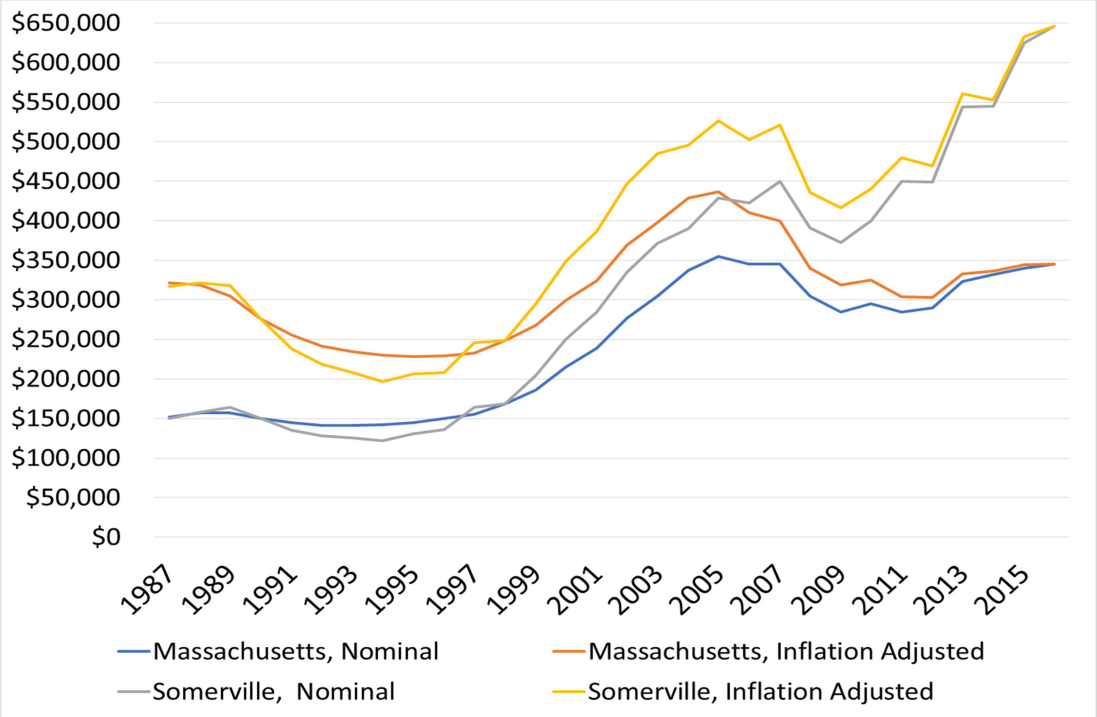
Somerville Housing Market Conditions

This section summarizes current housing market conditions in Somerville to inform analysis and recommendations for the city's affordable housing linkage policies.



Housing Conditions in Somerville[11]

The City of Somerville is experiencing a sustained and severe affordable housing shortage, because demand for affordable units is outstripping the supply of housing affordable to low and moderate-income households.

Ownership Housing

There has been a sustained run up in housing prices for condos and single-family homes in Somerville, as shown by data in Figure 6 and in Figure 7. The median price in 2016 of a single-family home was over $646,000 and the median price of a condo was $580,000.

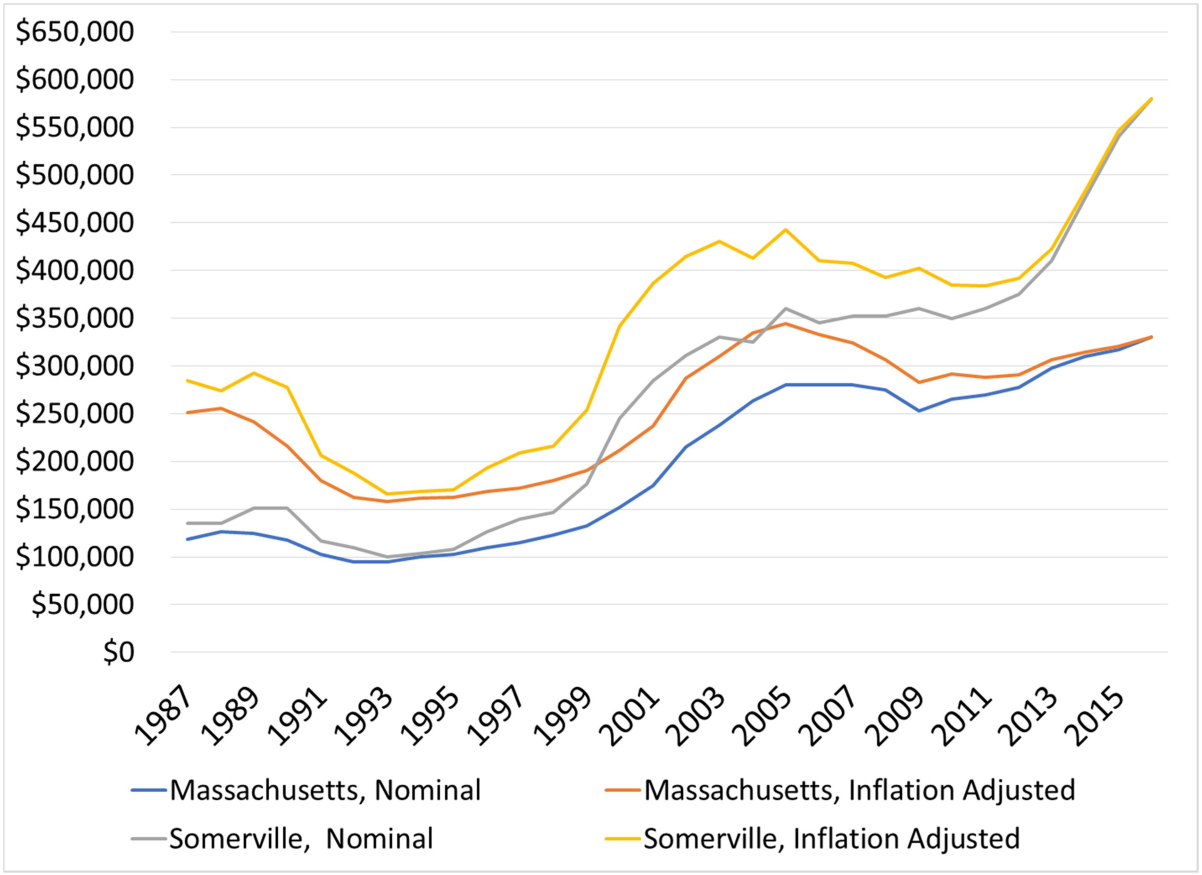


Figure 6. Trend in Median Sales Price of Single-family Units, Somerville and Massachusetts, in Nominal Value and 2017 Value of the Dollar

Source: Warren Group and ConsultEcon, Inc.

Rental Housing

In addition to ownership housing prices that have far outpaced the growth in prices statewide, Somerville and surrounding areas have had a relatively low rental vacancy rate in recent years. As reported by the U.S. Census Bureau in the 2000 and 2010 censuses, the rental vacancy rate in Somerville increased from 1.6% in 2000 to 3.6% in 2010. Despite this increase, the rental vacancy rate is low when compared to the rates across the Boston region and the Commonwealth of Massachusetts as a whole. In 2010 the rental vacancy rates were 5.9% in the Boston region and 6.5% in the Commonwealth; early estimates for 2015 indicate that the rental vacancy rate is decreasing, to 3.3% in the Boston region and to 3.5% in the Commonwealth as a whole. Somerville continues to have low availability of affordable rental units. These trends continue to be a factor in the availability and cost of housing in Somerville.

Data from the Census Bureau also indicates that the median gross monthly rental payment among Somerville renting households has increased 30.6% from $1,299 in 2010 to $1,696 in

2015.[12] Assuming 30 percent of income used for housing costs, the average rent in 2015 was affordable to households earning $67,840 or more annually. By comparison, the general rate of inflation nationally, as indicated by the Consumer Price Index (CPI), is much more modest. Between 2010 and 2015, CPI increased from 218.1 to 237.0, an 8.7% increase, which would indicate that Somerville households are devoting an increasing share of their financial resources to housing.

Asking rents for current rental housing are shown by data in Table 8. Average asking rents for all listings was just over $3,000 per month. The majority of listings were in 2- and 3- bedroom apartments. Two-bedroom apartments leased for an average of $2,700 or $2.69 per square foot. Three-bedroom apartments averaged $3,000 per month or $2.54 per square foot. Smaller apartments earned a higher per square foot cost; studios rented at $4.42 per square foot, while one-bedrooms rented at $3.36 per square foot.

Table 8. Asking Rents by Unit Size in the City of Somerville, May 4, 2017

Unit Size	Number of Listings	Average Asking Rent	Average Square Feet 1/	Average Rent Per Square Foot 1/
Studio	4	$2,293	526	$4.42
1 Bedroom	33	$2,424	789	$3.36

Housing Costs as a Percent of Household Income

Due to the high cost of housing, many Somerville households devote a large portion of their incomes to housing. As shown by data in Table 9, 32.7% of all occupied housing units in Somerville in 2015 were "cost burdened," which means the household was paying more than 30 percent of its income on housing costs. Housing is typically considered affordable if housing costs are no more than 30 percent of household incomes. In Somerville, both renters and homeowners are cost burdened. In 2015, about 32.6% of renters were cost-burdened, compared to 32.8% of homeowners. This is an improvement compared to 2010, when nearly half (47.2%) of renters were cost burdened and 40.2% of renters were cost burdened. The Somerville share of households paying over 30 percent of their income for housing was estimated at 32.6%, a great

[12] This 2015 figure is based on the Census Bureau's American Community Survey 1-year (2015) estimate and reflects average tenant rent payments not including any rental subsidies.

improvement over 2010, when the estimate was 45.6%, and overall slightly lower than the ratio for the Boston MSA and Massachusetts, both at between 36 and 37%.

Data in Table 10 shows the distribution of households by the percentage of income that was spent on rent in 2010 and 2015. In 2010, the largest household cohort was that paying 50 percent or more on rent. In 2015, this proportion decreased slightly, such that the largest cohorts were those paying between 15 and 20 percent of their income on rent. The cohort paying 50 percent or more of their income on rent decreased to only 15.2% of households. This is unlike the situation in the Boston region and in Massachusetts as a whole, where over 23% of households paid 50 percent or more on rent.

Total Residential Housing

According to the Census housing data, Somerville had 32,477 housing units available in 2000. There was a net gain of 1,243 housing units between 2000 and 2010, with a 3.8% increase in available housing to 33,720 units. Though the total number of housing units increased modestly, the number of vacant housing units increased over 75%, from 922 units to 1,615 units. The vacant units may have been vacant for sale or for rent at the time the survey was conducted. Between 2010 and 2015, homeowner and rental vacancy rates have decreased and more of Somerville's housing units are occupied. The total estimated housing stock decreased slightly to 33,322, based on ACS 5-year estimates of total housing units. Given the margin of error of 807 units, the time period of the survey, and trend in market demand, the number of housing units in Somerville may have increased slightly between 2010 and 2015.

Summary of Somerville Housing Conditions

Somerville's population is growing, housing is in high demand, and household composition is changing. Between 2010 and 2015, Somerville's population surged while its households became slightly larger and more affluent. Data indicate that Somerville's housing supply has not kept up with population growth during this period (although the ACS data used in this analysis may not adequately reflect the addition of new housing units in Somerville). ACS data indicate low vacancy rates for homeownership and rental housing. Recent sales prices for single-family and condominiums and current asking rents for available units are high and growing higher, although real estate brokers have noticed some leveling off in sales prices between 2016 and 2017. With increases in household income, the proportion of households that were cost burdened in Somerville was lower in 2015 than in 2010. This may indicate that new market rate housing is attracting households better able to afford Somerville's high prices, and that low- and moderate-income households are leaving the city.

National Housing Market Trends

Somerville's market experience is reflected in national and regional trends. According to *The State of the Nation's Housing, 2016*, the national housing market continues to rebound from the economic downturn, largely due to strength in the rental sector. Rental vacancy rates have fallen steadily since 2010, with rents increasing at twice the rate of inflation. Multi-family rental construction accounted for more than 30% of all housing starts, substantially more than the long term average. Capitalization rates for multi-family housing are lower than at the height of the housing boom a decade ago, reflecting the strength of the rental market and the low interest rate environment that has investors looking for a good return on their investment. However, most of the units constructed are at the upper end of the market, which is similar to the situation in Somerville. The strength of the rental market has contributed to an increase in the number of renters that are cost burdened—those households that are paying more than 30% of their income on rent—especially among low-income and very low-income households.

Housing prices for owner-occupied homes continue to increase but have not yet returned to previous levels before the economic downturn except in a few leading markets, like the Boston region. New home sales and new ownership housing construction are at historically low levels and low homeownership vacancy rates are contributing to increases in prices, despite an overall decline in the homeownership rate nationally. The homeownership rate has declined due to a number of demographic and economic factors including the slowing of new household formation as people are delaying marriage and child birth, high levels of foreclosures, low levels of income growth, higher lending standards, and increasing student debt burdens. As the economic recovery continues to support employment and income growth, it is anticipated that household formation will increase and once again provide support for higher levels of homeownership.

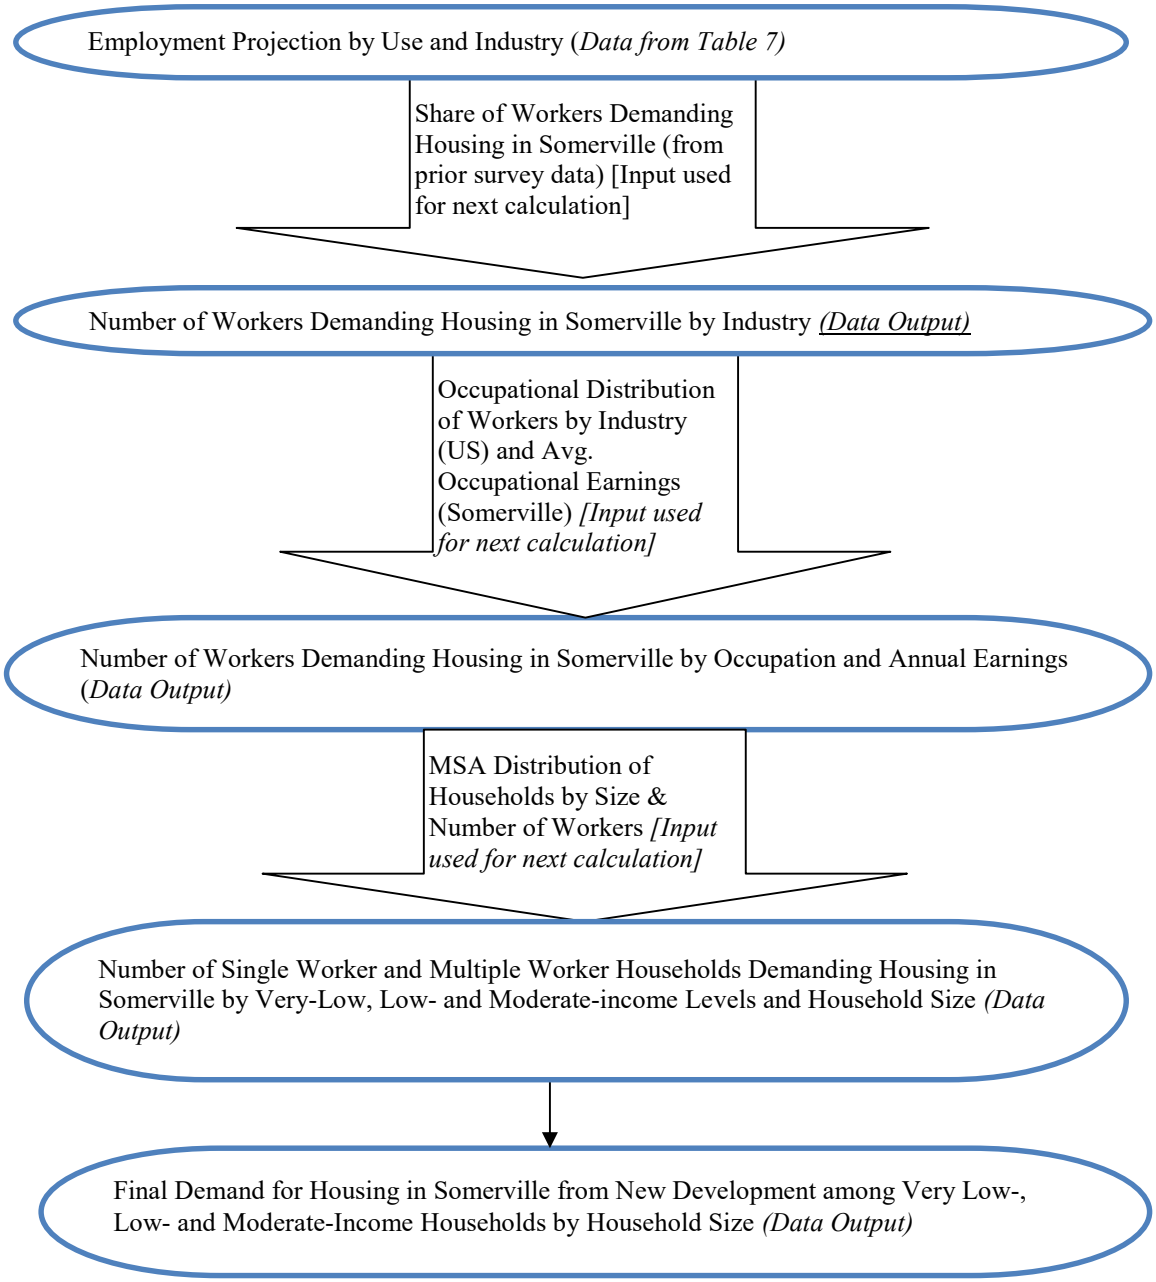
Regional Housing Market

According to *Greater Boston Housing Report Card, 2016,* Greater Boston's housing market is strained under a growing population of millennials, retirees, and low-income immigrants. The region[13] has a housing supply mismatch that is unable to accommodate the changing demand for housing from the region's population. The core cities in the region, such as Somerville, Cambridge and Boston, have an undersupply of multi-family housing that is desirable among the younger millennials, born between 1980 and 2000, and aging baby boomers, born between 1946 and 1964. Millennials have indicated a strong desire to locate in dense, walkable neighborhoods.[14] According to *Greater Boston Housing Report Card, 2016,* Boston's suburbs conversely have a reported oversupply of single-family homes that appeal to families with children because the "baby bust" generation, born between 1965 and 1980, is not large enough to absorb existing homes put on the market by aging baby boomers and the new homes being built, while Millennials, burdened with student debt, are unable to afford those single-family homes.

[13] The region here is defined as Suffolk, Essex, Middlesex, Norfolk and Plymouth Counties.

[14] Lachman, M. Leanne, and Deborah L. Brett. *Gen Y and Housing: What They Want and Where They Want It.* Washington, D.C.: Urban Land Institute, 2015.

Greater Boston's housing prices continue to increase, but with uneven changes across its communities. Sales in many traditionally desirable and high-priced communities are slowing while sales are increasing in more affordable communities, suggesting that there are limits to sustainable price increases due to affordability issues. Single-family home prices are flattening in many communities while the prices for condominiums are surging, reflecting the uneven and evolving demand for different types of housing.



The *Greater Boston Housing Report Card, 2016* refers to and reinforces 2015 analysis of the "housing cost conundrum" that exists because the Boston region's supply of housing has not kept up with housing demand that has been driven by the increase in jobs in the region. Household growth in the region would have likely been higher had the amount of housing produced kept up with demand. The report suggests that supply has lagged because the cost of developing housing is too high to provide housing suitable for the region's working and middle-income households. Another large contributor to the high costs is restrictive zoning controls at the local level. Housing costs are so high that it is "virtually impossible for supply to match demand and therefore the vicious cycle of price appreciation and rent escalation in Greater Boston is fundamentally unmanageable under current economic and political conditions."[15] This indicates that the City of Somerville is not alone in experiencing the high cost of housing production. Therefore, seeking out solutions at a state and regional level that encourage housing production, including affordable units, outside of the city and lowering development costs overall will contribute to easing the pressure on housing demand and production in the city of Somerville.

[15] Barry Bluestone et al., *The Greater Boston Housing Report Card 2015: The Housing Cost Conundrum*, Prepared by the Kitty and Michael Dukakis Center for Urban and Regional Policy, Northeastern University, Prepared for the Boston Foundation, Page 8.

Impact of Large Scale Development on Affordable Housing Demand

Using the 10-year development scenario and employment projections summarized in Table 7 of Section 2, this section forecasts the demand for affordable housing in Somerville that will result from this development. Since several data sources and assumptions were used to prepare the forecast, a full explanation of the methodology is provided along with the results. Figure 8 provides an overview of the analytical steps and data sources for the housing demand projections.

Figure 8. Methodology and Data Sources for Housing Demand Analysis

Since demand for affordable housing is tied to household income, the first step in the analysis projects the distribution of the forecasted new jobs by employee earnings. To do this, the number of new jobs was distributed to 22 occupational categories for each of the 22 industries expected to occupy new development in Somerville. The distribution was calculated using 2014 national data for each industry's occupational distribution. Earnings were then estimated for these occupations based on the median annual earnings for the respective occupation in May 2016 for the Metro North Workforce Development Area adjusted for inflation to reflect March 2017 value of the dollar[16]. These calculations yield the projected number of new jobs at different annual earning levels by industry.

Since new employees will, for different reasons, desire to live in other communities as well as Somerville, it is necessary to determine the share that will demand housing in Somerville. To estimate the percentage of new employees who will demand housing within the city, the study adapted results from a 2014 survey of Somerville workers on the extent to which they moved to Somerville as a result of obtaining a job in the city. The survey results indicated that 17.5% of Somerville office workers and 6.8% of retail and restaurant workers either moved to the city or sought housing in Somerville but did not move there due to high housing costs. These percentages were multiplied by the gross number of new jobs by occupational distribution in each industry to estimate the number of new workers who will demand housing in Somerville.

The occupational distribution in each industry was then applied to the number of workers in that industry who are expected to seek Somerville housing to estimate their earnings distribution. Table 11 summarizes the resulting earning distribution, focusing on those workers in low- and moderate-income categories, assuming a single worker, 2-person household. While these figures show the earning distribution among projected new jobs in new commercial development, they do not reflect the number of households that will demand housing in each income category for two reasons: (1) many households will be larger and thus a higher income threshold will determine if they are very low-income, low-income or moderate-income; and (2) households with two workers will have higher total incomes that reflect the earnings of both workers and may not be eligible for affordable housing under current income limits.

[16] The Urban Wage Earner CPI was used for this inflation adjustment.

Table 11. Distribution of Annual Earnings for Expected Jobs among New Employees Demanding Housing in Somerville from New Development by Use and Earnings Level

Tenant Use/Industry	Gross New Jobs	Number of Workers Demanding Somerville Housing	Number of Workers with Earnings below 50% of AMI (Very Low-income) 1/	Number of Workers with Earnings 50 to 80% of AMI (Low-income) 1/	Number of Workers with Earnings 80% to 110% of AMI (Moderate-income) 1/	Total Workers with Earnings Below 110% AMI 1/

Source: Karl F. Seidman Consulting Services and ConsultEcon, Inc.

The next step to project demand for affordable housing units among the 1,425 employees who are expected to seek housing in Somerville requires adjusting for the number of wage-earners and the size of these workers' households. The distribution of households by number of earners and household size is based on the most recent (2011 to 2015) American Community Survey data for the Boston Metropolitan Statistical Area Workers in each occupation seeking housing in Somerville were first divided into one-, two-, three- and four or more-person households based on the region's household size distribution[17]. Then each household size group was divided into one-, two- and three-worker households, using the American Community Survey percentages. The results of this analysis are presented in Table 12 and were used to calculate the final affordable housing demand presented in Table 13, as detailed below.

Table 12. Household Size by Number of Wage-Earners, Boston Metropolitan Statistical Area

Workers per Household	Worker Households by Size: 1 Person	2 Persons	3 Persons	4 or More Persons
1 worker	100.0%	42.0%	32.8%	28.0%
2 worker	0.0%	58.0%	47.5%	46.4%
3 or more workers	0.0%	0.0%	19.7%	25.6%
Total	**100.0%**	**100.0%**	**100.0%**	**100.0%**

Source: 2011-2015 American Community Survey 5-Year Estimates; and ConsultEcon, Inc.

[17] From the 2011 to 2015 ACS, the ratios for Somerville are: 28.1% one-person, 32.5% two-person, 16.2% three-person and 22.8% four-or-more-persons.

Demand from Single-Earner Households

For single earner households, the average wage for the occupation was used to estimate their household income and determine if they fell below the very low-income, low-income and moderate-income thresholds for their respective household size. Among the single earner households who are expected to demand Somerville housing, 133 are estimated to be very low-income (less than 50% of area median income); 182 are projected to be low-income (between 50% and 80% of area median income); and, 177 are estimated to be moderate-income (80% to 110% of area median income) for a total demand of 492 affordable housing units.

Demand from Multiple-Earner Households

Projecting affordable housing demand among multiple-earner households required estimating the additional household earnings from other wage earners in the household. Since data regarding the distribution of incomes within multi-worker households is not available, this analysis assumes that the second worker's earnings equaled the median wage for all occupations in Somerville, which was $55,134 in March 2017 value of the dollar. When the distribution of number of workers is used, this resulted in an additional 99 dual worker households due to new development that will demand housing in Somerville, all in the moderate-income category. Note that in this analysis no three-worker households fall within the very low-, low- or moderate-income ranges.

Across all household sizes and income groups, the total number of affordable housing units needed to meet the demand generated by new commercial development is estimated at 591 units. Data in Table 13 summarizes the total projected demand for new housing by household size and among low-income, moderate-income and middle-income households. Data in Table 14 shows the income limits by household size.

Table 13. New Affordable Housing Demand in Somerville from New Large Developments by Income Type and Household Size, 2017 to 2026

Financing Gap Required to Mitigate Impact of Large Scale Development

This section builds upon the framework established in the affordable housing demand analysis to project the total financing gap required to mitigate the projected increased demand for affordable housing generated by the 10-year forecast of new commercial development in Somerville. Housing affordability is a function of household income and the cost of available rental and for-sale housing units in a given real estate market. The City of Somerville and the entire Boston region suffer from a well-known and demonstrated lack of sufficient affordable housing. This section calculates the financing gap required to create new affordable housing that satisfies the demand for it from new workers in new commercial development by comparing the total development cost of new affordable housing units to the housing rents/prices that can be supported by very-low, low, and moderate-income households. The basis for imposing a linkage fee on new commercial development is that there is a nexus between job-creating commercial development and the increased demand for affordable housing.

Methodology

Following is a summary of data and analyses used in calculating the projected total per square foot financing gap required from new commercial development to support development of new affordable housing for workers. The financing gap would be for very low-, low-, and moderate-income households whose jobs would be located in Somerville's new commercial development projected over the next 10 years.

The analyses establish that affordable rents and affordable sales prices do not currently support development of affordable housing, due to high development costs. Therefore, a financing gap exists that must be filled to stimulate affordable housing development. These analyses estimate the amount of this financing gap to be filled by the linkage fee collected from new commercial development projects in Somerville. The estimated total required financing gap is the difference between the total development costs of producing new affordable housing units and the capitalized value of affordable rent and unit sale proceeds. The required financing gap is presented as a per square foot cost for projected commercial development.

The previous section projected demand for new housing among 591 very low-, low-, and moderate-income households ranging in size from one-person to four-or more-persons. This section determines the projected financing gap required to construct housing that will satisfy projected ten-year affordable housing demand generated by worker households in new development commercial buildings, using a modified demand estimate of 592.[18] Following is a review of the methodology used to calculate the total financing gap required:

Estimate the number of very-low-income, low-income and moderate-income households that would be generated by the new development. Specify demand by number of persons in the household, number of bedrooms, and by tenure (i.e. renter-occupied units and owner-occupied units).

Estimate the total development costs of affordable units to satisfy the demand created based on unit costs of recently completed or currently under construction new affordable housing developments.

Estimate the potential capitalized revenue due to annual rents and sales proceeds of affordable units segmented by very-low-income, low-income and moderate-income households. Calculate the difference between the total development costs and the capitalized revenue that is internally generated by renters and owners. This amount is the total financing gap required to produce the targeted new affordable units created by demand from new workers in new commercial developments.

Divide the total financing gap amount by the total commercial square feet subject to calculate the linkage fee, based on the current policy for exempt square feet. This is the fee level required to generate the full financing gap needed to produce the new affordable units created by demand from new workers in new commercial developments.

The majority of state and federal funding programs for affordable housing are targeted to low-income households. Federal and state tax credits prioritize creation of units for households below 60% Area Median Income (AMI). Therefore, because of the targeting of available funding sources, it is likely that much of the new affordable housing created in Somerville will be targeted to these income levels. As the following analysis shows, the amount of the financing gap required to create housing for very-low-income, low-income and moderate-income households is substantial. Yet moderate-income households are also increasingly finding housing to be unaffordable in Somerville's housing market. Focusing on very low-income, low-income, and moderate-income households will expand access to a broader range of funding sources to address the financing gap and enhance development feasibility.

[18] Due to the division of the 591 units among multiple categories of household size, rental units and ownership units, fractional units can result. Rounding is used to insure the analysis occurs for whole numbers of units, rather than partial housing units. Due to rounding results after the distribution of the 591 units across household size and rental versus ownership units, the total number of units demanded increased by one to 592 to maintain consistency and clarity of analysis by only using rounded whole numbers of rental and ownership units. The total number of units is one unit higher than the housing unit demand presented earlier.

The following key assumptions were made to calculate the required housing financing gap.

Mix of Rental and Ownership Units

New affordable housing has primarily been supplied through rental housing, due to the available financing from federal and state sources. This analysis assumes that the affordable housing to be demanded will be a mix of rental and ownership units. The estimated financing gap in this analysis assumes that:

- 33% of units for moderate-income households will be ownership units and the remaining 67% will be rental;
- 10% of units for low-income households will be ownership units and the remaining 90% will be rental; and
- All of the units for very low-income households will be rental units.

Data in Table 15 show the distribution of rental and home ownership housing units by size and income level.

Table 15. New Affordable Housing Demand in Somerville by Rental and Ownership Units

Unit Distribution for New Affordable Housing

The distribution of households by number of persons and income levels was derived previously. The household sizes range from one-person to four-or-more-persons. One-person households are assumed to be 100% one-bedroom units. Two-person households are allocated as 20% to one-bedroom units and 80% to two-bedroom units. Three-person households are allocated 5% one-bedroom units, 80% to two-bedroom units and 15% to three-bedroom units. Four-person or larger households are allocated to three-bedroom units. For the purposes of this analysis, the allocation of households by units by number of bedrooms is assumed to be the same for rental units and ownership units. Data in Table 16 show the estimated distribution of rental housing units by size and income levels (very low-income, low-income and moderate-income). Data in Table 17 show the mix of ownership units, including low-income and moderate-income households.

Recent Unit Costs

Somerville's Affordable Housing Trust Fund (AHTF) has supported two affordable rental housing projects: Saint Polycarp Village Phase III, opened in 2014, and 181 Washington, opening in 2017. The total AHTF contribution to both projects was $295,000, approximately 1 percent of the total development costs. Both projects are owned and managed by the Somerville Community Corporation. Saint Polycarp Village Phase III, with 31 units of new construction, cost $360,000 per unit (adjusted for inflation) and 181 Washington, with 35 units of new construction and 2,400 square feet of retail space, cost $436,000. Over three years, the per-unit cost of producing new affordable housing units in Somerville increased 21%. On both projects, the distribution of costs by type was roughly the same, averaging 61% of total development costs (TDC) for construction costs, 19% for soft costs, 10% for acquisition costs, and 10% for developer fees, developer overhead, and capitalized reserves.

Development costs for new housing are high, driven by increasing construction costs and increasing acquisition costs. Interviews with housing developers active in Somerville and the Boston area report construction costs ranging from $200 per square foot (SF) to $260 per SF for stick frame construction over podium, which is predominant and in scale with Somerville's urban design and density. One construction cost estimate for a proposed affordable housing project in Somerville was $281 per SF. Higher density high-rise developments are reportedly costing $305 per SF. Construction costs are reportedly high due to the higher costs of construction labor, of which there is a shortage in the Boston area due to the amount of development activity.

Acquisition costs for land and buildings in Somerville are also very high. The average acquisition cost per unit was $40,000 per unit for the two affordable housing projects in Somerville. Market rate developers are reporting unit acquisition costs exceeding $100,000 per unit for new construction. High acquisition costs and high construction costs combine to make the overall cost of producing new housing in Somerville very high. However, market rate development in the city is sustained because of the high price of housing. Average prices for condominiums in Somerville exceeded $600,000 per unit in 2016.

The Massachusetts Department of Housing and Community Development advised in 2017 that the cost of a unit of affordable rental housing produced with Low-income Housing Tax Credits in the urban areas of the Boston area, such as Somerville, should not exceed $399,000 per unit. Recent trends in the housing market in Somerville indicate that if construction and acquisition costs remain as high as they are in the future, the City of Somerville and its affordable housing developers will have a difficult time producing newly constructed affordable housing units.

Development Project Costs

The average costs of housing development projects supplied by the City of Somerville and the costs based on developer interviews are used as the basis for calculating the costs of new affordable housing in Somerville over the next ten years. It is likely, however, that housing development costs will vary considerably according to the particulars of individual projects and

may change over time. If development activity slows in the Boston area and housing prices decline in Somerville, the cost of construction may come down, thereby lowering the potential cost of affordable housing. However, according to the City of Somerville, there are few large city-owned land parcels that can support the development of hundreds of housing units, so the cost of land and building acquisition may be higher in the future thus increasing the cost to provide affordable housing.

Rental Housing

Data in Table 18 summarize total development costs (TDC) of developing affordable rental units in Somerville.

Table 18. Calculation of Total Development Costs of Affordable Rental Housing Units in Somerville over a 10-Year Period in 2017 Dollars

Project and Cost Assumptions		
Number of Units	482	
Average Unit Size GSF [1/]	1,068.5	
Total Project GSF	515,000	
Cost Assumptions [2/]		
Soft Costs, including Design, Permitting, Overhead, Profit, and Contingency, as a Percent of Construction Cost	40.0%	
Construction Cost and Construction Contingency per SF	$250	
Land/Acquisition per Unit Costs	$40,000	
Development Costs	**Amount**	**Percent to Total**
Soft Costs, including Design, Permitting, Overhead, and Developer's Fee, and Project Contingency	$51,500,000	25.8%
Construction Cost and Construction Contingency	128,750,000	64.5%
Land/Acquisition	19,280,000	9.7%
Total Development Costs (TDC)	**$199,530,000**	**100.0%**
TDC per Unit	***$413,963***	
TDC per GSF	***$387***	

1/ See Table A-1 in Appendix for mix of units by size.

2/ Development cost assumptions are based on recent experience of selected housing projects in Somerville, and interviews with housing developers. Due to the variation in the size of the units demanded, construction costs are based on project size in square foot costs, with a percentage increase for soft costs and per unit acquisition costs for land and buildings.

Source: City of Somerville; Karl F. Seidman Consulting Services; and ConsultEcon, Inc.

Ownership Housing

Data in Table 19 summarize TDC of developing affordable ownership units in Somerville. The development cost factors used for ownership housing are the same as rental housing due to the lack of ownership projects included in the available housing data supplied by the City. Further, the cost of rental housing on a per square foot basis is considered representative of the costs for multi-family ownership housing. Total development costs per unit are higher for ownership units than for rental units because they are expected to house large households on average and thus have a larger average unit size.

Rental Housing Development Project Revenue

An important step in calculating the financing gap required to create new affordable housing units is to define the development project's revenue that will be used to support the development and operations of new affordable housing. This analysis assumes that the new rental housing will solely be supported by rental income from tenant households and ownership housing will be supported by the sales of affordable units. Affordable rents and sales prices are based on household income. In prior sections of this report, annual occupational wages were the input for establishing the household income and resulting demand for affordable housing by very-low, low, moderate-income households of new workers in new commercial development in Somerville. The weighted average gross income for each income level, as shown by the data in Table 20, is the basis for calculating affordable rents and sales prices that in turn support the development of affordable housing.

Table 20. Weighted Average Income by Income Group and Household Size, Households of Workers in Projected Commercial Development in 2017 Dollars

	Households by Number of Persons			
	One Person	Two Person	Three Person	Four Person

The financing gap for new affordable rental housing is calculated first, followed by the calculation of the required financing gap for affordable ownership housing.

Affordable Rent Levels

The affordable rents for rental units are based on the estimated annual income of workers in the new commercial developments in Somerville. Construction costs for the rental affordable housing units projected in this analysis are supported by rental revenue from tenants with additional funding sources used to fill the gap between rental revenue and the cost of developing the housing. In general, the federal department of Housing and Urban Development (HUD) is a source of much of the funding for affordable housing. HUD defines housing costs as affordable to a household when the total cost of shelter consumes no more than 30% of gross (total) income. For this analysis, households are assumed to pay 30% of household income in rent. Data in Table 21 detail the assumed income levels of households to derive the total gross rental revenue for the units, based on the distribution of households by size and income. Total annual gross rental revenue for the units is estimated at $8.0 million.

Table 21. Annual Rental Revenue by Household Income and Size of Household in 2017 Dollars

Household Size	Annual Income [1/]	Applicable Monthly Rent [2/]	Number of Households	Total Annual Rent
Very Low Income Households

To calculate the rental revenue available to support the total development costs described above, the gross rents must be adjusted to reflect lost revenue due to periodic vacancies and the operating costs of maintaining and managing housing. As shown by data in Table 22, vacancy is assumed at 3% of gross rental revenue. Operating costs typically include such items as building management, janitorial services, trash removal, building maintenance, landscaping, and marketing and other administrative costs. For this analysis, the full cost of utilities is also included. Based on data from the Massachusetts Housing Partnership, total annual operating costs were calculated as $10,000 per unit. Net rental income after deducting vacancy and operating costs is estimated at $3.0 million.

Rental Affordability Gap & Required Financing Gap

The next step is to find the gap in project finance between the permanent mortgage and developer equity that the net rental income can support and the total development costs of the rental units. In general, the amount of loan that lenders will approve is based on the income stream from the project. In this case, the annual net income from rents is $3.0 million. However, lenders prefer to build into their mortgage calculations a cushion between projected net income from rents and the annual debt service needed to pay down the loan. The debt coverage ratio (ratio of net income to allowable debt) reduces the effective amount of net income that can be used to support a mortgage. This analysis assumes a debt coverage ratio of 1.1, based on permanent financing programs offered by the Massachusetts Housing Partnership. After adjusting the net income by the debt coverage ratio, the project has $2.7 million in annual net income with which to pay the debt service on a permanent mortgage.

The total allowable permanent loan is calculated by dividing the net income by the mortgage constant, based on a 6.260% mortgage constant, (assuming the available current Massachusetts Housing Partnership financing rates amortized over a 30 year period). The permanent loan that could be supported by the resident households is $43.4 million. The annual revenue not required for the mortgage is then available to support equity investment. Based on a required return of 8.0%, this revenue would support $3.4 million in equity investment. Given the total development costs of $200.0 million, the financing gap required to create 482 new affordable rental housing units is $152.8 million, approximately 77% of the total development cost (TDC). (It should be noted that 133 very low-income units do not produce sufficient annual rent to support costs of operating those units; hence, the financing gap is equivalent to the total development costs of producing very low-income units.)

Ownership Housing Development Project Revenue

The average sales price of affordable units sold in Somerville is the basis for estimating the sales proceeds available to support the creation of affordable ownership units in Somerville. As shown by analysis in Table 23, the "affordable" sales price is derived based on 30% of gross income spent on housing and estimates of housing costs, the same as rental housing. Housing costs for ownership units include mortgage payments based on assumed down payment on the home, private mortgage insurance, real estate taxes and condominium fees. It is assumed that very low-income units are all rental units, so estimates of sales prices based on very low- income earnings were not prepared.

Table 23. Aggregate Affordable Ownership Unit Sales by Household Income and Size of Unit in 2017 Dollars

Household Size	Annual Income [1/]	Monthly Housing Costs [2/]	Number of Households	Supportable Sales Price [3/]	Total Supportable Sales
Low Income					
One bedroom	$41,507	$1,038	13	$202,018	$2,626,234

Ownership Housing Required Financing Gap

The affordability gap in project financing of ownership units is the difference between the TDC and the proceeds from the sale of the estimated required 110 ownership units. Based on the mix of units and the assumed sales prices, the total estimated sales proceeds are $38.8 million. Assuming TDC of $48.5 million, the estimated financing gap for 110 affordable home ownership units is $9.7 million, approximately 20% of the TDC. Data in Table 24 summarize the financing gap required for ownership units.

Table 24. Summary of Financing Gap Required for Affordable Ownership Housing, In 2017 Dollars

				By Household Type	
			All Units	Low Income	Moderate Income

Required to Satisfy Ten-Year Affordable Housing Demand

The total development costs for rental and ownership units in Somerville that satisfy the demand for new affordable housing due to workers in new commercial developments is $248.0 million. The total financing gap required for the rental and ownership units is $162.5 million, approximately 66% of the TDC. The total financing gap is then divided by the total estimated commercial development building area that is non-exempt from the linkage fee, as shown by data in Table 25. Of the total 2.2 million square feet of commercial space an estimated 330,000 square feet is not exempt, 15% of the projected total, based on current policy and an average project size of 200,000 square feet. Therefore, the total financing gap required is estimated at $86.43 per square foot of commercial development.

Table 25. Calculation of Financing Gap Required for New Affordable Rental and Ownership Units per Square Foot of Projected Commercial Development in 2017 Dollars

	All Units	Very Low Income	Low Income	Moderate Income
Total Development Cost	$248,030,000	$56,953,000	$63,157,000	$127,920,000
Total Financing Gap Required	$162,482,000	$56,953,000	$52,390,000	$52,136,000
Percent TDC that is the Financing Gap	65.5%	100.0%	83.0%	40.8%
Derivation of Commercial Square Footage Subject to Linkage Fee				
Total Commercial Square Footage	2,210,000	2,210,000	2,210,000	2,210,000
Square Footage Exempt from the Linkage Fee under Current Policy [1/]	330,000	330,000	330,000	330,000
Commercial Square Footage Subject to the Linkage Fee	1,880,000	1,880,000	1,880,000	1,880,000
Financing Gap per Square Foot of New Commercial Development [2/]	**$86.43**	**$30.29**	**$27.87**	**$27.73**

1/ Per the City of Somerville Linkage Policy, the first 30,000 SF of commercial building area is exempt from the linkage fee. It is assumed that commercial projects in the future average approximately 200,000 GSF, for a total of 11 projects. Across all projects, 330,000 SF is assumed to be exempt from the linkage fee, per the current ordinance.

2/ Total Financing Gap divided by the total commercial square footage Subject to the Linkage Fee.

Note: Rounding may affect totals.

Source: City of Somerville; Karl F. Seidman Consulting Services; and ConsultEcon, Inc.

Modified Financing Gap Required Based on Other Funding Sources

This analysis calculates the full cost of the financing gap due to the housing demand generated by workers of households in projected commercial developments in the City of Somerville. Somerville has relatively high affordable housing development costs, given the scarcity of vacant land, and high costs. The purpose of affordable housing is to limit the rental or mortgage payments of low-income households to 30% of income, which is considered "affordable"; this creates a limited revenue stream to finance development costs. Therefore, the City and developers are challenged to find additional sources of funding to fill the gap between the rents and sales proceeds that very-low, low, and moderate-income families can afford and the development financing that would be incurred by affordable housing developers. Since most affordable housing developers layer multiple funding sources to support the construction of new housing units, the linkage fee will work in conjunction with other financing sources to fill the $162.5 million financing gap.

Linkage Fee Level Scenarios

Data in Table 26 show linkage fee level scenarios including scenarios that model various percentages of the full financing gap required, by applying the current housing linkage fee and the recent ratio of AHTF and total City funds to total funds needed to fill the full financing gap. Increasing AHTF's share of the required financing gap to leverage more state funds and counteract the decline in federal funds may be required in order to produce the level of affordable housing required to satisfy the new demand from commercial development. Funds from the Commonwealth of Massachusetts have been relatively stable, while federal funds have been declining over time. There is a new Federal Program, the National Housing Trust, which is funded from Fannie Mae and Freddie Mac profits that is targeted to very low-income households, but it does not represent a large fund -- all of Massachusetts received $3 million in the most recent year. AHTF funding is an important component of the City's affordable housing production and has a substantial impact because the Commonwealth requires the City to provide matching funding as a way of investing in its own affordable housing projects. Without City generated sources like AHTF, the City would not have the primary sources of funding to leverage state funds effectively.

Table 26. Linkage fee Scenarios for the City of Somerville

	Linkage Fee Scenarios, Percent to Total / Full Financing Gap	Linkage Fee Amounts, per Square Foot
Total Financing Gap per Square Foot of Commercial Development for 592 Affordable Housing Units		$86.43
Illustrative Percentages of Financing Gap that would be Supported by Linkage Fees		
Current Linkage Fee	6.0%	$5.15
Current City AHTF Share of Existing Affordable Housing Funds to Fill the Financing Gap [1/]	22.8%	$19.73
Current Total City Share of Existing Affordable Housing Funds to Fill the Financing Gap [1/]	31.7%	$27.36
Full Financing Gap	100.0%	$86.43

1/ The factors used in this analysis are based on eight 100% affordable housing projects recently funded partially by the City of Somerville. In these projects, the City's AHTF accounted for 22.8% of financing gap funds and total City sources accounted for 31.7% of financing gap funds.

New Development, Resident Employment and Jobs Linkage Fee

New development projects in Somerville will create new jobs with the potential to benefit Somerville residents, and especially improve employment and earnings for low-income residents. The job linkage fee is warranted to address specialized employment and training services that are needed to allow Somerville residents to gain access to employment opportunities and share in the benefits from new large scale development. Such services may be needed either if there is a lack of available Somerville workers with the specific occupational skills demanded by employers in new development or if workers have more general gaps in education, skills or experience that pose barriers to their employment. Occupational and job specific training services are warranted to address the first situation while basic education and job readiness programs address the latter need. Both services may be needed, and in many cases combined into an integrated skills training program, to ensure that Somerville's unemployed and low-income residents have equitable access to jobs created by new development.

A three-part methodology was used to analyze the need for employment and job training services to link Somerville residents to the jobs created by the expected new development. First, an analysis of the potential occupational supply gaps for jobs in projected development over the next ten years was completed. This analysis used the occupational composition of projected industries expected to occupy new projects to estimate the expected number of new jobs in different occupations. These data were then compared to the occupational composition of Somerville's workforce to identify occupations for which the supply of existing residents may be insufficient to meet this new demand. Information on the capacity of existing job training programs to supply new workers was then considered in estimating the occupational supply gap. Recent research and labor reports related to occupational supply gaps also were reviewed to provide further context and information on this aspect of needed workforce development services. Some studies focused on Massachusetts or the greater Somerville region but are still relevant since they address expected industries, occupations and labor force segments for Somerville. The second part of the analysis considers employment barriers faced by Somerville residents beyond occupational skills that can impact their access to employment across occupations, drawing on ACS data, interviews with workforce agencies and labor market reports. Finally, the analysis draws on the broader understanding of labor market trends, occupational supply needs, and the demand for education and training services gained from interviews with workforce development practitioners.

Labor Supply Gaps

Table 27 compares the expected number of jobs in major occupational categories to ACS data from 2011 to 2015 on the number of Somerville workers in these occupations. For three occupational groups, the number of new jobs is a very small share of the current workforce at less than 5%. Consequently, there is likely to be a good supply of Somerville residents within these occupations to address employer needs, although mismatches may exist based on unique employer needs or for occupations that are more specialized. In another five occupations, new employment in future large development projects falls between 5% and 10% of Somerville's workforce, which may make it more difficult to locate city residents for these jobs. Moreover,

47% of these jobs are in higher skill and high wage life, physical and social science, and legal occupations that are less likely to benefit low-income residents. For the remaining fourteen occupational groups, projected new jobs account for a large share of the current workforce, ranging from 10.4% (Art, Design and Media Occupations) to 48.8% (Computer and Math Occupations). Six of these occupational groups (Food Preparation and Serving Occupations, Health Care Support Occupations, Office and Administrative Support Occupations, Personal Care Occupations, Production Occupations, and Sales and Related Occupations) are sources of entry-level jobs for low-income and less educated workers and account for 45% of the jobs in these "tight demand" occupations. Although the remaining eight "tight demand" occupational groups are dominated by high skill jobs that require college or advanced degrees, some include technician and support occupations that are accessible with a two-year college degree or certificate program.

Table 27. Comparison of Expected Occupational Demand and Somerville Workforce by Major Occupational Groups

Occupational Group	Estimated New Jobs in Projected Development	Number of Somerville Residents in Occupation	New Jobs as Percentage of Somerville Workforce
Management Occupations	697	5,799	12.0%
Business and Financial Operations Occupations	730	3,370	21.7%

Total, All Occupations	8,904	49,538	18.0%

Source: Karl F. Seidman Consulting and American Community Survey 2011-2015 5- year estimates

Additional analysis was conducted on several mid-level jobs in occupational groups with "tight demand" that are more accessible to low-income and non-college educated workers. These include: computer support specialists and drafters, engineering, and mapping technicians. The results shown in Table 28 indicate demand for an additional 406 workers in these occupations. Although data on Somerville's workforce in these specific occupations were not available, it appears likely that demand is tight, given that the ratio of new jobs to the existing workforce for the broader category in which these jobs fall is 49% and 21%, respectively.

Table 28. Expected New Workforce Demand for Three Targeted Technology Related Occupations

Occupation	Projected New Jobs*
Computer support specialists	301
Drafters, engineering, and mapping technicians	105
Total	406

Source: Karl F. Seidman Consulting
*Based on 9 industries with demand for these occupations

Overall, Somerville has a tight labor market with strong employment growth and low unemployment rates. Somerville's unemployment rate was 2.4% in April 2017, and it varied between 1.7% and 2.8% over the prior twelve months. Moreover, Somerville's unemployment has been low for several years, averaging 2.4% in 2016 and 3.2% in 2015. The *2015 Massachusetts Economic and Labor Market Review* characterized the Metro North labor market, in which Somerville is located, as extremely tight with an unemployment rate of 3.9% in 2015, a 4.9% wage growth rate and the number of job openings well above the number of unemployed workers looking for a job. Since 2015, Somerville's labor market has likely grown tighter as the economy has continued to grow and the number of unemployed workers declined by 16%[19]. These overall tight labor market conditions indicate that new and expanding employers in Somerville may have difficulty finding workers and face increased employee turnovers as workers have more opportunities for career advancement and are less concerned about the risk of job loss.

In analyzing Somerville's Jobs Linkage fee and policies, it is important to understand specific occupational and skills gaps and their relationship to projected employment demand from future development projects. A 2015 report by Northeastern University's Dukakis Center[20] projected future occupation demand for Massachusetts and its Workforce Investment Areas and analyzed the capacity of the existing vocational education system to address this expected demand. This study found that the majority of job openings in Massachusetts through 2022 will not require a

[19] Based on the number of unemployed Somerville workers in April 2017 and April 2015.
[20] *Meeting the Commonwealth's Workforce Need: Occupation Projections and Vocational Education*, Northeastern University Kitty and Michael Dukakis Center for Urban and Regional Policy, October, 2015.

college degree and can be met through no more than a vocational education or associate's degree. The four occupational groups with the highest projected job openings are:

- Food Preparation and Serving Related Occupations;
- Office and Administrative Support Occupations;
- Sales and Related Occupations; and
- Healthcare Practitioners and Technical Occupations.

These four categories combine to account for 43% of the state's expected job openings between 2012 and 2022.

The report also found that the state's existing vocational education system only has the capacity to fill a small share of the projected job openings through 2020 in positions that do not require a college degree. Statewide, high school and community college programs can fill close to 15.7% of future jobs requiring a high school degree or less, 11% of job openings requiring some college; and 23% of job openings requiring an associate's degree. The gap in high school and community vocational education capacity is greater for the Metro North Workforce Investment Region. Based on the study's analysis of current graduation rates only 10.9% of future jobs requiring a high school degree or less, 5.2% of job openings requiring some college; and 11.3% of job openings requiring an associate's degree will be filled through the region's vocational high schools and community colleges. However, this capacity varies considerably across occupational groups, as shown in Table 29. Metro North high schools and community colleges have the highest capacity to meet expected job openings for Installation, Maintenance and Repair occupations, Architectural and Engineering occupations, Construction and Extraction occupations, and Arts, Design, Entertainment, Sports, and Media occupations, at 32.7%, 27.7% 19.6%, 18.5% and 18.1%, respectively. In the Architecture/Engineering and Arts/Design/Media categories, capacity is especially strong for jobs requiring only a high school degree—supplying two-thirds to 86% of expected demand. Capacity to fill jobs requiring an associate's degree is also relatively strong, at close to two-thirds, for the Architectural and Engineering and one-third for Arts, Design, Entertainment, Sports, and Media occupations.

Based on the Northeastern Report, the vocational education supply capacity is especially low in the Metro North Workforce Investment Area for three occupational areas in which future development projects are expected to generate large numbers of new jobs:

- Food Preparation and Serving Related Occupations: 4.2% of expected job openings with an average annual wage of $28,055[21];
- Office and Administrative Support Occupations: 1.9% of expected job openings with an average annual wage of $44,774; and
- Sales and Related Occupations: 1.0% of expected job openings with annual average wage of $45,882.

[21] Annual wage figures are from the May 2016 US Bureau of Labor Statistics Occupational Employment and Wage Statistics for the Metro North WIA.

These findings highlight the need for expanded investment in local and regional vocational and job training to prepare Somerville residents and workers for future jobs. Moreover, expanded training capacity appears particularly important to address the type of jobs that will arise from business and employment growth at the city's future development projects.

Table 29. Supply of Annual New Graduates from College and Vocational Education System, Metro North Workforce Investment Area

Occupational Group	Supply as Share of Openings by Educational Level				
	HS Graduate	Some College	Associate's Degree	BA	Total

Employment Barriers for Somerville Residents

Beyond the occupational labor imbalances discussed above, Somerville workers may not have access to jobs at new development projects due to more general barriers to employment, such as lack of English language skills, poor reading and math skills, low educational attainment, limited work experience, prior criminal record and other factors. Somerville has a well-educated and

experienced workforce, but there is a sizable portion of the city's labor force that faces language and educational barriers to employment. Based on ACS 5-year estimates, 20.2% of workers in Somerville's labor force have a high school level education or less (see Table 30). Educational barriers are especially high for unemployed workers, with 43% of them in the prime working age cohort lacking post-secondary education. This profile is confirmed by recent Somerville clients of the Career Place shown in Table 31: 72% of the job seekers from FY2014 to FY2016 attained education at or below a high school diploma. Additionally, almost 10% of Somerville workers reported that they speak English less than very well and thus, may face barriers to employment, obtaining a quality job or job advancement based on their English language skills.

Table 30. Educational Attainment for Somerville Workers and Residents, Age 25 to 64 Years

Education Level	Percent of Population (25 or older)	Percent of Labor Force (25 to 64)	Percent of Unemployed (25 to 64)
Less than high school graduate	7.9%	5.9%	6.0%
High school graduate	15.4%	14.3%	37.1%
Some college or associate's degree	14.0%	13.3%	20.0%
Bachelor's degree or higher	62.7%	66.5%	36.9%

Despite a well-established system of providers and education programs for adult basic education (ABE) and English for Speakers of Other Languages (ESOL)[22], the supply of these services is insufficient to address the need and demand among Somerville residents. According to the Somerville Foundation report, *Breaking the Language Barrier: A Report on English Language Services in Greater Somerville*, there were 3,702 people on waiting lists among Metro North providers for ABE and ESOL services in December 2010, with 95% of these for ESOL. The

[22] There are 25 ESOL providers in Somerville funded by the Office of New Somervilleians and listed on their web site. The Massachusetts Department of Elementary and Secondary Education ABE/ESOL directory lists 29 providers in Somerville.

Somerville Center for Adult Learning Experiences has 800 people on its waiting list for English Language Learning programs.

Among workforce development practitioners, a lack of English language skills was the most frequently cited employment barrier for Somerville workers. Other common barriers outside of occupational specific skills, as reported by practitioners, are job readiness including soft skills, job search skills and prior work experience, legal status as an undocumented worker, and health issues, including alcohol and drug use. Transportation, childcare and basic education skills in reading, writing, and math were mentioned less frequently by a quarter of interviewees. These barriers are consistent with those identified on a recent report in improving high rates of unemployment prepared by Governor Baker's Task Force on Economic Opportunity for Persons Facing Chronically High Rates of Unemployment[23] and a 2016 report by the Job Training Alliance[24]. The Governor's Task Force report also noted limited knowledge of the job market, how benefit programs work, poor credit scores (used by employers in screening applicants), access to mentors, and employer bias and stigma as additional barriers.

Warranted Jobs Linkage Fee and Recommendations

Somerville's future commercial development will create demand for workers in several occupational areas that are accessible to low-income and moderate-income residents, but insufficient workforce training capacity and funding exists to address this demand. With the city's tight labor market and limited capacity of the existing job training system to address new demand, additional investment in job training will be necessary to fill this demand for workers. While there is an existing Somerville labor force in these occupational areas, demand in the occupations with the largest need for new workers is above 10% and as high as 48% of the city's current supply and thus is unlikely to be filled with Somerville's existing workforce. Since the goal of the Jobs Linkage policy is to expand opportunity for Somerville's low-income and moderate-income workers from new development, it is necessary to provide training and education to connect and prepare unemployed and under-employed workers for these new jobs rather than relying on existing employed residents to fill them. Moreover, barriers exist that will prevent many of the city's less educated and immigrant workforce from benefiting from these jobs. Finally and most importantly, the current workforce development services do not have sufficient funding and capacity to meet the increased demand for skills training and education needed to connect DIP employment to Somerville residents. For all these reasons, a jobs linkage fee is warranted to fund job training and workforce development services to address the potential occupational and skills gaps among Somerville residents to meet labor demand at the projected new development, particularly in occupations that can benefit low-income and lower skilled workers.

[23] *Report and Recommendations to Improve Employment Outcomes Among Populations Facing Chronically High Rates of Unemployment* January 2016, http://www.mass.gov/lwd/docs/executive-office/eo-561-task-force-report508.pdf .

[24] Root Cause, *Job Training Works, Pays and Saves: An Economic Impact Study on Outcomes of Job Training*, January 2016

To estimate and quantify this need, the analysis focused on those low-skill and middle-skill occupations that are most accessible to low-income and moderate-income residents, ESOL and ABE services that are important barriers to both skills training services and employment and career advancement training and services to help workers mover from entry-level to higher skilled and higher paying occupations. Table 32 summarizes the 10-year projected new employment for these occupations, which total 4,434 jobs. To estimate the cost of training services for these jobs, a goal of filling 30% of these positions with Somerville residents is used. This goal is based on the employment goals established for Assembly Square development. This target results in the need for training to support 1,330 jobs for low-income and moderate-income Somerville residents.

Table 32. Development Projects' Estimated Ten-Year Job Growth in Low-Skill and Middle-Skill Occupations

Occupation Category or Position	Estimated New Jobs at Projected Development
Healthcare Support Occupations	260
Protective Service Occupations	18
Food Preparation and Serving Related Occupations	801
Building, Grounds Cleaning and Maintenance Occupations	89
Personal Care and Service Occupations	299
Sales and Related Occupations	628
Office and Administrative Support Occupations	1497
Farming, Fishing, and Forestry Occupations	3
Construction and Extraction Occupations	37
Installation, Maintenance, and Repair Occupations	74
Production Occupations	178
Transportation and Material Moving Occupations	144
Miscellaneous Computer Occupations, including Computer Support Specialists	301
Drafters, Engineering, and Mapping Technicians	105
Total	4,434
Total for Somerville residents at 30% of new jobs	1.330

Source: Karl F. Seidman Consulting Services

The estimated total cost to provide skills training to 1,330 residents is $6.06 million based on an average per participant training cost of $4,553 for the Individual Training Account (ITA) funded training programs used by Somerville residents in FY2015 through FY2017. A linkage of $3.22 per square foot is needed to generate these funds using a base of 1,880,000 square feet of new development expected to pay a linkage fee over the next ten years[25].

Three adjustments are applied to this initial jobs linkage figure. First, since Somerville residents have access to existing occupational training provided by high school, college and non-profit training agencies, the linkage fee does not need to fund the full $6.06 million cost. Consequently,

[25] This figure differs from the 2.21 million square feet used to project employment impacts due to the application of the current 30,000 square foot exemption assuming an average project size of 200,000 square feet.

the number of participants to be trained with linkage fee funds was adjusted for recent data on Somerville residents receiving occupational skills from four sources:

- Somerville High School vocational training programs;
- Bunker Hill Community College;
- Training provided through federally funded ITAs; and
- Additional training provided by area non-profit providers.

Primary data on vocational training completed by Somerville residents provided by training providers and the Metro North Regional Employment Board was used to estimate this job training resource. The resulting estimate of training capacity is 68 training program graduates per year, which can prepare 680 Somerville residents for the new jobs at future development projects. To account for the large decline in federal funds for ITA in the Metro North region (33% over the past three years), a range of ITA training slots was used; this range had the average number of ITAs over the past three years at the top level and 50% of this amount as the bottom level, assuming a continued decline in future years. Table 33 details the components of this estimate. Once this training capacity is deducted, the jobs linkage would need to fund training for 650 to 705 jobs at a cost of $2,959,000 to $3,164,00 which translates into a per square foot linkage fee of $1.57 to $1.68.

Table 33. Estimated Skills Training Capacity for Somerville Residents

Educational Program or Funding Source	Training Capacity
Somerville High School annual vocational training for targeted occupations[26]	8
Annual ITA funded skills training, Somerville residents	5.5 to 11
Additional training reported by Job Training Alliance members, Somerville residents	11
Bunker Hill Community College years ending 2015 and 2016[27]	38
Net capacity, non-jobs linkage fee funded	63.5 to 68
Ten years capacity	635 to 680
Net positions to fund	650 to 705
Percentage of targeted jobs funded by the Jobs Linkage Fee	49% to 53%

Source: Karl F. Seidman Consulting Services

A second adjustment relates to workers' broader educational barriers to employment. As documented from US Census data, multiple reports and practitioner interviews, many of Somerville's unemployed and low-income workers lack English language proficiency, basic math skills and a high school diploma or equivalent. Since these basic competencies are needed for many occupational skills training programs, the sufficient supply of these services is a complement to the skills training program, as well as vital to securing ultimate employment for most occupations. Consequently, an additional jobs linkage amount is estimated to address the

[26] Somerville high school vocational training is based on graduates who do not go on to college for eight occupations relevant to projected industries in new development.
[27] BHCC figures based on number of Associate and Certificate graduates who were Somerville residents, reduced by the percent of all college graduates who transfer to four year colleges.

cost of providing ABE and ESOL education to prepare targeted Somerville residents for the projected new jobs at new commercial development projects.

Table 34. Ten-Year Estimate, ABE and ESOL Services for Targeted Jobs at Future Development Projects

Education Level	Percent of Unemployed Somerville Workers	Percent Not Speaking English Well Somerville Labor Force	Percent Needing ESOL Services	Low Estimate Need for ABE Services*	High Estimate Need for ABE Services+
Less than high school diploma	6.0%	16.7%	3.1%	6.0%	6.0%
High school diploma or equivalent	37.1%	10.4%	3.4%	0.0%	9.3%
Some college or associate's degree	20.0%	6.4%	1.7%	0.0%	0.0%
Bachelor's degree or higher	36.9%	5.1%	1.2%	0.0%	0.0%
Total percentage of workers			9.3%	6.0%	15.3%
ABE/ESOL slots to fund for DIP targeted jobs			124	246	354

*Includes only workers with less than a high school diploma; +Includes workers with less than a high school diploma and one quarter of workers with a high school diploma or equivalent.

The linkage fee amount for these education services was estimated based on American Community Survey estimates for the education level of unemployed Somerville residents and the estimated English language proficiency for Somerville residents at each education level (see Table 34). Unemployed workers were used for these estimates since they are a key client target for training programs, a key source of workers to fill new jobs, and provide a better proxy for the Somerville residents who are likely to receive training for jobs at future development projects than the overall Somerville labor force. Two estimates were made for ABE services: (1) a low estimate assumes that all workers with less than a high school education will need ABE services; and (2) a high estimate that includes 25% of workers with a high school diploma or equivalent. The high estimate is intended to address workers who, despite having a high school diploma, lack high school-level competencies. Based on these figures, 9.3% of workers for targeted jobs in new development projects will need ESOL services to improve their English proficiency and between 6% and 15.3% will need to complete an ABE program. When applied to the 1,330 new low-skill and middle-skill jobs targeted to Somerville residents, this translates into the need to provide ESOL education to 124 workers and ABE to between 246 and 354 workers. The

estimated cost per participant is $2,472[28], which results in education costs of between $914,640 and $1,181,600. When applied to the projected linkage base of 1,880,000 square feet, the additional warranted linkage for ABE and ESOL services is $.49 to $.63 per square foot.

A final third adjustment was made to provide for training and other services to help residents in entry-level jobs gain additional skills to move up a career or occupation ladder into higher paying positions. These career advancement services will help residents move into higher paying jobs to provide a family-sustaining income. To estimate costs for career advancement services, the projected jobs from new development in four occupations categories with good career ladder opportunities was used.

- Healthcare Support;
- Office and Administrative Support;
- Miscellaneous Computer Occupations; and
- Drafters, engineering, and mapping technicians.

These four occupational categories account for 2,163 projected new jobs and applying the 30% Somerville resident employment target, the jobs linkage fee would need to fund career advance services for 649 workers. To estimate the cost for these services, the FY2016 average cost for incumbent worker training from the state's Workforce Training Fund ($1,088) was used as a proxy for existing worker skills training. Using this per employee, figure, another $706,000 is needed to fund career advancement services.

After all three adjustments, the warranted jobs linkage fee per square foot ranges from $2.44 to $2.69 per square foot. Table 35 summarizes the components of the final warranted jobs linkage fee.

Table 35. Calculation of Warranted Jobs Linkage

Required Training/Education	Number of Training/Education Slots	Cost	Per SF Cost*
Skills training to prepare residents low and middle skill jobs	1,330	$6,055,000	3.22
Less available vocational and nonprofit skills trainings	-635 to -680	-$2,891,000 to -$3,096,000	-1.54 to -1.65
Plus required ESOL services	124	$307,000	+.16
Plus required ABE Services	246 to 354	$608,000 to $875,000	+.32 to +.47
Plus career advancement services	649	$706,000	+.38
Total		$4,580,000 to $5,052,000	$2.44 to $2.69

*Based on Project Linkage Fee Base of 1,880,000 square feet.

[28] This figure is based on a $2,202 average FY2010 expenditure per participant for ESOL programs in Greater Somerville (*Breaking the Language Barrier*, p. 27) adjusted to 2017 dollars by the Greater Boston CPI for Urban Consumers.

Review of Policy Options and Other City Policies

This section reviews the legal justification for linkage fees, compares Somerville's current linkage fee policies to other Massachusetts cities and counties, considers several linkage fee policy options and assesses the impact of housing and jobs linkage fee rates on Somerville's competitiveness for attracting businesses and development.

Legal Basis for Linkage Fees

Linkage fees have been an established policy for local governments for over three decades, with the City of Boston's policy first enacted in 1983. An established body of law supports a municipality's right to require monetary or other contributions in connection with commercial and/or residential development. In recent years, there has been no significant change in the legal basis and justification for linkage fees. It is constitutional to condition a development permit upon such payments or contributions when a "reasonable relationship" can be demonstrated between the government's legitimate purpose and the required fee. In the case of Somerville's linkage fees, the provision of affordable housing for low- and moderate-income households and providing education and training to create and maintain jobs for Somerville residents constitute legitimate government purposes, as indicated by the authorizing state legislation.

Additionally, two Supreme Court cases set legal standards that: (1) a rational nexus must be established between the imposed exaction or mitigation fee and its stated purposes; and (2) the fee amount must be proportional to the development project's impact that is mitigated or addressed by the exaction. The Nollan and Dolan Supreme Court cases are the primary basis for justifying the linkage fees, and provide the impetus for communities to conduct nexus studies that establish the relationship between new development and employment and its impact on housing and job training needs. The U.S. Supreme Court decision in the Nollan case [Nollan v. California Coastal Commission, 483 US 825 (1987)] declared that there must be an essential nexus between the exaction or mitigation imposed on the party and a legitimate state interest. The U.S. Supreme Court decision in the Dolan case enshrined into law the proportionality test that mitigations required by municipalities must be roughly proportional to the impact that the proposed developments will create [Dolan v. City of Tigard, 512 US 687 (1994)]. Further, the Supreme Court clearly placed the burden of proof on the municipalities to prove, within reason, that the mitigation is in fact necessary.

The analysis in this study indicates that a clear nexus exists between new non-residential development and the need for new affordable housing and to ensure low- and moderate-income Somerville residents gain employment in the jobs created by this development. The analysis also identifies fee levels that are proportional to addressing and mitigating these development impacts.

Development Impact Exaction Policy Issues

As Somerville considers updating its Housing Linkage policies and setting parameters for the new Jobs Linkage Fee, it faces common policy issues that cities have addressed in different

ways. The core policy issues, beyond the critical question of the appropriate and warranted linkage fee rates, for linkage policies include:

1. **Applicable project type and size.** This policy defines the uses and scale of real estate development projects that are subject to linkage fees and what zoning status triggers linkage fee payments. Somerville currently applies its housing linkage fees to a very broad set of uses, exempting only residential, religious, city owned buildings and artist studio space with a project size threshold at 30,000 gross square feet. Furthermore, the city only applies the requirement to projects seeking a special permit, a special permit with site plan review or site plan approval.
2. **Fee variation by use**. Housing and job impacts vary by the type of use and business type since the density and wage levels vary considerably across uses and industries. Consequently, some cities and counties have linkage fee rates that vary by use. The benefit of tailoring rates more closely to impacts is offset by other aspects of this policy, including its added complexity, potential disincentives for certain uses and how to address a project's change in uses over time.
3. **Fee variation by location.** Some cities have varied their linkage fees by a project's location perhaps reflecting differences in the impacts and mitigation costs across city economic centers and neighborhoods. Since Somerville is a compact city without great variations in either housing costs or transportation access to jobs across neighborhoods, there is not a strong case for this type of geographic variation in linkage fees.
4. **Exemptions.** Somerville currently exempts the first 30,000 square feet of any project from linkage fee payments, which reduces the housing linkage fees paid by each project by $154,500 under current rates.
5. **Linkage fee payment schedule**. Somerville allows housing linkage fee obligations to be paid over a five year period, which slows the receipt of funds needed to build affordable housing. This extended payment schedule might be shortened to pay linkage fees more quickly and accelerate the supply of needed housing subsidy funds.
6. **Linkage fee rate adjustment over time.** Current policy allows for adjusting the housing linkage fee every three years based on an analysis of the impact of new commercial development on the cost and supply of housing in Somerville. However, there is no provision for a rate increase based on an inflation index, such as the Consumer Price Index (CPI), as practiced in several other cities.

Review of Linkage Programs in Other Cities

Linkage fees[29] charged to commercial development for the purpose of funding affordable housing is a policy utilized in a number of communities around the United States. They are often found in communities with high housing costs where there is a demonstrated need for affordable

[29] Linkage fees policies have different names in different communities. Boston calls its linkage fees development exaction fees, and Cambridge a housing contribution. For the purposes of this analysis reviewing these policies across communities, linkage fees has been used throughout to maintain consistency of usage and terminology in order to improve readability.

housing. Numerous communities in California have enacted such policies, and they are also found in other states, such as Washington, Colorado, Florida, and New Jersey. Somerville is among the Massachusetts communities that have a linkage fee policy, along with the cities of Boston, Cambridge and Barnstable County. This section reviews linkage policies in Massachusetts cities and counties, as those most relevant to Somerville, to identify competitive issues and existing practices to inform potential changes to Somerville's policies.

Linkage Fee Program and Policy Administration

All housing linkage fee programs operate in a similar manner. Commercial, mixed-use, or other types of developments over a certain number of square feet are subject to a fee assessed per square foot of new developed space over the threshold size for the development. Though the essence of the policy may be the same, programs differ in a variety of ways. Some governing bodies restrict the application of the linkage fee to the use type, such as office space or retail space, whereas others impose the linkage fee on all nonresidential development in their jurisdiction. Some policy programs allow developers to either directly build the required housing or to pay an exaction into an affordable housing trust over a set period of time. In some cases, the fee is divided into installments and paid at certain intervals over a period of several years, most frequently related to the issuance of the certificate of occupancy or building permit. Governments adjust the fee on a regular basis, most often relating to the Consumer Price Index (CPI) or a construction cost index, such as the Engineering News Record Construction Cost Index. It should be noted that adjustments based on these indices do not take into account changes in land values, which impact the costs of developing affordable housing. Major revisions to the fee structure are undertaken less frequently, requiring approval of the local legislative body and often a new nexus study. Many communities have maintained the original fee structures from when the fees were first enacted, adjusting only based on the index, largely due to the cost and complexity of re-evaluating and passing new linkage legislation. The following section reviews linkage programs in Massachusetts. Exaction/linkage fee rates and key policies for Boston and three comparison cities/counties are summarized in Table 37 on page 71.

City of Boston. Boston's linkage fees and policies are defined under Article 80 of the city zoning code, which addresses development project review, in Section 80B-7. This policy requires housing and jobs exaction contributions for any real estate development that meets the definition of a "Development Impact Project" (DIP). Four characteristics establish a real estate project as a DIP subject to exactions: (1) the project cannot be built "as-of-right" and requires some forms of zoning relief; (2) the project has more than 100,000 square feet of new construction, additions to an existing building, or renovation of an existing building; (3) the project includes more than 100,000 square feet of gross floor area for proposed Development Impact Uses; and (4) is not wholly owned by a government agency. The definition of Development Impact Use (DIU) is very broad, covering 40 distinct uses and excluding residential, wholesale businesses, storage, industrial uses, and accessory parking garages. Housing Exactions and Job Exactions are paid on the gross square feet amount above 100,000 at current rates of $8.34 and $1.67 per square foot, respectively. Housing exactions can be paid either through cash Housing Contribution Grant or by building low-income or moderate-income

housing units with cost at least equal to the required Housing Contribution Grant but in practice all exactions have been paid with a cash grant. Grants are paid in seven equal annual installments beginning at the earlier of the Certificate of Occupancy date or 24 months after construction starts. All Housing Contribution Grant funds go to the Neighborhood Housing Trust, which awards the funds to finance affordable housing projects through a periodic RFP process. Job exaction obligations can be met through either payment of a cash grant (Job Contribution Grant) or creation of a job training program with a cost at least equal to the required Job Contribution Grant. In practice, almost all Job Exactions have been paid through the grant option. Grants are paid in two equal installments with the first payment due at building permit issuance and the second payment one year later. The Neighborhood Jobs Trust receives all Job Contribution Grant funds, and awards them through a RPF process to finance job training, education and employment programs. Housing and job exaction rates have been set by special state statutes and can be adjusted for inflation every three years by a vote of the Boston Planning and Development Agency (BPDA) Board of Directors[30].

City of Cambridge. The City of Cambridge's commercial linkage fees (referred to as a Housing Contribution) in its Incentive Zoning Ordinance were first adopted in 1988. Developers can also opt to create affordable housing units, under the "Housing Creation" option, but this has not occurred in the past decade. The Incentive Zoning Ordinance applies to commercial development of more than 30,000 square feet of gross floor area devoted to one or more of the following uses: Hotel or Motel; Radio and Television Studio, College or University (with some exemptions), Noncommercial Research Facility, Healthcare Facility, Social Service Facility, Office and Laboratory Use, Retail and Consumer Service Establishment, Open Air or Drive In Retail, Light Industry, Wholesale Business, Storage, and Heavy Industry. The current housing contribution is $13.50 per square foot over 2,500 square feet of the project authorized by the special permit granted with one-dollar increases occurring annually in September 2017 and September 2018. Consequently, the Cambridge fee is scheduled to reach $15.50 per square foot in fall 2018. The fee does not vary by type of use or by size of development. The amount of the housing contribution is also subject to annual adjustment based on the CPI Housing Index for the Boston-Brockton-Nashua, MA-NH-ME-CT area. The current fee was recommended by a 2015 Nexus Study for the Incentive Zoning Ordinance and went into effect on September 28, 2015. The Housing Contribution is paid, as a lump sum payment, directly to the Managing Trustee of the Affordable Housing Trust (AHT) or its designee. The AHT Managing Trustee must certify to the Superintendent of Buildings that the payment requirements for the ordinance are met prior to issuance of the Certificate of Occupancy. There are no reported problems with the administration or collection of the fee.

Barnstable County. The Cape Cod Commission is a regional planning agency that acts as the regulatory authority for all development projects in Barnstable County. In 2005, the Commission carried out a nexus study to investigate the impact of regional development on low-

[30] The inflation adjustment for the Housing Exaction is calculated based on an equally weighted (50%/50%) average of the change in the Boston Metropolitan Area Consumer Price Index for all urban consumers and the change in the housing component of the Boston Metro Area Consumer Price Index (CPI). The Job Exaction is adjusted by the change in the Boston Metro Area CPI for urban wage earners.

income and moderate-income residents. The results of the study were incorporated into an affordable housing linkage fee policy as part of the 2009 Regional Policy Plan, which has since been amended under a number of county ordinances.

The linkage fee policy is triggered by all new land development of 30 acres or more, land development into 30 or more residential lots or 10 or more business, office or industrial lots, new building developments and expansions to existing developments over 10,000 square feet or 40,000 square feet of outdoor areas. These developments are called "Developments of Regional Impact" or "DRI," which are regionally significant development projects that, due to their size, location, or character, impact more than one community. The 2009 plan puts forth a process for the appropriate review of these projects and includes appropriate affordable housing and other mitigation fees. The affordable housing fee varies depending on the type of development and its location. These categories were determined based on the number of lower-than-average-income jobs each industry or use creates. The fee also depends on whether the development is located in an area that is determined to be an "economic center." The fee schedule was updated in November of 2014 and the new fee schedule went into effect on July 1, 2017. Table 36 summarizes the current linkage fee rates. Fees are adjusted on an annual basis based on the Consumer Price Index.

The fee schedule is subject to reductions and discounts of up to 50%, or 65% if the development is approved for a Hardship Exemption. Discounts include development in an economic center (15% reduction), redevelopment projects (15% reduction), non-profit organization development (10% reduction), and reservation of land for estate or conservation purposes (10%).

Fees accrued under the DRI mitigation policy are collected in advance of the issuance of a Certificate of Compliance, which states that the development complies with the DRI policy. Only upon receipt of the Certificate of Compliance can the developer receive the Certificate of Use and Occupancy by the Municipal Agency. The fees are collected by the Cape Cod Commission, which holds the funds until the town manager of the town where the development took place requests them for affordable housing projects. Instead of paying the fee, developers can mitigate the affordable housing impacts by developing 10 % of the housing units determined necessary to support the lower-than-average-income jobs that are projected to be created by the new development; for example, if a development is projected to create 20 new jobs, then the developer could build 2 low-income housing units instead of paying the mitigation fee.

Table 36. Mitigation Fees for Developments of Regional Impact, July 1, 2017

Type of Development	DRI Mitigation Application Fee
Residential	$10,975 base fee, plus $329 per lot or unit
Non-Residential Building	Fifty-five (55) cents per square foot of gross floor area
Non-Residential Outdoor Space (such as swimming pools and tennis courts)	Fifty-five (55) cents per square foot
Wind Energy Conversion Facilities (WECF)	1-3 WECF: output of 250kW up to less than 1MW each: $3,293 1-3 WECF with an output of 1MW or greater each: $9,878 Per WECF over 3: $3,293 per WECF Not eligible for Fee Reductions
Other Non-Residential Developments	$10,975 base fee plus:
Divisions of Land:	$329 per lot
Gravel Pits, Mining and Extraction Activities and Golf Courses	$329 per acre
Wireless Communication Towers:	$55 per linear foot of tower/monopole height above ground level
Water Dependent Uses including but not limited to docks, piers and revetments:	Twenty-seven (27) cents per square foot
Utilities and other linear development:	Fifty-four (54) cents per linear Foot
Mixed-Use Projects	The applicable residential and non-residential per lot/unit/foot fee set forth above. The residential base fee is not applied to Mixed-Use Projects
Historic Properties	Single-family or Accessory Building - $441 Other - $2,745
Other	For other types of land uses not covered above, $10,975 base fee plus (to be determined as needed, based upon similar uses in the fee schedule above).

Somerville Policies in Relation to Other Communities

Although there are similarities in the core linkage policy across cities, several aspects of Somerville's policies emerge from the review of policies in other cities:

- Somerville's project threshold is the middle range, higher than Barnstable County, the same as Cambridge and well below Boston's 100,000 square feet;

- Somerville's exemption of 30,000 square feet is much higher than Cambridge at 2,500 but similar in policy to Boston, for which the project threshold and exemption levels are the same;

- Boston and Somerville are the only cities that use multiyear payments, with Somerville's five-year payment period shorter than the seven years for Boston;

- Somerville is unique in not providing for any inflation adjustments to fees, with Cambridge and Barnstable County having provisions for annual inflation adjustments to their exactions and Boston providing for a three- year adjustment period.

- Somerville is consistent with Boston and Cambridge in not varying fees by project use. Barnstable County has a more complex system that varies its fee by use.

Policy Options for Somerville Linkage Policies

This section reviews several policies and administrative aspects of Somerville's linkage fee policy that inform recommendation for potential policy changes. This discussion focuses on five issues:

1. Project threshold and exemption level;
2. Fee variation by use;
3. Number and timing of fee payments;
4. Periodic adjustment of fee level; and
5. Use of jobs linkage fee revenue.

Project Size Threshold and Space Exemptions

As noted above, Somerville's project threshold is the same as Cambridge and well below the 100,000 square foot threshold in Boston. The current threshold is appropriate for Somerville as recent development has involved a mix of both mid-size and large projects; an equal number of projects between 30,000 and 100,000 square feet and over 10,000 square feet were permitted since 2009. While there were many smaller projects of less than 30,000 square feet permitted since 2009, most of these were residential without retail, office or hotel space. Non-residential space in these 113 projects under 30,000 square feet totaled 154,000 square feet. Consequently, lowering or reducing the project threshold is unlikely to provide much revenue to mitigate housing and employment impacts.

Somerville currently exempts the first 30,000 square feet of a project from housing linkage payments. This does not serve to exempt small projects from fees since the 30,000 square foot threshold achieves this purpose. However, this provision reduces linkage fee revenue at the established rate and adds a slight complexity to the policy and its administration. It also contributes to a higher nominal rate since applying this large exemption requires setting a higher fee level to generate the specified level of revenue needed to mitigate the development impacts. However, removing the exemption would increase the linkage fee burden on small to mid-size developments between 30,000 and 60,000 square feet. With the exemption, these projects now pay linkage fees on less than half of their developed square feet, but removing the exemption would require them to pay fees on the entire square footage.

Development Use and Fee Levels

The impact of new development on the demand for affordable housing and need for education and training services does vary by building use and business type. Uses and businesses with a higher density of employment and a large share of lower paying jobs will generate greater

impacts. Table 38 compares different uses by their employment density (measured by typical square feet per employee) and share of jobs with average annual wages below 80% of area median income. Restaurants have both the highest employment density and share of lower paying jobs. Research and Development is on the other end of the spectrum with low density and a relatively low share of jobs with wages below 80% of median income. Office uses fall in the middle—they have high job density but a middle range of low paying jobs. Hotels and retail uses, on the other hand, have a large share of lower paying jobs but relatively low employment density. Thus, based on impact alone, there is a case for varying fees by use. Somerville could establish a multi-tiered fee schedule with different rates for hospitals, hotels, office, retail/personal services, restaurants and universities.

Table 38. Variation in Employment Density and Job Wage Levels by Use

Development Use	Square Feet Per Employee	Percent of Jobs with Median Wages Below 80% of Median Income
Office	200	17% to 53%
Hotel	1,000	90%
Retail	500	44% to 95%
Restaurant	225	98%
Research and Development	440	16%

Source: Somerville OSPCD and Karl F. Seidman Consulting Services from BLS Data

There is a precedent for varying fees by type of use. Many California cities, including San Diego and San Francisco do so, as does Barnstable County in Massachusetts, which has varied fee rates for eleven different use categories. Locally, Boston, Cambridge and Somerville all use a uniform rate for all uses.

Despite the differential impacts by use, Somerville may want to continue its policy of a single fee rate across uses for administrative simplicity and competitive factors. From an administrative perspective, the occupancy use of a project may be difficult to determine for some projects and may change over time for a building. The first problem is most likely to occur for office buildings that combine general office uses with research and development, medical services or educational uses, or have large portions of a building devoted to mixed activities, as is becoming more common with collaborative and open floor space designs. There would be an incentive for owners and developers to classify mixed space as the use with a lower fee, or underestimate office space if differential contribution rates were applied. Additional administrative complexities might result from the need to allocate common areas and shared uses (e.g., reception areas, conference rooms, etc.) among different uses. Furthermore, developers and building owners might view the fees as unjustified and seek a refund or legal relief if the allocation of uses changed upon final occupancy. These problems can be addressed by having the contribution rate based on the predominant use in the building. However, this would mitigate the goal of having the fee rate reflect differential impacts.

Another issue is that building uses often change over time: ground floor space may first be rented to a retail store and later converted to a restaurant. Similarly, a building might first have an office tenant and later be converted to an institutional or research and development use.

Somerville could address this issue by basing linkage fee rates on the initial use but this could create inequitable results between buildings with stable uses and those for which uses change more often. This problem seems greatest for buildings with a larger share of ground floor commercial space which may change more frequently between retail, restaurant and office uses.

Timing of Fee Payments

Somerville, with a five-year payment period, has a relatively long time period for collecting housing linkage fees, exceeded only by Boston, at seven years. This extended payment period slows the receipt of funds and the ability to deploy them to build affordable housing and expand training services. It also adds administrative costs and complexity as the city must track, invoice, and collect payments from each project over five years. Since the affordable housing impacts from new development are likely to occur in the first year or two after project completion as the project is leased up and tenants hire new employees, the five-year payment period is not well aligned with project impacts. A single payment or shorter payment period would supply funding to build housing and implement training programs at a pace that better matches impact while simplifying fee administration and collection.

For the new jobs linkage fee, it is important to collect fees early in the development process to allow the funding and implementation of education and training programs to train residents before the project is occupied and tenants begin hiring workers. Consequently, the jobs linkage fee is appropriate to collect in a single payment at the time of building permit issuance.

Fee Adjustments

Somerville's linkage ordinance has a provision to periodically recalculate linkage fees every three years to adjust for changing market and economic conditions but does not provide for inflation-based adjustments, as is common for other communities. Somerville's policy of periodic analytically-based linkage fee adjustments is good practice to keep linkage fees current. Moreover, Somerville has been more consistent than Cambridge and Boston in undertaking these periodic updates. However, it has proven difficult to complete nexus studies and updates within this three-year time frame, with updates more likely to occur within a five- to ten-year period. Given this situation, Somerville may want to amend its ordinance to allow regular annual or biennial adjustments linked to an inflation index such as the CPI or a building cost index.

Use of Jobs Linkage Fees

With implementation of a new jobs linkage fee, policies are needed to guide the deployment of linkage revenue collected and paid into the Job Creation and Retention Trust. Somerville faces two broad options for use of job linkage funds:

1. **Project-specific training** in which linkage fees collected from a project are used to train residents for jobs with employers at that specific project; and

2. **Citywide programs** in which linkage fees collected from multiple projects are pooled and then awarded to providers to provide training for jobs with employers throughout Somerville.

The first option has several advantages. First, there is a stronger connection between the fees collected and impacts generated by the project than with the citywide training approach. Second, the availability of training dollars could be an incentive that helps Somerville and the project developer attract businesses to a new project. Third, this approach fosters relationships between the city and new employers around resident hiring, training and career ladder development that may be leveraged for future programs and benefits.

Several challenges exist to effectively implement this option. The city's working relationship for the project is with the developer but the cooperation and engagement of employers is needed to establish a new training program. This places a burden on the city to establish these relationships and a willingness of developers to initially broker this process. Additionally, employers must need to hire a sufficient number of people for the same or very similar position for a program specific to the project to be feasible. Finally, the single project linkage fee revenue needs to be large enough to cover the full costs to implement the training program and related services. These last two conditions are more likely to exist for larger projects and those with expanding employers that are adding many employees.

While the second option does not directly connect with and leverage the employment and training opportunities presented by specific projects, it is easier to implement because it draws hiring and occupational training needs among employers across Somerville. It can pool linkage revenue across projects to fund larger scale or more integrated programs and pool demand across employers to achieve economies of scale for programs. Finally, it allows for competitive awarding of funds across different occupations and program designs, and thus may allow Somerville to target funds to programs that are most likely to offer the best employment outcomes for residents.

Linkage Fee Impact on Somerville's Competitiveness

An important consideration for Somerville in establishing the housing and jobs linkage fee rates is their potential impact on attracting new development and tenants. This is a particularly important concern given that maximum combined fee rate of $89.12 per square foot ($86.43 for housing and $2.69 for jobs) would be seventeen times the current housing fee of $5.15. If adopted, this rate would be more than six times the current housing contribution rate in Cambridge ($13.5) and almost nine times Boston's combined housing and jobs exactions of $10.01. An increase in the fee rate increases development costs, which developers must offset through either paying less for land (or an existing building in the case of renovation projects), reducing their return on investment, or collecting higher rents from tenants. The last option, raising rents, may affect Somerville's competitiveness in attracting businesses to new development projects.

Table 39 compares Class A office rents for Somerville with competing areas in Cambridge, Boston and several suburban locations, including those with sizeable professional service and technology companies, such as Lexington and Waltham. A developer's capacity to pass on the cost of fees to tenants and still remain economically competitive in attracting tenants depends on rent differentials between Somerville and competing locations. Somerville's office rents are well below Boston's major office markets (Financial District, Back Bay and the Seaport District) and the mid-Cambridge and East Cambridge markets, but close to or above competing suburban locations. Somerville's average rent for recently developed buildings is $40.50, $18 below Boston's financial district and $35 below East Cambridge. With the exception of Lexington, Somerville Class A rents in newer buildings are above those in competing suburban locations, by $8.32 for Waltham and $22.50 for Quincy. For the inner suburban market, which includes many communities closest to Somerville, including Chelsea, Malden, Medford and Revere, average asking rents were $33.00 in the First Quarter of 2017, or $7.50 below Somerville office rents.

Table 39. Class A Office Rents in Somerville, Boston, Cambridge and Selected Suburbs

Market Area	Office Rent	Differential
Somerville	$40.50	
Lexington	$56.00	$15.50
Quincy	$18.00	-$22.50
Waltham	$32.18	-$8.32
Boston Inner Suburbs	$33.00	-$7.50
East Cambridge-Kendall	$75.47	$34.97
Cambridge-Mid	$67.96	$27.46
Cambridge-West/Alewife	$47.75	$7.25
Boston-Seaport	$69.08	$28.58
Boston-Financial District	$58.87	$18.37
Boston-Back Bay	$64.76	$24.26
Charlestown-East Boston	$41.32	$0.82

Source: Somerville, Lexington, Quincy, and Waltham from Costar data for buildings built within last 5 years; other areas from Lincoln Property Office Report 1st Quarter 2017, Class A asking rents.

The maximum combined housing and jobs linkage fee, based on the city covering 100% of the financing gap is $89.12 per square foot of new development—an $83.97 increase over the current rate. If a developer passed on this increase in full to tenants, rents would increase by $8.40 per square foot for a ten-year lease[31]—a 21% increase in Somerville's Class A office rent (see Table 40). This would leave rent differentials of almost $10 with Boston's Financial District and over $26 with Kendall Square, but erase the city's advantage over the Alewife section of Cambridge and make Somerville less competitive with suburban locations by more than doubling its rent premium over Waltham and inner suburbs.

[31] This calculation is based on the current 30,000 square foot exemption, 85% net leasable space and a building size of 200,000 gross square feet.

Table 40. Potential Impact of Maximum Fee on Boston Class A Office Rents

Maximum Housing Fee	$86.43
Maximum Jobs Fee	$2.69
Total Combined Fee	$89.12
Existing Linkage Fee	$5.15
Increase in Fee	$83.97
Cost per Leased Square Foot	$83.97
Amortized over Ten Year Lease	$8.40
Amortized Fee as Percent of Class A Rent	20.7%

Developers are constrained in their ability to pass on the cost of additional fees to tenants by competition from outside Somerville and existing Somerville buildings that are not subject to linkage fees. If developers are unable to pass on the fee to tenants or reduce their property acquisition costs, linkage fees will increase their required equity investment and reduce their rate of return. A large negative impact on investment returns creates a risk that developers may decide to pursue projects in more profitable locations or impair their ability to raise equity capital, making new development projects infeasible. Table 41 presents the estimated impact on a developer's return on equity assuming "worst case" in which the full cost of the additional fees are paid by an increase in the developer's cash equity under scenarios in which the developer would earn a 6% and 8% return prior to the fee increase. With the maximum fee increase of $83.97 per square foot, a developer's annual return on investment from the building's net income would decrease from 8% to 4.72% or from 6% to 3.54%. These represent a 41% decline in expected investment returns, which indicates that if the maximum fee was adopted and most of the increase had to be paid with developer equity, it is likely to deter new investment in Somerville's office development.

Table 41. Potential Impact of Maximum Fee on Developer Investment Return

Investment Parameter	8% Investment Return	6% Investment Return
Original Equity Investment*	$20,500,000	$20,500,000
Additional Fees at $83.97 PSF	$14,274,900	$14,274,900
New Equity Total	$34,774,900	$34,774,900
Investment Income+	$1,640,000	$1,230,000
New Return on Investment	4.72%	3.54%
Change in Investment Return	-3.28	-2.46
Percent Change in Returns	-41%	-41%

Impact of Alternative Fee Scenarios on Rents and Returns

Since adoption of the maximum warranted linkage fees is likely to impair Somerville's competitive position for attracting new businesses and real estate investment, the impact of two alternative fee scenarios was analyzed. This analysis also considered the combined impact of

linkage fees and $7.74 per square foot in other impact fees that Somerville has or is considering adopting[32]. The two scenarios analyzed are:

1. Scenario One: setting the housing linkage fee at $19.73 (equal to AHTF's recent share of the financing gap) and jobs linkage fee at $2.44.
2. Scenario Two: setting the housing linkage fee at $8.50 and jobs linkage fee at $2.50 so that Somerville linkage fees are in a comparable range to Boston ($10.01) and Cambridge ($13.50).

The results of this analysis are presented in Table 42. If the full increase in linkage and other fees are passed on to tenants via increased rents, the impact would be modest: rents would increase by $2.48 under Scenario One and $1.36 under Scenario Two based on a ten-year lease. These relatively small rent increases are unlikely to be a deciding factor for tenants and alter Somerville's competitive position relative to Boston, Cambridge and suburban communities.

In terms of investment returns, the impact is more significant, especially under Scenario One. Developer returns could drop by 102 to 136 basis points under Scenario One, if the full fee costs are paid with additional developer equity. Under Scenario Two, the impact is smaller ranging from 61 to 81 basis points. These are not so large as to make Somerville uncompetitive for real estate investment, especially since developers are likely to be able to offset at least part of the increased fee cost in other ways. However, since Somerville is still an emerging office real estate market and is competing with more established and higher rent markets in Boston, Cambridge and the strongest suburbs, developers and investors may perceive it as a higher risk location for investment. Consequently, Somerville should be careful not to set an overall level of fees that developers view as too burdensome and change the perceived risk/return balance, particularly relative to Cambridge and Boston.

Table 42. Potential Impact on Class A Office Rents and Developer Returns Under Alternative Linkage Fee Scenarios

Fee Component/Impact	Scenario One	Scenario Two
Combined Fee Cost per Leased SF	$29.91	$18.74
Increase from Current Linkage Fee	$24.76	$13.59
Impact on Rent Amortized over 10-Year Lease	$2.48	$1.36
Amortized fee as % of Somerville Rent	6.11%	3.36%
Impact on Developer Returns: 6% Base	-1.02%	-.81%
Impact on Developer Returns: 8% Base	-1.36%	-.61%

Source: Karl F. Seidman Consulting Services

[32] These include $2.40 for funding the Green Line extension, $2.00 for Union Square infrastructure, $1.60 for community benefits, and $1.74 to address storm water impacts.

Recommended Linkage Fee Rates and Policy Changes

The analysis detailed in this report supports an increase in Somerville's housing linkage fee and establishes the nexus and warranted fee level for the newly authorized jobs linkage fee. Projected construction of 2.21 million square feet in non-residential development over the next ten years is expected to generate 8,899 jobs. This employment growth will create demand for 591 new units of housing for very-low, low-income, and moderate-income households; and expanded workforce education and training services to serve 1,330 residents. An estimated financing gap of $162.5 million will exist to reach the $248 million in total development costs necessary to build the new affordable housing units. For workforce development services, a smaller funding gap of $4.58 to $5.05 million is needed to address development impacts. The maximum warranted housing and jobs linkage fees to fill these financing gaps are $86.43 per square foot and $2.44 to $2.69 per square foot, respectively.

Setting the final linkage fee rates is a matter of balancing public policy goals and considering both the need to address increased demand for affordable housing and workforce development services with the potential impacts of an increased rate on the city's future development. Given Somerville's goal to expand its employment base to create 30,000 new jobs and its emerging status as a location for Class A office and research space, it is important for Somerville to set linkage fees that are comparable to Boston and Cambridge rates. This rate level sustains Somerville's rent advantage over these key competitor cities, keeps its rents in line with major suburban alternatives and avoids developers perceiving Somerville as being less supportive of new investment as the result of establishing linkage fee rates above its neighboring cities.

A combined jobs and housing linkage fee in the range of $10.00 to 12.50 is recommended, placing Somerville at or slightly above Boston and below Cambridge, with the housing linkage fee between $8.00 and $10.00 per square foot and the jobs linkage fee between $2.00 and $2.50 per square foot. By adopting a rate in the $10.00 to $12.50 range (without, as noted below, an exemption for the first 30,000 square feet), Somerville will lessen the potential for adverse impacts on the city's commercial rents and competitiveness in attracting and retaining businesses and continued investment. As discussed in the prior section, if increased linkage fees of $11 per square foot in combination with other new exactions are fully passed on to tenants, it will increase annual rents by $1.36, or a 3.3% increase over the city's Class A office rents for newer buildings. Alternatively, if the additional exaction costs are fully absorbed by developers without increasing rents, its impact on investment returns would be limited, reducing them by .61 to .81 percentage points.

Table 43. Recommended Housing and Jobs Linkage Fee Rates

Fee Type	With 30,000 SF Exemption	Without 30,000 SF Exemption
Jobs Fee Rate	$2.00 to $2.50	$1.70 to $2.13
Housing Fee Rate	$8.00 to $10.00	$6.81 to $7.23
Combined Rate	$10.00 to $12.50	$8.51 to $9.36

Source: Karl F. Seidman Consulting Services

It is recommended that a two-stage approach regarding the usage of the jobs linkage fees be implemented. Under this approach, in the first stage, the jobs linkage fees collected from a project would be reserved to implement job training and education services linked to employers and jobs at the project. City planning and economic development staff would then meet with the project developer and confirmed tenant firms to discuss hiring plans and training needs and the potential to provide education and training for Somerville residents specific to the firms and project. Based on these meetings and discussions and consultation with potential training providers, a decision would be made on whether it is feasible to implement a training program specific to the project. If project-specific training was deemed feasible, Somerville economic development staff would convene meetings between the employer(s) and training and education providers on the implementation of the project-specific training, including specific dates and milestones to ensure implementation progress. When project-specific training is deemed infeasible, the second stage approach to jobs linkage revenue would apply and fees would be paid into a general fund of the Municipal Job Creation and Retention Trust to be awarded through a competitive RFP process for citywide training programs. In the event that project-specific training programs incurred hurdles and could not be implemented, the reserved linkage fees for the project would be released and transferred into the Trust's general fund. Given the time needed to manage the RFP and funding process, implement new training programs and monitor and evaluate employment outcomes, competitive RFPs by the Municipal Job Creation and Retention Trust are likely to be conducted every two to four years. For project-specific and general fund training programs, the Trust should encourage and give priority to programs with the following practices:

- Integration of ABE and ESOL services with training for entry level jobs and programs serving residents with these educational needs;
- Post-employment follow-up and support services to increase residents' successful transition to and retention at their new job; and
- Career advancement and job ladder services when feasible, given the opportunities within the occupation, industry and Somerville employers.

Several additional changes to the current linkage policies are recommended to simplify fee policies and their administration and accelerate collection and deployment of fee revenue:

- Shorten the housing linkage fee payment schedule to three payments made on the building certificate of occupancy (C of O) date; one year after C of O and two years after C of O;
- Use of a single payment at the building permit date for the jobs linkage fee to provide upfront payment needed to fund job training in advance of building occupancy and employment;
- Consolidate the payment schedule for each annual payment after C of O to January 15 (for initial C of O between January 1 and June 30) and July 15 (for initial C of O between July 1 and December 31) to simplify book keeping and administration of fee collection;

- Continue the current policy of reevaluating and updating linkage fees based on a nexus analysis every five years; and
- Establish an annual inflation rate adjustment based on the Boston CPI or alternative index.

Appendix A: Definitions of Economic Sectors

Construction sector comprises establishments primarily engaged in the construction of buildings or engineering projects (e.g., highways and utility systems). Establishments primarily engaged in the preparation of sites for new construction and establishments primarily engaged in subdividing land for sale as building sites also are included in this sector.

Manufacturing sector comprises establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is appropriately classified in Sector 23, Construction.

Utilities sector comprises establishments engaged in the provision of the following utility services: electric power, natural gas, steam supply, water supply, and sewage removal. Within this sector, the specific activities associated with the utility services provided vary by utility: electric power includes generation, transmission, and distribution; natural gas includes distribution; steam supply includes provision and/or distribution; water supply includes treatment and distribution; and sewage removal includes collection, treatment, and disposal of waste through sewer systems and sewage treatment facilities.

Wholesale Trade sector The Wholesale Trade sector comprises establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The merchandise described in this sector includes the outputs of agriculture, mining, manufacturing, and certain information industries, such as publishing.

Retail Trade sector comprises establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The retailing process is the final step in the distribution of merchandise; retailers are, therefore, organized to sell merchandise in small quantities to the general public. This sector comprises two main types of retailers: store and nonstore retailers.

Transportation and Warehousing sector includes industries providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Establishments in these industries use transportation equipment or transportation related facilities as a productive asset. The type of equipment depends on the mode of transportation. The modes of transportation are air, rail, water, road, and pipeline.

The Utilities, Wholesale Trade, Retail Trade, and Transportation and Warehousing were combined and presented as Trade, Transportation and Utilities in the study report.

Information sector comprises establishments engaged in the following processes: (a) producing and distributing information and cultural products, (b) providing the means to transmit or distribute these products as well as data or communications, and (c) processing data. The main components of this sector are the publishing industries, including software publishing, and both traditional publishing and publishing exclusively on the Internet; the motion picture and sound recording industries; the broadcasting industries, including traditional broadcasting and broadcasting exclusively over the Internet; the telecommunications industries; and Web search portals, data processing industries, and the information services industries.

Financial and Insurance sector comprises establishments primarily engaged in financial transactions (transactions involving the creation, liquidation, or change in ownership of financial assets) and/or in facilitating financial transactions. Three principal types of activities are identified:

1. Raising funds by taking deposits and/or issuing securities and, in the process, incurring liabilities. Establishments engaged in this activity use raised funds to acquire financial assets by making loans and/or purchasing securities. Putting themselves at risk, they channel funds from lenders to borrowers and transform or repackage the funds with respect to maturity, scale, and risk. This activity is known as financial intermediation.
2. Pooling of risk by underwriting insurance and annuities. Establishments engaged in this activity collect fees, insurance premiums, or annuity considerations; build up reserves; invest those reserves; and make contractual payments. Fees are based on the expected incidence of the insured risk and the expected return on investment.
3. Providing specialized services facilitating or supporting financial intermediation, insurance, and employee benefit programs.

Monetary authorities charged with monetary control are included in this sector.

Real Estate and Renting and Leasing sector comprises establishments primarily engaged in renting, leasing, or otherwise allowing the use of tangible or intangible assets, and establishments providing related services. The major portion of this sector comprises establishments that rent, lease, or otherwise allow the use of their own assets by others. The assets may be tangible, as is the case of real estate and equipment, or intangible, as is the case with patents and trademarks. This sector also includes establishments primarily engaged in managing real estate for others, selling, renting and/or buying real estate for others, and appraising real estate. These activities are closely related to this sector's main activity, and from a production basis they are included here. In addition, a substantial proportion of property management is self-performed by lessors.

The Finance and Insurance sector and Real Estate sector were combined and presented as Financial Activities in the study report.

Management of Companies and Enterprises sector comprises (1) establishments that hold the securities of (or other equity interests in) companies and enterprises for the purpose of owning a controlling interest or influencing management decisions or (2) establishments (except government establishments) that administer, oversee, and manage establishments of the company or enterprise and that normally undertake the strategic or organizational planning and decision-making role of the company or enterprise. Establishments that administer, oversee, and manage may hold the securities of the company or enterprise.

Professional, Scientific and Technical Services sector comprises establishments that specialize in performing professional, scientific, and technical activities for others. These activities require a high degree of expertise and training. The establishments in this sector specialize according to expertise and provide these services to clients in a variety of industries and, in some cases, to households. Activities performed include: legal advice and representation; accounting, bookkeeping, and payroll services; architectural, engineering, and specialized design services; computer services; consulting services; research services; advertising services; photographic

services; translation and interpretation services; veterinary services; and other professional, scientific, and technical services.

Administrative and Support and Waste Management and Remediation Services sector comprises establishments performing routine support activities for the day-to-day operations of other organizations. These essential activities are often undertaken in-house by establishments in many sectors of the economy. The establishments in this sector specialize in one or more of these support activities and provide these services to clients in a variety of industries and, in some cases, to households. Activities performed include: office administration, hiring and placing of personnel, document preparation and similar clerical services, solicitation, collection, security and surveillance services, cleaning, and waste disposal services

The Management of Companies, Professional, Scientific and Technical Services, and Administrative and Support/Waste Management and Remediation Services sectors were combined and presented as Professional and Business Services in the study report.

Educational Services sector comprises establishments that provide instruction and training in a wide variety of subjects. This instruction and training is provided by specialized establishments, such as schools, colleges, universities, and training centers. These establishments may be privately owned and operated for profit or not for profit, or they may be publicly owned and operated. They may also offer food and/or accommodation services to their students.

Health Care and Social Assistance sector comprises establishments providing health care and social assistance for individuals. The sector includes both health care and social assistance because it is sometimes difficult to distinguish between the boundaries of these two activities. The industries in this sector are arranged on a continuum starting with establishments providing medical care exclusively, continuing with those providing health care and social assistance, and finally finishing with those providing only social assistance. Establishments in this sector deliver services by trained professionals. All industries in the sector share this commonality of process, namely, labor inputs of health practitioners or social workers with the requisite expertise.

The Education Services and Health Care/Social Assistance sectors were combined and presented as Education and Health Services in the study report.

Arts, Entertainment, and Recreation sector includes a wide range of establishments that operate facilities or provide services to meet varied cultural, entertainment, and recreational interests of their patrons. This sector comprises (1) establishments that are involved in producing, promoting, or participating in live performances, events, or exhibits intended for public viewing; (2) establishments that preserve and exhibit objects and sites of historical, cultural, or educational interest; and (3) establishments that operate facilities or provide services that enable patrons to participate in recreational activities or pursue amusement, hobby, and leisure-time interests.

Accommodation and Food Services sector comprises establishments providing customers with lodging and/or preparing meals, snacks, and beverages for immediate consumption. The sector

includes both accommodation and food services establishments because the two activities are often combined at the same establishment.

The Arts/Entertainment/Recreation and Accommodation/Food Services sectors were combined and presented as Leisure and Hospitality in the study report.

Other Services (except Public Administration) sector comprises establishments engaged in providing services not specifically provided for elsewhere in the classification system. Establishments in this sector are primarily engaged in activities such as equipment and machinery repairing, promoting or administering religious activities, grant making, advocacy, and providing dry-cleaning and laundry services, personal care services, death care services, pet care services, photofinishing services, temporary parking services, and dating services. Private households that engage in employing workers on or about the premises in activities primarily concerned with the operation of the household are included in this sector.

Public Administration sector consists of establishments of federal, state, and local government agencies that administer, oversee, and manage public programs and have executive, legislative, or judicial authority over other institutions within a given area. These agencies also set policy, create laws, adjudicate civil and criminal legal cases, and provide for public safety and for national defense. In general, government establishments in the Public Administration sector oversee governmental programs and activities that are not performed by private establishments

INTRODUCTION

The following report summarizes an analysis of the impacts of non-residential development on the demand for affordable housing in the City of San Diego (City). The report has been prepared by Keyser Marston Associates, Inc. for the San Diego Housing Commission (SDHC), in order to assist the City in updating its housing impact fee program.

Background

The City of San Diego Housing Impact Fee Ordinance was established in 1990 to address the affordable housing demand created by non-residential development. Keyser Marston Associates, Inc. (KMA) performed the nexus analysis in support of the housing impact fees. In 1996, the fees were reduced by 50%. Subsequently the City and SDHC embarked on several efforts to update the nexus analysis and consider changes in the housing impact fees, as follows:

- In 2002, the City Council declared a "State of Emergency Due to Severe Shortage of Affordable Housing in San Diego." As part of the response to the housing shortage, the City commissioned KMA to conduct a fully updated nexus analysis. The nexus study was completed in December 2004 but was never formally presented to SDHC or the City.

- In 2008, KMA, at the request of SDHC, reviewed and partially updated the 2004 report. Like the 2004 report, the 2008 review was never formally presented.

- In September 2009, the City Council's Land Use and Housing Committee recommended that the impact fee program be reviewed and evaluated and in October 2009, the City Council approved the Committee's recommendation. As a result, KMA completed a new nexus analysis in October 2010. The KMA study, and SDHC's recommendation for increased fee levels, were presented to the City Council in July 2011. The Council did not adopt SDHC's proposal to increase fee levels.

- The present study was requested by SDHC in March 2013 and comprises a comprehensive update of KMA's 2010 study.

Purpose

The purpose of a nexus analysis is to document the linkages among construction of new workplace buildings (such as office, retail, hotel, etc.), the employees that work in them, and the demand for affordable housing. Since the jobs in all buildings cover a range of compensation levels, and the households a range of sizes, there is need for additional housing at all affordability levels. This analysis quantifies the housing need at each affordability level associated with each type of workplace building.

The analysis is conducted to meet the requirements of several U.S. Supreme Court decisions and also California Code Section 66000 and following. Such analyses are called linkage, or nexus, analyses.

Analysis Scope

This analysis examines the types of workplace buildings that are listed in the existing Housing Impact Fee ordinance as follows:

- Office
- Hotel and other lodging
- Retail/entertainment
- Research and Development/manufacturing/industrial
- Warehouse/storage

The following affordability levels are addressed in the analysis:

- Very Low Income (under 50% of Area Median Income, or AMI)
- Low Income (50% to 80% AMI)
- Moderate Income (80% to 120% AMI)

Report Organization

The report is organized into five sections as follows:

- Section I – presents a summary of the nexus concept and some of the key issues and underlying assumptions in the analyses linking jobs and housing demand.

- Section II – provides an overview of the historical and projected growth of jobs and housing in the City.

- Section III – presents an analysis of the jobs and housing relationships associated with individual prototype workplace buildings and concludes with a quantification of the number of households at each income level associated with each building type.

- Section IV – contains a summary of the costs of delivering housing units affordable to households at the income levels under study, allocated to each square foot of building area.

- Section V – provides materials to assist policy makers in evaluating alternative fee levels, including possible indices for increasing the level of the fee over time. The material in this section is not part of the nexus analysis.

- Appendix A – presents a summary matrix of key analysis assumptions and discussion of specific factors in relation to the nexus concept.

- Appendix B – contains supporting information related to worker occupations and incomes.

- Appendix C – contains supporting information related to the affordability gap calculations.

Data Sources and Qualifications

The analyses in this report have been prepared using the best and most recent data available. Local data were used whenever possible. The major sources were the U.S. Census Bureau's 2009-2011 American Community Survey, the U.S. Bureau of Labor Statistics, the California Employment Development Department, and San Diego Association of Governments (SANDAG). While we believe all sources utilized are sufficiently accurate for the purposes of the analyses, we cannot guarantee their accuracy. Keyser Marston Associates, Inc. (KMA) assumes no liability for information from these and other sources.

SECTION I – THE NEXUS CONCEPT AND MAJOR ISSUES

Introduction

This section outlines the nexus concept and some of the key issues surrounding the linking of new non-residential development to the demand for new residential units in the City of San Diego. The nexus analysis and discussion focus on the relationships among development, growth, employment, income of workers, and demand for affordable housing. The analysis yields a connection between new construction of the types of buildings in which there are workers and the need for additional affordable housing, a connection that is quantified both in terms of number of units and the amount of subsidy assistance needed to make the units affordable.

The Legal Basis and Context

The first housing linkage programs were adopted in the cities of San Francisco and Boston in the mid-1980s. To support the linkage, the City of San Francisco commissioned an analysis to show the relationships, or what might now be characterized as an early version of a nexus analysis. Since that time there have been several court cases and California statutes that affect what local jurisdictions must demonstrate when imposing impact fees on development projects. The most important U.S. Supreme Court cases are Nollan v. California Coastal Commission and Dolan v. City of Tigard (Oregon). The rulings on these cases, and others, help clarify what governments must find in the way of the nature of the relationship between the problem to be mitigated and the action contributing to the problem. Here, the problem is the lack of affordable housing and the action contributing to the problem is building workspaces that mean more jobs and worker households needing more affordable housing.

Following the Nollan decision in 1987, the California legislature enacted AB 1600 which requires local agencies proposing an impact fee on a development project to identify the purpose of the fee, the use of the fee, and to determine that there is a reasonable relationship between the fee's use and the development project on which the fee is imposed. The local agency must also demonstrate that there is a reasonable relationship between the fee amount and the cost of mitigating the problem that the fee addresses. Studies by local governments designed to fulfill the requirements of AB 1600 are often referred to as AB 1600 or "nexus" studies.

One court case that involved housing linkage fees was Commercial Builders of Northern California v. City of Sacramento. The commercial builders of Sacramento sued the City following the City's adoption of a housing linkage fee. Both the U.S. District Court and the Ninth Circuit Court of Appeals upheld the City of Sacramento and rejected the builders' petition. The U.S. Supreme Court denied a petition to hear the case, letting stand the lower court's opinion. The authors of this nexus study were the authors of the Sacramento study.

Since the Sacramento case in 1991 there have been several additional court rulings reaffirming and clarifying the ability of California cities to adopt impact fees. A notable case was the San Remo Hotel v. the City and County of San Francisco, which upheld the impact fee levied by the City and County on the conversion of residence hotels to tourist hotels and other uses. The court found that a suitable nexus, or deleterious impact, had been demonstrated. In 2009, in the Building Industry Association of Central California v. the City of Patterson, the Court invalidated the City's fee since the impact of the proposed project as related to the fee had not been demonstrated. The most recent ruling was in 2010 when the court upheld most of the impact fees levied by the City of Lemoore in Southern California. Of note relevant to housing impact fees was the judges' opinion that a "fee" may be "established for a broad class of projects by legislation of general applicability….the fact that specific construction plans are not in place does not render the fee unreasonable." In other words, cities do not have to identify specific affordable housing projects to be constructed at the time of adoption.

In summary, the case law at this time appears to be fully supportive of jobs/housing impact fees such as the impact fee that has been in place in the City of San Diego since 1990 and is the subject of this nexus analysis.

The Nexus Methodology

An overview of the basic nexus concept and methodology is helpful to understanding the discussion and concepts presented in this section. This overview consists of a quick "walk through" of the major steps of the analysis. The nexus analysis links new commercial buildings (or other workplaces) with new workers in the City; these workers demand additional housing in proximity to the jobs, a portion of which needs to be affordable to the workers in lower and middle income households.

The methodology utilized in this analysis is a "micro" analysis that examines individual buildings. The micro nexus readily lends itself to quantification that serves as a basis for quantifying the nexus cost, or basis for the fee amount, for each building type.

To illustrate the micro nexus, very simply, we can walk through the major calculations of a building. We begin by assuming a prototypical building of some specific size and then make calculations as follows:

- We estimate the total number of employees working in the building based on average employment density experience.

- We use occupation and income information for typical job types in the building to calculate how many of those jobs pay compensation at the levels addressed in the analysis. Compensation data is from the California Employment Development Department (EDD) and is specific to San Diego County as of 2012. Worker occupations by building type are derived from the 2012 Occupational Employment Survey by the U.S. Bureau of Labor Statistics.

- We know from the Census that most employees are members of households where more than one person is employed and the number of workers by household size; we use factors derived from the Census to translate number of workers into households of various size represented in each income category.

- Then, we calculate how many of the Very Low-, Low-, and Moderate-Income households are associated with the building and divide by the building size to arrive at coefficients of housing units per square foot of building area.

- In the last step, we multiply the number of lower income households per square foot by the costs of delivering housing units affordable to these income groups.

The factors and relationships utilized in the analysis reflect long-term average conditions. Short-term conditions, such as a recession or a vigorous boom period, are not an appropriate basis for estimating impacts over the life of the building.

The Relationship between Job Growth and Population Growth

A major social issue driving this analysis is growth in lower and middle income households. New population growth in most U.S. regions occurs primarily as a result of job growth. Over the long term, the vast majority of growth in the State of California and its sub-regions is job-driven. Many people coming to the region would not come if they could not expect to find a job. People born in the local area would not stay without jobs. This is the long-term pattern. In the short-term, economic cycles and other factors can result in population growth without jobs to support the growth. If an economic region in the U.S. does not maintain job growth, there is an out-migration to regions where job growth is occurring. Many cities in the Midwest during the 1970s and 1980s are examples of this outmigration, and some U.S. cities continued to lose population in more recent decades.

Not all population growth in San Diego is the result of new jobs in the region. Retirees, students, and others who are not part of the work force all generate demand for housing. However, non-working households are not included in the analysis since the purpose is to demonstrate the linkage between new buildings, new workers, and demand for housing. Since only working households are part of this equation, the demand for housing generated by non-working households is excluded.

The Relationship between Construction and Job Growth

Employment growth does not have one cause. Many factors underlie the reasons for growth in employment in a given region; these factors are complex, interrelated, and often associated with forces at the national and international levels. One of the factors is the delivery of new workplace buildings. The nexus argument does not make the case that the construction of new buildings is solely responsible for growth. However, new construction is uniquely important, first, as one of a number of parallel factors contributing to growth, and second, as a unique and essential condition precedent to growth.

As to the first, construction itself encourages growth. When the State economy is growing, the most rapidly growing areas in the State are those where new construction is vigorous as a vital industry. In regions such as San Diego where multiple forces of growth exist, the political and regulatory environment join forces with the development industry to attract growth by providing new work spaces, particularly those of a speculative nature. The development industry frequently serves as a proactive force inducing growth to occur or be attracted to specific geographic areas or locations.

Second, workplace buildings bear a special relationship to growth, different from other parallel causes, in that buildings are a *condition precedent* to growth. Job growth does not occur in modern service economies without buildings to house new workers. Unlike other factors that are responsible for growth, buildings play the additional unique role that growth cannot occur without them for a sustained period of time. Conversely, it is well established that the inability to construct new workplace buildings will constrain or even halt job growth.

Addressing the Housing Needs of a New Population vs. the Existing Population

The Housing Element of the City of San Diego and SDHC have clearly documented that the housing needs of the existing lower and middle income households are not being met. This existing housing shortage, especially at the lowest income levels, is manifested in numerous ways such as payment of far more than 30% of income for rent as set forth in Federal and State guidelines, overcrowding, and other factors that are extensively documented by the Census and other reports.

This nexus study does not address the housing needs of the existing population. Rather, the study focuses exclusively on documenting and quantifying the housing needs of new households where an employee works in a new workplace building.

Local analyses of housing conditions have found that new housing affordable to lower and moderate income households is not being added to the supply in sufficient quantity to meet the needs of new employee households. If this were not the case, and significant numbers of units were being added to

the supply to accommodate the low to moderate income groups, or if residential units in the City were experiencing significant long-term vacancy levels, particularly in affordable units, then the need for new units would be questionable.

Substitution Factor

Any given new building in the City of San Diego may be occupied partly, or even perhaps totally, by employees relocating from elsewhere in the City. Buildings are often leased entirely to firms relocating from other buildings in the same jurisdiction. However, when a firm relocates to a new building from elsewhere in the region, there is a space in an existing building that is vacated and occupied by another firm. That building in turn may be filled by some combination of newcomers to the area and existing workers. Somewhere in the chain there are jobs new to the region. The net effect is that new buildings accommodate new employees, although not necessarily inside of the new buildings themselves.

Indirect Employment and Multiplier Effects

The multiplier effect refers to the concept that the income generated by a new job recycles through the economy and results in additional jobs. The total number of jobs generated is broken down into three categories – direct, indirect, and induced. In the case of the nexus analysis, the direct jobs are those located in the new workplace buildings that would be subject to the linkage fee. Multiplier effects encompass indirect and induced employment. Indirect jobs are generated by suppliers to the businesses located in the new workplace buildings. Finally, induced jobs are generated by local spending on goods and services by employees.

Multiplier effects vary by industry. Industries that draw heavily on a network of local suppliers tend to generate larger multiplier effects. Industries that are labor-intensive also tend to have larger multiplier effects as a result of the induced effects of employee spending.

Theoretically, a jobs/housing nexus analysis could consider multiplier effects although the potential for double-counting exists to the extent that indirect and induced jobs are added in other new buildings in the City of San Diego subject to the linkage fee. KMA chooses to omit the multiplier effects (the indirect and induced employment impacts) to avoid potential double-counting and make the analysis more conservative.

In addition, the nexus analysis addresses direct “inside” employment only. In the case of an office building, for example, direct employment covers the various managerial, professional, and clerical people that work in the building; it does not include the janitorial workers, the window washers, the security guards, the delivery services, the landscape maintenance workers, and many others that are associated with the normal functioning of an office building. In other words, any analysis that ties lower income housing to the number of workers inside buildings will continue to understate the demand.

Thus, confining the analysis to the direct employees does not address all the low to moderate income workers associated with each type of building and understates the impacts.

Changes in Labor Force Participation

In the 1960s through the 1980s, there were significant increases in labor force participation, primarily among women. As a result, some of the new workers were re-entering the labor force and already had local housing, thus reducing demand for housing associated with job growth. In earlier nexus analyses, KMA would adjust the analysis to account for this. However, increases in participation rates by women have stabilized and even declined slightly, and labor force participation rates for men have been on a downward trajectory since 1970. As such, an adjustment for increase in labor force participation is no longer warranted in a nexus analysis.

Economic Cycles

An impact analysis of this nature is intended to support a one-time impact requirement to address impacts generated over the life of a project (generally 40 years or more). Short-term conditions, such as a recession or a vigorous boom period, are not an appropriate basis for estimating impacts over the life of the building. These cycles can produce impacts that are higher or lower on a temporary basis.

Development of new workspace buildings tends to be minimal during a recession and generally remains minimal until conditions improve or there is confidence that improved conditions are imminent. When this occurs, the improved economic condition will absorb existing vacant space and underutilized capacity of existing workers, employed and unemployed. By the time new buildings become occupied, current conditions will have likely improved.

To the limited extent that new workspace buildings are built during a recession, housing impacts from these new buildings may not be fully experienced immediately, though, the impacts will be experienced at some point. New buildings delivered during a recession can sometimes sit vacant for a period after completion. Even if new buildings are immediately occupied, overall absorption of space can still be zero or negative if other buildings are vacated in the process. Jobs added may also be filled in part by unemployed or underemployed workers who are already housed locally. As the economy recovers, firms will begin to expand and hire again filling unoccupied space as unemployment is reduced. New space delivered during the recession still adds to the total supply of employment space in the region. Though the jobs are not realized immediately, as the economy recovers and vacant space is filled, this new employment space absorbs or accommodates job growth. Although there may be a delay in time, the fundamental relationship between new buildings, added jobs, and housing needs remains over the long term.

In contrast, during a vigorous economic boom period, conditions exist in which elevated impacts are experienced on a temporary basis. As an example, compression of employment densities can occur as firms add employees while making do with existing space. Compressed employment densities mean more jobs added for a given amount of building area. Boom periods also tend to go hand-in-hand with rising development costs and increasing home prices. These factors can bring market rate housing out of reach from a larger percentage of the workforce and increase the cost of delivering affordable units.

Discount for Changing Industries / Long-Term Declines in Employment

While short-term declines in employment related to economic cycles do not warrant an adjustment in the nexus analysis for the reasons described above, long-term or structural declines in specific industry sectors do warrant an adjustment.

It is general practice to examine major sectors of the local economy and determine if there are long-term trends in employment suggesting either decline or restructuring. In the case of long-term decline of one or more industries or sectors, it is appropriate to recognize that all new jobs may not be net new jobs. On the other hand, as discussed above, short-term temporary declines in employment do not warrant an adjustment. In San Francisco, by way of example, there was major long-term economic decline in the industrial land use activity sectors, as evidenced by the decline of the Port and its related activities. During the 1980s in that city, for every job gained in an office building, there was more than half a job lost in the industrial sector. Short-term upheavals such as the closing of a military base or single large manufacturing plant may also warrant an adjustment in the analysis.

San Diego's economy, like that of the U.S. as a whole, is constantly evolving. In recent years, the region's economy has become more diverse and less reliant upon military and defense industries. A few industry sectors in San Diego have experienced long-term declines in employment, as shown in Table I-1. Industry sectors experiencing long-term declines in employment include aerospace, computer and electronics manufacturing, banking, and durable goods manufacturing, among others. These are jobs that, once lost, never return and so the workers are forced to find employment in other industries. Declining industries may occupy special purpose space not readily re-occupied by other types of industries or tenants and therefore be taken out of the supply. Over time, displaced workers will presumably find new work locally and thus some of the employment in new buildings would be for workers who would not be new to the City or County and who already have housing. Based on the data in Table I-1, a 16% downward adjustment to the findings of the analysis is made to account for permanent job losses and downsizing in declining industries. The 16% adjustment factor is the equivalent of saying about one of every six jobs added is filled by a worker that has been downsized from a declining industry and already lives locally. This is likely conservative given it derived from declines in employment between 1990, when the unemployment rate was 4.6%, and 2012 with an

unemployment rate of 8.9%. Some of the decline in employment between the two periods could be the result of cyclical conditions and a higher unemployment rate in 2012. Never-the-less, the analysis conservatively assumes the entire decrease in employment is the result of a permanent structural change.

Other City of San Diego Affordable Housing Programs

The City of San Diego is committed to creating new opportunities for affordable housing as well as preserving the existing affordable housing stock.

SDHC was established by the City as a public agency dedicated to preserving and increasing affordable housing within the City of San Diego. Since 1981, SDHC has contributed more than nearly $1.3 billion in loans and bond financing to projects that produced 14,500 affordable units. The City has a comprehensive and multi-faceted program that tackles the affordable housing shortage from many approaches. The Housing Impact Fee program is but one of many financial resources that the City uses to increase the supply of affordable housing in San Diego.

TABLE I-1

SAN DIEGO COUNTY INDUSTRIES EXPERIENCING LONG-TERM DECLINES IN EMPLOYMENT
JOBS-HOUSING NEXUS STUDY
CITY OF SAN DIEGO, CA

INDUSTRIES WITH LONG-TERM DECLINES IN EMPLOYMENT / SAN DIEGO COUNTY	1990 TOTAL EMPLOYMENT	2012 [2] TOTAL EMPLOYMENT	CHANGE SINCE 1990 Total	Percent
Unemployment Rate in San Diego County (1)	4.6%	8.9%		
Industries With Declining Long-Term Employment				
Aerospace Product & Parts Manufacturing	22,900	6,800	(16,100)	-70.3%
Computer & Electronic Product Manufacturing	32,400	24,700	(7,700)	-23.8%

GROWING and STABLE INDUSTRIES	686,500	1,020,400	333,900	48.6%
TOTAL EMPLOYMENT IN SAN DIEGO COUNTY	977,400	1,258,800	281,400	28.8%
Decline in Employment in Declining Industries			(52,500)	
Growth in Employment in Growing / Stable Industries			333,900	
Jobs in growth industries filled by workers from declining industries			-15.7%	
Adjustment to analysis results: For every new job, the percent filled by employees from declining industries		round to	-16%	

[1] As of March of each year.

[2] Conservative approach for evaluating declining industries given higher unemployment rate in 2012 to 1990. Higher unemployment rate in 2012 compared to 1990 will tend to over-state the long term or structural declines in certain industries. A portion of the indicated decline is likely explained by cyclical market conditions in 2012 as compared to 1990.

SECTION II – MACRO ECONOMIC JOBS/HOUSING ANALYSIS

This section examines the relationships in San Diego that underlie the jobs/housing linkage. In particular, the history of employment growth, housing production, and affordable housing production are reviewed. The history of housing production, particularly affordable housing production, compared with the demand generated by new workers is also examined.

In addition to historical data, this section contains a projection of jobs and dwelling units, as indicated by local and Statewide planning agencies, such as SANDAG. It must be emphasized, however, that the nexus relationships as established in this analysis are not contingent upon a specific projected level of employment growth being realized. The relationships linking employment and affordable housing are critical to the nexus, but the specific projected levels of growth are not. If employment growth occurs more slowly than projected, construction and housing demand will also be less than projected. In addition, in this analysis, linkages are established on a per-square-foot basis (Section III).

Employment History and Trends

SANDAG regularly publishes a regional employment inventory, including projections and other related data. According to SANDAG, "the purpose of the Demographic and Economic Forecasting Model is to forecast annually the size and structure of the region's economy and to produce a demographic forecast consistent with that future economy."[1] SANDAG is the most widely used data source by local planning agencies in the San Diego area. To capture the full range of business cycles, the time period between 1990 and 2008 is examined (2008 is used by SANDAG as a benchmark year in their most current projections as of this writing). According to SANDAG, employment growth in the City of San Diego between 1990 and 2008 registered a net increase of 147,800 total jobs, or an increase of 22%.

Year	Jobs in San Diego
1990[2]	673,722
2008[3]	821,521
Growth	147,799

Characteristics of San Diego Employees and Their Households

This section examines several key characteristics of San Diego employees and their households, particularly those that are relevant to the jobs/affordable housing linkage. These characteristics include:

[1] 2050 Regional Growth Forecast Process and Model Documentation, June 2010.
[2] SANDAG Regional Employment Inventory. 1994.
[3] SANDAG Cities/County Forecast 2050.

- The number of workers per worker household on average;
- Income characteristics; and
- Commute patterns.

Each of these factors impacts how many new workers in San Diego buildings will seek housing within the City. These characteristics become key inputs in the micro economic analysis of the linkage between workplace buildings and affordable housing demand.

Workers per Worker Household

The workers per household characteristic provides the link between the number of employees and the number of households associated with the employees, recognizing that most households today have more than one worker. The number of workers per household in a given geographic area is a function of household size, labor force participation rate, and employment availability, as well as other factors.

Historically, the national labor force participation rate rose steadily for three decades since the early 1960s as more and more women entered the labor force. The rate appears to have leveled off in the 1990s. Nexus studies prepared in the late 1980s and early 1990s often made an adjustment for increases in labor force participation to recognize that some employment growth already was living locally and had housing. As noted earlier, we no longer make such an adjustment.

For the nexus analysis, the characteristic of most direct interest is the number of workers per worker household. Worker households are defined as those households with one or more persons with work related income, including the self-employed, as reported in the 2009-2011 American Community Survey (ACS). In other words, worker households are distinguished from total households in that the universe of worker households does not include elderly or other households in which members are retired or do not work for other reasons. Student households and unemployed households on public assistance are also excluded from worker households.

According to the 2009-2011 ACS, the number of workers per worker household in the County of San Diego was 1.72. Since workers in the City of San Diego live all over San Diego County, the County average is used in the analysis.

Wages and Salaries of San Diego Workers and Household Income

The average wage or salary of San Diego workers and the income of households formed by the 1.72 workers determines the household's ability to afford housing. The California Employment Development Department reports information on average wages and salaries paid to San Diego County workers, by occupation type.

A summary of the occupations associated with each building was developed from the 2012 National Industry-Specific Occupational Employment Estimates, produced by the Bureau of Labor Statistics, which cross-references occupations by industry. Appendix B Tables 1, 3, 5, 7, and 9 present summaries for each building type.

The following is a summary table of the average salary levels for the three major occupation groups by building type. A detailed summary of wages and salaries for occupations in each building type is provided in Appendix B Tables 2, 4, 6, 8, and 10. The percentages refer to the share of employment within the building in the occupation group.

San Diego County Wages by Building Type

Building Type	Major Occupation Group	% of Employment in Building	Average Annual Income
Office	Office and administrative support occupations	27%	$37,600
	Business and financial operations occupations	11%	$73,600
	Computer and mathematical occupations	8%	$83,900
Hotel	Building and grounds cleaning and maintenance occupations	29%	$23,200
	Food preparation and serving related occupations	25%	$22,000
	Office and administrative support occupations	19%	$30,300
Retail	Food preparation and serving related occupations	33%	$22,100
	Sales and related occupations	32%	$28,800
	Office and administrative support occupations	11%	$32,700
Manufacturing	Production occupations	32%	$36,700
	Architecture and engineering occupations	12%	$87,900
	Office and administrative support occupations	10%	$39,000

Building Type	Major Occupation Group	% of Employment in Building	Average Annual Income
Warehouse	Transportation and material moving occupations	27%	$31,600
	Office and administrative support occupations	23%	$34,800
	Sales and related occupations	21%	$61,900

Source: California Employment Development Department, 2012 Occupational Employment Statistics Survey, Wages 1st Quarter 2012.

The occupations with the lowest compensation levels are in the retail and hotel industries, which are the industries associated with San Diego's important tourism sector.

Household Income

When workers in these occupations form households, their income, either alone or in combination with other workers, produce the household income. In addition, of course, there may be children and/or other household members who are not employed. The annual Median Income of a four-person household in San Diego County for the year 2013, as published by HCD, is $75,900. This analysis focuses on three classifications of household income:

- Very Low Income – up to 50% of Median Income
- Low Income – 50% to 80% of Median Income
- Moderate Income – 80% to 120% of Median Income

The upper limit of income classifications for two, three, and four person households in San Diego County for 2013 appear in the table below. These income levels are the levels set and utilized by HCD for most housing programs.

Two Person Household	
Very Low Income	$33,050
Low Income	$52,900
Median Income	$60,700
Three Person Household	
Very Low Income	$37,150
Low Income	$59,500
Median Income	$68,300
Four Person Household	
Very Low Income	$41,300
Low Income	$66,100
Median Income	$75,900

Source: California Department of Housing and Community Development.

Commute Relationships and Trends

This section provides a brief summary of existing commute relationships and the adjustment reflected in the analysis to reduce housing demand to a local or City of San Diego share using existing commute patterns as benchmark. This adjustment to a local share is not technically required for nexus purposes as the analysis could consider all housing demand irrespective of jurisdictional boundaries. Application of a commute factor is one of several conservative assumptions incorporated into the analysis.

The primary source of information regarding commute relationships is the American Community Survey (ACS), published by the U.S. Census Bureau. Working with only ACS data, the share of jobs in San Diego held by San Diego residents is computed at 60.4%. In San Diego, however, the Census Bureau's data does not provide a complete picture because it only covers jobs held by residents of the U.S. San Diego's city limits extend to the U.S.–Mexico border and SANDAG has documented significant cross-border commuting. SANDAG's September 2011 Cross-Border Travel Behavior Survey indicates approximately 26% of crossings into San Diego County are for trips to work.

Since relying exclusively on U.S. Census data could distort the share of San Diego's work force that resides within the City, KMA estimated the number of jobs in San Diego held by residents of Mexico. Estimates are based on combining data on border crossings from the U.S. Department of Transportation (USDOT) with SANDAG's September 2011 Cross-Border Travel Behavior Survey. Using these sources, it was estimated that approximately 24,200 jobs in San Diego are held by residents of Mexico commuting over the border daily for work (see Appendix B Table 11). This figure was used to adjust the ACS data

which, given it is derived from a survey of U.S. residents, does not account for workers who reside in Mexico. The result is a modified share of jobs in San Diego held by San Diego residents of 58.6% which has been applied in the analysis.

It is important to recognize that the commute share does not necessarily represent the demand for housing in San Diego. Taken to the extreme, one can hypothesize a city with very few workers living in it because there is very little housing or because few can afford to live there.

It should also be noted that even if housing were available and affordable, it is unlikely that 100% of people would live and work in the same city. The choice of where one lives depends on additional factors (schools, style of housing, types of amenities, and local services, etc.) as well as where one works.

As stated at the outset of this section, the commute share can be a policy choice or target. The existing condition is merely a starting point for the analysis and serves as useful benchmark for reducing total demand to a local share.

As to long-term trends, in San Diego as in most metropolitan regions, the share of jobs held by local residents has been declining for decades. As land is more available and affordable in outlying jurisdictions, the share of workers who reside outside the City is continually increasing, resulting in more commuting.

Housing

This section provides a brief summary of selected characteristics of the housing market that affect the ability of worker families to find housing in San Diego. This section also examines growth in housing units in San Diego to meet the demand of new worker households.

Housing Production

SANDAG and California Department of Finance data indicate that from 1990 through 2012, over 90,000 new housing units were constructed in the City of San Diego. As shown in Table II-1, annual building activity greatly varied over the two-plus decades. The high year was 1990, when almost 7,000 new units were added, and the low year was 2010, when only 645 new units were added. Construction activity was very strong during the decade from 1998 to 2008. On average, 3,935 units were constructed annually over the 23-year period.

As noted earlier, during 1990-2008, SANDAG estimates that 147,799 new jobs were created in San Diego. Also discussed earlier, there are approximately 1.72 workers per worker household, meaning that 147,799 new jobs can be equated to 85,930 households demanding housing somewhere within commuting distance to a job in San Diego.

It is important to note that housing demand generated by new employment is not equivalent to total housing demand. Each community experiences demand for its housing by people who work in other jurisdictions as well. In addition, there is a share of total demand attributable to non-working households. Every time the worker(s) in a household leaves the labor market, such as upon retirement, if the household remains in the same housing unit, the unit is removed from the pool of units for working households, thus resulting in demand for a new unit even though there is no employment growth.

To estimate the increase in housing demand generated by new retirees in the City, KMA relied on U.S. Census and SANDAG data to calculate the increase in the population between age 65 and 85 between 1990 and 2008. KMA excluded households over 85, recognizing that a significant portion of this population will require other housing solutions, such as nursing care, living with adult children, etc. KMA adjusted this population growth to estimate the number of newly retired households in San Diego, using U.S. Census data on employment rates and average household size, as shown in Table II-2. In total, KMA estimates that over the time period there were over 8,000 new non-working households between the ages of 65 and 85 in San Diego, thus increasing the total demand for new housing by that amount.

In total, KMA estimates that 85,930 new worker households and 8,345 new retirees created a demand for 94,274 new housing units between 1990 and 2008. During that same time period, San Diego added 79,595 net new housing units (Table II-1). Therefore, we can say that of the total new units in demand, the City production was sufficient to accommodate a significant portion of new housing demand (without consideration of affordability). Other ways of expressing the relationship are indicated below.

1990 through 2007	
Increase in Jobs	147,799
Increase in Worker Households (New Units in Demand) @ 1.72	85,930
Increase in Non-Working Households over age 65	8,345
Total New Housing Demand	94,274
Residential Construction in San Diego (from Table II-1)	79,595
Relationship of New Housing Units to New Worker Households	0.84:1
Deficit for 1:1 Ratio	(14,679)

The households not accommodated in the City of San Diego presumably found housing elsewhere in the region within commuting distance.

Housing Production by Affordability Level

KMA estimated the level of affordable housing production for the period from 1999 to 2012 to develop a sense of whether production has kept pace with demand. In the 2004 Housing Impact Fee Nexus Analysis, KMA assembled data on affordable housing production for the period between 1999 and 2004. The data source was a City Manager's Report on the City's Comprehensive Affordable Housing Strategy dated July 31, 2002 that discussed historical production and estimated future production based on projects in the pipeline.

The City's Annual Housing Element Progress Report provides information on affordable units permitted in the past eight years, between 2005 through 2012. Combining these two data sources allows us to estimate roughly the level of affordable housing production over a 14-year period. Between 1999 and 2012, there were about 6,177 affordable units constructed or permitted for construction, not including market-rate units that might be affordable. This represents approximately 11% of new dwelling units constructed, with the remaining new dwelling units available at market rates. See Table II-1 for more information. Not all of the affordable housing constructed or permitted during this time is likely to be available to new worker households, as some of it may be restricted to senior households, or other (typically) non-working populations.

The above analysis and discussion demonstrates that despite the notable accomplishments of the City of San Diego in the production of affordable housing, affordable units represent a small percentage of total units produced.

Future Projections

The jobs/housing nexus relationship in support of requiring new workspaces to contribute to new housing is based on best estimates of future trends and relationships in San Diego. In this context, projections of jobs, new workers households, and new housing units are provided in this section. The methodology for calculating the impact of specific building types does not, however, rely on any specific set of projections for employment and housing growth. (See Section III.)

Employment Projections

SANDAG provides projections of employment for the entire San Diego region. The most recent available is the 2050 Regional Forecast, published in 2010. For the purposes of this analysis, KMA examined the changes between the 2008 benchmark year and 2030, to match approximately the historical time frame examined earlier. Employment projections for San Diego are estimated as follows:

Year	Total Jobs
2008	821,521
2030[4]	928,178
Total Increase	106,657

The SANDAG projection for the 2008 to 2030 time period envisions the City adding an average of about 4,800 jobs per year over the 22-year period. See Table II-3 for more information. At 1.72 workers per worker household, these new jobs would generate approximately 62,010 new worker households (106,657 jobs divided by 1.72) that need housing in the San Diego region.

The SANDAG projections for residential construction in San Diego indicate 121,039 new units will be added. As discussed earlier, this housing would accommodate all households, not just worker households. Looking at demographic projections provided by SANDAG, it is clear that the City of San Diego expects significant increases in the number of non-working households over the forecasted timeframe. KMA estimated the increase in housing demand generated by new retirees in the City, and found it to be a significant source of future housing demand.

SANDAG anticipates that, with the aging of baby boomers, the number of San Diegans between the ages of 65 and 85 will more than double between 2008 and 2030, from 121,000 to almost 267,000. KMA excluded households over 85, recognizing that a significant portion of this population will require other housing solutions such as assisted living, nursing care, living with adult children, etc. Projected population growth between ages of 65 and 85 was used to estimate the number of newly retired households in San Diego, using U.S. Census data on labor force participation rates and household size for this age group. In total, KMA estimates that there will be about 66,890 new non-working households over age 65 in San Diego, thus increasing the total demand for new housing by that amount. See Table II-3.

In total, KMA estimates that 62,010 new worker households and 66,890 new retiree households will create a demand for 128,900 new housing units. Since SANDAG projects that 121,000 net new units will be built over the period, we can say that of the total new units in demand, the City production will fall short of accommodating new housing demand generated by new worker households and new retirees (without consideration of affordability) by about 7,900 units.

[4] SANDAG Cities/County Forecast 2050.

Affordability

Finally, the ratio of total new units and new worker households and related discussion does not take into account the matter of affordability. Based on the findings of this nexus analysis -- between 55% and 94% of new worker households will have incomes of 120% of Median Income or less (depending on the building type) -- the number of affordable units needed will far exceed affordable unit production under any likely scenario. During the 14 years reviewed, approximately 6,177 affordable units, or roughly 11% of total units, were constructed. Even if this rate of affordable unit production were maintained, the supply of affordable housing to the new work force would be far from adequate to meet new demand. A commercial linkage fee program would provide additional resources to improve affordable unit production for new worker households.

Homeless Individuals as Participants in the Labor Force

Homelessness is a serious and persistent problem in San Diego County. According to the Regional Task Force on the Homeless (RTFH), the January 2013 "point-in-time" count identified 9,028 homeless individuals throughout the County. More than half of this total, or 4,574 individuals, were unsheltered at the time of the survey. SDHC is actively engaged with other public, private, and non-profit organizations in a concerted effort to end homelessness through development of new housing options and wraparound supportive services.

While specific data on employment among homeless individuals in San Diego County are not readily available, both government and private sector studies confirm that a small proportion of homeless people are in fact employed. Review of these regional, state, and national studies offers the following highlights regarding this issue:

- An October 2010 Homeless Employment Report by Sacramento Steps Forward included a survey of homeless people which determined that 12% of the surveyed homeless respondents were employed at the time. (*2010 Homeless Employment Report: Findings & Recommendations*, by Bob Erlenbusch, Shannon Stevens, Kate Towson, and Michele Watts, October 2010)

- In December 1999, The Urban Institute prepared a report entitled "Homelessness: Programs and the People They Serve" for the Interagency Council on the Homeless. The report included a national survey of homeless assistance providers and clients. The survey found that 44% of homeless clients reported "any paid work in the past month". Of those reporting work, 20% -- or just under 9% of the total surveyed homeless clients -- indicated that the employment took the form of a job expected to last at least three months. (*Homelessness: Programs and the People They Serve; Findings of the National Survey of Homeless Assistance Providers and Clients*, prepared for Interagency Council on the Homeless by The Urban Institute, December 1999)

- Finally, the California Workforce Investment Board found that 1.3% of dislocated workers in California who were participating in Workforce Investment Act (WIA) programs in 2010 were homeless. (*Results Achieved Under the Workforce Investment Act [WIA] for Program Year 2010-2011*, California Workforce Investment Board Annual Report)

The table below identifies the proportion of worker households for each non-residential building type that fall into the Extremely Low-Income tier (under 30% of Median Income). The detailed methodology used in formulating these estimates is presented in Section III, pages 30 to 32 of this report. As shown below, it is estimated that 18% of hotel and retail worker households fall into the Extremely Low-Income tier. The actual proportion may be higher – the State Employment Development Department (EDD) data utilized in the analysis annualizes all worker incomes based upon the assumption that they have full-time employment (anecdotally we know part-time work to be prevalent especially in the retail sector). Other land use categories also have a small percentage of worker households that fall into the Extremely Low-Income tier. Given the survey information suggesting homeless individuals do participate in the labor force, it follows then that a small portion of jobs added by new workspace buildings are likely to be held by homeless individuals, particularly with jobs near the lower end of the pay scale.

Percent of Worker Households					
	Office	**Hotel**	**Retail**	**R&D/Manufacturing/ Industrial**	**Warehouse/ Storage**
Extremely Low Income	2.8%	18.3%	18.0%	2.7%	5.1%

SECTION III – MICRO ECONOMIC JOBS/HOUSING ANALYSIS

This section presents a summary of the analysis of the linkage between five types of workplace buildings and the estimated number of worker households in the income categories that will, on average, be employed within those buildings. This section should not be read or reproduced without the narrative and analysis presented in the previous sections.

Analysis Approach and Framework

The micro analysis establishes the jobs/housing linkages for individual building types or land use activities. This section quantifies the connection between employment growth in San Diego and affordable housing demand.

The analysis approach is to examine the employment associated with the development of 100,000-square-foot building modules. The building size is used solely to facilitate understanding of the analysis by being able to avoid cumbersome fractions. Then, through a series of linkage steps, the number of employees is converted to households and housing units by affordability level. The findings are expressed in terms of numbers of households related to building area. In the final step, we convert the numbers of households for 100,000-square-foot buildings back to the per-square-foot level.

The building types or land use activities addressed in the analysis are:

- Office
- Hotel and other lodging
- Retail/entertainment
- Research and development/manufacturing/industrial
- Warehouse/storage

Section II presented information on the income categories addressed in this analysis. For a four-person household, the maximum qualifying income levels for 2013 are:

- Median Income – $75,900
- Very Low Income – under 50% of Median (up to $41,300)
- Low Income – 50% to 80% of Median (between $41,300 and $66,100)
- Moderate Income – 80% to 120% of Median (between $66,100 and $91,100)

The analysis is conducted using a model that KMA has developed for application in many other jurisdictions for which the firm has conducted similar analyses. The model inputs are all local data to the extent possible, and are fully documented.

Analysis Steps

Tables III-1 through III-4 at the end of this section summarize the nexus analysis steps for the five building types. Following is a description of each step of the analysis:

Step 1 – Estimate of Total New Employees

The first step in Table III-1 identifies the total number of direct employees who will work at or in the building type being analyzed. Average employment density factors are used to make the conversion. The density factors used in this analysis are:

- *Office* – 250 square feet per employee. This figure is right in the middle of typical office densities, which are usually found in the range of 200 to 300 square feet per employee depending on the character of the office activity (corporate headquarters vs. back office to illustrate extremes). The average is based on gross building area and takes into account the lobby, corridors, restrooms, etc.

- *Hotel* – One employee per room and 500 square feet per hotel room, or 500 square feet per employee. This rate covers a cross-section of hotel types from lower service hotels, where rooms may be smaller than 500 square feet, to higher service convention hotels, where average room size (inclusive of lobbies, restaurants, meeting space, etc.) is larger, but the number of employees per room is higher.

- *Retail* – 350 square feet per employee. This category covers a broad range of experience from high service restaurants, where densities are far greater than average, to some retail uses, such as furniture stores, where densities are far lower.

- *Research and Development/Manufacturing/Industrial* – 500 square feet per employee. Manufacturing employment densities are variable and depend on the nature of the manufacturing activity. This classification uses an aggregate density scaled to industries and uses that are appropriate for the San Diego economy including industrial parks, general light industrial uses, research and development, biotech manufacturing, machinery, electrical equipment, defense manufacturing, and transportation equipment.

- *Warehouse /Storage* – 2,000 square feet per employee. This category covers a broad range of facility types incorporating higher employment density facilities engaged in wholesale trade to transportation and storage facilities that tend to have lower employment densities.

All density factors are averages and individual uses can be expected to be fairly divergent from the average from time to time. (An ordinance variance provision usually addresses the possibility of a building that is so divergent from the average so as to need special treatment.)

For ease of analysis and understanding, KMA conducted the analysis on prototype buildings at 100,000 square feet. We have used this size building in order to count jobs and housing units in whole numbers that can be readily communicated and understood. At the conclusion of the analysis, the findings are divided by building size to express the linkages per square foot, which are very small fractions of housing units.

Based on the density factors outlined above, the number of employees in our hypothetical 100,000-square-foot buildings are as follows: Office will house 400 employees; Hotel 200 employees; Retail 286 employees; Research and Development/Manufacturing/Industrial 200 employees; and Warehouse/Storage 50 employees.

Step 2 – Adjustment for Changing Industries

This step is an adjustment to take into account any declines, changes, and shifts within all sectors of the economy and to recognize that new space is not always 100% equivalent to net new employees. As discussed in Sections I and II, a 16% adjustment is utilized to recognize the long-term shifts in employment occurring in San Diego County and the likelihood of continuing changes to the local economy.

Step 3 – Adjustment from Employees to Employee Households

This step (Table III-1) converts the number of employees to the number of employee households that will work at or in the building type being analyzed. This step recognizes that there is, on average, more than one worker per household, and thus the number of housing units in demand for new workers must be reduced. As noted in Section II, all non-working households, such as retired persons, students, and those on public assistance, have been eliminated from the workers per worker household ratio. The San Diego County average is 1.72 workers per worker households.

Step 4 – Occupational Distribution of Employees

The occupational breakdown of employees is the first step to arriving at income levels. Using the 2012 National Industry-Specific Occupational Estimates, a cross matrix of “industries” and occupations,

produced by the Bureau of Labor Statistics (BLS), we are able to estimate the occupational composition of employees in the five types of buildings. The occupations that reflect the expected mix of activities in the new buildings are presented in Appendix B Tables 1, 3, 5, 7, and 9.

- Office buildings' "industry" mix has to be tailored to reflect the types of activities attracted to office space in San Diego. These industries represent a mix of professional service activities including business and financial operations, insurance, architecture and engineering, computer and mathematical, legal, management, health care, and sales. Because there are significant regional differences in the composition of office building employment, KMA weighted the industry mix based on San Diego County employment levels to ensure that it is representative of San Diego's economic base. Office and administrative support occupations (i.e., clerical) comprise 27% of all office-related employment.

- Hotels employ workers primarily from three main occupation categories: building and grounds cleaning and maintenance (maid service, etc.), food preparation and serving related, and office and administrative support, which together make up 73% of hotel workers. Other hotel occupations include personal care, management, and maintenance and repair.

- Retail employment is dominated by three main occupation groups: food preparation and serving (33%), sales (32%), and office and administrative support (11%). These three occupations together account for 75% of retail workers. The remaining 25% of retail workers are in occupations that include transportation, cleaning, maintenance, and production.

- Manufacturing employment is concentrated in production occupations (32%), architecture and engineering occupations (12%), and office and administration occupations (10%). The remaining occupations include management, business and financial, computer and mathematical, and life, physical, and social science occupations.

- Warehouse and storage occupations consist of transportation and material moving occupations (27%), office and administrative support (23%), and sales and related occupations (21%). The remaining 29% is made up of management, business and financial, computer and mathematical, maintenance and repair, and production occupations.

The numbers in Step #4 (Table III-1) indicate both the percentage of total employee households and the number of employee households in our hypothetical 100,000-square-foot buildings.

Step 5 – Estimates of Employee Households Meeting the Lower Income Definitions

In this step, occupation is translated to income based on recent San Diego wage and salary information for the occupations associated with each building type. The wage and salary information indicated in Appendix B Tables 2, 4, 6, 8, and 10 provided the income inputs to the model. This step in the analysis calculates the number of employee households that fall into each income category for each size household.

Individual employee income data was used to calculate the number of households that fall into these income categories by assuming that multiple earner households are, on average, formed of individuals with similar incomes. In addition, the model recognizes that the number of workers is dependent upon household size, and includes a distribution of number of workers by household size. Employee households not falling into one of the major occupation categories per Appendix B Tables 2, 4, 6, 8, and 10 were assumed to have the same income distribution as the major occupation categories.

Step 6 – Estimate of Household Size Distribution

In this step, household size distribution is input into the model in order to estimate the income and household size combinations that meet the income definitions established by the State, as used by the City. The household size distribution utilized in the analysis is that of San Diego County since the City draws workers from throughout the County.

Step 7 – Estimate of Households that meet HUD Size and Income Criteria

For this step, the KMA model incorporates a matrix of household size and income to establish probability factors for the two criteria in combination. For each occupational group a probability factor was calculated for each income and household size level. This step is performed for each occupational category and multiplied by the number of households.

Table III-2 shows the result after completing Steps #5, #6, and #7. The calculated numbers of households that meet size and income criteria shown in Table III-2 are for the Very Low Income or under 50% of Median Income category. The methodology is repeated for each income tier. See Table III-3.

Summary by Income Level

Table III-3 indicates the results of the analysis for the additional income categories for the five prototypical 100,000-square-foot buildings. The table presents the number of households in each affordability category, the total number up to 120% of Median, and the remaining households earning over 120% of Median.

The table below summarizes the percentage of total new worker households that fall into each income category. As indicated, over 90% of retail and hotel worker households are below the 120% of Median Income level. Office worker households have the highest incomes on average, with only 17% of worker households below 50% of Median and 44% earning greater than 120% of Median. Warehouse and Manufacturing worker households are in between these extremes with a moderate number of workers in the Very Low Income category, but a significant share of employees in the Low and Moderate Income categories.

Percent of Worker Households by Income Category

	Office	Hotel	Retail	R&D/Manufacturing/ Industrial	Warehouse/ Storage
Very Low	17%	53%	52%	15%	26%
Low	23%	32%	32%	21%	29%
Moderate	17%	8%	10%	16%	17%
Total <120% AMI	56%	93%	94%	53%	72%

Adjustment for Commute Relationship

Table III-4 indicates the results of the analysis both before and after an adjustment for commute relationship. As discussed in Section II, 58.6% of the jobs in San Diego are estimated to be held by residents of the City. In other words, if the existing commute relationship were to hold for new employee households, 58.6% would be expected to reside in the City of San Diego, with the remainder distributed throughout the region, including across the border in Mexico. The estimates of households for each income category in a prototypical 100,000-square-foot building are adjusted downwards by this commute factor. This adjustment is not technically required for nexus purposes. The City could, for example, choose to include all housing demand in the nexus analysis. The City could also choose to use a factor other than the existing commute relationship that might incorporate policy considerations such as a goal to house a greater or lesser percentage of the work force locally.

Summary by Square Foot Building Area

The analysis thus far has worked with prototypical buildings of 100,000 square feet. In this step, the conclusions are translated to a per-square-foot level and expressed as coefficients. These coefficients state the portion of a household, or housing unit, by affordability level for which each square foot of building area is associated. See Table III-5.

This is the summary of the housing nexus analysis, or the linkage from buildings to employees, to housing demand by income level. We believe that it is a conservative approximation (i.e., it understates at the low end) of the households by income/affordability level associated with these building types.

[1]Calculated by dividing number of household in bottom of Table III-4 by 100,000 to convert households per 100,000 sq. ft. building to households per 1 sq. ft. of building.

SECTION IV: TOTAL HOUSING LINKAGE COSTS

This section takes the conclusions of the previous section on the number of households in the Very Low, Low, and Moderate Income categories associated with each building type and identifies the total cost of assistance required to make housing affordable. This section puts a cost on the units for each income level to produce the "total nexus cost."

A key component of the analysis is the size of the gap between what households can afford and the cost of producing additional housing in San Diego, known as the "affordability gap." The analysis uses a standard methodology consistent with SDHC's policies to determine what households can afford, and compares that to the cost of providing additional housing. The analysis is conducted for various household sizes in three categories of Area Median Income: under 50% (Very Low Income), 50% to 80% (Low Income), and 80% to 120% (Moderate Income). Income definitions for housing programs are established by the State of California Department of Housing and Community Development (HCD) for varying household sizes, as presented in Section II and summarized in Table IV-1.

For the purposes of the nexus analysis, rental housing is assumed for the Very Low and Low Income categories, while ownership units are assumed for the Moderate Income category.

Project Descriptions

In order to determine the affordability gap, there is a need to match a household at each income level with a unit type and size according to government regulations and policies. The prototypical projects for both rental and ownership units are designed to represent what SDHC is most likely to assist in the future.

SDHC has typically assisted two types of rental development: garden-style apartments and higher density stacked-flats over podium apartments. Similarly, with ownership units, SDHC has assisted both lower density townhomes and higher density stacked-flat condominiums. "Greenfield" sites available for multi-family development are increasingly rare within the City of San Diego, and land values have risen significantly over the past decade as vacant sites have been absorbed. As a result, an increasing proportion of the affordable housing developments assisted by SDHC will involve higher densities as well as structured parking. Therefore, the analysis has assumed that 40% of the affordable units will be developed as garden or townhome units, and 60% will be developed as stacked flat condominiums over podium parking. All units are assumed to have two bedrooms. The average three-person household is assumed to be accommodated in a two-bedroom unit, per local policy.

Detailed descriptions of the development prototypes, including development costs, affordable values, and the affordability gap calculations, can be found in the tables at the end of this section. A brief overview is presented here.

Project descriptions for the development prototypes can be summarized as follows:

- Garden-style apartments are assumed to be wood-frame construction, built at a density of 25 units to the acre, with 950-square-foot two-bedroom units. Parking is provided at 1.50 spaces per unit.

- Stacked-flat apartment units are built at a density of 50 units to the acre, with 800-square-foot two-bedroom units. The buildings are assumed to have four stories of wood-frame construction over a podium. Structured parking is provided at 1.30 spaces per unit.

- Townhome units are assumed to be 1,200-square-foot two-bedroom units, with two parking spaces in an attached garage. The units are built at a density of 20 units to the acre.

- The higher density condominium units are estimated at 1,000 square feet, with 1.75 spaces per unit of structured parking. The building is built at a density of 45 units to the acre, with wood-frame construction over a parking podium.

The parking ratios used for the rental development prototypes reflect the City's recently adopted parking regulations for Reduced Parking Demand Housing (§142.0527, Chapter 14, Article 2, Division 5 of the San Diego Municipal code). The ordinance, which was adopted by the San Diego City Council in November 2012, allows for the application of lower parking requirements for affordable housing rental developments.

Maximum affordability gaps are determined based on the top end of the income categories. This is a conservative assumption, which produces a lower affordability gap average than reality, since not all households have income at the top end of the range. For Very Low Income households, rents are set to be affordable at 50% of Median Income, and for Low Income households, at 80% of Median Income. For Moderate Income households, maximum sales prices are calculated based on 120% of Median Income, with 35% of income set aside for housing (as opposed to 30% for rental units).

Development Costs

The cost of developing new residential units in San Diego was assembled from a number of sources. Land costs were gathered from recent land sale data collected by KMA. KMA is also actively working on a number of rental and condominium projects at various locations in the San Diego area and has recent developer pro forma financial analyses from which to draw cost information. Using these sources, KMA prepared a summary of average total development costs, broken down into the major cost components: land acquisition, direct or construction costs, indirect costs, and financing costs.

Affordability Gap

The KMA financial pro formas estimating the affordability gap for the above prototypes are presented in Appendix C Tables 1-17. Each pro forma contains:

i. A project description;

ii. Estimates of development costs;

iii. Stabilized net operating income for the rental prototypes based on two affordability scenarios: (a) all units affordable to households at 50% AMI (Very Low Income); and (b) all units affordable to households at 80% AMI (Low Income);

iv. Maximum affordable sales price for the ownership prototypes based on all units affordable to households at 120% AMI (Moderate Income);

v. Estimates of maximum warranted investment for the rental prototypes, which include supportable debt and/or equity investment, and tax credit equity investment for the Very Low Income rental prototype; and

vi. The resulting financing gap generated by the development prototype reflective of the difference between warranted investment and development costs for rental units, and the difference between net sales proceeds and development costs for ownership units.

The inputs and assumptions used in the KMA pro formas are based on KMA's experience with comparable developments throughout San Diego. In particular, KMA notes the following:

- The cost estimates do not assume a prevailing wage requirement.

- The City of San Diego is diverse in terms of real estate market factors. Therefore, the KMA pro formas assumed land costs ranging from a low of $25 per square foot to a high of $50 per square foot of land, reflecting project location and achievable density.

- As specific sites have not been defined for this study, KMA assumed an allowance for off-site improvements ranging between $3 and $5 per square foot of site area, and an allowance for on-site improvements ranging from $10 to $15 per square foot of site area.

- It is assumed that Very Low Income units will be financed with tax-exempt bonds combined with the 4% Low Income Housing Tax Credit. KMA did not assume that Very Low Income units could be financed with 9% Low Income Housing Tax Credits due to the highly competitive nature of this funding source.

- Low and Moderate Income units are assumed to be financed using conventional debt and equity financing sources.

- The affordability gap conclusions resulting from the KMA pro forma analyses are summarized as follows:

Rental	**Garden Apartments**	**Stacked Flats Over Podium Parking**	**Average Rental** (1)
Very Low Income (50% AMI)	($108,000)	($139,000)	($127,000)
Low Income (80% AMI)	($105,000)	($164,000)	($140,000)

Ownership	**Townhomes**	**Stacked Flats Over Podium Parking**	**Average Ownership** (1)
Moderate (120% AMI)	($12,000)	($93,000)	($61,000)

(1) Assumes 40% of affordable units delivered in lower density developments (garden apartments) and 60% of affordable units delivered in higher density developments (stacked flats over podium parking).

Total Linkage Costs

The last step in the linkage fee analysis marries the findings on the numbers of households at each of the lower income ranges associated with the five types of buildings to the affordability gaps, or the costs of delivering or housing for them in San Diego.

Table IV-2 summarizes the analysis. The affordability gaps are drawn from the prior discussion. Demand for affordable units at each of the lower income ranges that is generated per square foot of building area is drawn from Table III-5 in the previous section. At the right, the "Nexus Cost Per Square Foot" shows the results of the calculation: affordability gap times the number of units per square foot of building area.

The total nexus costs for the five building types are as follows:

Office	$72.41
Hotel	$66.88
Retail	$96.28
R&D/Manufacturing/Industrial	$33.78
Warehouse/Storage	$11.91

These costs express the total linkage or nexus costs per square foot for the five building types. These total nexus costs represent the ceiling for any requirement placed on new construction for affordable housing. The totals are not recommended levels for fees; they represent only the maximums established by this analysis, below which fees or other requirements may be set.

Conservative Assumptions Underlying the Nexus Cost Estimates

In establishing the total nexus cost, many conservative assumptions were employed in the analysis that result in a total nexus cost that may be understated by a considerable amount. These conservative assumptions are summarized below.

1. Only direct employees are counted in the analysis. Many indirect employees are also associated with each new workspace. Indirect employees in an office building, for example, include janitors, window washers, landscape maintenance people, delivery personnel, and a whole range of others. Hotels do have many of these workers on staff, but hotels also "contract out" a number of services that are not taken into account in the analysis.

2. Annual incomes for workers reflect full time employment based upon the California Employment Development Department's convention for reporting the compensation information. Of course many workers work less than full time; therefore, annual compensations used in the analysis are probably overstated especially for retail which tends to have a high number of part-time employees.

3. Using small households produces lower affordability gaps than larger households in larger units.

4. Affordable rents and sale prices are based upon the top of each income range. For example, units for Very Low Income households (0% to 50% AMI), have rents based on 50% of AMI. This is a particularly conservative assumption, in that the number of households generated at the Extremely Low Income level is significant for certain non-residential building types. KMA estimates that at least 18% of worker households generated by the Hotel and Retail building types are Extremely Low Income Households (30% of AMI). This income level equates to $19,850 for a two-person household, $22,300 for a three-person household, and $24,800 for a four-person household. These

households earn close to the California minimum wage -- $8.00 per hour -- depending on the number of workers in the household. Households at these income levels typically have the fewest housing options, and are most at risk of homelessness.

5. The estimates of affordability gaps for units at 50% of Area Median Income assume the availability of tax-exempt financing and 4% Low Income Housing Tax Credits. This financial assistance is competitively allocated and the investment market for tax credits fluctuates over time. Incorporating this external funding source into the gap analysis results in lower gaps to be funded at the local level.

In completing the 2010 nexus analysis, KMA and SDHC participated in several stakeholder workshops. Based on input received in these workshops, KMA incorporated the following additional modifications to the nexus analysis.

6. Long-term shifts in the regional economy can result in declines in employment in certain industries even as other industries add jobs. An adjustment is included to account for the fact that some new jobs will be filled by workers who are downsized from a declining industry and who already have housing locally. As described in Section I, KMA incorporated a -16% reduction in the nexus analysis to account for long-term unemployment resulting from declining industries.

7. The results of the nexus analysis are adjusted downward to reflect existing commute patterns, including an estimate of workers commuting from Mexico. Only households likely to seek housing in the City are included based on the existing commute pattern. This existing relationship is influenced by the availability of affordable housing in the City. Incorporating this commute adjustment results in a larger reduction in the fee amounts supported by the nexus study.

In summary, many less conservative assumptions could be made that would result in higher linkage costs.

TABLE IV-1

INCOME DEFINITIONS, 2013
JOBS-HOUSING NEXUS STUDY
CITY OF SAN DIEGO , CA

INCOME - UPPER END FOR EACH CATEGORY

Family Size	Very Low Income 50% AMI	Low Income 80% AMI	Moderate Income 120% AMI
1 Person	$28,900	$46,250	$63,750
2 Persons	$33,050	$52,900	$72,900
3 Persons	$37,150	$59,500	$82,000
4 Persons	$41,300	$66,100	$91,100
5 Persons	$44,600	$71,400	$98,400

TABLE IV-2

TOTAL HOUSING NEXUS COST
JOBS-HOUSING NEXUS STUDY
CITY OF SAN DIEGO, CA

WITH COMMUTE ADJUSTMENT AT 58.6%

	Affordability Gap[1]	Nexus Cost Per Sq. Ft.				
INCOME CATEGORY		**OFFICE**	**HOTEL**	**RETAIL**	**MANUF. / INDUSTRIAL**	**WAREHOUSE / STORAGE**
Under 50% of Median Income[2]	$127,000	$24.38	$38.77	$54.35	$11.00	$4.64
50% to 80% of Median Income[2]	$140,000	$36.21	$25.30	$37.21	$17.12	$5.75
80% to 120% of Median Income[3]	$61,000	$11.82	$2.81	$4.72	$5.66	$1.52
Total		**$72.41**	**$66.88**	**$96.28**	**$33.78**	**$11.91**

1. Assumes two-bedroom units. Affordability gap for under 50% of Median category assumes 4% tax credits.
2. Assumes households are housed in rental units.
3. Assumes households are housed in ownership units.

SECTION V – MATERIALS TO ASSIST IN UPDATING THE FEE PROGRAM

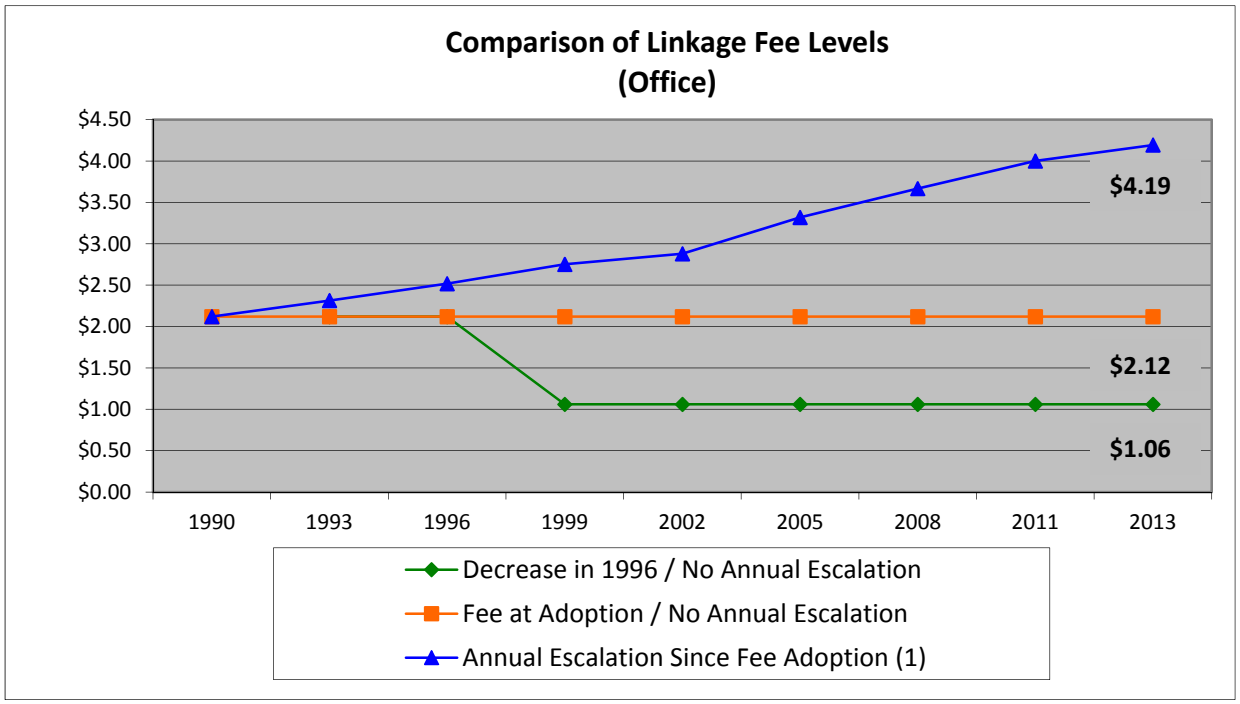
The purpose of this section is to provide guidance to policy makers in setting fee levels and designing the program. A particular focus is devoted to facilitating an understanding of whether the existing linkage fees or proposed fee increases are likely to alter development decisions, or drive activity to other jurisdictions.

As indicated at the end of the previous section, the nexus analysis establishes maximum fee levels supported by the analysis. Recognizing a variety of City objectives, policy makers may set the fees at any level below the maximum, and may design other program features to meet local goals and objectives.

The materials in this section are not part of the nexus analysis. Instead, this section provides an assembly of materials that helps answer the questions frequently asked when designing or updating a fee program:

- How can the fee level be selected?
- What do other cities do in their programs?
- What are some of the options for indexing the fee over time?

Fee Levels



Existing Linkage Fee Levels

Before presenting approaches to fee revisions, it is useful to briefly review linkage fee levels since the original program was adopted. All non-residential building types are subject to the fee. The City's Department of Development Services determines the building type and the applicable fee. In 1996, the City Council reduced the fee by half to spur business development. The fee has not been adjusted since 1996.

	Fee at Adoption	Fee Since 1996
Office	$2.12	$1.06
Hotel	$1.28	$0.64
Retail	$1.28	$0.64
R&D	$1.60	$0.80
Manufacturing	$1.28	$0.64
Warehouse	$0.54	$0.27

As shown in Table V-I, KMA compared the actual linkage fee levels for the years 1990, 1996, and 2013 against: (1) the fee levels if no adjustment had been made in 1996; and (2) the fee levels assuming an annual escalation of the fee based on the Construction ENR Building Cost Index, as allowed under the existing ordinance.

A graphic representation of the KMA comparison for the Office fee appears below. As shown, the Office fee at adoption was $2.12, the fee was decreased by half to $1.06 in 1996, and has remained the same over the past 23 years. Assuming the Office fee was not reduced in 1996 and no other adjustments were made since adoption, the office fee at adoption would have remained constant at $2.12 per square foot between 1990 and 2013. Assuming the fee was subject to an annual escalation factor, as allowed in the ordinance, the fee would have increased from $2.12 per square foot in 1990 to $4.19 per square foot by 2013.

(1) Source: McGraw Hill Construction ENR Building Cost Index.

Historical Fee Collection

The linkage fee represents the primary source of funds for SDHC's Housing Trust Fund, accounting for 77% of the Housing Trust Fund's total revenues since Fiscal Year 1992. To date, SDHC has collected a total of $53.6 million in linkage fee revenues.

Fee revenue collected by SDHC can be examined by type of development. For example, over the past seven years, SDHC has collected a total of $11.3 million in linkage fee revenues from 14.3 million SF of non-residential development. As shown below, the majority of the revenues came from office buildings (60%), followed by research and development buildings (11%), and retail buildings (11%).

	FY 2006 – FY 2012	
Building Type	**Non-Residential Development (SF)**	**Linkage Fee Revenue**
Office	6,300,000 SF	$6,677,000
R&D	1,553,000 SF	$1,242,000
Retail	1,899,000 SF	$1,209,000
Hotel	867,000 SF	$555,000
Warehouse	2,040,000 SF	$548,000
School	685,000 SF	$548,000
Manufacturing	609,000 SF	$390,000
Total [(1)]	**14,258,000 SF**	**$11,290,000**

[(1)] Reflects totals after adjustments and credits.

Source: City of San Diego.

Estimate of Foregone Fee Revenue

As indicated previously, the linkage fee was reduced by half in 1996. For illustrative purposes, KMA estimated the amount of fee revenue foregone under two scenarios:

- Test 1: Linkage fees collected assuming no adjustment to the fee in 1996; and
- Test 2: Linkage fees collected assuming an annual escalation of the fee based on the Construction ENR Building Cost Index.

As presented in Table V-2, and summarized below, Test 1 yielded a total of $92.6 million in linkage fee revenues, and Test 2 yielded a total of $123.9 million, differences of $39.3 million and $70.6 million, respectively, from the actual revenue amount collected.

As shown below, assuming a typical per-unit affordable housing subsidy of $100,000 for the period 1992-2013, an estimate of 393 additional units could have been developed under Test 1 (no adjustment made to the fee in 1996). Similarly, under Test 2 (annual escalation in the fee based on the construction cost index), an estimated additional 705 units could have been developed.

	Actual Collected	Test 1: No Adjustment in 1996	Test 2: No Adjustment in 1996 + Escalation (1)
FY 1992 – 2013	$53.3 mm	$92.6 mm	$123.9 mm
Potential Number of Additional Units Developed @ Typical Subsidy of $100,000/unit(2)		393 units	705 units

(1) Based on annual McGraw Hill Construction ENR Building Cost Index History.

(2) Reflects historic estimate of typical financing gap amounts, 1992-2013.

Linkage Fee Levels in the Context of San Diego Development Economics

When considering fee levels, there are several economic or real estate factors that may be taken into account in recommending or enacting affordable housing requirements. A primary concern is that fee levels not be so onerous that they significantly constrain development.

Survey of Linkage Fee Programs

As part of this study, KMA reviewed linkage fee programs in approximately 25 other cities and counties in California ranging in population from 7,000 to 1.4 million. A relative perspective on how the City's existing linkage fee program compares with programs in other jurisdictions in California is presented in Table V-3 and summarized below:

Current Level of Fee per SF	City of San Diego	State of California (range of findings)		
Office	$1.06	$0.58	-	$22.83
Hotel	$0.64	$0.64 (1)	-	$17.10
Retail	$0.64	$0.64	-	$21.30
R&D	$0.80	$0.57	-	$15.21
Manufacturing	$0.64	$0.28	-	$18.44
Warehouse	$0.27	$0.08	-	$18.44
Thresholds	No minimum threshold	25,000 SF	-	No minimum threshold
Geographic Exemptions	Excludes some geographic areas (enterprise zones)	redevelopment areas	-	No exemptions
Specific Use Exemptions	Development by government entities.	churches, educational facilities, hospitals, child care, non-profits, etc.	-	No exemptions

(1) Excludes jurisdictions where fee paid on a per-room basis.

Note: The chart has been assembled to present an overview, and as a result, terms are simplified.

Ordinance or Program Features

A Housing Impact Fee program often includes features to address a jurisdiction's policy objectives or specific concerns. The most common are:

- *Minimum Threshold Size* – A minimum threshold sets a building size over which fees are in effect. As shown above, San Diego does not have a minimum threshold, while other jurisdictions have thresholds as high as 25,000 square feet. In general, the programs with the highest fees tend to have more significant thresholds. Programs with low fees often have no thresholds and all construction is subject to the fee.

- *Geographic Area Exemptions* – Some cities with linkage fee programs exclude specific areas such as redevelopment areas. San Diego's program previously allowed for the exemption of new businesses developed in San Diego's two enterprise zones: the Metro Zone (formerly the Southeast/Barrio Logan Enterprise Zone) established in 1983 and the South Bay Enterprise Zone established in 1991. These zones have since been incorporated into the San Diego Regional Enterprise Zone. In July 2013, Governor Brown signed Assembly Bill (AB) 93 and Senate Bill (SB) 90 (clean-up legislation to AB 93). The bills eliminate the State's Enterprise Zone (EZ) program effective January 1, 2014 and replace it with sales tax exemptions for the manufacturing and biotech industries, hiring tax credits within former EZ areas, and income tax credits for employers and businesses. As such, the exemption allowed for developments within the San Diego Regional Enterprise Zone would thereby cease on January 1, 2014.

- Specific Use Exemptions – Cities may also choose to exempt specific uses. For example, these may include churches, hospitals, child care centers, and development by non-profits.

Linkage Fees as a Percent of Total Development Costs

Policy makers may establish linkage fees at any level below the maximum nexus cost for the building types addressed in the analysis. One approach to establishing fee levels is based on comparing the linkage fee against the development costs associated with each building. This approach facilitates an evaluation of whether the amount is likely to affect development decisions.

In a city as large as San Diego, there is a broad range of conditions and development "products" that might be built for various building types or land uses. For example, office buildings can range from minimal one-story structures with surface parking, to multiple-story buildings with podium parking, to high-rises with subterranean parking. To cover the range, we have assembled prototypes for each of the major commercial and industrial building types.

KMA prepared base case project descriptions and development budgets for representative non-residential product types currently being developed in the San Diego market. The prototypes are used as a "starting point" on which to test the impact of potential linkage fees on development costs.

Tables V-4 through V-7 provide the development cost estimates for the prototypes analyzed by KMA, as follows:

- Office Prototypes:
  - Garden Office – 3 stories, surface parking
  - Suburban Mid-Rise Office – 5 stories, deck/structured parking
  - Urban High-Rise Office – 15 stories, subterranean parking

- Hotel Prototypes:
  - Extended Stay Hotel – 3 story, surface parking
  - Full-Service Mid-Rise Hotel – 6 stories, structured parking
  - Full-Service High-Rise Hotel – 15+ stories, subterranean parking

- Retail Prototypes:
  - Strip Retail Center – 1 story, surface parking
  - Community Retail Center – 1 story, surface parking
  - Urban Retail Center – 1-2 stories, deck/structured parking

- Industrial Prototypes:
  - Research and Development – 2–3 stories, surface parking
  - Manufacturing/Industrial – 1–2 stories, surface parking
  - Warehouse/Storage – 1 story, surface parking

KMA's experience with financial feasibility analyses for non-residential development proposals in San Diego was a major frame of reference in developing the prototypes and typical development cost estimates. The inputs and assumptions assumed by KMA are as follows (costs have been rounded):

- Acquisition costs were estimated on a per-square-foot basis. For each land use type, acquisition costs were estimated to range as follows (reflecting the multiple scenarios analyzed):

Acquisition Costs	Per Square Foot (SF) Site Area
Office	$25 - $300 /SF
Hotel	$25 - $300 /SF
Retail	$25 - $50 /SF
R&D	$30/SF
Manufacturing	$20/SF
Warehouse	$15 /SF

- Direct construction costs, including site improvements, parking, shell construction, tenant improvements, and furniture/fixtures/equipment, were estimated for each land use type as follows:

Direct Costs	Per Square Foot (SF) Gross Building Area
Office	$150 - $310 /SF
Hotel	$135 - $275 /SF
Retail	$130 - $230 /SF
R&D	$150/SF
Manufacturing	$105/SF
Warehouse	$80/SF

- Indirect and financing costs -- including factors such as architecture and engineering, legal and accounting, taxes and insurance, developer overhead fee, marketing and lease-up, loan fees, and construction interest reserve – were combined and estimated as a percent of total direct costs:

Indirect and Financing Costs	% of Direct Costs
Office	30% of Directs
Hotel	30% - 35% of Directs
Retail	30% of Directs
R&D	30% of Directs
Manufacturing	30% of Directs
Warehouse	30% of Directs

- Cost for public permits and fees were based on KMA's review of permit and fee data provided to KMA for comparable developments within the City of San Diego.

Permits and Fees	***Per Square Foot (SF) Gross Building Area***
Office	$8/SF
Hotel	$10/SF
Retail	$10/SF
R&D	$8/SF
Manufacturing	$8/SF
Warehouse	$8/SF

Overall, total development costs per square foot of building area are summarized below for each non-residential development prototype (ranges in cost reflect multiple scenarios). The columns to the right illustrate possible fee levels calibrated as a percent of total development costs, ranging from a low of 0.5% to a high of 2.0%.

Non-Residential Building Type	**Total Development Costs ($/SF GBA)**	**Average Development Costs ($/SF GBA)**	**Fee Level Per SF @ % of Total Costs**			
			0.5%	**1.0%**	**1.5%**	**2.0%**
Office	$264 - $489	$354	$1.77	$3.54	$5.32	$7.09
Hotel	$216 - $431	$315	$1.58	$3.15	$4.73	$6.30
Retail	$267 - $410	$331	$1.65	$3.31	$4.96	$6.61
R&D	$276	$276	$1.38	$2.76	$4.14	$5.52
Manufacturing	$203	$203	$1.02	$2.03	$3.05	$4.06
Warehouse	$152	$152	$0.76	$1.52	$2.28	$3.04

GBA = Gross Building Area.

For comparison purposes, the current fee and the fee at adoption can also be compared to total development costs for each building type. As shown below, the current fee reflects between 0.2% and 0.3% of current development costs and the fee at adoption reflects between 0.4% and 0.6% of current development costs.

Non-Residential Building Type	Total Development Costs ($/SF GBA)	Average Development Costs ($/SF GBA)	Current Fee (in place since 1996)		Fee at Adoption (in 1990)	
			$/SF GBA	% of Costs	$/SF GBA	% of Costs
Office	$264 - $489	$354	$1.06	0.3%	$2.12	0.6%
Hotel	$216 - $431	$315	$0.64	0.2%	$1.28	0.4%
Retail	$267 - $410	$331	$0.64	0.2%	$1.28	0.4%
R&D	$276	$276	$0.80	0.3%	$1.60	0.6%
Manufacturing	$203	$203	$0.64	0.3%	$1.28	0.6%
Warehouse	$152	$152	$0.27	0.2%	$0.54	0.4%

GBA = Gross Building Area.

Fee as Percent of Nexus Cost

Policy makers may establish fees at any level below the maximum fee for the building types identified in the KMA nexus analysis – Office, Hotel, Retail/Entertainment, Manufacturing/Industrial, Warehouse/Storage – (1) in the same proportion to the nexus conclusions, or (2) independently selecting the fee for each building type based on weighing policy considerations separately for each building type.

When the City adopted housing impact fees initially, fees were set at between 5% and 20% of the calculated nexus costs (depending on land use), which included only Very Low and Low Income tiers, or up to 80% of Area Median Income. The current analysis assumes up to 120% of Area Median Income, resulting in higher total nexus costs. In the event the City wishes to continue using this approach, the following table illustrates potential fee levels set at 10% of the nexus amounts for each building type:

Non-Residential Building Type	Nexus Costs	Potential Fee @ 10% of Nexus Cost
Office	$72.41	$7.24
Hotel	$66.88	$6.69
Retail	$96.28	$9.63
R&D/Manufacturing/Industrial	$33.78	$3.38
Warehouse/Storage	$11.91	$1.19

The principal advantage of this approach lies in its simplicity and avoidance of addressing each fee independently. The disadvantage is that there could be a disproportionate burden on one building type. Alternately, there could be lost opportunity in not charging a fee on a building type that could sustain a higher fee level.

Impact of Fee on Development

This section reviews historic construction activity and employment growth in the City of San Diego since the linkage fee was adopted. It also provides a qualitative assessment of the likelihood of the fee preventing construction from occurring in San Diego, and/or redirecting development to other jurisdictions.

Overview of Construction Activity

Table V-8 summarizes construction activity by land use type for the City of San Diego, the balance of San Diego County, and the State of California for the period from 1990 through 2012. Construction activity can be measured in terms of building permit valuation data compiled by the Construction Industry Research Board. Since 1990, approximately $4.8 billion in hotel, office, retail, and industrial development has been permitted in the City of San Diego. This represents average annual permit valuation of $207.5 million. The largest category of permit valuation was office use, representing $2.3 billion in valuation during 1990-2012.

Within the balance of the County, approximately $4.3 billion in development valuation was permitted in these land use categories during 1990-2012, representing approximately $189 million in average annual permit valuation. The largest categories were retail ($1.7 billion) and industrial ($1.5 billion).

The measure of construction activity in the City of San Diego can also be compared to the balance of the County on a proportionate share basis. The table below summarizes total permit valuation in the City of San Diego as a percent of the County total (inclusive of the City):

Building Permit Valuation, 1990-2012 Total	**City of San Diego**	**County of San Diego (including City)**	**City as Percent of County**
Office	$2,317.9 mm	$3,063.7 mm	76%
Hotel	$672.6 mm	$1,074.4 mm	63%
Retail	$946.8 mm	$2,643.2 mm	36%
Industrial	$835.6 mm	$2,326.3 mm	36%
Total	**$4,772.8 mm**	**$9,107.5 mm**	**52%**

As shown in the table, the City accounted for the majority of office and hotel development in the County during the time period. This finding suggests that the City of San Diego has continued to capture a greater share of new office and hotel development than the rest of the County. On the other hand, industrial and retail uses have developed more rapidly in the balance of the County than the City of San Diego. This trend is not surprising in light of the greater land availability which largely explains the significant expansion of business parks, as well as new residential communities with supporting retail uses, in suburban areas such as Carlsbad, San Marcos, and Chula Vista over the time period.

Overview of Employment Growth

Table V-9 summarizes trends in employment growth for the City of San Diego, the balance of San Diego County, and State of California for the period 1990 to 2011. To ensure a consistent data source, KMA relied on U.S. Census and State of California Employment Development Department (EDD) data to calculate employment growth. (Note that the employment figures in Section II are slightly different as they are based on SANDAG estimates). As shown in the table, the rates of job growth in all three areas over the time period are relatively similar. Total employment in the City of San Diego increased from 681,218 jobs in 1990 to 811,364 jobs in 2011. This represents a total increase of 130,146 jobs, and an average annual increase of 6,197 jobs or 0.8%.

The rates of employment growth in the balance of San Diego County and the State were similar to the City's growth rate, as shown in the table below. It should be noted that population growth within the City of San Diego lagged behind population growth in the balance of the County by an even greater amount. In other words, the lower employment growth rate for the City as versus the County is not meaningful when considered in context of the slower population growth occurring in the City during this same time period.

Change in Employment by Place of Work, 1990-2011	Average Annual Growth in Employment	Average Annual Growth in Population
City of San Diego	0.8%	0.8%

The Burden of Paying for Impact Fees

The question is sometimes raised as to "who pays" for the housing impact fee. For example, does the burden fall on developers, end user/tenants, or landowners. Of course, the developer pays the fee at the time of building permit issuance. The question is focused on whether the fee is ultimately passed through to end users or tenants, results in reduced developer profits, or results in a reduction in land value achieved by the landowner who sells a development site to a developer.

It is the KMA view based on our experience with real estate economics that an impact fee charged for affordable housing functions similarly to any other development exaction. In other words, it is absorbed over time into the market for buying and selling of development sites. Whether this is true in the case of every development project depends on economic cycles, timing of land acquisition and entitlement,

and numerous other external factors. Obviously, if a proposed development site is already in use for another economically viable purpose, any increase in developer exactions will tend to delay the feasibility of implementing new development on the site.

Timing of Fee Payment

The question has been raised whether there is a measurable benefit to allowing the payment of the linkage fee to occur later than building permit issuance, e.g., at certificate of occupancy. The objective of this approach would be to offer an offsetting economic incentive to developers to help reduce the impact of the fee obligation. However, the reverse impact also holds – the City would receive the linkage fee revenue at a later date, and it would experience delays in implementing its affordable housing program.

The economic benefit to developer of paying a fee at certificate of occupancy, rather than building permit issuance, can be estimated in the form of savings in cost of funds or interest carrying costs. The chart below provides an illustration of the potential magnitude of interest carry savings to a developer for various fee levels. For this illustration, KMA has used an office building, ranging from a garden office to an urban high-rise. We have assumed construction periods ranging from a low of 12 months to a high of 24 months. In each case, we have assumed an annualized carrying cost of 9.0%, reflecting the blended cost of debt and equity needed for construction.

		Office		
		Garden	**Suburban Mid-Rise**	**Urban High-Rise**
Total Development Costs ($/SF GBA)		$264/SF	$310/SF	$489/SF
Construction Period		12 months	18 months	24 months
Fee Level		**Potential Interest Carry Savings**		
Existing Fee @	$1.06 /SF	$0.10 /SF	$0.14 /SF	$0.19 /SF
Fee @ 1.0% of Costs	$2.64 – $4.89/SF	$0.24 /SF	$0.42 /SF	$0.88 /SF
Fee @ 2.0% of Costs	$5.27 - $9.79 /SF	$0.47/SF	$0.84 /SF	$1.76 /SF

As shown above, depending on the type of office building, potential interest carry savings is estimated to range between $0.10/SF and $0.19/SF for the existing fee, $0.24/SF and $0.88/SF for a potential fee at 1.0% of costs, and between $0.47/SF and $1.76/SF for a potential fee at 2.0% of costs. As shown, the absolute savings for the existing fee is relatively minor because the existing fee itself is less than 0.5% of development costs.

In addition to the potential interest carry savings, it should also be recognized that the last dollars to raise in equity are often the most difficult to obtain and the most costly. As a result, for some projects the savings could be somewhat greater than that indicated above.

Discussion of Potential Indices for Fee Level Adjustment

There are a number of potential indices that could be used to adjust fee levels in the future. Some potential objectives that could potentially be taken into consideration in selecting an appropriate index for the fee are as follows:

Administrative Objectives

- Simple and easily administered
- Clear and objective, not subject to interpretation
- Tied to readily accessible and neutral third party published source

Potential Policy Objectives

- Maintain ability to mitigate impacts/fund affordable housing over long-term
- Maintain consistent fee burden over long-term
- Respond to economic cycles: fee relief during economic downturn, increased fees with a strong economy

The following chart reviews a range of potential indices that could be used to adjust the fee in the future.

Index	Concept / Description	Advantages	Disadvantages
#1 Building Cost Index (BCI)	Fees go up or down based on building construction costs. Published by Engineering News Record (ENR). Available at national average and for 20 cities (not San Diego; Los Angeles is nearest city available).	Very well established and the current index established in the ordinance. Consistent fee burden over time relative to construction costs.	May not trend with changes in non-construction development costs (land, other soft costs). May not trend with cost to produce affordable units. Only addresses cost side of the equation.

Index	Concept / Description	Advantages	Disadvantages
#2 Construction Costs Index (CCI)	Also published by ENR and similar to Building Cost Indices but with different weighting of labor and material cost categories.	Very well established. Consistent fee burden over time relative to construction costs.	May not trend with changes in non-construction development costs (land, other soft costs). May not trend with cost to produce affordable units. Only addresses cost side of the equation.
#3 Consumer Price Index (CPI)	Published by the U.S. Bureau of Labor Statistics. Available for major metro areas including San Diego.	Very well established. Generally tracks with inflation. Available for San Diego specifically.	May not trend with: - Construction costs (consistent fee burden) or - Cost to produce affordable units (consistent ability to mitigate impacts)
#4 Bureau of Labor Statistics (BLS) Construction Indices	BLS publishes "producer price indices" for a long list of industries.	Opportunity for index tied to specific types of construction.	Different indices for different uses somewhat more complicated.

Index	Concept / Description	Advantages	Disadvantages
#5 Housing Affordability Index	Metric tied to housing affordability. Fees go up as housing becomes less affordable. Based on what median household can afford versus median housing cost	Maintains consistent level of mitigation. Revenue increase as cost to produce unit increases.	Would not maintain consistent fee burden. Requires special calculation by the City and not produced by a neutral third party.

Recommendations

The decision to amend the City's Housing Impact Fees is a policy matter in which multiple City objectives are likely to be taken into consideration in addition to the goal of creating more affordable housing. Legally the City may select fees at any level up to the maximum supported by the nexus analysis; however, as a practical matter, most cities do not desire to set fees so high they become a deterrent to development. Accordingly, the focus of KMA's recommendations as outlined below is on bracketing an upper end of the range or maximum within which the City can have a reasonable degree of confidence that new development will not be significantly impaired.

Maximum Fee Levels

KMA's recommendation is that potential amended Housing Impact Fees be set within a range of up to 1.5% of total development costs. The recommended maximums are based on KMA's evaluation as to the fee increase that could be absorbed without a significant impact on development decisions. KMA further notes that the fees initially adopted in 1990 were set at a level equivalent to approximately 1.5% of development costs.

KMA's recommendations and other relevant benchmarks are summarized in the table below including: the current fee in place since 1996 (half the 1990 fees); the original 1990 fees; the fees today had the 1990 fees been indexed in accordance with the ENR index per the current ordinance; and the recommended maximum fee levels equivalent to 1.5% of development costs (using the development prototypes and cost estimates described earlier in this section). As noted previously, the current fee levels equate to 0.2% to 0.3% of development costs. All figures are expressed per square foot of gross building area.

Recommended Maximum Fee Levels for Consideration and Relevant Benchmarks

	Current Fee (Since 1996)	Fee as Adopted (in 1990)	Fee if Index the 1990 fees to today (ENR Index per Current Ordinance)	Recommended Maximum Fee Levels for Consideration (up to 1.5% of Development Costs)
Office	$1.06	$2.12	$4.19	$5.32
Hotel	$0.64	$1.28	$2.53	$4.73
Retail	$0.64	$1.28	$2.53	$4.96
Research & Development	$0.80	$1.60	$3.16	$4.14
Manufacturing/Industrial	$0.64	$1.28	$2.53	$3.05
Warehouse/Storage	$0.27	$0.54	$1.07	$2.28

Note: The nexus analysis combined research and development uses with manufacturing/industrial uses although research and development has a separate fee level in the ordinance.

Housing impact fees, like other development impact fees and exactions, ultimately become a factor in the price developers are willing to pay for development sites. A fee increase will, generally speaking, increase development costs and reduce the price developers will pay for sites. KMA's evaluation regarding the ability to absorb a fee increase up to the recommended maximum is based upon all the various criteria and considerations outlined above and a calibration of potential fee levels relative to land values. If fees are established at 1.5% of estimated development costs, it is estimated that a market adjustment in the value of development sites in the range of 5% to 10% could result for most non-residential building types. In our evaluation, the market will be able to adjust to such a change in a relatively short period. For example, if land values appreciated at an average rate comparable to inflation, then a 5% to 10% adjustment in value could be absorbed in two to three years. Fee levels higher than 1.5% of development costs will have a more significant impact on land value, and have the potential to delay or discourage new non-residential development.

As noted previously, the current Housing Impact Fees reflect between 0.2% and 0.3% of current estimated total development costs. Thus, new fees at 1.5% of development costs would represent an increase on the order of 1.2% to 1.3% of development costs.

Annual Escalation Index

Application of an annual index to the fee level is necessary to maintain the ability to mitigate impacts over time. KMA recommends leaving in place the current index: the Building Cost Index for twenty cities published by ENR. However, we recommend that the ordinance be modified to make application

of the index automatic rather than subject to a discretionary action by the City Council each year. As noted earlier, the Building Cost Index is well established, readily available, and would provide for a consistent fee burden over time relative to construction cost.

TABLE V-1

COMPARISON OF JOBS HOUSING LINKAGE FEE PROGRAMS, CALIFORNIA
JOBS-HOUSING NEXUS STUDY
CITY OF SAN DIEGO, CA

Jurisdiction	Yr. Adopted/ Updated	Current Fee Levels per SF	Thresholds & Exemptions	Build Option/ Other	Market Strength	Comments
High Fee Cities						
City and County of San Francisco Population: 797,983	1981 Updated in 2002, 07	• Office $22.83 • Hotel $17.10 • Retail & Entertainment $21.30 • R&D $15.21 • Integrated PDR $17.95 • Small Enterprise $17.95	25,000 GSF threshold	Yes May contribute land for housing	Very Substantial	Fee is adjusted annually based on the construction cost increases
City of Palo Alto Population: 63,475	1984 Updated in 2002	• Commercial & Industrial $18.44	No Minimum threshold Churches; colleges and universities; commercial recreation; hospitals, convalescent facilities; private clubs, lodges, fraternal organizations, private education facilities; and public facilities are exempt	Yes	Very Substantial	Fee is adjusted annually based on CPI
City of Menlo Park Population: 31,669	1998	• Office & R&D $14.71 • All other commercial and industrial $7.98	10,000 gross SF threshold Churches, private clubs, lodges, fraternal orgs, public facilities and projects with few or no employees are exempt	Yes, preferred May provide housing on- or off-site	Very Substantial	Fee is adjusted annually based on CPI
Medium Fee Cities						
County of Marin Population: 250,666	2003	• Office & R&D $7.19 • Retail & Restaurant $5.40 • Warehouse $1.94 • Manufacturing $3.74 • Hotel/Motel (/Room) $1,745	No minimum threshold	Yes, preferred	Substantial	
City of St. Helena Population: 5,838	2004	• Office $3.61 • Commercial & Retail $4.57 • Hotel $3.33 • Winery & Industrial $1.11	Small childcare facilities, churches, non-profits, vineyards, and public facilities are exempt	Yes, subject to city council approval	Substantial	
Town of Corte Madera Population: 9,191	2001	• Office $4.79 • R&D lab $3.20 • Light Industrial $2.79 • Warehouse $0.40 • Retail $8.38 • Com Services $1.20 • Restaurant $4.39 • Hotel $1.20 • Health Club & Rec $2.00 • Training facility/ School $2.39	No minimum threshold	N/A	Substantial	
City of Santa Monica Population: 89,153	1984 Updated in 2002	Office only • First 15,000 SF $5.06 • 15,000 + SF $11.24	15,000 sf exemption for new construction, 10,000 sf exemption for additions	Yes	Very Substantial	Includes fee for open space as well. Fees adjusted quarterly based on CPI. No comprehensive update since adoption.
City of Sunnyvale Population: 138,436	1984 Updated in 2003	• Industrial & Office $9.08	Applies only to the portion of the project that is in excess of allowable FAR (typically 0.35:1)	N/A	Very Substantial	
City of Mountain View Population: 73,394	2001 Updated in 2012	• Industrial, Office & High Tech $10.00 • Hotel, Retail & Entertainment $2.37	Fee is 50% less if building meets threshold: Office <10,000 SF Hotel <25,000 SF Retail <25,000 SF	Yes	Very Substantial	

Note: This chart has been assembled to present an overview, and as a result, terms are simplified. The information is recent but not all data has been updated as of the date of this report. In some cases, fees are adjusted by an index (such as CPI) which may not be reflected. For use other than general comparison, please consult the code and staff of the jurisdiction.

APPENDIX A

Additional Discussion of Nexus Concepts and Assumptions

APPENDIX A – ADDITIONAL DISCUSSION OF NEXUS CONCEPTS AND ASSUMPTIONS

Matrix of Key Nexus Analysis Concepts and Assumptions

For ease of reference, we have organized the major assumptions of the nexus analysis into a matrix format with a brief description of each.

	Key Assumption	***Description***
A. Employment		
1.	Relationship Between Construction and Job Growth	Construction of new work space buildings results in new jobs added to the region.
2.	Substitution Factor	Although some / all jobs in a given new building may be relocated from elsewhere in the region, this relocation makes other space available so that somewhere in the chain new jobs are added.
3.	Multiplier Effects	Multiplier effects are not included in the analysis. This is one of many conservative assumptions we make in the analysis.
4.	Adjustment for Declining Industries	Long-term shifts in the regional economy can result in declines in employment in certain industries even as other industries add jobs. An adjustment is included to account for the fact that some new jobs will be filled by workers who are downsized from a declining industry and who already have housing locally.
5.	Unemployment / Excess Labor Force Capacity	Conditions of high unemployment / excess labor force capacity may occur temporarily as a result of economic cycles. However, temporary conditions do not undermine the underlying assumption that new work space buildings accommodate added jobs over the long term. Long-term shifts in employment are recognized under item 4 above.
6.	Labor Force Participation	Labor force participation rates are assumed to be stable for purposes of the analysis. This is a conservative assumption given labor force participation rates for men have been on a downward trajectory since 1970 while increases in participation rates by women have stabilized recently and even declined slightly.
7.	Employment Density	The analysis is based upon assumptions about employment density or the number of square feet of building area per employee (Table III-1).

	Key Assumption	*Description*
B. Worker Occupation and Compensation Level		
1.	Worker Occupations	Worker occupations are based on U.S. Bureau of Labor Statistics data. For uses such as office and manufacturing, it is necessary to identify a mix of industries representative of San Diego's economic base in order to arrive at occupational distribution. See Appendix B for more information.
2.	Compensation Levels	Compensation levels are based on 2012 data from the California Employment Development Department (EDD). The EDD data assumes hourly employees have full-time employment (another conservative assumption). See Appendix B for more information.
C. Households		
1.	Population and household growth is linked to employment growth	Workers would not come to the area if they could not expect to find a job. Existing workers would not stay in the region over the long term without jobs.
2.	Non-working Households are Excluded	Only population growth arising from new employment is included in the analysis. Non-working households such as retirees and students are not included.
3.	Existing Housing Needs	The analysis does not address existing housing needs. Only housing needs arising from employment growth are included.
4.	Multiple Earner Households	Given that most households have more than one worker, the analysis uses a distribution of workers by household size based on 2009-2011 Census data (American Community Survey). Workers in multiple earner households are assumed to have similar incomes. While there are many exceptions to this, demographic studies in recent years have shown this to be the trend.
5.	Household size distribution	Household size distribution is based on 2009-2011 Census data (American Community Survey).
6.	Variations in income by household size	No distinction is made between the incomes of workers in different size households. This assumption likely understates the number of households falling into the lower income tiers. Census data indicates average household income for five and six person households is actually less than three and four person households.

	Key Assumption	*Description*
7.	Commute Adjustment	The results of the nexus are adjusted downward to reflect existing commute patterns, including an estimate of workers commuting from Mexico. Only households likely to seek housing in the City are included based on the existing commute pattern. This existing relationship is influenced by the availability of affordable housing in the City.
D. Affordability Gaps		
1.	Rents and Sale Prices	Affordable rents and sale prices are based upon the top of each income range. For example, units for Very Low Income households (0% to 50% AMI), have rents based on 50% of AMI. This is another one of the conservative assumptions incorporated into the analysis.
2.	Rental Unit Prototype	Very Low and Low Income households are assumed to be housed in rental units. Forty percent of the affordable rental units are assumed to be provided as garden apartments, and 60% as stacked flats over podium parking. Low Income Housing Tax Credit financing (4%) is assumed for Very Low Income units.
3.	Ownership Prototype	Moderate Income households are assumed to be housed in for sale units. Forty percent of the affordable units are assumed to be provided as townhomes, and 60% as stacked flats over podium parking.

Discussion of Specific Factors in Relation to the Nexus Concept

1. Multiplier Effects

The multiplier effect refers to the concept that the income generated by a new job recycles through the economy and results in additional jobs. The total number of jobs generated is broken down into three categories – direct, indirect, and induced. In the case of the nexus analysis, the direct jobs are those located in the new workplace buildings that would be subject to the linkage fee. Multiplier effects encompass indirect and induced employment. Indirect jobs are generated by suppliers to the businesses located in the new workplace buildings. Finally, induced jobs are generated by local spending on goods and services by employees.

Multiplier effects vary by industry. Industries that draw heavily on a network of local suppliers tend to generate larger multiplier effects. Industries that are labor-intensive also tend to have larger multiplier effects as a result of the induced effects of employee spending.

Theoretically, a jobs/housing nexus analysis could consider multiplier effects although the potential for double-counting exists. The potential for double counting exists to the extent indirect and induced jobs

are added in other new buildings in the City of San Diego subject to the linkage fee. KMA chooses to omit the multiplier effects (the indirect and induced employment impacts), as it avoids potential double-counting and makes the analysis more conservative.

2. Population Growth Resulting from Non-Employment Factors

Not all population growth in San Diego is the result of new jobs in the region. Retirees, students, and others who are not part of the work force all generate demand for housing. However, non-working households are not included in the analysis since the purpose is to demonstrate the linkage between new buildings, new workers and new worker households, and demand for housing. Since only working households are part of this equation, non-working households are excluded.

SANDAG projections anticipate significant growth in the population over the age of 65 over the next 20 years; retired households are expected to represent a significant component of future household growth and overall housing demand in the region.

3. Likelihood of Different Job Categories to Attract New Population from Outside the Region

An underlying concept in the analysis is that there is a relationship between job growth and population growth. Workers from outside the region would not come without an expectation that they could find a job. People born locally and entering the work force, or for example, who came to attend college, would not stay without jobs. However, the analysis does not assume employers are recruiting from outside the region to fill specific jobs or job categories. The analysis also does not assume workers are relocating to fill specific openings.

4. Differences in Number of Workers and Household Size by Occupation Category

The analysis accounts for multiple earner households based on Census data. The Census provides data on the number of workers in households of different sizes. The Census does not provide data to show whether there are differences in this pattern by occupational category. Given this data constraint, the model does not differentiate by occupational category when incorporating information on the distribution of household sizes and number of workers per household.

Anecdotally, one can observe some workers at the lower end of the pay scale address the issue of housing affordability by means of shared living situations which result in more workers in a given size household. However, we can also find examples of workers at the lower end of the pay scale who have larger families with children. If these examples could be quantified, they would tend to push the results of the nexus in opposite directions (the first would drive the results down, while the second would drive them up). The relative importance of these two factors cannot be determined based on the data available.

5. Accounting for Demolition of Existing Buildings

For demolition of existing structures, some programs provide an offset to any impacts of the proposed construction; however, we understand that San Diego's ordinance does not provide such an exemption. Buildings are charged the fee once during their useful lives in order to mitigate the impacts. The affordable units that are assisted also have a limited useful life and eventually need to be rehabbed or replaced. Replacing older or obsolete employment space "renews" the impacts over the life of a new building and collecting the fee on the new building "renews" the mitigation of those impacts.

6. Consistency with SANDAG Projections

The nexus analysis methodology is consistent with the approach that SANDAG uses in their projections. The nexus assumes employment growth is a key driver of growth in the number of working households. Similarly, one of the key features of SANDAG's models is the integration of demographic projections with economic models and job growth forecasts in recognition of the linkage that exists.[5]

7. Upward Mobility of Workers

New employment spaces add jobs across a distribution of occupational categories. Over time, some workers will move up the career ladder, for example into managerial occupations. However, not all workers will "move up" and those that do leave a position that is usually filled by a new worker. Occupational and income composition are not affected in the aggregate by the upward mobility of particular workers.

8. Housing New Worker Households in Existing Housing Units

The analysis assumes that the existing housing stock in San Diego is needed to meet the housing needs of the existing population. New worker households, including those needing affordable housing, will need to be accommodated by adding to the existing housing stock.

Los Angeles, CA 90012

Rushmore D. Cervantes, General Manager
Los Angeles Housing + Community Investment Department
1200 West 7th Street, 9th Floor
Los Angeles, CA 90017

Dear Mr. Bertoni and Mr. Cervantes:

We are pleased to submit the Los Angeles Affordable Housing Linkage Fee Nexus Study. The Study analyzes the relationship between new development and affordable housing impacts for two kinds of fees: those that could be charged to new commercial development, and those that could be charged to new market-rate residential development. We have also profiled how these fees are structured and implemented in numerous other "case study" cities, provided feasibility testing across common land uses in Los Angeles segmented by market condition, and suggested methods for structuring a fee program to implement both kinds of fees over the next few years in the City of Los Angeles.

We have enjoyed working with your staff and members of the development and affordable housing communities. Please let us know if you have any comments or questions regarding this report.

Sincerely,

Janet Smith-Heimer, MBA
President, BAE

Introduction

The City of Los Angeles faces an extraordinary housing crisis. In recent years, economic growth and strong demand for housing in Los Angeles have created substantial price and rent increases, causing more and more middle and lower income households to be priced out of the marketplace. The result has been an ever-widening gap for many households, between the cost of their housing and their incomes. This cycle has led to the need to produce more affordable housing units, at the same time that funding to subsidize affordable housing, has fallen.

A few key statistics tell the story:

- Over 61 percent of renter households in the City of Los Angeles pay more than 30 percent of their income on housing (rent and utilities), per the 2010-2014 American Community Survey. These approximately 490,000 households are considered cost-burdened and in need of affordable housing to lower this cost to an affordable level.[1]
- Between 2006 and 2013, the median renter household income decreased by nearly four percent after adjusting for inflation. This means that on average, the median renter household in Los Angeles received a pay cut of nearly $200 every year between 2006 and 2013. At the same time, LA median rents went the opposite direction, rising by almost 11 percent for the period after inflation. This mismatch between incomes and rents in LA grew more rapidly than any other major US city in the 2006 – 2013 period.[2]
- In 2014, the median LA household income ($54,440) could afford a $179,000 house, compared to the median home sale price in that same year of $560,000.[3]
- The 2016 Homeless Count found 28,464 homeless persons in the City of Los Angeles, and increase of almost 11 percent over 2015.[4]

These statistics are exacerbated by the fact that the City of Los Angeles has also lost much of its affordable housing funding in recent years, shrinking from $100 million in 2010 to $26 million in 2014. The decline in funding was primarily due to the demise of redevelopment (CRA/LA), as well as a drop in federal housing funds. Notably, Los Angeles is also the only large California city without a permanent source of local funding for production of affordable housing, which means that funding declines and the growing housing crisis have impacted Los Angeles dramatically.

[4] *2016 Greater Los Angeles Homeless County* (Los Angeles Homeless Services Authority, 2016)

As part of addressing the affordable housing crisis, Mayor Garcetti proposed that this study be prepared so that both a commercial affordable housing fee and a residential affordable housing fee can be fully considered.

Purpose of Nexus Study

The purpose of the Nexus Study is to conduct a legally defensible analysis of the relationships between commercial and market-rate housing development projects, the new employment generated, the new worker households, their income distributions, and an estimate of those households that will need affordable housing. The analysis also evaluates the cost to provide this housing for households earning up to 120 percent of Area Median Income, and analyzes the maximum fee per square foot of new development necessary to provide this housing.

The Study also evaluates the these "maximum legal" fees in terms of their feasibility by land use prototype across three market conditions to reflect the range and diversity of real estate economics in the City of Los Angeles. This analysis also accommodates current and proposed other impact fees and their effects on project feasibility. Finally, the Study estimates potential revenues if fees were adopted, and analyzes considerations for implementation.

Three additional issues are also considered in this report: the effects of the planned increase in Los Angeles's minimum wage by 2021, the option to provide affordable units on-site within market rate projects instead of a fee payment, and how the affordable housing fee might interact with the provision of units on-site in the case of density bonus projects.

Study Process and Approach

Process

This study was commissioned in late spring 2016 by the City of Los Angeles. The consultant team of BAE Urban Economics, specialists in urban economics, along with PlaceWorks, specialists in public engagement, were engaged to conduct a nexus study for both commercial and residential fees along with outreach to the development and advocacy communities in Los Angeles.

For each step in the study process, BAE conducted extensive research and analysis, as cited and documented in this report. Wherever possible, BAE developed data to support assumptions, as identified herein. In addition, BAE used a blend of standard methodologies to analyze nexus for employment generating uses, culled from court-tested and related analysis conducted across California during the past 20 years. In addition, wherever possible, this study's methodologies have sought to expand and more comprehensively document many of the foundational variables utilized by other cities, to tailor this study specifically to the Los Angeles real estate, employment, and housing markets.

To obtain input and preview preliminary findings from the study, a series of three workshops were held. Over 60 development companies, industry representatives, and policy advocates were invited. A list if attendees is included in the preface to this report.

Approach

This study includes extensive analysis of real estate project feasibility, to ensure that fees are set at levels that do not unduly constrain market rate projects. The feasibility analysis was prepared in an intentionally conservative manner, to accommodate the wide variation in project economics across Los Angeles. Wherever possible, the lower end of the range of revenue-related variables, and the higher end of the range of cost-related variables, was used. This approach was taken for two reasons: arguably, Los Angels is at the peak of the real estate cycle in 2016, and also, deeming a fee amount as feasible without a conservative approach would mean the fee could create downward pressure on market rate development.

It is also important to note that Los Angeles, a major city without a permanent mechanism to fund affordable housing, will be essentially "starting from scratch." Real estate economic theory suggests that over the long term, external costs such as impact fees, are absorbed by lower-than-otherwise land values (i.e., "land residual"), so imposing an affordable housing fee, over time, will likely have this effect. For many markets, this is experienced as a slower than otherwise land value appreciation trend, and is often offset by the land residual derived from rising rents/sale prices. Nevertheless, that change of moving from no fee to a fee, will strike some as an undue burden, especially in the short run. This report highlights how this situation has been addressed in other cities, including strategies such as exempting all projects already in the entitlement pipeline (which would have been organized and initiated without knowledge of the fee), phasing in the fee over several years so that the market can adjust, and providing for targeted waivers and exemptions to accommodate cases where the fee may have unintended negative consequences.

Overview of Report

The following report is divided into two halves: a commercial fee study and a residential fee study. For each development type, the report follows a similar outline. First, case studies of other California cities as well as selected major cities elsewhere in the US with these fees, are summarized. Next, the "nexus" or relationship between new development in employment-generating uses, the resulting affordable housing need, and the translation of these findings to a maximum legal fee, are presented. Maximum fees are then tested for financial feasibility across three levels of market conditions affecting Los Angeles. Several potential fee structures and corresponding estimates of potential annual fee revenues are provided. The report also analyzes several additional considerations for fee structuring and implementation.

About Commercial Fees

Overview of Commercial Fees

Commercial impact fees for affordable housing have a long, established history in major cities across the US. The concept of a commercial linkage fee, in general, is to charge a fee on new commercial development projects over a specific size, to mitigate the impacts of new jobs created by the project within high-cost local housing markets. For some types of commercial development, these impacts can be substantial: new workers who cannot find affordable housing must commute long distances, or pay more than 30 percent of their household's income for housing, or double up in overcrowded units, or even live with all of these conditions present at once.

Fees collected in many cities with established programs provide a significant local funding source for new affordable housing production. Although it may not technically be required, given recent court cases, this study was structured to comply with the California Mitigation Fee Act. This means this study demonstrates the direct relationship ("nexus") between the fees charged and the new workers' impacts. In addition, fees can not make up deficiencies in the local housing market created by other factors.

Summary of Case Studies

Appendix A profiles commercial linkage fee programs established in cities throughout California, including larger cities (e.g., San Francisco, Sacramento, Oakland, and San Diego), as well as smaller cities such as West Hollywood and Palo Alto. In addition, outside of California, the cities of Boston and Seattle are profiled.

It should be noted that these profiles are not exhaustive; numerous other smaller cities in California have adopted or are currently considering adopting commercial impact fees for affordable housing. However, given the large size of the City of Los Angeles, but with real estate markets specific to its economic base, the selected case studies seek to profile both large city experiences, along with smaller cities located nearby facing similar affordable housing challenges.

The table on the next page summarizes the case studies, with detail provided in Appendix A.

TABLE 1: SUMMARY OF COMMERCIAL FEES FOR AFFORDABLE HOUSING

	Popoulation (a)	Fee/ Sq.Ft.	Threshold	Fees Collected	Annual Rev. Per Capita (b)	Notes
Large Cities in CA with Fee						
San Francisco (1996/2015)	829,072		25,000 sq. ft.	$3.4 M/year	$4.04	Original program established in 1981
Entertainment		$22.42		(avg since 1988)		Exempts certain projects with
Hotel		$17.99		$27 million		pharmacy or grocery
Integrated PDR		$18.89		in FY 14/15		
Institutional		$0.00				
Office		$24.03				
PDR		$0.00				
R&D		$16.01				
Retail		$22.42				
Small Enterprise Workspace		$18.89				
San Diego (1990/2016)	1,341,510			$1.6 M/year	$1.16	New fee rates effective January 2017
Office		$2.12		(avg 2006-2014)		
Hotel		$1.28				
R&D		$0.80				
Retail		$1.28				
Oakland (2002)	402,339		25,000 sq. ft.	$171,000/year	$0.42	Fees became effective in 2005
Office		$5.44		(avg since 2005)		City anticipates approx. $2.5 M
Warehouse		$5.44				in the next 12-18 months
Sacramento (1989)	476,075			$1.0 M/year	$2.19	
Citywide				(avg 1989-2013)		
Office		$2.50				
Hotel		$2.38				
R&D		$2.12				
Commercial		$2.00				
Manufacturing		$1.57				
Warehouse/Office		$0.91				
Warehouse		$0.68				
North Natomas						
Highway Commercial		$2.74				
Community/Neighborhood Commercial		$2.06				
Office/Business		$2.06				
M-50		$1.74				
M-20		$1.44				
Light Industrial		$1.12				
Smaller CA Cities with Fee						
West Hollywood (1989/2014)	35,053		10,000 sq. ft.	$214,000 / year	$6.11	
Commercial Development		$8.00		(avg since 2002)		
Palo Alto (1984/2016)	65,998		1,500 sq. ft.,	$2.3 M/year	$34.85	Updated nexus study in 2016
Office/R&D		$35.00		(in FY 2014-15)		
Hotel		$30.00				
Retail/Restaurant/Other		$19.85				
Major Cities Outside of CA with Fee						
Boston (1986/2013)	639,594		100,000 sq. ft.	$5.1 M/year	$8.05	
Commercial Development		$8.34		(avg 1986-2012)		
Seattle (2015) (c)	637,850			NA (new)		Incentive zoning program structured
Downtown Harborfront 1		$0.00				to generate units. Many exemptions
Downtown Harborfront 2		$14.83				for desired projects.
Downtown Mixed Commercial		$9.78				
Downtown Office Core		$14.50				
Downtown Retail Core		$13.50				
Downtown Mixed Residential		$14.34				
International District Mixed		$8.00				
International District Residential		$9.30				
Pike Market Mixed		$0.00				
Pioneer Square Mixed		$11.08				
Seattle Mixed		$6.69				
Industrial Commercial		$8.00				
Commercial 2		$0.00				
Industrial Commercial 85-160 (Low/Med/High)		$10.00				
All other zones (Low)		$5.00				
All other zones (Medium)		$7.00				
All other zones (High)		$8.00				

Notes:
(a) All population figures from 2010-2014 American Community Survey.
(b) Per capita annual average revenue based on 2010-2014 ACS population estimates. Revenues are not adjusted for inflation, changes in fee rates, or other factors.
(c) Amounts shown are averages for each general zone type. The complete fee schedule is contained in Section 23.58B.040 of the Seattle Municipal Code.
Source: BAE, 2016.

Key points which emerge from the case studies include:

Fee Charges and Structure

- Commercial fees for affordable housing charged by larger cities with a diverse real estate market range from a low of $0.68 per square foot for warehouse space in the City of Sacramento, to a high of $24.03 per square foot for office space in San Francisco.
- Palo Alto, a smaller city with very strong market conditions, charges $35.00 per square foot for office space, and is considering raising this charge to $60.00 per square foot.
- Each city has tailored its commercial fees to match its typical commercial development project categories. The categories of land use subject to commercial fees are typically small in number (e.g., 4 or 5 categories).
- Some cities have a "fee zone" approach, with fees for the same land use category varying by location. Others have a single fee per land use category.
- Some cities avoid the challenges of land use categorization by charging a flat fee for all commercial uses. West Hollywood, the only city in the set of commercial fee case studies in the greater Los Angeles region, uses this approach (e.g., a flat fee, with a recent increase that was phased in over a two-year period).
- In general, cities collect these types of fees either prior to, or at the point of building permit issuance. Several cities allow partial payment at permit issuance, with the balance paid at Certificate of Occupancy.
- Many cities have built-in annual increases for commercial fees, tied to the CPI or the Construction Cost Index published by *Engineering News Record*. Staff generally report a preference for this approach, instead of relying on a city council's periodic review.

Waivers, Exemptions, and Refunds

- Most cities waive the fee for 100 percent affordable housing projects.
- Most cities offer a "units in lieu of fee" and/or land donation in lieu of fee option.
- All cities waive publicly-owned projects.
- Some cities waive non-profit buildings, and/or churches, schools (public and private), universities and colleges, and other similar categories of land use.
- Some cities exempt smaller buildings. For example, San Francisco does not charge a fee on commercial buildings smaller than 25,000 square feet.
- Many cities have created lower fees or offer exemptions to decrease the potential dampening effects of fees on certain types of development that are strongly desired to meet other policy objectives. An example of this approach includes San Francisco's exemptions for local grocery stores and pharmacies that provide needed neighborhood services.
- Some cities have established clear refund processes if projects are subsequently not constructed, while others allow for refund requests decided on a case-by-case basis.

- During economic downturns, cities have either created special deferral programs or lowered fees across the board. These approaches demonstrate that these kinds of fees can be customized to adapt to downturns in the economic cycle.
- All cities in California have a "hardship" exemption available per legal requirements. Some cities render a hardship decision administratively; others have a more formal process.

Revenues and Reporting

- Estimates of revenues collected from commercial fees range from less than $1 million to over $5 million per year, depending on the city's fee structure, size, and amount of commercial development activity.
- When analyzed on a per-capita basis to normalize for a particular city's size, fee revenues range from a low of $0.42 per capita in Sacramento (which has a very low fee schedule), to a mid-range of $6.11 in West Hollywood, to a high of $34.85 per capita in Palo Alto (which has a very active commercial development market with high real estate values).
- Most cities do not specifically track the use of the fees to build affordable housing projects, because the funds go into a trust fund and are used in combination with other sources that may have varying AMI targets or restrictions.
- San Francisco last reported its sources and uses of commercial linkage fees along with other revenue sources comprising its Affordable Housing Fund as part of a larger annual report for FY 2014-2015. Its reporting does clearly show both source and use of each funding stream within its Affordable Housing Fund, along with remaining balances at year end.
- Sacramento has the clearest public information source of the cities profiled. Sacramento produces an online map showing commercial linkage fees' resulting funded project locations.
- Most cities have general guidelines for use of commercial fee funds such as maximum AMI levels that can be served in new affordable units, rather than targeting the funds specifically to serve households with the greatest need (e.g., at-risk of homelessness/extremely low income/very low income). The City of Los Angeles, with great need for new affordable units serving extremely low and very low income households, may wish to develop policies to target commercial fee funds.

Los Angeles Commercial Fee Nexus Analysis

Overview of Methodology

The commercial fee analysis conducted for this report is based on the premise that new commercial land uses generate new employment for workers that will have a range of household incomes. Due to high housing costs in Los Angeles, new workers with extremely low, very low, low, or moderate household incomes will be unable to afford most market-rate housing in the City without incurring substantial cost burdens. This situation – the increment of growth in new worker households facing the lack of affordable housing options - is considered the impact of new commercial development. The commercial fee would mitigate these impacts by generating revenue to support the construction of housing affordable to the new lower-income worker households.

This section provides an overview of the steps used to determine the maximum legal commercial fee, based on the relationship ("nexus") between new commercial space and the worker households generated by it who face affordable housing challenges in the City of Los Angeles. Each step is summarized below and discussed in more detail in the following sections.

Step 1: Define Land Uses

Based on City of Los Angeles building permit data and data from the California Employment Development Department, the Nexus Analysis identifies eight commercial land uses that comprise the vast majority of probable future employment-generating commercial land uses in the City, each of which are analyzed in the subsequent steps.

Step 2: Determine Employment Densities

For each land use identified in Step 1, the Nexus Analysis determines the average employment density and resulting number of workers per 100,000 square feet of each land use type.

Step 3: Estimate Worker Households

Since most households in Los Angeles include more than more worker, the Nexus Analysis grouped the employees generated by each land use into households to determine the total number of worker households generated by each land use type.

Step 4: Identify Industry Sectors by Land Use

The Nexus Analysis identifies the industry sectors that would occupy each of the eight commercial land uses covered in the analysis.

Step 5: Estimate Income Distribution for Worker Households

Based on the industry sectors identified in Step 4, the analysis uses a data set published by the US Census (the Public Use Microdata Sample or PUMS) to construct the likely household income distribution for each land use.

Step 6: Estimate New Worker Households by Household Income

This step estimates the number of new worker households by income level by applying the worker household income distribution for each land use from Step 5 to the total number of worker households from Step 3.

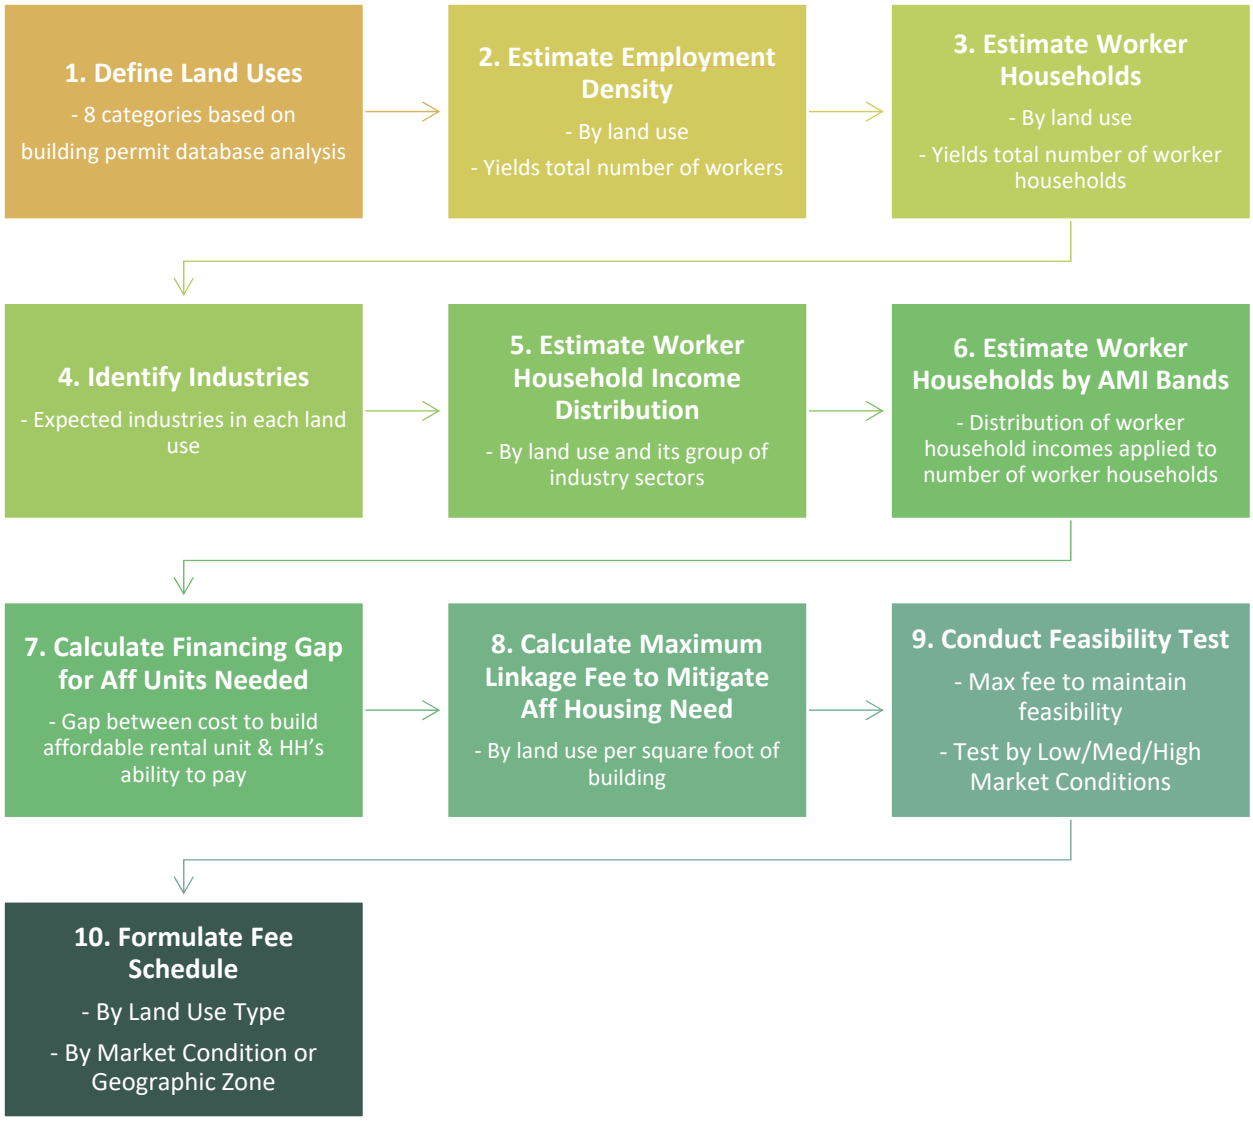
Step 7: Calculate Financing Gap per Affordable Unit

This step determines the per unit "financing gap" that affordable housing developers encounter when securing a permanent loan for their projects. Step 7 of the Nexus Study calculates the net operating income (NOI) generated by units affordable to extremely low-, very low-, low-, and moderate-income households. Using conventional financing assumptions, the analysis determines the supportable permanent loan amount based on the NOI from units at each income level.

The cost to house a lower-income household is the difference between the cost to develop an affordable unit and the amount the of the permanent loan that the developer can borrow to finance the unit. Using data on recent affordable housing developments in the City of Los Angeles, the Nexus Analysis determines the average cost to build an affordable rental unit in the City. The supportable permanent loan amounts (by AMI income band) as identified in Step 7 are deducted from the average per-unit development cost to determine the financing gap for units serving households at each income level up to 120 percent of AMI.

Step 8: Calculate the Maximum Legal Fee

The final step in calculating the impact fee is to apply the financing gap per unit for each income level (from Step 7) to the total housing need by income level (from Step 6). The resulting sum constitutes the maximum legal commercial fee.



Step 9 Test Feasibility of Maximum Legal Fee Under Different Market Conditions

The City of Los Angeles has a wide range of neighborhoods and corresponding market conditions. In order to ensure that market-rate commercial development is not effected by any fee that may be adopted, this step identifies three general levels of market condition throughout the City, and analyzes the financial return from a development project, in order to identify "feasible" levels of fee by land use.

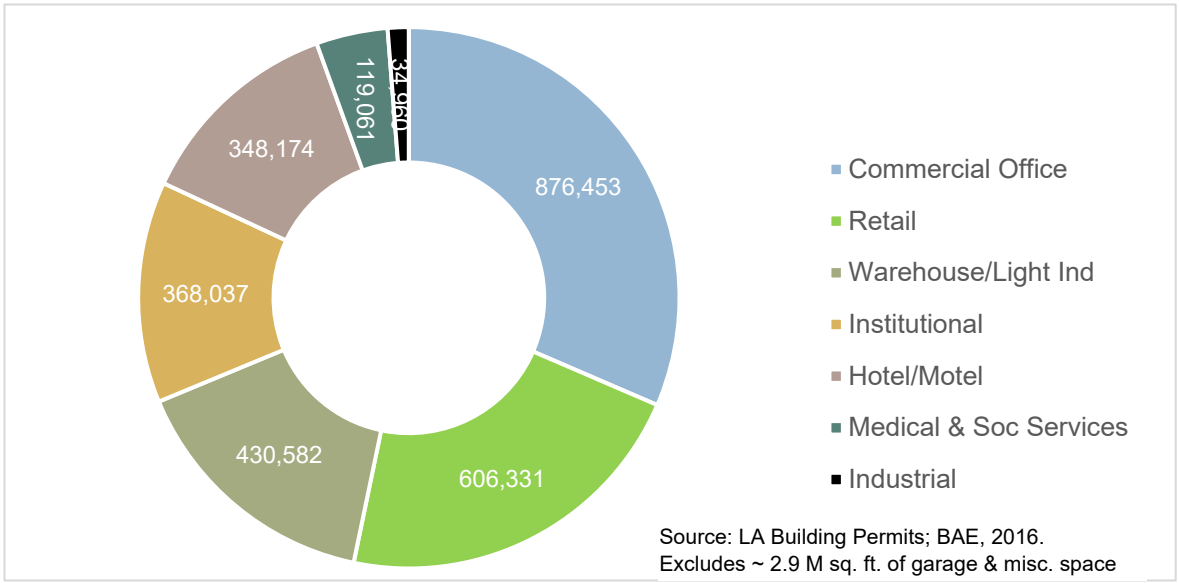
10: Formulate Feasible Fee Schedule

This step involves a summary fee schedule tested for feasibility, along with policy recommendations for phasing it in, administration, and other options for consideration.

FIGURE 1: SUMMARY OF COMMERCIAL FEE NEXUS METHODOLOGY

Commercial Land Uses

Step 1: Define Land Uses



In order to formulate commercial land use categories that reflect actual development in Los Angeles, the City's building permit data was analyzed for the 2011 to 2015 period (see Appendix B for summary data). The City permitted an average of approximately 5.7 million square feet of commercial space per year, including an average pf 2.8 million square feet per year in employment-generating commercial uses. The balance of 2.9 million square feet was permitted for public and private garage space, which is not generally considered an employment-generating use, and thus excluded from the following analysis.

Based on a review of employment by industry sector for Los Angeles County, the categories of commercial fees used by other cities in California (see Case Studies chapter), and permit trends for Los Angeles, commercial employment-generating land uses were classified into eight categories including.

- Office
- Retail
- Hotel/Motel
- Industrial
- Warehouse/Utility/Light Industrial
- Medical &Social Services (including hospitals)
- Institutional (churches and schools)

The graph below shows annual average of new construction, employment-generating space permitted by the categories of land use within the past five years, in order of amount of space.

FIGURE 2: AVERAGE ANNUAL PERMITTED NEW SPACE IN EMPLOYMENT-GENERATING USES, CITY OF LA, 2011 - 2015

Step 2: Determine Employment Densities

For the purposes of the following analysis leading to the maximum fee calculations, the Nexus Study assumes a building totaling 100,000 square feet for each commercial land use. This is not intended to portray a typical building permitted or developed in the City of Los Angeles; it is a method to allow for per square foot comparisons across commercial land uses.

For each land use identified in Step 1, the Nexus Study determined the average employment density (i.e., square feet of building area per employee), in order to determine the number of workers per 100,000 square feet of each land use type. BAE reviewed several studies to estimate average employment densities for each land use type, including the City of Los Angeles Affordable Housing Benefit Study (2011), the Southern California Association of Governments Employment Density Study (2001), Environmental Impact Reports for several recent projects in the City of Los Angeles, and the commercial linkage fee nexus studies for each of the commercial linkage fees discussed in the best practices section of this report. These studies demonstrated wide variation in the assumed employment density for each land use type. The employment densities assumed in this study are generally based on either the median value or most common value for each land use type, with some outlier values omitted. In some cases, the employment densities used in this study may be slightly lower than would typically be expected for new construction in order to avoid overstating the number of workers that would be generated by new development, thereby maintaining a more conservative analysis.

In particular, many office tenants are demonstrating a preference for more open floor plans with fewer square feet per employee than is typical of more traditional office space, some occupying 150 square feet per employee or less. However, while employment densities in some new office space in Los Angeles will be in line with this trend, other new developments will be configured with a more traditional layout with lower employment densities. The Nexus Study assumes 350 square feet per office employee, as is common in more traditional office space, in order to reflect the higher end of the range of potential configurations among new office developments and avoid overestimating the number of employees per 100,000 square feet of office development.

As shown below, the assumed average employment density for each of the eight commercial land uses ranges from 350 square feet per employee for office uses to 1,100 square feet per employee for construction, warehousing, and wholesale trade land uses.

New Worker Households and Affordable Housing Need

Step 3: Estimate Worker Households

Since most households in Los Angeles include more than one worker, the Nexus Study groups the employees generated by each land use into households to determine the total number of worker households generated by each land use type. According to the US Census American Community Survey, as of 2014 the City of Los Angeles had 1,849,845 workers living in households and 1,047,928 households with at least one worker, averaging approximately 1.77 workers per household with workers. Therefore, the Nexus Study estimates the number of employee households that each land use generates by dividing the total number of workers by 1.77. As shown below, the estimated number of households per 100,000 square feet ranges from 51.5 for construction, warehousing, and wholesale trade uses to 161.9 for office uses.

TABLE 2: EMPLOYEES AND HOUSEHOLDS PER 100,000 SQUARE FEET

	Office	Retail	Industrial	Hotel/ Motel	Warehouse	Hospital	Institutional
Average Sq. Ft./employee	350	450	900	1,000	1,100	500	500
Total Employees	285.7	222.2	111.1	100.0	90.9	200.0	200.0
Total Employee Households	**161.9**	**125.9**	**62.9**	**56.6**	**51.5**	**113.3**	**113.3**
Assumptions							
Building Size		100,000					
Employees per Household (a)		1.77					

Note:
(a) Employees per household from 2014 ACS reported average number of workers per household in the City of Los Angeles.
Sources: ACS, 2014; BAE, 2016.

Step 4: Identify Industry Sectors by Land Use

Worker occupations, salaries, and associated household incomes tend to vary between industries, and therefore the Nexus Study identifies the industry sectors that would occupy each of the eight commercial land uses as a first step in identifying affordable housing need among worker households.

Federal, State, and local governmental agencies typically categorize business establishments based on the North American Industry Classification System (NAICS), which assigns numerical codes to each industry sector. NAICS codes group all industries into 20 major industry categories, each identified with a two-digit code. Within each two-digit NAICS sector, more detailed sub-categories of industries are identified by three-digit NAICS codes, which are themselves comprised of more detailed subcategories of industries, up to the six-digit NAICS code level, with more digits associated with more detailed subcategories. For example, NAICS sector 72, Accommodation and Food Services, is comprised of NAICS code sectors 721 (Accommodation) and 722 (Food Services and Drinking Places). NAICS codes 721 and 722

are comprised of more detailed industries, identified by NAICS codes with four to six digits, depending on the level of specificity of the subcategories.

BAE analyzed each two-digit NAICS code and each subcategory to determine the industry sectors most likely to occupy each of the eight commercial land uses. To the extent possible, the Nexus Study places each two-digit NAICS code into one of the eight land uses. However, some two-digit NAICS codes are too broad to fall into one of the eight uses, and were split at the three-digit level to between two land uses. The industry sectors that are expected to occupy each commercial land use type are shown in Table 3.

In addition, the analysis excludes several industry sectors that were not grouped into any of the eight land uses, as shown in Table 3. These uses include sectors that are not expected to generate a significant amount of future new development in Los Angeles (i.e., Agriculture, Forestry, Fishing, and Hunting; Mining, Quarrying, and Oil and Gas Extraction; and Utilities), and do not fit within any of the eight land uses. In addition, the analysis excludes the Public Administration industry on the basis that the City will not charge a fee for space that it will occupy. The "Other Services" industry was excluded because it includes a large range of industries that vary widely in types of employment and likely incomes of workers. However, to the extent that the industries within the "Other Services" sector may occupy any of the eight analyzed commercial land uses, the employment and income profile of workers in these industries is assumed to be similar to the employment and income profile of workers in other industries within each land use type.

TABLE 3: INDUSTRIES BY LAND USE TYPE AND TOTAL EMPLOYMENT, LA COUNTY, 2014

NAICS Number	NAICS Industry Name	2014 LA County Employment	% of Employees in Land Use Type
Office			
51	Information	200,536	20.1%

Step 5: Estimate Household Income Distribution of New Worker Households

As discussed above, worker households[5] in Los Angeles often have more than one employed person. In some instances, economists estimate household income for workers by simply multiplying worker earnings by industry by the average number of workers per worker household. This methodology relies on the unsatisfactory assumption that on average workers make the same amount of money as other workers in their household. Given the diversity of household composition, this assumption is not appropriate. For example, a household may have a teacher and a doctor, with significantly different individual earnings.

To address this issue, this analysis makes use of a detailed and rich data set published by the U.S. Census known as the Public Use Microdata Sample (PUMS). Derived from a five percent sample of all households per the American Community Survey, and available for certain defined areas of 100,000 or more of population, this data allows one to cross tabulate variables such as industry of employment and household income. The analysis here uses the most recent available data, from the 2010 through 2014 five-year period.

The PUMS data set was queried to identify the number of households by income category for the groups of industries assumed to be associated with the different non-residential building types (controlling for household size) to construct a household income distribution for each of these industry groupings. The distribution was constructed based on the income categories defined by the California Department of Housing and Community Development (HCD). These HCD income categories are defined by a formula based largely on the percentage of the Area Median Income (AMI), adjusted for household size and income levels relative to housing costs. Table 4 below presents the distribution of households by HCD income level for each of the eight commercial land uses.

[5] A worker household is defined as a household with one or more employed persons. They may be wage and salary workers, or self-employed/sole proprietors.

TABLE 4: DISTRIBUTION OF NEW WORKER HOUSEHOLDS BY INCOME

		Estimated Household Income as a Percent of AMI (a)					
NAICS Code	Land Use	Up to 30% AMI	30% to 50% AMI	50% to 80% AMI	80% - 120% AMI	Above 120% AMI	Total
Private Sector Only							
51, 52, 53, 54, 55, 561	Office	10.7%	10.2%	15.0%	5.5%	58.6%	100.0%
44-45, except 454, 722	Retail	18.2%	18.5%	22.1%	6.4%	34.8%	100.0%
31-33, 562	Industrial	12.9%	16.2%	20.6%	6.3%	44.0%	100.0%
721	Hotel/Motel	15.2%	18.3%	22.1%	7.4%	37.0%	100.0%
23, 42, 48-49	Warehouse	16.6%	16.6%	21.3%	6.4%	39.1%	100.0%
62	Hospital	11.4%	11.6%	17.8%	6.2%	53.1%	100.0%
61, 71	Institutional	13.2%	11.1%	16.3%	6.0%	53.5%	100.0%

Notes:
(a) Based on a cross tabulation of Public Use Microdata Samples (PUMS) from the 2010-2014 American Community Survey. These incomes were compared to household income limits published by the California Department of Housing and Community Development, to determine the percentage of households falling into each income category. The analysis controlled for household size, to address the varying HCD income limits for each household size.
Sources: Census, American Community Survey Public-Use Microdata Sample (PUMS) 2010-2014; CA Dept. of Housing and Community Development, 2014; BAE, 2016.

Step 6: Estimate New Worker Households by Household Income

This analysis estimates the number of new worker households by income level by applying the worker household income distribution for each land use from Step 5 to the total number of worker households from Step 3. As shown in Table 5 below, the number of extremely low-, very low-, low-, and moderate-income households per 100,000 square feet of commercial space ranges from 31.4 households for construction, warehousing, and wholesale trade to 82.0 households for retail space.

The number of lower-income households that each land use type generates is a product of both the total number of worker households that 100,000 square feet of each use supports and the income distribution among those workers. As a result, hotel/motel and construction, warehousing, and wholesale trade land uses are among the uses that generate the smallest number of lower-income households, despite having relatively low worker household incomes, due to the low employment densities associated with these uses. Conversely, office uses generate a large number of lower-income households despite relatively high worker household incomes due to the high employment densities in office uses. Retail uses are associated with both relatively low worker household incomes and high employment densities, resulting in the highest number of lower-income worker households per 100,000 square feet out of all eight land uses.

TABLE 5: WORKER HOUSEHOLDS BY HOUSEHOLD INCOME GENERATED BY COMMERCIAL LAND USES

Employee Households by Income Level	Office	Retail	Industrial	Hotel/ Motel	Warehouse	Hospital	Institutional
Extremely Low Income (up to 30% AMI)	17.3	22.9	8.1	8.6	8.5	12.9	14.9
Very Low Income (31-50% AMI)	16.6	23.3	10.2	10.4	8.6	13.2	12.6
Low Income (51-80% AMI)	24.2	27.8	13.0	12.5	11.0	20.1	18.4
Moderate Income (81-120% AMI)	8.9	8.1	3.9	4.2	3.3	7.0	6.8
Subtotal - Affordable Housing Need (Units)	***67.0***	***82.0***	***35.3***	***35.7***	***31.4***	***53.2***	***52.7***
Above Moderate Income (over 120% AMI)	94.9	43.9	27.7	21.0	20.1	60.1	60.6
Total Housing Need	**161.9**	**125.9**	**62.9**	**56.6**	**51.5**	**113.3**	**113.3**

Assumptions	
Building Size	100,000

Sources: Census, American Community Survey Public-Use Microdata Sample (PUMS) 2010-2014; CA Dept. of Housing and Community Development, 2014; BAE, 2016.

Financing Gap

Step 7: Calculate the Financing Gap per Affordable Unit

The next step in the nexus analysis is to calculate the cost to house the extremely low-, very low-, low-, and moderate-income households calculated in Step 6 by determining the per unit "financing gap" that affordable housing developers encounter when securing a permanent loan for their projects. In other words, the cost to house a lower-income household is the difference between the cost to develop an affordable unit and the amount of the permanent loan that the developer can borrow to finance the unit.

According to cost data provided between 2013 and 2015 on applications for low-income housing tax credit projects in the City of Los Angeles, the average development cost for affordable housing in the City averages approximately $448,500 per unit, as shown in Table 6.[6] [7]

[6] This weighted average cost is based on data from 25 developments serving homeless, special needs, large-family, and senior households in the City of Los Angeles with a total of 1,503 units. All cost data inflated to 2016 dollars using the Turner Building Cost Index.

[7] This study uses the average development cost across all affordable housing types despite that most of the new workers living in affordable units will be housed in large family developments, which in practice accommodate a range of household sizes and mostly serve lower-income worker households. Among units in the large family developments analyzed in this study, three percent were studios, 35 percent were one-bedroom units, 28 percent were two-bedroom units, 32 percent were three-bedroom units, and on percent were units with four or more bedrooms. In contrast, homeless, special needs, and senior developments, typically have a large number of occupants living on social security. However, by using the average across all affordable unit types, the Nexus Study is conservative in estimating the financing gap associated with constructing new units because the average development costs for homeless, special needs and senior units tend to be lower than the development costs for large family units.

TABLE 6: DEVELOPMENT COSTS FOR AFFORDABLE HOUSING UNITS, CITY OF LOS ANGELES, 2013-2015

Housing Type	Avg. Development Cost (per unit) (a)	Number of Units
Homeless & Special Needs	$410,871	622
Large Family	$502,946	676
Senior	$382,977	205
Weighted Average - All Housing Types	$448,479	1,503

Note:
(a) Weighted average cost as reported on tax credit applications between 2013 and 2015. All costs adjusted to 2016 costs based on the Turner Building Cost Index.
Sources: City of Los Angeles, 2016; BAE, 2016.

Affordable housing developers are able to secure a permanent loan based on their net operating income (NOI) per unit. NOI is equal to rental income less operating expenses and vacancy. As shown in Table 7, households can afford monthly rents ranging from $544 for extremely low-income households to $1,708 for moderate-income households. These rents are based on household income limits for three-person households and assuming households spend 30 percent of their income on rent and utilities.[8] Standard deductions are taken for operating expenses and vacancies to determine NOI.

BAE used conventional financing assumptions to determine the supportable loan amount per unit for each income level. As shown in Table 7, the loan amount ranges from $0 per unit for extremely low-income units (i.e., operating expenses exceed NOI, leaving no NOI to support debt payments) to $152,301 for units serving moderate-income households.

The financing gap per affordable unit is equal to the total development cost less the supportable loan amount per unit. Based on the supportable loan amount calculated above, the financing gap per affordable unit ranges from $448,500 for extremely low-income units to $296,199 for moderate-income units, as shown in Table 7.

It should be noted that no other affordable housing subsidy was assumed in this analysis, because this calculation is intended to serve as the actual impact of the new employment-generating commercial land uses; it is not necessarily the way funds generated by a commercial fee would be spent on new affordable housing. Instead, in may affordable housing projects, multiple funding sources would be utilized in combination, enabling limited public resources from federal, state, and local sources to be combined most effectively. For some affordable housing projects serving low income households, non-cash subsidies such as Low Income Housing Tax Credits (LIHTCs) would also be used.

[8] The analysis assumes a three-person household for consistency with the 2016 Los Angeles County average household size of 2.88 persons per household, per California Department of Finance estimates.

TABLE 7: FINANCING GAP ANALYSIS, CITY OF LOS ANGELES, 2016

	Income Group			
	Extremely Low	**Very Low**	**Low**	**Moderate**
Household Income Limit (a)	$23,450	$39,100	$62,550	$70,000
Maximum Affordable Monthly Rent per Unit (b)	$544	$936	$1,522	$1,708

Maximum Legal Fee

Step 8: Calculate the Maximum Legal Fee

The final step in calculating the impact fee is to apply the financing gap per affordable unit for each income level (from Step 7) to the total housing need by income level (from Step 6) per commercial land use. This is expressed as the "maximum legal fee" because it is directly derived from the nexus analysis described above (i.e., new commercial development generating new jobs combined into new worker households distributed by income band, and the cost to provide new affordable rental housing units to these same households).

As shown in greater detail on the next page, the maximum legal fees are as follows:

- Office: $247.84 per square foot
- Retail: $308.82 per square foot
- Industrial: $130.60 per square foot
- Hotel/Motel: $132.68 per square foot
- Warehouse: $117.52 per square foot
- Med & Social Services: $195.78 per square foot
- Institutional: $196.56 per square foot

It is important to note that due to the high cost of providing affordable housing, these maximum fee levels are not feasible to charge to development projects. Thus, the lower "feasible" fee by land use tested under a range of current market conditions, is analyzed in the following chapter.

TABLE 8: MAXIMUM COMMERCIAL FEES, LOS ANGELES

Affordable Housing Need	Office	Retail	Industrial	Hotel/ Motel	Warehouse	Hospital	Institutional
Extremely Low Income (up to 30% AM	17.3	22.9	8.1	8.6	8.5	12.9	14.9
Very Low Income (31-50% AMI)	16.6	23.3	10.2	10.4	8.6	13.2	12.6
Low Income (51-80% AMI)	24.2	27.8	13.0	12.5	11.0	20.1	18.4
Moderate Income (81-120% AMI)	8.9	8.1	3.9	4.2	3.3	7.0	6.8
Total Affordable Housing Need	67.0	82.0	35.3	35.7	31.4	53.2	52.7
Financing Gap (a)							
Extremely Low Income Units	$7,747,508	$10,269,897	$3,646,292	$3,867,376	$3,824,996	$5,781,706	$6,699,669
Very Low Income Units	$6,613,935	$9,295,516	$4,079,489	$4,147,164	$3,418,720	$5,267,000	$5,024,260
Low Income Units	$7,785,398	$8,923,624	$4,166,664	$4,012,822	$3,524,464	$6,462,566	$5,914,130
Moderate Income Units	$2,637,145	$2,392,525	$1,167,458	$1,240,985	$983,651	$2,067,181	$2,017,919
Total Financing Gap	**$24,783,986**	**$30,881,562**	**$13,059,903**	**$13,268,346**	**$11,751,832**	**$19,578,452**	**$19,655,978**
Maximum Impact Fee per Sq. Ft.	**$247.84**	**$308.82**	**$130.60**	**$132.68**	**$117.52**	**$195.78**	**$196.56**
Assumptions							
Building Size	100,000						
Financing Gap							
Extremely Low Income Units	$448,500						
Very Low Income Units	$399,600						
Low Income Units	$321,129						
Moderate Income Units	$296,199						

Note:
(a) The financing gap is calculated by multiplying the number of employee housesholds at each income level by the financing gap per unit (from Step 7) at each affordability level.
Source: BAE, 2016.

As noted earlier, this set of findings will shift slightly with the implementation of the City's minimum wage regulations, to be completed in 2021. The Additional Considerations chapter at the end of this report discusses the effects of the minimum wage increases on the above findings.

Feasibility of Maximum Legal Fee

As shown in the preceding section, meeting the affordable housing costs generated by each land use category of commercial use per the nexus analysis results in expensive maximum legal fee levels.

In order to evaluate these maximum legal fees in the context of maintaining feasible market rate commercial projects, this report involved extensive analysis of the Los Angeles real estate marketplace by three levels of current market condition, and then financial feasibility testing of each of the eight land use categories by each of the market conditions' economic factors.

As an overview, the analytical process included the following steps (each step is explained more fully in the following pages):

- **Step A:** Identification of Los Angeles neighborhoods
- **Step B:** Analysis of market rents to categorize each neighborhood by market condition
- **Step C:** Formulation of basic static pro formas for each land use type to analyze the maximum feasible fee by land use and by the three market conditions
- **Step D:** Comparison of feasible fees to legal maximum fee

Step A: Identification of Los Angeles Neighborhoods

For this step, several geographic subarea classifications were considered, including Community Plan Areas (37 areas), City Council Districts (15 areas), and neighborhoods defined by the Los Angeles Times (114 neighborhoods). The Los Angeles Times neighborhoods were considered the most refined, enabling fine-grained differentiation by neighborhood, without being too small to obscure larger market trends. These neighborhoods along with their Step B market categorization are shown in Figure 3.

Step B: Classification of LA Neighborhoods by Market Condition

This step involved compiling data for commercial market rents based on 439 office projects' rents and 711 retail projects' rents reported by CoStar, a private data vendor (other commercial land uses showed fewer records in CoStar and were thus considered not reliable for purposes of this analysis). Both office and retail rents were analyzed based on the standard deviation from mean (average) rent, and combined into a composite index by neighborhood. The map on the next page displays the results of this analysis.

To illustrate how the development community has responded to market conditions, the maps on the next pages show permit activity of the past five years for office and retail projects throughout the city.

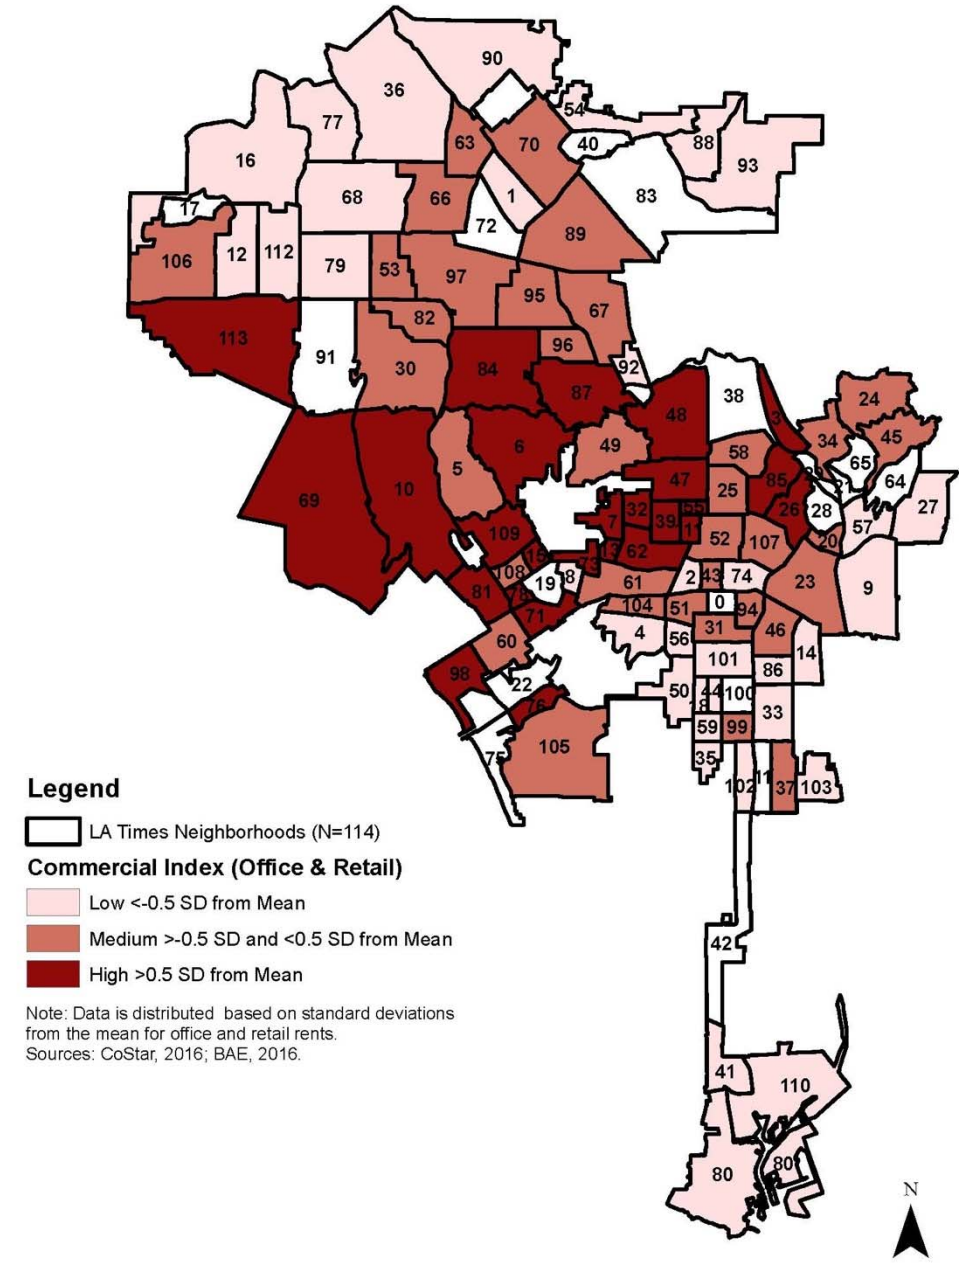

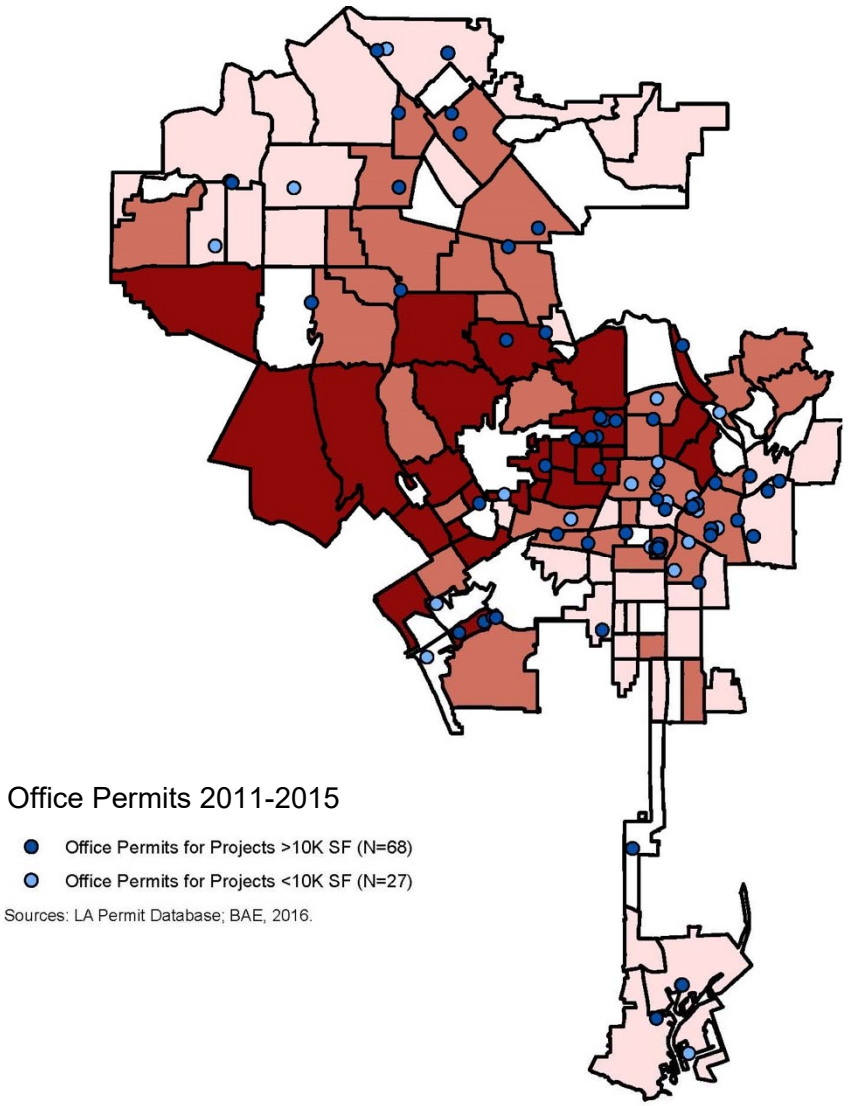

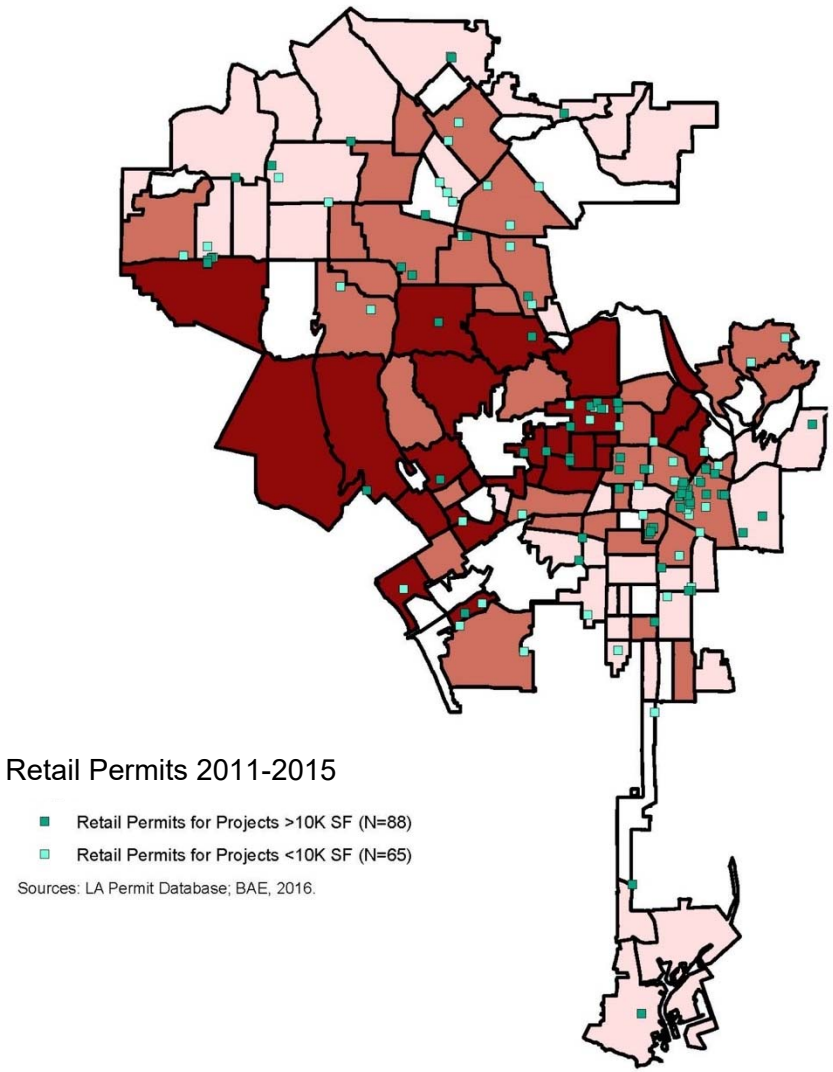

FIGURE 4: OFFICE AND RETAIL PERMIT ACTIVITY BY MARKET CONDITION, 2011-2015

Step C: Pro Forma Analysis to Determine Maximum Feasible Fee by Land Use for Each Market Condition

This step involved the formulation of basis static pro forma models for each land use, with rent assumptions varied by market condition. For all assumptions, a conservative approach was taken to ensure that feasible findings would be developed. A summary of the research informing each key assumption is described below.

- **Development Prototype** – For each land use, a median sized project was identified from actual projects permitted by the City of Los Angeles, as described previously in this report. The project's actual number of stories and parking method were researched, and the project's floor area ratio (FAR) and parking ratios were estimated based on review of applicable zoning codes, resulting in a development program for each prototype.
- **Land Costs** – For each land use and market condition, BAE reviewed available appraisals conducted for various city agencies (see Appendix C-8 for summary of land sales by market category), and also interviewed leading developers of commercial and residential projects currently active in Los Angeles.
- **Construction Costs (Hard, Soft, and Financing)** – For each prototype, per square foot hard costs was estimated based on review of R.S. Means, a cost manual. Soft costs and financing costs were estimated based on industry standards and current interest rates.
- **Rent** – Rent assumptions were developed based on an analysis of project rents from CoStar for just newer buildings (e.g., built in past 10 years or less), and further refined to estimated the 25th, 50th, and 75th percent quartile breakpoints in order to generate conservative rent assumptions. This approach means that, for example, the high market areas' rents do not represent very top end, but rather the 75th percent of top end rents.
- **Cap Rates** – For each prototype, both national and regional cap rates were compiled, with variations by market area based on developer interviews.

The following two metrics were utilized to judge feasibility:

- **Return on Total Development Cost (ROC)** – This metric divides total profit by total development cost, to judge overall project feasibility. It can be considered as a simple profit margin, irrespective of how a project is financed between debt and equity. In other words, ROC is useful because it allows comparison across all real estate project types (whether income-producing or for-sale units), irrespective of individual choices to leverage equity through use of debt. It is also useful because, as a simple project margin calculation, it can be easily compared to other non-leveraged non-real estate short-term investments such as one-year corporate bonds (which are generally paying 6 to 10 percent at present). Real estate development has higher risk inherent to the

investment activity, so the ROC on real estate projects should be higher than these other investment options.

To test feasibility for this study, this metric had to achieve at least a 15 percent return on cost, with cost including the new affordable housing fee and the applicable school fee.

- **Yield on Cost (YOC)** – This metric evaluates the annual stabilized Net Operating Income (NOI) compared to total development cost. It is useful to evaluate income-producing projects. For the feasibility testing, based on developer interviews, each land use was assigned a minimum YOC threshold. Both ROC and YOC thresholds had to be achieved to deem a project feasible with the total fees (e.g., new affordable fee + school fee).

A summary of the pro forma findings is shown on the following page. Detailed pro formas are shown in Appendix C.

It should be noted that new development projects in Low Market Areas, while occurring on the ground in selected locations, do not generally show feasible returns sufficient to support a fee when estimated very conservatively per the approach followed for this report (see Appendix C for these pro formas). Since many of these neighborhoods seek to encourage new development and investment, but additional fees may not "pencil" under today's market conditions, a market-based fee may not be workable in these areas. Some cities have called these kinds of areas Incentive Areas with lower or no fees charged, as a means to incentivize new development at slightly lower costs (assuming fees are charged in other Medium and High market areas).

TABLE 9: SUMMARY OF COMMERCIAL FEE PRO FORMAS

Low Market scenarios not shown here due to lack of general feasibility under conservative assumptions. Detailed pro formas including Low Market are shown in Appendix.

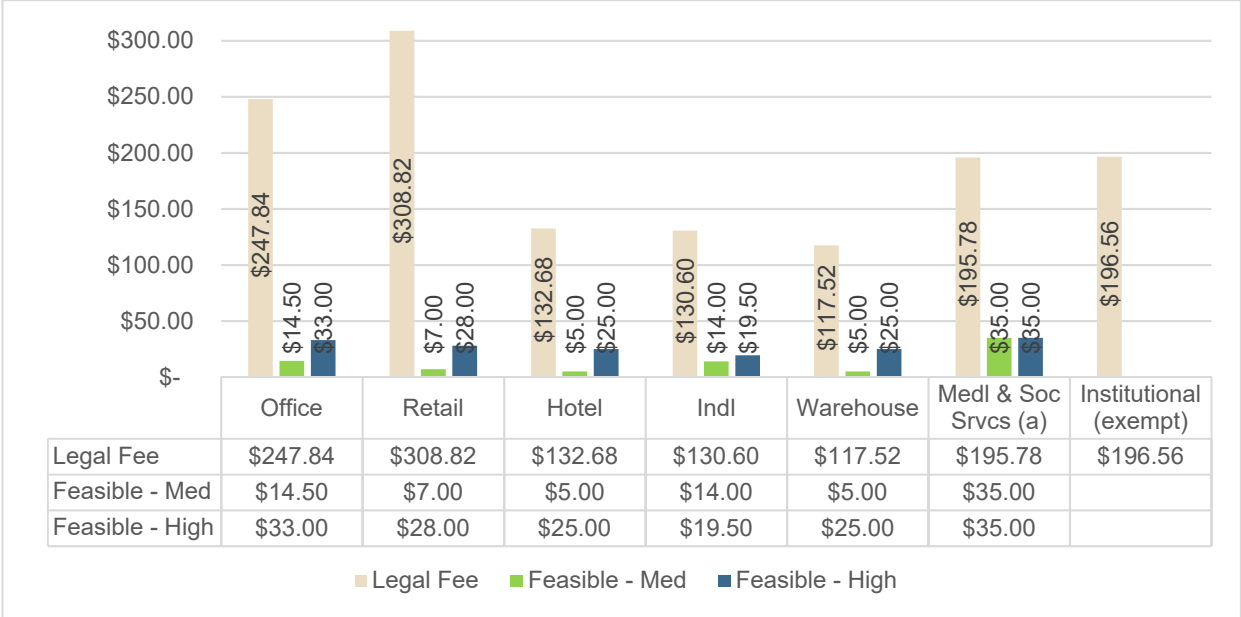
b) Financial feasibility evaluated on 2 metrics

ROC = 15.0%

YOC :	Retail:	Office:	Hotel:	Industrial	Warehouse:
	7.0%	6.0%	9.0%	6.5%	6.5%



Two land use categories were treated differently than the above methodology. For the Medical & Social Services category (including hospitals), land uses will include both for-profit developments intended to generate financial returns such as medical office buildings, and non-profit developments intended to house social services, health clinics, of hospitals. For each of these sub-categories, the real estate economics situation often deviates varies from the standard income-generating investment property financial returns: non-profit facilities such as hospitals are often built by and for the occupant's use. Medical office buildings, while they may be developed as income-generating property, are also often built as part of hospital campuses or health clinics, and may have high construction costs. At the other end of the spectrum. social service agencies are often owned by a governmental entity (and would be exempt). For these reasons, this category was analyzed on a Percent of Cost basis to develop the fee, as detailed in Appendix C.

Institutional land uses, defined here as primarily schools and churches, are also often exempt from affordable housing fees. Thus, this category is not assigned a feasible fee rate, and would likely not generate any fee revenue, despite the housing market impacts identified through the legal fee (nexus) analysis.

Step D: Comparison of Feasible Fee to Maximum Legal Fee

The table below compares the feasible fees estimated above, to the maximum legal fees described in the previous chapter (based on nexus analysis of new worker households). As in most other cities in California, the gap between the dollars needed to fund affordable housing for new workers (e.g., maximum legal fee) and the feasible level of fee that can be absorbed by real estate market conditions, is substantial. In other words, charging a fee that would not constrain private sector development does not usually meet all subsidy needed to mitigate the costs of the affordable housing impacts generated by the new development.

FIGURE 5: COMPARISON OF MAXIMUM LEGAL COMMERCIAL FEES TO FEASIBLE FEES

	Office	Retail	Hotel	Indl	Warehouse	Medl & Soc Srvcs (a)	Institutional (exempt)
Legal Fee	$247.84	$308.82	$132.68	$130.60	$117.52	$195.78	$196.56
Feasible - Med	$14.50	$7.00	$5.00	$14.00	$5.00	$35.00	
Feasible - High	$33.00	$28.00	$25.00	$19.50	$25.00	$35.00	

a) Medical & Social Services includes hospitals. Fee formulated based on % of total cost, rather than on for-profit financial returns, due to this category representing primarily non-income properties. See Appendix C for % of Cost detail to formulate the example shown for hospitals.

Commercial Fee Program Options & Estimated Revenues

The preceding analysis underscores the complexity of formulating a fee schedule for commercial projects that balances the need for affordable housing funds with market conditions. The City could choose to structure this type of fee in several different ways to accommodate other policy options and limit effects on overall commercial development. The following presents four fee program options as examples. These options are then analyzed in order to estimate total annual fee revenues, along with two kinds of potential further adjustments to exempt certain projects.

Option A: Match Fee to Market Conditions

This option would create a fee schedule which charges feasible fees based on conservatively-estimated Medium Market Area conditions to new and rehabilitated projects in those areas, and feasible fees estimated for High Market Area conditions to those areas. Project fees in Low Market Areas would likely be waived since these fees would generally not be feasible.

This option would create the most finely-tuned fee structure, but may create challenges to administer and would necessitate periodic updating to identify changing neighborhood market conditions and feasible fee levels.

Option B: Charge Medium Market Fees to Both Medium and High Market Areas

This would be a conservative option, charging the level of feasible fee derived from a Medium market area feasibility test, to all projects located in both Medium and High Market Areas. This approach would limit debate about whether an individual project is in a medium or high market area, charging the same fee per land use to all projects regardless of location. Again, due to the economics of Low Market areas, fees would likely not be charged in these exempt zones.

This option would simplify fee administration, but may create an uneven burden on projects due to their location and subsequent economics.

Option C: Charge Only High Market Areas

This option would limit fees to only those projects located in premium, High Market Areas, where feasibility is most assured and development is least likely to be affected. Fees charged would be at the corresponding High Market levels. Projects in Medium and Low Market Areas would be waived based on their location. As market conditions change and are re-evaluated, neighborhoods may change from medium to high market conditions and become eligible for the fee schedule.

This option would further simplify fee program administration, but may create debate over specific projects which have High Market characteristics and economics but be technically located in a Medium Market neighborhood (or vice-versa).

Option D: Charge Lowest Feasible Commercial Fee Citywide (Flat Fee)

In this option, the lowest feasible fee for the lowest commercial land use in a Medium Market Area would be charged across all commercial uses in all markets. This is a more straightforward approach than any of the options cited above. For example, the feasibility testing for commercial land uses found that Warehouse projects in Medium Market Areas can only support an approximately $5.00 fee; this would become the flat fee charged to all land use categories for commercial projects anywhere in the city (including in Low Market Areas).

The benefits of this option are that it establishes clarity, minimizes confusion and minimizes administrative functions. While this option would apply the fee to all projects, including those located in market conditions that the pro formas concluded may be infeasible, most new development projects occurring in the Low market conditions likely reflect improving submarket conditions not reflected in the broader three market segments used for the analysis in this report.

The estimated annual revenues that could potentially be generated by the application of these fee program options are shown on the next page.

Adjustment for Project Size

Many cities exempt fees for smaller projects in order to encourage infill and accommodate small businesses. For this study, the distribution of new commercial projects by square foot size was analyzed (see data in Appendix B-3). This distribution suggests that projects less than 10,000 square feet in gross size is a logical threshold to waive the fee; approximately 40 percent of retail projects and 29 percent of office projects fall below this size, but on a square foot basis, most square footage built for office and retail occur in projects above this threshold.

TABLE 10: FEE SCHEDULE OPTIONS & ESTIMATED ANNUAL REVENUE

Estimates do not include possible exemptions and waivers under consideration other than minimum project size.

Option A - Match Fee to Market Conditions

	Low Market		Medium Market		High Market		Total		Total

Notes on next page

Notes:

a) Sq. Ft. of each land use based on avg. annual permit data, as follows:

Office	876,453
Retail	606,331
Industrial	34,960
Hotel/Motel	348,174
Warehouse	430,582
Hospital	55,932
Total	2,352,432

b) Allocation of Sq. Ft. per Market Area category- based on geocoding of all permits:

	% Sq.Ft. in Low Markets	% Sq.Ft. in Med Markets	% Sq.Ft. in High Markets
Office	13.8%	31.3%	54.9%
Retail	18.9%	50.8%	30.3%
Industrial	8.3%	91.7%	0.0%
Hotel/Motel	0.0%	84.7%	15.3%
Warehouse	18.6%	77.8%	3.6%
Hospital*	33.3%	33.3%	33.3%

*The hospital square footage was allocated equally among low, medium, and high markets because only one new hospital was built between 2011 and 2015.

c) Adjusted for proposed minimum project size (10,000+ Sq. Ft.)

	Below Min Project Size	Above Min Project Size
Office	4.5%	95.5%
Retail	13.6%	86.4%
Industrial	17.3%	82.7%
Hotel/Motel	0.5%	99.5%
Warehouse	6.2%	93.8%
Hospital	0.0%	100.0%

In addition to adjustments for potential exempted small projects, the City of Los Angeles could also create a partial fee waiver in its new fee program for those projects located in the two Specific Plan areas which currently charge Transportation Impact Assessment (TIA) fees. These two areas – West Los Angeles Specific Plan and the Coastal Transportation Corridor Specific Plan (CTCSP) – currently each have similar fee schedules to fund local transportation improvements, varied by land use and in some cases, size of project.

As of August 2016, both of these fee programs have also been proposed for fee increases and refined schedules (changing some land use definitions and size thresholds). The fact that these two fee schedules are different from each other, and are undergoing a simultaneous simplification process, means that if the City were to adopt a commercial affordable housing fee and sought to still balance feasibility with needed fee revenue, these two areas could be partially waived and subject to a lower fee schedule for affordable housing plus the TIA fee, to end up at the same total fee level. A map of the TIA overlay on commercial market areas is shown below, and the adjustment to the potential fee revenue estimate for each option net of the proposed applicable TIA fee is shown on the next page. It should be noted that a fee revenue estimate for each option which combines waivers for both small projects and partial TIA waivers has not been conducted for this study.

FIGURE 6: COMMERCIAL MARKET AREAS & TIAS

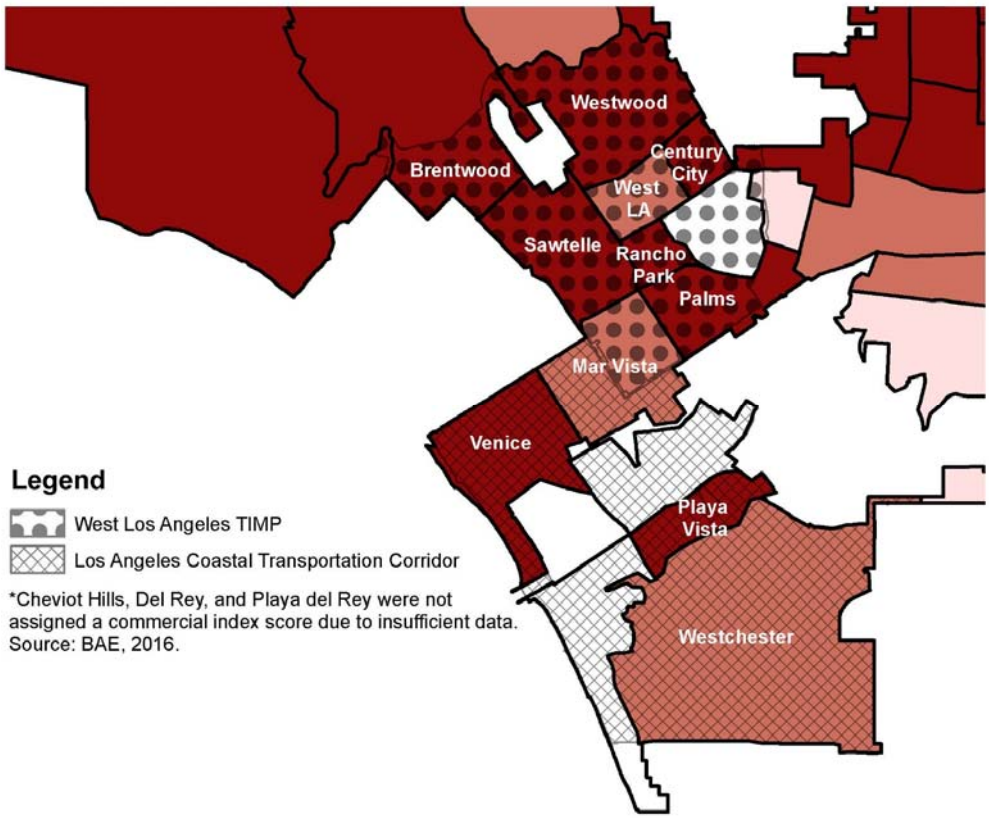

TABLE 11: ESTIMATED ANNUAL COMMERCIAL FEE REVENUE WITH TIA ADJUSTMENTS

Estimates do not include possible exemptions and waivers under consideration.

Medical (Hospital)	0.0%	0.0%	0.0%	0.0%

In summary, the estimated range of potential fee revenue for an average development year (based on the past five years of permit data), would be as follows.

FIGURE 7: ESTIMATE OF POTENTIAL ANNUAL COMMERCIAL FEE REVENUE

It should be noted that these are estimates, and actual fee collections will vary depending on the specific regulations in the to-be-determined adopted ordinance. Furthermore, these estimates rely on data for the past five years of permitted development activity (2011 – 2015), which reflects a time period at the end of the Great Recession plus the surge after economic recovery. Actual economic cycles in any given year may strongly influence the revenue stream.

Considerations for Implementation

Fees by Geographic Area

As described above, the City of Los Angeles could adopt a commercial fee schedule which varies the required fee by geographic area, as related to market condition. Further variations of this approach, which would match the feasible fee to the geographic area, are then possible to structure.

The advantage of this framework is that fees can be calibrated to achieve meaningful revenues to produce affordable housing, while still balancing the diversity of Los Angeles development conditions to achieve ongoing feasibility. However, this framework, whether accomplished through Option A, B, or C, would require ongoing or periodic analysis to re-calibrate market areas. Furthermore, the 114 LA Times neighborhoods used for this study, while representing a good way to determine subareas, could be further improved in terms of both the accuracy of the geo-spatial files, and possibly the actual division of geographies. For

example, a more fine-grained approach than taken in this study, could utilize Census Tracts to determine market condition by location.

Phase-In of Fee Schedule

A key component of adopting a commercial fee in Los Angeles will be the phase-in schedule. Most notably, most cities when first adopting a fee like this, set a future date for its implementation, and also define and waive current "pipeline" projects which would have been started without knowledge of this fee. Moreover, because Los Angeles has relatively few other impact fees for most areas, with the exception of the TIAs in 2 specific plan areas, and the proposed park fees, adoption of a new commercial fee may have the undesirable short-term perceived effect of a "shock" to the economic system for some projects with smaller profit margins.

For these reasons, it is recommended that if Los Angeles adopts a commercial fee program, it should consider a phased-in schedule when initially implemented. Some cities have phased fees like this in over a two-year period; for Los Angels, it is recommended that this two-year period be considered. The fee schedule, for example, could be set at half of the full fee for the first year of applicability, rising to the full 100 percent of the fee on projects seeking building permits 12 months later and beyond.

Fee Exemptions and Waivers

As profiled in the case studies of commercial fees, other cities in California have variable approaches to making categories of land use either exempt from commercial fees, or waiving fees under certain conditions.

Fee Exemptions

This study was conducted assuming that certain categories of land use would be exempted from commercial fees, due to the nature of these land uses (e.g., built and owned primarily by non-profit or public-purpose organizations). These include all institutional uses (churches, public schools, private schools, and public and private higher educational institutions), as well as child care facilities, and public agency owned buildings (including city, state and federal as required by the California Constitution).

Most cities also exempt 100 percent affordable housing projects. Some cities also exempt buildings smaller than a certain size threshold as discussed earlier in this study, and a few cities earmark other exemptions to achieve policy goals such as the example of San Francisco exempting neighborhood grocery stores and pharmacies.

Fee Waivers

Some cities profiled in the case studies also waive commercial fees in exchange for other mechanisms to provide for affordable housing impacts, including building the affordable housing (although few cities report that this option is used), and/or allow land donation at an equivalent value. Because most of Los Angeles is relatively built-out and land constrained,

especially in the stronger market areas, the option to dedicate land instead of pay a fee, should be further explored.

The revenue estimates for the commercial fee included an example adjustment that can also be built into the regulations for Transportation Impact Assessment (TIA) areas, which are currently applicable only to the Specific Plans for West Los Angeles and the Coastal Transportation Corridor. In the event other areas of Los Angeles were to adopt area transportation impact fees, the commercial linkage fee could be partially waived (reduced) to accommodate those other fees.

Finally, most cities allow for a waiver request if a) economic hardship can be demonstrated or b) if lesser affordable housing job impacts can be demonstrated. Excluding the issue of the planned increase in minimum wage (explored later in this report), it is recommended that these two options be narrowly allowed per legal requirements, but not more broadly offered, to minimize administrative burden on staff.

Timing of Fee Calculation and Payment

As profiled in the case studies, most cities charge the commercial fee prior to or at the time of building permit issuance. Several cities split up the payments, allowing for partial payment later (at Certificate of Occupancy), while a few cities spread payments even farther apart over time, allowing for essentially a payment plan or the choice of an upfront net present value payment of the entire amount.

For several reasons, it is recommended that for the City of Los Angeles, the fee payment be split only into at most, two equal installments – at the time of building permit issuance and at the time of Certificate of Occupancy. This recommendation is made due to the overarching immediate need to create a permanent source of funding for affordable housing, as well as potential collection challenges if payments were spread beyond the point of issuing a Certificate of Occupancy.

About Residential Fees

Overview of Residential Fees

Residential fees for affordable housing apply to market rate units, and are based on the "nexus" or relationship between the occupants of a market-rate unit's spending in the economy, and the portion of this spending that generates workers' low income households needing affordable units.

One of the complexities around this kind of fee is that for most cities in California with a residential fee, the fee is rooted in an existing inclusionary housing program, which requires generally 10 to 15 percent of units in market rate projects be affordable to low and sometimes moderate income households. There are more than 170 inclusionary programs in cities and counties throughout California, many of which have been operating for decades.[9] Although these programs were structured to achieve production of affordable units within a market-rate development, creating a mixed-income project, most of these programs also offer an in-lieu fee option instead of providing on-site affordable units. With the *Palmer/Sixth Street Properties L.P. v. City of Los Angeles* court decision in 2009, these inclusionary programs were found to violate California's Costa Hawkins Act regarding rent control, and thus prohibited from requiring on-site mandatory unit requirements. The in-lieu fee for market rate rental projects, however, remained legal. Many cities and counties then determined that the fee should be based on a nexus study (which many in-lieu fees had previously not been based on), and many jurisdictions proceeded to update and/or amend their inclusionary ordinances, supporting in-lieu fee requirements with nexus studies. Some legal questions remain, such as whether the in-lieu fee is subject to the California Mitigation Fee Act, but the nexus studies have nonetheless become common practice.

Because the City of Los Angeles does not have an operative inclusionary housing program, a pre-existing in-lieu fee is not a factor. Instead, and similar to a few cities which have never adopted an inclusionary program, the City of Los Angeles is considering a new residential fee for affordable housing. Some other cities term this fee as an "impact" fee or "development" fee; for simplicity's sake, this report calls the fee under consideration a residential fee for affordable housing ("residential fee").

It should be noted that the process of establishing a nexus for the City of Los Angeles's residential fee is virtually the same as the nexus studies undertaken to support inclusionary housing in-lieu fees after *Palmer*. This analytical process is described in the following chapter.

---

[9] *Affordable by Choice: Trends in California Inclusionary Housing Programs* (Non-Profit Housing Association of Northern California, 2006).

Summary of Case Studies

This report profiles 11 cities with market-rate housing fees to produce affordable housing. The profiles include all large California cities with fee programs (e.g., San Francisco, Oakland, San Jose, and Sacramento), selected smaller southern California cities with economies similar to portions of Los Angeles (e.g., Santa Monica, West Hollywood, Pasadena, Santa Ana), along with a high-fee case in Palo Alto and two large cities elsewhere in the U.S. (e.g., Boston and Chicago). Appendix D provides a detailed discussion).

The California cities selected for case studies in this report are not exhaustive; over 170 jurisdictions in California have mandatory inclusionary housing programs, and all require a fee payment for market rate rental projects (after the *Palmer* decision, fees are the only requirement legally available related to impose on market-rate rental projects).[10]. Among the California cities profiled here, all except Oakland and San Jose had pre-existing mandatory inclusionary programs established prior to the Palmer decision, and as such, already had ongoing in-lieu fee program options. Therefore, the City of Los Angeles falls somewhere in the middle of this spectrum between long-established mandatory inclusionary programs with procedures and real estate markets that have adjusted to the concept, and new programs post-Palmer that do not relate directly to this practice.

The following table summarizes the case study cities, with key findings on the next page.

[10] It should be noted that the state legislature has twice passed legislative "fixes" to Palmer for rental projects, both of which were vetoed by the Governor. However, the Governor has recently proposed a legislative "fix" as part of proposed legislation to waive CEQA review for certain "by right" housing projects with at least 5 percent affordable housing included within the project. As of July 2016, this most recent legislative proposal has again been dropped and is considered "dead." These events are cited here to illustrate that the Palmer decision is reversible, and may be reversed by future California legislative action.

TABLE 12: SUMMARY OF RESIDENTIAL FEE CASE STUDIES

	Popoulation (a)	Fee per Unit/Square Foot (b)				Threshold	Fees Collected	Annual Rev. Per Capita (c)	Aff. Units Produced	Notes

Review of the case studies indicates the following key points:

Fee Charges and Structure

- Direct comparisons among cities is difficult due to the variation of fee structures; some cities charge per square foot, while others charge per unit by density variations or size of project.
- Residential fees for affordable housing charged by larger cities with a diverse real estate market range from a low of $1.11 per square foot in Sacramento (e.g., $1,100 per unit for 1,000 square feet), to over $172,000 per unit in San Francisco (for a 4-bedroom unit).
- Some cities, notably Santa Ana, Boston, and Chicago, only charge this kind of fee (and only apply their inclusionary ordinances) to projects with public financial assistance or those seeking a zoning change.
- Sacramento, Pasadena, Oakland, Boston, and Chicago take a zone approach to their fee schedules, seeking to incentivize housing production through lower fees in areas with more modest market conditions or for other policy reasons.
- San Jose also takes a zone/product type approach, exempting downtown high rise housing projects from the fee until 2021. This is an interesting product type/time frame targeting approach to foster the city's goal of increased production of dense downtown market-rate housing.
- Several cities (e.g., San Francisco, West Hollywood, and Pasadena) have developed fee schedules based on project size (e.g., number of units), with lower fees for smaller projects.
- San Francisco is the only city profiled which has a differentiated on- and off-site policy, originally designed to foster on-site unit production, although it should be noted that other California cities not profiled in this report have taken a similar approach.

Waivers, Exemptions, and Refunds

- All cities waive the fee for 100 percent affordable housing projects.
- All cities exempt publicly-owned projects.
- Some cities waive non-profit buildings, and/or churches, schools (public and private), universities and colleges, and other similar categories of land use.
- Most cities offer a "units in lieu of fee" and/or land donation in lieu of fee option.
- For individual newly-constructed single family units, some cities charge a fee, while others do not.
- Some cities have established clear refund processes if projects are subsequently not constructed, while others allow for refund requests decided on a case-by-case basis.
- During economic downturns, cities have either created special deferral programs or lowered fees across the board. These approaches demonstrate that these kinds of fees can be customized to adapt to downturns in the economic cycle.

- All cities in California have a "hardship" exemption available per legal requirements. Some cities render a hardship decision administratively; others have a more formal process.

Revenues and Reporting

- Estimates of revenues collected from residential fees range from less than $1 million to over $10 million per year, depending on the city's fee structure, size, and amount of residential development activity. It is import to note that with the exception of Oakland and San Jose, these fees have long been part of inclusionary programs which were structured to produce units within new projects, so instead of fees, cities obtained affordable units (not tracked in this report). If Los Angeles were to adopt a residential fee, it would be more akin to Oakland and San Jose, both of which are essentially starting from scratch, not able to require units in rental projects (just fees). Since both Oakland's and San Jose's fee programs are new, neither can be relied on to inform fee collection patterns at this time.
- Most cities do not specifically track the use of these fees to build affordable housing projects, because the funds go into a trust fund and are used in combination with other sources per project.
- San Francisco last reported its sources and uses of commercial linkage fees along with other revenue sources comprising its Affordable Housing Fund as part of a larger annual report for FY 2014-2015. Its reporting does clearly show both source and use of each funding stream within its Affordable Housing Fund, along with remaining balances at year end.
- Most cities have general guidelines for use of commercial fee funds such as maximum AMI levels that can be served in new affordable units, rather than targeting the funds specifically to serve households with the greatest need (e.g., at-risk of homelessness/extremely low income/very low income). The City of Los Angeles, with great need for new affordable units serving extremely low and very low income households, may wish to develop policies to target commercial fee funds.

Los Angeles Residential Fee Analysis

Overview of Methodology

The maximum residential fee calculation is based on the premise that new households in Los Angeles spend money within the local economy, thereby supporting employment for new workers, a portion of which will be in need of affordable housing. The intent of the market-rate residential fee is to generate revenue that will support the construction of affordable housing affordable to these new lower-income worker households.

This section provides an overview of the steps used to determine the maximum legal fee for market-rate residential units. Each step is discussed in more detail in the following sections.

Step 1: Define Housing Types

The Nexus Study identified four residential land uses to determine the maximum legal fee for each residential product type. The residential product types analyzed in this study consist of multifamily rental units, condominium units, single-family attached units, and single-family detached units.

Step 2: Identify Housing Prices for New Market-Rate Units

The Nexus Study estimated sale prices for new market rate units based on rent and sale price data for recently-constructed properties in Los Angeles. The analysis used rent and sale price data for units built in 2006 or later to approximate typical housing costs for the new units that would be subject to the impact fee.

Step 3: Estimate the Incomes of Households in New Market Rate Housing

Based on the rent and sale prices identified in Step 2, the Nexus Study estimated the household incomes of occupants in new residential units in Los Angeles, assuming that households spend 30 percent of gross household income on housing costs.

Step 4: Analyze Projected Spending Patterns for Households in New Market-Rate Units

Based on the household income figures from Step 3, the Nexus Study uses IMPLAN to estimate spending patterns among households that would occupy new units in the City and the number of new jobs that this spending would support. The IMPLAN output includes the number of new workers by industry from new household spending.

Step 5: Estimate New Worker Households by Household Income

The analysis uses a data set published by the U.S. Census (the Public Use Microdata Sample or PUMS) to estimate the household income distribution among the worker households derived from Step 4.

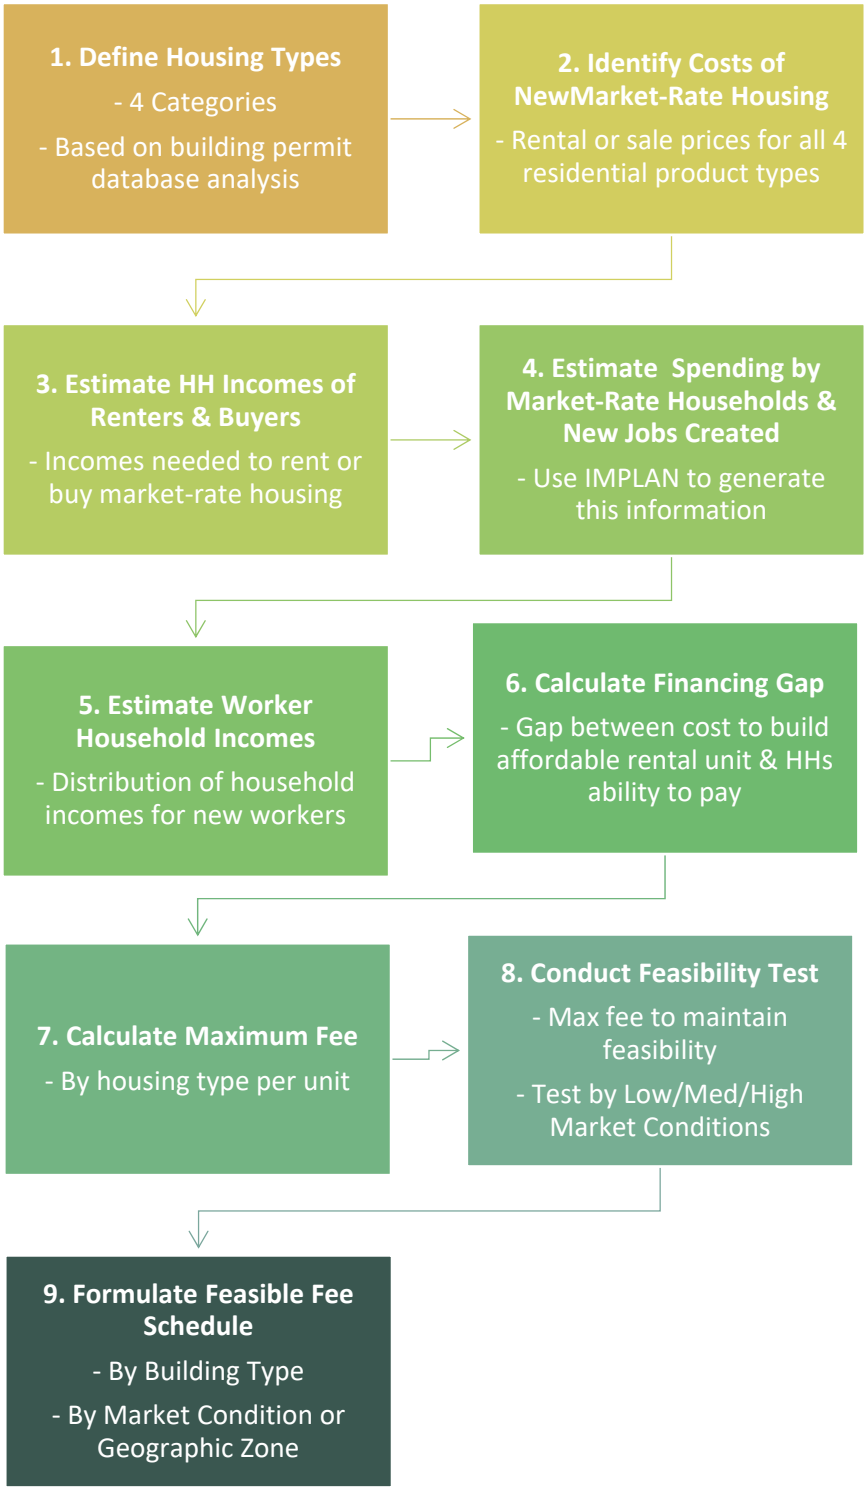
Step 6: Calculate Financing Gap per Affordable Unit

The next step in the nexus analysis is to determine the per unit "financing gap" that affordable housing developers encounter when securing a permanent loan for their projects. Step 6 of the Nexus Study calculates the net operating income (NOI) generated by units affordable to extremely low-, very low-, low-, and moderate-income households. Using conventional financing assumptions, the analysis determines the supportable loan amount based on the NOI from units at each income level.

The cost to house a lower-income household is the difference between the cost to develop an affordable unit and the amount the developer can borrow to build the unit. Using data on recent affordable housing developments in the City of Los Angeles, the Nexus Study determined the average cost to build an affordable rental unit in the City. The supportable permanent loan amounts identified in Step 6 were deducted from the average per-unit development cost to determine the financing gap for units serving households at each income level up to 120 percent of AMI.

Step 7: Calculate the Maximum Legal Fee

The final step in calculating the impact fee is to apply the financing gap per unit for each income level (from Step 6) to the total housing need by income level from new market-rate units (from Step 5).



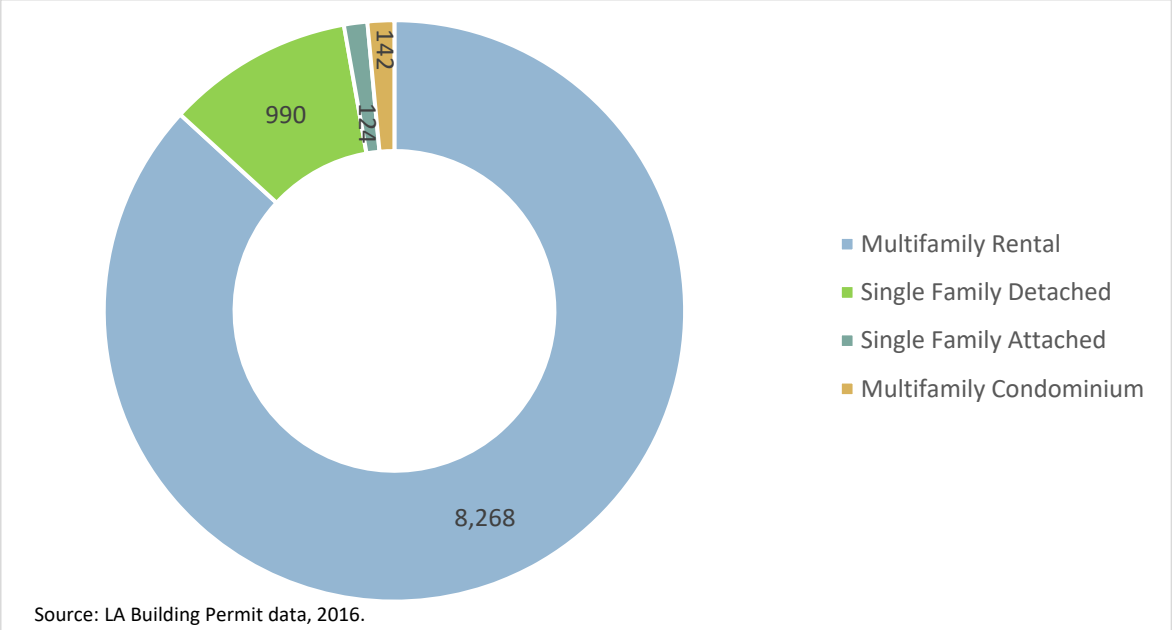
Step 8 Test Feasibility of Maximum Legal Fee Under Different Market Conditions

The City of Los Angeles has a wide range of neighborhoods and corresponding market conditions. In order to ensure that market-rate commercial development is not effected by any fee that may be adopted, this step identifies three general levels of market condition throughout the City, and analyzes the financial return from a development project, in order to identify "feasible" levels of fee by land use.

Step 9: Formulate Feasible Fee Schedule

This step involves a summary fee schedule tested for feasibility, along with policy recommendations for phasing it in, administration, and other options for consideration.

FIGURE 8: SUMMARY OF MARKET-RATE HOUSING FEE METHODOLOGY



Residential Land Uses

Step 1: Define Housing Types

In order to formulate commercial land use categories that reflect actual development in Los Angeles, the City's building permit data was analyzed for the 2011 to 2015 period (see Appendix E for summary data). The City issued building permits for an average of approximately 14.0 million square feet of new residential space per year for the period, including an average of 990 single family detached units with 3.7 million square feet[11]. Just under 70 percent of permitted square feet was in multifamily rental, averaging 8,268 units in 9.8 million square feet annually for the period. The graph below shows the annual average for residential units permitted for the time period analyzed. It is important to note that this average over the past five years may not be predictive; longer "look-back" time periods may yield a lower annual average number of permits, but would be based on changing circumstances and include cycles of growth and recession that may not be repeated in future decades.

FIGURE 9: AVERAGE ANNUAL NEW PERMITTED RESIDENTIAL UNITS, CITY OF LA, 2011 - 2015

Source: LA Building Permit data, 2016.

[11] Note that the building permit database codes projects by single family detached and single family attached. The City's zoning related to small lot subdivisions has resulted in several projects (both single family attached and detached products) on small lots (minimum lot size of 2,000 square feet). Thus, the permit data contains these small lot subdivisions in both single family permit categories.

The Nexus Study analyzed four residential land uses to determine the maximum legal fee for each residential product type. As shown in the following tables, the residential product types analyzed in this study consist of:

- Single Family Detached Units
- Single Family Attached Units
- Condominium Units
- Multifamily Rental Units

New Worker Households and Affordable Housing Need

The Nexus Study estimates the affordable housing need generated by new market-rate units based on the projected spending patterns among the households that would occupy new market-rate units, the jobs that these spending patterns would support, and the affordable housing need among the workers employed in these jobs. This section details the methodology and findings from each of these steps to estimate the need for affordable housing generated by new market-rate units.

Step 2: Identify Housing Prices for New Market-Rate Units

The first step in estimating the new worker affordable housing need that would be generated by new market-rate residential units is to determine the rental rates and home sale prices for new residential units.

Multifamily Rental Units: BAE obtained data from Reis, a private data vendor that provides property-level information on multifamily rental properties, in order to estimate rental rates for new multifamily rental properties in Los Angeles. This analysis used 2016 rental rate data for all 149 multifamily rental properties (24,495 total units) built in 2006 or later that Reis tracks in the City. Since the units included in this analysis are among the newer rental units in Los Angeles, the rental rates for these properties are likely to be similar to rental rates for new multifamily rental properties in the City. As of the second quarter of 2016, the average rental rate among multifamily rental units in Los Angeles was $2,923 per month, as shown in Table 13.

TABLE 13: NEW MULTIFAMILY RENTAL HOUSING MARKET OVERVIEW, LOS ANGELES, 2016

Average Rent	**$2,923**
Studio	$2,087
1-Bedroom	$2,536
2-Bedroom	$3,435
3-Bedroom	$4,014
Vacancy Rate (a)	4.6%

Notes:
(a) Vacancy rate for developments completed between 2006 and 2014 in order to capture new properties that have passed the initial lease-up period.
Sources: Reis, 2016; BAE, 2016.

For Sale Units: BAE obtained data from CoreLogic, a private data vendor that provides data on home sales from county assessors, in order to estimate sale prices for new for-sale units in Los Angeles. This analysis used data on sales of recently-constructed (i.e., built in 2006 or later) for sale units that occurred between July 2015 and July 2016.

BAE conducted a detailed analysis of the data from CoreLogic in order to code each sale record as one of the three for-sale product types (i.e., condominium, single-family attached, or single-family detached). The data from CoreLogic include a code for each home sale record that identifies the unit as either a "condominium" or "single-family residential" unit, but does not code single-family attached units in a way that differentiates these units from either condominiums or single-family detached units. BAE cross-checked the data from CoreLogic with data from Redfin.com, which identifies residential units as either "condominiums", "townhomes", or "single-family" units, in order to re-categorize the unit types from the CoreLogic sale records as appropriate. In addition, BAE performed a thorough review of hundreds of the CoreLogic sale records to ensure that each was property categorized into one of the three for-sale residential product types, and re-coded records as necessary.

The analysis of recent home sales in Los Angeles indicates that the median sale price for recently-constructed for-sale properties sold between July 2015 and July 2016 was $659,000 for condominiums, $540,000 for single-family attached units, and $1.17 million for single-family detached units, as shown in Table 14.

TABLE 14: NEW FOR-SALE HOUSING MARKET OVERVIEW, LOS ANGELES, 2016

Income Level	Income Limit (a)	Max. Affordable Sale Price (b)	Percent of Recent Sales of New Units in Price Range (c)
Single-Family Detached			
Extremely Low-Income (Up to 30% AMI)	$23,450	$118,144	0.0%
Very Low-Income (Up to 50% AMI)	$39,100	$196,991	0.0%
Low-Income (Up to 80% AMI)	$62,550	$315,135	3.4%
Moderate-Income (Up to 120% AMI)	$70,000	$352,669	5.0%
Median Sale Price			$1,170,000
Number of Units Sold			322
Single-Family Attached/Townhomes			
Extremely Low-Income (Up to 30% AMI)	$23,450	$39,549	0.0%
Very Low-Income (Up to 50% AMI)	$39,100	$118,396	0.8%
Low-Income (Up to 80% AMI)	$62,550	$236,540	0.8%
Moderate-Income (Up to 120% AMI)	$70,000	$274,074	1.6%
Median Sale Price			$540,000
Number of Units Sold			123
Condominiums			
Extremely Low-Income (Up to 30% AMI)	$23,450	$39,549	0.0%
Very Low-Income (Up to 50% AMI)	$39,100	$118,396	0.0%
Low-Income (Up to 80% AMI)	$62,550	$236,540	0.2%
Moderate-Income (Up to 120% AMI)	$70,000	$274,074	1.0%
Median Sale Price			$659,000
Number of Units Sold			923

Notes:

Annual Interest Rate (fixed)	3.60%
Term of mortgage (years)	30
Percent of sale price as down payment	20%
Initial property tax (annual)	1.19%
Mortgage Insurance as percent of loan amount	0.0%
Annual homeowner's insurance rate as percent of sale price	0.40%
Monthly homeowners' association fee (condos & townhomes only)	$390
Percent of household income available for housing costs	30%

(a) Income limits published by the CA Department of Housing and Community Development for a three-person household in Los Angeles County, 2106.
(b) See Appendix A for affordability calculations.
(c) Includes of all sales of homes built in 2006 or later and sold between 03/15/2016 and 06/15/2016 in the City of Los Angeles.

Step 3: Estimate the Incomes of Households in New Market Rate Housing

The Nexus Study uses the rent and sale prices for new units in Los Angeles, as identified in Step 2, to estimate the household incomes of households that occupy new rental and for sale units in Los Angeles.

Multifamily Rental Units: Table 15 presents the annual household income required to rent new multifamily rental units in Los Angeles, assuming households spend 30 percent of their gross income on rent and utilities. Based on the weighted average monthly rent of $2,923 for new multifamily rental units (as shown in Step 2) the annual household income required to afford these market rents is $118,400.

Table 15 also presents the estimated aggregate income for all households in new multifamily rental developments, calculated by multiplying the estimated household income by the 100 units in the development. This results in an aggregate income in the development of $11.8 million. The IMPLAN analysis discussed in the following section uses this aggregate income from the development to project spending patterns among new residents in multifamily rental units.

TABLE 15: HOUSEHOLD INCOME REQUIRED TO RENT NEW MULTIFAMILY UNITS, LOS ANGELES, 2016

Average Monthly Rent (a)	$2,923
Plus Utilities (b)	$38
Total Monthly Housing Costs	$2,961
Annual Housing Costs	$35,528
Household Income Required (c)	**$118,400**
Number of Households in Development	100
Aggregate Income in Development	**$11,840,000**

Notes:
(a) Data are for multifamily properties constructed in the City of Los Angeles that were constructed in 2006 or later and consist of more than 20 units.
(b) Utility costs based on utility allowance for multifamily dwellings established by the Los Angeles Housing Authority in 2015. Utility cost estimates assume that water, sewer, and trash collection costs are included in monthly rental amount.
(c) 30 percent of gross income spent on housing costs.
Sources: Reis, 2016; Los Angeles Housing Authority, 2016; BAE, 2016.

For-Sale Units: Table 16 shows the annual household income required to afford a new for-sale home in Low Angeles. Based on the sale prices for new for sale units (as shown in Step 2), the annual household income needed to afford new for-sale units in Los Angeles is $146,300 for condominiums, $107,100 for single-family attached units, and $232,100 for single-family detached units. The resulting estimated aggregate income is approximately $14.6 million for a 100-unit condominium development, $10.7 million for a 100-unit single-family attached

development, and $23.2 million for a 100-unit single-family detached development. The IMPLAN analysis discussed in the following section uses these aggregate incomes to project spending patterns among new residents in for-sale units, which in turn determines the estimated new worker households that may need affordable housing.

TABLE 16: HOUSEHOLD INCOME REQUIRED TO PURCHASE NEW UNITS, LA, 2016

	Single-Family Detached	Single-Family Attached	Condominium
Estimated Sale Price for New Residential Unit (a)	$1,170,000	$540,000	$659,000
Monthly Housing Costs for a New Residential Unit (b)	$5,803	$2,678	$3,659
Annual Housing Costs	$69,640	$32,141	$43,904
Household Income Required (c)	**$232,100**	**$107,100**	**$146,300**
Number of Households in Development	100	100	100
Aggregate Income in Development	**$23,210,000**	**$10,710,000**	**$14,630,000**

Notes:
(a) Median sale price among homes built in 2006 or later and sold between 03/15/2016 and 06/15/2016 in the City of Los Angeles.
(b) Monthly homeownership costs are based on the following assumptions:

Annual Interest Rate	3.60%
Term of Mortgage (years)	30
Percent of sales price as down payment	20%
Initial property tax (annual)	1.19%
Mortgage Insurance as a percent of sale price	0.0%
Annual homeowner's insurance rate as a percent of sale price	0.40%
Monthly homeowners' association fee (condominiums only)	$390

(c) Percent of household income available for housing costs: 30%
Sources: CoreLogic, 2016; Freddie Mac, 2016; California Department of Insurance, 2016; Los Angeles County Auditor-Controller, 2016; Condos.com, 2016; BAE, 2016.

Step 4: Analyze Projected Spending Patterns for Households in New Market-Rate Units

New household spending within an economy supports jobs. As households spend money on retail goods, food, and health, personal, professional, and educational services, they support job growth in these and other sectors.

To estimate the effect of new household spending on employment generation, this nexus study uses IMPLAN ("Impact analysis for Planning"), a widely-accepted and utilized software model. At the heart of the model is an input-output dollar flow table. For a specified region, the input-output table accounts for all dollar flows between different sectors of the economy. Using this information, IMPLAN models the way income injected into one sector is spent and re-spent in other sectors of the economy, generating waves of economic activity, or so-called "economic multiplier" effects. Appendix G contains a more detailed overview of IMPLAN.

The IMPLAN model is also able to estimate the number of *direct*, *indirect*, and *induced* jobs generated by a given economic "event." Once the economic events have been entered into the model, IMPLAN reports the following types of impacts:

- Direct Impacts. Direct impacts refer to the set of producer or consumer expenditures applied to the predictive model for impact analysis. It is the amount of spending available to flow through the local economy. IMPLAN then displays how the local economy will then respond to these initial changes. The direct impacts may equal the amount of spending input into the model, depending on a variety of factors.
- Indirect Impacts. The indirect impacts refer to the impact of local industries buying goods and services from other local industries. The cycle of spending works its way backward through the supply chain until all money leaks from the local economy, either through imports or by payments to income and taxes. For capital projects this would include payments for construction inputs such as wood, steel, office supplies, and any other non-labor payments that a construction firm would purchase in the building process. Since IMPLAN is only used for the housing analysis for this report to assess the impacts of new resident household expenditures, there are no indirect impacts to assess as there are no industry expenditures as inputs to the model.
- Induced Impacts. The induced impacts refer to an economy's response to an initial change (direct impact) that occurs through re-spending of income according to household spending patterns. When households earn income, they spend part of that income on goods and services, such as food and healthcare. IMPLAN models households' disposable income spending patterns and distributes them through the local economy.

For the purpose of this analysis, the economic "event" is the household spending by occupants of new residential units in Los Angeles. By IMPLAN definition these expenditures are *direct* impacts, and the resulting spending results in *induced* impacts. For instance, the household expenditures generate jobs for cashiers and baggers at grocery stores patronized by the households. The process initiated by household expenditures continues as these workers and the businesses they work for spend money in subsequent transactions, supporting employment at places other than the initial point of sale, such as wholesalers supplying retail stores, or truck drivers delivering goods to those stores. In turn, these businesses and workers spend money to generate additional activity in the local economy. These are all part of the *induced* impacts linked to the household expenditures.

The IMPLAN model is customized to reflect the economic characteristics of the specified region – in this case Los Angeles County. The nexus analysis considers regional employment generation, rather than jobs generated in the City of Los Angeles exclusively, because household spending in the City creates jobs throughout the region. Some of these workers cannot afford to live in Los Angeles precisely because of the City's high housing costs. If the

analysis solely considered workers living in Los Angeles, it would in effect discount the needs of households who currently cannot afford to live in Los Angeles, and propagate the need for affordable housing in the City. In essence, this analysis considers employment effects beyond the City's borders in order to address the City's "fair share" of regional housing need.

Step 5: Estimate New Worker Households by Household Income

Worker households[12] in Los Angeles often have more than one employed person. In some instances, economists estimate household income for workers by simply multiplying worker earnings by industry by the average number of workers per worker household. This methodology relies on the unsatisfactory assumption that on average workers make the same amount of money as other workers in their household. Given the diversity of household composition, this assumption is not appropriate. For example, a household may have a teacher and a doctor, with significantly different individual earnings.

To address this issue, this analysis makes use of a detailed and rich data set published by the U.S. Census known as the Public Use Microdata Sample (PUMS). Derived from a five percent sample of all households per the American Community Survey, and available for certain defined areas with 100,000 population or more called PUMAs, this data allows one to cross tabulate variables such as industry of employment and household income. The analysis here uses the most recent available data, from the 2010 through 2014 five-year period. A map of the PUMAs comprising Los Angeles County is provided in Appendix F.

The PUMS data set was queried to identify the number of households by income category by industry (controlling for household size) to construct a household income distribution by industry. The distribution was constructed based on the income categories defined by the California Department of Housing and Community Development (HCD). These HCD income categories are defined as a percentage of the Area Median Income (AMI), adjusted for household size. The household income distribution by industry is shown in Table 17.

[12] A worker household is defined as a household with one or more employed persons. They may be wage and salary workers, or self-employed/sole proprietors.

TABLE 17: INCOME LEVEL BY INDUSTRY, PERSONS BY 2014 INCOME LIMITS

		Estimated Household Income as a Percent of AMI (a)					
NAICS Code	Industry	Up to 30% AMI	30% to 50% AMI	50% to 80% AMI	80% - 120% AMI	Above 120% AMI	Total

All Government Employment		9.2%	9.3%	14.4%	5.9%	61.2%	100.0%

Notes:
(a) Based on a cross tabulation of Public Use Microdata Samples (PUMS) from the 2010-2014 American Community Survey. These incomes were compared to household income limits published by the California Department of Housing and Community Development, to determine the percentage of households falling into each income category. The analysis controlled for household size, to address the varying HCD income limits for each household size.
Sources: Census, American Community Survey Public-Use Microdata Sample (PUMS) 2010-2014; CA Dept. of Housing and Community Development, 2014; BAE, 2016.

Housing need is based on the number of households rather than the number of jobs. As such, jobs are translated into households by dividing the number of jobs by the average number of workers per worker household in the City of Los Angeles.[13]

Multifamily Rental Housing: Table 18 applies the income distribution by industry to the number of jobs generated in each industry as a result of spending by households in new rental units. As shown, a 100-unit apartment complex generates a total of 42 households across various income groups and 23 households earning up to 120 percent of AMI.

Condominiums: Table 19 applies the income distribution by industry to the number of jobs generated in each industry as a result of spending by households in new condominiums. As shown, a 100-unit condominium development generates a total of 48 households across various income groups and 26 households earning up to 120 percent of AMI.

Single-Family Attached: Table 20 applies the income distribution by industry to the number of jobs generated in each industry as a result of spending by households in new single-family

[13] Average workers per worker household from American Community Survey, 2010-2014.

attached units. As shown, 100 single-family attached units generate a total of 35 households across various income groups and 19 households earning up to 120 percent of AMI.

Single-Family Detached: Table 21 applies the income distribution by industry to the number of jobs generated in each industry as a result of spending by households in new single-family detached units. As shown, 100 single-family detached units generate a total of 73 households across the various income groups and 39 households earning up to 120 percent of AMI.

Subsidy Gap

Step 6: Determine the Financing Gap for Affordable Units

The next step in the nexus analysis is to calculate the cost to house the extremely low-, very low-, low-, and moderate-income households calculated in Step 6 by determining the per unit "financing gap" that affordable housing developers encounter when securing a permanent loan for their projects. In other words, the cost to house a lower-income household is the difference between the cost to develop an affordable unit and the amount the developer can borrow to build the unit.

Affordable housing developers are able to secure a permanent loan based on their net operating income (NOI) per unit. NOI is equal to rental income less operating expenses and vacancy. As shown in Table 7 in Chapter 2, households can afford monthly rents ranging from $544 for extremely low-income households to $1,708 for moderate-income households. These rents are based on household income limits for three-person households and assuming households spend 30 percent of their income on rent and utilities.[14] Standard deductions are taken for operating expenses and vacancies to determine NOI.

BAE used conventional financing assumptions to determine the supportable loan amount per unit for each income level. As shown in Table 7 in Chapter 2, the loan amount ranges from $0 per unit for extremely low-income units (i.e., operating expenses exceed NOI, leaving no NOI to support debt payments) to $152,301 for units serving moderate-income households.

The financing gap per affordable unit is equal to the total development cost less the supportable loan amount per unit. According to cost data provided between 2013 and 2015 on applications for low-income housing tax credit projects in the City of Los Angeles, the average development cost for affordable housing in the City averages approximately $448,500 per unit, as shown in Table 22.

[14] The analysis assumes a three-person household for consistency with the 2016 Los Angeles County average household size of 2.88 persons per household, per California Department of Finance estimates.

TABLE 22: DEVELOPMENT COSTS FOR AFFORDABLE HOUSING, CITY OF LOS ANGELES, 2013-2015

Housing Type	Avg. Development Cost (per unit) (a)	Number of Units
Homeless & Special Needs	$410,871	622
Large Family	$502,946	676
Senior	$382,977	205
Weighted Average - All Housing Types	$448,479	1,503

Note:
(a) Weighted average cost as reported on tax credit applications between 2013 and 2015. All costs adjusted to 2016 costs based on the Turner Building Cost Index.
Sources: City of Los Angeles, 2016; BAE, 2016.

This study uses the average development cost across all affordable housing types despite the likelihood that most of the new worker households needing affordable units will be housed in large family developments, which in practice accommodate a range of household sizes and mostly serve lower-income worker households. Among units in the large family developments analyzed in this study, three percent were studios, 35 percent were one-bedroom units, 28 percent were two-bedroom units, 32 percent were three-bedroom units, and on percent were units with four or more bedrooms. In contrast, homeless, special needs, and senior developments, typically have a large number of occupants living on social security. However, by using the average across all affordable unit types, the Nexus Study is conservative in estimating the financing gap associated with constructing new units because the average development costs for homeless, special needs and senior units tend to be lower than the development costs for large family units.

Based on the supportable loan amount calculated in Step 6, the financing gap per affordable unit ranges from $448,500 for extremely low-income units to $296,199 for moderate-income units, as shown in Table 23.

TABLE 23: FINANCING GAP ANALYSIS, CITY OF LOS ANGELES, 2016

	Income Group			
	Extremely Low	**Very Low**	**Low**	**Moderate**
Household Income Limit (a)	$23,450	$39,100	$62,550	$70,000
Maximum Affordable Monthly Rent per Unit (b)	$544	$936	$1,522	$1,708
Monthly Operating Expenses (c)	$542	$542	$542	$542
Vacancy (d)	5%	5%	5%	5%
Net Operating Income per Unit (e)	-$25	$347	$904	$1,081
Operating Subsidy from Other Sources (f)	$25	$0	$0	$0
Monthly Supportable Debt Service per Unit (g)	$0	$278	$723	$865
Loan Amount (h)	$0	$48,900	$127,371	$152,301
Financing Gap per Affordable Unit (i)	**$448,500**	**$399,600**	**$321,129**	**$296,199**

Assumptions	
Total Affordable Unit Development Costs (j)	$448,500
Financing Terms	
Debt Coverage Ratio	1.25
Interest Rate	5.50%
Term of Loan (years)	30

Maximum Legal Fee

Step 7: Calculate the Maximum Legal Fee

The final step in calculating the impact fee is to apply the financing gap per unit for each income level (from Step 7) to the total housing need by income level from new market-rate units (from Step 5). As shown in Table 24, the maximum impact fees for each of the four residential product types are as follows:

- Multifamily Rental: $84,964 per unit
- Condominium: $95,484 per unit
- Single-Family Attached: $69,900 per unit
- Single-Family Detached: $145,901 per unit

TABLE 24: MAXIMUM AFFORDABLE HOUSING IMPACT FEE CALCULATIONS

Employee Households in City by Income Level	Multifamily Rental	Condominium	Single-Family Attached	Single-Family Detached
Extremely Low Income (up to 30% AMI)	6.1	6.9	5.0	10.5
Very Low Income (31-50% AMI)	6.0	6.8	5.0	10.4
Low Income (51-80% AMI)	8.0	9.0	6.6	13.7
Moderate Income (81-120% AMI)	2.6	2.9	2.1	4.5
Subtotal - Affordable Housing Need (Units)	***22.8***	***25.6***	***18.7***	***39.1***
Above Moderate Income (over 120% AMI)	19.7	22.0	16.1	33.5
Total Housing Need	**42.5**	**47.6**	**34.8**	**72.5**
Financing Gap (a)				
Extremely Low Income Units	$2,743,807	$3,089,354	$2,261,584	$4,726,450
Very Low Income Units	$2,411,132	$2,711,989	$1,985,332	$4,144,578
Low Income Units	$2,566,479	$2,879,691	$2,108,099	$4,395,613
Moderate Income Units	$774,962	$867,372	$634,966	$1,323,442
Total Financing Gap per 100 Units	**$8,496,380**	**$9,548,406**	**$6,989,981**	**$14,590,083**
Maximum Impact Fee per Unit	**$84,964**	**$95,484**	**$69,900**	**$145,901**
Assumptions				
Building Size (# of units)	100			

Note:
(a) The financing gap is calculated by multiplying the number of employee housesholds at each income level by the financing gap per unit (from Step 7) at each affordability level.
Source: BAE, 2016.

Feasibility of Maximum Legal Fee

As shown in the preceding section, meeting the affordable housing costs generated by each residential land use per the nexus analysis results in expensive maximum legal fee levels.

In order to evaluate these maximum legal fees in the context of maintaining feasible market rate residential projects, this report involved extensive analysis of the Los Angeles real estate marketplace by three levels of current market condition, and then financial feasibility testing of each of the eight land use categories by each of the market conditions' economic factors.

As an overview, the analytical process included the following steps (each step is explained more fully in the following pages):

- **Step A:** Identification of Los Angeles neighborhoods
- **Step B:** Analysis of market rents/sale prices to categorize each neighborhood by market condition
- **Step C:** Formulation of basic static pro formas for each land use type to analyze the maximum feasible fee by land use and by the three market conditions
- **Step D:** Comparison of feasible fees to legal maximum fee

Step A: Identification of Los Angeles Neighborhoods

As detailed in the commercial fee chapter, this study used the Los Angeles Times neighborhoods to segment Los Angeles into three levels of market condition, as shown on the following map for residential markets.

Step B: Analysis of Market Rents/Sales Prices

Residential markets signal their market condition by price, and this economic principle was applied to classify neighborhoods into distinct market categories. Data were analyzed for three price signals: market rents, single family home sales, and condominium sale prices. For the rental variable, data was provided by Reis, a private data vendor, for 33,000 rentals in over 150 buildings. This information was geocoded, aggregated into an average rent for each neighborhood, and grouped using standard deviations. CoreLogic provided data on recently constructed single family homes and condominiums sold between June 2015 and June 2016. This data set captured sales for approximately 4,000 single family homes and 500 condos. Like the rental data, this information was geocoded and aggregated into an average price per square foot for each neighborhood, with the results grouped using standard deviations.

Using these three price signals, average rents, and average price per square foot for single family homes and condominiums, an index was developed to describe the market condition for each neighborhood. Each price signal was assigned a score from one to three, reflecting the

variable's placement within the standard deviation intervals.[15] A score of one indicated a relatively weaker housing market, while a score of three reflected a strong market. The scores were combined into a composite index. The following pages provide maps of the three variables used in the analysis, and the resulting composite Residential Index scores. Housing units that were permitted between 2011 and 2015 were overlaid on the maps to illustrate how permit activity corresponded to areas of varying market strength.

[15] Each of the three price signal variables was analyzed by using a statistical measure called standard deviation, which measures the dispersion of data relative to the mean (or average) for all data points. This measure best reflected the clustering across the three variables, with prices clustered at the high end, others around the average for all of Los Angeles, and some at the low end of the range. The intervals used to score each variable are noted in the maps in the following pages.

Step C: Pro Forma Analysis to Determine Maximum Feasible Fee by Land Use for Each Market Condition

This step involved the formulation of basis static pro forma models for each land use, with rent/sale revenue assumptions varied by market condition. A conservative approach was taken to ensure that feasible findings would be developed. A summary of the research informing each key assumption is described below:

- **Development Prototype** – For each land use, a median sized project was identified from actual projects permitted, as tracked by the Los Angeles Building Permit database described previously in this report. The project's actual number of stories and parking method were researched, and the project's floor area ratio (FAR) and parking ratios were estimated based on review of applicable zoning codes, resulting in a building description of each prototype[16].
- **Land Costs** – For each land use and market condition, BAE reviewed available public appraisals (see Appendix C-8), and also interviewed numerous leading developers of commercial and residential projects currently active in Los Angeles.
- **Construction Costs (Hard, Soft, and Financing)** – for each prototype, per square foot hard costs was estimated based on review of R.S. Means, a cost manual. Soft costs and financing costs were estimated based on industry standards and current interest rates.
- **Rents** – For multifamily rental, all rents for that land use in buildings built in 2006 or later were analyzed to develop a 25, 50, and 75th percent quartile rent assumption.
- **Cap Rates** – For multifamily rental, both national and regional cap rates were compiled and variations by market area were researched based on developer interviews.

The following two metrics were utilized to judge feasibility:

- **Return on Total Development Cost (ROC)** – This metric divides profit by total development cost, to judge overall project feasibility. As described in the Commercial Feasibility analysis, this metric is similar to overall return on investment in short-term investment mechanisms such as corporate bonds. To test feasibility, this metric had to achieve at least a 15 percent return on cost including for the new affordable housing fee and the applicable school fee. This metric does not account for leverage, but a separate analysis of several of the pro formas prepared for this study indicated that in the event of a typical equity/debt configuration, this metric and the 15% ROC threshold should still enable sufficient return in equity to investors.

[16] It should be noted that during the course of this analysis, discussions with builders specializing in inexpensive market rate residential units on small lots (e.g., minimum of 2,000 square feet and may be either attached or detached units) were concerned that their profit margins may not be reflected in the land uses shown herein, due to their particular business model. See further discussion in feasibility analysis summary.

- **Yield on Cost (YOC)** – This metric evaluates the annual stabilized Net Operating Income (NOI) compared to total development costs for multifamily rental housing projects only (not relevant in for-sale unit projects because these do not generate ongoing operating investment income). For the feasibility testing, based on developer interviews, multifamily rental housing was also assigned a minimum YOC threshold. Both ROC and YOC thresholds had to be achieved to deem a project feasible with the total fees (e.g., new affordable fee + school fee).

A summary of the pro forma findings is shown on the following page. Detailed pro formas are shown in the Appendix H.

Again, it should be noted that these four land use categories, based on building permit data, do not reflect several small lot subdivisions which may provide inexpensive market-rate units. For several reasons, the metrics of feasibility on these small lot inexpensive subdivisions (which may be either attached but lower than median sale prices, or detached and also lower than median sale prices), are difficult to reflect in this analytical framework due to the combination of several sources of builder profit along with the sometimes inexpensive sale prices.

Most other cities in California do not differentiate between small lot and conventional lot subdivisions, only between density and/or project size (number of units). This unique small lot detached or attached product, falling below the median in sale price by offering an inexpensive ownership unit, and reflecting the City's policy objective to encourage inexpensive small lot unit production, may be a good candidate for a partial waiver or refund of a fee, in the event that middle income ownership (e.g., inexpensive sale prices) can be demonstrated by the builder.

TABLE 25: SUMMARY OF RESIDENTIAL PRO FORMAS

Low Market scenarios not shown here, due to limited feasibility when analyzed conservatively. Low scenario pro formas shown in Appendix H.

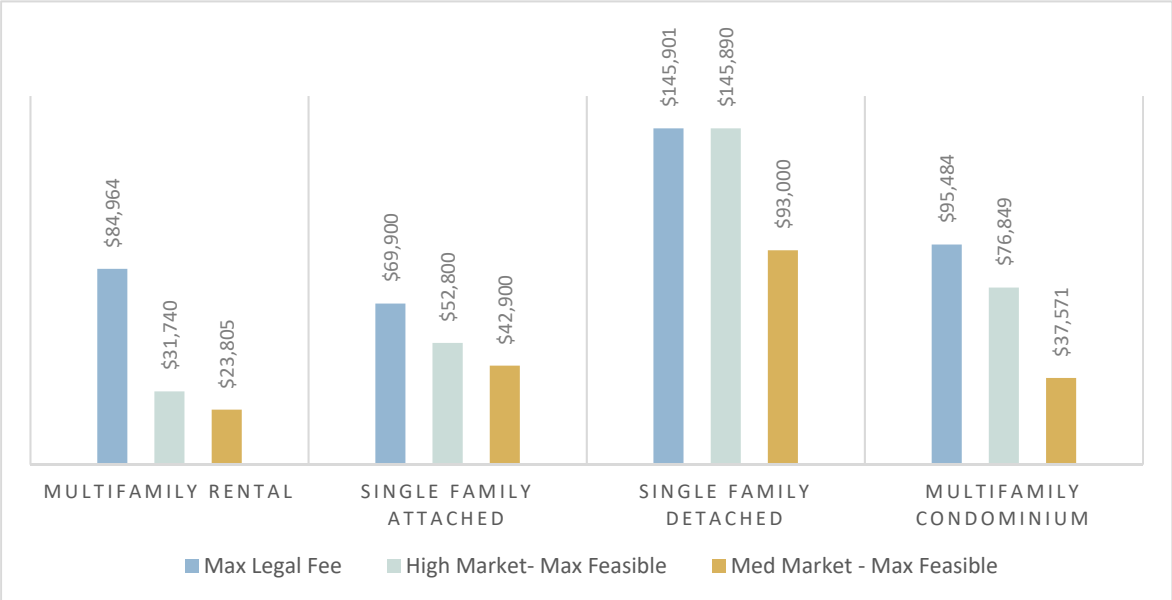
a) Assumes payment of proposed Qumiby fee (($10,000 per unit for subdivisions) or new Park fee ($5,000 per unit for multifamily)
Single family detached feasible fee is capped at max legal fee.

b) Feasibility measured 2 ways.

Project must achieve at least: 15.0% Return on Cost

Project must achieve at least: 6.0% Yield on Cost (if applicable)

Step D: Comparison of Feasible Fee to Maximum Legal Fee



The table below compares the feasible fees estimated above, to the maximum legal fees described in the previous chapter (based on nexus analysis of new worker households). As in most other cities in California, the gap between the dollars needed to fund affordable housing for new workers (e.g., maximum legal fee) and the feasible level of fee that can be absorbed by real estate market conditions, is substantial. In other words, charging a fee that would not constrain private sector development does not usually meet all subsidy needed to mitigate the costs of the affordable housing impacts generated by the new development.

TABLE 26: COMPARISON OF RESIDENTIAL MAX LEGAL FEES TO FEASIBLE FEES

	Multifamily Rental		Multifamily Condo		Single Family Attached		Single Family Detached	
	Med	High	Med	High	Med	High	Med	High
Legal Fee (Max per Unit)	**$ 84,964**	**$ 84,964**	**$ 95,484**	**$ 95,484**	**$ 69,900**	**$ 69,900**	**$ 145,901**	**$ 145,901**
Legal Fee (Max per Sq. Ft.) (a)	**$ 73.88**	**$ 73.88**	**$ 64.30**	**$ 64.30**	**$ 42.36**	**$ 42.36**	**$ 48.63**	**$ 48.63**
								Capped at Legal Max
Feasible Fee Per Unit (b) (c)	**$ 23,805**	**$ 31,740**	**$ 37,571**	**$ 76,849**	**$ 42,900**	**$ 52,800**	**$ 93,000**	**$ 145,890**
Feasible Fee Per Sq. Ft. (b)	**$ 18.00**	**$ 24.00**	**$ 22.00**	**$ 45.00**	**$ 26.00**	**$ 32.00**	**$ 31.00**	**$ 48.63**
Feasible Fee as % of Legal Max	24.4%	32.5%	34.2%	70.0%	61.4%	75.5%	63.7%	100.0%

a) Legal Max calculated per unit in nexus analysis. Converted here to per sq.ft. based on pro forma assumptions based on sales analysis of sq. ft. of homes sold.
b) Current school fee and proposed Park fee is applied to project. Feasible Res Fee is after accounting for those costs.
c) The feasible fee per unit was derived by taking the feasible fee per square foot multiplied by the gross residential square footage divided by the number of units. As a result, while the fee is presented on a per unit basis, it accounts for area within units and common area space.

FIGURE 12: COMPARISON OF MAX RESIDENTIAL LEGAL FEES TO FEASIBLE FEES

Residential Fee Program Options & Estimated Revenues

Similar to the commercial fees, there are several options the City could select to structure a market-rate residential fee program. The following presents four program options as examples. These options are then analyzed in order to estimate total annual fee revenues, along with two kinds of potential further adjustments to exempt certain projects.

Option A: Match Fee to Market Conditions

This option would create a fee schedule which charges feasible fees based on conservatively-estimated Medium Market Area conditions to new and rehabilitated projects in those areas, and feasible fees estimated for High Market Area conditions to those areas. Project fees in Low Market Areas would likely be waived.

This option would create the most finely-tuned fee structure, but may create challenges to administer and would necessitate periodic updating to identify changing neighborhood market conditions and feasible fee levels.

Option B: Charge Medium Market Fees to Both Medium and High Market Areas

This would be a conservative option, charging the level of feasible fee derived from a Medium market area feasibility test, to all projects located in both Medium and High Market Areas. This approach would limit debate about whether an individual project is in a medium or high market area, charging the same fee per land use to all projects regardless of location. Due to the economics of Low Market areas, fees would likely not be charged in these exempt zones.

This option would simplify fee administration, but may create an uneven burden on projects due to their location and subsequent economics.

Option C: Charge Only High Market Areas

This option would limit fees to only those projects located in premium, High Market Areas, where feasibility is most assured and development is least likely to be affected. Fees charged would be at the corresponding High Market levels. Projects in Medium and Low Market Areas would be waived based on their location. As market conditions change and are re-evaluated, neighborhoods may change from medium to high market conditions and become eligible for the fee schedule.

This option would further simplify fee program administration, but may create debate over specific projects which have High Market characteristics and economics but be technically located in a Medium Market neighborhood (or vice-versa).

Option D: Charge Lowest Feasible Residential Fee Citywide (Flat Fee)

In this option, the lowest feasible fee for the lowest residential land use in a Medium Market Area (e.g., multi-family rental) would be charged across all residential uses in all markets.

The benefits of this option are that it establishes clarity, minimizes confusion and minimizes administrative functions. While this option would apply the fee to all projects, including those located in market conditions that the pro formas concluded may be infeasible, most new development projects occurring in the Low market conditions likely reflect improving submarket conditions not reflected in the broader three market segments analyzed in this report.

The estimated annual revenues that could potentially be generated by the application of these fee program options are shown on the next page.

Adjustment for Density Bonus Programs and 100 Percent Affordable Projects

Due to the anticipated different treatment for both density bonus programs and 100 percent affordable projects (e.g., "credit" for affordable units provided directly in these cases; see next chapter), the revenue estimates exclude the square feet for these projects.

Adjustment for Minimum Project Size

Many cities exempt fees for smaller projects in order to encourage infill and accommodate small businesses. For this study, multifamily rental, multifamily condo, and single family attached projects with less than five units are analyzed as a potential exempt minimum project size (see footnote c on following table for historic distribution of residential projects by number of units in project). Single family detached units were assumed to not be subject to this exemption for revenue-estimating purposes.

TABLE 27: REVENUE ESTIMATES OF FEE PROGRAM OPTIONS, ANNUAL AVERAGE

Estimates do not include possible exemptions and waivers under consideration, other than for project size, density bonus projects, & 100% affordable projects

Option A - Match Fee to Market Conditions

	Low Market		Medium Market		High Market		Total		
Use	Low Feasible Fee per Sq. Ft.	Annual Avg. Sq. Ft. (a)(b)	Med Feasible Fee per Sq. Ft.	Annual Avg. Sq. Ft. (a)(b)	High Feasible Fee per Sq. Ft.	Annual Avg. Sq. Ft. (a)(b)	Annual Avg. Sq. Ft.	Potential Max Annual Revenue	Max Annual Rev Adjusted for Minimum Project Size (c)

Total		1,876,362		2,979,458		7,070,871	11,926,691	**$ 214,680,442**	**$ 204,645,495**

** Multifamily Rental sq.ft. is net of density bonus & 100% aff projects.*

Notes:

a) Sq.Ft. for each land use based on avg. annual permit data adjusted to waive density bonus & 100% aff projects, as follows:

Annual Average 2011-2015

	All Units Built	Total Sq. Ft. Built	Units in Density Bonus Projects	100% Affordable Projects	Units Built Net of Density Bonus & Affordable	Net Sq. Ft. Built
Multifamily Rental	8,268	9,791,525	1,344	444	6,480	7,673,869
Single Family Detached	990	3,677,381	0	0	990	3,677,381
Single Family Attached	124	289,956	0	0	124	289,956
Multifamily Condominium	142	285,485	0	0	142	285,485
Total	9,524	14,044,347	1,344	444	7,736	11,926,691

b) Allocation of Sq. Ft. per Market Area category- based on geocoding of all permits excluding density bonus and 100% affordable projects:

	% Sq.Ft. in Low Markets	% Sq.Ft. in Med Markets	% Sq.Ft. in High
Multifamily Rental	15.9%	24.0%	60.2%
Single Family Detached	12.5%	28.1%	59.3%
Single Family Attached	57.9%	1.6%	40.4%
Multifamily Condominium	11.2%	35.3%	53.5%

c) Adjusted for minimum project size (5+ units)

	Below Min Project Size	Above Min Project Size
Multifamily Rental	6%	94%
Single Family Detached	NA	NA
Single Family Attached	0%	100%
Multifamily Condominium	34%	66%

Also similar to the commercial fee revenue estimates, two Specific Plans (West Los Angeles and the Coastal Transportation Corridor) currently charge a range of TIA fees and both have been proposed for increases in these fees. The map below shows the location of the TIAs and following pages show the effect of incorporating these proposed fees and charging a net feasible fee for affordable housing in those two Specific Plan areas.

FIGURE 13: RESIDENTIAL MARKET AREAS AND TIAS

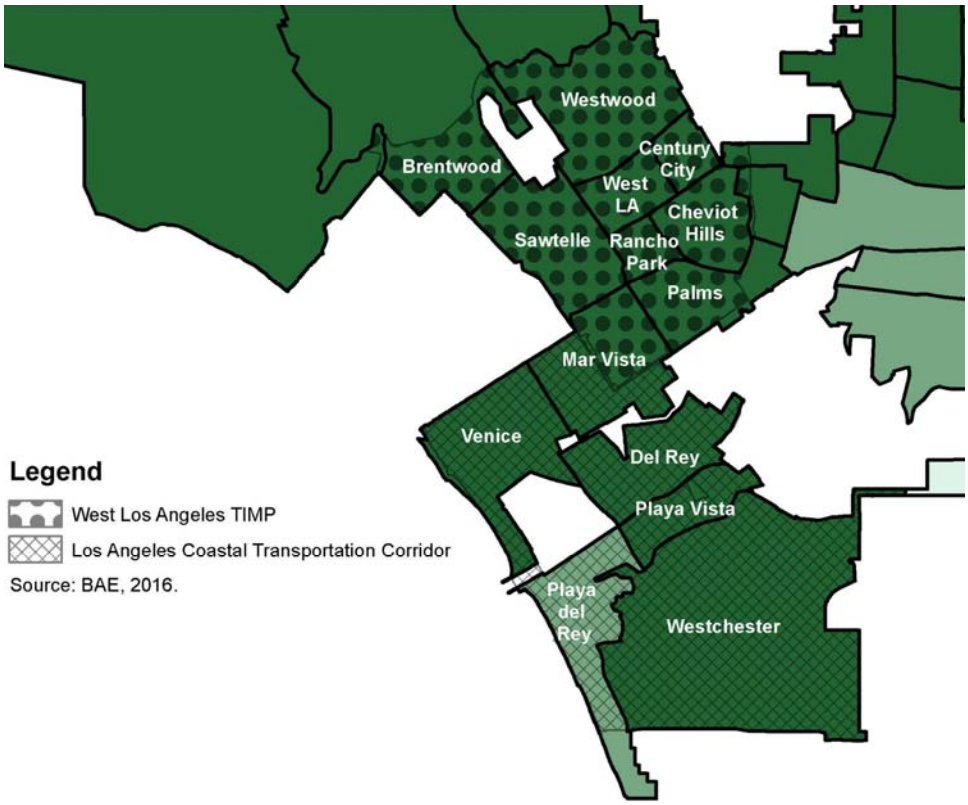

TABLE 28: RESIDENTIAL ESTIMATE FEE REVENUES WITH TIA ADJUSTMENTS

Estimates do not incorporate exemptions and waivers under consideration other than density bonus projects & 100% affordable projects.

	Option A - Citywide Fee Per Market Area Zones

** Multifamily Rental sq.ft. is net of density bonus & 100% aff projects.*

Option D would not be affected by the presence of TIAs.

Footnotes shown on next page

Notes:

a) Sq.Ft. for each land use based on avg. annual permit data adjusted to waive density bonus & 100% aff projects, as follows:

	Annual Average 2011-2015					
	All Units Built	Total Sq. Ft. Built	Units in Density Bonus Projects	100% Affordable Projects	Units Built Net of Density Bonus & Affordable	Net Sq. Ft. Built
Multifamily Rental	8,268	9,791,525	1,344	444	6,480	7,673,869
Single Family Detached	990	3,677,381	0	0	990	3,677,381
Single Family Attached	124	289,956	0	0	124	289,956
Multifamily Condominium	142	285,485	0	0	142	285,485
Total	9,524	14,044,347	1,344	444	7,736	11,926,691

b) Allocation of Sq. Ft. per Market Area category- based on geocoding of all permits excluding density bonus and 100% affordable projects:

	% Sq.Ft. in Low Markets	% Sq.Ft. in Med Markets	% Sq.Ft. in High Markets
Multifamily Rental	15.9%	24.0%	60.2%
Single Family Detached	12.5%	28.1%	59.3%
Single Family Attached	57.9%	1.6%	40.4%
Multifamily Condominium	11.2%	35.3%	53.5%

c) Adjusted for minimum project size (5+ units)

	Below Min Project Size	Above Min Project Size
Multifamily Rental	6%	94%
Single Family Detached	68%	32%
Single Family Attached	0%	100%
Multifamily Condominium	34%	66%

d) Figures overestimate revenue if TIA fees are accounted for in two specific plan aras where TIA fees are charged. The highlighted figures represent the maximum fee for each prototype, which are used in the above calculation. The proposed TIA fees are (fees per unit converted to square foot fees based on unit sizes used for the pro forma analysis):

	Proposed TIA Fees		Max Supportabe Fee - Medium		Max Supportabe Fee - High	
	West LA	CTCSP	West LA	CTCSP	West LA	CTCSP
Multifamily Rental	$ 4.54	$ 4.04	$ 13.46	$ 13.96	$ 19.46	$ 19.96
Single Family Detached	$ 3.31	$ 5.36	$ 27.69	$ 25.64	$ 45.32	$ 43.27
Single Family Attached	$ 4.26	$ 3.79	$ 21.74	$ 22.21	$ 27.74	$ 28.21
Multifamily Condominium	$ 4.73	$ 4.21	$ 17.27	$ 17.79	$ 40.27	$ 40.79

Allocation of Sq. Ft. per Market Area category within TIAs

	% Units in Low	% of Units in Med	% of Units in High	Total Activity in TIAs
Multifamily Rental	0.0%	0.0%	10.0%	10.0%
Single Family Detached	0.0%	0.4%	12.6%	13.0%
Single Family Attached	0.0%	0.0%	19.4%	19.4%
Multifamily Condominium	0.0%	4.5%	21.7%	26.2%

In summary, the range of fee program options and their associated revenues for an average year are as follows:

FIGURE 14: ESTIMATE OF POTENTIAL ANNUAL RESIDENTIAL FEE REVENUE

Considerations for Implementation

Fees by Geographic Area

Similar to the commercial fee discussion of implementation earlier in this report, the City of Los Angeles could adopt a market-rate residential fee schedule which varies the required fee by geographic area, as related to market condition. Further variations of this approach, which would match the feasible fee to the geographic area, are then possible to structure.

Phase-In of Fee Schedule

A key component of adopting a commercial fee in Los Angeles will be the phase-in schedule. Most notably, most cities when first adopting a fee like this, set a future date for its implementation, and also define and waive current "pipeline" projects which would have been started without knowledge of this fee. Moreover, to mitigate the initial perceived "shock to the system" of a new residential fee, a phase-in schedule would help to mitigate this risk.

For these reasons, it is recommended that if Los Angeles adopts a residential fee program, it should consider a two-year phased-in schedule when initially implemented. The fee schedule, for example, could be set at half of the full fee for the first year of applicability, rising to the full 100 percent of the fee on projects seeking building permits 12 months later and beyond.

Fee Exemptions and Waivers

As profiled in the case studies of commercial fees, other cities in California have variable approaches to making categories of land use either exempt from residential fees or waiving fees under certain conditions.

Fee Exemptions

This study was conducted assuming that 100 percent affordable housing projects residential projects would be exempt from residential fees since affordable housing is being provided. Los Angeles could also exempt projects smaller than a certain size threshold, as discussed earlier in this study.

Fee Waivers

The next chapter explores the Los Angeles Density Bonus Program, which involves market-rate residential projects incorporating affordable units in exchange for additional allowable floor area ratio (FAR) in conformance with state law. This program means that these projects are already providing affordable units within the same project, although the levels of required affordable units to achieve FAR increases are lower than the nexus study levels of affordable housing need identified as generated from current market rate projects.

The revenue estimates for the residential fee included an example adjustment that can also be built into the regulations for Transportation Investment Areas (TIAs), which are currently applicable only to the Specific Plans for West Los Angeles and the Coastal Transportation

Corridor. In the even other areas of Los Angeles have the eventual need to adopt area transportation impact fees, the residential fee could be partially waived (reduced) to accommodate those other fees.

Another kind of waiver could be considered in cases where developers are applying to build inexpensive market rate homes in Low or Medium market areas on small lots (can be attached or detached units); these units are typically built with inexpensive finishes and sold at relatively inexpensive sale prices. Analysis for this report, and discussions with builders of these products, indicated concern for the ability to absorb a linkage fee and still provide this type of unit. If such units were sold at prices that served a policy objective (such as ownership housing serving 110 percent AMI households), a reduction or waiver in the fee may help limit this type of potential overlap between policy objectives.

Finally, most cities allow for a waiver request if a) economic hardship can be demonstrated or b) if lesser affordable housing job impacts can be demonstrated. Excluding the issue of the planned increase in minimum wage, it is recommended that these two options be narrowly allowed per legal requirements, but not more broadly offered, to minimize administrative burden on staff.

Timing of Fee Calculation and Payment

As profiled in the case studies, most cities charge the residential fee prior to or at the time of building permit issuance. Several cities split up the payments, allowing for partial payment later (at Certificate of Occupancy), while a few cities spread payments even farther apart over time, allowing for essentially a payment plan or the choice of an upfront net present value payment of the entire amount.

For several reasons, it is recommended that for the City of Los Angeles, the fee payment be split only into at most, two equal installments – at the time of building permit issuance and at the time of Certificate of Occupancy. This recommendation is made at this limited level, due to the overarching immediate need to create a permanent source of funding for affordable housing.

Additional Considerations

Effect of Los Angeles Minimum Wage Phase-In Schedule

In 2015, the Los Angeles City Council passed a City Minimum Wage Ordinance that will increase the minimum wage to $15 per hour for all employers in the City, with increases in the minimum wage phased in between 2016 and 2021. Employers with more than 25 employees will be required to reach the $15 minimum wage by 2020, while some nonprofit organizations and employers with 25 or fewer employees are eligible to receive an additional year to reach the $15 minimum wage. This section provides an analysis of the potential impact of the City's minimum wage ordinance on the legal maximum commercial linkage and affordable housing impact fee calculations presented in the preceding sections of this report.

Methodology

BAE analyzed the potential impacts of the increase in the minimum wage by determining the household AMI levels for workers that will earn the new minimum wage and adjusting the household income distribution among the workers generated by each residential or commercial land use type accordingly. BAE then re-calculated the maximum fee based on the adjusted household income distribution. This section provides an overview of the methodology used to analyze the potential impacts of the minimum wage ordinance on the maximum legal fee calculations. Calculation tables and additional detail about the methodology used in this analysis are shown in Appendix E.

Step 1: Determine the AMI band for households at the new minimum wage. The $15 per hour minimum wage that will apply to most employers in 2020 is equivalent to an estimated wage of $13.33 per hour in 2016 dollars, translating to an annual income equal to approximately $27,700 for a full-time employee. Assuming 1.77 workers per worker household, the estimated annual household income for an employee working full time at minimum wage would be approximately $48,900. According to 2016 HCD income limits for a household in Los Angeles County, a household earning an income of $48,900 falls within the low-income AMI band for two- to five-person households.

Step 2: Adjust the household income distribution for workers generated by new development. Based on the findings from Step 1, all worker households that fall into the extremely low- or very low-income AMI bands under current minimum wage requirements would fall into the low-income AMI band following an increase in the minimum wage to $15 in 2020. For each residential product type and commercial land use analyzed in the preceding maximum fee calculations, the household income distribution among worker households was adjusted by moving all extremely low- and very low-income households into the low-income AMI band.

Step 3: Re-calculate the maximum legal fees using the adjusted AMI distributions. Step 2 results in an income distribution that shows a reduction in extremely low- and very low-income households (to zero) and a commensurate increase in low-income households. Since the subsidy gap for low-income units is smaller than the subsidy gap for extremely low- or very low-income units, the cost associated with providing housing for households below the moderate income level decreases somewhat as extremely low- and very low-income households shift to become low-income households. The reduced cost of providing affordable housing translates directly to a lower maximum legal fee due to the increase in the minimum wage.

Findings

The increase in the City of Los Angeles minimum wage is not expected to impact the recommended fee rates, despite anticipated reductions in the maximum legal fees.

Although the increase in the minimum wage will decrease the maximum legal commercial linkage fee, the maximum legal fee will still be higher than the anticipated fee rate. As shown in Table 29, the planned increase in the minimum wage will decrease the maximum legal fee for each of the eight commercial land uses, resulting in maximum legal fees that range from approximately $100 per square foot to $261 per square foot, depending on the specific use. These lower maximum legal fees are nonetheless significantly higher than the feasible fee rates and the fees likely to be adopted by the City. In the event that the City adopts fee rates that are higher than those shown in the table below, it may necessary for the City to revisit the fee rates following implementation of the minimum wage increase.

TABLE 29: MAXIMUM LEGAL COMMERCIAL FEE, FUTURE MINIMUM WAGE

	Office	Retail	Industrial	Hotel/ Motel	Warehouse	Hospital	Institutional
Maximum Legal Fee (per sq. ft.)							
With Current (2016) Minimum Wage	$248	$309	$131	$133	$118	$196	$197
With Increased Minimum Wage in 2020	$213	$261	$112	$114	$100	$169	$168

Note:
See detailed calculations in Appendix I.
Source: BAE, 2016.

Similarly, the increase in the minimum wage will decrease the maximum legal affordable housing impact fee, though not below the anticipated fee rates. As shown in Table 30, the planned increase in the minimum wage will decrease the maximum legal fee for each of the four residential product types, resulting in maximum legal fees that range from approximately $59,600 per unit to $124,300 per unit. However, the maximum legal fees will remain higher than the fee rates likely to be adopted by the City. In the event that the City adopts fee rates that are higher than those shown in the table below, it may necessary for the City to revisit the fee rates following implementation of the minimum wage increase.

TABLE 30: MAXIMUM LEGAL HOUSING FEE UNDER FUTURE MINIMUM WAGE REQUIREMENTS

	Multifamily Rental	Condominium	Single-Family Attached	Single-Family Detached
Maximum Legal Fee (per unit)				
With Current (2016) Minimum Wage	$84,964	$95,484	$69,900	$145,901
With Increased Minimum Wage in 2020	$72,437	$81,385	$59,578	$124,339

Note:
See detailed calculations in Appendix I.
Source: BAE, 2016.

Option to Provide On-Site Units

Many cities with market-rate housing fees provide the option to developers to waive these fees if on-site affordable units are provided instead. This section calculates the proportion of affordable units that would need to be provided on-site for this option, and is based on the analysis of affordable housing need generated by new market-rate units in Los Angeles, as previously presented in shown in Table 24.

Table 31 shows the proportion of units that would be required to fully address the need for affordable units generated by market-rate units on site in mixed-income developments. This analysis uses the base 100 market-rate units in each of the development prototypes that were identified in the maximum fee calculations shown in this report, and adds the affordable unit need generated by these market-rate units to the project in order to demonstrate the number of units and income mix needed to address this need on site. For example, the figures in Table 24 show that 100 units of market-rate multifamily rental housing generate a need for 22.8 affordable units. The figures in Table 31 therefore assume a hypothetical 122.8-unit project comprised of 100 market-rate units and the 22.8 affordable units that are needed to address the affordable housing impacts of the market-rate units on site. The figures in Table 31 then calculate the numerical proportion of the total 122.8-unit project that would be comprised of units at each affordability level.

Table 31 also provides a weighting of the proportion of units at each affordability level to convert the entire need into units that serve each affordability level in order to estimate the number of units that would need to be provided on site at a single affordability level. As shown, the estimated proportions at single affordability levels are as follows:

- Multifamily Rental: 12 percent at extremely-low income, 16 percent at very-low income, 22 percent at low-income, or 29 percent at moderate income.
- Condominiums: 14 percent at extremely-low income, 18 percent at very-low income, 24 percent at low-income, or 32 percent at moderate income.
- Single-Family Attached: 11 percent at extremely-low income, 14 percent at very-low income, 18 percent at low-income, or 25 percent at moderate income.

- Single-Family Detached: 19 percent at extremely-low income, 24 percent at very-low income, 33 percent at low-income, or 44 percent at moderate income.

TABLE 31: ON-SITE UNITS NEEDED TO MITIGATE MARKET-RATE UNIT'S IMPACT

Voluntary Density Bonus vs. Market-Rate Housing Fee

This section provides an overview of the use of the California State Bonus Law in the City of Los Angeles, compares the outcomes from the Density Bonus to the potential outcomes of the market-rate housing fee analyzed in this study, and provides a policy options for the implementation of the market-rate housing fee in combination with the State Density Bonus.

California Density Bonus Overview

The California State Density Bonus Law (California Government Code Sections 65915 through 65918) entitles developers to certain development incentives for projects that include a prescribed amount of affordable housing. For developers, the State Density Bonus Law is a voluntary, incentive-based program, which allows developers to opt in on a project-by-project basis in exchange for incentives. All cities in California are mandated by State Law to adopt the State Density Bonus.

Depending on the share of affordable units provided, development incentives under the State Density Bonus Law include up to a 35 percent increase in density over the density otherwise allowed on the project site. Projects in which at least 10 percent of units are affordable to low-income households or five percent of units are affordable to very low income households are eligible for a 20 percent density bonus, while projects with higher proportions of affordable units are eligible for larger density bonuses. In addition, condominium developments, planned developments, and stock cooperatives are eligible for a five percent density bonus if at least ten percent of units are moderate-income units, with density bonuses up to 35 percent for larger proportions of moderate-income units.

TABLE 32: CALIFORNIA STATE DENSITY BONUS PROVISIONS

Affordable Unit Percentage (a)	Density Bonus by Affordability Level: Very Low Income Units	Low Income Units	Moderate Income Units
5%	20.0%	N/A	N/A

Note:
(a) Affordable unit percentage applies the base (i.e., without density bonus) density. Calculation of the share of affordable units is conducted before adding market-rate units added by the density bonus.
Sources: CA Government Code Sections 65915-65918; BAE, 2016.

Use of State Density Bonus in Los Angeles

Use of the density bonus is fairly common among recent residential developments in Los Angeles. Between 2011 and 2015, 7,915 market-rate and affordable units were developed in density bonus projects in Los Angeles, accounting for 17 percent of all units built in the City, as shown in Table 33, not including 100 percent affordable developments that received a density bonus. Of this total, 683 units in density bonus projects were very low-, low-, or moderate-income units, a number equal to nine percent of the total number of market-rate units in density bonus projects.

Among multifamily rental developments, 6,722 market-rate and affordable units were in projects that received a density bonus between 2011 and 2015, amounting to 16 percent of multifamily rental units permitted in Los Angeles during this period. Multifamily rental developments that received a density bonus generated 585 affordable units, a number equivalent to 10 percent of the number of market-rate units in density bonus projects. Condominium developments that received a density bonus between 2011 and 2015 included 1,193 market-rate and affordable units, comprising 19 percent of all units in the City during the same period.

Density bonus projects produced 98 affordable for-sale units, a number equal to nine percent of all units in density bonus projects.

TABLE 33: UNITS IN DENSITY BONUS PROJECTS, CITY OF LOS ANGELES, 2011-2015

	Multifamily Rental	Condominium	Total
Very Low (AMI up to 50%)	497	95	592
Low (AMI 50%-80%)	73	2	75
Moderate (AMI 80%-120%)	15	1	16
Affordable Unit Total	**585**	**98**	**683**
Market-Rate Units in Density Bonus Projects	6,137	1,095	7,232
Total Units in Density Bonus Projects	**6,722**	**1,193**	**7,915**
Affordable Units as a % of Market-Rate Units in Density Bonus Projects	**9.5%**	**8.9%**	**9.4%**
Total Units Permitted in City (Density Bonus Projects + Other Projects)	41,341	6,280	47,621
Units in Density Bonus Projects as a Share of All Units Permitted	**16.3%**	**19.0%**	**16.6%**

Note:
Figures exclude projects that are comprised only of affordable units.

Comparison of Density Bonus to Market-Rate Housing Fee

On a project-by-project basis, the density bonus does not generate enough units to meet the affordable housing need generated by the market-rate units in density bonus projects. As detailed in the section of this report that shows the maximum market-rate housing fee calculations and shown in Table 34 below, 100 units of market-rate multifamily housing generates a need for 22.8 affordable units. Mixed-income (i.e., not 100 percent affordable) density bonus projects built in Los Angeles between 2011 and 2015 produced 9.5 affordable multifamily rental units for each 100 units of market-rate multifamily rental housing, falling 13.2 units short of the need. Similarly, 100 market-rate condominium units generate a need

for 25.6 affordable units, while condominium projects that receive a density bonus generated 8.9 affordable units per 100 market-rate units between 2011 and 2015.[17]

TABLE 34: COMPARISON OF DENSITY BONUS OUTCOMES TO HOUSING FEE OUTCOMES

Shortfall of Density Bonus Program in Mitigating Affordable Housing Impacts	Multifamily Rental	Condominium
Affordable Housing Need Generated by 100 Market-Rate Units (a)	22.8	25.6
Affordable Units per 100 Market-Rate Units in Density Bonus Projects (b)	9.5	8.9
Shortfall using Density Bonus Program	**13.2**	**16.6**
Shortfall of Fee Program in Mitigating Affordable Housing Impacts		
Affordable Housing Need Generated by 100 Market-Rate Units (a)	22.8	25.6
Maximum Legal Market-Rate Housing Fee (per unit) (c)	$84,964	$95,484
Recommended Market-Rate Housing Fee (per unit) (d)		
Medium Market	$23,805	$37,571
High Market	$31,740	$76,849
Recommended Fee as a % of Maximum Legal Fee		
Medium Market	28.0%	39.3%
High Market	37.4%	80.5%
Affordable Units from Fees from 100 Market-Rate Units (e)		
Medium Market	6.4	10.1

Application of Fee Program to Density Bonus Projects

The City of Los Angeles can elect to charge market-rate housing fees on the market-rate units in density bonus projects. As discussed above, the City may choose to waive market-rate housing fees on projects in which a defined proportion of units are affordable to lower-income households, which could include density bonus projects that meet the designated affordability threshold.

Table 35 below compares the proportion of affordable units in density bonus projects to the proportions needed to fully address the need generated by market-rate units on site, as shown in Table 31 above. The figures in Table 35 demonstrate that, with the exception of single-family attached projects, density bonus projects providing the minimum number of units necessary to receive the maximum density bonus under State Law result in fewer affordable units than needed to fully address the need for affordable units within the development.

[17] The historic yield of affordable units in density bonus projects is used here, because the state density bonus program allows a range of affordable units, starting at 5 percent. Thus, actual choices made and units produced, is the best indicator of expected future production of affordable housing using the bonus program.

These figures indicate that the City could provide market-rate housing fee waivers for multifamily rental, condominium, and single-family detached density bonus projects that provide a larger share of affordable units than the State Density Bonus Law addresses. This could incentivize the provision of a larger number of affordable units on site and provide flexibility for developers that may elect to provide additional affordable units in exchange for a fee waiver. For single-family attached developments, fee waivers could be provided for developments with slightly fewer affordable units than would be provided by meeting the minimum affordability requirement needed to achieve the maximum density bonus under the State Density Bonus Law.

TABLE 35: AFFORDABLE HOUSING YIELD FROM UNITS ON SITE

	Affordable Units				Market-Rate			Total
Very Low Income	**VLI**	**LI**	**Mod**	**Total**	**Base**	**Bonus**	**Total**	**Project**

Appendix A: Commercial Fee Case Studies

The following profiles commercial linkage fee programs established in cities throughout California. First, larger cities' programs are summarized, including San Francisco, Sacramento, Oakland, and San Diego. Next, several smaller cities located near Los Angeles are profiled to provide context for more localized real estate economics and policy considerations.

It should be noted that these profiles are not exhaustive; numerous other smaller cities in California have adopted or are currently considering adopting commercial impact fees for affordable housing. However, given the large size of the City of Los Angeles, but with real estate markets specific to its economic base, this chapter seeks to profile both large city experiences along with smaller cities nearby facing similar affordable housing challenges.

It should also be noted that the names of some of the commercial fee programs can be confusing' some cities name these fee programs in terms of their objective (to create affordable housing), while others link program names to earlier nomenclature regarding jobs-housing balance goals, and still others carry names associated with their purpose (e.g., to mitigate commercial development impacts).

San Francisco Jobs-Housing Linkage Fee Program

Background

One of the earliest cities to adopt a commercial impact fee, San Francisco established a jobs-housing linkage fee program to support affordable housing production in 1981. Early versions of the policy focused specifically on office development, but the law was expanded in 1996 to encompass retail and hotel uses.[18]

In 2010, the Jobs-Housing Linkage Program (Program) was established in Section 413 of the San Francisco Municipal Code. The Program was founded on the acknowledgement that the supply of housing in the City had not kept pace with the demand created by workers employed in large-scale commercial developments, and that the lack of supply requires many employees to live elsewhere in the Bay Area, resulting in long commutes as well as negative impacts on quality of life, environmental resources, and social equity.

The Program applies to development projects of at least 25,000 gross square feet of entertainment, hotel, production/distribution/repair (PDR), office, research and development, retail, and/or small enterprise workspace. Exemptions include grocery and pharmacy spaces

[18] Keyser Marston Associates, Inc., "Residential Nexus Analysis – City and County of San Francisco." 2007. PDF. Accessed 6/23/16. http://sf-planning.org/sites/default/files/FileCenter/Documents/8380-FINAL%20Resid%20Nexus_04-4-07.pdf.

of a certain size, as well as other standard exemptions such as developments on property owned or leased by the federal government, State of California used exclusively for governmental or educational purposes, and developments on property owned by the San Francisco Redevelopment Agency or Port of San Francisco where application is prohibited by State or local law.[19] Major phases and development projects that are part of the Mission Bay North and Mission Bay South Redevelopment Plans and Interagency Cooperation Agreements are also exempt.

To fulfill the requirements of the Program, developers of commercial space have three options:

1. Payment of the impact fee, calculated based on use type and size.
2. Payment to a housing developer to construct a specified number of units based on use type (either monetary or by contributing land of equivalent value to the impact fee.)
3. A combination of the above options.

Payments are imposed as conditions of project approval. If the project sponsor elects to provide a payment to housing developers instead of paying the impact fee, they must obtain written approval from the Director of the Mayor's Office of Housing and Community Development (MOHCD).

Fee Structure

Fees are charged on a per gross square foot basis, excluding accessory parking, and vary by commercial use type. The current fee schedule is shown below.

SAN FRANCISCO FEES PER SQUARE FOOT OF COMMERCIAL DEVELOPMENT

Use	Fee per sq. ft.
Entertainment	$22.42
Hotel	$17.99
Integrated PDR	$18.89
Institutional	$0.00
Office	$24.03
PDR	$0.00
Research & Development	$16.01
Retail	$22.42
Small Enterprise Workspace	$18.89

Note:
(a) Fees reflect those effective January 1, 2015.

Sources: SF Planning Code, Sec. 413, 2016;
BAE, 2016.

[19] Free standing pharmacies not exceeding 50,000 square feet, general grocery retail not exceeding more than 75,000 square feet, and mixed-use space consisting of residential space and pharmacy retail space not exceeding 50,000 square feet, or general grocery retail space not exceeding 75,000 square feet are exempt from the requirements of the Jobs-Housing Linkage Program (Section 413.3(8)(A-C)).

Fees also apply to the replacement or change of use from PDR space occupied prior to April, 2010 to another commercial use; however, the fee is significantly lower than that imposed for new construction.[20]

In general, fees, payments, and/or transfer of land title(s) must be completed in full before issuance of the first construction document; however, the Board of Supervisors has adopted deferral mechanisms in the past. For example, during the Great Recession, development projects in the pipeline were permitted to defer payment of the jobs-housing linkage fee, in addition to all other impact fees, to the point in time just prior to issuance of the first certificate of occupancy. These deferrals were subject to a surcharge deposited into the Affordable Housing Fund. This option expired in July 2013, though the language still exists in the Planning Code, in the event that the Board of Supervisors decides to reactivate such provisions.

In the event that a project does not ever receive its first building permit, the fee may be refunded by contacting the Planning and Building Inspection Departments and submitting a request. If a building permit has been issued and a developer has authorization to build but chooses not to proceed, the fee is nonrefundable.

All monies generated by the impact fee and any lien proceedings are deposited into the Citywide Affordable Housing Fund, which is managed by the Mayor's Office of Housing and Community Development (MOHCD) and used exclusively to increase the supply of housing affordable to qualifying households. Unlike many other cities profiled in this report, funds may not be used for administrative or general overhead expenses.

The Jobs-Housing Linkage Fee is updated periodically according to the annual percent change in the Construction Cost Index (CCI) for San Francisco.

Payment to Housing Developer

Should a commercial developer elect to fulfill Program requirements through payment or contribution of land to one or more housing developer(s), the housing developer(s) are required to construct a minimum of the number of housing units determined by the formula in the table below. All housing units constructed pursuant to this option must be affordable to qualifying households continuously for 50 years.[21] Similar to the fee, the magnitude of the payment to the housing developer depends on the use type. Regardless of use type, the payment or value of land contributed must be at least equivalent to the amount of the impact fee. Staff noted that this option is seldom, if ever, pursued.

---

[20] To derive the fee for replacement or change of use from PDR occupied prior to April 2010 to another commercial use, $14.09 is subtracted from the applicable fee listed in Table 1 (depending on the new use). See Table 413.6B of Section 413.6 of the Municipal Code.

[21] San Francisco Municipal Code, Section 413.5 (Compliance by Payment to Housing Developer.)

SAN FRANCISCO AFFORDABLE HOUSING REQUIREMENT, JOBS-HOUSING LINKAGE FEE

Use	Housing Unit Multiplier
Entertainment	Gross sq. ft. x 0.00014
Hotel	Gross sq. ft. x 0.00011
Office	Gross sq. ft. x 0.00027
R&D	Gross sq. ft. x 0.0002
Retail	Gross sq. ft. x 0.00014

Sources: SF Planning Code, Sec. 413, 2016; BAE, 2016.

Outcomes

A 2012 report published by the San Francisco Controller's Office notes, "Since fiscal year 1988-89, $56,791,248 in Jobs-Housing Linkage fees has been deposited into the Citywide Affordable Housing Fund, and $12,735,030 in interest has been earned on the Citywide Affordable Housing Fund, which also includes Inclusionary Housing Fees."[22] At the time of the report's publication, no commercial developers had opted to construct on- or off-site below market-rate units instead of paying the fee.

In fiscal year 2014-2015, the Jobs-Housing Linkage Program contributed over $27 million to the Affordable Housing Fund's ending balance of approximately $103 million as of June 30, 2015. In the same year, revenues in the Affordable Housing Fund assisted the development of 609 housing units for families, developmentally disabled persons, transition-age youth, low-income individuals, and seniors.[23]

Lessons Learned

Clearly defined use categories leads to easier administration. The specificity of San Francisco's commercial use categories and clarity of the definition of these uses in the City's land use classifications reduces the chance for misclassification of projects for which the jobs-housing linkage fee is assessed. City staff emphasized the importance of the clarity of these definitions in their ability to consistently and accurately apply the appropriate fee rate to new projects.

Consider impacts on essential neighborhood services. San Francisco's exemption of most pharmacies and grocery stores reduces the possible negative impact on the provision of essential goods and services.

[22] City and County of San Francisco Controllers Office, "FY 2011-12 Development Impact Fee Report." November 30, 2012. Accessed 7/19/16. http://sfcontroller.org/sites/default/files/FileCenter/Documents/3770-ImpactReport_2011-12.pdf.
[23] Mayor's Office of Housing and Community Development, "Annual Progress Report Fiscal Year 2014-2015." PDF. Accessed 7/15/16. http://sfmohcd.org/sites/default/files/Documents/MOHDC%20Annual%20Progress%20Report%20FY14-15.pdf.

Land contribution and/or direct payment to residential developer are rarely used. As is the case in Palo Alto, the option to provide a payment to a residential developer to construct affordable units rather than paying the fee is rarely, if ever, used.

It may be prudent to allow for a deferral mechanism in the future, even if not immediately effective. Deferral mechanisms were necessary and were well-utilized during the Great Recession when there was uncertainty about project completion. It is important, however, to include the provision of temporary policies carefully. San Francisco's description of a deferral mechanism in the Planning Code is somewhat misleading; the Planning Code references a section of the Building Code, which includes the expired sunset clause for this provision (planning staff noted that this is a constant source of confusion).

SACRAMENTO HOUSING TRUST FUND COMMERCIAL FEE

Background

The City of Sacramento enacted the Housing Trust Fund (HTF) Ordinance (Chapter 17.188 of the City of Sacramento Zoning Code) to fund construction of affordable housing near new employment centers. .[24] The original impetus seems to have been rapid development in North Natomas, where expected new commercial projects caused concern about creating an imbalance between new jobs and new housing.

The Citywide and North Natomas fees currently in effect are shown below. Land uses vary for North Natomas due to different land use designations for that area's Specific Plan.

SACRAMENTO CITYWIDE AND NORTH NATOMAS FEES, 2016

Citywide			N. Natomas		
Office	$	2.50	**Office/Business**	$	2.74
Hotel	$	2.38	**Community/Neighborhood Com**	$	2.06
Commercial	$	2.00	**Hwy Commercial**	$	2.74
R & D	$	2.12	**M-50**	$	1.74
Manufacturing	$	1.57	**M-20**	$	1.44
Warehouse/Office	$	0.91	**Light Industrial**	$	1.12
Warehouse	$	0.68			

Source: City of Sacramento; BAE, 2016.
Effective 7/1/2016

The City also enacted a separate series of commercial fees for projects where the developer elects to build affordable housing instead of pay the full fee (fees drop to 20 percent of above if specific amounts of housing are built). Also not shown above, are other specific land uses, including major medical facilities, which have a fee of $3.90 per square foot.

In the commercial fee program, the Planning Director determines the fee amount when the project does not fall in an existing category or when it is a use not shown here. Projects subject to this discretionary determination include sports complexes, marinas, golf courses, drive-in theaters, nonresidential care facilities, bus terminals, pest control companies, slaughter houses and flea markets. Other uses are exempt from the commercial fee, including properties owned by the state or US (as a state capital, Sacramento has substantial state-owned property), non-profit homeless facilities, low income services facilities, churches, child care facilities, utilities, and a number of other special purpose structures.

[24] City of Sacramento, https://www.cityofsacramento.org/Community-Development/Planning/Long-Range/Housing-Programs/Housing%20Trust%20Fund, last accessed May 30, 2016.

The Sacramento commercial fee at present, is increased each year by the San Francisco Construction Cost Index. In earlier years, fees were left the same for long periods, then increased, and when economic conditions warranted, rolled back.

Fees are collected prior to (and as condition for) the issuance of the building permit. No provisions exist for the deferral of fees or refunds. However, as long as the monies have not been transferred into the Housing Trust Fund itself, it is possible for a developer who decides not to build to negotiate a refund.

Fees flow to the Housing Trust Fund, created in 1989 specifically to administer monies collected under the commercial linkage fee program. The objective of the Fund is "*to increase and improve the supply of housing affordable to households of low income, with priority given to very low income households.*"[25] The Trust Fund does not finance housing for the homeless or low income senior housing.

Outcomes

Since inception in 1989 through 2013, approximately $25 million of commercial fees have been collected, an average of roughly $1 million per year. Staff estimates that these fees have been used to leverage gap financing to build 3,095 affordable housing units in 44 development projects. Projects receiving funds from the fees are tracked and identified on a map published by the Planning Division.

Lessons Learned

The staff interviewed for this report indicated that since the North Natomas area has now been largely built out, the separate fee structure may need to be collapsed into a single citywide schedule. Staff also mentioned complexities determining how to apply the fee to mixed-use projects (e.g., hotel with convention center and residential units) or or projects that start one way and end up another way (e.g., a warehouse to which office space is added over time).

[25] Sacramento City Code, section 17.708.020 Low income housing fund.

OAKLAND JOBS/HOUSING IMPACT FEE

Background

In 1999, the City of Oakland commissioned a Housing Development Task Force, which recommended in 2000 that the City conduct a Nexus Study for a Jobs/Housing Impact Fee. The City adopted the Jobs/Housing Impact fee in 2002 following completion of the Nexus Study in 2001. However, the City delayed implementation of the fee until 2005 in an effort to clear the development pipeline of projects that had been proposed before the fee was adopted.

Fee Structure

The City of Oakland adopted the jobs/housing impact fee to apply only to office and warehouse/distribution uses, despite that nexus study analyzed office, warehouse/distribution, hotel, and retail uses. The City's ordinance applies citywide but exempts the first 25,000 square feet of all projects and all space devoted to parking. In addition to new construction, the fee applies to substantial rehabilitation projects, defined as projects in which the cost of repairs or rehabilitation exceed 25 percent of the value of the building after the rehabilitation or repair.

The fee is updated on an annual basis based on the Marshall & Swift building cost index. As of 2016, the fee rate was $5.44 per square foot (up from $4 per square foot in 2005) of gross floor area in excess of 25,000 square feet.

Oakland assesses the fee rate at building permit issuance, but the fee is paid in three installments. The first 25 percent of the fee is paid prior to issuance of a building permit for all or any portion of the project. Developers are required to pay another 50 percent prior to issuance of a temporary certificate of occupancy for all or any portion of the project. The final 25 percent is due 18 months after the date of issuance of a temporary certificate of occupancy for all or a portion of the project. If necessary, the City may enforce payment by recording a lien against the property, revoking or suspending the certificate of occupancy, or other action.

Project applicants can request a fee exemption from the City Manager only under special circumstances. In addition, applicants can elect to provide affordable units on site at a rate of 0.00004 units per square foot of office or warehouse/distribution uses (with the first 25,000 square feet of commercial uses exempted). However, applicants for eligible projects are generally expected to pay the fee rather than seek exemptions.

The Jobs/Housing Linkage fee revenue accrues to the City's Housing Trust Fund, which is used to increase, improve, and preserve the supply of affordable housing in the City, with priority given to housing for very low income households. Eligible uses include, but are not limited to, assistance with staff costs or other administrative costs attributable to a specific affordable

housing project, equity participation in affordable housing projects, loans and grants to affordable housing projects, or other public/private partnership arrangements. Monies from the Affordable Housing Trust Fund may be extended for the benefit of rental housing, owner occupied housing, limited equity cooperatives, mutual housing developments, or other types of affordable housing projects.

Outcomes

As of April 2016, the City of Oakland had collected approximately $1,878,000 from the jobs/housing impact fee, with $2,483,000 expected from planned projects by the end of 2017. The City estimates that the fee revenue collected to date has supported the construction or substantial rehabilitation of 15 to 19 units, with a typical City contribution of approximately $100,000 to $125,000 per unit.

Lessons Learned

Adaptive reuse projects can generate commercial linkage fee revenue. The City of Oakland assesses its jobs/housing impact fee on substantial rehabilitation projects resulting in office or warehouse/distribution uses, provided that the project site has been vacant. A planned conversion of a former Sears building in the City to offices for Uber Technologies Inc. is expected to generate approximately $1 million in jobs/housing impact fees to the City, more than half of the total revenue that the fee has generated to date.

Commercial linkage fee revenue collection varies substantially over time due to real estate market cycles. Since implementation in 2005, Oakland's Jobs/Housing Impact Fee has generated a relatively modest amount of revenue, totaling just under $1.9 million, approximately $170,000 per year on average. The moderate pace of revenue collection is attributable in large part to the minimal amount of developer interest in office or warehouse/distribution projects in the City since 2005. However, due to strong regional job growth in key office-based industries, leading to strong office real estate markets in Oakland and other regional employment centers, the City now anticipates receipt of approximately $2.5 million in jobs/housing impact fee revenue over the next 12 to 18 months, exceeding the total revenue collected since the fee was implemented.

SAN DIEGO HOUSING IMPACT FEE

Background

In 1989, the San Diego Housing Commission created a task force to address the city's growing shortage of affordable housing, leading to adoption of the Housing Trust Fund Ordinance in April 1990, which established a Housing Impact Fee for commercial development.[26] Since 1990, the Ordnance has been revised many times, most recently in April, 2016. Fees were reduced by 50 percent in 1996, and only recently restored to their 1990 levels.

Fee Structure

Fees apply to the gross square feet of office, hotel, and retail projects, along with a discounted fee for R & D projects (to encourage economic development). Exempt uses include manufacturing and warehousing, as well as non-profit hospitals, SRO housing units, projects located on state or federally-owned lands, and general government buildings. The most recent Ordinance update also removed the prior requirement that staff recommend an annual fee increase to City Council.[27] Current fees per April 2016 are:

SAN DIEGO HOUSING IMPACT FEES

	Per Gross Building Sqare Foot	
	2016	2017 and After
Office	$ 1.76	$ 2.12
Hotel	$ 1.06	$ 1.28
Retail	$ 1.06	$ 1.28
R & D	$ 0.80	$ 0.80

Source: San Diego Municipal Code
Chapter 9: Building, Housing and Sign Regulations
Article 8: Housing, Division 6: Housing Impact Fees On Commercial Development

For rehab projects, the fee to be paid "shall be the fees for the new use, less any fees that either were paid or would have been paid based on the existing use of the building."[28] In lieu of fees, developers can donate land or air rights, provided the dedicated property is suitable for housing construction[29]. Developers may also ask for a fee variance prior to obtaining the building permit, for reasons such as financial hardship or if special circumstances apply. To date, 54 requests for fee variances have been submitted, mostly by religious and educational institutions, including 49 stating they would create few jobs, one for financial hardship, and four on both grounds. The five claims of financial hardship were denied, but many of the low job-creation reasons were approved. These variances have resulted in a mix of reduced and

[26] San Diego Municipal Code, Chapter 9: Building, Housing and Sign Regulations, Article 8: Housing, Division 6: Housing Impact Fees On Commercial Development, Section 98.0601: Purpose.
[27] Adapted, with modifications, from a person communication from staff, June 29, 2016.
[28] San Diego Municipal Code, Section 98.0610: Payment of Housing Impact Fee.
[29] This provision was granted once, in 2003, when the San Diego Revitalization Corporation had over $83,000 in impact fees waived because it included shared parking in a commercial project for use by people in an adjacent affordable housing project.

waived fees, reducing total collections for the 54 requests by over $600,000. The Mayor makes the ultimate determination of fee waiver amounts.[30]

As of May 2016, developers may ask for fee deferral for up to two years, but certificates of occupancy are not issued without payment. The deferral program is administered by the City of San Diego Facilities Financing Department and is run on a cost-recovery basis (an application for deferral costs $500). Since the program is new, no information is available about uptake.

Outcomes

San Diego's commercial fees are deposited in a Housing Impact Fee subaccount of the San Diego Housing Trust Fund. Recent data collected for the 2006 – 2014 period indicates that total revenues from the fee were approximately $14 million, averaging $1.55 million annually. No data is collected to track housing financed by the fee.

Lessons Learned

Staff indicated that the commercial fee, with just four categories, which may be too few for contemporary development product types. Also, each category is not clearly defined. The recent removal of an automatic indexed increase to the fee also is problematic, particularly because other local fees are indexed and this fee used to be indexed.

[30] San Diego Municipal Code, Section 98.0611: Determination of Fee.

West Hollywood Non-Residential Affordable Housing Fee

Background

West Hollywood's Non-Residential Affordable Housing Impact Fee was established in 1989. Since its inception, the fee has applied to developments of at least 10,000 net new square feet of commercial space. In 2014, the City increased the fee from $2.85 to $8.00 per square foot based on an updated nexus study. To minimize impacts of this increase, the City Council phased it in over two years; the fee rose to $4.00 per square foot in FY 15-16, and rose again to $8.00 per square foot in FY 16-17 [31] The flat fee is based on the average of the fees supported by various nonresidential uses per the most recent nexus study.[32]

Fee Structure

The City currently levies its commercial fee on office, retail, and hotel development. Fees must be paid prior to building permit issuance. If a project consists of multiple phases, fees for the whole project must be paid before building permit issuance. The Non-Residential Affordable Housing Impact Fee is annually adjusted based on the Building Cost Index (BCI).[33] Currently, fees cannot be deferred, and are generally nonrefundable; however, fee payments may be returned if the building permit expires and is not extended, or if the fees were collected illegally or erroneously. To request a refund, applicants must file a written request with the City no later than 90 days after the initial payment date to be considered.[34]

Outcomes

Commercial fees are deposited into the City's Affordable Housing Trust Fund (along with West Hollywood's residential fee). The Trust's funds subsidize housing projects with at least 20 percent of units affordable to very low income households, and at least 60 percent affordable to low- and moderate-income households. Non-profit housing developers in West Hollywood receive these funds for development costs including predevelopment, land acquisition, administration, and gap financing. From 2002 through 2013, the Trust Fund generated $2.57 million in revenue, and been used to subsidize 17 housing projects[35]. Future Trust Fund revenues are projected to grow rapidly due to the recent commercial fee increase [36]

PALO ALTO COMMERCIAL IMPACT FEE

Background

In 1977, three years after the City adopted its inclusionary housing policy, Palo Alto began requiring affordable housing mitigation fees for large commercial and industrial developments, using its environmental review authority provided by the California Environmental Quality Act (CEQA). Funds were deposited into what was then known as the Industrial-Commercial Account, which has since evolved into the current Commercial Housing Fund.[37,38]

Historically, the City has charged one impact fee per square foot for all commercial uses (most recently at $19.85). In 2014, the City completed commercial and residential nexus studies to update its commercial and market-rate residential affordable housing fees.

Fee Structure

Palo Alto's commercial fees are shown below. Effective August 15, 2016, the new fee structure varies by commercial use type. The fee applies to all gross building area, excluding parking.

PALO ALTO COMMERCIAL FEE

Use	Existing Fee	Adopted Fee (a)
Office/R&D	$19.85/sf	$35/sf
Hotel	$19.85/sf	$30/sf
Retail/Restaurant/Other	$19.85/sf	$19.85/sf

Note:
(a) Adopted fee schedule is effective August 15, 2016.

Sources: Palo Alto Planning and Community Environment Department, 2016; BAE, 2016.

Exemptions include on-site child care or recreational facilities, residential uses, churches, colleges and universities, commercial recreation, hospitals and convalescent facilities, private clubs, private educational facilities, public facilities, and small retail/restaurant/auto spaces of 1,500 square feet or less.[39]

[37] City of Palo Alto Finance Committee, "Residential/Commercial Impact Fee Studies Staff Report." February 16, 2016. Accessed 7/19/16. http://www.cityofpaloalto.org/civicax/filebank/documents/50935.
[38] City of Palo Alto, "Affordable Housing Fund Guidelines." August 17, 2015. PDF. Accessed 7/21/16. http://www.cityofpaloalto.org/civicax/filebank/documents/53195.
[39] See Palo Alto Municipal Code, Chapter 16.47.030.

While determined to be reasonable by the 2014 Residential Nexus Study, Palo Alto's recently adopted fees are among the highest in the Bay Area due to the City's strong housing market conditions, making housing in Palo Alto unaffordable for many new workers. [40]

The commercial fee must be paid before issuance of the first grading or building permit. If a project consists of multiple phases, payments may be submitted proportional to each phase prior to issuance of the grading and building permits for that phase. Fees are adjusted annually based on in the Consumer Price Index (all urban consumers) for the San Francisco-Oakland area.

Revenues generated by the affordable housing impact fee are collected in the Commercial Housing Fund, a "sub-fund" of the City's Affordable Housing Fund, a trust fund to preserve and expand affordable housing for very low-, low-, and moderate-income households. Other "sub-funds" of the Affordable Housing Fund include the Residential In-Lieu Fund, Home Investment Partnership Fund, Community Development Block Grant (CDBG), and Below Market Rate Emergency Fund.

Detailed guidelines for use of Affordable Housing Fund are posted on the City's website. According to these guidelines, specific restrictions apply to the use of funds in each sub-category. Fees generated by the Commercial Housing Fund may be used for the following:

- Construction of new housing units;
- Addition of new units to existing buildings;
- Conversion of non-residential space to housing units;
- Acquisition, rehabilitation, and preservation of existing affordable housing, where rents are controlled by deed restriction or another similar mechanism;
- Administrative costs for the collection of fees and administration of the fund;
- The cost of consultant studies required to update the fees;
- Direct costs for the City to implement an affordable housing construction program.[41]

Alternatives to Fee Payment

As is the case in San Francisco, Palo Alto's commercial affordable housing fee program also permits developers to construct affordable units rather than paying the fee. City staff remarked that while this alternative is available, it is rarely, if ever, pursued by commercial developers in Palo Alto. The formula used to determine the required number of below market-rate units is as follows:

Gross square feet/350 x 0.017 = Number of units required

---

[40] City of Palo Alto Finance Committee, "Staff Report Attachment A: Draft Commercial Linkage Fee Nexus Study." November 2015. Accessed 7/19/16. http://www.cityofpaloalto.org/civicax/filebank/documents/50935.

[41] City of Palo Alto, "Affordable Housing Fund Guidelines." August 17, 2015. PDF. Accessed 7/21/16. http://www.cityofpaloalto.org/civicax/filebank/documents/53195.

Put simply, under this alternative, developers are required to construct 1.7 percent of the gross square feet of the nonresidential development divided by 350. If the calculation results in a fraction of a unit, the developer must either provide a whole unit or pay an in-lieu fee based on the square footage of the applicable project.

Outcomes

In fiscal year 2014-15, revenues generated by the commercial affordable housing impact fee contributed approximately $2.3 million to the Commercial Housing In-Lieu Fund, independent of interest earnings. As of June 30, 2015, the Fund contained approximately $14.6 million.[42]

[42] City of Palo Alto, "Annual Status Report Development Impact Fees FY15." January 25, 2016. PDF. Accessed 7/19/16. http://www.cityofpaloalto.org/civicax/filebank/documents/50632.

BOSTON COMMERCIAL IMPACT FEE

Background

In 1983, a non-binding ballot measure to promote development in the neighborhoods (vs. downtown) and institute a commercial linkage fee received strong voter approval. Council then adopted the fee, set at $5.00 per square foot payable in 12 years, on new commercial projects that had over 100.000 square feet. of floor area and received a zoning change. After a change in administration, Boston created the Neighborhood Housing Trust to manage and allocate the fees. Council added a $1.00 square foot fee for job training and shortened the payment period from 12 to 7 years for downtown projects. A Neighborhood Jobs Trust was set up for the new job-training fees in 1987.

Fee Structure

Contrary to most other cities, there is a flat fee for all projects, irrespective of kind or location. It is currently set at $8.34 per square foot. Instead of paying the fee, developers may also build or help build housing that is affordable to low- and moderate-income residents (with an investment at least equal to the amount that would have been paid in fees) or do a combination of fee payment and housing development. The development project in which the developer invests must be approved by the Boston Redevelopment Authority. This provision is the mirror image, so to speak, of the City's Inclusionary Development Policy, under which a developer may pay cash in lieu of building affordable units.

The fee is imposed on "all new large-scale commercial real estate developments exceeding 100,000 square feet and requiring zoning relief, including expansion and rehabilitation projects."[43] The fee applies only to the floor area in excess of 100,000 square feet. This provision applies to phased development and to the Master Plans that health and educational institutions and the City of Boston adopt together to regulate the institution's growth: one cannot development in a number of small phases (< 100,000 square feet) in order to avoid fee payments.

The initial fee of $5.00 per square foot was raised to $7.18 per square foot in 2001. At the same time, the payment period was set at 7 years for both downtown and neighborhood development. In 2006, the fee was raised to $7.87 per square foot was raised again in 2013, to $8.34 per square foot.

43 City of Boston, Neighborhood Housing Trust Annual Report 2014, n. p.; available at http://dnd.cityofboston.gov/portal/v1/contentRepository/Public/dnd%20pdfs/HousingDevelopment/NHT_Report_2014_150406_1230.pdf (last consulted on May 31, 2016).

The timing of fee payments can be spread over seven years, or paid up front (present value). For neighborhood projects, the fee must be paid either at issuance of certificate of occupancy or 24 months after issuance of building permit, whichever is sooner. Downtown projects, in contrast, must pay at building permit issuance.

Fees go to the Neighborhood Housing Trust, which then allocates funds raised from fees to affordable housing projects based on criteria including meeting a "but for" test (fee is needed), serving households at 80 percent or below, and with affordability set for 50 years for for-sale units, and in perpetuity for rental units. [44]

Outcomes

Between 1986 and 2012, commercial fees generated over $133.,8 million.[45] In the same time period (1986 – 2012), fees contributed to the development or preservation of 10,176 units in 193 projects.[46]

Lessons Learned

Boston's regulations are fairly simple compared to those of other cities (e.g., flat fee for all kinds of projects, everywhere in the city). This has limited political debates and the creation of favorable rates for some rather than others. At the same time, flexibility is important, too. For example, Boston allows developers of commercial projects to partner with a community group to build affordable units rather than pay fees, creating partnerships best-equipped to address the underlying goal of affordable housing unit production.

Staff interviews indicated that Boston's lack of a built-in annual fee increase is being reconsidered at present (rather than have to rely on Council to raise fees periodically). Another possible change under consideration is whether the size threshold of 100,000 square feet should be reduced to 50,000 square feet, to provide a more targeted incentive to non-fee paying small projects.

Seattle Affordable Housing Impact Mitigation Program for Commercial Development

Background

Seattle has had an incentive zoning program for downtown commercial development since 2001, and for residential development since 2006.

In 2013, during the rezoning of the South Lake Union area near downtown, it became clear that these programs were insufficient to meet the need for affordable housing created by new market-rate commercial and residential development. It should also be noted that general interpretations of Washington State laws have meant that fees or inclusionary zoning is considered not possible unless these are paired with upzoning regulations given at the same time.

The initiative to update the city's affordable housing programs started in May 2013. It included best practices studies, the creation of the Housing Affordability and Livability Agenda (HALA), and the institution of the HALA Advisory Committee. This committee submitted its report in July 2015. Its main recommendation was "that the City boost market capacity by extensive citywide upzoning of residential and commercial zones and, in connection with such upzones, implement a mandatory inclusionary housing program for new construction residential development and a commercial linkage fee program for new construction commercial development."[47]

The policy goal is to help produce 6,000 housing units that are affordable to households with incomes below 60 percent of median income over ten years. A nexus study set possible fee levels; the City chose to stay well below those levels in its July 2015 Statement of Intent for Basic Framework for Mandatory Inclusionary Housing and Commercial Linkage Fee, and to monitor their effects. Council passed an ordinance in November 2015 to establish the framework for an Affordable Housing Impact Mitigation Program for commercial development."[48] Upzoning in commercial, industrial and mixed-use districts should take place in 2016 – 2017.

Seattle has had strong grassroots activists and political leaders over the years who have pushed the affordable-housing agenda forward. There is a community of sophisticated affordable-housing developers and experienced city staff in incentive zoning and such measures. Debates between the City and the development community were intense, with

[47] City of Seattle, Ordinance 124895, p. 2.

48 City of Seattle, Ordinance 124895, "An ordinance relating to land use and zoning; adding a new Chapter 23.58B of the Seattle Municipal Code (SMC) to establish the framework for an Affordable Housing Impact Mitigation Program for commercial development; and amending subsection 23.40.020.A, subsection 23.76.006.B, subsection 23.76.006.C, and subsection 25.05.675.I of the SMC," available at https://seattle.legistar.com/LegislationDetail.aspx?ID=2451973&GUID= 5A771786-2728-4862-AF11-C20A4919A85B&Options=&Search=, last accessed on June 6, 2016.

consulting reports produced on both sides. In the end, the parties struck a "Grand Bargain" in which increased burdens on development to contribute to affordable housing were exchanged for increased development densities. The link between upzoning and the imposition of a commercial linkage fee also serves a legal function: because such a fee was still untested in Washington State, providing extra development density as compensation would make the policy less likely to be challenged in court.

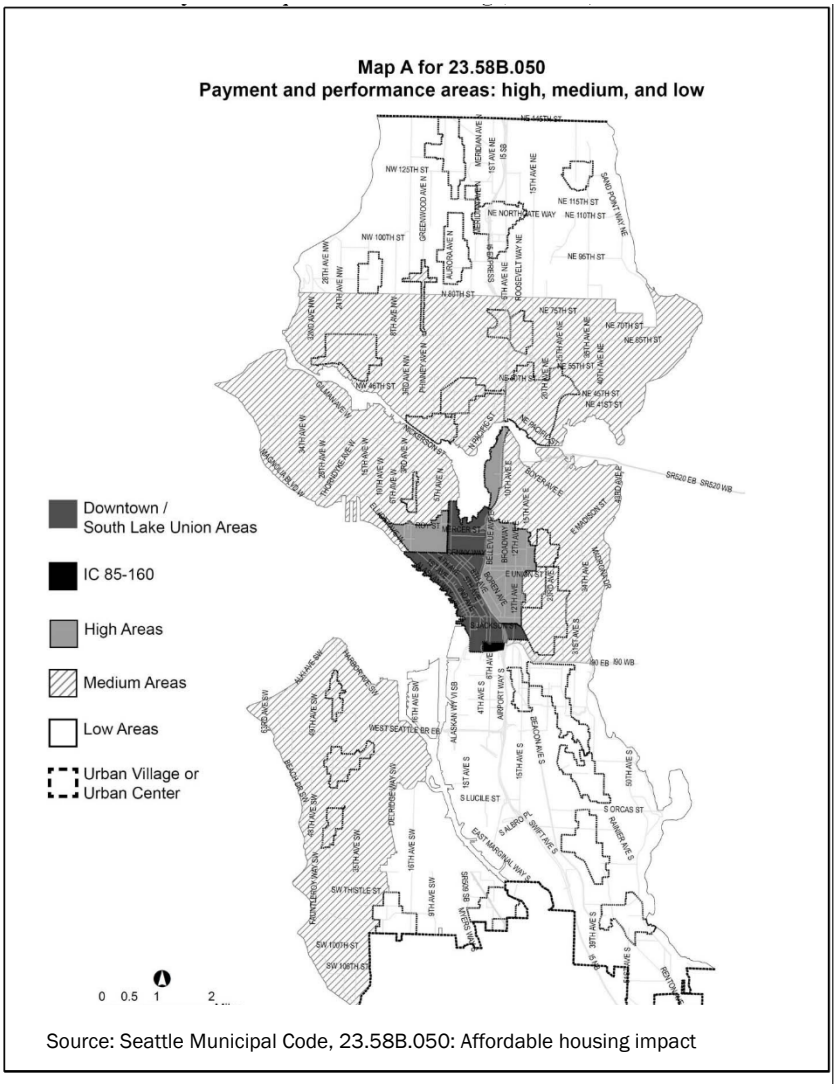
Fee Structure

In all cases, developers may choose to meet the requirements of the ordinance by means of "payment" (fees) or by means of "performance," i.e., in the provision of affordable rental units, on-site or off. Fees are differentiated by location in the city, i.e., inside or outside Downtown and South Lake Union Urban Centers and then by location within these general areas.

Inside Downtown and South Lake Union Urban Centers, the fees are differentiated by land-use zone, and outside these two areas, they are differentiated by land-use zone and by intensity. Given the number of land-use zones in the downtown area and Urban Centers, this approach results in a lengthy fee schedule, but there is simplicity in the fact that there is not differentiation according to the type of development. Among the 43 land-use zones that are listed in the table of fees for Downtown and South Lake Union Urban Centers, four have no impact fee requirement; among the other 39 zones, cash requirements vary from $8.00 per square foot to $17.50 per square foot.

Exemptions are meant to avoid impacting desirable mixed-use development:

- In building in which at least 50 percent of above-ground floor area is devoted to housing, up to 4,000 square feet of street-level floor area used for arts facilities, cafés and restaurants, entertainment venues (except for adult entertainment) and general sales and services
- Along designated "pedestrian streets," all street-level floor area that is necessary to meet standards set by the City for such streets
- Commercial floor area in buildings containing affordable units (with at least 75 percent of units affordable to households with less than 60 percent of median income) and in buildings with rent-controlled or income-controlled units[49]



[49] Seattle Municipal Code, Section 23.58B.020: Voluntary agreements for affordable housing, Subsection C: Exemptions.

The Director of Construction and Inspections may, in consultation with the Director of Housing, modify the impact fee in cases where the developer can demonstrate that the housing impact of the project does not warrant the regular fee, or when the project is in a zone with building heights over 85 feet and development standards make it impossible for the project to exceed that height, or when the requirements would cause financial hardship that outweighs the affordable housing impacts"[50][51]

As mentioned above, the ordinance calls for possible fee adjustments during the implementation phase, and every five years thereafter. In addition, there is an automatic adjustment every year, starting March 1, 2016, according to the change in the Consumer Price Index for the preceding calendar year.

Fees must be paid before a construction permit is issued. However, "construction permit" does not include "a demolition, excavation, or shoring permit." If a phased permit application is being used, the fees must be paid "prior to issuance of the portion of the building permit that includes the structural frame for the entire building."[52]

SEATTLE ZONE MAP FOR COMMERCIAL FEES

Source: Seattle Municipal Code, 23.58B.050: Affordable housing impact

[50] Seattle Municipal Code, Section 23.58B.030: Modification of amount of payment or performance, Subsection D. Financial hardship.
51 Although the is given in the section pertaining to the "performance" option, it also applies to the payment option, i.e., to the fees to be paid.
52 Seattle Municipal Code, Section 23.58B.035: Documentation and timing.

All fees will go into a dedicated fund to subsidize affordable projects which preserve or produce rental units affordable to households with incomes up to 60 percent of Area Median Income, and to owner households with incomes up to 80 percent.[53] Allocation of these funds are guided by factors including contribution to fair housing choice, location in an urban center or in an urban village (place types which guide planning in Seattle), proximity to transit service, or contribution to furthering economic opportunity. t[54]

Lessons Learned

The "Grand Bargain" struck by all stakeholders enabled the City to adopt new programs to produce affordable housing and/or generate funding for it. Parties made compromises, resulting in a complex system which links upzoining with fee payments and/or affordable housing unit production.

The ordinance contains strong provisions for monitoring and possible adjustments, including planned upzonings, modifications to development standards, and starting in 2018, and every two years thereafter, staff analysis of the effectiveness of the policies and a report on unit production. The program's rules also required it to be reviewed and possibly amended within five years of its adoption if outcomes are below expectations or if significant changes occur in real-estate markets; otherwise, it has to be reviewed within ten years. To perform a review, the Mayor and Council will appoint and Technical Review Committee with proper representation of all public, private and community stakeholders.

Project Feasible? (f)	No	No	Yes	Yes	Yes	Yes

Notes:

a) Assumes triple net lease

b) Hard costs were based on data from RS Means with a location factor applied to reflect construction costs in Los Angeles.

c) Estimates for tenant improvements were provided by developers active in Los Angeles building this product type.

d) School Fees for Commercial

Current	$ 0.54	psf
Anticipated to Increase in Fall 2016	$ 0.57	psf

e) Cap rates were estimated based on investor reports, data provided by developers, and a review of Costar data for properties sold between August 2015 and July 2016.

f) Feasibility is based on a minimum Yield on C 7%
and a minimum Return on Cost of 15%
based on interviews with developers active in the Los Angeles.

Source: BAE, 2016.

Project Feasible? (f)	No	No	Yes	Yes	Yes	Yes

Notes:

a) Assumes full-service lease

b) Hard costs were based on data from RS Means with a location factor applied to reflect construction costs in Los Angeles.

c) Estimates for tenant improvements were provided by developers active in Los Angeles building this product type.

d) School Fees for Commercial

Current	$ 0.54	psf
Anticipated to Increase in Fall 2016	$ 0.57	psf

e) Cap rates were estimated based on investor reports, data provided by developers, and a review of Costar data for properties sold between August 2015 and July 2016.

f) Feasibility is based on a minimum Yield on 6%
and a minimum Return on Cost of 15%
based on interviews with developers active in the Los Angeles.

Project Feasible? (f)	No	No	Yes	Yes	Yes	Yes

Notes:

a) The parking requirements for a hotel/motel are as follows: one parking space for the first 30 guestrooms, 1/2 of a parking space for the next 30 guestrooms, and 1/3 of a parking space for the remaining rooms.

b) Average daily rates were derived from listesd average rooms rates for hotels across market conditions.

c) Hard costs were based on data from RS Means with a location factor applied to reflect construction costs in Los Angeles.

d) Furniture, fixtures, and equipment for hotels in strong markets were assumed to have a greater cost associated with higher grade finishes.

e) School Fees for Commercial

Current	$ 0.54	psf
Anticipated to Increase in Fall 2016	$ 0.57	psf

f) Cap rates were estimated based on investor reports, data provided by developers, and a review of Costar data for properties sold between August 2015 and July 2016.

g) Feasibility is based on a minimum YOC of 9%
and a minimum return on cost of 15%
based on interviews with developers active in the Los Angeles.

Appendix D: Residential Fee Case Studies

The following profiles several residential fee programs established in cities throughout California. First, larger cities' programs are summarized, including San Francisco, Sacramento, Oakland, and San Diego. Next, several smaller cities located near Los Angeles are profiled to provide context for more localized real estate economics and policy considerations.

It should be noted that these profiles are not exhaustive; numerous other cities in California have pre-existing inclusionary housing programs, and almost all of these jurisdictions have an in-lieu fee option (especially post-Palmer for rental housing projects).

The only city profiled in this chapter that did not have an existing inclusionary housing ordinance at the time of the Palmer decision is Oakland, which just recently adopted it's housing impact fee, as described below.

San Francisco Inclusionary Program and In-Lieu Fees

Background

San Francisco's Inclusionary Housing Program dates back to 1992, though substantial amendments in 2002 extended applicability to as-of-right projects with ten units or more, and established the option to pay an in-lieu fee that in large part remains in place today.

Since its inception, the inclusionary requirements and scope have been modified numerous times to account for changing economic conditions, growing affordable housing needs. and legal challenges to inclusionary housing policies across the State.[55] At the time of the policy's adoption in 1992, the program established a 10 percent on-site affordable housing (60% AMI) requirement that applied only to projects seeking conditional uses. Changes to the policy in 2002 cited declining vacancy rates and dramatic increases in average housing prices as the impetus for the imposition of stricter requirements, including expanding its applicability to as-of-right projects.[56]

Rather than constructing inclusionary units, market-rate residential developers have had an option to pay an in-lieu fee, based on the number of off-site inclusionary units (typically a higher percentage than those required on-site), the affordability gap identified by way of a nexus study, and annual adjustments.

---

[55] A summary of the evolution of San Francisco's Inclusionary Housing Program has been compiled by the Mayor's Office of Housing and Community Development and may be accessed at the following URL as of 7/21/16: http://sfmohcd.org/sites/default/files/FileCenter/Documents/7252-Evolution%20of%20Inclusionary%20Housing%20Program%20110513.pdf.

[56] San Francisco Ordinance No. 37-02, "Inclusionary Affordable Housing Program." Amended 3/18/02. Accessed 7/18/16. http://sfmohcd.org/sites/default/files/FileCenter/Documents/3780-Inclusionary%20Housing%20LawOrdinance37-02.pdf.

In 2010, the Program's in-lieu fee evolved into the Affordable Housing Fee following the 2009 California Court of Appeal's decision in *Palmer/Sixth Street Properties L.P. v. City of Los Angeles*, which effectively prohibited the enforcement of inclusionary housing programs and associated in-lieu fees on rental developments. The current ordinance imposes the Affordable Housing Fee on residential projects of ten or more units and provides developers with an option to construct units rather than paying the Fee, provided they meet certain requirements. This setup is opposite the original policy, which required the construction of units but offered the option to pay an in-lieu fee, subject to conditions.

Most recently, in June 2016, San Francisco voters passed Proposition C, which removed the existing inclusionary rates from the City Charter to allow for easier routine adjustment and increased the affordable housing obligations applicable for larger market-rate residential developments. The requirements set forth in Proposition C will be enforced on an interim basis until the City enacts an ordinance to amend the Planning Code and adopt inclusionary and/or affordable housing obligations.[57] As such, the inclusionary standards described in this section reflect those in Proposition C.

Today, San Francisco's program applies broadly to any residential development project that consists of at least ten units (even if units are located on separate adjacent lots), with standard exemptions such as developments located on property owned or leased continuously by the United States or State of California used exclusively for governmental or educational purposes, and those located on property owned by the San Francisco Redevelopment Agency or Port of San Francisco where application is prohibited by State or local law. Projects in which 100 percent of units will be affordable and regulated by a government unit, agency, or authority and qualified student housing projects are also exempt from the inclusionary requirement, subject to specific requirements and conditions.[58]

As part of the program, all project sponsors or developers are required to submit a Declaration of Intent specifying how the inclusionary requirements will be fulfilled to the Planning Department before payment of any fees. The Planning Department is then responsible for notifying the Development Fee Collection Unit at the Department of Building Inspection of their choice. Should a developer opt to proceed with an alternative option rather than paying the

---

[57] The full text of Proposition C may be accessed at the following URL as of 7/21/16: http://sfgov.org/elections/sites/default/files/Documents/candidates/IHR%20Legal%20Text.pdf.

[58] Section 415.3 of the Municipal Code states, "If a project qualifies as exempt because it consists of 100 percent affordable units, the project sponsor must record an NSR against the property that provides that, in the event of foreclosure or for any other reason, the project no longer qualifies as a project meeting the requirements of [the exemption], the project will either pay the Affordable Housing Fee plus interest from the date the project received its first construction document for the project if no affordable units were ever provided, or if affordable units were provided and occupied, then the Affordable Housing Fee with no interest is due on the dates the units were no longer occupied by qualifying households; or provide the required number of on-site affordable units required at time of original project approval and that those units shall be subject to all of the requirements of [the inclusionary program]." In order to qualify as exempt, a Student Housing project must be part of a larger institutional master plan, which is to be filed with the Planning Department prior to the issuance of any building permit or alteration permit.

fee, they must submit an Affidavit of Eligibility for an Alternative to the Affordable Housing Fee in addition to the Declaration of Intent.

Fee Structure

The amount of the Affordable Housing Fee (formerly the in lieu fee) is charged on a per-unit basis for either 20 percent of the total number of units in the principal project for projects with 10 to 24 units or 33 percent for projects with 25 units or more, without rounding up to the nearest whole number. The current fee schedule is shown in the table below. Fees charged per unit reflect the unit mix of the principal project.

The inclusion of a fee specific to single room occupancy (SRO) and Group Housing Units in 2016 is unique among the case study areas analyzed for this report and accounts for the finding that these units are typically smaller than studios.

MARKET-RATE RESIDENTIAL AFFORDABLE HOUSING FEES

	Project Size	
Unit Type (a)	**10-24 Units** (b)	**25+ Units** (c)
SRO/Group Housing Unit	$29,701	$49,007
Studio	$39,602	$65,343
1 Bedroom	$53,792	$88,757
2 Bedroom	$73,274	$120,902
3 Bedroom	$83,560	$137,874
4 Bedroom	$104,286	$172,072

Note:
(a) Fees shown are those effective June 1, 2016.
(b) Reflects an off-site inclusionary requirement of 20% of units in the principal project.
(c) Reflects an off-site inclusionary requirement of 33% of units in the principal project.

Sources: SF Mayor's Office of Housing and Community Development, 2016; BAE, 2016.

The Affordable Housing Fee must be paid in full before issuance of the first construction document, though in the past, the Board of Supervisors has adopted deferral mechanisms. For example, during the Great Recession, development projects in the pipeline were permitted to defer payment of the in-lieu fee, in addition to all other impact fees, to prior to issuance of the first certificate of occupancy, subject to a deferral surcharge deposited into the Downtown Park Fund. This option expired in July 2013, though the language still exists in the Planning Code, in the event that the Board of Supervisors is motivated to reactivate such provisions.

All monies collected by the Affordable Housing Fee and any lien proceedings are deposited into the Citywide Affordable Housing Fund, which is managed by the Mayor's Office of Housing. Funds generated by the Inclusionary Housing Program are used as a source of gap financing to

support affordable housing developments,[59] assist low and moderate income homebuyers, and pay the expenses of the Mayor's Office of Housing and Community Development (MOHCD) as necessary to administer and monitor compliance with the Program, but not exceeding $200,000 every five years.

The Mayor's Office of Housing and Community Development updates and publishes annual adjustments to the Affordable Housing Fee, based on the annual percent change in the Construction Cost Index (CCI) for San Francisco as published by Engineering News Record.

Alternatives

As noted previously, developers may choose to construct inclusionary units, either on- or off-site (or provide a combination of units and paying the fee) rather than paying the Affordable Housing Fee in full.[60] If a developer chooses to construct units rather than paying the fee, they must either (a) construct, market and sell all units as ownership units that will remain ownership units for the life of the project, or (b) submit a contract to the City demonstrating that construction of the inclusionary units is not in violation of the Costa-Hawkins Rental Housing Act because they have entered into an agreement with a public entity to receive a direct financial contribution or other form of assistance, thereby exempting the development from the requirements of Costa-Hawkins.[61] Typically, off-site units must be located within one mile of the principal project, to support an even distribution of market-rate and subsidized housing across the City. Special requirements may apply to individual projects subject to standards established in a developer agreement.

Pursuant to recent changes adopted in Proposition C, the number of inclusionary units required is dependent on project size as follows:

Projects with 10-24 Units

For projects with fewer than 25 units, developers may choose to construct inclusionary units on- or off-site, equivalent to either 12 percent of the number of units in the principal project for on-site units or 20 percent for off-site units, and affordable to low-income households.[62]

---

[59] Based on an interview with a Development Project Manager in the Mayor's Office of Housing and Community Development, the amount of gap financing contributed by the Affordable Housing Fund typically does not exceed $200,000 per unit. The City has established supportive service requirements for affordable projects, and these standards which may be increased especially when the City has invested funds into the project; however, funds are generally not used directly for supportive services, which are typically shown as an operating expense (rather than construction cost), and paid by the developer over the life of the project.

[60] In certain geographic areas such as the UMU and Mission Transit Districts, developers also have an additional option to contribute land to the City whose value is at least equivalent to payment of the Affordable Housing Fee.

[61] Refer to California Civil Code Section 1954.53(a)(2).

[62] The percentage requirement of off-site affordable units is slightly different for tall projects. Section 415.7 of the Municipal Code provides that any project that is over 120 feet in height and does not require a Zoning Map amendment or Planning Code text amendment related to its project approvals that results in a net increase in the number of permissible residential units or in a material increase in the net permissible residential square footage is required to construct 17 percent times the number of units in the principal project, rounded up from fractions of 0.5 or more.

Projects with 25+ Units

For projects with twenty-five dwelling units or more, the minimum required number of on-site affordable units be must be equal to at least 25 percent of the units in the principal project, rounded up from fractions of 0.5 or more, with 15 percent of units affordable to low- and very low-income households and 10 percent affordable to middle-income households. If inclusionary units are constructed off-site, the developer must construct at least the number of units equivalent to 33 percent of all units constructed in the principal project, rounded up from fractions of 0.5 or more, with 20 percent of units affordable to low- and very low-income households and 13 percent of units affordable to middle-income households.

These alternative scenarios are summarized in the table below.

INCLUSIONARY HOUSING REQUIREMENTS FOR ON- AND OFF-SITE UNITS

Project Size	On-Site Requirement (a)	On-Site Minimum Affordability Requirement	Off-Site Requirement (b)	Off-Site Minimum Affordability Requirement
< 10 units	0	N/A	0	N/A
10 - 24 units	12% of units on project site	Affordable to LI households	20% of units in principal project	Affordable to LI households
> 24 units	25% of units on project site	15% affordable to LI households; 10% affordable to LI/MI households	33% of units in principal project	20% affordable to LI households; 13% affordable to LI/MI households

Notes:
(a) The requirements shown are general, city-wide requirements. Specific requirements may apply to the UMU District and Eastern Neighborhood.
(b) Subject to a pending feasibility study.

Sources: SF Planning Code, Sec. 415, 2016; SF Planning, 2016; BAE, 2016.

Outcomes

Since its inception in 1992, the inclusionary housing program has resulted in the production of 2,157 total below market-rate (BMR) units with an average of 86 units completed per year[63] Due to the nature of the program, the magnitude of BMR inclusionary housing units completed in a particular year is dependent on market-rate construction trends and consequently broader economic conditions. In 2008, for example, 311 BMR units were completed, the peak year since the program's establishment in 1992. Following the Great Recession, the program saw its lowest production of BMR inclusionary units, with just four completed in 2011. Since 2012, production of BMR units has grown annually, but has not yet exceeded the 2008 pre-recession peak. In addition to the units produced on-site, as of FY 2011-12, $50,321,468 in Inclusionary Housing Fees had been deposited into the Affordable Housing Fund.[64]

Lessons Learned

[63] Based on an inventory of projects completed between Q1 1992 and Q2 2016. Source data provided by the SF MOHCD and may be downloaded at https://data.sfgov.org/Housing-and-Buildings/Residential-Projects-With-Inclusionary-Requirement/nj3x-rw36n. Accessed 7/19/16.

[64] City and County of San Francisco Controllers Office, "FY 2011-12 Development Impact Fee Report." November 30, 2012. Accessed 7/19/16. http://sfcontroller.org/sites/default/files/FileCenter/Documents/3770-ImpactReport_2011-12.pdf.

City staff interviewed for this study remarked that while the City is not legally able to require developers to select one particular option to comply with the ordinance, construction of on-site units is the City's preferred option in most cases.[65] This is partially due to the challenge of using of Affordable Housing Fee funds in housing boom cycles, when land prices and construction costs are high, making affordable projects difficult to build.

By imposing a smaller proportion of affordable units when constructed on-site, San Francisco's program incentivizes on-site construction of affordable units.

Since the transition of the in-lieu fee to the Affordable Housing Fee in 2010 and realignment of the policy towards a fee-based program, 60 percent of projects approved by the Planning Department have elected to construct on-site units. Of those projects electing to provide on-site affordable units, a slightly greater proportion have built ownership units (54 percent ownership compared to 46 percent rental units.)[66] Approximately 34 percent of projects approved since 2011 have chosen to pay the Affordable Housing Fee and approximately three percent have sought a combination of units and fees.

These program outcomes are summarized below.

INCLUSIONARY PROGRAM OUTCOMES, Q1 2011 - Q2 2016

Option	Projects (a)	Percent
On-Site BMR Project	82	60.3%
Fee Payment	46	33.8%
Combination Project	4	2.9%
Land Dedication	2	1.5%
Units for Off-Site Project with Onsite Obligation	1	0.7%
Units for Off-Site Project	1	0.7%
Total	**136**	**100.0%**

Note:
(a) Based on the date of planning approval.

Sources: San Francisco MOHCD, 2016; BAE, 2016.

[65] One case in which on-site units are not a preference are those in which luxury units have particularly high homeowners' association fees that may ultimately make a technically "affordable" unit exceed allowable housing payments.
[66] Based on a total of 83 projects that chose to provide on-site BMR units and received planning approval between 1/1/11 and 6/9/2016.

OAKLAND AFFORDABLE HOUSING IMPACT FEE

Background

The City of Oakland had undertaken various efforts to study inclusionary housing ordinances prior to the City's recent adoption of an affordable housing impact fee in May 2016. For example, in 2000, a City Housing Task Force recommended that the City consider adopting an inclusionary housing policy, though the City did not act on the recommendation at that time. In 2006, the City Council established a Blue Ribbon Commission to study a proposed inclusionary ordinance, condominium conversions, and a comprehensive housing strategy, and formulate a set of recommendations. The Commission's final report was presented to Council in September 2007. Among other recommendations, the Commission recommended that the City adopt an inclusionary housing ordinance for new residential ownership developments. An economic feasibility report that was completed to inform the Commission's work found that development of rental housing was economically infeasible at the time even without an additional affordable housing impact fee, leading the Commission to elect not to recommend inclusionary requirements for rental projects.

In late 2007, shortly after the release Blue Ribbon Commission's recommendations, the Oakland housing market began to experience the impacts of the recent recession, stalling the City's consideration of an inclusionary housing ordinance. However, in the past few years, Oakland's housing market, including the market for rental housing, has experienced a dramatic boom. Significant increases in housing costs and concerns about displacement have led housing advocates to call for affordable housing impact fees, particularly within the context of the City's recent adoption of four major Specific Plans.

At roughly the same time, the City began to consider adoption of a transportation impact fee, causing City staff and Council members to call attention to the need for an affordable housing impact fee, along with fees for other capital improvements.

In 2013 the City Council authorized funding for the affordable housing impact fee nexus study, which was completed in 2016. The Nexus Study analyzed seven types of residential development and found the maximum legal fees per unit of each type of housing to be as follows:

- Single-Family Homes – Urban $34,833
- Single-Family Homes – Hills $81,729
- Townhomes – Urban $44,693
- Townhomes – Hills $53,258
- Multifamily – Lower/Mid-Rise $35,172
- Multifamily – Mid-Rise $39,887
- Multifamily – High-Rise $50,804

Alongside the nexus study, the City commissioned an Economic Feasibility Study to evaluate the impacts of all three new impact fees (affordable housing, transportation, and capital facilities) on development feasibility. The study found that single-family homes and townhouses were feasible in most parts of Oakland, multifamily rental housing was marginally feasible without the new impact fees, and condominium development was not feasible even without the new fees.

The Oakland City Council adopted substantially lower-than-maximum housing fees (see next section) on May 2016. The adopted fee schedule is effective on September 1, 2016.

Fee Structure

Oakland's affordable housing impact fee applies to all new residential units constructed in the City, regardless of the number of units in the project. The fee structure has different rates for each of three product types - multifamily, townhome, and single-family units - as well as different fees and phase-in schedules for each of three geographic zones. In the two geographic zones with stronger current residential market conditions, the fee will be phased in starting on September 1, 2016 and increasing on July 1, 2017 and July 1, 2018. The third zone, with a more moderate residential market, has a slower phase-in period. Starting on July 1, 2021, the fee will increase on an annual basis based on the Marshall & Swift building cost index. The adopted fee rates and phasing through July 1, 2020 are as shown in the table below. Affordable units and accessory dwelling units are exempt from the fee.

OAKLAND AFFORDABLE HOUSING IMPACT FEE (PER UNIT)

	Sept. 1, 2016	July 1, 2017	July 1, 2018	July 1, 2019	July 1, 2020
Zone 1					
Multifamily	$5,500	$11,500	$22,000	$22,000	$22,000
Townhome	$6,500	$12,000	$20,000	$20,000	$20,000
Single-Family	$6,000	$12,500	$23,000	$23,000	$23,000
Zone 2					
Multifamily	$4,550	$9,250	$17,750	$17,750	$17,750
Townhome	$2,600	$7,200	$14,250	$14,250	$14,250
Single-Family	$3,750	$9,000	$16,500	$16,500	$16,500
Zone 3					
Multifamily	$0	$0	$3,000	$6,000	$12,000
Townhome	$0	$0	$1,000	$4,000	$8,000
Single-Family	$0	$0	$1,000	$4,000	$8,000

Sources: City of Oakland, 2016; BAE, 2016.

Oakland's affordable housing impact fee is collected in two installments: half prior to issuance of a building permit for all or any part of the project, and half prior to issuance of a certificate of occupancy or temporary certificate of occupancy. The City has the ability to enforce payment of the fee by withholding building permits, recording a special assessment or other

lien against the property, revoking or suspending the certificate of occupancy or temporary certificate of occupancy, assessing civil penalties, or taking any other action necessary and appropriate to secure payment.

Project applicants have the option to provide affordable units on- or off-site rather than pay the fee. Affordable units provided off site must be completed within 18 months of the issuance of a certificate of occupancy for the market-rate units, and in most cases must be located within one half mile of the market-rate project site. In order to qualify for a fee exemption, the project must provide ten percent of units to low- or moderate-income households or five percent of units to very low-income households. In effect, these provisions exempt projects that are developed pursuant to the State Density Bonus Ordinance from the fee.[67] The City enacted these provisions in part to encourage developers to apply for density bonuses to address a lack of developer interest in pursuing density bonus projects in Oakland. In addition, City staff and leadership are hoping that use of the density bonus will make it feasible for a larger number of developers to provide units on-site within market-rate developments.

Applicants can also petition the City Manager for fee waivers or reductions on the basis that the fee would make a project infeasible and there are no feasible means of compliance, that the specific project will not generate a need for affordable housing (or only a limited need for affordable housing), or that the project has been subjected to atypical delays beyond the applicant's control due to litigation or similar circumstances.

Once the fee is implemented, revenues will be deposited into Oakland's Housing Trust Fund and can be used to support primarily the development of units for very low- or low-income households; up to 15 percent of revenues can be used to support the development of moderate-income households.

Outcomes

Because the fee has not yet gone into effect, the program has not generated any revenue or units to date.

Lessons Learned

Stakeholder working groups are often essential to creating a feasible fee, but can be controversial. Oakland engaged a stakeholder working group comprised of housing advocates and developers in order to gain technical insight and ensure that the adopted fee rate would be feasible. City staff report that this process was essential to determine feasible fee rates.

---

[67] Oakland's affordability requirements for fee exemptions differ slightly from the affordability requirements under the State Density Bonus Ordinance in that the State Density Bonus does not include provisions that allow for additional density for rental projects that provide units for moderate-income households, while Oakland's ordinance does allow fee exemptions for projects that provide moderate-income units.

However, the working group process did receive some negative media attention because meetings were not open to the public in order to ensure candid stakeholder input.

Adopting different fees in different geographic areas can be politically controversial. The City of Oakland adopted different fee rates for each residential unit type based on three geographic zones. In general, the adopted fee rates and are lower and phased in more slowly in areas of the City that have experienced minimal recent developer interest in order to avoid the potential negative impacts of fees in areas with weaker real estate market conditions and encourage additional development in those areas. As the City began discussing the proposed fee rates with the public, some residents expressed dissatisfaction with the difference in rates on the basis that the differing rates send a message that the area with lower fee rates are not as desirable as other areas.

Stakeholders have differing views on fee collection vs. units on site. Affordable housing advocates in Oakland generally supported policies that would encourage most developers to provide fee revenue rather than construct units on site. Because Housing Trust Fund revenue can be used to leverage other sources of affordable housing financing, many affordable housing developers and advocates prefer fee revenue on the basis that it can generate a larger total number of affordable units. However, City staff and elected officials developed fee exemptions for on-site units with the goal of encouraging a greater mix of incomes at both the project and neighborhood level, and therefore adopted less stringent requirements for onsite units than many housing advocates requested. The City expects some developers to elect to pay the fees regardless of exemptions for on or offsite units due to the relative simplicity of providing the fee or economic feasibility considerations specific to each project. Notably, some areas of Oakland have no height or density limits, thereby negating any potential benefit of a density bonus that would be provided in exchange for affordable units.

Eligible activities for fee expenditures should be related to nexus study methodology. Affordable housing advocates lobbied to have all affordable housing fee revenues dedicated to support units serving lower-income households. In contrast, due to high market-rate housing costs, Oakland City staff and elected officials identified a need to also serve moderate-income households. Consequently, the City adopted policies that would allow up to 15 percent of housing impact fee revenue to support moderate-income units.

Adopting a charge based on square footage can lead to different outcomes than per-unit charges. The City of Oakland's adopted fees are charged on a per-unit basis, despite prior consideration of a fee that would be based on square footage. In part, the City decided on a per unit fee because developers often make a larger profit on a per-square-foot basis for smaller units. A per-unit fee effectively results in a higher fee rate per square foot for smaller units than for larger units, thereby capturing a larger share of any excess profit from smaller units relative to larger units, which may have lower profit margins. Perhaps more importantly,

the City has identified a need for increased construction of larger multifamily units, and therefore sought to avoid charging higher fees for larger units.

SACRAMENTO HOUSING IMPACT FEE

Background

In 2005, housing advocates pushed for making inclusionary housing requirements citywide. (The 2000 regulations on inclusionary housing concerned only certain growth areas.) A new council member elected in District 1 (with one of the growth areas) also wanted a fairer distribution of affordable housing units. The Housing Element update of 2008 put the shift to city-wide affordable housing policy on paper. The Palmer and Patterson decision and the loss of the Redevelopment Agency both forced the city to look for new ways of producing affordable housing or revenue for affordable housing. A linkage fee was chosen. Keyser Marston did a nexus study in 2015, and a new ordinance was passed in the summer of that year. Fees go into the Housing Trust Fund that was created in 1989, for the commercial impact fee program.

The "Mixed Income Housing" ordinance was enacted on Sept. 1, 2015.

Fee Structure

The fee structure shown below aims to foster higher densities of development and to steer development into specific locations: the fee of $2.58 per square foot is waived for high-density housing and greatly reduced in a Housing Incentive Zone (see figure on next page).

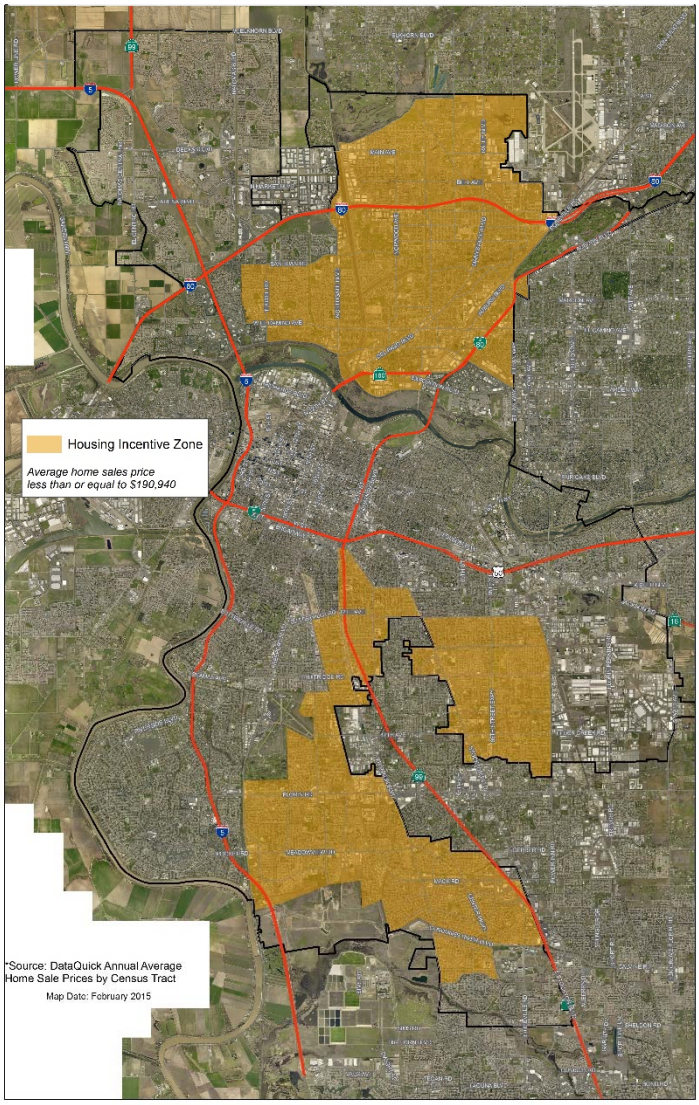
SACRAMENTO HOUSING FEES

Type	Fee Per Square Foot
Single/Duplex	$ 2.58
High Density Single/Duplex (a)	$ -
Multi-Unit Dwelling	$ 2.58
High Density Multi-Unit Dwelling (b)	$ -
Nonresidential to Residential Conversion	$ -
DU in Housing Incentive Zone	$ 1.11

Notes:
(a) "High Density" single/duplex is defined as 20 dwelling units or more per acre.
(b) "High Density" multi-unit is defined as 40 dwelling units or more per acre.

Sources: City of Sacramento, 2016; BAE, 2016.
Effective 11/1/2015

The Housing Incentive Zone (HIZ) is made up of areas where the market supplies housing that is actually affordable. The reduction in the fee represents an incentive to build there and helps to keep prices affordable. The ratio of HIZ fee to citywide fee is the same as the ratio of the median home price in the HIZ to the median home price in the rest of the city.



Note that for projects on parcels larger than 100 acres in area, the developer, in addition to paying impact fees, must gain approval of a "mixed income housing strategy" in the project.

Aside from grandfathered projects (with varying conditions according to the type of the project), several categories of project are exempt, including mobile home parks, development projects with at least 10 percent of affordable units, a new single-unit dwelling built by an owner-builder on his/her property (under certain conditions), a secondary dwelling unit, uninhabitable square footage without conditioned air, and community rooms for residential developments.[68]

Increases occur annually, on July 1, according to the San Francisco Construction Cost Index.

Fees are collected prior to (and as condition for) the issuance of the building permit. No provisions exist for the deferral of fees (but see below, planned revisions) and no provisions exist for refunds. However, as long as the monies have not been transferred into the Housing Trust Fund itself, it should be possible for a developer who decides not to build to negotiate a refund.

SACRAMENTO HOUSING INCENTIVE ZONES

According to staff interviewed for this report, there is little interplay between the fee program with the density bonus program, because the current zoning code is very permissive in terms of densities. Only two bonuses have been awarded in the last 20 years.

[68] Sacramento City Code, section 17.712.040 Exempted development projects.

Fees accrue to the Housing Trust Fund, founded in 1989 (when the commercial linkage fee program was initiated. The objective of the Housing Trust Fund is "to increase and improve the supply of housing affordable to households of low income, with priority given to very low income households."[69] "Low income" is defined as being below 80% of countywide median income; "very low income" is defined as below 50% of median income.

Housing that is financed by the Housing Trust Fund does not include housing for the homeless and housing dedicated to seniors.

Outcomes

Since Sept. 1, 2016, only about $30,000 has been collected. This small amount can be explained by three factors: the limited time since the adoption of the ordinance; the fact that many projects were already in the pipeline at the time of adoption; the fact that many projects are at densities or in locations that make them exempt from the fee.

No affordable housing units have been produced.

Lessons Learned

The requirement to pay the whole housing linkage fee upfront is a burden to developers. Council is currently studying a fee deferral ordinance, to enable developers to pay housing linkage fees over a certain amount of time.

The fees apply to all housing projects in which units are "market-rate," i.e., "not restricted to an affordable housing price or affordable rent."[70] This includes projects such as those built by Habitat for Humanity, in which owners invest sweat equity. The Planning Division would like to amend definitions so as to exempt such projects. Planners also would like to clarify the ways in which fees are assessed on multi-use projects or projects with different forms of tenure.

Finally, the price differential between market-rate housing in the Housing Incentive Zone and housing elsewhere in the city needs to be monitored, to know whether the ratio of HIZ fee to "regular" fee is still correct.

---

[69] Sacramento City Code, section 17.708.020 Low income housing fund.
[70] Sacramento City Code, section 17.712.020 Definitions.

San Jose Affordable Housing Impact Fee

Background

The City of San Jose wanted to have additional tools to implement some of its housing policy goals (as spelled out in the Housing Element of its General Plan), in particular the objective to have 15 percent of new residential units be affordable units. Other goals served by the provision of affordable housing is a better jobs-housing balance and reduced pressure on traffic, and the attraction and retention of employees by the city's businesses.[71] A nexus analysis was prepared in 2014, and a new regulation was passed by City Council later that year. The Affordable Housing Impact Fee ordinance will take effect on July 1, 2016.

The Affordable Housing Impact Fee applies only to rental housing projects in large part because the *Palmer* decision limited the City's ability to generate revenue for affordable housing through in-lieu fees on rental development as part of its Inclusionary Housing Policy. San Jose's Inclusionary Housing Ordinance was adopted in 2010 (though it will take effect only this year, after a long legal battle). Legally distinct from the in-lieu fee, the Affordable Housing Impact Fee is an alternative mechanism to increase the City's supply of both affordable rental and ownership units.

Fee Structure

Fees apply to all market-rate rental developments (i.e., not to homeownership projects). Floor areas on which the fee is calculated are the residential areas of units (i.e., not including balconies, loggias, etc. or common areas in buildings).

Two categories of projects exist: Rental Development and Downtown High Rise Rental Development. The latter are projects in the Downtown Core Area in which the highest occupied floor is 150 feet or more above street level. The fees are $17.00 per square foot for both categories. (The two categories of projects reflect the categorization that exists in the Inclusionary Housing Ordinance, where downtown high-rise buildings had a lower in-lieu fee.) It is also noteworthy that the fee on rental units is the same as the in-lieu fee per the inclusionary program charged on for-sale units.[72]

Exemptions to the fee include pipeline projects, downtown high-rise projects which obtain a certificate of occupancy by July 1, 2021, and projects for which the developer is able to demonstrate no impact or standard violations of the US Constitution or California Constitution."[73]

---

[71] City of San Jose, Resolution No. 77218, "A Resolution of the Council of the City of San Jose Adopting a Housing Impact Fee," available at http://www.sanjoseca.gov/DocumentCenter/View/37779, last accessed on June 1, 2016.
[72] This equality is due to the fact that the nexus study gave a range of possible levels for the impact fee and that $17.00 per square foot was within that range and seemed to all to be a good compromise.
[73] City of San Jose, Resolution No. 77218, Section 11, par. A.

Fees are adjusted annually at a fixed rate of 2.4 percent. In addition, the resolution allows the City to adjust the fee schedule from time to time if conditions change, such as an economic downturn.

Fees must be paid prior to issuance of the building permit. Developers may petition the Director of Housing of the City to delay payment of the fees to the time of delivery of the Certificate of Occupancy or the date of the final inspection if the City is not yet able to spend impact fees.

A Housing Impact Fee Fund was set up to manage the monies collected. It can be used to purchase affordable housing, finance the development of affordable housing, or to acquire affordability covenants. This fund is different from the Affordable Housing Fund set up with the adoption of the Inclusionary Housing Policy in 1988 (revised 2010).

The City has prepared an "Expenditure Plan for Housing Impact Fee Revenue" based on the nexus study of 2014 and demographic projections from ABAG.

Outcomes

The program has not yet generated fees. The City received 34 applications for exemptions as pipeline projects.

Lessons Learned

The ordinance was produced on the basis of a robust consultation process, in which developers and the public were heard. This produced a good compromise (e.g., 5-year exemption for downtown high-rise rental projects, but the same fee of $17.00 per square foot fee as on rental projects elsewhere), and provided solid support when City Council voted on the ordinance.

SANTA MONICA AFFORDABLE HOUSING PRODUCTION PROGRAM

Background

In 1990, Santa Monica voters approved Proposition R, which required that at least 30 percent of all housing units produced in any given year be affordable to low- and moderate-income households. Other ordinances were adopted over the years, including the Affordable Housing Production Program (AHPP) in 1998. The current ordinance took effect in May 2006 and was revised in June 2015.

Santa Monica's inclusionary housing policy mandates that 20 to 25 percent of market-rate units on-site, or 25 percent more than the on-site requirement for inclusionary units built off-site, be made affordable to low- and moderate-income households, depending on tenure and project size. The current residential Affordable Housing Fee originated from the option for residential developers to pay an in-lieu fee, rather than constructing affordable units, to satisfy the requirements of the AHPP.

Fee Structure

In-lieu fees are required for all rental projects, irrespective of the number of units[74] As an option for rental projects, a developer of a project with two or more units may dedicate land to the City or to a non-profit housing developer, sell either party land below market rate, or pay for an option on a piece of land. In all of these land options, the developer's loss or investment must equal the fee amount.

Fees can also be an option for or-sale projects that contain two or three units. For-sale projects with four or more units must provide affordable units either on- or off-site.

Currently, the Unit Base Fee is $31.25 per square foot for rental projects and $36.51 per square foot for condominium projects. [75]

Exemptions in addition to pipeline and other standard exemptions include single-unit projects, and designated landmark buildings or structures that are part of a historic district (fee only applies to new structures on site).

Fees are reviewed annually and are set by Council. Increases are based on changes in construction costs and on changes in land costs in the past year. The former are assessed by means of the relevant Construction Cost Index published by the Engineering New Record; the

[74] City of Santa Monica, "Affordable Housing Production Program," at http://www.smgov.net/Departments/HED/Housing_and_Redevelopment/Housing/Production_Program_(Inclusionary)/AHPP.aspx, last accessed on June 5, 2016. In the Municipal Code that is available on the web at this time (June 5, 2016), there is no differentiation between condominium and apartment projects.

[75] City of Santa Monica, "Fee – Affordable Housing," available at https://smgov.net/Departments/HED/ Housing_and_Redevelopment/Housing/Fee_-_Affordable_Housing/Fee_-_Affordable_Housing.aspx

latter are determined by data on the median condominium prices in the city. The precise methodology for revising the "Affordable housing unit base fee" is described in internal guidelines, the latest version of which was approved by Council in April 2016.[76]

Fees must be paid between issuance of the first building permit and issuance of the certificate of occupancy. No certificate will be issued without fees having been paid.

Fees are deposited a reserve account separate from the General Fund, and are to be used only for development of affordable housing, administrative costs related to the production of this housing, and monitoring and evaluation of this affordable housing production program."[77]. Fees must be used within five years of payment or approval of the project, whichever occurs later. An interesting enforcement mechanism has been adopted to manage the fee program: If fees are not used in the five-year time period, they will be returned to all developers who paid fees during the relevant five-year period, on a pro-rata basis.

The City of Santa Monica has also adopted an extensive Land Use and Circulation Element of the General Plan (LUCE), which provides for density bonuses in exchange for providing affordable housing along with an array of other incentives to direct denser development to certain locations. However, these provisions have been in flux in the past several years, with changes to implementing policies (not detailed herein).

Outcomes

Approximately $17 million has been received as in-lieu fees between 1998 and 2015.[78]

---

[76] City of Santa Monica Housing Division, "Affordable Housing Production Program Administrative Guidelines (Pursuant to Chapter 9.64 of the Municipal Code)," April 12, 2016, available at http://www.smgov.net/uploadedFiles/Departments/HED/Housing_and_Redevelopment/Housing/Production_Program_(Inclusionary)/AHPP_Administrative_Guidelines_2016-04-12.pdf, last accessed on June 5, 2016.

[77] Santa Monica Municipal Code, Section 9.64.070: Affordable Housing Fee, paragraph F.

[78] This sum was obtained by adding in-lieu fees reported in the annual "Housing Reports" of the City of Santa Monica, available at https://www.smgov.net/Departments/HED/Housing_and_Redevelopment/Housing/Reports/Housing_ Reports.aspx, last consulted on June 7, 2016. The exact sum is $16,863,380. It was obtained by adding (1) fees collected in the first half of 1998 and in fiscal year 1998-1998 from all projects approved in that time period, (2) fees collected in fiscal years 1999-2000 to 2013-2014 for all projects completed in that time period, and (3) fees collected in fiscal year 2014-2015 from all projects completed, under construction or approved in that year.

West Hollywood Affordable Housing Impact Fee

Background

Established in 1986, West Hollywood's original Inclusionary Housing Program required developers to construct at least one unit affordable to low- or moderate-income households for projects with ten or fewer units and 20 percent affordable units in projects with over ten units.[79] Only projects of ten or fewer units have historically had the option to pay an Affordable Housing Fee in-lieu of providing units.

Subsequent to *Palmer/Sixth Street Properties, L.P v. City of Los Angeles* (2009), the City modified its inclusionary program by expanding the in-lieu fee option to rental projects of any size, provided the project does not utilize the State Density Bonus program or any other form of assistance described in Section 65915 of the California Civil Code. Condominiums, cooperatives, and apartments constructed using the Density Bonus program or other forms of assistance are still required to construct inclusionary units.[80]

In 2014 the City commissioned a residential nexus study to ensure that even if such requirements faced legal challenge, the requisite fees would survive the reasonable nexus test.[81] The Nexus Study prepared in 2014 confirmed that the in-lieu fee charged as part of the City's inclusionary program is supported by the analysis of all three residential prototypes studied. Nevertheless, the City is in the process of converting the Inclusionary Housing Ordinance into a Residential Affordable Housing Impact Fee program to establish consistent fee requirements for all residential development, regardless of tenure, and reduce the opportunity for legal challenge. While inclusionary units are still required of condominiums, cooperatives, and apartments constructed with a density bonus, this section describes the Residential Affordable Housing Fee as it applies to rental projects constructed without a density bonus or other form of financial assistance.

---

[79] City of West Hollywood, "2013-2021 Housing Element." December 2013. PDF. Accessed 7/14/16. http://www.hcd.ca.gov/housing-policy-development/housing-resource-center/plan/he/housing-element-documents/west_hollywood_5th_adopted121313.pdf.

[80] City staff expressed that while their program has faced legal challenge, it has withstood such scrutiny due to the fact that the court's ruling in the *Palmer* case was that density bonuses and other types of incentives qualify as "direct financial contribution or any other [form] of assistance" specified in CA Civil Code Section 65915 (Density Bonus Program), therefore exempting development projects utilizing such incentives or assistance from the requirements of the Costa-Hawkins Rental Housing Act (CA Civil Code Section 1954.50).

[81] West Hollywood Department of Human Services and Rent Stabilization, "Non-Residential Jobs-Housing Nexus Study and Residential Nexus Study." December 15, 2014 City Council Agenda Report.

Fee Structure

In general, all residential development projects are required to either construct inclusionary units or pay the Affordable Housing Fee, with the exception of new single family dwelling units or the replacement of one single family dwelling with another single family dwelling, and projects developed, owned, or operated by a nonprofit housing provider (including residential care facilities), where all units are exclusively for low- or low- and moderate-income persons.[82]

The City provides density bonuses in excess of what is currently required per State law, allowing a maximum density increase of up to 100 percent the maximum density permitted by the underlying zone, subject to conditions of approval. In addition, the Inclusionary Housing Program offers concessions to developers including modified development standards such as height limits, setback, and open space requirements, in addition to reduced parking requirements. If a density bonus or other financial incentives are utilized, developers are required to construct inclusionary units (with an option to construct a greater proportion of inclusionary units off-site) and comply with the development standards as described in Chapter 19.22 of the West Hollywood Municipal Code.

The amount of the Affordable Housing Fee depends on project size (in terms of the number of units) and calculated based on the square feet of gross livable area (GLA) (including balconies and porches, but excluding parking.) Projects with 10 or fewer units pay a fee per square foot of GLA based on the sliding scale shown below. Projects with greater than ten units are required to pay a fee of $27.13 per square foot of GLA. Note that the figures in the table below reflect current amounts for the 2016-2017 fiscal year.

WEST HOLLYWOOD AFFORDABLE HOUSING IN-LIEU FEES

Project Size	Fee per Square Foot
2 Units	$12.65
3 Units	$14.47
4 Units	$16.28
5 Units	$18.09
6 Units	$19.90
7 Units	$21.71
8 Units	$23.53
9 Units	$25.33
10+ Units	$27.13

Sources: City of West Hollywood, 2016; BAE, 2016.

The adopted Affordable Housing Fee is a fraction of the maximum fees supported by the 2014 Residential Nexus Study. The Nexus Study arrived at a maximum supportable per square foot

[82]West Hollywood Municipal Code, Chapter 19.22 (Affordable Housing Requirements and Incentives).

fee of $33.00 for small condo projects, $40.30 for medium rental projects, and $47.20 for large rental projects.

The Affordable Housing Fee is adjusted based on changes in the Construction Cost Index (CCI) and adopted annually by the City Council. Fees must be paid in full upon issuance of a building permit for all units incurring the fees. If the project consists of multiple detached units, fees for the whole project must be paid before building permit issuance. Currently, there is no option for fee deferral. Impact fees are generally nonrefundable; however, funds may be issued if the building permit expires and is not extended or if the fees were collected illegally or erroneously. To request a refund, applicants must file a written request with the City no later than 90 days after the initial payment date to be considered.[83]

Outcomes

Revenue generated by the Affordable Housing Fee is deposited into the City's Affordable Housing Trust Fund. In fiscal year 2014-15, the Affordable Housing Fee generated approximately $1.3 million.[84]

Established in 1986, the Affordable Housing Trust Fund receives funds from residential and commercial development impact fees, as well as settlement funds. Funds are used exclusively for projects that include a minimum of 20 percent of the total units affordable to low income households and at least 60 percent affordable to low- and moderate-income households. Tax-exempt, non-profit corporations are eligible to apply to receive funds from the Affordable Housing Trust Fund which may be used for predevelopment costs, land or air rights acquisition, administrative costs, gap financing, or to lower the interest rate of construction loans or permanent financing. As of June 20, 2015, loans disbursed from the Affordable Housing Trust Fund and the Housing Asset Fund to qualified non-profit housing and community development corporations had an outstanding balance of $28,996,603.[85] The City does not have an updated estimate of the funds generated by the Residential Affordable Housing Fee or the number of units constructed by the program. City staff expressed a desire to maintain records of this progress in the future.

Lessons Learned

Of the case study areas analyzed, the City of West Hollywood's detailed sliding scale for smaller projects is unique; this approach lessens the burden of impact fees on small projects.

SANTA ANA INCLUSIONARY IN-LIEU FEE

Background

The Housing Opportunity Ordinance was adopted in 2011 to support implementation of the 2009 Housing Element Update. Other major land use changes underway in the City of Santa Ana at the time, including major rezoning of large industrial areas (Transit Zoning Code) and for the Harbor Boulevard Corridor, underscored the need to address affordable housing as well.

Santa Ana's inclusionary housing policy is contained in the Housing Opportunity Ordinance and requires that 15 percent of new, market rate residential projects consisting of five or more units be made affordable on-site to very low- or low-income households. Rather than constructing affordable units, developers may opt to pay an in-lieu fee, whose revenues are collected in an Inclusionary Housing Fund and used to produce affordable housing.

It is important to note that the Ordinance applies only to three types of projects: (1) housing developments that exceed the density otherwise available under applicable zoning and development standards, (2) projects that require a change in land use classification from a land use that does not permit residential uses to one that does, and (3) the conversion of rental units to condominiums.[86]

Fee Structure

The in-lieu fee varies by size of project, from $5.00 per square foot for projects with 5 to 20 units, to $15.00 per square foot for projects with over 20 units. This fee is applied only to the number of units that exceed land use density regulations allow at the time of the application. The fee is also used to deal with fractions of units that are normally required but are not included among those being built on-site or off-site.

The structure of the in-lieu fee has changed over time, with a recent shift to a higher fee per square foot on smaller projects because City Council realized that it is difficult for smaller projects (less than 20 units) to incorporate affordable units within them, so a fee payment is preferable.

Aside from pipeline projects and projects subject to California statues, projects with fewer than five units are exempt from the inclusionary requirement and thus the fee. In addition, the ordinance exempts conversion or adaptive reuse projects that change the use of the property from non-residential to residential; this exemption is provided in recognition of the fact that conversion and adaptive reuse projects are often made very expensive by code upgrades

[86] City of Santa Ana, "Affordable Rental Housing Administrative Procedures." January 2015. PDF. Accessed 8/9/16. http://www.santa-ana.org/pba/planning/documents/3AdminProcedures-RentALL.pdf.

The fee is due at issuance of the building permit. In the case of mixed-use projects, the rule applies even if the first building permit concerns only the non-residential portion of the project.

Outcomes

Fees are deposited in an Inclusionary Housing Fund, and combined with other affordable housing funding sources. Uses of in-lieu and other Trust funds can be used for rental or ownership projects. The ordinance contains a provision that invites developers paying the fees to provide input into their use, which according to staff interviewed for this study, is present to prevent political pressure from directing the affordable housing funds to a particular project or affordable housing developer.

As of June 2016, $4,302,000 has been received. So far, $1,875,000 has been committed to a project with 64 units.

Palo Alto Below Market Rate Housing Program

Background

Palo Alto's Below Market Rate (BMR) Housing Program was implemented in 1974, concurrent with the City's first receipt of Community Development Block Grant funding, to increase the City's supply of affordable housing.[87] Like other cities with inclusionary housing programs that predate the *Palmer* decision, Palo Alto is in the process of converting its residential inclusionary in-lieu fee to an impact fee supported by a reasonable nexus. In 2014, the City completed both residential and commercial nexus studies to determine the maximum legal fees justified by the impact of market-rate residential development in the City.

The City's existing BMR Housing program, adopted in 2008, is contained in Chapter 18.14 of the Municipal Code. The policy requires developers of projects with five or more units to construct 15 percent of units in the principal project as BMR units, or pay an in-lieu fee. Today this requirement applies only to ownership housing units, unless the developer agrees by contract to restrict rents in exchange for financial incentives such as a density bonus. Rental projects were once subject to this requirement before the 2009 California Court of Appeal ruled, in *Palmer/Sixth Street Properties L.P. v. City of Los Angeles,* that the application of inclusionary housing requirements and associated in-lieu fees on rental residential development was a violation of the Costa-Hawkins Rental Housing Act. In 2014, the City completed a residential nexus study to transform the in-lieu fee into a market-rate residential affordable housing impact fee.

Palo Alto's home prices and rental rates surged during its recovery from the Great Recession. A 2016 staff report explains that, "Since 2010 the purchase price of an average priced home in Palo Alto has increased 259% from $900,785 to $2,337,500. Rental costs have also skyrocketed from an average of $1,695 in 2010 to $3,105 in 2015."[88] Combined with the *Palmer* decision, these factors formed the impetus for the City to undertake commercial and residential nexus studies to establish impact fees and generate revenue for affordable housing.

Fee Structure

Historically, the City has imposed an inclusionary in-lieu fee equivalent to 7.5 to 10 percent of the sales price for market-rate single-family detached, single family attached, and condominiums. Following the results of recent nexus studies, the City has adopted flat fees per unit, rather than the existing percentage of sales price, that will take effect on August 15, 2016.

[88] City of Palo Alto Finance Committee, "Residential/Commercial Impact Fee Studies Staff Report." February 16, 2016. Accessed 7/19/16. http://www.cityofpaloalto.org/civicax/filebank/documents/50935. Page 3.

Both the existing and adopted fees are shown in the table below.

PALO ALTO RESIDENTIAL FEES

Unit Type	Existing Fee	Adopted Fee (a)
Single Family Detached	7.5 to 10% of sales price	$95/sf
Single Family Attached	7.5 to 10% of sales price	$50/sf
Condominium	7.5 to 10% of sales price	$50/sf
Rental Housing	None	$50/sf

Note:
(a) Adopted fee schedule is effective August 15, 2016.

Sources: Palo Alto Planning and Community Environment Department, 2016; BAE, 2016.

Revenues generated by the affordable housing impact fee are collected in the City's Residential Housing Fund, a "sub-fund" of the City's Affordable Housing Fund, a trust fund that exists to preserve and expand affordable housing for very low-, low-, and moderate-income households. Other sub-funds of the Affordable Housing Fund include the Commercial In-Lieu Fund, Home Investment Partnership Fund, Community Development Block Grant (CDBG), and Below Market Rate Emergency Fund. Detailed guidelines dictating the use of Affordable Housing Fund are posted on the City's website. According to these guidelines and the City's Notice of Funding Availability application, specific restrictions apply to the use of funds in each sub-category. Fees generated by the Residential Housing Fund may be used for the following:

- Construction of new housing units;
- Addition of new units to existing buildings;
- Conversion of non-residential space to housing units;
- Acquisition, rehabilitation, and preservation of existing affordable housing, where rents are controlled by deed restriction or another similar mechanism;
- Administrative costs of operating the BMR housing program.[89]

There is currently no limit on the amount of funding that can be allocated to a single development.[90]

Established in 2002 and distinct from the Residential Affordable Housing Fund, the Below-Market Rate Emergency Fund is used chiefly for activities necessary to preserve existing BMR housing by providing assistance such as deferred payment, low interest loans in the event that an owner of BMR housing faces "severe financial hardship" in paying major capital assessment on condominiums (not including monthly homeowners dues), acquiring units in

[89] City of Palo Alto, "Affordable Housing Fund Guidelines." August 17, 2015. PDF. Accessed 7/21/16. http://www.cityofpaloalto.org/civicax/filebank/documents/53195.

foreclosure, repairing and reselling BMR units acquired by the City, or issuing short-term loans to rehabilitate older BMR housing stock.[91]

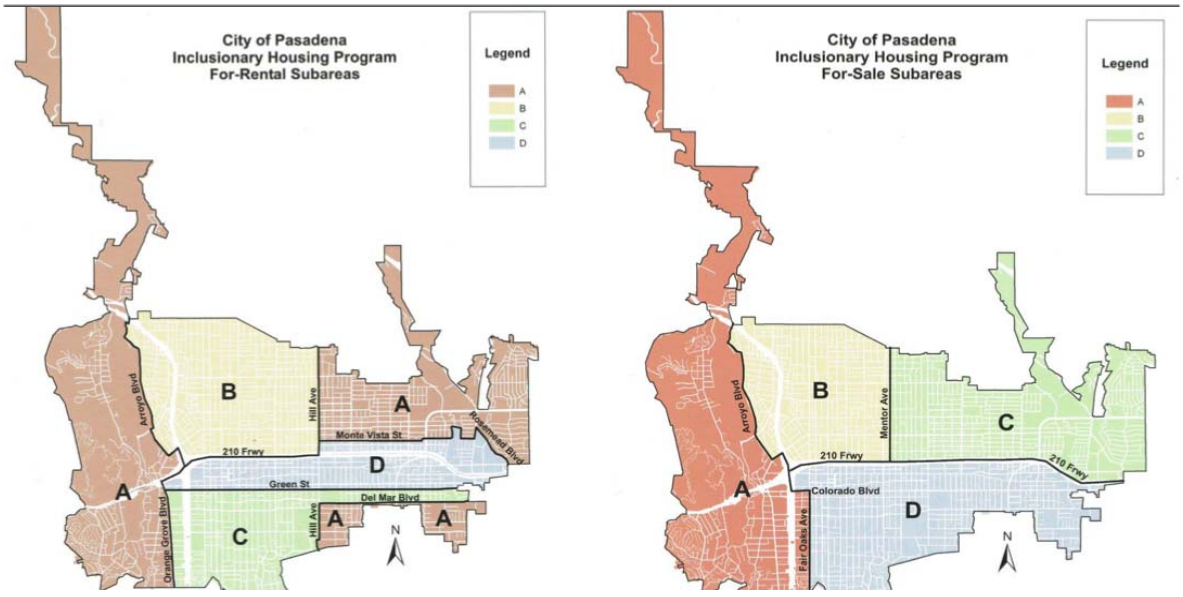
Outcomes

In Fiscal Year 2014-15, $19,800 in housing in-lieu fees was collected and deposited into the City's Residential Housing In-Lieu Fund, which as of June 30, 2015 had an ending balance of approximately $17.6 million.

[91] City of Palo Alto, "Affordable Housing Fund Guidelines." August 17, 2015. PDF. Accessed 7/21/16. http://www.cityofpaloalto.org/civicax/filebank/documents/53195. Page 5.

PASADENA INCLUSIONARY HOUSING ORDINANCE

Background



Pasadena's Inclusionary Housing Ordinance was adopted in 2001.[92] The policy requires either that 15 percent of all newly constructed, market-rate residential units be made affordable to low- and moderate- income households and constructed on-site, or payment of a fee based on project size and tenure, and assessed per square foot.

As with most inclusionary housing ordinances in California, the residential fee was originally established as an option "in-lieu" of producing the required number of affordable units. After the California courts limited mandatory unit production in the case of market-rate rental units, Pasadena revisited its rental housing in-lieu fee. In 2015 the City commissioned an Affordable Housing In-Lieu Analysis to recalculate the fee based on the affordability gap between the cost of market-rate housing units and the price that a low- or moderate-income household could afford to pay.[93] The City is currently considering raising its ordinance requirements based on a recent nexus study presented to City Council in April 2016.

Fee Structure

Inclusionary requirements and in-lieu fees vary by zone, with the four zones also varying slightly by tenure (rental vs. ownership projects) as shown below.

PASADENA INCLUSIONARY HOUSING ZONES

Current and proposed fees as of April 2016 are shown below:

PASADENA CURRENT AND PROPOSED IN-LIEU FEES

	Fee Per Square Foot	
	FY 2016 Rate	Proposed Rate
10-49 Rental Units		
Sub-area A	$ -	$ 35.37
Sub-area B	$ 1.14	$ 19.97
Sub-area C	$ 25.21	$ 32.89
Sub-area D	$ 22.92	$ 35.37
50+ Rental Units		
Sub-area A	$ -	$ 49.12
Sub-area B	$ 1.14	$ 27.74
Sub-area C	$ 34.39	$ 45.68
Sub-area D	$ 32.10	$ 49.12
10-49 Ownership Units		
Sub-area A	$ 43.56	$ 47.01
Sub-area B	$ 16.04	$ 19.01
Sub-area C	$ 26.36	$ 29.66
Sub-area D	$ 20.63	$ 47.01
50+ Ownership Units		
Sub-area A	$ 60.75	$ 65.30
Sub-area B	$ 21.78	$ 26.40
Sub-area C	$ 36.68	$ 41.20
Sub-area D	$ 28.65	$ 65.30

Sources: David Paul Rosen and Associates; 2016, BAE, 2016.

Projects with fewer than 10 units are exempt from the Inclusionary Ordinance.

Half of the fee is due prior to obtaining the first building permit, with the balance due prior to obtaining a certificate of occupancy. Fees accrue to the Inclusionary Housing Trust Fund. There are no guidelines or limitations on the use of the fees collected.

Outcomes

The total amount collected between 2001 and April 2016 was $19.6 million.[94] Fee revenues have varied dramatically year by year: revenue dropped from about $5,000,000 in 2006 to about $100,000 six years later, during the Great Recession. These fluctuations have spurred the City to consider other options currently, including a commercial fee.[95]

As of 2016, Pasadena reports that there have been 1,507 "city-funded affordable units" produced.

BOSTON INCLUSIONARY DEVELOPMENT IN-LIEU FEE

Background

An executive order created the Boston inclusionary housing policy in 2000. The policy allowed for in-lieu fees: instead of including a number of affordable units equivalent to 10 percent of the total number of units in the project, the developer could pay a fee of $52,000 per unit on a number of units equivalent to 15 percent of the total number of units in the project. In 2003, a revision required that an in-lieu fee also be paid for the fraction of affordable unit that was not built when the number of affordable units was rounded off to the nearest lower number. The program has been revised several times to improve implementation since its inception.

BOSTON INCLUSIONARY DEVELOPMENT ZONES

Source: City of Boson. Inclusionary Development Policy. Exhibit B

The Inclusionary Development Program (IDP) applies to all residential projects that have ten units or more that are financed by the City, that are located on land that belongs to the City or to the Boston Redevelopment Authority, or for which zoning relief is sought.

Fee Structure

Fees vary by location and by tenure. The territory of the city was divided into three zones: Zone A comprise neighborhoods whose median value of a square foot of residential living area is in the top third of city valuations; Zone B has neighborhood medians close to the city average; and Zone C has neighborhood medians in the bottom third of city valuations. Different fees apply in each zone.

Contributions for rental projects are $380,000 per unit for projects in Zone A, $300,000 per unit for projects in Zone B, and $200,000 per unit for projects in Zone C. These unit costs are called “Zone Factors.” The number of units on which the IDP Contribution is calculated is 18 percent of the total number of units for projects in Zone A and in Zone B and 15 percent in Zone C. The total contribution is therefore Zone Factor X number of units.

Contributions per unit for homeownership projects are the highest of two figures: the Zone Factor or 50 percent of the difference between the market rate price and the affordable price for each unit type. The number of units is the same as for rental projects: 18 percent of total project units in Zones A and B, 15% in Zone C.

Note that an in-lieu contribution is also required in cases where affordable units are built on site to compensate for the loss of a fraction of an affordable unit in the project. For example, if the number of affordable units that is required is 7.35 and 7 units are built, the developer owes 35 percent of the in-lieu fee for a unit.

Exemptions include grandfathered projects, projects in which 40 percent or more of the units have income restrictions or are otherwise protected as affordable units, and dormitories.

There are no automatic fee increases; the unit factor was first set at $52,000, raised to $97,000 in 2005, and then to $200,000 in 2006. The 2006 revisions included a provision that contributions for rental projects could be paid in seven annual installments rather than all at once. The fee structure was amended again in 2015, to its current status.

Developers of rental housing may pay the IDP Contribution in 7 annual installments or all at once (using the current yield of a 10-year Treasury bond to calculate NPV). The first installment is due within 30 days of receipt of the "initial full building permit." Developers of ownership projects must pay 25 percent of the IDP Contribution based on Zone Factors within 30 days of receiving the building permit and the remaining 75 percent within 30 days of receiving the Certificate of Occupancy for their project.

Fees normally go into the IDP Fund. However, developers may ask that some or all of their IDP Contribution be used to finance an affordable housing project in the vicinity of their own development project.

Outcomes

Between 2000 and 2015, $119,700,542 was generated by in-lieu IDP Contributions. About $80,000,000 were already collected at that time, and the remainder was committed but not collected. An additional $22,176,190 was estimated to be in the pipeline, from projects that had been approved by the Boston Redevelopment Authority but had not yet been granted a development permit.[96]

In the same time period (2000 – 2015), contributions helped to build 1,597 new affordable housing units. Of these, 1,215 units were for low-income households (< 60% AMI) and 382 units were middle-income households (60% - 120% AMI).[97]

---

[96] *Ibid*.
[97] *Ibid*.

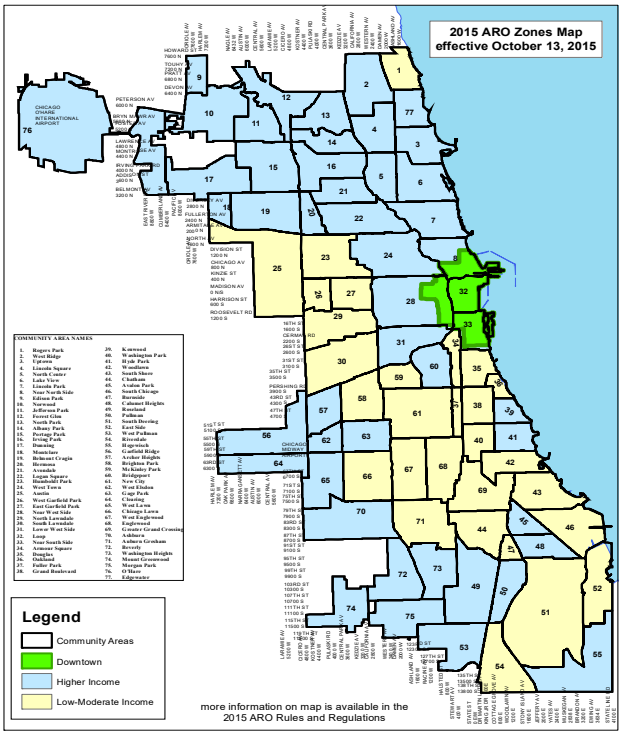
Lessons Learned

The City would like a maximum number of projects to be built with affordable housing units on-site. Developers prefer either building off-site units or paying in-lieu fees. City staff reports that most projects chose a combination of units and fees.

Staff are currently considering revisions or clarifications on a number of elements of the ordinance including:

- The provision that allows developers to identify a specific project to target their in-lieu fees; because fee payments may be made in 7 years, this provision raises a serious problem for the financing of the affordable housing project. If the developer does not pay all fees upfront (with NPV calculation), the City must utilize the IDP fund to finance the affordable housing project and then use future fee payment to repay the IDP
- The distribution of monies to affordable housing projects; more emphasis on unit preservation vs. new construction may be needed. New units are generally in less attractive locations with fewer services, and preservation may also be cheaper in some cases.

CHICAGO AFFORDABLE REQUIREMENTS ORDINANCE



Background

Chicago adopted the first version of the Affordable Requirements Ordinance (ARO) in 2003. A few years later, as the market grew stronger and affordable units lost to new development increased, community groups pushed for stronger inclusionary requirements and Mayor Daley supported their goals. A much stronger ordinance was adopted in 2007, which started to generate more in-lieu fees (see Fees collected since inception, below). After the Great Recession, a new market upswing provoked a new push for generating affordable housing funding. Thus in 2015, requirements were strengthened again in order to generate more in-lieu fees.

Fee Structure

The fees are differentiated in several ways. First, they are differentiated geographically, according to local market conditions. Where the market is strongest ("Downtown"), the fees are highest. Lower fees are charged in medium strength markets (e.g., "Higher Income" areas, with low poverty rates), and still lower fees are charged in areas where markets are weakest (e.g., "Low-Moderate Income" areas, with high poverty rates). This scale is viewed as an incentive for developers to invest in Low-Moderate Income areas. A simplified map of the three zones will be updated every five years, based on new census data.

CHICAGO ZONE MAP

Source: City of Chicago, available at http://www.cityofchicago.org/content/dam/city/depts/dcd/general/housing/2015_ARO_ Zone_Map _JULY_28_2015.pdf

Second, the fees are differentiated according to tenure in the Downtown zone. Third, the fees are differentiated according to the developer's effort to contribute to the supply of affordable housing by means of construction (rather than in-lieu fees; see three green columns). Thus in the table on the next page, the "Final In-lieu Fee" applies today for regular projects; the "Final Authorized Agency In-lieu Fee" applies to projects in which the developer builds and sells or leases to an "authorized

agency" (for use as affordable housing, in the project at hand) a number of housing units at least equal to 25 percent of the total number of affordable units required under the ARO (i.e., the number of affordable units that should be built if no in-lieu fees were paid). The "Final In-lieu Premium" applies to downtown for-sale projects in which the developer fails to build, on-site or off-site, at least 25 percent of the number of required affordable units.[98]

Finally, fee increases were phased in over a year: "initial" levels are replaced by "final" levels after about 6 months.

CHICAGO IN-LIEU FEES

	In-Lieu Fee Per Unit					
Zone	Initial (a)	Final (b)	Initial Authorized Agency	Final Authorized Agency	Initial Premium	Final Premium
Low-Moderate Income	$ 50,000	$ 50,000	n/a	n/a	n/a	n/a
Higher Income	$ 125,000	$ 125,000	$ 100,000	$ 100,000	n/a	n/a
Downtown Rental	$ 140,000	$ 175,000	$ 115,000	$ 150,000	n/a	n/a
Downtown For Sale	$ 140,000	$ 175,000	$ 115,000	$ 150,000	$ 160,000	$ 225,000

Notes:
(a) "Initial" denotes an effective date of October 13, 2015.
(b) "Final" denotes an effective date of April 16, 2015.

Sources: City of Chicago, 2016; BAE, 2016.

Chicago, unlike other cities, does not require the payment of in-lieu fees for fractions of units that are required under the percentage-based formulas for on-site or off-site affordable housing construction. Results are rounded off to the nearest whole number.

A number of projects are exempt from affordable housing requirements under ARO including grandfathered projects, projects that do not call for a rezoning, do not benefit from the sale of City land and do not benefit from the City's financial assistance (i.e., require a rezoning, include the purchase of City land or benefit from City subsidies); and existing housing units, except in projects for which the developer received financial assistance from the City (i.e., for projects that involve existing buildings and are not subsidized, the requirements are calculated only on the new units added to the project)

Like other cities, Chicago also has a "waiver" option in its ordinance, which allows, the Commissioner of Planning and Development, "in certain limited circumstances as specified in the rules and regulations, to waive, adjust or reduce the requirements of this section [i.e., ARO]."[99] However, the rules were written is such a way as to limit the number of requests for

98 Chicago Municipal Code, Section 2-45-115 2015 Affordable Requirements, subsection F Methods of compliance. Note that the price of units sold to an authorized agency is not regulated; i.e., the sale can be done at market prices.
99 Chicago Municipal Code, 2-45-115 2015 Affordable Requirements, subsection P Hardship Waiver.

waivers to a minimum. In fact, no developer has yet attempted to obtain a waiver under this article of the ordinance.

Until 2015, fees were being updated periodically. The new ARO specifies that as of 2018, fees will be increased on January 1 of every year, at the rate given by the change in the Consumer Price Index for the metropolitan area of Chicago (using the annual change posted in September of the previous year).

Fees are due prior (and as a condition for) the issuance of the first building permit. The applicable fees are calculated by the Project Manager when the project is submitted for review and are valid for two years only; after that time period they must be calculated again, in light of any changes in the ARO.

In-lieu fees are deposited in the Affordable Housing Opportunity Fund ("unless required to be deposited into another fund pursuant to federal or state law"[100]). The funds will be divided two, one half being used for the production of affordable housing (new construction, rehabilitation or preservation), the other half is to be transferred to the Chicago Low-Income Housing Trust Fund, which provides rental subsidies.

To date, the fee program has raised approximately $50 million since 2007. Because of the economic downturn of 2008 and subsequent years, most fees have been collected since 2014. To date, in-lieu fees have been used to produce an estimated 310 affordable units, with an addition 242 units were built by developers as part of their projects.

Developers of projects who have received extra density under Chicago's Affordable Housing Zoning Bonus program (which give extra floor area in exchange for cash payments to the City) must first pay the fees owed under that program. Sums paid are then credited toward the in-lieu fees to be paid under the ARO.[101]

Lessons Learned

Sensitivity to context, i.e., to the socioeconomic geography of the city, is important. In Chicago, the very robust downtown market is key to the generation of fees for affordable housing and for other city priorities. (A new Neighborhood Opportunity Bonus was instituted in May 2016, whereby developers can earn a density bonus in exchange for a contribution to a newly established Neighborhood Opportunity Fund, which will be used to finance local economic development programs and projects.[102]) The distinction by zone, recognizing market

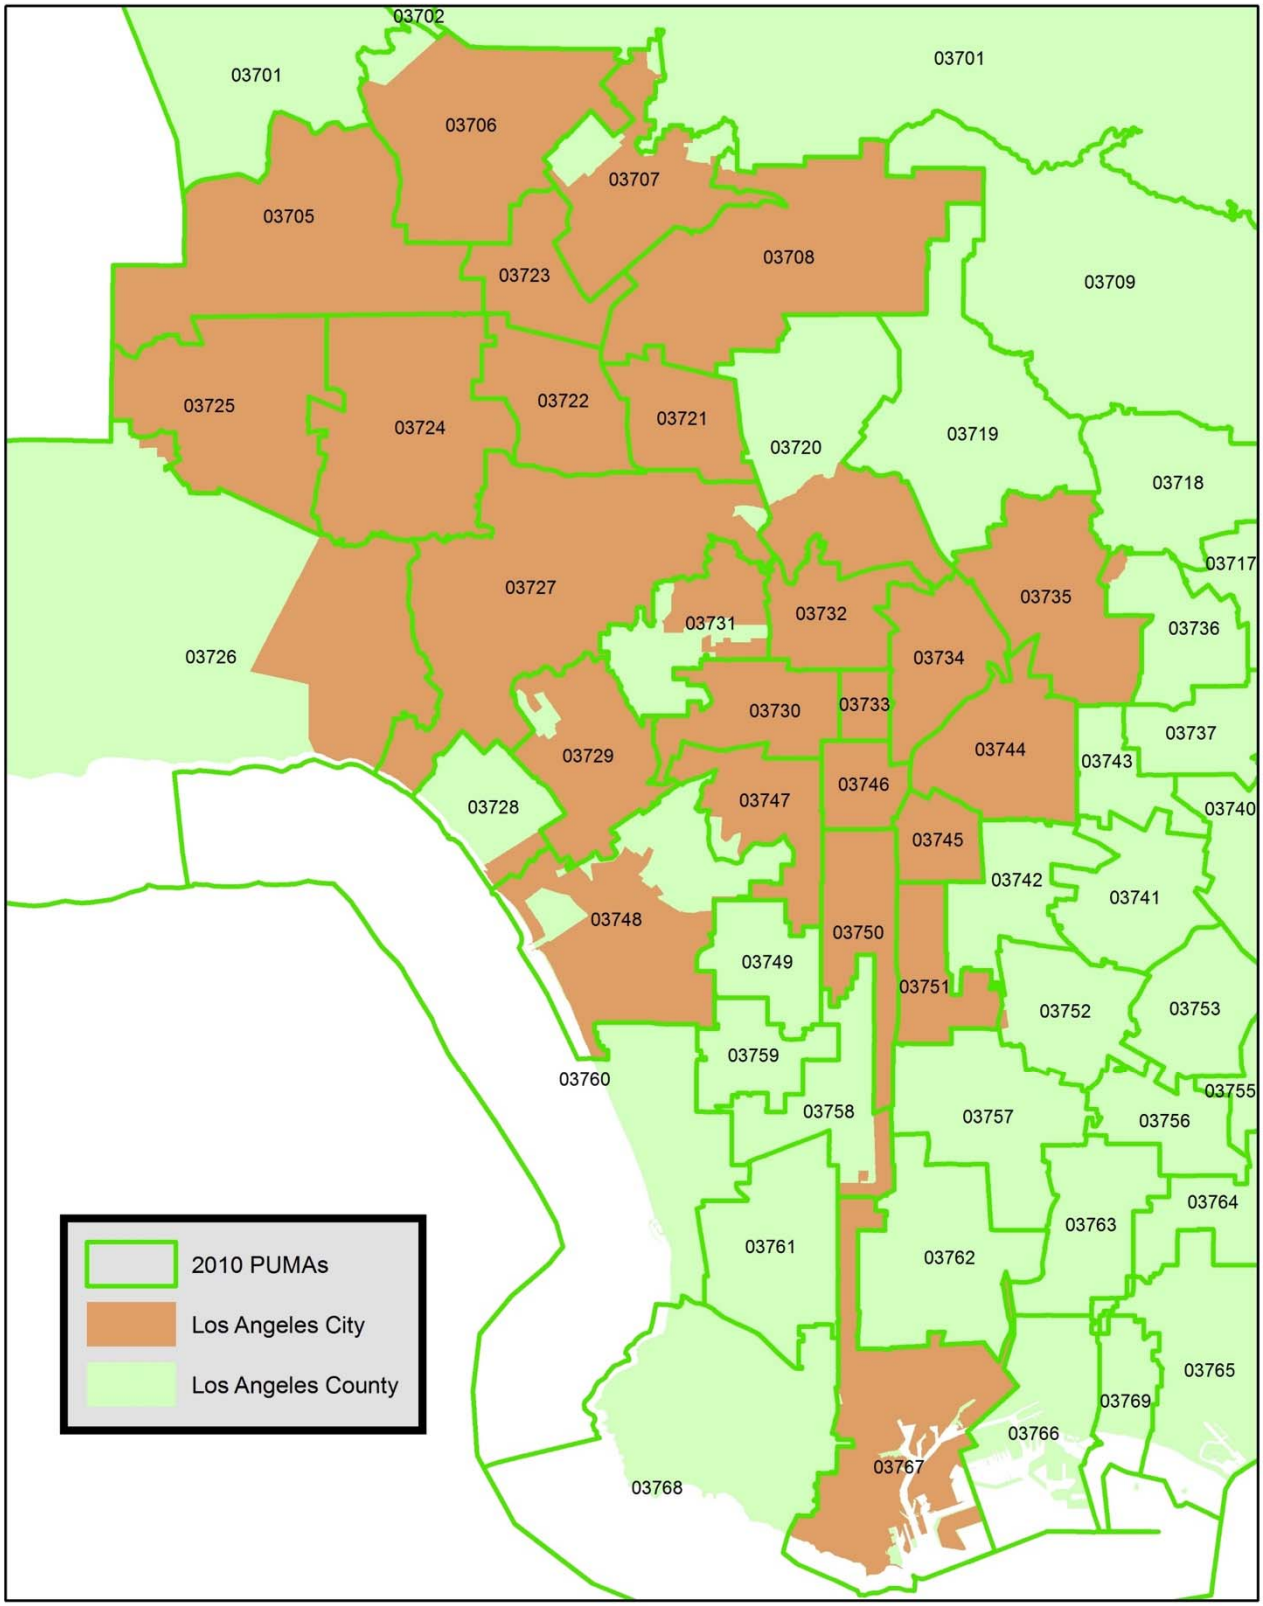
conditions, is also important, so that modulated fees can help to generate more fee income in areas where development is robust and encourage developers to do projects in areas where economic development is needed.

One important issue noted during interviews for this case study is the balance between certainty and discretion in the use of funds generated by the in-lieu fee. On the one hand, the funds must be earmarked for specific purposes. However, planners feel that they must be able to allocated the funds without constraints on the location or type of project. In Chicago as in other cities, there was pressure from the community to earmark in-lieu fees from a project to affordable units in the same neighborhood. Planners resisted the pressure and maintained their right to allocate fees to projects throughout the city, on the basis of need.

A similar tension exists in the provision about waivers: use of this provision must be very tightly regulated, to prevent abuse, but it remains useful as an escape valve for truly exceptional cases.

Appendix E: Residential Building Permit Analysis



APPENDIX E-1: RESIDENTIAL UNITS PERMITTED, CITY OF LOS ANGELES, 2011-2015

Permit database does not differentiate between single family small lots and conventional lots. Thus, single family attached and single family detached categories include small lot projects.

Appendix F: Los Angeles PUMAs

Appendix G: Overview of IMPLAN

This appendix provides additional clarification of the workings of the IMPLAN input-output model. It provides a step-by-step account of how IMPLAN estimates economic impacts using new residential development as an illustrative example. Definitions of key *italicized* terms are provided in footnotes for the benefit of the reader. This section begins with an overview of the data that IMPLAN uses internally, and moves forward through the process of how the model estimates the impacts of the construction phase of the proposed casino.

What is IMPLAN?

As stated in the main body of the text, IMPLAN is an input-output model that estimates the total economic implications of new economic activity within a specified geography. The model uses national industry data and county-level economic data to generate a series of multipliers, which in turn estimate the total economic implications of economic activity.

At the heart of the model is a national input-output dollar flow table called the Social Accounting Matrix (SAM). Unlike other static input-output models, which just measure the purchasing relationships between industry and household sectors, SAM also measures the economic relationships between government, industry, and household sectors, allowing IMPLAN to model transfer payments such as unemployment insurance. Thus, for the specified region, the input-output table accounts for all the dollar flows between the different sectors within the economy.

National Industry Data. The model uses national production functions for 440 sectors to determine how an industry spends its operating receipts to produce its commodities. The model also uses a national matrix to determine the *byproducts*[103] that each industry generates. To analyze the impacts of household spending, the model treats households as an "industry" to determining their expenditure patterns. IMPLAN couples the national production functions with a variety of county-level economic data to determine the impacts for our example.

d

County-Level Economic Data. In order to estimate the county-level impacts, IMPLAN combines national industry production functions with county-level economic data. IMPLAN collects data from a variety of economic data sources to generate average output, employment, and productivity for each of the industries in a given county. It also collects data on average prices for all of the goods sold in the local economy. In the case of our example, IMPLAN uses economic data for Los Angeles County. IMPLAN gathers data on the types and amount of output that each industry generates within the region. In addition, the IMPLAN model uses county-level data on the prices of goods and household expenditures to determine the

[103] The byproducts refer to any secondary commodities that the industry creates.

consumption functions of regional households and local government, taking into account the availability of each commodity within the specified geography.

Multipliers. IMPLAN combines this data to generate a series of SAM-type multipliers for the local economy. The multiplier measures the amount of total economic activity that results from an industry (or household) spending an additional dollar in the local economy. Based on these multipliers, IMPLAN generates a series of tables to show the economic event's *direct*, *indirect*, and *induced* impacts to gross receipts, or output, within each of the model's 536 sectors. These outputs are described below:

- **Direct Impacts**. Direct impacts refer to the dollar value of economic activity available to circulate through the economy. In the case of new residential development, the direct impacts are equal to the new households' discretionary spending. The direct impacts do not include household savings and payments to federal, state, and local taxes, as these payments do not circulate through the economy.

  It should be noted that impacts from retail expenditures differ significantly between the total economic value of retail and the amount available to circulate through the local economy. The nature of retail expenditures accounts for this difference. The model assumes that only the retail markup impacts the local economy, particularly for industries heavily populated with national firms such as gas stations and grocery stores. Since local stores buy goods from wholesalers and manufacturers outside of the area, and corporate profits also leave the local economy, only the retail markup will be available for distribution within the local economy. To the extent that retailers' headquarters are located within the county or region, the model allocates their portions of the impacts to the local economy.

- **Indirect Impacts.** The indirect impacts refer to the inter-industry impacts of the input-output analysis. Since IMPLAN is only used for the housing analysis for this report to assess the impacts of new resident household expenditures, there are no indirect impacts to assess as there are no industry expenditures as inputs to the model.

- **Induced Impacts.** The induced impacts refer to the impacts of household spending by the employees generated by the direct and indirect impacts. In other words, induced impacts result from the household spending of employees of business establishments that the new households patronize (direct) and their suppliers (indirect). The model accounts for local commute patterns in the geography. For example, if 20 percent of construction workers who work in the region live outside of the region, the model will allocate 80 percent of labor's disposable income into the model to generate induced impacts. The model excludes payments to federal and state taxes and savings based on the geography's average local tax and savings rates. Thus, only the disposable incomes from local workers are included in the model.

Specifying the "Event" and Running the Model

Once the model is built for the specified geographies, it is time to specify the "event" that the model will analyze and run the model.

Specifying the "Event." The "event" refers to the total economic value of industry output that we are interested in analyzing. In the case of the ongoing economic impacts of a new residential development, the "event" would be the total household incomes of the households that buy or rent the homes.

Running the Model. Once the event is specified, IMPLAN runs the event through the model to generate the results. IMPLAN applies the local data on average output per worker and compensation per worker to determine the direct impacts. It then applies the value of the event to the national production functions and runs a number of iterations of this value through the production functions for the local economy to determine the indirect and induced impacts. For each iteration, the model removes expenditures to government, savings, and for goods bought outside of the local economy so that the results only include those dollars that impact the local economy.

Summarizing the Impacts

Once the model is run, IMPLAN generates a series of output tables to show the direct, indirect, and induced impacts within each of the model's 536 sectors. IMPLAN generates these tables for three types of impacts: output, employment, and value added. This nexus study is concerned with the employment impacts.

- *Output* refers to the total economic value of the project in the local economy.
- *Employment* shows the number of employees needed to support the economic activity in the local economy. It should be noted that for annual impacts of ongoing operations, the employment figure shown represents the amount of employment needed to support that activity for a year. Furthermore, IMPLAN reports the number of jobs based on average output per employee for a given industry within the geography. This is not the same as the number of full-time positions.
- *Value Added* shows the total income that the event generates in the local economy. This income includes:
    - *Employee Compensation* – total payroll costs, including benefits
    - *Proprietary Income* – payments received by self-employed individuals as income
    - *Other Property Type Income* – payments for rents, royalties, and dividends
    - *Indirect Business Taxes* – excise taxes, property taxes, fees, and sales taxes paid by businesses. These taxes occur during the normal operation of businesses, but do not include taxes on profits or income.

Feasible? (d)	No	No	Yes	Yes	Yes	Yes

Notes:

a) Assumes 50% of open space requirement is satisfied on first floor as common open space, pursuant to LAMC Section 12.21G. The remaining open space requirement will be satisifed on private balconies and a roof top deck.

b) Proposed park fees under study by City Council are:

Quimby (for subdivisions)	$ 10,000	per dwelling unit
Park Facililties Fee (applicable to all rental units)	$ 5,000	per dwelling unit

c) School Fees for Residential

Current	$ 3.36	psf
Anticipated to Increase in Fall 2016	$ 3.54	psf

d) Project feasibility assumes a minimum return on cost of 15%
and a minimum yield on cost of 6%

Notes:

a) Assumes RD-1.5-1 zoning

The remaining open space requirement will be satisifed on private balconies and a roof top deck.

b) Proposed park fees under study by City Council are:

Quimby (for subdivisions)	$ 10,000	per dwelling unit
Park Facililties Fee (applicable to all rental units)	$ 5,000	per dwelling unit

c) School Fees for Residential

Current	$ 3.36	psf
Anticipated to Increase in Fall 2016	$ 3.54	psf

d) Project feasibility assumes a minimum return on cost of 15%

Appendix I: Minimum Wage Analysis

This appendix provides additional detail on the methodology and calculations that supported the analysis of the potential impacts of the future increase in the City of Los Angeles minimum wage, as summarized in the body of this report. In summary, BAE analyzed the potential impacts of the minimum wage increase by determining the household AMI levels for workers that will earn the new minimum wage and adjusting the household income distribution among the workers generated by each residential or commercial land use type accordingly. BAE then re-calculated the maximum fee based on the adjusted household income distribution. The detailed steps and calculation tables are discussed below.

Step 1: Determine AMI bands for households with workers earning the new minimum wage

Step 1A: Discount the minimum wage to 2016 dollars

Since the full $15 minimum wage will take effect beginning in 2020 (2021 for some employers), this analysis is based on an estimate of the $15 hourly wage in current (2016) dollars. Although the $15 minimum wage will take full effect with all employers in 2021, this analysis discounts the $15 wage assuming implementation in 2020, when it will apply to the majority of employers. Assuming three percent annual inflation, $15 in 2020 is equivalent to approximately $13.33 in 2016 dollars.

Step 1B: Calculate the annual household income for workers earning the new minimum wage

Assuming full-time employment, the discounted 2020 minimum wage would result in an annual income of approximately $27,700 ($13.33 per hour x 2,080 work hours per year) in 2016 dollars, as shown below. According to the US Census American Community Survey, as of 2014 the City of Los Angeles had 1,849,845 workers living in households and 1,047,928 households with at least one worker, averaging approximately 1.77 workers per household with workers. Therefore, this analysis uses an average of 1.77 workers per worker household to calculate household income among minimum wage workers, resulting in an annual worker household income equal to approximately $48,900.

Step 1C: Determine the AMI level for minimum wage worker households

According to 2016 HCD income limits for a household in Los Angeles County, a household earning the annual income derived in Step 1B ($48,900 per year) falls within the low-income AMI band for any household size from two to five people. Accordingly, this analysis places minimum wage worker households into the low-income AMI band.

TABLE I-1: HOUSEHOLD INCOME AT INCREASED MINIMUM WAGE, LOS ANGELES, 2020

2020 Minimum Hourly Wage (Nominal) (a)	$15
2020 Minimum Hourly Wage in 2016 $ (b)	$13
Annual Worker Income at Minimum Wage (2016 $) (c)	$27,721
Minimum Wage Worker Household Income (2016 $) (d)	$48,934
Minimum Wage Worker Household Income Level (e)	Low Income

Notes:
(a) 2020 Minimum Wage for businesses with 26 or more employees per City of Los Angeles Minimum Wage Ordinance. The mimimum wage for businesses with 25 or fewer employees will increase to $15 per hour in 2021.
(b) Assumes 3% annual inflation.
(c) Assumes 2080 work hours per year (40 hrs per week x 52 weeks per year).
(d) Average number of workers per worker household calculated for Los Angeles County based on American Community Community Survey data, 2010-2014.

Total Workers	1,849,845
Total Households with Workers	1,047,928
Avg. Workers per Household	*1.765*

(e) Based on 2016 HCD income limits for a 3-person household.
Sources: City of Los Angeles, 2016; ACS, 2010-2014; CA Dept. of Housing and Community Development, 2016; BAE, 2016.

Step 2: Adjust the household income distribution for workers generated by new development.

The findings from Step 1 indicate that all worker households that fall into the extremely low- or very low-income AMI bands under current minimum wage requirements would fall into the low-income AMI band following an increase in the minimum wage to $15 in 2020. As a result, all of the extremely low- and low-income housing need generated by the eight commercial land use types and the four residential product types analyzed in the Nexus Study would instead constitute low-income housing need.

Accordingly, in Step 2 of the minimum wage analysis, BAE adjusted the income distribution among the worker households generated by each commercial and residential land use type (from Step 6 in the commercial maximum fee calculations and Step 5 in the residential maximum fee calculations) by moving all extremely low- and very low-income households into the low-income AMI band. The resulting household income distributions are shown below.

Step 3: Re-calculate the maximum legal fees using the adjusted AMI distributions

Step 2 results in an income distribution that shows a reduction in extremely low- and very low-income households (to zero) and a commensurate increase in low-income households. As shown in Step 7 of the commercial and residential maximum fee calculations in the body of this report, the subsidy gap for low-income units is smaller than the subsidy gap for extremely low- or very low-income units. Consequently, the cost associated with providing housing for households below the moderate income level decreases as extremely low- and very low-income households shift to become low-income households as discussed in Step 2 above. The lower per-unit cost associated with housing low-income households as compared to

extremely low- and very low-income households results in a lower maximum legal fee under the new minimum wage requirements. The adjusted fee calculations are shown below.

APPENDIX I-2: MAXIMUM COMMERCIAL LINKAGE FEES PER NEW CITY MINIMUM WAGE, LA, 2016

Affordable Housing Need	Office	Creative Office	Retail	Hotel/ Motel	Industrial	Institutional	Medical & Social Assistance	Construction, Warehousing, & Wholesale Trade
Extremely Low Income (up to 30% AMI)	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0

I. EXECUTIVE SUMMARY

Introduction

The City of Santa Rosa is considering implementing a commercial linkage fee on new development projects. The purpose of this fee is to mitigate the impact of new market rate development on the demand for affordable housing. When a city or county adopts a development impact fee, it must establish a reasonable relationship or connection between the development project and the fee that is charged. Studies undertaken to demonstrate this connection are called nexus studies. This nexus study quantifies the connection between the development of market rate commercial space and the demand for affordable housing units.

This commercial linkage fee nexus study quantifies the connection between the development of commercial hotel, retail/restaurants/services, and business park/light industrial projects and the demand for affordable housing units. The study also considers feasibility and other policy implications of implementing an impact fee.

Report Organization

This executive summary highlights the study's approach, the results of the analysis, and recommendations. Subsequent chapters provide more detailed information on the data sources, methodology used in this analysis, and study findings.

The report is organized into five sections, an appendix, and a glossary of terms. Following this Executive Summary, Section II provides an introduction to the purpose of the study, and an overview of the nexus concept. Section III provides a detailed description of the methodology and the results of the maximum fee calculation. Section IV discusses financial feasibility testing of the maximum justified fee and other fee scenarios. Section V discusses other policy considerations that jurisdictions typically weigh before implementing a nexus fee and provides implementation options for the City of Santa Rosa.

Nexus Analysis Methodology and Results

This nexus study uses a 5 – step methodology to calculate the maximum legal fee charged on new commercial development for affordable housing. This section summarizes the steps taken to calculate the nexus-based maximum fee amount per rentable square foot of new commercial space. More detail on each step can be found in later sections of this report.

Step 1: Establish commercial prototypes representing typical commercial development in Santa Rosa.

The first step in the nexus study is to identify commercial prototypes. The prototypes used in this study are not intended to represent specific development projects; rather, they represent commercial development recently constructed or proposed in Santa Rosa. This study examined the jobs-housing linkage for three commercial development prototypes, shown in Figure 1.

FIGURE 1: COMMERCIAL PROTOTYPES

	Hotel	Retail/ Restaurants/ Services	Business Park/ Light Industrial
Gross Building Area (SF)	100,000	100,000	100,000
Efficiency Ratio (a)	N/A	0.95	0.95
Net Leasable Sq. Ft. (NSF)	N/A	95,000	95,000
Hotel Rooms	175		
Net Leasable Office Area (SF)			4,750
Parking Ratio (per Room/1000 SF)	1	4	3
Parking Spaces	175	400	300
Floor Area Ratio	1.0	0.2	0.4
Land Area (Acres)	2.3	11.5	5.7
Land Area (SF)	100,000	500,000	250,000

Notes:
(a) Refers to ratio of gross building area to net leasable area. An efficiency ratio of 0.95 means that 95% of the gross building area is leasable.
(b) The floor-area-ratio (FAR) is often used as a measure of density. In this analysis, it is calculated as the gross building area divided by the total land area.
Source: City of Santa Rosa, 2018; Strategic Economics, 2019.

Step 2: Estimate the number of workers that will work in the new commercial space.

The next step is to calculate the number of workers associated with each building prototype. These estimates are based on a review of national survey data for existing commercial buildings, as well as from recently completed linkage fee nexus studies in the Bay Area. These density factors represent the average density for the prototypes. The density factors were multiplied by the building size (100,000 square feet) to calculate the total number of workers occupying each commercial prototype, as shown in Figure 2.

FIGURE 2: EMPLOYMENT DENSITY AND NUMBER OF WORKERS BY PROTOTYPE

Commercial Prototype	Prototype Size (SF)	Average Density (SF per Worker)	Number of Workers in Prototype
Hotel	100,000	1,000	100
Retail/Restaurant/Services	100,000	300	333
Business Park/Light Industrial	100,000	350	286

Sources: Vallen and Vallen, "Chapter 1: The Traditional Hotel Industry," Check-In, Check-Out, 2012; Sonoma County Housing Needs Study, Economic & Planning Systems, 2006; A.C. Nelson, "Reshaping Metropolitan America," 2013; Jobs Housing Impact Fee Draft Nexus Study: City of Napa, CA, Vernazza Wolfe Associates Inc., 2011; City of Santa Rosa, 2018; Strategic Economics, 2019.

Step 3: Estimate Worker Household Incomes.

Next, the wages of workers who would be employed in the commercial prototypes were estimated. This step determines the proportion of households eligible for affordable housing. Estimating worker household incomes involves the following 4 steps:

A. Establish a list of industries and occupations associated with each prototype.

B. Estimate worker wages.

C. Convert worker wages to household incomes.

D. Determine the number of worker households eligible for affordable housing.

Figure 3 shows the number of households in four income categories by prototype.

FIGURE 3: NUMBER OF WORKER HOUSEHOLDS BY INCOME CATEGORY

Prototype	Number of Employee Households
Hotel	
Very Low Income (<=50% AMI)	2.4
Low Income (51-80% AMI)	45.6
Moderate Income (81-120% AMI)	8.0
Above Moderate (>120%)	6.5
Total	**62.4**
Retail/Restaurant/Personal Services	
Very Low Income (<=50% AMI)	65.8
Low Income (51-80% AMI)	125.4
Moderate Income (81-120% AMI)	9.9
Above Moderate (>120%)	7.0
Total	**208.1**
Business Park/Light Industrial	
Very Low Income (<=50% AMI)	0.6
Low Income (51-80% AMI)	48.8
Moderate Income (81-120% AMI)	51.6
Above Moderate (>120%)	77.4
Total	**178.4**

Sources: Strategic Economics, 2019.

Step 4: Calculate the affordability gap for new, lower income households.

The fourth step is to calculate the housing affordability gap. The housing affordability gap is defined as the difference between what very low, low, and moderate-income households can afford to pay for housing, and the cost to develop new, modest housing units. Calculating the housing affordability gap involves the following three steps:

A. Estimate affordable rents and housing prices for very low, low, and moderate-income households.

B. Estimate development costs of building new, modest housing units, based on current construction and land cost data.

C. Calculate the difference between what renters and owners can afford to pay for housing and the cost of development of rental and ownership units.

Figure 4 shows estimates of the housing affordability gap for very low, low, and moderate-income households.

FIGURE 4: AVERAGE AFFORDABILITY GAP BY INCOME GROUP

Income Level	Rental Gap	Ownership Gap	Average Affordability Gap
Very Low-Income (<=50% AMI)	$210,392	N/A	$210,392
Low-Income (50% - 80% AMI)	$133,981	N/A	$133,981
Moderate-Income (80% - 120% AMI)	$75,924	$82,003	$78,963

Source: Strategic Economics, 2019.

Step 5: Calculate maximum commercial linkage fee for each prototype.

Finally, the maximum commercial linkage fee for each prototype was derived by multiplying the total number of very low, low, and moderate- income new worker households for each prototype (calculated in Step 3), by the corresponding affordable housing gap figure (calculated in Step 4). The total affordability gap was then divided by 100,000 SF, the size of each commercial prototype, to generate a maximum fee per square foot.

Figure 5 presents the results of the linkage fee calculations for each prototype.

FIGURE 5: MAXIMUM COMMERCIAL LINKAGE FEES

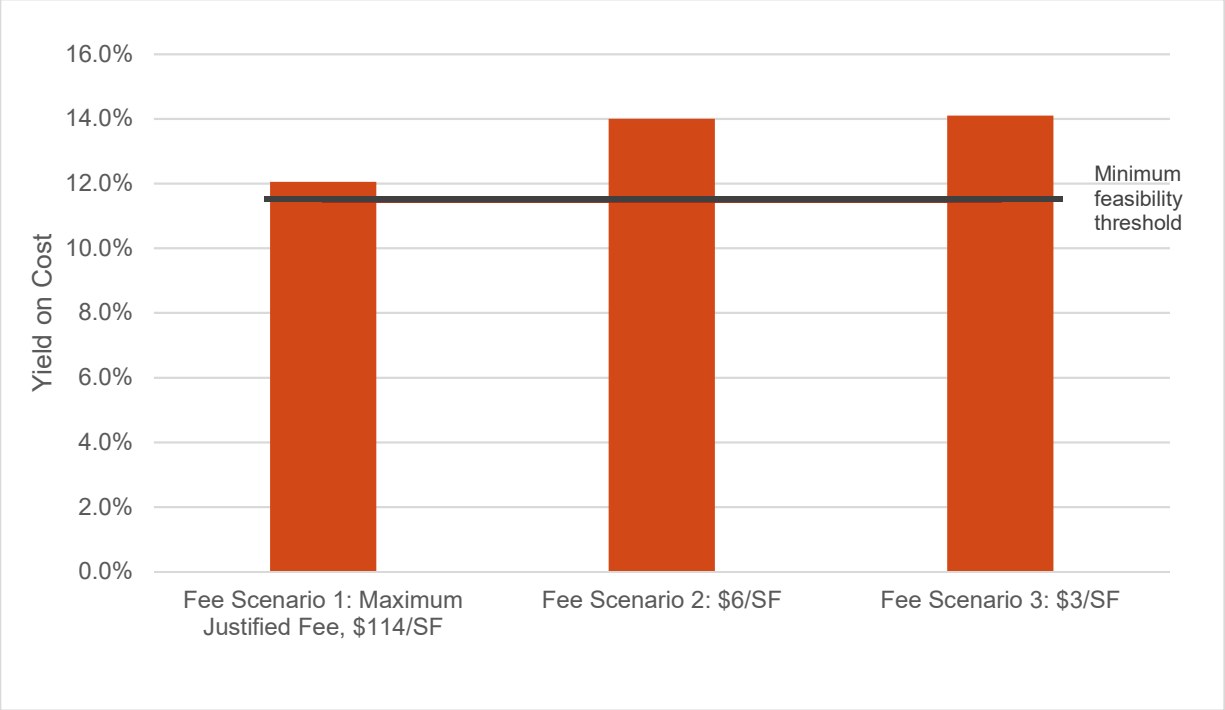
	Worker Households Requiring Affordable Housing	Affordability Gap for All New Worker Households	Size of Prototype (SF)	Maximum Fee per SF
Hotel	56	$7,513,688	100,000	$75
Retail/Restaurants/Personal Services	204	$32,015,109	100,000	$320
Business Park/Light Industrial	102	$11,357,815	100,000	$114

Source: Strategic Economics, 2019.

Policy and Feasibility Considerations

There are a number of policy considerations jurisdictions take into account when they consider a new commercial linkage fee. These may include factors such as:

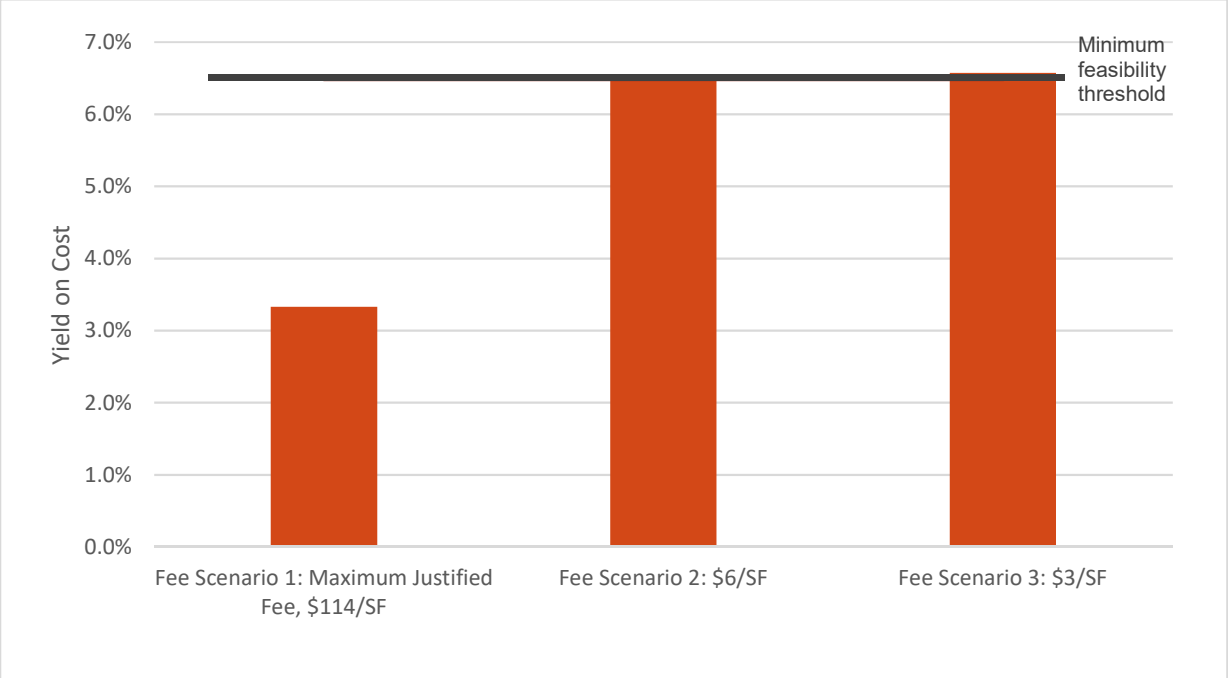
- Development feasibility.
- Total development costs.
- Comparison to neighboring jurisdictions.
- The fee's role in the City's overall strategy for affordable housing implementation.



Financial Feasibility

Financial feasibility is just one of several factors to consider in making a decision regarding a potential nexus fee. In order to provide Santa Rosa with guidance on how proposed fees could impact

development decisions, the Consultant Team conducted a pro forma analysis that tested the financial impact of the maximum and reduced fee scenarios for each prototype.



- **Hotel:** The feasibility analysis indicates that under current economic conditions, the maximum justified fee ($75 per square foot) meets the required threshold (11.5%-13.5%) for financial feasibility as do two reduced fee levels of $6 and $3 per square foot (Figure 6).
- **Retail/Restaurants/Services:** The feasibility analysis indicates that under current economic conditions, the maximum justified fee ($320 per square foot) does not meet the required threshold (6.5%-7.5%) for financial feasibility, but reduced fee levels of $6 and $3 per square foot do marginally meet the minimum feasibility threshold (Figure 7).
- **Business Park/Light Industrial:** The feasibility analysis indicates that under current economic conditions, the maximum justified fee ($114 per square foot) does not meet the required threshold (6.0%-7.0%) for financial feasibility, but reduced fee levels of $6 and $3 per square foot do marginally meet the minimum feasibility threshold (Figure 8).

FIGURE 6: FEASIBILITY RESULTS, HOTEL PROTOTYPE

Source: Strategic Economics, 2019.

FIGURE 7: FEASIBILITY RESULTS, RETAIL/RESTAURANTS/SERVICES PROTOTYPE

Source: Strategic Economics, 2019.

FIGURE 8: FEASIBILITY RESULTS, BUSINESS PARK/LIGHT INDUSTRIAL PROTOTYPE

Source: Strategic Economics, 2019.

Total Development Cost

Currently, the total development costs (including building and onsite improvements, land, parking, indirect costs, financing costs, developer overhead, and existing fees) are $423 per square foot for the hotel prototype, $323 per net square foot for the retail/restaurant/services prototype, and $125 per net square foot for the business park/light industrial prototype. The addition of the maximum housing impact fees would represent 15 percent, 50 percent, and 48 percent of total development cost of the hotel, retail/restaurant/services, and business park/light industrial prototypes, respectively. A fee of $6 per square foot represents 1.4 percent, 1.8 percent, and 4.6 percent of total development cost of the hotel, retail/restaurant/services, and business park/light industrial prototypes, respectively, and a fee of $3 per square foot represents 0.7 percent, 0.9 percent, and 2.3 percent of total development cost of the hotel, retail/restaurant/services, and business park/light industrial prototypes, respectively.

Comparison to Neighboring Jurisdictions

A comparison to current commercial linkage fees charged in nearby or comparison cities can be a helpful consideration. Figure 9 provides available information on commercial linkage fees to compare Santa Rosa's potential fee scenarios to existing fees in selected jurisdictions.

If the maximum commercial linkage fees calculated for Santa Rosa were adopted, they would significantly exceed the fees charged in neighboring and comparison jurisdictions, as listed in Figure 9. Current fees in neighboring and comparison jurisdictions range from $0.69 per square foot for hotel in Rohnert Park to $6.00 per square foot for hotel in Fremont and Napa and for retail uses in Fremont.

The recommended fee level of $3 per square foot is comparable to or lower than the fees in place in several jurisdictions including Cotati, Napa, Petaluma, Pleasanton, and Sonoma County.

FIGURE 9: EXISTING COMMERCIAL LINKAGE FEES IN SELECTED CITIES

City/County	Hotel	Retail/Restaurant/ Personal Services	Business Park/Light Industrial
Berkeley	$4.50	$4.50	$2.25
Cotati	$2.08	$3.59	$2.15
Fremont	$6.00	$6.00	$3.00
Napa	$6.00	$3.55	$3.50
Petaluma	$2.42	$4.17	$2.49
Pleasanton	$3.15	$3.15	$3.15
Rohnert Park	$0.69	$1.19	$0.71
San Rafael	$1.91	$5.73	$4.14
Sonoma County	$2.92	$5.05	$3.01

Source: Strategic Economics, 2019.

Implementation Options and Recommendations

This study finds the maximum justified linkage fees are $75 per square foot for hotel, $320 per square foot for retail/ restaurants/ services, and $114 per square foot for business park/light industrial.

If Santa Rosa elects to impose a new commercial linkage fee, the recommended fee level is $3 per square foot for the three land uses. These recommendations are based on the findings of the financial feasibility analysis, a comparison of fees in neighboring jurisdictions, and other factors as explained in the Policy Considerations section, above. The recommended fee levels are shown in Figure 10.

FIGURE 10: RECOMMENDED LINKAGE FEES BY COMMERCIAL PROTOTYPE

Prototype	Maximum Fee per SF	Recommended Fee per SF
Hotel	$75	$3
Retail/Restaurants/Personal Services	$320	$3
Business Park/Light Industrial	$114	$3

Sources: Strategic Economics, 2019.

II. INTRODUCTION

The City of Santa Rosa is considering implementing a commercial linkage fee charged on new retail, hotel, and light industrial/ business park development projects. The purpose of a commercial linkage fee is to mitigate the impact of new commercial development on the demand for affordable housing from new workers.

When a city or county adopts a commercial linkage fee, it must establish a reasonable relationship or connection between the development project and the fee that is charged. Studies undertaken to demonstrate this connection are called nexus studies. The nexus study quantifies the connection between new commercial development and the demand for affordable housing units.

Background

For more than thirty years, California cities and counties have imposed commercial linkage fees on new, non-residential developments. Linkage fees are one of several funding sources that jurisdictions can use to help meet the affordable housing needs of new workers. Commercial linkage fees and other impact fees have been a common practice and deemed legally defensible following landmark cases such as *Ehrlich v. Culver City* in 1996, in which the California Supreme Court established that exactions on developers were permissible provided that the exaction amount bear a reasonable relationship to, and reflect the magnitude of, the impact of the development on the community.

The funds raised by the linkage fees are deposited into a housing fund specifically reserved for use by a local jurisdiction to increase the supply of affordable housing for the workforce. Many municipalities offer alternative means of complying with their fee requirements, such as allowing developers to provide affordable units as a part of their development or dedicate land for affordable housing.

Santa Rosa does not currently have a commercial linkage fee in place. The purpose of this study is to provide the necessary nexus analysis for commercial linkage fees should Santa Rosa decide to adopt them.

The Nexus Concept

This commercial linkage fee nexus study establishes and quantifies the linkages or “nexus” between new commercial development and the need for additional housing affordable for new workers.

Growth in employment will provide jobs at various wage rates. While some jobs will pay salaries that will allow new workers to rent or purchase market rate housing, others will provide lower wages. Some of the new workers will have household incomes low enough to qualify them for income-restricted affordable housing. Given this, there may be an affordability gap between what worker households can afford to pay for housing, and what the actual costs of new housing may be. This study quantifies the demand for very low income, low income, and moderate income housing that is created by new development of commercial buildings. In order to adopt a commercial linkage fee, a nexus study is required to determine the reasonable relationship between the fee's use and the impact of the development project on which the fee is imposed.

The nexus analysis presented in this study is designed to define an upper limit for a commercial linkage fee to be charged on new commercial development to mitigate impacts on affordable housing needs. The maximum fee is not necessarily the recommended fee. Subsequent sections of this report address

additional policy considerations when adopting a commercial linkage fee quantify the increase in demand for affordable housing that accompanies new non-residential development.

III. CALCULATION OF THE NEXUS FEE

This commercial linkage nexus study uses a 5 – step methodology to calculate the maximum justified fee on new commercial development for affordable housing. This section describes the steps taken to calculate the nexus-based maximum fee amount per square foot.

Step 1: Establish the Commercial Prototypes

The first step in this study is to identify commercial prototypes. They are not intended to represent specific development projects; rather, the prototypes used in this study represent commercial development recently constructed or proposed in Santa Rosa. This study examined the jobs-housing linkage for three commercial development prototypes, which are described below and shown in Figure 11.

- **Hotel:** This building prototype includes full-service hotels, limited-service hotels, motels, and other lodging.

- **Retail/Restaurants/Services:** This building prototype includes a broad range of buildings, including retail stores, restaurants, and personal care spaces accommodating businesses like nail salons and dry cleaners.

- **Business Park/Light Industrial:** This building prototype could include a wide range of light industrial, office, and R&D users, including open floor-plan offices, medical offices, and cannabis-related uses found in Sonoma County.

The prototypes defined above represent the types of new commercial buildings recently constructed or proposed in Santa Rosa. Each prototype was assumed to be 100,000 square feet in size. This building size is not intended to represent the size of actual projects being built in Santa Rosa. Many linkage fee nexus studies use 100,000 square feet because it can easily be converted into per-square-foot calculations. The per-square-foot linkage fee can be applied to a project of any size.

FIGURE 11: COMMERCIAL PROTOTYPES

	Hotel	Retail/ Restaurants/ Services	Business Park/ Light Industrial
Gross Building Area (SF)	100,000	100,000	100,000
Efficiency Ratio (a)	N/A	0.95	0.95
Net Leasable Sq. Ft. (NSF)	N/A	95,000	95,000
Hotel Rooms	175		
Net Leasable Office Area (SF)			4,750
Parking Ratio (per Room/1000 SF)	1	4	3
Parking Spaces	175	400	300
Floor Area Ratio	1.0	0.2	0.4
Land Area (Acres)	2.3	11.5	5.7
Land Area (SF)	100,000	500,000	250,000

Notes:
(a) Refers to ratio of gross building area to net leasable area. An efficiency ratio of 0.95 means that 95% of the gross building area is leasable.
(b) The floor-area-ratio (FAR) is often used as a measure of density. In this analysis, it is calculated as the gross building area divided by the total land area.
Source: Strategic Economics, 2019.

Step 2. Estimate the Number of Workers

The next step is to calculate the number of workers associated with each building prototype. These estimates are based on a review of national survey data for existing commercial buildings, as well as from recently completed linkage fee nexus studies in the Bay Area.

The employment densities assumed for each prototype are described below. These density factors represent the average density for the prototypes; specific employment densities for development projects may vary. The density factors were multiplied by the building size (100,000 square feet) to calculate the total number of workers occupying each commercial prototype, as shown in Figure 12.

- **Hotel:** The hotel employment density assumption is 1,000 square feet per worker (or 1 worker per room, assuming an average of 1,000 gross square feet per room[1]). For a 100,000-square-foot hotel, this density assumption results in a total number of 100 workers.

- **Retail/Restaurants/Services:** The average density for retail/restaurants/services is estimated at 300 square feet of space per worker. Using this density, the number of workers in a 100,000 square foot prototype is estimated at 333.

- **Business Park/Light Industrial:** The average density assumption for business park/light industrial is estimated at 350 square feet per worker. The resulting number of total workers in this prototype is estimated at 286.

FIGURE 12: EMPLOYMENT DENSITY AND NUMBER OF WORKERS BY PROTOTYPE

Commercial Prototype	Prototype Size (SF)	Average Density (SF per Worker)	Number of Workers in Prototype
Hotel	100,000	1,000	100
Retail/Restaurant/Personal Services	100,000	300	333
Business Park/Light Industrial	100,000	350	286

Nelson, "Reshaping Metropolitan America," 2013; Jobs Housing Impact Fee Draft Nexus Study: City of Napa, CA, Vernazza Wolfe Associates Inc., 2011; City of Santa Rosa; Strategic Economics, 2019.

1 Gross square footage includes restaurants, conference facilities, gyms, business centers, and other hotel facilities.

Step 3. Estimate Worker Household Incomes

Next, the wages of workers who would be employed in the commercial prototypes were estimated. This allowed Strategic Economics to determine the income levels of worker households, and therefore the proportion of households eligible for affordable housing.

Estimating worker household incomes involves the following four steps:

E. Establish a list of industries and occupations associated with each prototype.

F. Estimate worker wages.

G. Convert worker wages to household incomes.

H. Determine the number of worker households eligible for affordable housing.

Step 3A. Establish Industries and Occupations Associated with each Prototype

The first step in calculating employee wages is to establish a list of the industries associated with each prototype. Using industry data from Quarterly Census of Employment and Wages (QCEW), industries (defined by NAICS codes) were identified that would be most likely to occupy each prototype. The appendix to this report includes figures showing the industries that are associated with the hotel, retail/restaurants/services and business park/light industrial prototypes, respectively.

The next step is to identify all the occupations that are associated with each industry based on data provided by the U.S. Bureau of Labor Statistics (BLS). The national BLS occupational matrix is then calibrated to match the county's employment mix by weighting the national employment distribution to reflect the distribution of employment by industry within Sonoma County. The complete list of occupations for each prototype is presented in the appendix.

Step 3B. Estimate Worker Wages

Next, the average wage by worker is calculated using data on average annual wages by occupation in the San Francisco-Redwood City-Sonoma Metro Division from the California Employment Development Department.

Figure 13 below summarizes the results of these calculations, computing the average annual weighted wage [2] for each prototype. As shown, the average wage is lowest for workers in retail/restaurants/services. Hotel workers have a slightly higher average wage than retail/restaurant/service workers, while business park/light industrial employees have the highest average wage of the three prototypes.

[2] The weighted average wage takes into account the proportion of jobs in each occupational category.

FIGURE 13: AVERAGE ANNUAL WAGE BY PROTOTYPE

Commercial Prototype	Weighted Average Annual Wage (a)
Hotel	$36,014
Retail/Restaurants/Personal Services	$29,743
Business Park/Light Industrial	$61,060

Notes:

(a) Average wages are weighted to take into account the proportion of jobs in each occupational wage category.
Sources: Quarterly Census of Employment and Wages; U.S. Bureau of Labor Statistics; Strategic Economics, 2019.

Step 3C. Convert Worker Wages to Household Incomes

Many households include multiple wage earners. In order to determine the number of worker households required to fill the jobs associated with each prototype, the number of new workers (calculated in Step 2) was divided by 1.60, or the average number of wage-earners per working household in Santa Rosa, according to the U.S. Census Bureau's American Community Survey, 5-Year Estimates, 2011-2015. The calculation of total new worker households is shown in Figure 14.

The analysis also assumed that the income of the second wage-earner in a household would be similar to the wage of the first wage-earner. Accordingly, individual worker wages (estimated in Step 3B) were multiplied by 1.60 to represent total household incomes.

FIGURE 14: NUMBER OF WORKER HOUSEHOLDS BY PROTOTYPE

Commercial Prototype	Number of New Workers	Workers Per Household	Number of New Worker Households
Hotel	100	1.60	62
Retail/Restaurant/Personal Services	333	1.60	208
Business Park/Light Industrial	286	1.60	178

Sources: US Census, American Community Survey 5-Year Estimates, 2012-2016; Strategic Economics, 2019.

Step 3D. Determine the Number of Worker Households Eligible for Affordable Housing

Next, worker households are categorized as very-low, low, moderate, and above-moderate income based on the income definitions and cut-offs established by the California Housing and Community Development Department (HCD) for a three-person household, or the average household size in the City of Santa Rosa according to the U.S. Census Bureau American Community Survey 5-Year Estimates, 2012-2016. These income cut-offs are shown in Figure 15. Figure 16 shows the number of households in each income category by prototype. Above-moderate income households were removed from the subsequent steps of the nexus analysis, as it is assumed that these income groups would be able to afford market-rate housing.

FIGURE 15: HOUSEHOLD INCOME CATEGORIES

Income Category	3-Person Household
Very Low Income (<=50% AMI)	$37,200
Low Income (51-80% AMI)	$59,350
Moderate Income (81-120% AMI)	$89,200
Above Moderate Income (>120%)	>$89,200

Very Low Income (<=50% AMI)	0.6
Low Income (51-80% AMI)	48.8
Moderate Income (81-120% AMI)	51.6
Above Moderate (>120%)	77.4
Total	**178.4**

Sources: Strategic Economics, 2019.

Step 4. Calculate the Housing Affordability Gap

Next, the housing affordability gap is estimated. The housing affordability gap is defined as the difference between what very low, low, and moderate-income households can afford to pay for housing, and the cost to develop new, modest housing units. The calculation does not assume the availability of any other source of housing subsidy because not all "modest" housing is built with public subsidies, and tax credits and tax-exempt bond financing are highly competitive programs that will not always be available to developers of modest housing units.

Calculating the housing affordability gap involves the following three steps:

D. Estimate affordable rents and housing prices for very low, low, and moderate-income households.

E. Estimate development costs of building new, modest housing units, based on current construction and land cost data.

F. Calculate the difference between what renters and owners can afford to pay for housing and the cost of development of rental and ownership units.

Each step is described below.

Step 4A. Estimate Affordable Rents and Sales Prices

The first step in calculating the housing affordability gap is to determine the maximum amount that households at the targeted income levels can afford to pay for housing. The maximum affordable monthly rent is calculated as 30 percent of gross monthly household income, minus a deduction for utilities. Homeowners are assumed to pay a maximum of 35 percent of gross monthly income on total housing costs. Figure 17 show the calculations for rental housing. Figure 18 show the calculations for ownership housing. Key assumptions used to calculate the maximum affordable rents and housing prices are discussed below.

- **Unit types.** For rental housing, the analysis included studios, and one-, two-, and three-bedroom apartment units. For for-sale housing, two- and three-bedroom townhouse units were included. These unit types represent the affordable and modestly priced rental and for-sale units available in Santa Rosa.
- **Occupancy and household size assumptions**. Calculating affordable unit prices requires defining household sizes for each unit type. Consistent with California Health and Safety Code Section 50052.5(h), unit occupancy was generally estimated as the number of bedrooms plus one. For example, a studio unit is assumed to be occupied by one person, a one-bedroom unit is assumed to be occupied by two people, and so on. Several adjustments to this general assumption were made in order to capture the full range of household sizes. In particular, it is assumed that two-bedroom townhouses could be occupied by two- or three-person households, and three-bedroom apartments and townhouses could be occupied by four- or five-person households.
- **Targeted income levels for rental housing.** For rental housing, affordable rents were calculated for very low, low, and moderate-income households. For eligibility purposes, most affordable housing programs define very low-income households as those earning 50 percent or less of area median income, or AMI, low-income households as those earning between 51 and 80 percent of AMI, and moderate-income households as those earning between 81 and 120 percent of AMI.
- **Targeted income levels for ownership housing.** For ownership housing, affordable home prices were calculated only for moderate income households. Higher income limits are used for ownership than for rental housing because ownership housing is more expensive to purchase and maintain. It is assumed that moderate-income homebuyers may earn slightly less than the maximum for that income category (120 percent of AMI).
- **Maximum monthly housing costs.** For renters, maximum monthly housing costs are assumed to be 30 percent of gross household income. For homebuyers, 35 percent of gross income is assumed to be available for monthly housing costs, reflecting the higher incomes of this group. These standards are based on California's Health & Safety Code Sections 50052.5 and 50053.

- **Utilities.** The monthly utility cost assumptions are based on utility allowances calculated by City of Santa Rosa Housing and Community Services.[3] Both renters and owners are assumed to pay for heating, cooking, other electric, and water heating. In addition, owners are assumed to pay for water and trash collection.[4]
- **Mortgage terms & costs included for ownership housing.** For ownership housing, the mortgage calculations are based on the terms typically offered to first-time homebuyers (such as the terms offered by the California Housing Finance Authority), which is a 30-year mortgage with a five percent down payment. A five percent down payment standard is also used by many private lenders for first-time homebuyers. Based on recent interest rates to first-time buyers, the analysis assumes a 4.0 percent annual interest rate.[5] In addition to mortgage payments and utilities, monthly ownership housing costs include homeowner association (HOA) dues,[6] property taxes,[7] private mortgage insurance,[8] and hazard and casualty insurance.[9]

[4] Units are assumed to have natural gas heating, cooking, and water heating systems, as natural gas is the most common fuel for units located in Sonoma County. Source: U.S. Census Bureau, 2015 American Community Survey.

[5] Sources: CalHFA Mortgage Calculator, accessed November 2018; Zillow.com, "Current Mortgage Rates and Home Loans," accessed November 2018.

[6] HOA fees are estimated at $330 per unit per month, based on common HOA fees in Santa Rosa as reported on Zillow.com in 2018.

[7] The annual property tax rate is estimated at 1.60 percent of the sales price, based on the average total tax rate for Santa Rosa (calculated from Santa Rosa Consolidated Annual Financial Report, FY 2014-2015).

[8] The annual private mortgage insurance premium rate is estimated at 1.08 percent of the total mortgage amount, consistent with standard requirements for conventional loans with a five percent down payment. Sources: GIC, Apr 2016; Radian, June 2016; Genworth, July 2016.

[9] The annual hazard and casualty insurance rate is assumed to be 0.35 percent of the sales price, consistent with standard industry practice.

FIGURE 17: CALCULATION OF AFFORDABLE RENTS IN SANTA ROSA BY APARTMENT UNIT TYPE

	Apartment Unit Type			
	Studio (1 person)	**1 bedroom (2 persons)**	**2 bedroom (3 persons)**	**3 bedroom (4 persons)**
Very Low Income (<=50% AMI)				
Maximum Household Income at 50% AMI	$34,400	$39,300	$44,200	$49,100
Maximum Monthly Housing Cost [a]	$860	$983	$1,105	$1,326

Step 4B. Estimate Housing Development Costs

The second step in calculating the housing affordability gap is to estimate the cost of developing new, modest housing units. First, an average, per-square foot development cost was estimated, using a pro forma model (Figure 19). Next, the per-square foot cost was translated to per-unit costs, using assumptions about average unit sizes (Figures 20 and 21). Key assumptions are discussed below.

- **Building characteristics:** The rental housing building characteristics shown in Figure 19 are based on a review of recent affordable apartment projects developed in Santa Rosa. The modest for-sale housing characteristics are based on non-luxury, market-rate townhouse development projects in Santa Rosa. Each prototype was assumed to include 100 units for ease of calculation.
- **Development cost assumptions:** Figure 19 also shows development cost assumptions. Land acquisition costs are based on asking sales prices for commercial land listed on Loopnet.com in September 2018. Hard cost, soft cost, and developer fee assumptions are based on a review of recent affordable housing pro formas and developer interviews. Soft costs are assumed to include design, engineering, city permits and fees, construction interest, contingencies, and legal expenses.
- **Unit sizes:** Unit sizes were estimated based on recent affordable and modest development projects.

FIGURE 19: PRO FORMA ANALYSIS

	Modest Rental Housing	Modest For-Sale Housing
Building Characteristics [a]		
Building Type	3 story wood frame apartment building	Attached townhouses
Number of Units	100	100
Average Unit Size (SF)	1,000	1,400
Net Building Area (SF)	100,000	140,000
Gross Building Area (SF)	117,647	164,706
Land Area (SF)	174,240	290,400
Parking Type	Surface	Surface
Parking Spaces/ Unit	2	2
Density (units per acre)	25	15
Development Cost Assumptions [b]		
Land Acquisition Costs (per SF Land)	$17	$17
Hard Costs (per Net SF)	$190	$160
Soft Costs (as % of Hard Costs)	35%	35%
Developer Fees (as % of Hard and Soft Costs)	12%	12%
Total Development Costs		
Land Cost	$2,905,983	$4,843,305
Hard Costs	$19,000,000	$22,400,000
Soft Costs	$6,650,000	$7,840,000
Developer Fees	$3,078,000	$3,628,800
Total Development Costs	$31,633,983	$38,712,105
Total Development Cost per Net SF	**$316**	**$277**

Notes:

Unit Type	Estimated Cost per Net SF	Unit Size (net SF)	Development Costs
Two bedroom	$277	1,200	$331,818
Three bedroom	$277	1,600	$442,424

Source: Strategic Economics, 2019.

Step 4C. Calculating the Housing Affordability Gap

The final step in calculating the housing affordability gap is to calculate the difference between what renters and owners can afford to pay and the total cost of developing new units.

Figure 22 shows the housing affordability gap calculation for rental units. For each rental housing unit type and income level, the gap is defined as the difference between the per-unit cost of development and the supportable debt per unit. The supportable debt is calculated based on the net operating income generated by an affordable monthly rent, incorporating assumptions about operating expenses (including property taxes, insurance, etc.), reserves, vacancy and collection loss, and mortgage terms based on discussions with local affordable housing developers. Because household sizes are not uniform and the types of units each household may occupy is variable, the average housing affordability gap is calculated by averaging the housing affordability gaps for the various unit sizes.

Figure 23 shows the housing affordability gap calculation for ownership units. For each unit type, the gap is calculated as the difference between the per-unit cost of development and the affordable sales price for each income level. As with rental housing, the average housing affordability gap for each income level is calculated by averaging the housing affordability gaps across unit sizes in order to reflect that households in each income group vary in size and may occupy any of these unit types.

Finally, tenure-neutral estimates of the housing affordability gap were estimated for very low, low, and moderate-income households (Figure 24). Because very low and low-income households that are looking for housing in today's market are much more likely to be renters, an ownership gap was not calculated for these income groups. The rental gap represents the overall affordability gap for these two income groups. On the other hand, moderate income households could be either renters or owners. Therefore, the rental and ownership gaps are averaged for this income group to calculate the overall affordability gap for moderate income households. The calculated average affordability gap per unit is $210,392 for very low income households; $133,981 for low income households, and $75,924 for moderate income households.

FIGURE 22: AFFORDABILITY GAP CALCULATIONS FOR RENTAL UNITS

Income Level and Unit Type	Unit Size (SF)	Maximum Monthly Rent [a]	Annual Income	Net Operating Income [b]	Available for Debt Service [c]	Supportable Debt [d]	Development Costs [e]	Affordability Gap
Very-Low Income (50% AMI)								
Studio	500	$819	$9,828	$1,837	$1,469	$19,448	$158,170	$138,722
1 Bedroom	700	$937	$11,238	$3,176	$2,541	$33,633	$215,111	$181,478
2 Bedroom	970	$1,041	$12,492	$4,367	$3,494	$46,248	$284,706	$238,458
3 Bedroom	1,170	$1,197	$14,363	$6,144	$4,916	$65,065	$347,974	$282,909
Average Affordability Gap						$41,098	$251,490	**$210,392**
Low Income (80% AMI)								
Studio	500	$1,334	$16,008	$7,708	$6,166	$81,618	$158,170	$76,552
1 Bedroom	700	$1,525	$18,303	$9,888	$7,910	$104,705	$215,111	$110,406
2 Bedroom	970	$1,704	$20,442	$11,920	$9,536	$126,223	$284,706	$158,483

Step 5. Calculate Maximum Linkage Fees

Finally, the maximum commercial linkage fee for each prototype was derived by multiplying the total number of very low, low, and moderate-income new worker households for each prototype (calculated in Step 3), by the corresponding affordable housing gap figure (calculated in Step 4). The total affordability gap was then divided by 100,000 SF, the size of each commercial prototype, to generate a maximum fee per square foot.

Figure 25 presents the results of the linkage fee calculations for each prototype. The calculations shown below assume that 100 percent of the very low, low, and moderate income households linked to the new commercial space would be accommodated in Santa Rosa. The maximum fee results are $75 per square foot for hotel, $320 per square foot for retail/restaurants/personal services, and $114 per square foot for business park/light industrial.

The fees presented in Figure 25 represent the maximum that Santa Rosa could charge to mitigate affordable housing demand related to commercial development. The City may adopt a fee at a lower level than the maximum justified fees, depending on a variety of policy considerations such as other fees charged on new development, the financial feasibility of development projects, and other factors.

FIGURE 25: MAXIMUM COMMERCIAL LINKAGE FEES

	Worker Households Requiring Affordable Housing	Affordability Gap for All New Worker Households	Size of Prototype (SF)	Maximum Fee per SF
Hotel	56	$7,513,688	100,000	$75
Retail/Restaurants/Personal Services	204	$32,015,109	100,000	$320
Business Park/Light Industrial	102	$11,357,815	100,000	$114

Source: Strategic Economics, 2019.

IV. DEVELOPMENT FEASIBILITY

There are a number of policy considerations jurisdictions take into account when they consider updating their affordable housing impact fee on new market-rate development. These may include factors such as:

- Development feasibility.
- Comparison to neighboring jurisdictions.
- The fee's role in the City's overall strategy for affordable housing implementation.
- Total development cost.
- Comparison to existing City fees.

This chapter provides a discussion of development feasibility while the following chapter discusses other key policy questions for Santa Rosa.

Feasibility Testing

In order to provide Santa Rosa with guidance on how a commercial linkage fee could impact development decisions, Strategic Economics conducted a financial feasibility analysis that tested the impact of several fee scenarios on developer profit. This chapter provides a summary of the feasibility analysis for three commercial prototypes.

Methodology

This analysis tested the financial feasibility of a range of fee scenarios on prototypical commercial development projects. Financial feasibility was tested using a static pro forma model that measures **yield on cost** (YOC), a commonly used metric indicating the profitability of development projects. Yield on cost is calculated by dividing a project's expected net annual operating income at full lease-up[10] by total development costs (including construction costs, soft costs, fees, and land costs but excluding financing costs). Using YOC as a metric for feasibility allows for a comparison of rates of return among different rental projects, without skewing the results based on the specific financing arrangements (such as the particular combination of debt and equity) that can be highly variable from project to project.

Prototypes

Strategic Economics worked with City staff to construct three commercial prototypes that represent the range of commercial development projects that can reasonably be expected in Santa Rosa based on recent development trends and a review of development proposals that are currently in the pipeline. Figure 26 summarizes the characteristics of the three development prototypes that were tested for financial feasibility:

[10] Net operating income at full lease-up is calculated as total rental revenues minus operating costs, assuming a stable vacancy rate.

- **Hotel:** This building prototype includes full-service hotels, limited-service hotels, motels, and other lodging.
- **Retail/Restaurants/Services:** This building prototype includes a broad range of buildings, including retail stores, restaurants, and personal care spaces accommodating businesses like nail salons and dry cleaners.
- **Business Park/Light Industrial:** This building prototype could include a wide range of light industrial, office, and R&D users, including open floor-plan offices, medical offices, and cannabis-related uses found in Sonoma County.

The characteristics, including building type, size, density (floor-area-ratio), and parking assumptions are based on a review of recently built and proposed projects in Santa Rosa and Sonoma County. The financial feasibility of potential fee levels is tested for each of these prototypes.

FIGURE 26: COMMERCIAL PROTOTYPES

	Hotel	Retail/ Restaurants/ Services	Business Park/ Light Industrial
Gross Building Area (SF)	100,000	100,000	100,000
Efficiency Ratio (a)	N/A	0.95	0.95
Net Leasable Sq. Ft. (NSF)	N/A	95,000	95,000
Hotel Rooms	175		
Net Leasable Office Area (SF)			4,750
Parking Ratio (per Room/1000 SF)	1	4	3
Parking Spaces	175	400	300
Floor Area Ratio	1.0	0.2	0.4
Land Area (Acres)	2.3	11.5	5.7
Land Area (SF)	100,000	500,000	250,000

Notes:
(a) Refers to ratio of gross building area to net leasable area. An efficiency ratio of 0.95 means that 95% of the gross building area is leasable.
(b) The floor-area-ratio (FAR) is often used as a measure of density. In this analysis, it is calculated as the gross building area divided by the total land area.
Source: City of Santa Rosa, 2018; Strategic Economics, 2019.

Revenues

To estimate income from commercial development, the analysis used rental data from Costar, LoopNet and developer interviews for existing retail and light industrial buildings. Hotel room revenue is estimated based on current revenue per available room (RevPAR) from HVS Consulting and Smith Travel Research.

Figure 27 summarizes the calculations and data sources used for estimating the value of the prototypes.

FIGURE 27: PRO FORMA REVENUE INPUTS BY PROTOTYPE

Prototypes	Metric	Input
Hotel		
Revenues and Expenses		
Gross Annual Room Income (a)	RevPAR	$46,612

Vacancy Rate		($48,450)
Net Operating Income		$872,100
Cap Rate		5.00%
Total Capitalized Value		$17,442,000

Notes:

(a) RevPAR is a measure of revenue per room, calculated as occupancy percentage times average daily rate. Source: STR, 2018, Custom Trend Report including all mid-scale Santa Rosa hotels.

(b) Based on national data from STR Host Almanac, 2018.

Sources: CoStar, 2018; Loopnet, 2018; STR, 2018; Strategic Economics, 2019.

Development Costs

Cost estimates for the prototypes include land costs, direct construction costs (site work/infrastructure, building costs, and parking), indirect costs, financing costs, and developer overhead and profit. Land costs are based on average sales prices for commercial and industrial zoned property that was listed on LoopNet (a commercial real estate site) in Santa Rosa in September 2018 and interviews with developers. Direct building construction cost estimates include site work, building construction, and parking costs and are based on RS Means and information from developer interviews. Soft costs and developer overhead/profit were estimated based on review of similar project pro formas and interviews with developers. City fee calculations were provided by City staff. The cost factors used in the analysis are summarized in Figure 28.

FIGURE 28: DEVELOPMENT COST FACTORS

Development Assumptions	Metric	Hotel	Retail/ Restaurants/ Services	Industrial
Hard Costs (Building & On-Site Improvements) [a]	per sq. ft. of GBA	$255	$145	$75

Measure of Feasibility

To establish a reasonable threshold for a developer's rate of return on new commercial development projects in Santa Rosa, Strategic Economics interviewed local developers, reviewed other similar financial analyses in the Bay Area, and reviewed publications on the local and regional real estate market.

- **Yield on Cost:** A common rule of thumb is that the expected Yield on Cost (YOC) for a commercial development project should be about 1.5 to 2.0 percentage points higher than the average capitalization rate in the local market.[11] Local developers reported that expectations for returns are higher in the North Bay compared to San Francisco

[11] A project's capitalization (or "cap") rate is the ratio of net operating income divided by property value. Real estate brokerage firms typically calculate the market capitalization rate as the average capitalization rate for projects sold in a given period.

because of the differences in market conditions. Based on these dynamics, hotel projects with a YOC of at least 11.5 to 13.5 percent, retail/restaurant/services projects with a YOC of at least 6.5 to 7.5 percent, and business park/light industrial projects with a YOC of at least 6.0 to 7.0 percent were considered financially feasible for the purposes of this analysis. Developments with a YOC below these thresholds are not financially feasible, while projects with a YOC at the lower end of the thresholds are considered marginally feasible.

FIGURE 29: FEASIBILITY THRESHOLDS

Prototype	Capitalization Rates	Selected Threshold for Yield on Cost
Hotel (a)	9.5-11.5%	11.5%-13.5%
Retail/ Restaurants/ Services (b)	4.5-5.5%	6.5%-7.5%
Business Park/Light Industrial (c)	4.5-5.0%	6.0%-7.0%

Fee Scenarios Tested

Strategic Economics tested the impact of a range of different fee levels on development feasibility, including the maximum justified fee and two different fee levels below the maximum justified fee level. Figure 30 shows the fee scenarios tested. These scenarios are referred to as the "nexus fee scenarios" throughout this document. Note that the fees shown in Figure 30 only include the fees that are the subject of this nexus study; other fees (including existing City fees) are discussed above under "Costs."

FIGURE 30: NEXUS FEE SCENARIOS

Prototype	Scenario 1 (Maximum Fee)	Scenario 2	Scenario 3
Hotel	$75.14	$6.00	$3.00
Retail/ Restaurants/ Services	$320.15	$6.00	$3.00
Business Park/Light Industrial	$113.58	$6.00	$3.00

Source: Strategic Economics, 2019.

Financial Feasibility Results

Figures 31, 32, and 33 provide the pro forma model results for the commercial prototypes. To understand the financial burden of the fee scenarios on overall development costs, the pro forma analysis also measures the fees as a percent of total development costs. Below is a discussion of the findings.

Hotel

The feasibility analysis indicates that under current economic conditions, the yield on cost for the hotel prototype meets the required threshold (11.5%-13.5%) for financial feasibility under all three

scenarios. The following summarizes the financial feasibility results for potential commercial linkage fees at different levels:

- The maximum justified fee of $75 per square foot results in a calculated yield on cost of 12.06 percent, which meets the minimum feasibility threshold.
- An impact fee set at $6 per square foot results in a calculated yield on cost of 14.00 percent, which meets the feasibility threshold.
- An impact fee set at $3 per square foot results in a calculated yield on cost of 14.10 percent, which meets the feasibility threshold.

Retail/Restaurants/Services

The feasibility analysis indicates that under current economic conditions, the yield on cost for the retail/restaurants/services prototype does not meet the required threshold (6.5%-7.5%) for financial feasibility under the maximum justified fee scenario but does marginally meet the minimum feasibility threshold for the two other fee scenarios. The following summarizes the financial feasibility results for potential commercial linkage fees at different levels:

- The maximum justified fee of $320 per square foot results in a calculated yield on cost of 3.33 percent, which does not meet the minimum feasibility threshold.
- An impact fee set at $6 per square foot results in a calculated yield on cost of 6.51 percent, which marginally meets the minimum feasibility threshold.
- An impact fee set at $3 per square foot results in a calculated yield on cost of 6.57 percent, which marginally meets the minimum feasibility threshold.

Business Park/Light Industrial

The feasibility analysis indicates that under current economic conditions, the yield on cost for the business park/light industrial prototype does not meet the required threshold (6.0%-7.0%) for financial feasibility under the maximum justified fee scenario but does meet the minimum feasibility threshold for the two other fee scenarios. The following summarizes the financial feasibility results for potential commercial linkage fees at different levels:

- The maximum justified fee of $114 per square foot results in a calculated yield on cost of 3.66 percent, which does not meet the minimum feasibility threshold.
- An impact fee set at $6 per square foot results in a calculated yield on cost of 6.66 percent, which meets the minimum feasibility threshold.
- An impact fee set at $3 per square foot results in a calculated yield on cost of 6.82 percent, which meets the minimum feasibility threshold.

V. POLICY CONSIDERATIONS AND IMPLEMENTATION OPTIONS

While the nexus study provides the necessary economic analysis for implementing a commercial linkage fee, it is up to policymakers to decide what fee level will be charged on new development. As discussed in the preceding chapter, development feasibility is one important factor to examine. In addition, there are a number of additional policy considerations that cities take into account when considering an update to impact fees, such as:

- How a commercial linkage fee fits into Santa Rosa's overall housing strategy.
- How much total development costs would increase with a new commercial linkage fee;
- How a commercial linkage fee in Santa Rosa would compare with those in neighboring or other comparable jurisdictions; and
- What options exist for establishing alternatives to the payment of fees.

Role of the Commercial Linkage Fee in Santa Rosa's Overall Housing Strategy

Santa Rosa does not currently have a commercial linkage fee in place. The revenues to be collected from a commercial linkage fee provide an important source of local funding; however, fee revenues do not generally cover the entire funding gap encountered by sponsors of new affordable housing. Additional funding is almost always required. Affordable housing in Santa Rosa is currently funded through the use of a variety of financing sources, including funding provided by the City's existing residential impact fee. The City's existing inclusionary housing program covers for-sale housing only and developers may elect to build units on-site or pay the existing affordable housing impact fee. The existing inclusionary housing policy has not resulted in a significant number of affordable housing units built as most developers elect to pay the impact fee rather than build units on-site.

Commercial linkage fee revenues would augment existing affordable housing funds. The existence of a local revenue source such as nexus fees can help make certain projects more competitive for outside funding. It should be noted that revenues from a commercial linkage fee need to be spent on housing that benefits the workforce since the funds stem from affordable housing impacts related to new employment.

Total Development Cost

Currently, the total development costs (including building and onsite improvements, land, parking, indirect costs, financing costs, developer overhead, and existing fees) are $423 per square foot for the hotel prototype, $323 per net square foot for the retail/restaurant/services prototype, and $125 per net square foot for the business park/light industrial prototype. The addition of the maximum housing impact fees would represent 15 percent, 50 percent, and 48 percent of total development cost of the hotel, retail/restaurant/services, and business park/light industrial prototypes, respectively. A fee of $6 per square foot represents 1.4 percent, 1.8 percent, and 4.6 percent of total

development cost of the hotel, retail/restaurant/services, and business park/light industrial prototypes, respectively, and a fee of $3 per square foot represents 0.7 percent, 0.9 percent, and 2.3 percent of total development cost of the hotel, retail/restaurant/services, and business park/light industrial prototypes, respectively.

Comparison to Neighboring Jurisdictions.

A comparison to current commercial linkage fees charged in nearby or comparison cities can be a helpful consideration. Figure 34 provides available information on commercial linkage fees to compare Santa Rosa's potential fee scenarios to existing fees in selected jurisdictions.

If the maximum commercial linkage fees calculated for Santa Rosa were adopted, they would significantly exceed the fees charged in neighboring and comparison jurisdictions, as listed in Figure 34. Current fees in neighboring and comparison jurisdictions range from $0.69 per square foot for hotel in Rohnert Park to $6.00 per square foot for hotel in Fremont and Napa and for retail uses in Fremont.

FIGURE 34: EXISTING COMMERCIAL LINKAGE FEES PER SQUARE FOOT IN SELECTED CITIES

City/County	Hotel	Retail/Restaurant/ Personal Services	Business Park/Light Industrial
Berkeley	$4.50	$4.50	$2.25
Cotati	$2.08	$3.59	$2.15
Fremont	$6.00	$6.00	$3.00
Napa	$6.00	$3.55	$3.50
Petaluma	$2.42	$4.17	$2.49

Potential for Overlap Between Residential and Commercial Fees

The City of Santa Rosa also has a residential impact fee in place and is undertaking an update to that fee simultaneously. One issue that may arise if a city considers the adoption of both fees is whether there is any overlap between the two impact fees, resulting in potential "double-counting" of impacts.

The commercial linkage fee study examined jobs located in new commercial buildings. The nexus analysis then calculated the average wages of the workers associated with each commercial building to derive the annual income of the new worker households. The analysis determines the area median income (AMI) level of the new worker households to identify the number of worker households that would require affordable housing.

The housing impact fee nexus analysis examines households buying or renting new market rate units in the jurisdiction. The household expenditures by these new residents have an economic impact in the county, which can be linked to new jobs. The nexus analysis quantified the jobs linked to new household spending, and then calculated the wages of new workers and the household income of new

worker households. Each worker household was then categorized by AMI to determine the number of households that require affordable housing.

There may be a share of jobs counted in the commercial linkage fee analysis that are also included in the residential nexus analysis, particularly those in the service sector. Other types of jobs counted in the residential nexus analysis are unique to that analysis and are not included in the commercial linkage fee analysis (for example, public sector employees).

There is potential that some jobs could be counted in both analyses, and that the two programs may overlap in mitigating the affordable housing demand from the same worker households. Each of the proposed fees is required to mitigate no more than 100 percent of the demand for affordable units by new worker households. However, the recommendations presented in this study (and in the housing impact fee study) do not exceed the nexus, even if every job counted in the residential nexus study was duplicated in the commercial linkage fee study.

The calculations below show that the nexus fee levels recommended in both studies represent less than the justified nexus amount.

- First, the recommended linkage fees are less than the maximum justified nexus amount for all prototypes. Therefore, the commercial linkage fee would mitigate less than 100 percent of the demand for affordable units generated by the new non-residential space.
- Secondly, the recommended housing impact fee levels are also less than 100 percent of the maximum fee level supported by the residential nexus analysis. Therefore, the combined programs (commercial and housing fees) would mitigate less than 100 percent of the impact even if there were overlap in the jobs counted in the two nexus analyses.

Options for Establishing Alternatives to Payment of Fees

When Santa Rosa designs its ordinance governing commercial linkage fees, it can provide options that developers may choose instead of the payment of fees. For example, one option would be for the developer to provide affordable housing units on- or off-site or to provide a building site for affordable housing. This flexibility is provided to allow development of creative solutions that may provide more affordable housing than would be created by payment of fees. Regardless of whether a commercial developer elects to provide affordable housing or provide a building site, it is necessary to calculate how these alternatives would compare with any fees established by the City.

The first step in establishing options for a specific development project would be for the City to calculate the total fees that are owed by the new development. Then, establishing an alternative compliance method will depend on what is offered by the developer. For example, if the developer offers to provide land for an affordable housing site, a recent site appraisal generally suffices to place a value on a contribution of land. This land value can then be compared with the fees that the developer would normally pay. If, instead of paying a fee, the developer elects to provide affordable housing units, it is also possible to estimate the value of these units by multiplying the number of affordable units to be provided by a current affordability gap estimate per unit. The value of alternative compliance measures needs to be calculated at the time a developer requests one.

Administrative Issues

When adopting or updating a commercial linkage fee, there are several administrative issues to consider. Similar to any impact fee, it will be necessary to adjust the commercial linkage fees on an annual basis. Adjustments will also be needed if conditions change and/or due to possible changes in the affordability gap.

It is advisable that the City adjusts its commercial linkage fee annually by using an annual adjustment mechanism. An adjustment mechanism updates the fees to compensate for inflation in development costs. To simplify annual adjustments, it is recommended that the City select a cost index that is routinely published. While there is no index that tracks changes in Santa Rosa's development costs, including land, specifically, there are a few options to consider.

- The first option is the Consumer Price Index (CPI) Shelter component. The shelter component of the CPI covers costs for rent of primary residence, lodging away from home, owner's equivalent rent of primary residence, and household insurance. Of the total shelter index, costs associated with the owner's equivalent rent of primary residence constitute 70 percent of total costs entered into the index.
- A second option to adjust the fee for annual inflation is the construction cost index published in the Engineering News Record (ENR). This index is routinely used to update other types of impact fees. Cost index information for the San Francisco region, the smallest geographical area available for this purpose, is available on an annual basis. The ENR cost index measures inflation in construction costs, but it does not incorporate changes in land costs or public fees charged on new development.

Because these indices are readily available, reliable, and relatively simple to use, it is recommended that Santa Rosa use one of them for annual adjustments. However, because both understate the magnitude of inflation, it is recommended that the City base its annual adjustment mechanism on the higher of the two indices (CPI or ENR), using a five-year moving average as the inflation factor.

In addition to revising the fee annually for inflation, the City is encouraged to update the commercial linkage study every five years, or at the very least, update the housing affordability gap used in the basic model. The purpose of these updates is to ensure that the fee is still based on a cost-revenue structure that remains applicable in the Santa Rosa housing market. In this way, the fee will more accurately reflect any potential structural changes in the relationships between affordable prices and rents, market-rate prices and rents, and development costs.

GLOSSARY OF TERMS AND ACRONYMS

Glossary of Terms

Affordable Housing: Under state and federal statutes, housing is defined as affordable if housing costs do not exceed 30 to 35 percent of gross household income.

Annual Adjustment Mechanism: Due to inflation in housing construction costs, it is frequently necessary to adjust impact fees. An index, such as the Consumer Price Index (CPI) or a published construction cost index (for example, from the Engineering News Record) is used to revise housing fees to reflect inflation in housing construction costs.

Assisted Housing: Housing that has received public subsidies (such as low interest loans, density bonuses, direct financial assistance, etc.) from federal, state, or local housing programs in exchange for restrictions requiring a certain number of housing units to be affordable to very low-, low-, and moderate-income households.

Consumer price index (CPI): Index that measures changes in the price level of a market basket of consumer goods and services purchased by households.

Employment Densities: The amount of square feet per employee is calculated for each property use that is subject to a commercial development housing linkage fee. Employment densities are used to estimate the number of employees that will work in a new commercial development.

Household: The US Census Bureau defines a household as all persons living in a housing unit whether or not they are related. A single person living in an apartment as well as a family living in a house is considered a household. Households do not include individuals living in dormitories, prisons, convalescent homes, or other group quarters.

Household Income: The total income of all the persons living in a household. Household income is commonly grouped into income categories based upon household size and income, relative to the regional median family income.

Housing Affordability Gap: The affordability gap is defined as the difference between what a household can afford to spend on housing and the market rate cost of housing. Affordable rents and sales prices are defined as a percentage of gross household income, generally between 30 percent and 35 percent of income.

> For renters, rental costs are assumed to include the contract rent as well as the cost of utilities, excluding cable and telephone service. The difference between these gross rents and affordable rents is the housing affordability gap for renters. This calculation assumes that 30% of income is paid for gross rent.

For owners, costs include mortgage payments, mortgage insurance, property taxes, property insurance, and homeowner association dues. [12] The difference between these housing expenses and affordable ownership costs is the housing affordability gap for owners. This calculation assumes that 35% of income is paid for housing costs.

Housing Subsidy: Housing subsidies refer to government assistance aimed at reducing housing sales prices or rents to more affordable levels.

Housing Unit: A housing unit can be a room or group of rooms used by one or more individuals living separately from others in the structure, with direct access to the outside or to a public hall and containing separate toilet and kitchen facilities.

IMPLAN3: A software model that is used to provide a quantitative assessment of the interdependencies between different branches of a regional (or national) economy. The latest model, IMPLAN3, was used in the nexus studies. The major input is household income, and the major output is direct and induced employment reported by industries

Inclusionary Zoning: Inclusionary zoning, also known as inclusionary housing, refers to a planning ordinance that requires that a given percentage of new construction be affordable to households with very low, low, moderate, or workforce incomes.

In-Lieu Fee: A literal definition for an in-lieu fee for inclusionary units would be a fee adopted "in place of" providing affordable units. For the purposes of operating an inclusionary housing program, a public jurisdiction may adopt a fee option for developers that prefer paying fees over providing housing units on- or off-site. A fee study is frequently undertaken to establish the maximum fee that can be charged as an in-lieu fee. This fee study must show that there is a reasonable relationship between the fee and the cost of providing affordable housing.

Market-Rate Housing: Housing which is available on the open market without any public subsidy. The price for housing is determined by the market forces of supply and demand and varies by location.

Nexus Study: In order to adopt a residential housing impact fee or a commercial linkage fee, a nexus study is required. A nexus requires local agencies proposing a fee on a development project to identify the purpose of the fee, the use of the fee, and to determine that there is "a reasonable relationship between the fee's use and the type of development project on which the fee is imposed." A nexus study establishes and quantifies a causal link or "nexus" between new residential and commercial development and the need for additional housing affordable to new employees.

Prototypes: Prototypes are used for residential and commercial developments in order to define housing impact fees. The prototypes generally represent new development projects built in a community and are used to estimate affordable housing impacts associated with new market rate commercial and residential developments. While the prototypes should be "typical" of what is built,

[12] Mortgage terms for first-time homebuyers typically allow down payment of five percent; these terms require private mortgage insurance.

for ease of mathematical computation, they are often expressed as larger developments in order to avoid awkward fractions.

Residential or Housing Impact Fee: A fee imposed on residential development to pay for a development's impact on the need for affordable housing. The fee is based on projected incomes of new employees associated with the expansion of market rate developments. Two steps are needed to define the fees. The first step is the completion of a nexus study, and the second step entails selection of the actual fee amount, which can be below the amount justified by the fee study, but not above that amount.

RS Means: Data source of information for construction cost data.

1. INTRODUCTION AND EXECUTIVE SUMMARY

Background

The City of Culver City (City) has not previously adopted a commercial linkage fee for affordable housing. Given adoption of the 2013-2021 Housing Element, as well as a number of changes in local housing supply, regional housing needs, and broader economic and housing trends, the City retained Economic & Planning Systems, Inc. (EPS) to affirm the need for and calculate an affordable housing impact fee for new commercial (i.e., nonresidential) development.

Purpose

EPS was retained by the City of Culver City to conduct a nexus study that quantifies the relationship between the growth in nonresidential land uses and the demand for and cost of affordable housing for the local workforce. As a development impact fee, this linkage fee (fee) can only be charged to new development and must be based on the impact of new development on the need for resources to subsidize the development of new affordable housing. The purpose of this report is to provide the nexus (or reasonable relationship) between new nonresidential development that occurs in the City and the need for additional affordable housing as a result of this new development.

Fee revenue may be collected by the City and used to subsidize the production of new affordable units for lower-income households.

Authority

This study serves as the basis for requiring development impact fees under AB 1600 legislation, as codified by the Mitigation Fee Act (California Government Code sections 66000 *et seq*.). This section of the Mitigation Fee Act sets forth the procedural requirements for establishing and collecting development impact fees. These procedures require that a reasonable relationship, or nexus, must exist between a governmental exaction and the purpose of the condition.

In 1991, the Ninth Circuit U.S. Court of Appeals upheld the City of Sacramento's nonresidential linkage fee.[1] In that case, the court found that the City of Sacramento's fee program "substantially advanced a legitimate interest." EPS is using a similar methodology to the nexus study reviewed in that case to develop the City of Culver City's fee program.

[1] *Commercial Builders of Northern California v. City of Sacramento,* 941 F2d 872 (1991).

Required Nexus Findings

- Identify the purpose of the fee.
- Identify how the fee is to be used.
- Determine how a reasonable relationship exists between the fee's use and the type of development project on which the fee is imposed.
- Determine how a reasonable relationship exists between the demand for the affordable housing and the type of development project on which the fee is imposed.
- Demonstrate a reasonable relationship between the amount of the fee and the cost of the public benefit attributable to the development on which the fee is imposed.

Summary

As new employment-generating development continues to occur in the City, additional affordable housing will be required to house a portion of the new lower wage workforce. The cost to construct new housing units is higher than can be supported by the rents or home prices that many workers will be able to pay. The difference between costs and affordable rent levels is considered an "affordability gap." The costs allocated to new nonresidential development through this fee reflect this affordability gap that would need to be filled in order to provide housing for additional workforce demanded by nonresidential development. **Table 1** summarizes the maximum justifiable fee by land use category. The methodology used to establish maximum justifiable fees is described in the subsequent chapters.

Table 1 Summary of Maximum Allowable Fees

Employment Category	Maximum Fee *per sq. ft.*
Retail/Restaurant	$249
Office	$171
Warehouse/Industrial/Manufacturing	$66
Media Studio and R&D/Flex	$30
Lodging	$148
Assisted Living	$141

Source: Economic & Planning Systems, Inc.

Table 2 presents the income categories that are relevant for this fee program. This study uses incomes defined by the State of California's Department of Housing and Community Development (HCD)The number of worker households that are generated as a result of commercial development are categorized on the basis of these income levels.

Table 2 Los Angeles County Income Category Definitions (2019)

Income Group and Standard Definition		HCD 2020 Maximum Income
		3-Person Household
Extremely Low	≤30% AMI	$30,450
Very Low	>30% to ≤50% AMI	$50,700
Low	>50% to ≤80% AMI	$81,100
Median	>80% to ≤100% AMI	$69,550
Moderate	>100% AMI to ≤120% AMI	$83,500
Above Moderate	>120% to ≤150% AMI	$104,325

Sources

To estimate the fee, EPS relied on numerous sources of data, including the following:

- U.S. Bureau of Labor Statistics (BLS) "May 2019 National Industry-Specific Occupational Employment and Wage Estimates"
- State Department of Housing and Community Development (HCD) annual income limits for 2020
- U.S. Census Bureau American Community Survey (ACS) 5-Year Estimates (2014-2018)
- Input from City of Culver City's staff regarding affordability levels, recently developed affordable housing projects, market assumptions, and nexus study methodology

These and other data sources are identified on the tables provided throughout this report. In addition, data from recent Culver City developments and land transactions found in Keyser Marston Associates' Inclusionary Housing Feasibility Study prepared for the City in April 2019 have been combined with information collected from various market-rate and affordable housing developers to estimate appropriate development cost assumptions for use in Culver City.

Organization of Report

Following this **Introduction and Executive Summary**, this study includes the following chapters:

- **Chapter 2** presents the nexus findings based on the methodology.
- **Chapter 3** describes the methodology used to calculate the fee.

2. REQUIRED NEXUS FINDINGS FOR FEE PROGRAM

Purpose of Fee

The fee program established through this Nexus Study will fund the development and preservation of affordable housing projects in the City required by the increase in local, lower-wage workers employed by new nonresidential development. The businesses that occupy new nonresidential buildings will hire employees, many of whom will have difficulty finding suitable local housing they can afford.

Use of Fee

The fee will be collected by the City. The funds are used to provide assistance for production or rehabilitation of affordable housing units and/or the acquisition of existing at-risk units, in the City. The fee also may fund the studies and administration to support the fee program.

Relationship between Use of Fee and Type of Development

The development of new nonresidential land uses in the City will generate need for additional workers. The wages of a significant portion of the new employees will be inadequate to support sufficient rent prices to attract residential developers to provide housing opportunities without further subsidy. The fee will be used to help to fill the "affordability gap" for housing development and increase the number of homes available for the local workforce.

Relationship between Demand for Affordable Housing and Type of Project

The City and EPS have identified six employment categories for which a separate fee has been calculated. The proportion of lower wage workers and the number of square feet per employee for each employment category has been assessed to ensure a proper nexus is established.

Relationship between Amount of Fee and Cost of Public Benefit Attributed to New Development

EPS estimated the gap between the cost of developing new rental housing and the achievable value of the new rental units based on prices affordable to households at different income levels. The affordable rents yielded unit values below the cost of construction, indicating an "affordability gap." To estimate the fee for each nonresidential development category, this gap was multiplied by the anticipated number of lower wage workers generated by the new development projects and the number of households of various income categories those workers are likely to form.

3. METHODOLOGY AND FEE CALCULATION

Employment Categories

Employment categories utilized in this analysis are presented in **Table 3** along with a description of the types of businesses that are included in each category. In general, each employment category is intended to be associated with a particular type of building or land use, to which the fees can be applied. The City has asked EPS to evaluate six distinct categories to better match potential land uses and nexus linkages to employment categories, but the City may choose not to adopt fees for all land use categories. While most employment categories are discretely associated with a particular type of building, others may be interchangeable as tenants may shift between building types (e.g., office space locating in retail space). This analysis bases its employment projections on NAICS codes associated with the most typical tenants for each land use category, as defined in **Appendix B**.

Table 3 Employment Category Descriptions

Employment Category	Description and Examples
Retail/Restaurants	Businesses selling merchandise, entertainment, and personal services to the general public. Examples include grocery stores, drug stores, clothing stores, general merchandise stores, beauty salons, and gas stations. Restaurants are also included in this category.
Office	Employers engaged in business activity with limited direct access from the general public; businesses focused on professional and financial services. Examples include finance, insurance, real estate, law, engineering, and science and technology.
Warehouse/Industrial/Manufacturing	Employers engaged in business activity with limited direct access from the general public; businesses focused on assembling, distributing, or repairing products; businesses focused on the testing and invention of new materials, products, or processes; and businesses engaged in the transformation of raw materials into consumable products. Examples include warehouses, auto repair, self-storage facilities, and food/beverage/smoking products manufacturing.
Media Studio and R&D/Flex	Combines the businesses that engaged in media production with research and design facilities, including physical sciences, life sciences, and social sciences. These businesses use similar building types, and over time the tenants may shift between studios and R&D.
Lodging	Lodging or short-term accommodations for travelers, vacationers, and others and comprises establishments primarily engaged in providing short-term lodging in facilities known as hotels, motor hotels, resort hotels, and motels.
Assisted Living	Facilities focused on providing assisted living services. Examples include continuing care facilities, nursing homes, rehabilitation centers, hospice care facilities.

Occupational Category and Wage Distribution

EPS used U.S. Bureau of Labor Statistics (BLS) *National Industry-Specific Occupational Employment and Wage Estimates* for 2019 – the most recent year available - to estimate the wages earned by employees in industry sectors related to the employment categories. This BLS data set includes wage data at both the national and Metropolitan Statistical Area (MSA) levels, with Culver City falling within the Los Angeles-Long Beach-Anaheim MSA. Wage data for the MSA are provided for occupations for all industries in aggregate, while national-level wage data are provided by industry sector (e.g., "management" workers in retail industries versus in industrial/R&D industries). To account for regional wage disparities, EPS calculated wage adjustment factors as displayed in **Table 4** to show that Los Angeles-Long Beach-Anaheim MSA wages exceed national averages across all occupation categories. EPS applied these adjustment factors to the nationwide income level data by industry sector to estimate the wages for the Los Angeles-Long Beach-Anaheim MSA.

EPS used BLS nationwide data regarding industries and occupation categories to estimate the proportion of occupations likely to be represented under each employment category. For example, EPS evaluated the occupation categories for the lodging industry to determine the proportional distribution of occupations for the employment category "Lodging." North American Industry Classification System (NAICS) sector 721000 ("Accommodation") shows that 4.3 percent of the jobs in the lodging industry nationwide are taken by managers, while 27.3 percent are in the category of buildings and grounds cleaning and maintenance (see **Table B-2**). The occupational distribution for all designated employment categories is provided in **Appendix B**.

The wages within each occupation were multiplied by 1.61, the average number of workers per working household in the City, according to the Census Bureau's American Community Survey data. The resulting figure is assumed to represent the annual household income assuming workers form households with those of similar earning potential. While certainly there will be some variation in wages per employee within a household, in the absence of more specific data, this analysis assumes comparable levels of education and training among all workers in a household. **Table 5** presents an example of this calculation.

Table 4 Adjustment Factors - Converting National Wages to Los Angeles MSA Wages

Occupation Category	US Average Wage	Los Angeles-Long Beach-Anaheim MSA Average Wage	Los Angeles-Long Beach-Anaheim MSA % of US Average
Management	$121,560	$134,680	110.8%
Business and Financial Operations	$76,910	$81,970	106.6%

Distribution of Workers by Land Use Type

After identifying income ranges for each occupation and employment category, EPS summed the percentages of occupations by income bracket. These proportions of anticipated household income brackets by employment category are presented in **Table 6**.

As shown, Retail/Restaurant and Assisted Living are expected to generate significant numbers of households at the very low income level, while jobs in the Industrial and Office uses are expected to yield more households with incomes at or above moderate income levels.

Employment Densities

Different land use categories operate with varying levels of employment densities. Industrial uses, for example, often do not require a significant number of employees but do require a significant amount of building square footage. Office uses, on the other hand, may not require a significant amount of square footage, but often require a significant number of employees. The number of building square feet anticipated for an employee is termed the "employment density" of each employment category.

Based on prior nexus studies, input from City staff, independent research, and experience with other comparable cities, EPS estimated the employment density for each of the employment categories as shown in **Table 7,** with more detail in **Appendix Table A-1**. Using those employment density assumptions, EPS estimated the number of employees that would occupy a 100,000-square foot building for each employment category.

Household Formation

EPS then estimated the number of households represented by those employees calculated on **Table 7**. First, EPS adjusted for the fact that younger workers may not be at the age to form their own households. Data from the Bureau of Labor Statistics indicate that young workers aged 16 to 19 represent only about 1.9 percent of the overall workforce. However, the majority of these young workers are in the retail/restaurant industries, where they represent 12.5 percent of the overall industry employment. EPS has assumed that these young workers would not form their own households. Second, EPS has assumed that, on average, new households formed in response to growing employment opportunities would have 1.61 wage-earning workers. This assumption is based on the Census Bureau's American Community Survey 2014-2018 data regarding the number of Culver City's residents who are "workers" in households that have workers. The combination of these adjustments results in the assumption that approximately six households are formed for every ten new employees. Lastly, the analysis assumes that the fees on nonresidential development will fund required affordable housing for all new workers generated.

Table 6 Income Distribution of Worker Households by Employment Category [1]

Employment Category	Income Level			
	Very Low 50% AMI	**Low** 80% AMI	**Moderate** 120% AMI	**Above Moderate** 150% AMI
Retail/Restaurant	47.7%	46.0%	0.0%	6.3%
Office	0.8%	40.6%	0.0%	58.6%
Warehouse/Industrial/Manufacturing	0.0%	39.8%	0.0%	60.2%
Media Studio and R&D/Flex	4.3%	6.7%	1.8%	87.2%
Lodging	3.5%	89.6%	0.0%	6.9%
Assisted Living	46.5%	36.7%	0.0%	16.8%

[1] Designation of household income assumes a 3-person household and 1.61 workers per household, based on American Community Survey data.

Table 7 Household Generation Rates by Employment Category

Employment Category	Sq.Ft. per Worker[1]	Total Workers per 100k Sq.Ft.	% of Workers Forming Households[2]	Total Households per 100k Sq.Ft.[3, 4]	Households by Income Level[5]			
					Very Low 50% AMI	Low 80% AMI	Moderate 120% AMI	Above Moderate 150% AMI
Retail/Restaurant	550	182	87.5%	99	47	45	0	6
Office	250	400	98.1%	243	2	99	0	142
Warehouse/Industrial/Manufacturing	600	167	98.1%	102	0	40	0	61
Media Studio and R&D/Flex	670	149	98.1%	91	4	6	2	79
Lodging	654	153	98.1%	93	3	83	0	6
Assisted Living	1,000	100	98.1%	61	28	22	0	10

[1] See **Appendix Table A-1** for sources on employment densities in different land uses.

[2] National Retail Federation data indicates that 12.5% of retail/restaurant workers are aged 16-19, but an average of only 1.9% of workers in other industries fall into that age cohort. EPS has assumed that workers aged 16-19 do not form their own households.

[3] Assumes 1.61 employees per household based on Census data; rounded.

[4] Assumes all workers would prefer to live in the City of Culver City. Based on existing commute patterns, there may need to be additional adjustments to account for employees that choose to live elsewhere.

[5] Figures are rounded to nearest whole number.

Sources: US Census; California Housing and Community Development (HCD); Economic & Planning Systems, Inc.

Housing Development Costs and Affordability Gap

EPS has assumed that the average type of housing for Culver City's lower-income workers would be a 2-bedroom apartment unit in a three to four-story building. The assumed prototype reflects multifamily construction at 65 dwelling units to the acre with surface parking. This building prototype is generally cost-effective to construct, as it makes efficient use of land and does not involve overly expensive construction materials or techniques.

California State law (California Health and Safety Code Section 50052.5) assumes that a 2-bedroom unit is occupied by a 3-person household, and this assumption is used in this analysis. Consistent with Keyser Marston Associates' survey of rental properties in Culver City, EPS assumes that the typical gross square footage of a 2-bedroom rental unit in Culver City will be approximately 1,155 square feet.

Development Cost Assumptions

Affordable housing development costs include land costs, direct costs (e.g., labor and materials), and indirect or "soft" costs (e.g., architecture, entitlement, marketing, etc.). For rental projects, operating costs also must be incorporated into the analysis. Data used by Keyser Marston Associates from recent Culver City developments and land transactions have been combined with information collected from various market-rate and affordable housing developers to estimate appropriate development cost assumptions. These assumptions are shown on **Table 8**.

Revenue Assumptions

To calculate the values of the affordable units, assumptions must be made regarding the applicable income level (very low, low, moderate, and middle) and the percentage of household income spent on housing costs. In addition, translating these assumptions into unit prices and values requires estimates of operating expenses and capitalization rates. The following assumptions were used in these calculations:

- *Income Levels*—This analysis estimates the subsidy required to produce units for households falling into the very low, low, and moderate income categories for a three-person household. While these categories are generally defined as a percentage of area median income (AMI) by HCD, in Los Angeles County the dollar amount thresholds for each category are not necessarily in line with the percentage thresholds. For example, in 2020, AMI in Los Angeles County for a three-person household is $69,550 according to the HCD, but the maximum income for the low income category (typically defined as 51 to 80 percent of AMI) is $81,100 (see **Table 2**). This income threshold, which is clearly above 80 percent of AMI, is established to reflect the relatively high cost of housing found in Los Angeles County.[2]

- *Percentage of Gross Household Income Available for Housing Costs*— HCD standards on overpaying for rent indicate that households should pay no more than 30 percent of their

[2] See HCD State Income Limits 2020, https://www.hcd.ca.gov/grants-funding/income-limits/state-and-federal-income-limits/docs/Income-Limits-2020.pdf

gross income on housing costs. For this analysis, EPS has assumed that all households shall spend 30 percent of their gross income on housing costs.

- *Operating Costs for Rental Units*—This analysis assumes that apartment operators incur annual operating costs of $6,000 per unit, which include the cost of utilities, for units affordable for those falling into the very low and low income categories. EPS has assumed the units for moderate and above moderate income households would have similar operating costs but would be built by for-profit builders and thus also subject to property taxes, increasing their annual operating cost to $10,000 per unit.

Affordability Gap Results

Table 8 shows the costs and values for developing rental apartments in the City for households at various income levels. Across all categories, the cost of constructing the unit is higher than the supportable value of the unit. This is considered the "affordability gap," and serves as the basis for calculating the subsidies required to provide housing for the employees who will be working in new nonresidential development in Culver City. The results of the analysis illustrate that rents affordable to households earning above-moderate incomes and below cannot support the costs of new construction without subsidy.

It should be noted that the affordability gap is greater for moderate income units than it is for low income units. This is because the HCD-defined maximum limits for low income and moderate income are only $2,400 apart, but units designated for moderate income households are subject to property tax, which is estimated to be around $4,000 in typical cases. As units designated for low income households are assumed to be built by non-profit developers and thus exempt from such taxes, their value is higher, and their affordability gap lower, than that of units occupied by moderate income households.

Table 8 Affordability Gap Analysis – Rental Product Type

Item	Assumption	3-4 Story Multifamily Building with Subterranean Parking			
		Very Low 50% AMI	Low 80% AMI	Moderate 120% AMI	Above Moderate 150% AMI

[1] Based on Keyser Marston Associates' estimated development costs for rental units using mixed-use zoning @ 65 units/acre with community benefits + density bonus + inclusionary housing - 15% affordable units (see Keyser Marston Associates Inclusionary Housing Feasibility Study Appendix B Exhibit II)
[2] Keyser Marston Associates' pro forma assumes a mix of studio, one-, two-, and three-bedroom units. This analysis converts all leasable square footage to two-bedroom units in accordance with the assumptions for a three-person household given under the California Health and Safety Code 50052.5
[3] Based on Keyser Marston Associates' assumptions, derived from survey of land sales for similar developments between 2016 and 2019
[4] All direct costs assumptions are based on Keyser Marston Associates' pro forma, which are derived from estimated direct costs of similar developments
[5] Keyser Marston Associates assumes two parking spots per two-bedroom unit
[6] All indirect costs assumptions are based on those in Keyser Marston Associates' pro forma, which are derived from estimates for similar developments
[7] Financing cost assumptions are based on Keyser Marston Associates' pro forma. KMA assumes an average interest rate of 3.6%, and a loan origination fee of 2.0 points at 60% loan-to-value
[8] Based on 2020 income limits for a three-person household Los Angeles County
[9] Based on Keyser Marston Associates' assumption that Culver City households allocate 30% of income to housing costs
[10] Operating expenses are generally based on data reported by CoStar and reflective of properties in Los Angeles County. Estimates are inclusive of management, maintenance, common utility, and property tax costs, except Very Low and Low properties which are exempt from property taxes
[11] The capitalization rate is used to determine the current value of a property based on estimated future operating income, and is typically a measure of estimated operating risk. The capitalization rate used in this analysis is based on recent CoStar reported transaction data in the Culver City submarket.
[12] The total supportable unit value is determined by dividing the net operating income by the capitalization rate.

Fee Calculation

Tables 9 through **14** provide the maximum nonresidential housing fee calculations for each of the six employment categories. Assuming a 100,000-square foot nonresidential building prototype for each employment category, the number of new households by income category is multiplied by the per-unit affordability gap to determine the level of subsidy required to provide housing for the new worker households. The adjusted affordability gap is then divided by the size of the assumed building to determine a maximum fee per building square foot.

TOWN OF BASALT MEETINGS

Basalt Affordable Community Housing (BACH)

Thursday, May 11, 2023

Basalt Town Hall 101 Midland Avenue

12:00 PM	Roll Call
12:03	Approval of Minutes- April 13, 2023
12:05	Discussion Regarding Housing Assessment Proposals
12:25	Affordable Housing Bond Initiative
12:50	Staff Updates
12:55	Member Updates & Other
1:00	Adjourn

Public Comment is limited to 3 minutes. Those who wish to speak should email james.lindt@basalt.net before the meeting starts with their name, phone number, and identify what item they would like to address. During the meeting those wishing to comment may also email james.lindt@basalt.net, but it is not guaranteed that the email will be seen in a timely fashion.

Basalt Affordable Housing Commission (BACH)

ACTION MINUTES

BOARD MEMBERS PRESENT: Anne Baker, Perry Kleespies, Dave Portman, Katie Erickson, Jay Israel

STAFF PRESENT: Michelle Thibeault, James Lindt, Sara Nadolny

GUESTS: Erin Wackerle (Bendon Adams), Shannon Meyer (Response), Erica Golden and Anna Reynoso (2757 Design), Councilor Elyse Hottel Attended Meeting Near the Conclusion of the Meeting for the Western Regional Housing Coalition Agenda Item

DATE: 4/13/2023

MEETING CALLED TO ORDER AT 12:07 PM

AGENDA ITEMS

1. Review and Recommendation regarding Affordable Housing Proposal – 325 E. Cody Lane Application for Domestic Abuse Shelter.
2. Update from Elyse Hottel on the Western Regional Housing Coalition
3. Staff Updates
4. Member Updates & Other

1. **Review and Recommendation regarding Affordable Housing Proposal – 325 E. Cody Lane Application for Domestic Abuse Shelter**

James introduced the item as BACH's review of 325 E. Cody lane development proposal – AH mitigation aspects of project. Applicants is Response. The Applicant received a PUD amendment last year to add a domestic abuse shelter as a Special Review use for the Property in the Basalt Business Center East PUD. The Applicants have now submitted application for Special Review with design. The Application Includes a small office space around 2k sq ft, seven private client rooms and a deed-restricted community housing unit that is to be 2-bedrooms and 870 sq ft.

Staff provided a memo in the packet that identified some discussion topics. It was noted that that the Applicant had some addendums to their affordable housing proposal that were sent earlier this week, which included a request for occupancy priority for Response's employees and volunteers, a request for the deed-restricted unit to be a Category 2 unit, and the ability to reduce number of employment hours a tenant could have to be eligible to occupy the unit down to 1040 hours of work per year from 1500 per year that is required by the Town's Community Housing Guidelines.

James explained the mitigation requirements in the Town Code. It was pointed out that staff included commercial mitigation calculation in the Staff memo as it was interpreted by Staff that the commercial

mitigation requirements would apply even though the use is a hybrid between residential and commercial use. It was explained that the Town Code assumes that 4 full-time employees are generated per 1,000 sq ft of commercial space and that 15% of the employees generated are required to be mitigated for with affordable housing. The Applicants have proposed 2 bed unit to mitigate for the employees generated.

James described that there is a review process that allows for unique uses such as the proposed Domestic Abuse Shelter to demonstrate that they will generate less than the 4 employees per 1,000 sf that is assumed by the Town Code. As such the Applicants have proposed that they will have 5 total employees operating the proposed facilities. Staff evaluated the proposal and 5 total employees generated would require approximately 400 sq ft of affordable housing, which is proposed to be satisfied through the construction of the 870 sq ft deed-restricted unit.

Staff pointed out the Livability requirements of the community housing guidelines, which are livability requirements for restrooms, kitchen, storage and parking. It was noted that Staff believes the unit satisfies the livability requirements.

Related to Occupancy priority, Staff explained that under the Town's Community Housing Guidelines, essential employees within the town receive occupancy priority. Then if an employee in the first occupancy priority category is not interested in an available unit, the occupancy priorities waterfall to general employees working in Basalt, and then to employees between Aspen and Glenwood Springs. The Applicants have asked for a first priority category for their employees and volunteers. Staff believes this is supportive given the unit within the domestic abuse shelter.

In evaluating the Category 2 unit request, response thought Category 2 lined up better with their employees. Staff explained that this was acceptable to Staff since the domestic abuse shelter use was a hybrid between residential and commercial and residential was allowed to be mitigated at a Category 2 level.

The Applicants presented that Response is a local nonprofit that serves survivors of domestic and sexual abuse and human trafficking. It was noted that they also conduct healthy relationship programming in schools. It was described that it is challenging for domestic abuse survivors to secure housing when seeking to leave abusers. They explained that there is a growing need in the community for more temporary housing of this nature. This Project will be mixed use and consist of office and shelter space. It was described as critical temporary housing. The design is at a modest scale to provide comfort and refuge and fit into the neighborhood. The proposed community housing unit is on the second level.

The Applicants described their need for requesting flexibility for occupancy. Safety and security of clients is their highest priority.

People that come into the shelter may not be working, or only working part-time. 1500 annual hours worked is approx. 28 hours per week. The reduced employment hour requirement of 1040 annually = 20 hrs worked per week. Helping clients achieve financial independence is a goal of Response. So, the Applicants have requested that Response clients be allowed to occupy the community housing unit while working only a minimum of 1040 hours per year.

Shannon Meyer of Response discussed that 1 in 3 women and 1 in 5 men will experience domestic violence in lifetime and that it happens in this Valley. Response has seen the numbers increase by 20%

since the pandemic and housing is essential. Transitional housing is up to 3 months. Response has reached capacity with the apartment stock they already have. Last year they served 17 survivors and turned away 13.

There will be an on-site staffer will have eyes on the building at all tines and are skilled in addressing issues. The Applicants would like to add housing to the job description for an office manager (recruitment and retention). It was noted that the shelter is free housing for up to 3 months for clients and that clients work with a housing manager during this time to get into their own place. If the Community Housing Unit is not occupied by an employee of Response, it may be able to put a survivor into the unit. It would be another tool for Response to serve the survivors.

Erica Golden, the Applicants' architect expressed that she feels the design is meeting standards, but have delved more into accessibility standards. Two uses on site, office is first use and where people are received. The shelter is set back into the more private area of the site and there is screening for privacy. Bike parking and covered parking are included for the AH unit. There is also a play area for kids in a more secure area. The entire upper level is proposed as the shelter component. Additionally, an elevator is provided in the building and the Community Housing Unit is a Type A accessible unit. Therefore, they Applicants had to eliminate the second restroom to allow for larger radius to meet accessibility standards. An access door connecting into shelter space was needed so that the AH unit has access to elevator. Shannon described that have the unit be accessible is important to all aspects of Response's work.

James clarified that BACH will need to make a recommendation on losing the half bath.

Katie asked for occupancy clarification but said it's a great use of space.

Anne asked the number of hours a resident of 3 months needs to work. Shannon said that makes sense if the housing unit is used for a longer-term survivor rather than an employee.

Dave expressed that he feels good about the Category 2 and priority occupancy requests. He asked how to determine hours if a volunteer is eligible? He suggested that it could be Category 2 for just Response employees and volunteers and Category 1 for other priority occupancies.

Katie felt there was a need to have someone associated with Response in that space and not just random tenants and that random tenants could be putting people in the shelter at risk. Responding to a question, James responded that BACH and Council have the flexibility to accept the proposals.

Dave asked if it is Response's request to have Response employees, volunteers, and clients be the first occupancy in the Community Housing Unit or to eliminate the other occupancy priorities in the Community Housing Guidelines for this unit completely?

The Applicants responded that they desire Response employees, volunteers, and clients to be the first occupancy priority.

Perry described that he thought the intent of this project is a greater good of helping out the AH issue in the Basalt community. He expressed support for the approach to provide localized housing for staff, particularly in a first responder type requirement. He expressed that he thinks the AH unit should be strictly for Response employees, not potential use by the larger community.

James summarized that the majority of BACH seems accepting of concept of the AH unit being for Response employees, volunteers and clients.

M/S Katie and Dave to make a recommendation to Council to allow for occupancy of the Community Housing Unit by only Response employees, volunteers, and clients; that the unit be allowed to be a Category 2 unit; and that the unit receive a waiver to allow it to have only one bathroom. Motion passed 5 to 0.

Due to time constraints and the need for BACH members to leave the meeting, the Western Regional Housing Coalition Update was continued to a future meeting.

Katie motion to adjourn.

Meeting adjourned at 1:07 pm.

EPS #233067

1. INTRODUCTION

Economic & Planning Systems, Inc.
The Economics of Land Use

May 1, 2023

Mr. James Lindt
Assistant Planning Director
Town of Basalt
Basalt Town Hall
101 Midland Avenue
Basalt, CO 81621
submitted via email to james.lindt@basalt.net

Subject: Updated Affordable Housing Assessment and Short-Term Rental Impact Fee Nexus; EPS #233067

Dear James:

Economic & Planning Systems (EPS) is pleased to present this proposal to prepare a new Housing Needs Assessment and to update the Town's housing mitigation fees. EPS has enjoyed working with the Town over the years, from helping the Town negotiate with the Willits Town Center development in the early 2000s, a Cost of Growth Study, and a previous Housing Needs Assessment in 2015.

EPS is a full-service economic consulting firm with 50 employees in its Denver, Oakland, Sacramento, and Los Angeles offices. The firm has a broad-based practice in real estate analysis, public finance, and land use policy. Since 1983, EPS has worked with a wide range of public and private clients throughout the nation and has established a reputation for objective high-quality analysis and creativity. Within our Housing Practice, we have completed numerous needs assessments in Colorado mountain towns, and recent experience in the Roaring Fork Valley. We also have experience on the implementation side with several completed linkage and cash-in-lieu fee studies. EPS also prepared what we believe to be the first regulatory fee study for short-term rentals for the Town of Breckenridge.

An experienced team has been assigned to this project including Brian Duffany, Principal, as the principal-in-charge responsible for the overall project direction, management, and outcomes. Brian will work closely with Rachel Shindman, Vice President, who will support the technical work. Rachel and Brian have extensive experience in mountain and resort housing policy and regulation.

Our qualifications and proposed scope of work and fee is attached. We are open to your input on the overall scope, cost, and schedule. We appreciate the opportunity to work with the Town again. If you have any questions or need additional information please contact me at (720) 460-3302 or bduffany@epsdenver.com.

Sincerely,

Economic & Planning Systems, Inc.

Brian Duffany
Principal

2. QUALIFICATIONS, EXPERIENCE, AND CAPACITY

Key Staff Members

Brian Duffany, Principal, will be the principal-in-charge and project manager responsible for the overall project strategy, direction, delivery, and quality. He will be working side-by-side with Rachel Shindman, V.P. and co-project manager. Brian has nearly 20 years of consulting experience in housing, real estate market and feasibility analysis, and economic and community development. He has completed many needs assessments, linkage fee nexus studies, and short term rental regulatory fee studies.

Rachel Shindman, Vice President, will be the co-project manager working closely with Brian and the rest of the EPS Team. Rachel has managed housing technical studies and housing plans and strategies throughout Colorado and brings 8 years of experience in housing, nexus studies, and inclusionary housing policy. She is particularly skilled in explaining technical information to broad audiences.

Sarah Dunmire, Senior Associate will support the survey, needs assessment, market research, and fee analysis tasks. Sarah brings 6 years of experience in housing, community planning, geospatial analysis, and financial and economic analysis.

Carson Bryan, Associate will also support the survey, needs assessment, market research, and fee analysis tasks. Carson brings 3 years of experience in housing, community planning, geospatial analysis, and financial and economic analysis.

Résumés for key staff are provided on the following pages, followed by relevant project experience and current volume of work.

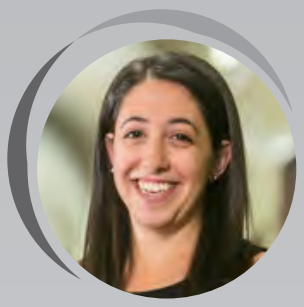
Brian Duffany

Principal



Brian Duffany is a real estate economist and planner with over 20 years' experience in land economics. Brian has a broad base of experience in real estate development feasibility analysis, workforce housing, financial and economic modeling, economic development, economic and demographic analysis, local government finance, fiscal impact analysis, and transportation planning. Much of his work is in mountain, rural, and amenity gateway communities. In this context, Brian helps communities understand the market and economic forces shaping them. His work includes housing strategy and policies, comprehensive and neighborhood planning, and impact fee programs.

Carson Bryant

Associate

Carson Bryant has significant experience with housing market analysis, housing policy, affordable housing strategy, real estate finance, and financial modeling in downtowns and other infill settings. He has worked on a variety of projects across the region and has a strong skill set for identifying market opportunities and constraints, and formulating creative approaches to address them.

SELECTED PROJECT EXPERIENCE

- Lumber Yard Housing Market Assessment | Aspen, CO
- Pitkin County Economic and Community Analysis | Colorado
- Housing Funding Plan | Fruita, CO
- Deerbrook Townhomes Market and Feasibility Study | Snowmass Village, CO
- Loveland Affordable Housing Task Force Support | Colorado
- Affordable Housing Funding Plan | San Antionio, TX
- Workforce Housing Feasibility Study | Red Lodge, MT
- Beartooth RC&D Regional Housing Study and Needs Assessment | Joliet, MT
- Covid-19 Economic Resiliency Plan | Ouray County, CO
- Mountain Village Comprehensive Plan Economics | Mountain Village, CO
- Economic Development Plan | Santa Fe County, NM
- Resiliency and Recovery Roadmap Strategy | Mesa County
- Resiliency and Recovery Roadmap Strategy | Northwest Colorado
- Resiliency and Recovery Roadmap Strategy | Costilla County
- Opportunity Zone Prospectus | Southeast Colorado Econ. Dev. District

About Economic & Planning Systems

Economic & Planning Systems, Inc. (EPS) is a land economics consulting firm experienced in the full spectrum of services related to real estate development, the financing of public infrastructure and government services, land use and conservation planning, and government organization.

EPS was founded on the principle that real estate development and land use-related public policy should be built on realistic assessment of market forces and economic trends, feasible implementation measures, and recognition of public policy objectives, including provisions for required public facilities and services.

AREAS OF EXPERTISE

- Real Estate Economics
- Public Finance
- Land Use & Transportation
- Economic Development & Revitalization
- Fiscal and Economic Impact Analysis
- Housing Policy
- Public-Private Partnership (P3)
- Parks and Open Space Economics

Clients Served

Since 1983 EPS has provided consulting services to hundreds of public- and private-sector clients in Colorado and throughout the United States. Clients include cities, counties, special districts, multi-jurisdictional authorities, property owners, developers, financial institutions, and land use attorneys.

Staff Capabilities

The professional staff includes specialists in public finance, real estate development, land use and transportation planning, government organization, and computer applications. The firm excels in preparing concise analyses that disclose risks and impacts, support decision making, and provide solutions to real estate development and land use-related problems.

Housing Policy

EPS has a depth of affordable housing related experience. Availability of housing that meets the need for the full spectrum of affordability should be viewed as an integral part of any successful region, conferring economic, social, and environmental benefits that underpin sustainable growth. In recent years, many communities have experienced significant increases in housing demand, pushing rents and prices beyond the level that median-income households can afford. Rising housing costs can cause overcrowding, financial hardship, and in some cases force households to leave their neighborhoods, jobs, and/or social networks. The lack of access to affordable housing affects all sectors of society and has become a particular problem for workers in lower paying fields (e.g., service, public, and non-profit sectors).

EPS offers a full spectrum of services related to assessing specific population affordable housing needs, workforce housing, and market-rate housing. We work with communities to structure initial strategic housing plan frameworks, revise housing needs goals, establish production or rehabilitation targets, develop financing plans, or provide rigorous analysis that quantifies the return on investment from public dollars directed toward housing goals. Our work integrates an understanding of local, regional, and national market and policy forces. EPS works in a variety of contexts, from large urban metropolitan areas and regional planning organizations to smaller, rural, suburban, and resort markets.

Representative Projects

- Archuleta County Housing Needs and Policy Assessment
- Aspen Housing Update
- Aurora Housing and Community Needs Assessment
- Basalt Affordable Housing Strategy
- Bexar County TX Housing Needs Assessment
- Big Sky MT Housing Development Plan
- Billings MT Workforce Housing Needs Assessment
- Boulder Inclusionary Housing Rental Policy Update
- Boulder Rental Housing Climate Action Plan Cost Impact
- Broomfield CO McWhinney Affordable Housing Analysis
- Chaffee County Housing Needs Assessment
- City & County of Denver Housing Economic Study/ Denver IHO
- Clear Creek County Housing Assessment
- Denver Housing Production and Funding Analysis
- Douglas County Housing Partnership Nexus Study
- Edwards Housing Economic Impact Study
- Fort Collins Inclusionary Housing Study
- Lakewood Housing Study
- Lakewood Support for Development Review Process
- Leadville and Lake County Housing Needs Assessment
- Longmont Inclusionary Housing Study
- Manitou Springs Affordable Housing Needs Assessment
- Northern Colorado Housing Density Analysis
- Oklahoma City OK Housing Plan
- Ontario Canada Inclusionary Zoning Policy Study
- Plano TX Housing Trends Analysis and Strategic Plan
- Portland OR Housing Incentive Analysis
- Roaring Fork Valley Regional Housing Authority 2017 Housing Needs
- San Antonio Housing Production Target Study
- San Antonio TX Housing Policy
- San Miguel County Housing Needs Analysis
- Sonoran Institute Housing Market Study
- St. Anthony Center Housing Needs Assessment
- Summit County Housing Needs Update
- Summit County Peer Review
- SW Colorado Regional Housing Plan
- Tri County Housing Needs Assessment
- UAACOG Housing Needs Assessment
- Windsor Study of Demographics and Housing Opportunities

The following are representative projects EPS has completed involving the assessment of housing demands, supply, and gaps; assessment of market rate, affordable, workforce, and special needs housing; and housing policy and plans.

Short Term Rental Housing Fee Study

Summit County, Colorado

Summit County hired an EPS led team to establish a basis for fees on STR units. This work included three key components:

1. Building on existing County data, we established a baseline STR context for the County. This provided data to inform policy makers as they consider new fees or other policies and strategies, and enable data-informed decision making for a proposed fee. Analysis included data on inventory, location, unit characteristics, economic characteristics, and guest spending.
2. To provide additional context, we provided an overview of how peer communities are addressing STRs, including how the STR contexts of other locations (including magnitude of inventory, share of total units, and guest expenditures) are similar or different from Summit County.
3. Lastly, EPS completed a nexus study to document the nexus between STR use and affordable/workforce housing demand. Using an economic impact model to document the relationship between STR guest spending and affordable housing demand, the model provides a basis from which the County can generate fee revenue to be used for housing development and/or to fund programs (e.g., buy downs).
    - Cost of project: $51,000
    - Client: Summit County, Colorado
    - Sub consultant: RRC Associates
    - Project over/under budget and schedule: Ongoing
    - Listing of general policy recommendations: Anticipated recommendations include STR fee and use of revenues.

Roaring Fork Valley Regional Housing Study

Aspen to Glenwood Springs and New Castle to Eagle, Colorado

The Roaring Fork Valley has become synonymous with high housing costs, a tight and constrained housing supply, and an ever-expanding commute shed. The discontinuity of affordable housing practices, goals, policies, and initiatives by numerous counties and municipalities makes tackling affordable housing needs and issues an even more challenging problem to solve. For the past few decades, it has been clear that housing needs for the workforce are not being met sufficiently. Years of applying best practices in most of the Valley's communities has helped many, but left still many more needs unmet.

The goal of this study was to provide a solid foundation from which a regional solution could finally address a regional problem. EPS and its subconsultant, RRC Associates, provided an in-depth analysis of workforce needs, a projection of age-and income-specific needs, and a robust foundation from which to communicate the story and issues to local governments, stakeholders, and the public. The team conducted the first-ever regional resident and employer survey to comprehensively assess the perceptions, concerns and housing needs of residents, workers, and employers. The team also pioneered a new methodology for identifying housing gaps by income. The findings revealed subregional under- and over-supplies, inter-regional dependencies, and a truer picture of the housing needs by income created by each driver of housing demand – factoring in wage and salary workers, proprietors, non-working residents, in-commuters and out-commuters.

- Cost of project: $116,500
- Client: Garfield County Housing Authority
- Sub consultant: RRC Associates
- Project over/under budget and schedule: Budget increase of $29,000 due to additional tasks and expanded report
- Listing of general policy recommendations: Quantified the regional housing gap and gaps at the community level, with recommendations on what AMI levels should receive the greatest focus.

Lake County Housing Needs Assessment

Leadville, Colorado

Lake County is a unique community in the Rocky Mountain West, given its origins and continuity as a mining community and its growing appeal as a tourism and recreation destination. Leadville, the County's only incorporated municipality, has a strong mining history and downtown historic district. The regional context for Lake County is one of growth in both the commercial and residential sectors. The surrounding counties include Eagle, Summit, Chaffee, and Pitkin, each of which has a thriving real estate market and growing economy. Lake County's residents provide much of the workforce for these surrounding communities, as regional housing challenges push workers to seek housing in Lake County. There has been a major shift in the Lake County housing market since 2015, both in rental and for-sale homes. While Lake County is not alone in the challenges it is facing, its geographic and employment context make the challenges and opportunities present distinct in the region.

EPS prepared a Housing Needs Assessment for Lake County that focused on identifying the key housing issues facing the community as well as resources in the County available to address these issues. The analysis documented economic and demographic conditions contributing to housing affordability issues, evaluated the housing market to identify market trends affecting

affordability, and recommended strategies and actions for the City and County to pursue to increase the supply and affordability of housing.

This work was done through data analysis, stakeholder input obtained through focus groups and direct interviews, and community outreach through two community meetings. The resources and strategies available to the community were cataloged, and applicability to Leadville and Lake County was assessed as part of the creation of an action plan to address identified issues and goals. The analysis emphasized implementation measures focused around policy, funding, and governance.

- Cost of project: $44,000
- Client: Lake County, Colorado
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed on time and on budget
- Listing of general policy recommendations: EPS made recommendations in five categories: land strategy, policy initiatives, organization and management, funding sources, and regional partnerships.

Housing Conditions and Policy Update

Basalt, Colorado

EPS was retained to identify how market and economic conditions since the recession had changed and to what extent housing supply was or was not meeting demand. EPS conducted a targeted employee survey to collect primary data on residence preferences and assessed how widening gaps between local housing costs and lower-paid employees and their households were contributing to the need for a locally-funded affordable housing solution. The work included a full analysis of supply and demand conditions, such as trends in demographics, employment, wages and income, and commuting, as well as the housing inventory. EPS found that exacerbated cost-burden conditions, a drastic increase in low-wage jobs, housing prices in excess of the local workforce, and the lack of new affordable inventory in the pipeline contributed to a workforce development problem.

- Cost of project: $50,000
- Client: Town of Basalt, Colorado
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed on time and on budget
- Listing of general policy recommendations: Increase program income limits to 140% AMI; focus on deed restricted for-sale housing; increase unit and property amenities.

Aspen Lumber Yard Market Study

Pitkin County, Colorado

The City of Aspen purchased a 4.7-acre lumberyard and an additional 3-acre mini storage site along Highway 82 across from Aspen/Pitkin County Airport in 2020 for employee housing development. The site is just north of the Burlingame Neighborhood, a for-sale employee housing neighborhood that has been one of Aspen-Pitkin County Housing Authority's (APCHA) most successful projects. APCHA had been building largely for-sale housing in recent projects but this site is suitable for high densities, and APCHA was proposing nearly 300 units of rental housing. Since APCHA had not done a rental project in several years, it needed to develop a better understanding of the target market. In addition, Aspen City Council was interested in how it could better serve local businesses and wage earners with housing. This information would be used to inform the project design, unit mix, and rent and qualifying income levels.

APCHA hired EPS to conduct an analysis of job and wage growth in the Upper Valley, and a survey of recent rental projects in the larger valley from Glenwood Springs to Aspen to assess competitive rent levels. EPS analyzed detailed business-level employment data for the upper valley. The analysis found that job growth continued to be in tourism-oriented sectors, plus local government. For single earner households, these jobs equate to about 55 to 70 percent of AMI (APCHA Category 2) for about 25 percent of the jobs. Another 55 percent of jobs were in the 85 to 120 percent of AMI range (APCHA Category 3). The demographic analysis prepared by EPS also showed that roommates are a common living arrangement, and that combined roommate incomes put them above the APCHA categories, creating friction in the market.

- Cost of project: $30,000
- Client: Aspen-Pitkin County Housing Authority
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed on time and on budget
- Listing of general policy recommendations: EPS advised APCHA to review its roommate and income qualifying guidelines to housing market friction. We also recommended a unit mix to serve a range of incomes and household types.

Housing Funding Plan

Fruita, Colorado

The City of Fruita, located on the western slope, is facing mounting housing market pressure and, like so many other communities in Colorado, is concerned about the ability of the local workforce to access housing in the city. The City retained EPS to formulate a housing funding strategy focused on generating

new revenue streams and how those funds can be most effectively allocated to create more workforce housing options. The study also modeled various housing programs, including an ADU program, land banking, and down payment assistance, to determine the impact of new funding in relation to housing targets and the financial feasibility of establishing a revolving loan fund for the City.

- Cost of project: $89,210
- Client: City of Fruita, Colorado
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed on time and on budget
- Listing of general policy recommendations: A housing fee and new housing assistance programs and incentives.

Capital and Housing Impact Fee Process

Pagosa Springs, Colorado

In 2018, the Town decided to reevaluate its impact fee program in 2018. With affordable housing being an increasingly difficult challenge, the Town also wanted to explore new tools for funding affordable housing. The Town hired EPS to conduct a study and process of updating its existing impact fees and exploring the option of replacing the capital impact fees with an affordable housing impact fee (linkage fee).

- **Capital Impact Fees –** EPS prepared a new nexus analysis and new fee calculations for Town Council to consider. The fee categories were municipal facilities, parks and recreation, trails, Town fleet, and police. EPS and staff determined that transportation should be eliminated because it was determined that there were few if any roadway capacity projects appropriate for impact fees.
- **Housing Linkage Fee Nexus Study –** To address affordable housing, EPS performed a housing linkage nexus study using an economic impact model. The model estimates the jobs and households generated by AMI range from new market rate housing development. Linkage fees were calculated on a per square foot basis.
- **Council Decision –** The Town Council ultimately determined not to adopt either type of fee as the revenues were deemed not to be worth the potential impacts on economic development.
  - Cost of project: $39,860
  - Client: Town of Pagosa Springs, Colorado
  - Sub consultant: N/A
  - Project over/under budget and schedule: Project completed on time and on budget

- Listing of general policy recommendations: EPS prepared revenue projections from impact fees and housing linkage fees to gauge their impact on the Town's capital and housing budgets. EPS provided objective analysis and facilitated discussions with Town Council. Council opted to repeal capital impact fees.

Inclusionary Zoning and Linkage Fee Nexus Study

Fort Collins, Colorado

In response to a continuation of concerns about steep appreciation in rents and for-sale price points, the City selected EPS to evaluate the feasibility, impact, and market-readiness of these two policies. Following a process of outreach, including a technical advisory group of housing advocates, service providers, real estate professionals, developers, and builders, as well as technical modeling, EPS gave the City guidance on the community's readiness for voluntary and mandatory IZ, as well as residential and commercial linkage fees.

EPS evaluated the feasibility and impacts of IZ on prototypical development scenarios and tested sensitivities to identify an optimal programming structure – the outcomes produced an understanding of feasible housing set-asides, affordability levels, incentive structures, among the other programmatic elements. The technical analysis also included a linkage fee nexus study, required legally to justify maximum supportable fees that could be applied to different land use developments for generating revenue to mitigate the affordable housing needs created through those developments.

- Cost of project: $135,000
- Client: City of Fort Collins, Colorado
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed on time and on budget
- Listing of general policy recommendations: Provided IZ set aside percentages and AMI limits; potential nonresidential linkage fee amounts; and impacts on development feasibility.

Affordable Housing Mitigation Rate and Fee-in-Lieu Updates

Vail, Colorado

The Town of Vail recognized the need to update its affordable housing mitigation requirements given that the standards were dated and exempted a large geography of the community from compliance. As the Town developed a work program to address the need it focused on 1) generation rates; 2) mitigation rates; and 3) updated factors for fee-in-lieu calculations. The goal was to provide a comprehensive set of tools that reflected the current Town Council's priorities and policy objectives.

The Town retained EPS to address the full range of elements. EPS provided the generation rates, using the most recent industry standards for residential linkage that provided the Town with job formation rates graduated by size of home. To enable the Town to set new mitigation rates, EPS provided a range of trend data related to economic growth, housing costs, residential land supply, and housing gap analyses. EPS also constructed a fee model, using the factors related to development costs, household income, and employee ratios to arrive at an affordability gap. A key element in the final task was to create a simple, data-driven system for annual updates to the fee calculations that will enable the Town to keep pace with the escalations in development costs.

- Cost of project: $48,500
- Client: Town of Vail, Colorado
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed on time and on budget
- Listing of general policy recommendations: Town is considering the study in the context of other code changes.

Affordable Housing Mitigation Strategies

Mountain Village, Colorado

Mountain Village, located at the base of the Telluride Ski Area, is a municipality that sought to generate affordable housing solutions. Mountain Village, along with many peer communities throughout the Rocky Mountain West, is challenged to provide the workforce to staff local business. In addition to economic goals, these towns also seek to increase community vitality with a greater number of affordable housing units for local residents.

Mountain Village retained EPS to provide affordable housing mitigation strategies that covered all uses of new development. The mitigation model that EPS constructed identified both the employment generation rates for all types of residential product as well as all types of commercial uses. Following the employment generation rates, the model identified the financial gaps faced by local households. These factors were used to generate mitigation programs that the Town began applying to development requests immediately following the adoption of the program. The benefit will be the construction of dedicated affordable housing and/or the generation of fees that the Town will use to fund its development efforts.

- Cost of project: $80,000
- Client: Town of Mountain Village, Colorado
- Sub consultant: RRC Associates
- Project over/under budget and schedule: Project completed within budget; 8/2021-3/2022

- Listing of general policy recommendations: Recommended housing requirements and linkage fees for new commercial and residential development, along with a tiered mitigation strategy to incentivize on-site and in-town housing, which were adopted by Council.

Employment Generation Rate Update

Aspen, Colorado

EPS provided the City of Aspen with the original fee estimates and employment generation rates for the City of Aspen's Employee Mitigation Requirements in 2002 and was contracted by the City in 2012 to update the employment generation rates to reflect changed economic conditions. EPS collected primary data from each of the businesses in downtown Aspen and surrounding areas in the city to provide the City with updated values on employment generation rates by land use and sufficient information to provide distinguishable values for downtown core versus elsewhere in the city.

- Cost of project: $15,000
- Client: City of Aspen, Colorado
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed within budget; 9/2012-12/2012
- Listing of general policy recommendations: Updated employee generation rates by major land use type.

Short Term Rental Regulatory Fee Study

Breckenridge, Colorado

The Town of Breckenridge is a national and international ski and outdoor recreation destination. Town policy makers are facing a housing crisis and pressure from constituents to address the problem. The housing challenges are being amplified by the ongoing COVID-19 pandemic and its impacts on "amenity migration" patterns resulting in increased purchases and occupancy of second homes and conversion of second homes and long term rentals to full time residences for remote workers, further pricing out the local workforce. On top of that, the growth of vacation rental by owner platforms such as VRBO and Airbnb is driving investment in housing by corporate entities buying "trophy" properties to manage and market with usage patterns more like hotels than traditional vacation rentals. The growth of Metro Denver has also generated more buyers who tend to purchase older and lower priced properties as second homes, sometimes converting long-term rental housing to second homes and short term rentals (STRs).

The Town hired EPS to work with its legal staff to design a regulatory fee program applied to short term rentals. Traditional lodging properties such as hotels and lodges (defined by zoning classifications) are exempt from the

fee in order to target properties more likely to affect neighborhoods and long term rental or purchase opportunities for the local workforce. EPS prepared an economic analysis that demonstrated the impacts of STR use on the demand for workforce housing and calculated an annual fee designed to fund related housing programs. We then projected the potential fee revenue the program would generate and worked with Town Housing and Finance staff to ensure the fee revenues would be restricted to housing programs. Town Council adopted the fee in November 2021.

- Cost of project: $34,370
- Client: Town of Breckenridge, Colorado
- Sub consultant: RRC Associates
- Project over/under budget and schedule: Project completed within budget; 8/2021-11/2021
- Listing of general policy recommendations: Short term rental fee and uses of funds

Short Term Rental Fee Study

Aspen, Colorado

Aspen and other mountain resort communities in Colorado are evaluating tools to regulate the impact of STRs on housing availability and affordability. EPS was retained by the City to analyze a fee-based approach that would levy an annual licensing fee on these units, with the fee revenue dedicated to providing a specific purpose such as housing development or housing programs.

EPS completed a fee study outlining both an administrative fee that the City can charge to cover the costs of regulating and managing STRs, as well as a fee structure that would link expenditures from STR guests to housing need in the community, based on employment supported through spending. The analysis included a detailed nexus study to document the community need stemming from expenditures, and how that linkage could be used to form the basis for a fee. As the project progressed, City Council adopted the administrative fee and gave direction to pursue a tax initiative to address housing impacts. The EPS nexus analysis is being used to calibrate the parameters in considering a ballot measure to adopt an excise tax on STRs.

- Cost of project: $77,000
- Client: City of Aspen, Colorado
- Sub consultant: RRC Associates
- Project over/under budget and schedule: Project completed within budget; 3/2022-8/2022
- Listing of general policy recommendations: Fee structure to address administrative and housing impacts of short term rentals.

Short Term Rental Study

Vail, Colorado

The Town hired EPS to analyze the existing STR inventory, understand the housing impacts of STR use in the town, and complete a nexus study to support a fee on STR units. Through this work, EPS was able to characterize the STR inventory in the Town of Vail, including location, size, occupancy, rental rate, and ownership characteristics. This data was contextualized within the overall town lodging inventory to understand the role of STR units in the lodging sector.

EPS also analyzed the Town's housing market over a three year period, with a focus on units registered as STRs before and/or after sale, to evaluate the type and value of units used as STRs and how those units relate to the overall housing market.

The final component of this effort was a nexus study to support a fee program, with revenue supporting local workforce housing programs. EPS's analysis used an economic impact model to document the relationship between STR guest spending and affordable housing demand based on employment generated by spending.

- Cost of project: $48,500
- Client: Town of Vail, Colorado
- Sub consultant: RRC Associates
- Project over/under budget and schedule: Project completed within budget; 10/2021-5/2022
- Listing of general policy recommendations: EPS recommended a fee for mitigating the impacts of STRs on housing need in the town. This fee program and other policy changes, determined in partnership with staff have yet to be adopted by Council.

St. Anthony Summit Hospital Workforce Housing Solutions

Summit County, Colorado

St. Anthony Summit Hospital (St. Anthony) is situated in one of the state's most expensive and supply-constrained housing markets. Limited new residential construction, a predominance of second homeowners and a largely tourism-driven economy translate to challenges not only for the workforce, but for a growing entity like St. Anthony to recruit and retain a qualified workforce.

St. Anthony selected EPS to provide options it may consider to address the housing-related challenges for its new hires and existing associates. Based on analysis of a survey fielded to all associates, market data, and a series of focus groups, EPS recommended a range of strategies that could be implemented to address housing challenges among its workforce. These strategies varied in terms of cost, target employee cohort, and timing.

- Cost of project: $20,000
- Client: St. Anthony Summit Hospital
- Sub consultant: N/A
- Project over/under budget and schedule: Project completed within budget; 11/2019-1/2020
- Listing of general policy recommendations: Pay adjustments and housing stipend recommendations. EPS also advised St. Anthony on a development partnership on a site the hospital owns.

Short Term Rental Policy Evaluation

Eagle County, Colorado

EPS is currently undertaking a comprehensive STR conditions analysis and fee study for Eagle County. This work includes an analysis of STR trends and existing conditions throughout the county, including inventory and performance metrics. In addition to this conditions analysis, EPS is completing a study to support a regulatory fee based on workforce housing impacts, as well as analysis to support adoption of an administrative fee to assist the County with the costs of administering and enforcing an STR regulatory program.

- Cost of project: $57,500
- Client: Eagle County, Colorado
- Sub consultant: RRC Associates
- Project over/under budget and schedule: Ongoing
- Listing of general policy recommendations: N/A

3. APPROACH TO PROPOSAL

Project Understanding

The Town of Basalt has a comprehensive set of land use regulations and fees that are designed to mitigate the impacts of new development and produce and fund more affordable housing. The two main programs are in inclusionary zoning requirement of 20 percent of units, with a cash-in-lieu option, and a commercial linkage fee or affordable housing impact fee on nonresidential development. The Town has had these regulations for many years and has produced roughly 280 units from these and other programs and funding sources.

The Town sees a need to update its regulations and fees given the continued increases in prices, widening housing gaps for the workforce, an aging population, and the evolution of the market post-pandemic. Post pandemic, there are more remote workers in the region which is also affecting housing supply and prices. The continued increase in prices in Basalt and other mountain towns is causing policy makers to consider increasing the income limits of their programs, as even higher income professionals are priced out of the market. The Town's income limits cap out at 120 percent of AMI, while other communities have programs that go to 200 percent of AMI or higher. Last, the Town would also like to explore a regulatory fee on short-term rentals to mitigate their impacts on affordable housing.

Project Approach

The proposed Scope of Work below is divided into four components that address the Town's needs as we understand them from the RFP.

- **Surveys (Primary Data)** – An employer survey is needed to update employee generation rates for the linkage fee update, and to get feedback on how housing or other issues are affecting the local economy. The Town would like to survey residents of its deed restricted housing to understand their housing preferences and needs, and future plans. This survey will inform the future unit mix and amenities in new projects.
- **Needs Assessment / Secondary Data** – This group of tasks includes a housing market and affordability assessment, and analysis of other economic and demographic information to inform the degree of housing needs and housing gaps by tenure and income level.
- **Mitigation Fee Updates** – These tasks are to update and recalculate the inclusionary housing cash-in-lieu fee and the commercial linkage fee. It includes reviewing the current methodologies and proposing any changes to reflect current best practices.
- **Reports and Presentations** – Last, we will document all work in draft and final reports, and include an in-person presentation to the BACH and Town Council.

Scope of Work

The proposed Scope of Work below closely follows the RFP. It summarizes the major tasks we anticipate completing. Based on our experience, there are often minor deviations from the specifics that evolve during the project, but the overall intent follows the RFP. We are also open to discussing the scope with the Town to make any modifications to best meet your needs and budget.

Task 1: Kickoff and Review of Existing Housing Initiatives

EPS will host a phone/video kickoff meeting with Town staff and potentially interested members of the Basalt Affordable Community Housing Commission (BACH).

- Collect relevant data, current program and policy information, other studies, and establish key Town contacts.
- Listen to input on policy and technical issues to address in the study, ensure that the work plan can address them.
- Begin planning survey distribution logistics.

Task 2: Data Collection

This task is comprised of three main components needed to provide the updated housing need and housing preference recommendations, and to make the proposed updates to specific policies and implementation measures such as the cash-in-lieu and commercial linkage fees.

First, the RFP requests a survey (primary data) of current deed restricted housing residents to inform housing preferences and needs. Next, an employer survey is requested to inform economic aspects of housing such as employee recruitment and retention, and to inform the employee generation rates used in the commercial linkage fee program. The last component is the important secondary data on demographics, incomes, wages, and home prices needed to round out the information used in the Needs Assessment.

2.1 - Deed Restricted Housing Survey

In this task, we will survey current residents of the Town's deed restricted housing to gain insight on their demographics, employment status and occupations, tenure plans (move, stay, etc.), and preferences on unit types and features. This information will inform the Town's programs and the design and unit mix of future projects.

- Meet with Town staff and select BACH members to brainstorm on survey topics and questions.
- Prepare a draft and final survey, proposed to be electronic on the Survey Monkey platform.

- If hard copies are needed for people without ability or access to an internet-connected device, the Town will be responsible for distributing those and providing assistance in completing the survey.
- The Town will provide a distribution list of all current residents, including email addresses.
- EPS will monitor responses and determine with the Town when the survey should be closed (e.g., when there is an adequate number of responses for analysis, and the response rate drops off).
- EPS will compile and analyze the results in summary tables and charts.

2.2 - Employer Survey

We understand that there are two main purposes for the employer survey. First, information on the health of local businesses is needed, and how housing may be a factor. We can also get good information on where employees live (commute distances), and some information on workforce housing preferences. Second, we would collect data on business floor area and the number of employees to update the employment generation rates used in the commercial linkage fee program.

- Meet with Town staff and select BACH members to discuss the survey and key topics.
- Design draft and final survey instruments for electronic distribution using Survey Monkey.
- Obtain employer email addresses. This proposal assumes they are readily available through the Town's business license program or that the Town can provide them through other sources.
- Distribute survey and monitor responses, close the survey at the appropriate time.
- EPS will compile and analyze the results in summary tables and charts.
- EPS will calculate the updated employment generation rates and strive to follow the current land use categories.

2.3 - Needs Assessment Secondary Data

We understand that the primary purposes of this project are to inform and provide proposed updates to the Town's current housing policies and programs. The Needs Assessment component will draw from both surveys, plus additional data on the area housing market and economy to inform housing needs and recommended priorities. The Needs Assessment data component will address the demand side, while the supply side will be addressed in Task 3 (Market Analysis and Needs Assessment).

- **Demographics** – Data will include household income levels and distribution by Town Category, tenure (renters and owners), age distribution, and trends in growth and change. We will also look specifically to gauge if senior housing should be an increased priority, as it has not been the typical focus of housing programs in the Roaring Fork Valley.

- **Economy** – We will examine local and regional Upper Valley economic trends and wages levels, and comparisons of job shifts between the Upper and Lower Roaring Fork and Colorado River Valleys building on our recent work in the Pitkin County Economic and Community Analysis (2022).

Task 3: Market Analysis and Needs Assessment

3.1 - Market Analysis

This task covers the analysis of the housing supply and market and then combines the analysis from the demand side (surveys and secondary data) to arrive at a clear definition of housing needs and recommended priority market segments (income levels, job types, age and demographic groups).

- **Housing stock and production** – Characterize the existing housing stock. Quantify housing production by housing type for the past 10 or so years including market rate and deed restricted units.

- **For-sale market** – Analyze data from the multiple listing service (MLS) to get accurate local data on current prices and trends. Categorize sales by the AMI to which they are affordable, including the change in affordability levels and incomes required over time.

- **Rental market** – Data on the rental market is more limited as there is no central service like an MLS for rentals in the Basalt area. Data on the rental market will come from multiple sources such as CoStar (may have limited coverage, focusing on newer buildings), interviews with 2-3 major property managers, and American Community Survey data. We will summarize key indicators such as rent and vacancy levels, and approximate income/AMI levels served in the rental market.

- **Affordability metrics** – From the above data, EPS will prepare a concise and simple set of metrics that summarize affordability levels by tenure (renters and owners) and housing gaps.

- **Available land** – Land is an important part of the future housing supply. We will coordinate with the ongoing study by the Western Regional Housing Coalition to determine if there is adequate land in and near Basalt to address current and future housing needs.

3.2 - Needs Assessment

The Needs Assessment will bring together the findings from the surveys, secondary data, and market analysis to clearly define and recommend the top housing need areas and proposed areas of focus (e.g., rental, for-sale, senior). We will also recommend the most needed types and sizes of units. Depending on the available findings from the Western Regional Housing Coalition study, we will also assess how much supply could be potentially delivered in the next 10 years on those sites.

The overall Needs Assessment needs to be concise to fit within the project budget. It needs to serve two main purposes in our interpretation of the RFP: inform areas of greatest need and priority, and help us determine if any of the Town's current policies need to be updated. In particular, we will look at income levels and need as it compares to the Town's current categories that cap at 120 percent of AMI. There has been movement and need in many mountain towns to serve higher incomes in deed restricted housing programs and other housing assistance.

Task 4: Implementation Strategies and Recommendations

Task 4 includes preparing proposed updates to the Town's current housing policies and regulations. The findings from the Surveys and Needs Assessment will be used to direct this task and inform the recommendations. In particular, the Town's housing mitigation fees have not been updated in several years and the cost and market assumptions need to be updated.

Embedded in each task is working with the Town to determine if the income category levels should be updated to reflect current market conditions. Depending on the methodology selected, we may also interview local builders/ developers to collect current cost factors to use in the fee calculations.

4.1 - Commercial Linkage Fee Update

In this task, we will update the housing gap calculations and resulting fees by land use type in the Town's commercial linkage fee program.

- Review the current calculation methodologies with Town staff and discuss any proposed refinements, including aligning generation rates with land use categories.
- Apply the appropriate generation rates to the major land use types and determine employee wage and household income levels to establish the affordable price for employees generated. Ensure that factors such as interest rates, utility costs, and HOA dues and insurance are included as necessary.
- Calculate housing gaps by major land use type based on either housing sale prices or construction costs.

4.2 - Residential Inclusionary Cash-in-Lieu Update

- Review the current calculation methodologies with Town staff and discuss any proposed refinements, including aligning generation rates with land use categories.
- Calculate affordable prices by AMI range, ensuring factors such as interest rates, utility costs, and HOA dues and insurance are included as necessary.
- Calculate housing gaps by AMI range based on either housing sale prices or construction costs.

4.3 - Short-Term Rental Regulatory Fee Study

EPS has completed several regulatory fee studies to mitigate the impacts of short-term rentals on affordable housing. The relationship between STRs and housing demand is based on guest spending and the resulting jobs generated. The Short-Term Rental Study cannot be completed within the available budget for this work. Depending on the final scope, we estimate a cost range of $25,000 to $35,000. A scope of work for an STR Study typically includes the following elements:

- **STR Inventory Analysis** – Gather and analyze data on the physical characteristics of the STR inventory to establish inputs to the fee study, and characterize the types of housing in the STR inventory. This includes factors such as unit size and type, number of bedrooms, assessed value, and age.
- **STR Economic Characteristics** – Gather and analyze data on guest spending patterns, STR unit annual occupancy, and average annual daily rental rates as inputs to the economic impact model and fee calculation.
- **Fee Calculation and Economic Impact** – Prepare the economic impact model and subsequent housing gap and fee calculations.

Task 5: Report and Presentation(s)

5.1 Needs Assessment Report

EPS will prepare a Draft and Final Report for the Town. The proposed focus of the report is on the findings from the Surveys and Needs Assessment and documenting the recommended housing priorities for the Town. The key topics we anticipate addressing include:

- Recommended AMI categories
- Greatest areas of housing preferences
- Income and job/wage types with the greatest needs to sustain the economy
- Degree of need for senior housing

- Strategies to increase production in the town, interfacing with the Western Regional Housing Coalition.

5.2 - Technical Deliverables (Fee Calculations)

We propose to provide separate technical deliverables documenting the proposed updates to the commercial linkage fees and residential cash-in-lieu fees. The deliverables would include the recommended new fee levels by AMI category and land use type, with documentation of the calculation methodologies, data sources, and major assumptions.

5.3 - Presentation

EPS will make an in-person presentation to the BACH and Town Council on the findings and recommendations.

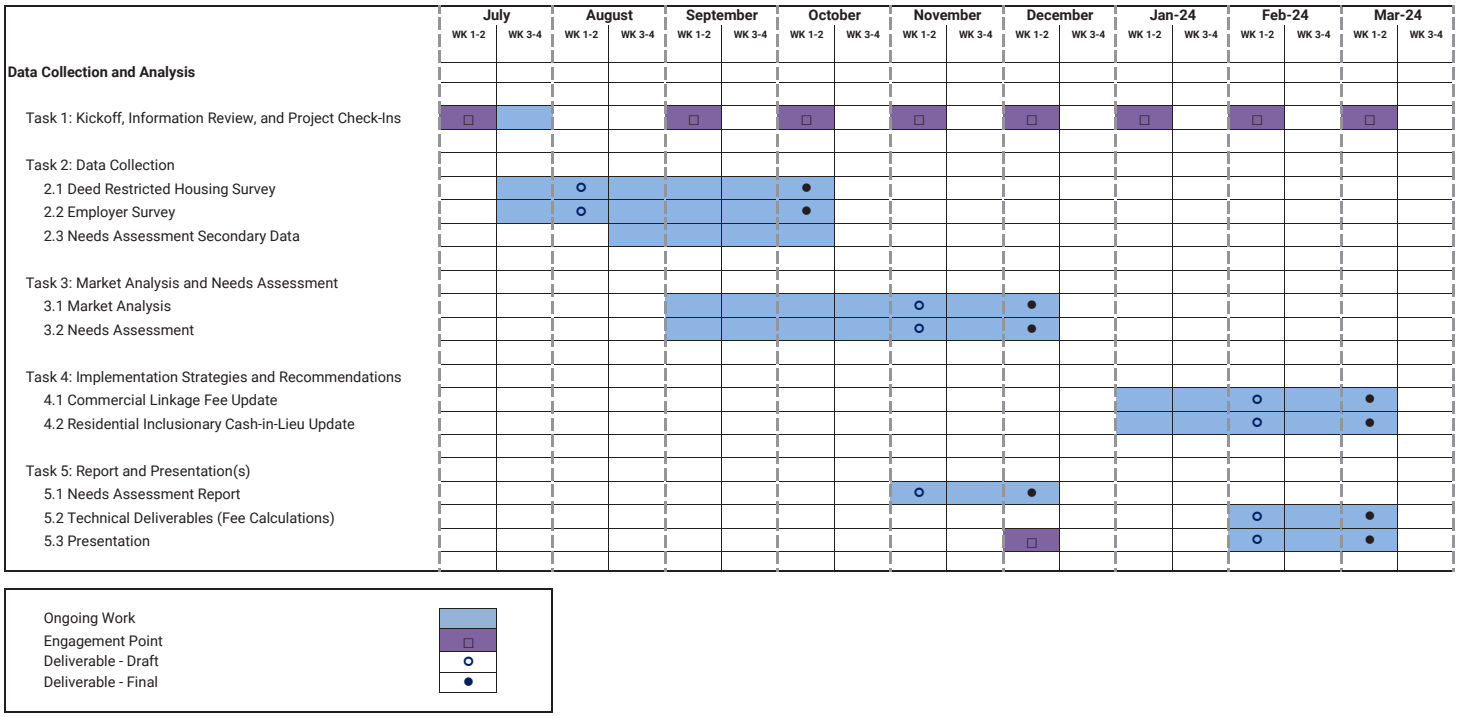
5. FEE PROPOSAL AND SCHEDULE

Fee Proposal and Schedule

The estimated budget for all scope items, except the STR Study, is not to exceed $104,420 as shown below. We understand this may be more than the Town has allocated for the project and we would be happy to discuss how the scope could be reduced, refined, or phased to lower the cost.

Table 1. Proposed Fee by Task and Staff



Description	Principal & V.P [1]	Associate	Research Analyst	Total
Billing Rate	**$223**	**$145**	**$115**	
Task 1: Kickoff and Review of Existing Housing Initiatives	**4**	**16**	**0**	**$3,210**

Source: Economic & Planning Systems

EPS proposes to complete the scope of work within a 9-month period of the initial notice to proceed as shown in **Figure 1**. With a project kickoff at the first of July, the final deliverable is anticipated by early March 2024. EPS anticipates monthly check-ins with the Town project team and/or at the end of each task to provide a brief project update and initial findings.

Figure 1. Proposed Schedule

Town of Basalt Affordable Housing Assessment Proposal

Introduction

The team led by Smart City Policy Group has worked on hundreds of Short-term Rental regulatory analysis, stakeholder engagement, compliance and policy creation. The team has also worked on multiple Economic Analysis, Economic Impact, Fee Analysis and Recommendation and Stakeholder Engagement in multiple destination communities.

One eye-catching example of success is the work completed in Galveston, Texas. This community, which includes significant hotel and resort inventory, found significant success in the compliance of registration and tax collection.

The team led by Smart City Policy Group worked to help Galveston, Texas increase their registrations of Short-term Rentals from less than 2000 to 4170 registered properties as of February 20th, 2023. The team also helped Galveston increase Hotel Occupancy Tax collection from Short-term Rentals from 31.5% in 2019 to 53% 2022.

The Team also helped Galveston, and other communities, by producing a survey and "virtual site visits" of peer communities for the purpose of understanding the opportunities, and challenges of various fee structures for registration fees, permit fees and other associated Short-term Rental fees.

Smart City Policy Group, working with the economics analytics team at TXP, and the housing analytics team at RCLCO, have completed numerous studies, analysis, fee recommendations and compliance policy creation on Short-term Rentals, including our work in the vacation regions of Asheville (Buncombe County) North Carolina, and La Quinta (Riverside County) California.

The team has read the proposal, and understands that the city of Basalt is looking for an assessment of prior initiatives addressing housing, an update to the current data with regards to households, housing units, population, and employment, will provide information on the current market rate for short-term rentals and ownership units including the availability of units in question, and looks forward to providing solutions to address the pertinent housing needs for different housing types, rates, the mix of ownership and rentals, and any other needs that arise based on the market analysis.

We look forward to helping Basalt achieve local goals and creating effective solutions through data, transparent dialogue, community engagement and regular iteration of

results and information with staff and stakeholders. Please contact the team lead, Matt Curtis, through the contact information provided below for any additional information.

Qualifications and Capacity

About Smart City
The team at Smart City Policy Group is made up of former mayors, policy makers and travel industry leaders focused on creating government and public solutions for Short-term Vacation Rental regulations. The group has worked for years to help cities, counties, real estate associations, destination marketing organizations and vacation rental management companies work to identify national best practices and model examples that achieve compliance for Vacation Rental regulations.

In 2020 the team partnered with the State of New Mexico to host a Vacation Rental-focused compliance discussion called, “The Future of Tourism”. In 2019 the team worked with the Pocono Mountains Association of Realtors to hold two half-day summits on the data and solutions for Vacation Rental regulations. And, in September 2021 the team will hold their third annual Conference on Short-term Rental Regulations.

The Smart City Policy Group team is responsible for researching hundreds of communities and their impacts of Vacation Rental regulations. Recently the team developed solutions for two destination markets in their work with the Carolina Coastal Association of Realtors and South Carolina Vacation Rental Alliance focused on North Myrtle Beach, and the Golden Isles Convention and Visitors Bureau focused on Glynn County, Georgia.
Smart City Policy Group is the only team with the breadth of regulatory understanding and compliance experience in the rapidly evolving vacation rental industry.

Matt Curtis, Founder and CEO
Matt is a former Deputy to the last two Austin mayors and he has extensive experience in municipal government and local politics, working on a broad variety of initiatives and best practices in a rapidly changing city. He is a trained facilitator with 15 years of expertise in helping connect potentially conflicting interests to create effective policy.

Most recently, he served as Head of Global Government Affairs and Public Policy for HomeAway/Expedia where he worked with governments, and local communities around the world to create best practices and effective policies. He has served on the United States Conference of Mayors Business Council, the National League of Cities

Corporate Council, the Sharing Economy Advisory Network, the Travel Technology Association board and served on the Vacation Rental Management Association board.

His team at Smart City Policy Group includes former Austin mayor Lee Leffingwell, former Pleasanton mayor Jennifer Hosterman, former Economic Development Association board member Kevin Johns, former City Manager Jeff Coffee and several other former policy makers and thought leaders with extensive backgrounds in local governments.

Together they have worked on Vacation Rental, or Short-term Rental, regulatory and government advocacy issues for nearly ten years. Matt and his team have presented on Short-term Rental regulations around the world including; National Council of State Legislators, National Governors Association, European Parliament, Destinations International, US Travel - ESTO, United States Conference of Mayors and many more government and travel industry associations.

Matt works daily with affected local stakeholders on how to create effective regulations that achieve compliance.

Jeff Coffee, Former City Manager
Jeff served as City Councilmember and City Administrator in Buda, Texas, an immediate neighbor to Austin, and a community facing the growth challenges as one of the five fastest growing counties in the country. Jeff adeptly navigated Buda through the financial, political and policy changes of a city in transition.

His success includes the ideation, pursuit and execution of a 40 million dollar incentive package, the creation of a local government and private sector partnership for land development, and new municipal modeling to address growth.

While serving as a local elected official Jeff Coffee was recruited by the City of Elgin, Texas to fill the role of City Manager. Under Jeff's leadership the City of Elgin rose to a position of regional prominence as it became the pivotal community in the region's transportation network.

Jeff worked to delicately balance the changes occurring in Elgin through his daily interactions with the Chief of Police and the police department. Working closely to balance the police department budget with the city's evolving general operating budget,

Jeff struck a chord by working to fully understand the everyday impacts of each financial decision.

In recent months Jeff conducted a nationwide research project of the impacts of Short-term Rental regulations, helped to facilitate the ordinance affecting Vacation Rentals in North Myrtle Beach, South Carolina, and helped to create a countywide ordinance for Vacation Rentals in Glynn County, Georgia.

Jeff Coffee earned his BA in Political Science from UCLA, and his JD from the University of Houston, and is licensed to practice law in Texas. He currently works with a group of former policy makers as part of Smart City Policy Group.

About TXP
TXP, Inc. is an economic analysis and public policy consulting firm founded in 1987 in Austin, Texas. Our clients have discovered that we are the firm to hire when there is not an immediate, obvious, or simple solution to their economic or public policy challenge. In addition to drawing on the expertise of our firm members, we regularly partner with urban planning, engineering, and public policy firms to put together teams uniquely suited to our clients' needs.

TXP offers a full-range of economic analysis and forecasting services to public and private clients. The firm specializes in applying focused primary research to enhance secondary data. TXP offers a number of other services to clients, including periodic reports highlighting economic trends in regional economies and presentations to a range of stakeholders. TXP currently serves as economist-on-retainer for a number of high-profile private and public clients.

TXP's past economic and fiscal impact studies have covered a wide range of topics, including expanding and relocating businesses, educational facilities, tourism activity, arts and music festivals, transportation projects, and mixed-use developments. For each client, TXP develops a customized methodology that yields appropriate, cost-effective results that can be communicated effectively to a wide variety of audiences and stakeholders.

John Hockenyos, Economist and Project Manager
Following stints as an aide to a member of the British Parliament and work on a Senatorial campaign, Mr. Hockenyos founded TXP while attending the LBJ School of Public Affairs at the University of Texas at Austin in 1987. Since then, TXP has

successfully completed hundreds of projects for a wide variety of clients, with a strong record of on-time, on-budget delivery.

In his role as President of the firm, Mr. Hockenyos is involved in managing the day-to-day operations of the organization, performing technical analysis, and developing strategies for clients. In addition, he makes numerous public presentations and speeches. Mr. Hockenyos has served as a resource witness on a variety of issues in front of city councils, state legislatures, and the U.S. Congress.

Mr. Hockenyos' private sector background extends beyond TXP. He is currently a board member of Ascension Texas (a nationwide network of not-for-profit hospitals) and American Bank of Commerce. He also served on the Board of Directors for Capital Metro (the Austin area transit authority), and the Board of the ARC of the Capital Area.

Mr. Hockenyos received a B.A in Philosophy from the University of Illinois and M. Pub. Aff. from the LBJ School of Public Affairs, where he has taught as an Adjunct Professor.

Travis D. James, Economist
Travis D. James brings nearly 20 years of experience in economic analysis, strategic planning, and policy development. Currently, Mr. James leads the firm's efforts in economic impact studies, statistical analysis, and strategic planning. While at TXP, Mr. James has conducted over 200 economic and tax revenue impact studies for projects located in California, Florida, Louisiana, Maryland, New York, Pennsylvania, South Carolina, and Texas. He specializes in sub-regional analysis that requires blending economic analysis, land planning, GIS tools, and long-term forecasting.

Prior to joining TXP, Mr. James worked at ExxonMobil in the global information systems technology division in Washington, D.C. His duties required lengthy international travel to South America, Europe, and Asia in order to develop and support large-scale global systems solutions. Mr. James also spent five years as a project manager at a national economic development consulting firm where he worked on numerous studies throughout the United States.

Mr. James holds a Bachelor of Arts degree in Economics from the University of Texas at Austin. He also received a Bachelor of Science in Computer Science from Texas State University. Mr. James earned an MBA from St. Edward's University.

Mr. James has attended workshops and training seminars for economic impact modeling software including the U.S. Bureau of Economic Analysis' Regional Input-Output Modeling System (RIMS II) and MIG, Inc.'s IMPLAN software.

About RCLCO

In 1967, Bob Lesser, then an architect and developer, was asked to evaluate the potential uses for the center of the new town of Thousand Oaks, California. In carrying out this assignment, he found that the creativity and financial imagination required for the study were extremely stimulating—so much so that he started RCLCO. Today, our team of experienced professionals still share that original enthusiasm and eagerness to solve challenging real estate questions while adding value to our clients' real estate endeavors. We are proud to be the "first call" for real estate developers, investors, the public sector, and non-real estate organizations seeking strategic and tactical advice regarding property investment, planning, and development. RCLCO leverages quantitative analytics and a strategic planning framework to provide end-to-end business planning and implementation solutions at an entity, portfolio, or project level. With the insights and experience gained over 50 years and thousands of projects – touching over $5B of real estate activity each year – RCLCO brings success to all product types across the United States and around the world.

Todd LaRue, Managing Director

Todd joined RCLCO in 2004 and leads the Austin, Texas office. He manages engagements for developers, land owners, investors, and public sector entities seeking strategic development, investment, and/or planning advice regarding their real estate. His work includes consulting for numerous types of large-scale master-planned communities, high rise mixed-use developments, resorts, and commercial developments throughout Texas, the Southeast, and Mexico. For these engagements, he conducts highest and best use analyses, market opportunity analysis, consumer research, economic development assessments, financial analyses, fiscal impact analyses, metropolitan growth trends analyses, and various other analytical tasks to help guide clients' planning decisions and development strategies. Prior to RCLCO, Todd spent over seven years in construction management with Skanska in Atlanta, Georgia and W. H. Bass, Inc. in Norcross, Georgia. Much of his work was concentrated on managing ground-up construction projects in retail, banking, education, and telecommunication, as well as interior build-outs of high-rise office buildings.

Todd brings strong analytical skills in quantitative and qualitative analysis with his Bachelor's in Civil Engineering from the University of Virginia, and his Master's in

Business Administration (focusing on real estate and finance) from Emory University. He is an active member of the Urban Land institute (member of the ULI Austin Advisory Board) and has been a guest speaker at numerous real estate industry events and graduate business schools, including the Urban Land Institute, Congress for the New Urbanism, the University of Texas at Austin, and Emory University.

Cameron Pawelek, Vice President

Cameron Pawelek joined RCLCO in 2014 and is a Vice President based in Austin, Texas. As part of the firm's real estate economics practice, he focuses on providing strategic and actionable guidance for urban and suburban mixed-use developments, master-planned communities, resorts, and other complex, multi-use developments. His experience includes highest and best use analyses, financial feasibility studies, and market opportunity analyses for an extensive range of commercial and residential land uses. With an emphasis on consumer segmentation and insight, Cameron has helped clients in both the public and private sectors make informed development decisions.

Cameron serves as part of the leadership group responsible for RCLCO's firm-wide training program. Through this role, he educates and mentors new team members, and manages the programming and phasing of onboarding initiatives. He also assists in creating innovative business intelligence initiatives to further enhance RCLCO's segmentation analyses, long-term demand projections, and detailed supply-side studies.

Actively engaged in the Austin District Council of the Urban Land Institute, Cameron serves on the Advisory Board and has held previous positions on the Management Committee and Young Leaders Committee. In recognition of his contributions, Cameron was awarded the 2019 Young Leader of the Year.

Cameron graduated from the University of Texas at Austin with a Bachelor of Arts in Urban Studies, as well as interdisciplinary certificates in Real Estate and Business Foundations. His coursework focused on urban history, real estate economics, and geological sciences.

Expertise

The Smart City Policy Group team is uniquely situated as the most experienced on Short-term Rental policy creation, research and compliance. This experience allows the Group to host an annual Summit on Short-term Rental Policy on October 4, 2023.

Smart City Policy Group is made up of former policy makers including former mayors, a former tourism industry leader and travel association president, former economic development board member and several other former policy makers and thought leaders with extensive backgrounds in local governments. Our group has a decade of experience focused on the Vacation Rental industry, local government policies, data collection, analysis and STR mitigation fee studies.

The Smart City Policy Group team is responsible for researching hundreds of communities and their impacts of Vacation Rental regulations. The team has worked with;

- Galveston Park Board (Galveston's destination marketing organization) to help them make appropriate changes to their ordinance to increase compliance with registration and tax collection, including a national fee study
- Asheville (Buncombe County), and Brevard, North Carolina through the North Carolina Association of Realtors on an economic impact, housing analysis and cost of compliance study
- La Quinta, California on an economic impact, housing analysis and cost of compliance study
- The team has also conducted a comprehensive cost of compliance study reviewing North Myrtle Beach – North Carolina, Palm Desert - California, and Glynn County - Georgia

In performing short-term rental policy creation and compliance:

- assess the concerns of the community and local government through programmed engagement;
- analyze the short-term rental activity and any associated patterns and impacts;
- engage the major online providers, property management companies, associated service providers, and individual rent-by-owners to understand the potential hurdles to compliance;
- coordinate with any impacted organization that could benefit, or be challenged by, short-term rental activity; including tourism boards, convention and visitor

bureaus, chambers of commerce, neighborhood groups, homeowner's associations, and more;
- provide reports reflecting our findings and recommendations, and iterate those with local government;
- offer ordinance and administrative guidance providing the local government with a "model ordinance" to help bring their ordinance up to date, if needed;
- educate short-term rental owners, managers, and hosts to ensure future compliance with rules and any applicable registration, taxes, and more; and
- provide the local government with the opportunity for ongoing audits, evaluations, education, and compliance monitoring solutions.

Smart City Policy Group is the only team with the breadth of regulatory understanding and compliance experience in the rapidly evolving STR industry.

The Economic Impact of Short-Term Rentals

Various

Smart City and TXP have completed evaluations of the economic impact of short-term rentals in more than 20 destination communities across the United States, including Chicago, Honolulu, Los Angeles, Portland, and Seattle, as well as statewide in Texas. Georgia, and Missouri. The policy discussion over short-term rentals is highly localized, and often focuses on public nuisance concerns. Once again relying on the combination of survey research and secondary data, TXP's work provides an economic context, and also addresses the question as to the substitution effect with other local lodging options and the impact on the local housing market.

The Economic Impact, Jobs and Housing Analysis of Buncombe County, North Carolina (Asheville)

Buncombe County, North Carolina (Asheville)

Smart City Policy Group, TXP and RCLCO worked together to complete a third-party analysis of the impact of short-term rentals (STRs) on the housing supply in Buncombe County, North Carolina. During the course of the analysis we Identified tourism trends and tax revenue in Buncombe County, assessed housing supply statistics by tenure (including owner-occupied versus renter-occupied, as well as vacant units) and evaluated STR supply characteristics, including occupancy and average daily rate trends. We also reported on how the STR market was impacting the housing supply, analyzed concurrent rent increases and home price appreciation and compared the STR supply (number of bedrooms) to the dominant household types to get a sense of whether STRs

are reducing housing supply for primary residences and contributing to rising prices/rents.

The Fee Survey, Analysis and Recommendation for Galveston, Texas
Galveston, Texas
Smart City Policy Group, and the team, worked to conduct a national survey of fees associated with Short-term Rentals including registration fees, permit fees, other associated fees and fines. This work was coupled with a facilitated stakeholder engagement process, and taskforce facilitation, that included "virtual site visits" of targeted peer communities. The fee survey and recommendations came as part of our comprehensive efforts with Galveston's destination marketing organization, the Galveston Park Board. The outcome included the recommendation of a specific approach to fees, and an overall approach to a fluid registration program which successfully increased registrations by more than 100%, and resulted in significant recapture of obligated taxes.

The Economic Impact of Short-Term Rentals
Various
Smart City Policy Group and TXP have conducted economic impact studies of short-term rentals in more than 20 communities across the United States, including Chicago, Honolulu, Los Angeles, Portland, and Seattle, as well as statewide in Texas. Georgia, and Missouri. The policy discussion over short term rentals is highly localized, and often focuses on public nuisance concerns. Once again relying on the combination of survey research and secondary data, TXP's work provides an economic context, and also addresses the question as to the substitution effect with other local lodging options and the impact on the local housing market.

The Economic Impact of River Tourism in San Marcos, Texas
The City of San Marcos and the Greater San Marcos Partnership
Visitors come to San Marcos for a variety of reasons, but the San Marcos river is one of the primary sources of recreation for both locals and tourists. However, its impact on the local economy was unclear.TXP employed a similar methodology that built on a survey of river users that was developed and fielded that yielded data on spending patterns and levels, length of stay, motivation to travel, etc. TXP has also completed a similar project for New Braunfels, TX, which is served by the Comal and Guadalupe rivers.

The Economic Impact, Jobs and Housing Analysis of Buncombe County (Asheville), North Carolina

Buncombe County (Asheville), North Carolina

Smart City Policy Group, TXP and RCLCO worked together to complete a third-party analysis of the impact of short-term rentals (STRs) on the housing supply in Buncombe County, North Carolina – the Asheville area. During the course of the analysis we Identified tourism trends and tax revenue in Buncombe County, assessed housing supply statistics by tenure (including owner-occupied versus renter-occupied, as well as vacant units) and evaluated STR supply characteristics, including occupancy and average daily rate trends. We also reported on how the STR market was impacting the housing supply, analyzed concurrent rent increases and home price appreciation and compared the STR supply (number of bedrooms) to the dominant household types to get a sense of whether STRs are reducing housing supply for primary residences and contributing to rising prices/rents.

Economic Impacts, Housing Demand Analysis, and Mitigation Tools

Economic Impact, Jobs and Housing Analysis of Short-Term Rentals in Brevard/Transylvania County

Vacation rental properties have been part of the accommodations market for decades in some of North Carolina's most popular tourism destinations, especially in the Asheville region. For this project we identified the exact number of unique STR properties in the state at any given point is a challenge, given the ability of hosts to market their properties on multiple sites, the use of primary residences as part-time STRs, and the use of STR websites by more traditional lodging accommodations. We calculated the aggregate direct accommodations spending of visitors using STRs, of calculating the STR guest spending on other tourism purchase categories, such as entertainment and food as well as total direct spending attributable to STRs.

The second step in the process was to translate the direct impact into the total economic impact through an input-output model of the Brevard MAS economy and each of the subregions that allows measurement of the secondary, or "ripple" effects. By doing this we distinguish three types of expenditure effects: direct, indirect, and induced to find the direct spending by STR guests Asheville in 2020, the total impact of the economic activity, value-added over annual earnings, and the amount of full-time, permanent jobs supported. We also aggregated further benefits accrue to state and local governments in the form of taxes assessed on direct spending by STR guests, as well as revenues generated by the ripple effects of that spending.

Approach to Proposal

Smart City Policy Group understands that the Town of Basalt would like a group to conduct a comprehensive STR program evaluation and a study supporting a reasonable fee program to be applied to short-term accommodation unit licenses to mitigate any potential impacts of STRs.

To accomplish this the team at Smart City Policy Group-team (the team) will research and review the best practices and model examples, and will conduct "virtual site visits" to discuss the successes and challenges of targeted communities.

We will accomplish this through:

- Analysis of existing Short-term Rental data, with the aim of including items such as;
    - identification of potentially affected interests, stakeholders and creation of a stakeholder map.
    - execution of a stakeholder engagement process.
    - an overview of the industry and its performance within Basalt and relative to peer mountain town/resort communities.
    - collection of data related to the overall % of town housing stock that are STRs, the location of STRs by neighborhood and % of STRs per neighborhood.
    - identify the number of hotel rooms existing and planned in Basalt, and the estimated number of STRs needed to supplement traditional hotel accommodations to adequately support current and future (10yr?) visitation to Basalt.
    - within recent sales of dwelling units with STRs, identify what % are out-of-town/state buyers and estimate what % are buyers are 2 nd home buyers.
    - identify the number of long-term rentals in Basalt that have been converted to short-term rentals over the past (10?) years and vice versa if available.

- Economic Activity Analysis – Collect available economic data related to STRs and other accommodations in the Town of Basalt, with the aim of including items such as;

- trends in the total accommodations bed base, annual and seasonal occupancy rates (owner vs. visitor nights), and average daily rates (ADR) trends.
- estimated average rental rates, and tax revenue generated from STRs.
- spending patterns of STR guests compared to traditional lodging types subject to available data.
- estimated rental income to STR owners, analyzed by unit characteristics and location.
- estimate the number of units managed by traditional property management companies (but cross-listed on STR sites) and by individuals from the list of units that applied for an STR license in the 2022 lottery and didn't receive one, how many, if any, are now LTRs and what is the occupation status of the others?
- from the list of units that did receive a STR business license in the lottery, how many licenses are being actively utilized?

- Housing Impact Analysis – Analyze data to determine if STRs in Basalt over time have reduced the amount of housing inventory historically available to the local workforce, and/or influenced increases to the cost of remaining available housing. The study should aim to include items such as:
  - evaluate if STRs contribute to the current workforce housing shortages in Basalt (distinguish between STRs that are rented a majority of the year vs. several weeks of the year vs. primary resident that rents a room in an occupied unit)
  - develop an analysis of home values townwide or by neighborhood and compare them to the value of units utilized as STRs
  - the STR influence property values
  - STR impacts and the cash flow generators that buyers are purchasing homes on expected cash flow rather than similar market values
  - the spectrum of home values used as STRs
  - the portion of the STR inventory is or was potentially available to local-residents as rental or for-sale housing

- Economic Impacts, Housing Demand Analysis, and Mitigation Tools - Drawing from other peer destination-communities, evaluate a range of policy tools to help mitigate the impact of STRs on Town administration, housing availability and affordability, with the aim of including items such as;

- estimate STR guest spending in comparison to other goods and services, and the jobs generated by STR guest spending.
- estimate workforce housing demand from STR visitor spending.
- distinguish between the impacts of STRs and other lodging types and between local and second homes.
- determine a method for converting housing gap costs into an annual fee.
- consider rational fee uses such as housing programs and admin costs, and adjust the nexus methodology as needed.
- consider whether there is a fee/tax threshold nationally or locally that begins to impact volume and spending
- develop a recommended fee for mitigating the impacts of DSTRs.

Fee Proposal and Structure

The fee basis for the project includes:

Cost Structure
The professional fee to provide the scope of services outlined is $49,150

Smart City Policy Group
Facilitated stakeholder engagement of any necessary internal or external stakeholders, a targeted peer community fee survey, management of "virtual site visits", comparison study of Short-term Rental fee programs - registration and more, and policy and mitigation tools, drafting of reports and more
$15,500

TXP
Economic Activity Analysis, Housing Demand Analysis
$19,650

RCLCO
Housing Impact Analysis
$14,000

*These rates include two in-person trips by the lead team to Basalt, and virtual meetings to be scheduled upon demand.

*Additional travel to Basalt by the lead team member is $1,500 per day

Affordable Housing Initiatives

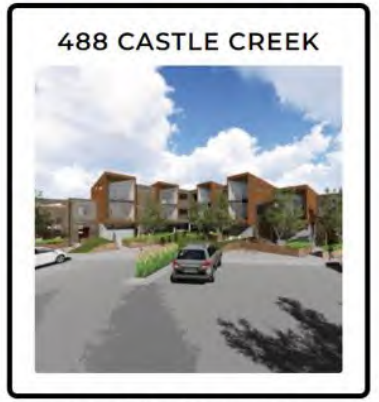
Basalt Forward Bond Measure

Development Opportunities

1. Low Income Housing Tax Credit (LIHTC) development
2. Public Private Partnerships
3. Land banking (vacant lots)
4. Town Owned Lots
5. Expanded Inventory Good Deeds/Vail InDEED

Development Opportunities

1. Low Income Housing Tax Credit (LIHTC) development
2. Public Private Partnerships/Pre-Sales
3. Land banking (vacant lots)
4. Town Owned Lots
5. Expanded Inventory Good Deeds/Vail InDEED



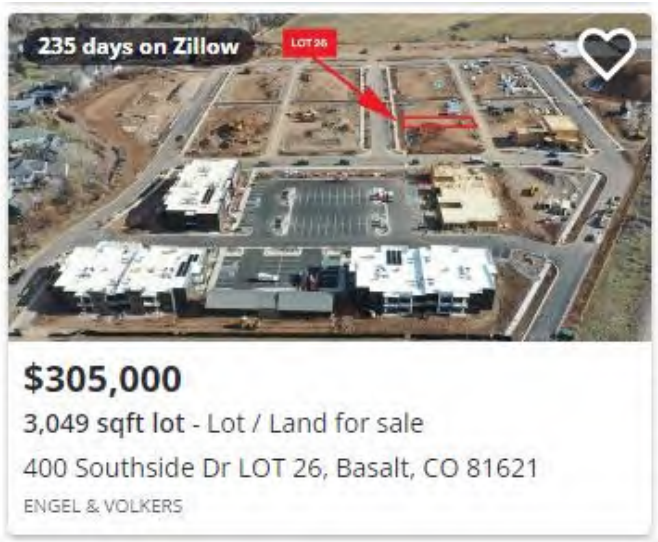
10 units (1bd)

11 units (2bd)

24 units (1-2 bd)

- Town advertises an RFP
- Town contributes land (sunk cost, no impacts to cash flow)
- LIHTC developer manages & maintains (30 years typical)

Development Opportunities



1. Low Income Housing Tax Credit (LIHTC) development
2. Public Private Partnerships/Pre-Sales
3. Land banking (vacant lots)
4. Town Owned Lots
5. Expanded Inventory Good Deeds/Vail InDEED

Create additional cashflow with presales of units to either employers or qualified buyers.

$ $ $ $

Development Opportunities

1. Low Income Housing Tax Credit (LIHTC) development
2. Public Private Partnerships/Pre-Sales
3. Land banking (vacant lots)
4. Town Owned Lots
5. Expanded Inventory Good Deeds/Vail InDEED

Land is only going up in value (and expense).

Today's high price is a discount of a future purchase.

Creates opportunities – Town development, LIHTC, PPP, …

Development Opportunities

1. Low Income Housing Tax Credit (LIHTC) development
2. Public Private Partnerships/Pre-Sales
3. Land banking (vacant lots)
4. Town Owned Lots
5. Expanded Inventory "Good Deeds" "Vail InDEED"

- Retain critical staff and prepare for future needs
- For sale units create some cashflow for other endeavors

- A focus of the MWRHC
- Town funds affordability gap between market price and affordable guidelines.
- Adds to general inventory.

Executive Summary

Economic Landscape

- **U.S. Economic Indicators**: The U.S. rates of inflation and unemployment are at or near levels generally seen indicative of a healthy and growing economy.
- **Maine's Economic Forecast**: State rates of inflation, of wage growth, and of employment growth are expected to be consistent with stable economic growth in the coming years.

Housing Production

- **Affordable Housing Production**: MaineHousing completed 775 affordable housing units in 2024. Another 1,005 units (727 of which are expected to complete in 2025) are in progress now.
- **Production Costs**: MaineHousing's average cost per unit increased in 2024 for a third consecutive year, but project costs are cumulative and currently financed projects indicate costs are leveling off.
- **Residential Construction Activity**: Construction employment in Maine grew by 7.3% from 2023 to 2024. Maine's construction capacity is growing to meet new home construction and repair demand.
- **Regional Housing Production**: New housing starts in the Northeastern states sharply increased in the third quarter of 2024, exceeding recent quarterly averages by nearly 50%.

Homeownership

- **Mortgage Rates**: Market rates have stopped rising and MaineHousing's First Home program is maintaining rates well below the market average. MaineHousing decreased the First Home mortgage rate to 5.375% prior to the end of 2024.
- **Housing Prices**: Rising home prices continue to be a primary concern for homeownership access in Maine. From 2020 to 2024, the median home price in Maine grew by more than 50% while the wages and salaries of Maine workers grew by less than 33.3%.
- **Mortgages Issued**: Statewide loan originations decreased sharply in response to the rise in mortgage rates during 2022, but MaineHousing's First Home programs have steadily continued to create homeownership opportunities for first-time buyers.
- **Foreclosures**: Since July 2022, a monthly average of 1,225 notices of default were issued in Maine, 40% lower than the monthly average prior to the COVID-19 pandemic.

Housing Affordability

- **Heating Fuel Prices**: Although they remain above their historic low points, prices for heating oil, kerosene, and propane have all stabilized. Heating oil and kerosene prices, which saw historic highs in 2022 and 2023, have been trending downwards since April 2024.
- **Rental Cost Burden**: Since 2018, rental cost burden has increased sharply among Maine households earning between $35,000 and $75,000 in total household income.
- **Eviction Filings**: Annual statewide eviction filings decreased in 2024 for the first time since the eviction moratorium in 2020.

Homelessness

- **Length of Stay**: Average length of stay in a shelter in 2024 increased to 11.6 days, a 38% increase from the previous year.
- **Returns to Homelessness**: In 2024, Maine saw a 43% decrease in the average number of people reentering the homeless services system after having exited to a permanent housing solution less than twelve months earlier.
- **Point in Time**: The total number of people in shelters, unsheltered, and in transitional housing increased from less than 1,700 to over 2,300 in 2024.

Introduction

This report is the first edition of what is intended to be an annual summary of the state of housing and housing-related issues in Maine. The report combines data from national and state agencies and organizations to examine the health of housing and employment markets, housing affordability trends, and homelessness trends. This examination is primarily conducted by reviewing historical data up to and including the previous year. The purpose of this report is to help inform expectations for the coming year, not to make predictions. The report conducts this examination in the context of the current state of the U.S. economy, as measured by inflation and unemployment trends, and the Maine Economic Forecast, produced by Maine's Consensus Economic Forecasting Commission (CEFC). Those elements are covered in the following two subsections. The report is then organized into sections reviewing metrics in four topic areas: Housing Production, Homeownership, Housing Affordability, and Homelessness.

U.S. Inflation & Unemployment Rates

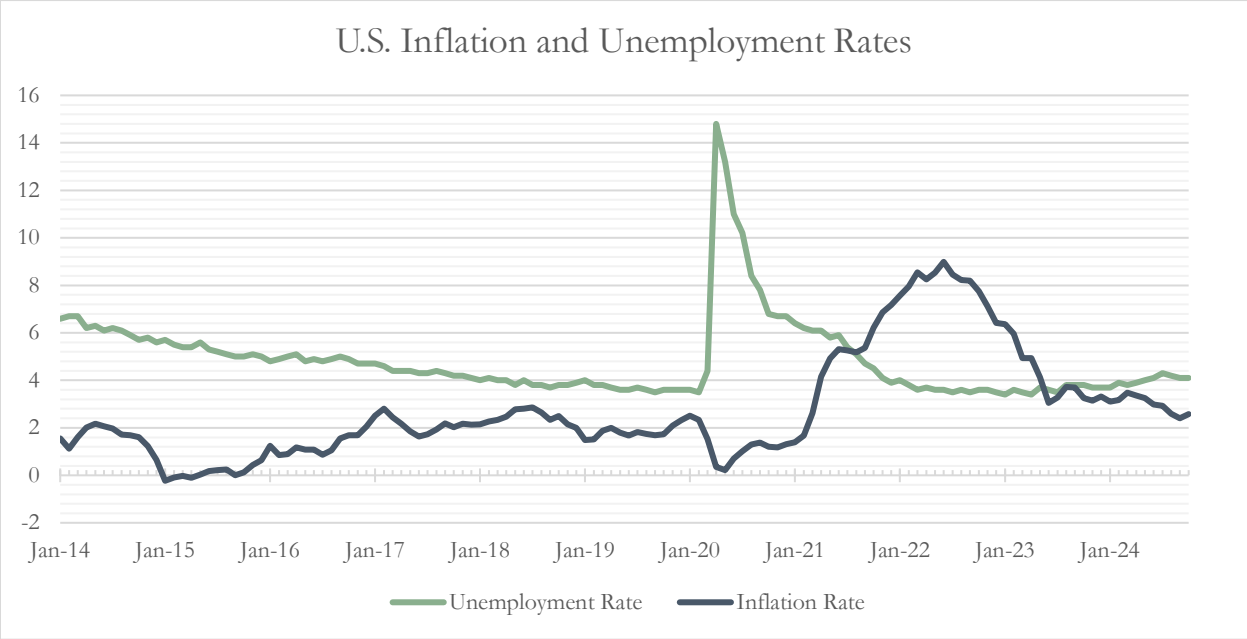

Figure 1 - Historical U.S. inflation (year-over-year CPI percent change) and U.S. unemployment rates.
Source: fred.stlouisfed.org

The U.S. economy experienced historic upheaval during the COVID-19 pandemic, beginning in 2020. This is first observed in the sudden quadrupling of the unemployment rate and then, as the unemployment rate recovered, the steadily climbing rate of inflation. Both economic indicators appear to have been stabilizing throughout 2024. The unemployment rate rose to just above 4%, which is commonly understood to be the United States' *natural rate of unemployment*.[1] Inflation has fallen below 3% and is trending downwards, nearing the 2% rate that is the standard inflation target of the Federal Reserve Board. These indicators are consistent with a stable and healthy U.S. economy going into the year 2025.

[1] The *natural rate of unemployment* is the rate that you expect to see in a healthy economy, due to natural employment frictions that cause job separations and new job searches.

Maine Economic Forecast

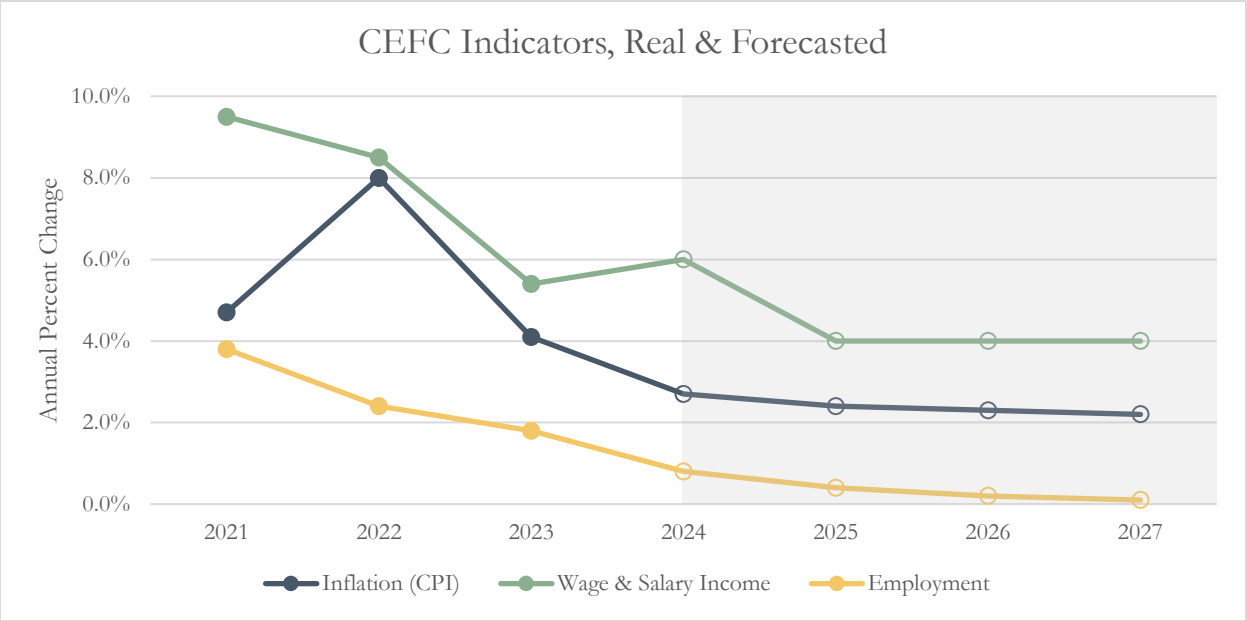

Figure 2 - CEFC Forecast summary. All values for 2024 and onward, the shaded region, are forecasts based on available information at the time of the fall 2024 CEFC meeting. Each value represents the percent increase since the previous year in total employment, wages and salaries, or prices (inflation) as measured by the Consumer Price Index.
Source: Report of the Consensus Economic Forecasting Commission, November 1, 2024.

Maine's CEFC meets twice yearly to forecast key indicators of Maine's economic health. Figure 2 includes the historic and forecast values of those indicators, limited to three years pre- and post-2024. The CEFC predicts that inflation will continue to converge towards 2%, which is the standard rate of growth targeted by the U.S. Federal Reserve. Wages and salaries are expected to grow at a stable 4% in each of the coming years, slower than the rapid wage growth of recent years, but steadily greater than the rate of inflation. Finally, employment growth slowed down significantly in 2024 and is expected to continue slowing through 2027.

After uncertainty and volatility during and immediately following the COVID-19 pandemic, Maine appears to be entering a period of stable economic growth. Although the experience of the pandemic is a clear reminder of how quickly economic conditions can shift, if Maine's economy remains on this stable trajectory, it will offer a positive environment for public and private investment in housing production and preservation. This environment is unlikely to result in any large increases in public revenues to invest in issues like housing stabilization, but it could support incremental improvements in the rate of naturally occurring affordability in the housing market. It is also a reasonable environment in which to fine-tune and expand existing housing affordability and homelessness prevention programs that have been shown to be effective.

Housing Production

Affordable Housing Construction

Indication: *Positive*

Highlight: Pandemic and supply chain disruptions to the affordable housing pipeline have dissipated, labor markets have begun to stabilize, and new affordable housing units are again coming online at a steady rate.

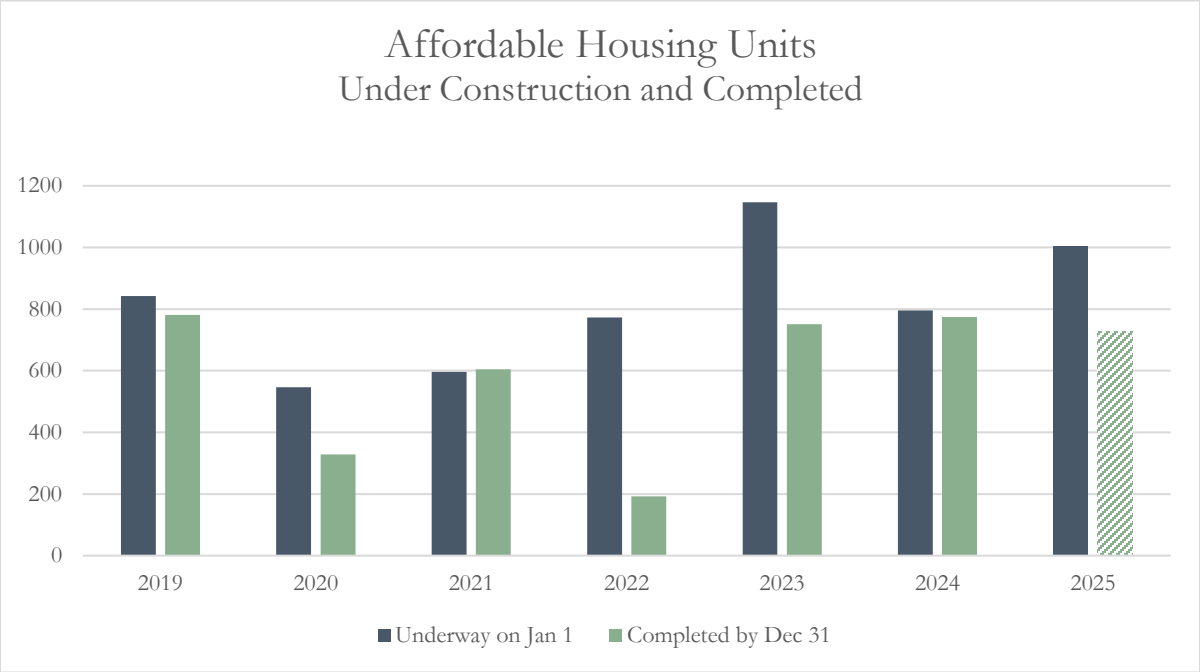

Figure 3 - Affordable units financed by MaineHousing. The graph depicts those under construction at the start of each year (blue) and completed by the end of the same year (green); it does not include financed units that have yet to begin construction. The number of units completed in 2025 is forecast based on available information as of December 10, 2024.
Source: MaineHousing Annual Accomplishments Reports, and 2024 development estimates produced for the MaineHousing Board of Commissioners.

New affordable rental housing in Maine is financed through MaineHousing's development programs, designed to meet the varying needs of communities around the state. The unit counts in the chart above include all rental units[2] financed by those programs. A total of 775 affordable housing units were completed in 2024. Another 1,005 units are under construction as we enter 2025 with 727 of those units expected to be complete by the end of 2025. Assuming bipartisan support and funding for affordable housing development remains steady, MaineHousing expects to continue increasing Maine's affordable housing supply at this steady pace.

[2] This excludes production financed by the Recovery Housing Program, which does not produce standalone housing units, and the Affordable Homeownership Program, which won an NCSHA Annual Award for Program Excellence in 2024 for financing the production of price-restricted single family homes that are sold to qualifying homebuyers.

The Cost of Affordable Housing

Indication: ***Mixed, with some concerns***

Highlight: The cost of units completed in 2024 increased for the third year in a row. However, project costs accumulate over multiple years and indications from currently financed projects are that costs have leveled out.

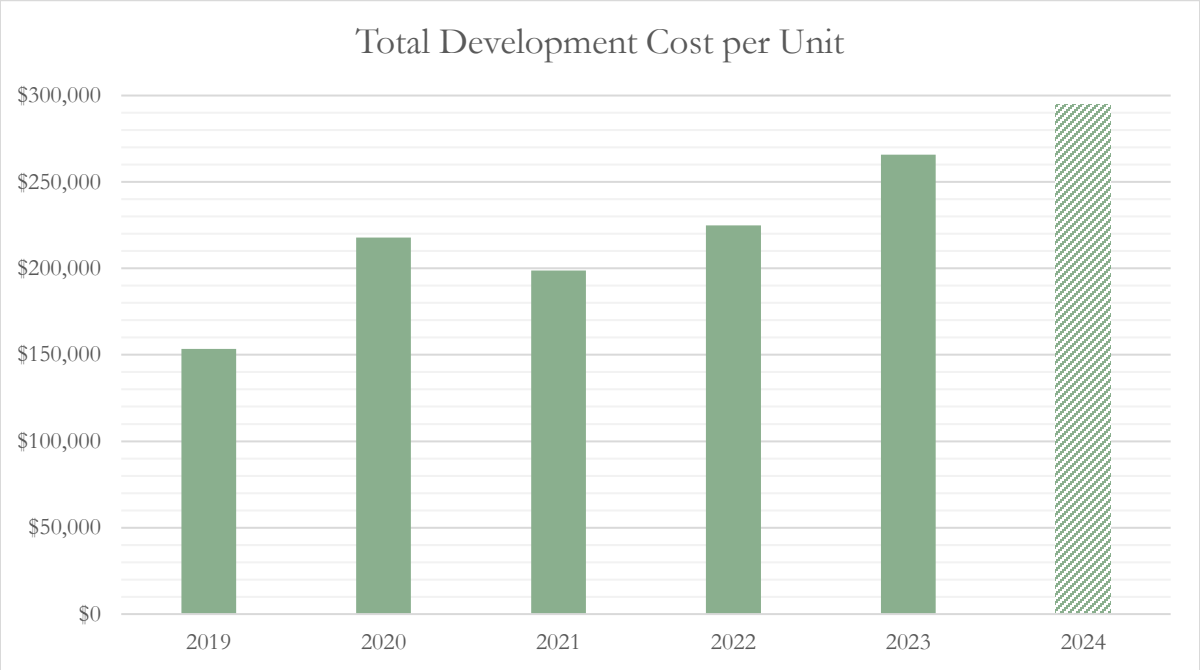

Figure 4 - Total development costs (TDC) per unit over time. This figure depicts the overall TDC index for all MaineHousing-financed units completed in the given year. The 2024 average is subject to change because some of those projects have yet to undergo project loan closing at the time of this report, their expected final costs are included.
Source: MaineHousing Annual Accomplishments and 2024 Development Department project data.

Production costs have risen steadily over recent years, increasing the demand on the existing sources of funding needed to maintain production levels. Although the data from these completed projects shows only increasing costs, we have begun to see evidence from ongoing projects that cost increases appear to have slowed and may have leveled out. MaineHousing's Development team reports that wages remain high, but appear to have stabilized; average time to completion of development projects, although still longer than it has been historically, appears to have stopped increasing; supply chains have become more predictable; and for those scarce inputs that still experience delays, developers have adapted to incorporate those delays into planning. On the whole, development costs are expected to stabilize at or near the levels seen in 2024.

However, policy and economic factors can shift the cost environment very quickly. In particular, the Build America, Buy America (BABA) Act, which sets requirements to source construction materials domestically, could lead to significant price increases as the law is fully implemented. Alternatively, recently proposed tariffs would also increase the price of construction materials, even in the absence of BABA restrictions.

Maine Residential Construction Indicators

Indication: ***Neutral***

Highlight: Construction employment in Maine is on a growth trajectory. Weekly construction wages indicate increasing construction activity per worker. Maine's construction capacity is growing to meet the demand for new housing construction and home repair activities.

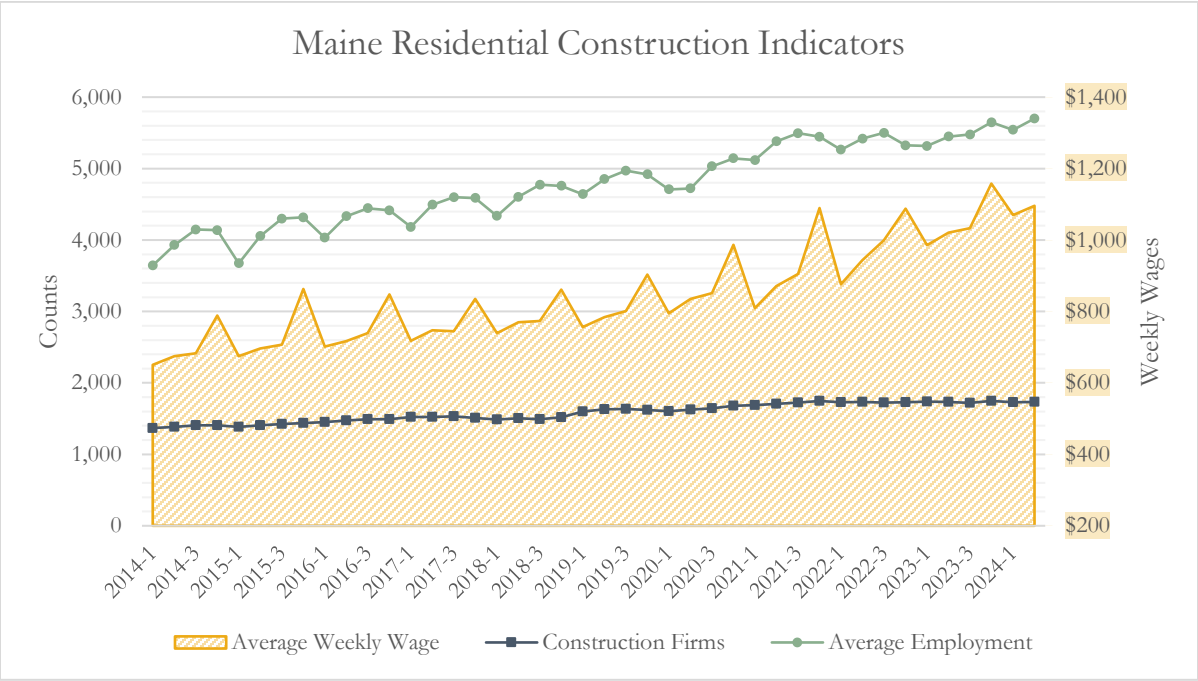

Figure 5 - State of Maine Residential Construction Quarterly Data. Total number of residential construction firms and employees reported on the left axis. Average weekly wages paid to residential construction workers reported on the right axis.
Source: Center for Workforce Research and Information, www.maine.gov/labor/cwri/qcew1.html.

Prior to 2022, the number of construction firms grew by an average of just over 3% each year, while construction employment grew by an average of 4.3% each year. That growth leveled off during 2022 and only resumed for construction employment, which grew by 2.6%-3.6% year-over-year during 2023 and the first half of 2024. The number of construction firms remained constant throughout that period.

Average weekly wages are the total weekly earnings of workers, reflecting the changes in the average hours worked by each worker, as well as any changes in the hourly rate of pay. This explains the seasonality with which average weekly wage increases in the third or fourth quarter of each year, then dips down during the winter. However, the overall upward trend in this metric reflects both increasing hourly wages and increasing hours of work. Altogether, there are an increasing number of people working in construction and they are working more hours, which translates to greater construction capacity. The lack of growth in construction firms could be a limiting factor with respect to that capacity, but construction firms may simply be finding it more efficient to have more or larger crews than they have in the past.

National and Northeast Regional Housing Starts

Indication: ***Positive***

Highlight: During 2023, the Northeast Region experienced a more sustained decrease in housing production than the broader U.S. market. However, both single and multifamily housing starts trended significantly upward in the Northeast during the second and third quarters of 2024.

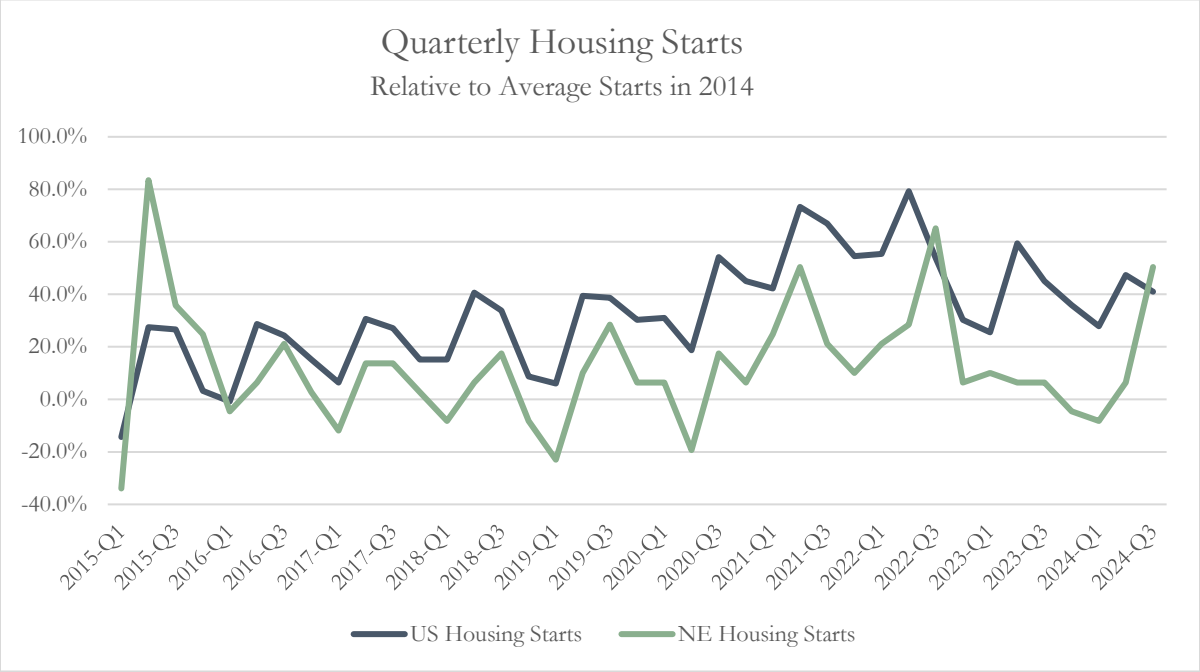

Figure 6 - Regional and National Housing Production Trends. The U.S. and Northeast trend lines show the percent difference in total (single family plus multifamily) quarterly housing starts relative to their own average quarterly housing starts in the year 2014. In addition to Maine, the Northeast Region includes NH, VT, MA, CT, RI, NY, NJ, and PA. *Source: US Census Bureau, Survey of Construction, https://www.census.gov/construction/nrc/data/series.html*

Housing production in Maine is impacted by regional and national market conditions. This is due to globalized supply chains and regional labor trends. Although Maine markets may deviate from regional and national trends, they are subject to many of the same market pressures and so tracking is potentially informative. This observation is reinforced by the fact, depicted in the chart above, that housing starts in the Northeast have historically had a close correlation with the national trend.

Since the beginning of 2023, the trend in the Northeast has not aligned as well with nationwide housing starts. New activity is relatively stagnant throughout 2023, but then climbs quickly during the observable portion of 2024. During the third quarter of 2024, housing starts in the Northeast exceed the benchmark (2014 quarterly average) by more than 50%. That may be a seasonal peak, but even so would indicate positive regional production activity.

Homeownership

Mortgage Rate Comparison

Indication: *Neutral*

Highlight: Mortgage rates have stopped rising and MaineHousing's First Home program is maintaining rates well below the market average. MaineHousing decreased the First Home mortgage rate to 5.375% prior to the end of 2024.

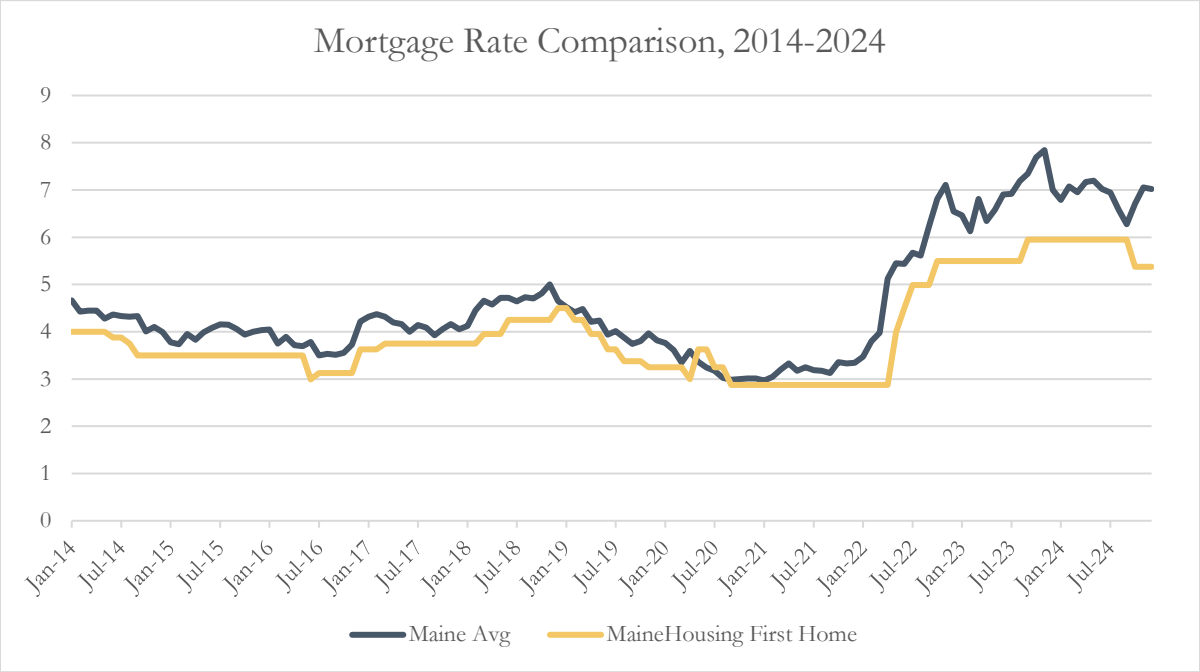

Figure 7 - Mortgage Rates in Maine. This figure shows MaineHousing's First Home Program base rate over the past decade, alongside the average 30-year fixed rate reported by Maine mortgage lending institutions.
Source: MaineHousing Homeownership Department, Rate Watch surveys.

Mortgage rates are a primary determinant of home buying activity. The average market rate in Maine peaked at 7.8% in November 2023, fell to about 7% throughout 2024, dipped to a low of 6.2%, and rose back to 7% by year end. MaineHousing maintained the First Home Program rate at 5.95% through the first three quarters of 2024, then dropped the rate to 5.375%. That represents a large spread relative to the average market rate. If the market rate remains around 7%, MaineHousing may consider raising the First Home rate above 5.5% again.

The importance of mortgage rates to home buying activity is best understood by considering the impact an interest rate can have on a monthly mortgage payment. For example, if a household can afford a maximum mortgage payment of $2,000 per month, then a rate decrease from 7% to 6% on a 30-year mortgage increases that household's affordable home price from approximately $250,000 to $270,000. The increase in available options means that potential homebuyers are, on average, more likely to find one or more homes that suit their preferences and make an offer on those homes.

Housing Prices

Indication: ***Ongoing Concern***

Highlight: Rising home prices continue to be a primary concern for homeownership access in Maine. From 2020 to 2024, the median home price in Maine grew by more than 50% while the wages and salaries of Maine workers grew by less than 33.3%.

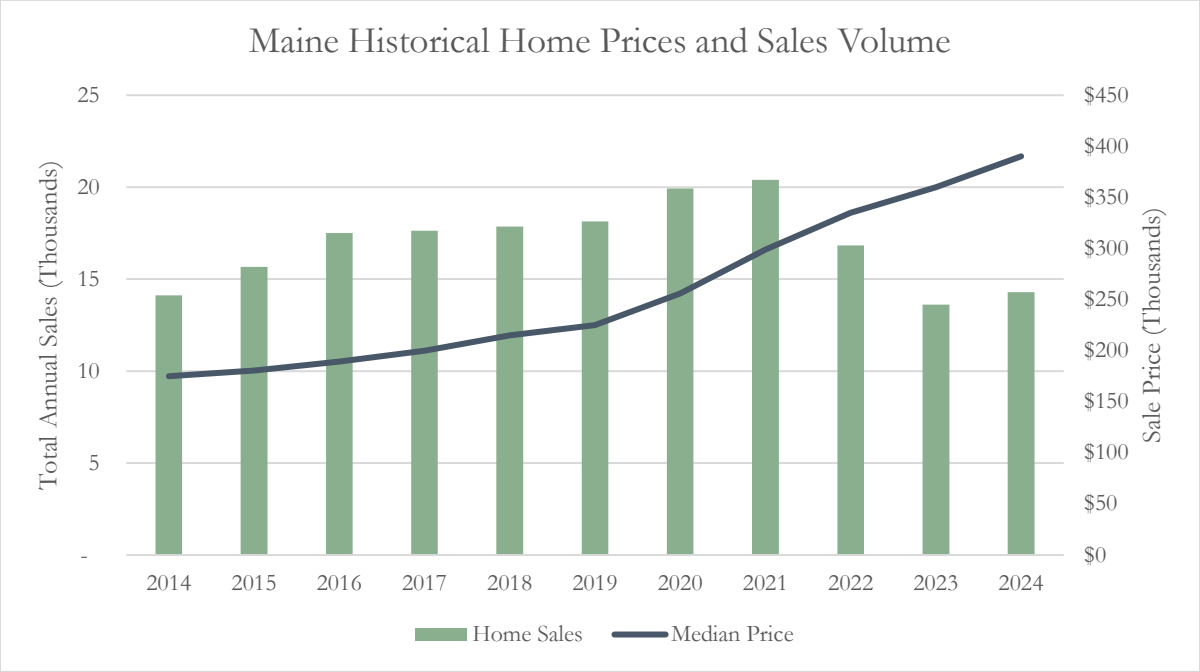

Figure 8 - Median Home Prices and Total Sales Volume in Maine. Prices include only homes purchased for occupancy by the owner, not those purchased for rental or other uses.
Source: Maine Association of Realtors, Home Sales Statistics & Press Releases.

Throughout the beginning of the previous decade, Maine's median home price grew more slowly than nationwide home prices. However, from 2020 through 2023, the median home price in Maine increased by 43.5%, while the U.S. median price increased 39.1% (American Community Survey estimates, U.S. Census Bureau). Figure 8 depicts the median Maine home price increasing more than 50% from 2020 to 2024. During that same period, Maine's workforce saw an average wage or salary increase of less than 33% (Figure 2). Even that rapid rate of wage growth failed to keep up with increasing home prices, making homeownership less affordable for many Maine households.

The decreased volume of home sales in 2023 and 2024, each less than in any other year since 2014, may indicate downward pressure on home prices. This is the case if the decrease in volume is a demand-side response, meaning a result of potential homebuyers balking at high home prices. However, high mortgage rates, which spiked in 2022, are indicative of a potential supply-side response that would also reduce sales volume, as homeowners refrain from selling their homes because they currently enjoy a much lower mortgage rate. This is discussed further in the next section.

Mortgages Issued

Indication: ***Neutral/Positive***

Highlight: Although total volume of mortgage activity has decreased, those trends have followed expected trajectories given the home price and rate environments. Statewide loan origination decreased quickly as mortgage rates rose during 2022 and have yet to show definitive sign of recovery. However, MaineHousing's First Home programs have steadily continued to create homeownership opportunities for first-time buyers.

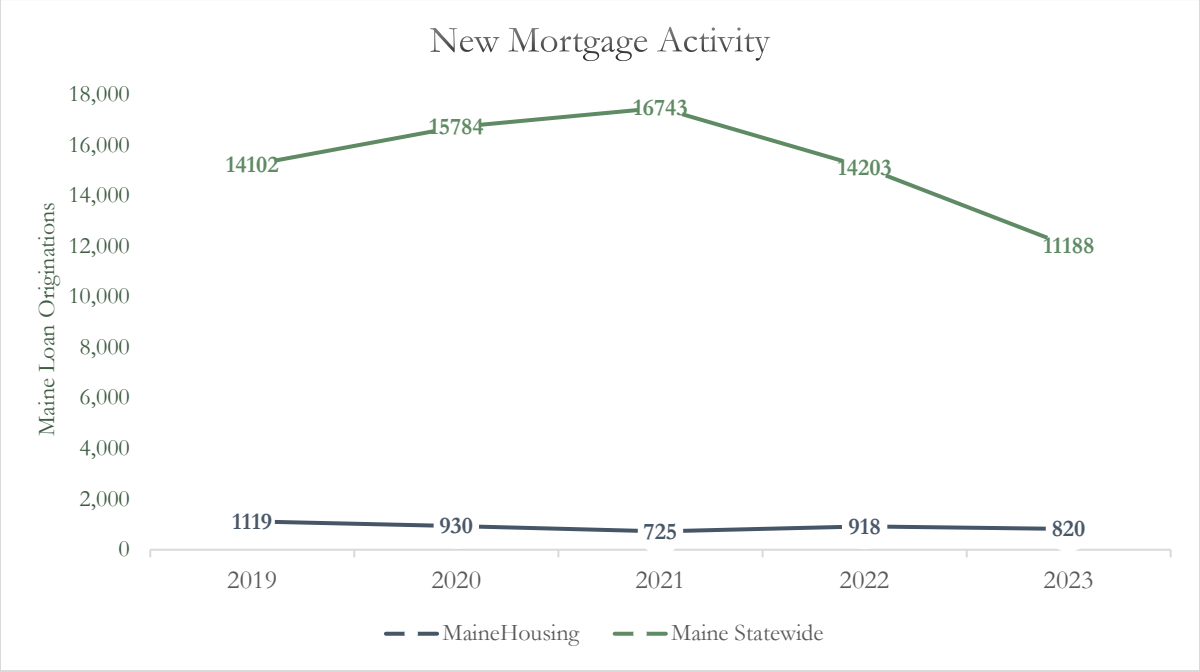

Figure 9 - Residential Loan Originations in Maine. The graph shows the total number of new residential mortgages issued (excluding homes purchased by business entities) in Maine each year and the total number of First Home mortgages purchased by MaineHousing each year. At the date of this publication, statewide mortgage data for the year 2024 is not yet available.
Sources: MaineHousing Accomplishments reports and Homeownership Department data; Consumer Financial Protection Bureau. HMDA (2023) Data.

Unlike home sales volume in Figure 8, the data in this metric is restricted to residential mortgages issued to individual buyers. Home purchasing in Maine peaked during the height of the COVID-19 pandemic, with close to 17,000 new residential home purchases in 2021. By 2023, new loans decreased by nearly one-third. This sudden decrease in activity coincided with mortgage rates roughly doubling between the beginning and end of 2022. Such a significant rise in mortgage rates not only makes purchasing more expensive for potential buyers, it also creates a phenomenon where current homeowners can't afford to sell and move to a new home. Homeowners with low mortgage rates and limited home equity are unable to afford, or unwilling to face, the increased payments on a new mortgage. However, even if mortgage rates remain elevated, the share of homeowners in this situation decreases as they build home equity through appreciation and loan payments.

MaineHousing's First Home programs, including First Home, SaluteME, and First Generation mortgages, maintained steady loan activity throughout the high-rate environment by offering rates further below the market average than it is possible to maintain during lower rate periods. With down payment and closing cost assistance, MaineHousing's mortgage programs continue to expand homeownership opportunities for first-time buyers, veterans, and those who have never lived in a home owned by their family.

Foreclosures

Indication: ***Positive***

Highlight: Homeowners in Maine are defaulting on their mortgages at much lower rates than was the case prior to the COVID-19 pandemic.

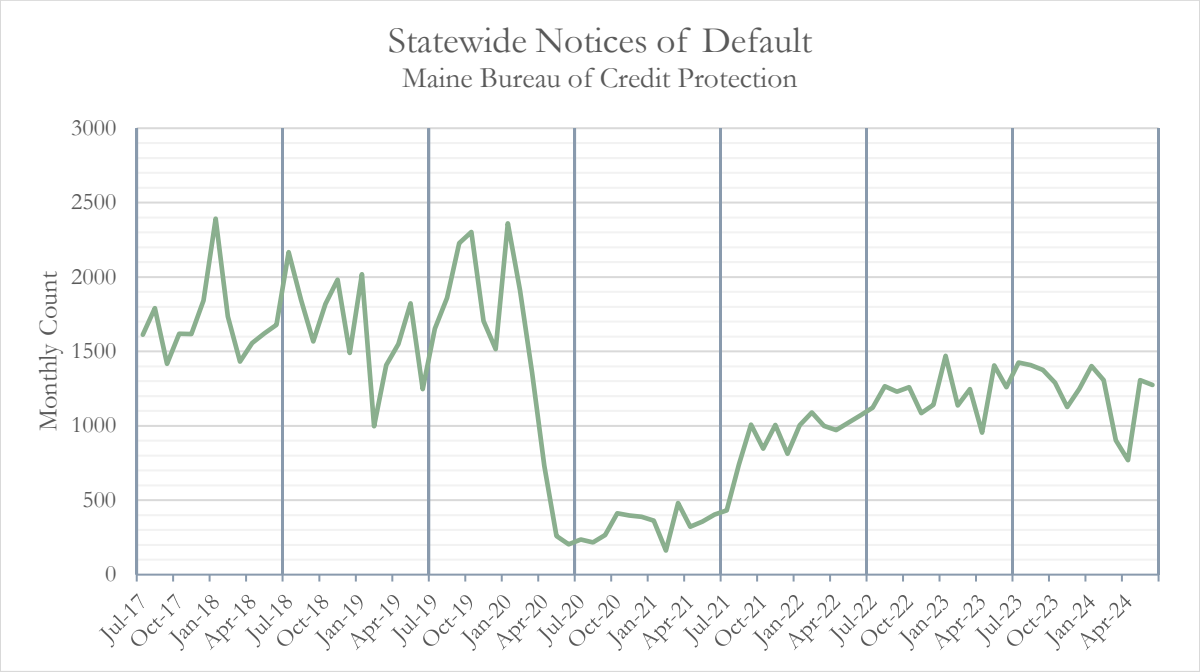

Figure 10 – Notices of Mortgage Default in Maine. The graph depicts the monthly count of statewide notices issued. The abrupt decrease in early 2020 captures the impact of pandemic-era policies, like the eviction moratorium in the federal CARES Act.
Source: Maine Bureau of Consumer Credit Protection, Quarterly Reports.

Notices of default fell dramatically during the COVID-19 pandemic due to several factors, including a moratorium on foreclosures and several state and federal programs to aid homeowners. Although default notices have climbed back up since the slow period during the pandemic, they have resumed at a new normal that is notably lower than it was previously. Since July 2022, the average number of default notices per month in Maine has been 1,225. Prior to the pandemic, the monthly average was more than 40% higher. The explanation for this shift in trend is unclear, but it implies improvement in the ability of current homeowners to manage their mortgage and home expenses, despite the rapid inflation that recently beset the nation. This financial strength indicates potential for increased liquidity in Maine's real estate market when the rate environment improves and transitioning to new homes becomes more financially attractive.

Housing Affordability

Heating Fuel Prices

Indication: *Positive*

Highlight: Although still well above their historic low points, all three of the primary heating fuel prices have stabilized. Heating oil and kerosene prices are both trending downwards.

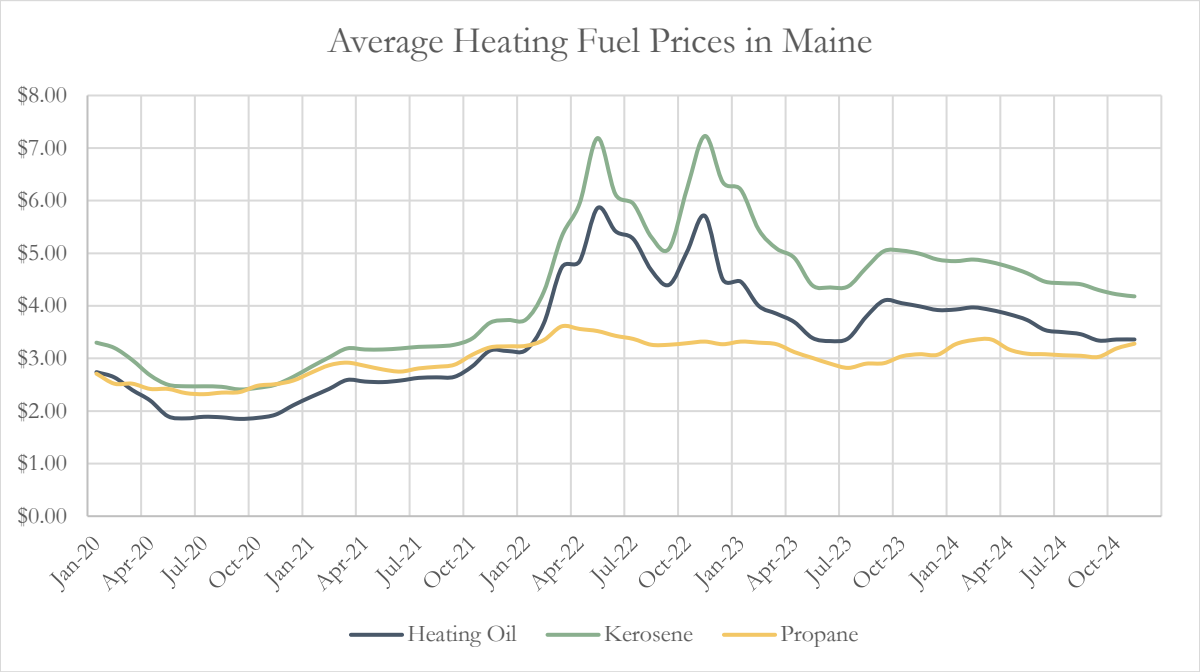

Figure 11 - Heating Fuel Prices in Maine. The graph depicts the price per gallon of delivered heating oil, kerosene, and propane measured via a weekly survey of retailers statewide.
Source: Historical Heating Fuel Prices, State of Maine Governor's Energy Office. https://www.maine.gov/energy/heating-fuel-prices

Heating costs are a significant affordability concern for households in Maine. Failure to plan for extended cold spells or price increases can leave a household facing frigid temperatures with few good options. MaineHousing's Energy Crisis Intervention Program can provide support to eligible households experiencing such an emergency, but that is a contingency for crisis situations. Additionally, failure to properly heat a home can have costly negative health effects for residents, especially for older Mainers and the very young.

Heating fuel prices in Maine were extremely volatile in 2022 and 2023, with both heating oil and kerosene reaching record highs. Propane remained more stable than the other fuels, but still climbed above $3 per gallon and has largely remained there since. Heating oil and kerosene remained historically elevated in 2024 but have both been trending downwards since April. The home heating situation is much improved relative to the previous two years.

Rental Cost Burden

Indication: ***Ongoing Concern***

Highlight: Since 2018, rental cost burden has increased sharply among Maine households earning between $35,000 and $75,000 in total household income.

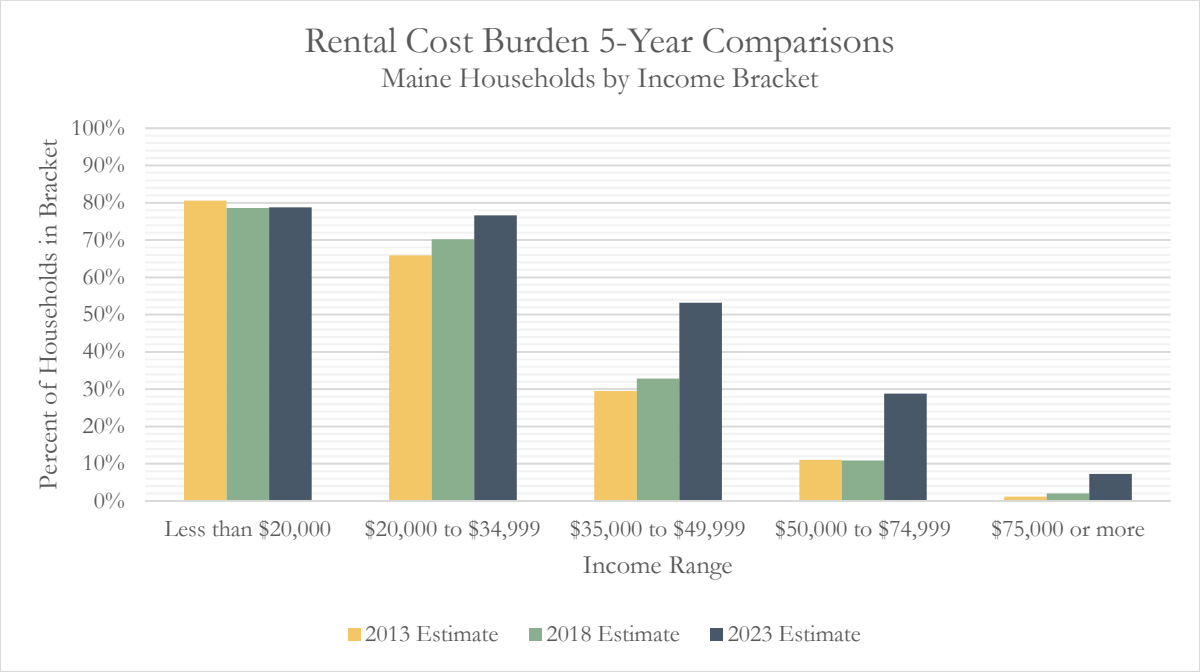

Figure 12 - Rental Cost Burden in Maine. 2013, 2018, and 2023 comparisons by household income brackets. Each bar shows the estimated percentage of all renter households in the given income range that are cost burdened, with the color of the bar indicating which year the estimate is for. Cost burden is defined as spending more than 30% of gross household income on total housing costs.
Source: ACS 5-year Samples; Census Data Table CP04 – Comparison Profiles; Financial Characteristics.

Housing cost burden is a straightforward means of identifying households spending a disproportionate percentage of their income on housing costs. A household that spends more than 30% of gross household income on housing costs has little remaining to cover necessities, much less any savings or discretionary spending.

The most notable changes in rental cost burden occurred for those Mainers earning between $35,000 and $75,000 in total income. 53.2% of renters earning $35,000-$49,999 were cost burdened in 2023, up from 32.8% just 5 years earlier, and 28.8% of renters earning $50,000-$74,999 were cost burdened in 2023, more than double the 10.8% from five years earlier. Even among those renter households earning more than $75,000 per year, a small but notable share (7.3%) were cost burdened in 2023.

Among renter households earning less than $20,000 per year, a large and stable majority were cost burdened in each of the sample years. Finally, for renter households earning $20,000-$34,999, the share that are cost burdened has increased incrementally in each sample, from 65.9% in 2013 to 76.6% in 2023.

Data Note: It is important to remember when viewing estimates using the 5-year samples of the American Community Survey (ACS 5-year Samples) that the underlying five years of survey data are pooled together. This results in large sample sizes and very reliable estimates. However, since it pools surveys over several years, estimates using these data have been criticized as lagging behind real-time changes in the estimated metrics.

Eviction Filings

Indication: *Positive*

Highlight: Annual statewide eviction filings in Maine decreased for the first time since the eviction moratorium in 2020.

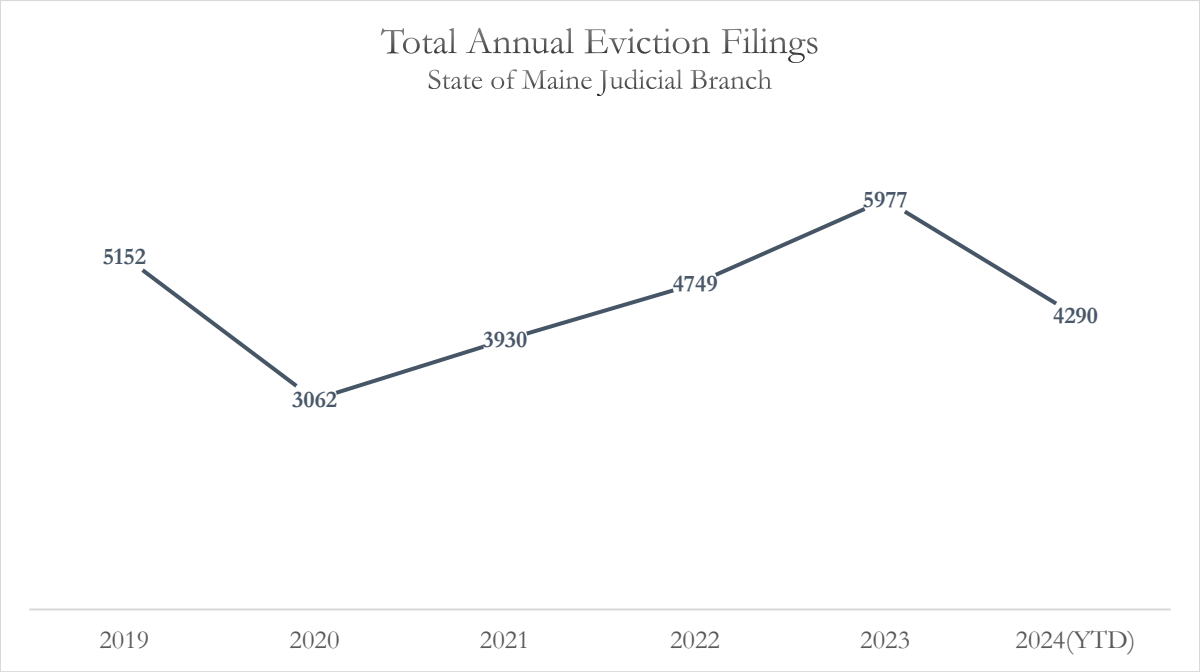

Figure 13 - Eviction Filings in Maine Courts. This figure depicts the total count of eviction filings registered with the Maine Judicial Branch in each year. The year-to-date (YTD) count for 2024 only includes data through the end of the month of November.
Source: State of Maine Judicial Branch. https://www.courts.maine.gov/about/reports/fed-monthly15yr-report.pdf

In order to carry out a lawful eviction, a landlord or property manager must register an eviction filing with their nearest district court. Not all filings result in an actual eviction, but the filing is a necessary and serious step towards an eviction. During the COVID-19 pandemic, a sequence of executive orders and legislation, both state and federal, instituted moratoriums on evictions by limiting the allowable grounds for an eviction. Those laws and executive orders will have artificially decreased the count in both 2020 and 2021.

Although the 2024 count only includes eleven months of data, it is safely on track to be the first year since 2020 that the total number of evictions in Maine has decreased relative to the previous year. Assuming evictions in the final month of 2024 are no greater than the average of all other months in 2024, the total – 4,680 or fewer – will be less than preceding years. Although MaineHousing's Eviction Prevention Pilot Program was launched in 2024, the decrease in evictions cannot be directly attributed to the success of the program as it did not begin issuing benefits until the final month of this data. It is possible that unexpected variable expenses, such as heating costs, play an outsized role in causing evictions, in which case the moderating prices of heating fuels aligns well with the positive trend in this metric.

Homelessness

Length of Stay

Indication: ***Ongoing Concern***

Highlight: Average length of stay in 2024 increased to 11.6 days, a 38% increase from the previous year.

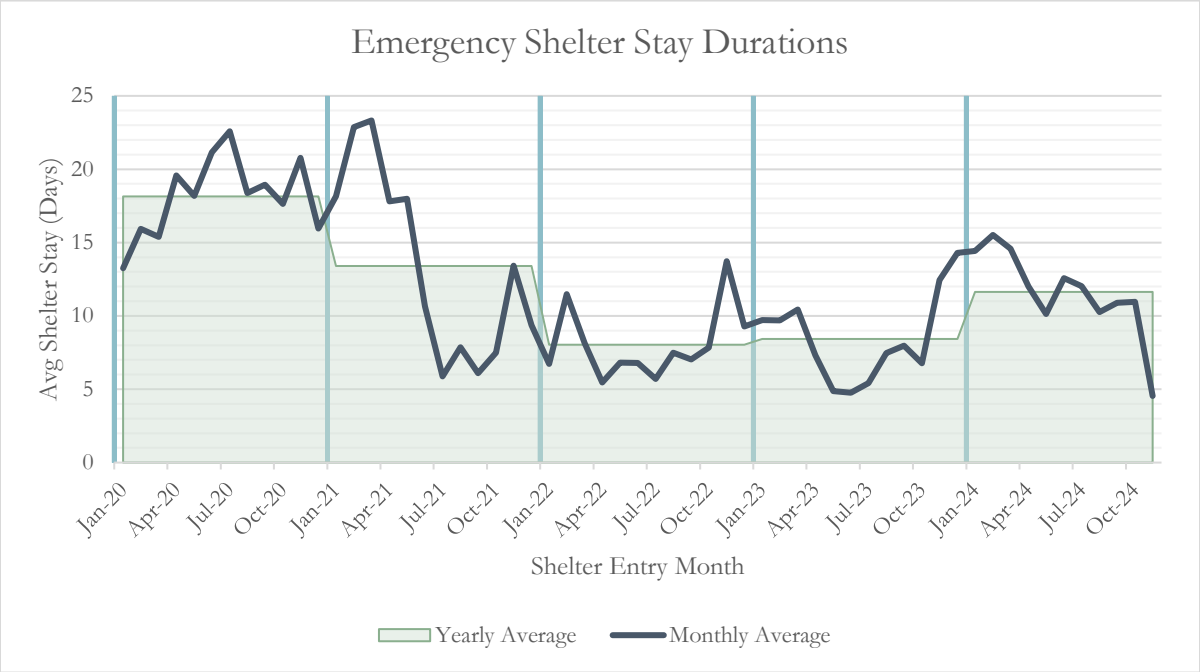

Figure 14 - Maine Shelter Stay Durations. The graph depicts the average length of stay for all new admissions to shelters in the associated month. The data includes all participating ESHAP shelters in the State of Maine. **Technical note: the sharp decrease in the last month of 2024 is a necessary result of the fact that those entering in the final period cannot have a length of stay longer than the time between their entry and the date that this report was drawn.**
Source: MSHA Project Participation/LOS Report (WellSky BusinessObjects), compiled on 12/02/24.

Length of stay is an important indicator of the current shelter and housing environment for people experiencing homelessness. It reflects not only the individuals' willingness to remain in the shelter, but the difficulty of finding viable permanent housing solutions. Average length of stay in 2024 increased 38%, up to 11.6 days from 8.4 days in 2023. While this still represents a much lower average than during the height of the COVID-19 pandemic, it is a concerning shift that suggests permanent housing solutions for those leaving homelessness were in scarce supply this year.

Returns to Homelessness

Indication: ***Positive***

Highlight: In 2024, Maine saw a 43% decrease in the average number of people reentering the homeless services system after having exited to a permanent housing solution less than twelve months earlier.

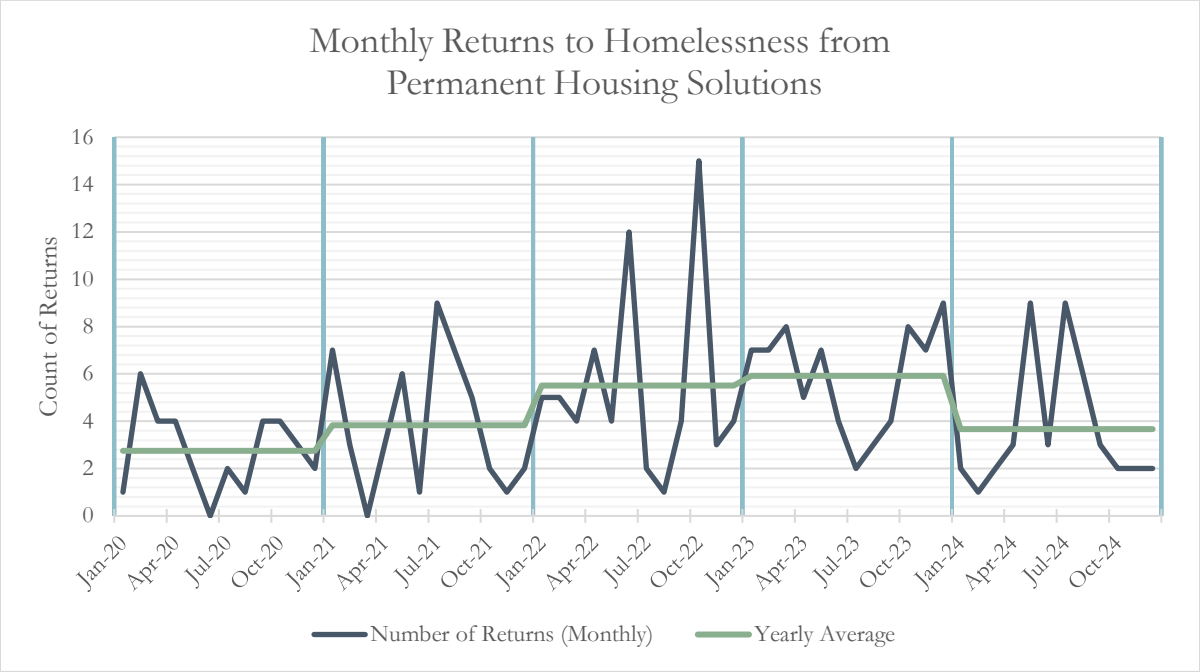

Figure 15 - Returns to Homelessness in Maine. Returns are people enrolling in homeless services who had previously exited homelessness to a permanent housing solution less than 12 months prior to their reenrollment. The data includes all participating ESHAP shelters in the State of Maine.
Source: MSHA Return to Homelessness Report (WellSky BusinessObjects), compiled on 01/21/25.

This metric measures the frequency with which people in Maine exit homelessness to a permanent housing solution and yet find themselves back in the system again. A return to homelessness, in this data, is identified as an individual enrolling in homeless services less than 12 months after having exited homeless services with a placement in a permanent housing solution. Individuals out of the system for more than twelve months before re-experiencing homelessness are not included in the totals depicted above. The monthly totals are highly variable, so the yearly averages are more telling. Average returns climbed each year prior to 2024, then fell from 5.9 per month to 3.3 per month in 2024.

This metric offers an interesting contrast with the length-of-stay metric. People experiencing homelessness are staying longer in shelters, but appear to be more successful in remaining housed when the shelter is able to help them find a permanent housing solution. On the other hand, that success could very well lead to a greater scarcity of available permanent housing solutions and therefore contribute to the issue in Figure 14.

Point In Time

Indication: ***Ongoing Concern***

Highlight: The counts of people in shelters, unsheltered, and in transitional housing increased to over 2,300 in 2024. The marked decrease in availability of emergency motel rooms, used as a housing solution during and for some time after the pandemic, causes a misleading decrease in the overall homeless count.

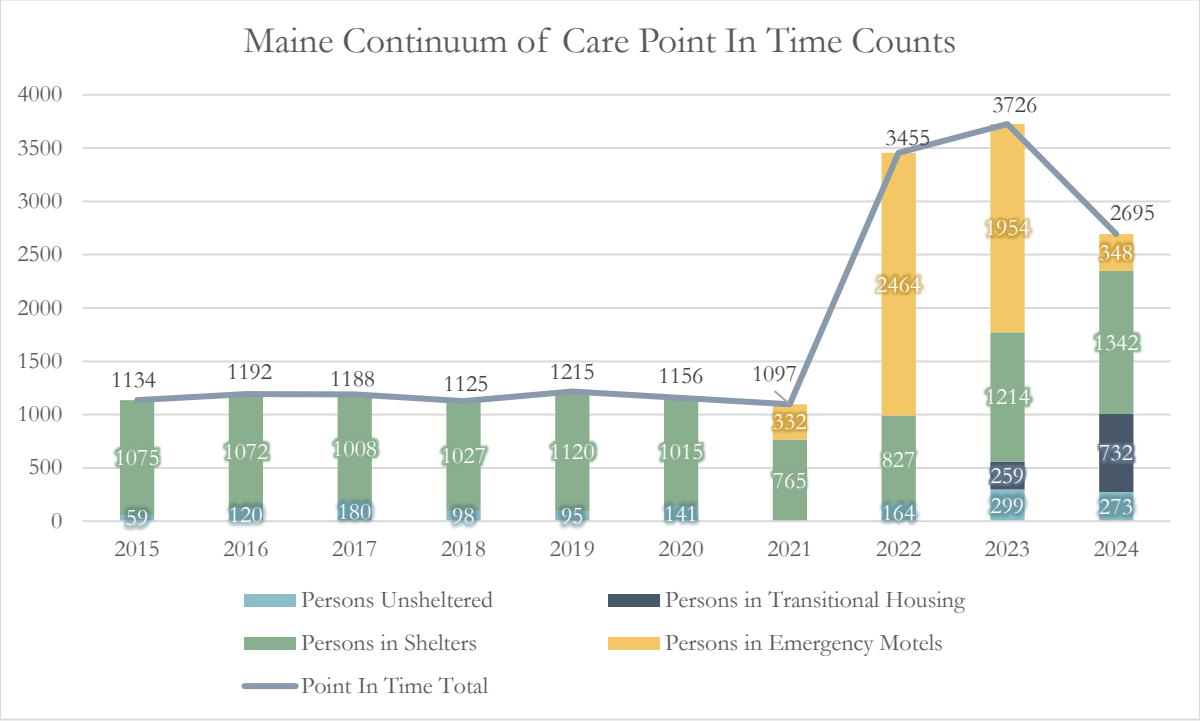

Figure 16 - Point In Time Counts. Snapshot counts of people experiencing homelessness in late January of each year. The counts are shown by unsheltered, sheltered, in transitional housing, or in emergency motels. The emergency motels were a product of COVID-related emergency relief programs that have now expired. *Source: MSHA Point In Time Count, 2015 – 2024.*

Although the total count decreased in 2024, that reduction cannot be attributed to fewer people in Maine facing housing crises and homelessness because it is so closely linked to changes in program availability. Specifically, the reduction in the total count is less than the decrease in the number of persons in emergency motel rooms, for which pandemic-related funding is no longer available. The key 2024 statistics pertain to the other three groups: the count of Persons in Shelters increased by more than 10%; the count of Persons in Transitional Housing nearly tripled; and the count of Persons Unsheltered remained elevated well above historic norms. All of these indicate that the threat of homelessness remains a significant concern in Maine.

The appearance of emergency motels in 2021 resulted from emergency relief available under myriad COVID-19 response programs. Those relief programs made access to no-cost shelter in motels available to individuals and families who may otherwise have relied on informal solutions to their housing needs, such as doubling up with a friend or "couch surfing." Importantly, those arrangements are not classified by HUD as experiencing homelessness, but motel stays paid for by emergency relief programs are. COVID-related emergency relief programs have now expired. Although a small portion of emergency motels are now in use as transitional housing, the remainder are no longer available. It is unknown how many of those households have returned to informal housing arrangements that are not observable in these data.

Pedestrian Activities District (PAD) Overlay
Chapter 14 - Land Use Code Text Amendment
City of Portland, Applicant

Submitted to: Portland Planning Board **Public Hearing Date**: July 8, 2025 **Date Prepared**: July 2, 2025	**Prepared by**: Andrew Graminski Planning & Development Review Manager

I. INTRODUCTION

On June 17, 2025, The City Council's Housing and Economic Development Committee (HEDC) recommended the adoption of a new commercial vacancy ordinance, prepared and presented to the Committee by staff from the Economic Development Department. As drafted, the ordinance aims to promote the use of vacant space, encourage communication between property owners and those seeking commercial space, collect data for future programs, and coordinate collaboration with Portland's artist community to actively utilize vacant spaces. While the commercial vacancy ordinance has been drafted as an element of Chapter 6 of the Code of Ordinances, the ordinance is proposed to apply within the limits of the City's Pedestrian Activities District (PAD) Overlay Zone (see map below). The draft proposed vacant commercial properties ordinance is attached as Attachment B.

Pedestrian Activities District (PAD) Overlay Map

As the commercial vacancy ordinance is proposed to tie geographically to an element of the City's zoning, the Land Use Code needs to be amended to add a reference to the vacancy ordinance within the PAD Overlay Zone. As with all amendments to the land use code, this amendment must be reviewed by the Planning Board, who will make a recommendation to the City Council.

A legal advertisement for this zoning amendment ran in the June 26, 2025 and June 27, 2025 editions of the Portland Press Herald.

II. BACKGROUND

At the August 20, 2024 HEDC meeting, Housing and Economic Development (HED) staff discussed strategies to address commercial vacancies in downtown Portland. One of those options included the idea of a commercial vacancy ordinance. The HEDC supported this concept, directing HED staff to draft policy for review at their April 15, 2025 meeting.

The proposed ordinance was subsequently discussed at the May 20, 2025 HEDC meeting, where staff incorporated suggested revisions to the ordinance. At the June 17, 2025 HEDC meeting, the committee recommended approval of the proposed ordinance to Chapter 6 of the City's Municipal Code. Given that the proposed Commercial Vacancy Ordinance is geographically tied to an element of the City's zoning, and the HEDC has unanimously recommended its adoption, City staff is bringing the associated zoning text amendment to the Planning Board for a public hearing. Following the Planning Board's vote, the intent is for both the Commercial Vacancy Ordinance and the zoning text amendment to be presented as companion items to the full City Council at their August 2025 meeting.

III. PROPOSED TEXT AMENDMENT

Below is the proposed text amendment to Section 8.5 Pedestrian Activities District (PAD) Overlay. Please see attachment A for the full draft amendment to Article 8.

Section 8.5.2(D):
Buildings located within the areas identified on the PAD Overlay Zone map shall comply with the Vacant Commercial Properties Ordinance, as outlined in Chapter 6, Article XXX. of the City Code.

IV. COMPREHENSIVE PLAN ANALYSIS

Planning staff find that the proposed amendment to Section 8.5 of the Land Use Code aligns with *Portland's Plan 2030*, the city's comprehensive plan. Insofar as the amendment helps to support the implementation of a commercial vacancy ordinance, the amendment will help further goals outlined in the plan's economic and recreation and open space chapters, specifically advancing objectives related to capitalizing on the potential of temporary activities, leveraging arts and culture, and incorporating creative design, public art, and placemaking.

V. PUBLIC COMMENT

At this time no written public comments have been submitted to the Planning and Urban Development Department.

VI. PROPOSED MOTION

On the basis of material provided in this report dated July 2, 2025, public testimony, and other information provided during the Planning Board's review process and at the July 8, 2025 public hearing, the Planning Board finds that the proposed amendments to Section 8.5 of the land use code ***[are / are not]*** *consistent with the City of Portland's comprehensive plan and therefore* ***[recommends / does not***

recommend] *adoption of said amended land use code to the City Council.*

VII. ATTACHMENTS

A. Draft Zoning Amendment to the Pedestrian Activities District (PAD) Overlay Section 8.5
B. Draft Vacant Commercial Properties Ordinance, Chapter 6, Section 6-XXX
C. Commercial Vacancy Ordinance Memo dated June 17, 2025 from Housing and Economic Development

8 OVERLAY ZONES

8.1 COASTAL FLOOD RESILIENCE OVERLAY (CFROZ)

8.1.1 Purpose

The purpose of the Coastal Flood Resilience Overlay Zone (CFROZ) is to protect persons and structures from the adverse effects of sea level rise and storm surge associated with climate change by:

A. Advancing adaptation strategies for long-term resilience.
B. Complementing public realm resilience measures by guiding development on private property.
C. Mitigating flood risks in a way that is specific to Portland's unique hydrological conditions and affected uses, particularly in areas that are not currently recognized as flood zones but are vulnerable to future sea level rise.
D. Providing a balanced framework in which flood protection requirements are proportional to the vulnerability and risks of various occupancies.

8.1.2 Applicability

The provisions of the CFROZ shall apply to property or proposed projects wholly or partially within the boundaries of the Coastal Flood Resilience Overlay Zone as depicted on the City of Portland Zoning Map. However, property or proposed projects within the CFROZ boundary that are also located wholly or partially within special flood hazard areas with a BFE of 13 feet or higher as defined in Article 12 shall be exempt from the provisions of the CFROZ.

8.1.3 Relationship to underlying zoning

The CFROZ constitutes an overlay zone. The provisions of the underlying zoning, as they may be amended from time to time, continue to apply, except as expressly superseded by this Section. Where conflicts exist between this Section and the remainder of this Code, the more restrictive provision shall govern.

8.1.4 Use classifications

A. For the purposes of this Section, uses in the CFROZ shall be classified as follows:
    1. *Critical uses.* Critical uses generally include residential, governmental, educational, medical, emergency, and related high-risk uses.
    2. *Non-critical uses.* Non-critical uses generally include retail, restaurant, commercial, and related medium-risk uses.
    3. *Exempt uses.* Exempt uses generally include low risk and low occupancy uses such as parking, construction yards, and storage.
B. Table 8-A shall determine whether a use is classified as critical, non-critical, or exempt. For uses not listed in Table 8-A, the Building Authority or the Planning Authority shall determine the classification based upon the most nearly comparable land use. Water-dependent uses shall be considered exempt.
C. All accessory uses shall be considered non-critical, with the following exceptions:
    1. Accessory dwelling units.
    2. Child care centers and small child care facilities greater than 1,000 square feet in floor area.
    3. Clinics greater than 1,000 square feet in floor area.

OVERLAY ZONES

TABLE 8-A: CLASSIFICATION OF USES AS CRITICAL, NON-CRITICAL, OR EXEMPT

		Critical	Non-Critical	Exempt
Residential	Single-family dwellings	●		
	Two-family dwellings	●		
	Three-family dwellings	●		
	Four-family dwellings	●		
	Townhouse dwellings	●		
	Multi-family dwellings	●		
	Live/work dwellings	●		
	Group homes	●		
	Lodging houses	●		
Institutional	Child care centers + small child care facilities	●		
	Clinics	●		
	Cultural facilities	●		
	Elementary, middle, and secondary schools	●		
	Emergency shelters	●		
	Governmental uses	●		
	Hospitals	●		
	Places of assembly	●		
	Post-secondary schools	●		
	Residential care facilities (small)	●		
	Residential care facilities (large)	●		
Commercial	Adult business establishments		●	
	Animal-related services		●	
	Auto, boat, and related dealerships		●	
	Auto service stations			●
	Bars		●	
	Bed and breakfasts	●		
	Exhibition, meeting, and convention halls		●	
	Funeral homes		●	
	General offices		●	
	General services		●	
	Greenhouse/Nursery, retail			●
	Hostels	●		
	Hotels	●		
	Marijuana retail store		●	
	Market garden			●

TABLE 8-A: CLASSIFICATION OF USES AS CRITICAL, NON-CRITICAL, OR EXEMPT

		Critical	Non-Critical	Exempt
Commercial	Neighborhood nonresidential reuse		●	
	Office park		●	
	Recreation and amusement centers		●	
	Registered marijuana dispensary		●	
	Restaurants		●	
	Retail		●	
	Small-scale marijuana caregiver		●	
	Specialty food service		●	
	Theaters and performance halls		●	
	Veterinary services		●	
Industrial	Communication studios		●	
	Construction & engineering services		●	
	Dairies			●
	Fish waste processing		●	
	Food & seafood processing, packing, and distribution		●	
	High-impact industrial uses		●	
	Impound lots			●
	Intermodal transportation facilities		●	
	Laboratory and research facilities		●	
	Low-impact industrial		●	
	Lumber yards			●
	Marijuana cultivation facility (<2,000 SF plant canopy)			●
	Marijuana cultivation facility (2,000-7,000 SF plant canopy)		●	
	Marijuana cultivation facility (>7,000 SF plant canopy)		●	
	Marijuana manufacturing facilities		●	
	Marijuana testing facilities		●	
	Printing and publishing		●	
	Recycling facilities			●
	Self-storage		●	
	Solid waste disposal facilities			●
	Studios for artists and craftspeople		●	
	Telecommunication towers (ground-mounted)			●
	Warehousing and distribution		●

Solar energy system (major)			●
Utility substations	●		
Wharves, piers, docks, and landing ramps			●
Wind energy system (minor)			●
Wind energy system (major)			●

8.1.5 Projects subject to the standards of the CFROZ

A. Any development located within the established boundary of the CFROZ, and which meets the thresholds listed below, shall be subject to the standards of the CFROZ.
   1. All new construction containing a critical use or uses.
   2. New construction of greater than 1,000 square feet containing non-critical uses only.
   3. Any addition of greater than 1,000 square feet containing critical or non-critical uses.

B. Where a change of use occurs within the CFROZ, all portions of a building containing a critical use and the critical systems supporting such use shall meet the CFROZ standards. Changes of use to non-critical uses shall not require compliance with the CFROZ standards.

C. Structures within the CFROZ that are 50,000 square feet or greater in gross floor area and undergoing substantial improvement are required to meet the CFROZ standards when they contain a critical use or uses. For the purposes of this subsection, substantial improvement shall be as defined in Article 12.

8.1.6 Use and dimensional requirements

A. Sea level rise design flood elevation (SLR-DFE). The required SLR-DFE shall be determined by use classification. For mixed-use developments that contain uses in different classifications sharing a ground floor, each use shall be addressed independently.

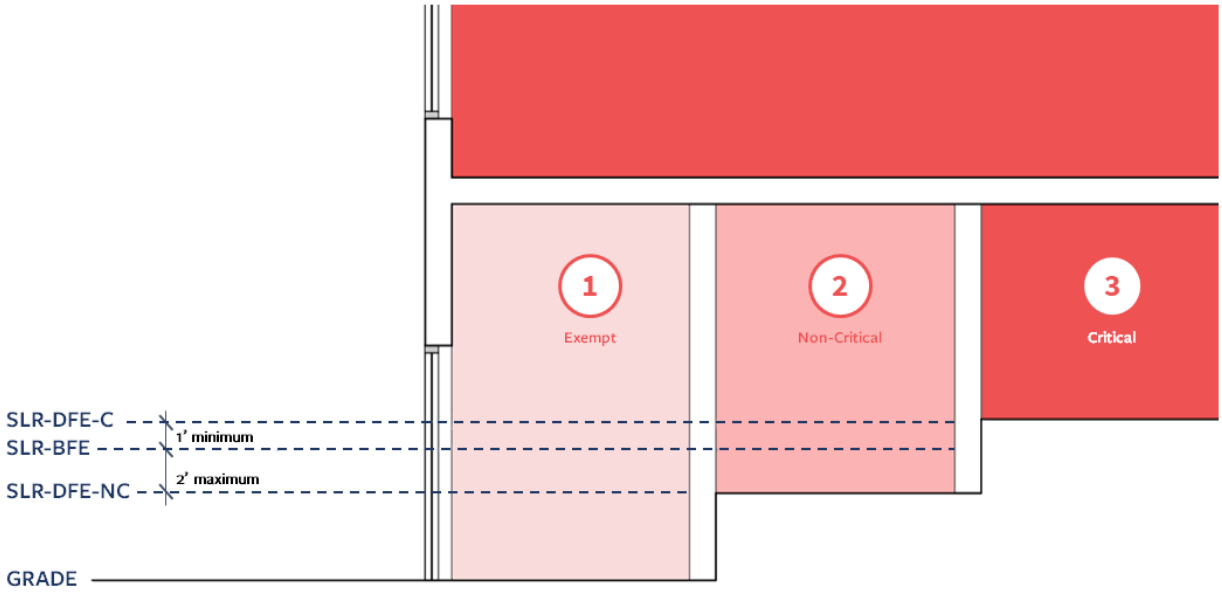

FIGURE 8-A: CFROZ USE CLASSIFICATIONS AND DESIGN FLOOD ELEVATION

1. *Critical uses.* The SLR-DFE for all critical uses (SLR-DFE-C), including the critical systems serving such uses, shall be a minimum of one foot above SLR-BFE, as defined in Article 3. In a proposed project containing critical uses, the following building and site elements are permitted to be located below the SLR-DFE:
    a. Lobbies, entries, egress stairs, and elements required for vertical circulation from the SLR-DFE to grade, such as elevators, ramps, and stairs.
    b. Parking.
    c. Storage.
    d. Flood protection equipment.
2. *Non-critical uses.* The SLR-DFE for non-critical uses (SLR-DFE-NC), including the critical systems serving those uses, shall be no lower than two feet below SLR-BFE, as defined in Article 3. The minimum elevation of the underside of the beams supporting the second floor in a multi-story building, or the roof in a one-story building, shall be no less than 13 feet above SLR-BFE. In a proposed project containing non-critical uses, the following building and site elements are permitted to be located below SLR-DFE:
    a. Lobbies, entries, egress stairs, and elements required for vertical circulation from the SLR-DFE to grade, such as elevators, ramps, and stairs.
    b. Parking.
    c. Storage.
    d. Flood protection equipment.
3. *Exempt uses.* Exempt uses shall not be subject to dimensional requirements with respect to SLR-BFE.

B. Building height. Within the CFROZ, if a proposed project contains principal critical or

non-critical uses on the ground floor, height shall be measured from the SLR-DFE or from average grade, whichever is higher.

C. Exemptions for required ramping and stairs. Ramping and stairs necessary to meet any required SLR-DFE may be included within the calculation of area required to meet landscaped open space ratio requirements, and shall not be included within the calculation of lot coverage. Ramping and stairs necessary to meet any required SLR-DFE may be located in any required front yard, interior or corner side yard, or rear yard, and in cases where build-to requirements apply, shall be considered to meet the build-to percentage.

D. Hazardous materials. Any hazardous materials shall be fully contained and elevated a minimum of two feet above SLR-DFE.

8.2 FORT SUMNER PARK HEIGHT OVERLAY

8.2.1 Purpose

The purpose of the Fort Sumner Park Height Overlay is to protect the public interest by limiting the impact of development on the quintessential views of natural resources and the changing Portland skyline from Fort Sumner Park.

8.2.2 Applicability

A key apex point is established in Fort Sumner Park at 43° 40’ 2.3359” N. 70° 15’ 4.3687” W . The Fort Sumner Park Height Overlay includes all land within 200 feet to the west of this key apex point as indicated on the City of Portland Zoning Map.

8.2.3 Standards

Notwithstanding any other section of this Land Use Code, development in the Fort Sumner Park Height Overlay shall be subject to the following additional provisions:

A. The top of structures, including rooftop appurtenances, within the overlay shall not exceed the baseline vertical height of the apex point (160.27’ City of Portland Datum (Mean Tide)). For each 25’ radially away from the apex point, the vertical height permitted in the overlay is reduced by 1 foot. (See Figure 8-B.)

B. The minimum building setback from the park property shall be 15 feet.

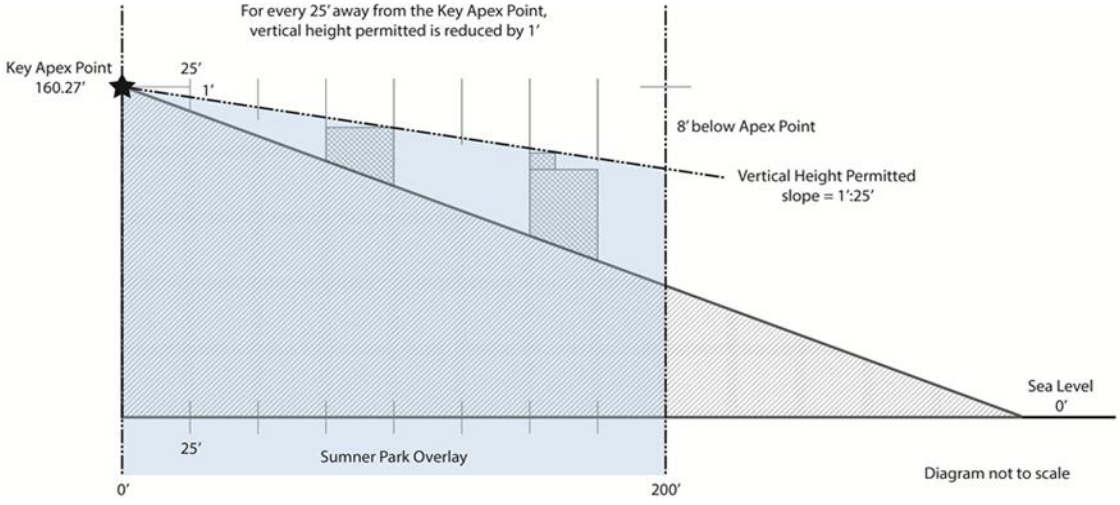

FIGURE 8-B: FORT SUMNER PARK OVERLAY PERMISSIBLE HEIGHT

8.2.4 Review process

Any project within the Fort Sumner Park Overlay shall go before the Parks Commission for a recommendation to the Planning Board regarding potential impacts on Fort Sumner Park.

8.3 INSTITUTIONAL OVERLAY (IOZ)

8.3.1 Purpose

The Institutional Overlay Zone (IOZ) provides a regulatory tool available to the city's major medical and higher education campuses where an alternative regulatory structure is needed to facilitate a consistent, predictable, and clear growth management process. The purposes of the Institutional Overlay Zone are to:

A. Acknowledge that the city's major academic and medical institutions play a prominent role in the health and well-being of the local and regional community, and to sustain that role, these institutions need flexibility to change and grow.
B. Encourage proactive planning for institutional change and growth which identifies and addresses likely long-term institutional needs and cumulative impacts while leveraging potential benefits at the neighborhood, city, and regional level.
C. Ensure that institutional change and growth both complements and, as appropriate, integrates adjacent or surrounding neighborhoods through carefully planned transitions.
D. Support the formation and continuation of mutually beneficial public-private cooperation.
E. Support an ongoing public engagement process that benefits both the institutions and nearby neighborhoods.
F. Reflect Comprehensive Plan and other policy objectives.
G. Provide a regulatory tool for Portland's major institutions that includes the flexibility required to balance the particular needs of institutions with the needs of the surrounding neighborhood and wider community.

8.3.2 Location and applicability

The city's major medical and higher education institutions are eligible to apply for designation as Institutional Overlay Zones. Use of an Institutional Overlay Zone is encouraged for these institutions, particularly where proposed future development may be inconsistent with current base zoning.

8.3.3 Establishment

A. Application for an Institutional Overlay Zone. Where an eligible institution seeks designation as an IOZ, they shall submit a zone change application consisting of two components:
    1. An Institutional Development Plan (IDP) in accordance with Subsection 8.3.4.
    2. A regulatory framework in accordance with Subsection 8.3.5. If adopted, this framework shall serve as the text and map amendment to the City's Land Use Code and zoning map.
B. Required public involvement. At least two neighborhood meetings shall be required to establish designation as an IOZ. The first shall be held prior to the formal submission of a zone change application, and the second shall be held during the City's review. Meetings

shall identify the concerns, if any, of affected residents and property owners, and should solicit feedback to inform the Institutional Development Plan (IDP) and regulatory framework proposed. Meetings shall be held in a convenient location proximate to the institution. The applicant shall provide written notification to property owners of record within 500 feet of the proposed IOZ boundary at least ten days prior to the meeting dates, and shall maintain written records of the meetings.

C. Required scoping meeting. The eligible institution shall meet with the Planning Authority after the first required neighborhood meeting and prior to submission of the zone change application to confirm the focus of the Institutional Development Plan (IDP) and regulatory framework, including associated study areas that may be outside of the proposed IOZ boundary. The IDP and regulatory framework will vary in detail and focus depending on the eligible institution and its context. The content requirements in Subsections 8.**3**.4 and 8.**3**.5 and the recorded comments from neighborhood meeting(s) shall provide direction for the content of the IDP. The Planning Authority or Planning Board may require additional information or modify content requirements as is relevant to the eligible institution.

D. Reviewing authority. The Planning Board shall review the zone change application, including the IDP and regulatory framework. At least one public workshop and a public hearing before the Planning Board are required. Upon recommendation of the Planning Board, the City Council shall review and consider adoption of the Institutional Overlay Zone and the accompanying regulatory framework as an amendment to the City's Code of Ordinances.

E. Future institutional development. All new development shall be compliant with the established IOZ and accompanying regulatory framework. It shall also be consistent with the IDP, consistent with the Comprehensive Plan, and shall meet applicable site plan standards, unless such standards are superseded by the regulatory framework. Any development proposed by an eligible institution outside the established IOZ boundary shall be reviewed under the standards of the applicable zone , unless such development is proposed in a residential zone and is functionally related to the operations within the IOZ, in which case it shall be addressed by the IDP and require an amendment to the IDP as applicable.

8.3.4 Institutional Development Plan (IDP)

A. Purpose. Any use conducted by an eligible institution and any construction by an eligible institution in an Institutional Overlay Zone shall be consistent with an Institutional Development Plan (IDP) approved by the Planning Board in accordance with this section. The purpose of the IDP is to establish baseline data about institutional land uses, facilities, and services, and to measure, analyze, and address the anticipated or potential impacts of planned institutional growth and change. The IDP shall serve as a background document that supports the proposed regulatory framework and informs subsequent site plan review(s).

B. Planning horizon. An IDP shall provide the City and abutting neighborhoods with a clear outline of the anticipated or potential growth and change of the eligible institution for the short- to medium-term (e.g. 1-5 and 5-10 years respectively), as well as a conceptual growth plan for the long-term (e.g. 10 years or more). However, the specific planning horizons for each institution will be determined as part of the IDP approval process.

C. Content. The IDP submission shall address the following elements unless specifically modified by the Planning Authority or Planning Board, with the scope and level of detail to be clarified at the required scoping meeting:

1. Context information, including:
    a. The institution's adopted mission, vision, or purpose statement.
    b. A summary of relevant baseline data on the institution, including:
        i. A neighborhood context plan.
        ii. An inventory of current programs and services.
        iii. A current census of the number of people using the institution (e.g., employees, enrollment, patients), with an indication of maximums and minimums over time.
        iv. An inventory and/or plan of all existing property holdings within the main campus and within the City of Portland, including an indication of functional land use links between off-campus properties and the main campus (e.g. remote parking).
        v. An inventory and/or plan of existing facilities, including data on use, floor area, and any existing functional connections between facilities.
    c. A summary of the baseline characteristics of the existing campus and context of the institution, based on identified study areas, including:
        i. A summary of existing resources, such as historic, open space, and natural resources.
        ii. A summary of the existing transportation system, including vehicular, pedestrian, transit, bicycle, and parking supply, demand, and utilization.
        iii. A summary of existing public infrastructure supporting the institution, including demand, utilization and any capacity issues.
        iv. Relevant municipal plans, projects, and studies that may influence the IDP study area and opportunities for integrating institutional growth.
    d. A summary of public involvement in the development of the IDP, including major areas of public concern.
2. Assessment of future institutional growth and change, including:
    a. A description of institutional needs and areas of future institutional growth and change, with:

i. A projected census of users (e.g., enrollment /employment/patient/ visitor figures and anticipated variations over time).
ii. Institutional objectives for property both within and outside the IOZ boundary (e.g. acquisition and/or disposition), including an indication of any functional land use connection for sites outside the IOZ boundary to the main campus.
iii. A development plan addressing anticipated or potential institutional needs and physical improvements, including the proposed boundary of the IOZ and any phasing of the development.

b. Analysis and associated plans that address the following elements in terms of anticipated growth or potential impacts within the identified study area, and support the development parameters as set out in the regulatory framework, including:
   i. Transportation and access, with:
      a) An analysis of the projected changes in parking demand, supply, and impacts to the off-street and on-street parking capacity, including an explanation of the proposed parking plan.
      b) An analysis of the projected changes in vehicular, pedestrian, transit, and bicycle access routes and facilities, their capacity, and safety.
      c) A transportation, access, and circulation plan, representing the synthesis of the analysis, and including a program of potential improvements or set of guidelines to address access deficiencies to and within the IOZ. The plan should outline proposed mechanisms and potential strategies to meet transportation objectives, including transportation demand management, phasing, and when a Traffic Movement Permit (TMP) may be required.
   ii. Environment, with:
      a) An analysis of potential cumulative impacts on natural resources and open spaces.
      b) An analysis of projected energy consumption, hazardous materials generation, noise generation, and similar issues as relevant.
      c) An environmental plan, representing the synthesis of the analysis and

including a proposed program or set of guidelines for future preservation, enhancement, conservation, and/or mitigation.

iii. Infrastructure, with:

a) An analysis of projected public utility demand and the capacity of associated infrastructure.

b) An analysis of projected public safety needs and projected impacts to the capacity of these services.

c) An infrastructure plan, representing the synthesis of the analysis and including a proposed program or set of guidelines to support sustainable growth.

iv. Design, with:

a) An analysis of projected impacts to neighboring properties and public spaces, including potential shadow, wind, and lighting impacts, impacts of height and massing, and impacts to historic resources.

b) An analysis of transition areas between the institution and adjoining neighborhoods, including identification of key character defining components of the surrounding context.

c) An analysis of existing Crime Prevention Through Environmental Design issues and identification of how these principles would be addressed as part of the proposed campus development.

d) A conceptual built environment/public realm plan, representing the synthesis of the analysis and including a set of guidelines for urban design, landscape, open space, and streetscape treatments, with particular attention to the treatment of edges (both within and abutting the IOZ boundary) to achieve compatible transitions.

v. Neighborhood engagement, with:

a) A plan for ongoing community engagement that represents best practices, promotes collaborative problem solving around community concerns, fosters transparency, and identifies mechanisms for neighborhood feedback and institutional accountability.

b) A property management framework that identifies the institution's process for handling operational property issues with neighbors.
c) Strategies for assuring communication pertaining to property acquisition and disposition in surrounding neighborhoods.
d) A set of construction management principles to apply to all institutional construction, that represent best practice, aim to minimize short- and long-term construction impacts on surrounding residents and businesses, and ensure a clear communication strategy is in place in advance of construction.

D. Standards of review. The IDP shall:
1. Address all content requirements, unless explicitly modified by the Planning Authority or Planning Board.
2. Reflect the issues/topics identified in the required public process.
3. Demonstrate consistency with the City's Comprehensive Plan and the purpose of this ordinance.
4. Demonstrate how the property ownership, proposed growth, and requested regulatory framework relate to the institution's mission.
5. Demonstrate that traffic and parking impacts have been anticipated and that the proposed parking provision is justified as based on an assessment of options for reducing traffic and parking demands.
6. Outline an approach to open space, natural, and historic resources that supports preservation and enhancement.
7. Demonstrate that potential cumulative environmental impacts have been anticipated and can be minimized or satisfactorily mitigated.
8. Demonstrate that utility impacts have been anticipated and can be minimized or satisfactorily mitigated.
9. Reflect a comprehensive design approach that ensures appropriate transitions with the existing or future scale and character of the neighboring urban fabric.
10. Promote compatibility with existing or future uses in adjacent neighborhoods, maintain housing, and support local amenities.
11. Anticipate future off-site improvements that would support the integration of the institution into the community and city-wide infrastructure.
12. Conform with the standards of Article 16 for designated landmarks or for properties within designated historic districts or designated historic landscapes, if applicable. When proposed adjacent to or within 100 feet of designated landmarks, historic districts, or historic landscapes, the IDP shall be generally compatible with the major character-defining elements of the landmark or portion of the district in the immediate vicinity.

13. Incorporate strategies to support clear communication and ongoing public engagement between institutions and nearby neighbors.

E. Approval. Upon finding that an eligible institution's IDP meets the standards of review, the Planning Board shall approve, approve with conditions, or deny an IDP.

F. Monitoring. The IDP shall establish a schedule for reporting on IDP implementation at regular intervals of not more than ten years from the date of approval of the initial or amended IDP, and identify thresholds for IDP amendments.

G. Amendments. An approved IDP shall guide campus development unless and until amended. If at any time the eligible institutions request minor amendments to an approved IDP, the Planning Authority may approve such minor amendments, provided that they do not constitute a substantial alteration of the IDP and do not affect any condition or requirement of the Planning Board. The applicant shall apply with a written statement of the proposed amendment and proposed amended IDP to the Planning Authority, whose decision as to whether the amendment is minor shall be final. Major amendments shall be reviewed by the Planning Board. When the IDP is amended, the baseline data in the IDP shall be updated as appropriate.

8.3.5 Regulatory framework

A. Purpose. The regulatory framework translates the IDP into a set of clear and specific zoning requirements for the IOZ that constitute the text and map amendments to the City's Land Use Code and zoning map. The zoning requirements are anticipated to include parameters that guide the growth and change of the institution as well as broad strategies to address potential impacts, with plans and details to be developed under site plan review.

B. Applicability. The regulatory framework shall apply only to properties that are within the IOZ boundary and to which the eligible institution holds right, title, or interest. For these properties, the Institutional Overlay Zone shall supersede the underlying zoning, and all new institutional development shall be conducted in compliance with the regulatory framework and the approved Institutional Development Plan. Properties located within the Institutional Overlay Zone not subject to right, title, or interest of the eligible institution shall continue to be governed by the regulations of the underlying zoning designation.

C. Uses. Institutional uses, including hospitals and higher education facilities, shall be permitted, as shall uses that are functionally integrated with, ancillary to, and/or substantively related to supporting the primary institutional use, consistent with the applicable approved IDP.

D. Content. The regulatory framework shall reflect the information and analysis of the IDP. The content shall be tailored to address the issues associated with the institution and its neighborhoods. The regulatory framework should be succinct and use tables and graphics to address the following, if applicable:

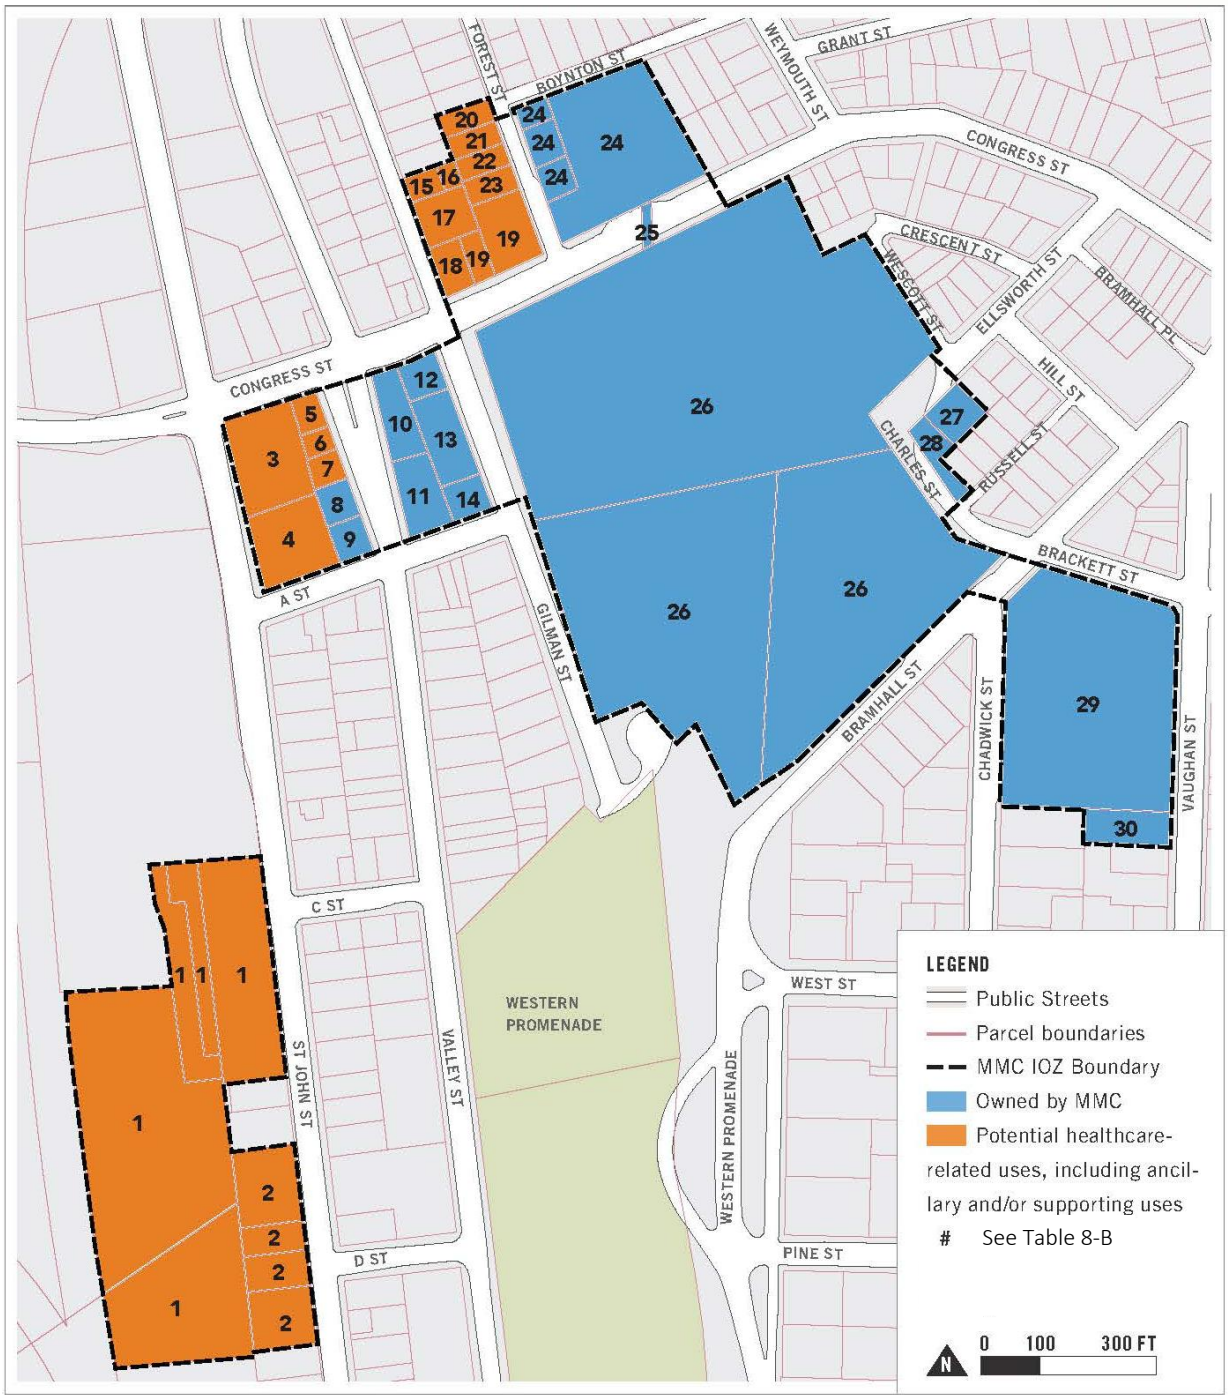
1. *Zoning boundary of the IOZ.* The area to

which the regulations apply, as shown on the zoning map, subject to other provisions of this ordinance (i.e. the map amendment to the City's zoning map).

2. *Phasing and schedules.* Requirements that relate to proposed phases; a chart showing the schedule or thresholds for submitting an amended IDP (or elements of an IDP, such as a Transportation Demand Management (TDM) Plan).
3. *Uses*. Clarification, as necessary, on permitted uses.
4. *Dimensional requirements.* Graphics, sketches, or standards, including details for transition zones within the IOZ boundary.
5. *Transportation.* Elements such as Transportation Demand Management Plan (TDM) trip reduction targets or contribution to area-wide TDM measures; broad parameters for ensuring pedestrian, vehicular, bicycle and transit access and safety; parking ratios and management strategies; thresholds for access improvements.
6. *Environment.* The approach to the inclusion of open space and preservation of environmentally-sensitive areas.
7. *Mitigation measures.* The broad approach to identified mitigation measures, which would be addressed in greater detail in the site plan review process; thresholds for addressing deficiencies; goals for preservation/protection.
8. *Design.* Graphics and standards to clarify building placement and envelope (height and massing); guidelines for integration of site features; required treatments for transition zones and treatment for all edges (both within and abutting the IOZ boundary); guidelines for establishing campus identity.
9. *Neighborhood integration.* Thresholds and strategies for neighborhood engagement; mitigation of impacts on neighboring properties, including construction impacts; buffering requirements; objectives for pedestrian linkages and safety; other requirements that address community concerns.
10. *Monitoring.* A schedule for regular monitoring reports on IDP implementation in accordance with the IDP.

E. Standards of review. The regulatory framework shall:
   1. Be consistent with the Comprehensive Plan and the Institutional Development Plan.
   2. Provide a clear zoning framework, using graphics and tables as appropriate, to apply to future site plan reviews.
   3. Provide specific regulatory statements as appropriate that respond to concerns raised during the required public involvement.
   4. Outline measurable goals and thresholds for improvements or other actions identified in the IDP to be advanced in subsequent site plan applications.

F. Approval/adoption. The Planning Board shall review the proposed regulatory framework against the standards of review and make a recommendation on the institution's IOZ designation and regulatory framework to the City Council for adoption as part of this Land



Use Code.

G. Amendments. A regulatory framework and IOZ boundary as adopted by the City Council shall remain in force unless and until amended. Amendments to a regulatory framework and/or IOZ boundary may be brought forth by the City or eligible institution. Proposed amendments to the IOZ boundary or regulatory framework shall be reviewed by the Planning Board and adopted by the City Council subject to the provisions of this ordinance.

8.3.6 Maine Medical Center Institutional Overlay Zone Regulatory Framework

A. Applicability. All development proposed by Maine Medical Center (MMC) within the boundary of the MMC Institutional Overlay Zone (IOZ) shall be consistent with the approved Institutional Development Plan (IDP), consistent with the Comprehensive Plan, and meet applicable standards of the Land Use Code, unless such standards are superseded by the following regulatory framework. This regulatory framework shall govern future development by MMC within the IOZ unless amended by the Portland City Council upon formal application of MMC. The MMC Institutional Overlay Zone shall have the boundaries depicted in Figure 8-C, and shall include the properties listed in Table 8-**B**.

B. Updates and amendments. It is intended that the IDP will be updated on a regular basis to

Note: Refer to Table 8-C for a list of permitted uses.

FIGURE 8-C: MMC IOZ BOUNDARY

30	63-B-8	214 Vaughan St.	0.1983	MMC

Properties owned by MMC are listed under MMC or MMC Realty Corp.
MMC will not extend its functionally-related Bramhall campus hospital operations beyond the boundary of the IOZ within the City of Portland without further amendment to the IDP. This includes any expansion of functionally-related operations that displace residential uses outside of the IOZ boundary. A functional relationship is defined as uses or activities that are traditionally or customarily linked to the day-to-day operations of the MMC Bramhall Campus that would relocate a significant proportion of the total employee population or activities.

ensure that the data is current and that the document remains accurate. Accordingly, monitoring reports will be filed every three years and shall include a summary of progress on IDP implementation and of acquisitions and divestment since the date of IDP approval. At the time of the submission of the monitoring report, MMC shall identify any updates to the IDP which may result from updated master planning, changes in baseline information, or changes in the adjacent neighborhoods which affect MMC, to allow the IDP to remain current. Updates and minor amendments not described below shall be reviewed administratively by the Planning Authority.

1. Minor amendments that impact phasing of the long-term development blocks or change the approach to parking, transportation, neighborhood engagement or design shall be reviewed by the Planning Board for consistency with the objectives of the IDP. In addition to consistency with the objectives of the IDP, review of phasing and development program amendments shall focus on integration with the campus and impacts on transportation or infrastructure. This review may occur simultaneously with the site plan review of an anticipated project.

2. Major amendments shall be reviewed by the Planning Board and are required under the following circumstances:
   a. A change to the regulatory framework is required.
   b. The IDP is no longer representative of the institutional mission or approach to community as a result of redevelopment in the area or City upgrades to neighborhood planning (such as roadway changes, infrastructure upgrades, community design, lighting).
   c. Development proposed by MMC is inconsistent with the master facility plan, transportation plan intent, design plan intent, or environment and infrastructure plan intent

TABLE 8-C: PERMITTED USES

Healthcare facilities, including but not limited to the following ancillary and/or supporting uses:

- Hospital
- Medical office/Clinic
- Laboratory center/services
- Research and development (R&D) laboratory or facility
- Educational facility/Conference center
- Administrative/Business office
- Accessory service or trade uses
- Guest house
- Multi-family housing for healthcare staff and students
- Rehab/Skilled nursing facility
- Retail
- Restaurant/cafe
- Employee service amenities
- Day care center
- Fitness center or gymnasium
- Parking lot or garage
- Bicycle storage
- Heliport
- Antenna station
- Outdoor use areas, such as green areas, parks, gardens, art installations, and other active and passive non-commercial recreation spaces

identified in the IDP.

3. Annual monitoring reports will be submitted for MMC's Transportation Demand Management (TDM) Plan. TDM monitoring reports shall include a summary of progress towards targets established in the TDM Plan.

C. Uses. In addition to the uses permitted in the underlying zone, the uses in Table 8-C are permitted as a matter of right. In recognition that MMC is part of a mixed-use area of the city, with important existing services and businesses that serve the local and wider community, healthcare facility development fronting onto Congress Street and St. John Street shall activate the public realm, to the extent able, with uses such as service and retail/restaurant, landscaping, active building entrances, pocket parks, etc., on the ground or other publicly accessible level, consistent with
the design intent contained in the approved IDP. In areas identified in the IDP as "Priority zone for commercially oriented/retail uses," usable ground floor retail, restaurant, or comparable community-oriented use that provides services to local residents and employees both during the day and evening hours is required. In areas labeled "Street activation through location of windows, entrances, etc.," usable ground floor retail, restaurant, or community-oriented use is encouraged to the extent practicable. Such uses, where constructed or facilitated as part of a healthcare related development, are expressly permitted whether ancillary or supporting the healthcare facility or not, and shall be open and welcoming to the general public in addition to employees or visitors of MMC.

D. Dimensional requirements. The MMC Institutional Overlay Zone shall have the dimensional requirements listed in Table 8-D and depicted in Figures 8-C and 8-D.

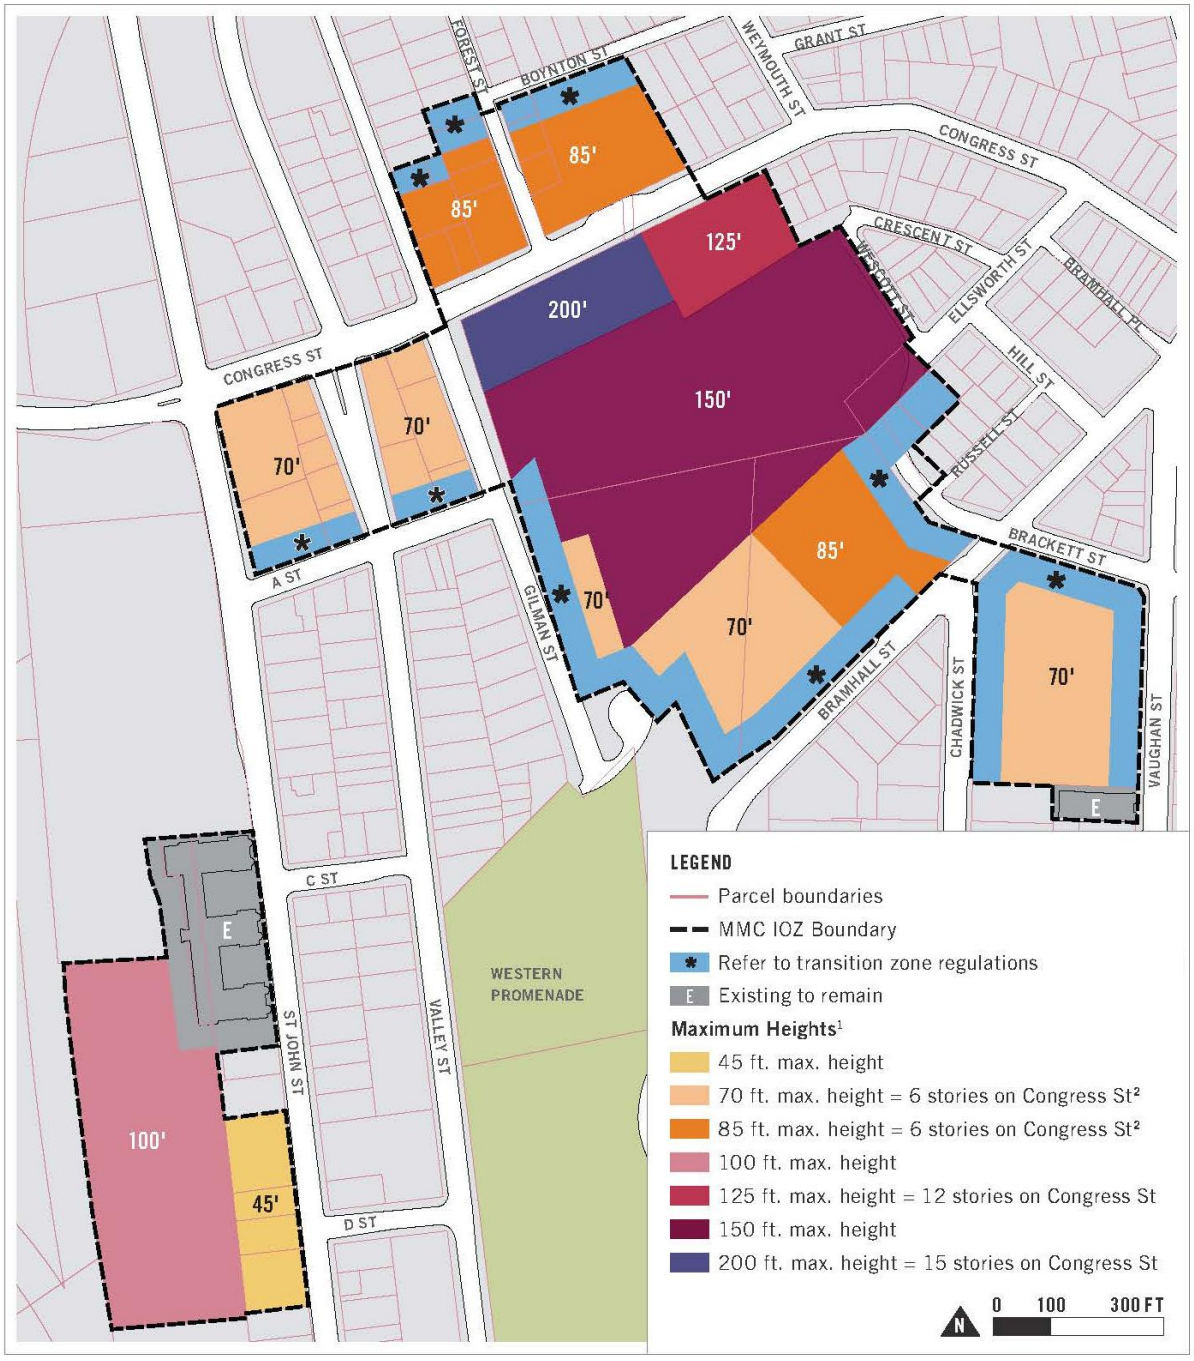
E. Design. New buildings within the IOZ shall adhere to the design guidelines set forth in Chapter 5: Design of the IDP and the site plan standards of Article 13.

F. Signs

1. At the time of first site plan review following IDP approval, a unified campus-wide signage plan shall be submitted for review and approval by the Planning Authority. Any update to such plan due to a change in name or logo shall not require amendment to the IDP.
2. Signs shall be designed in accordance with the campus-wide signage plan. All signs shall be designed in proportion and character with building facades and adjacent street typology. All signs shall be coordinated with the building and landscaping design and be constructed of appropriate permanent, high quality materials and finishes.

G. Transportation

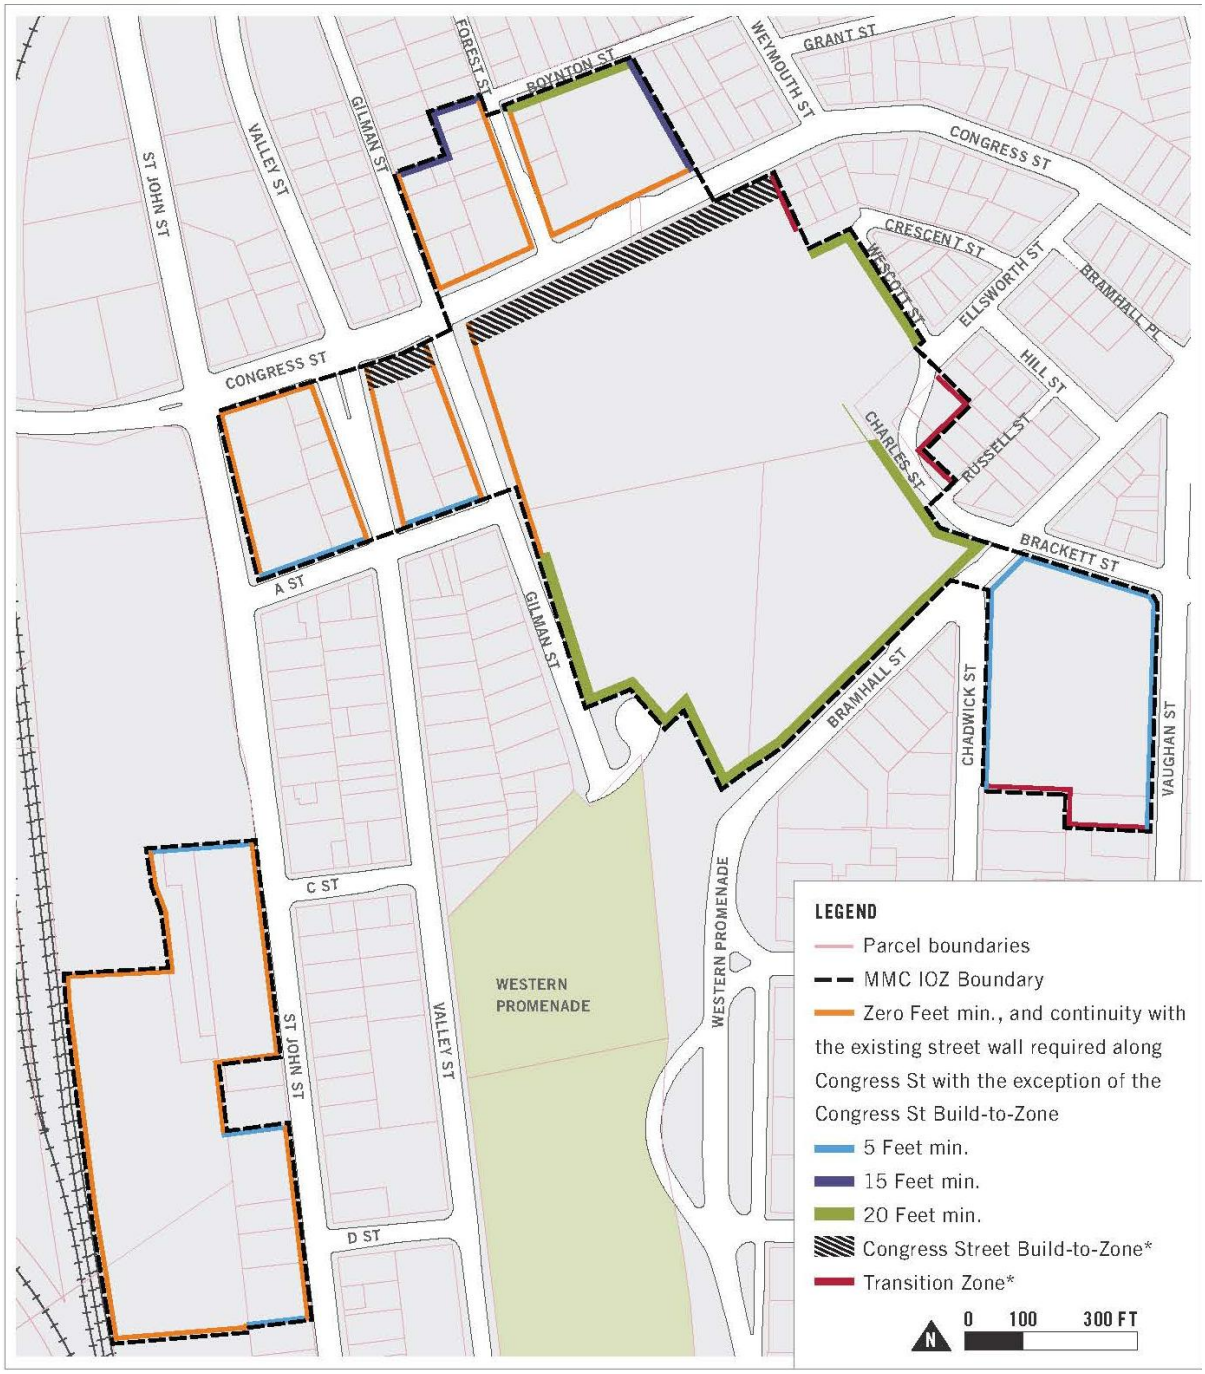
1. *Transportation Demand Management (TDM)*
   a. At the time of the first site plan review following IDP approval, MMC shall submit a campus-wide TDM Plan substantially in accordance with those TDM objectives and strategies identified in the approved Institutional Development Plan. The TDM Plan may be phased into short-,



mid-, and long-term actions to allow for progressive implementation over time.

b. The TDM Plan shall be designed to provide transportation choice with the goal of reducing parking demand

TABLE 8-D: MMC IOZ DIMENSIONAL REQUIREMENTS



Building heights (max.)	Max. building heights for new buildings within the IOZ shall be governed by the Maximum Building Heights Map in Figure 8-D, or by the transition zones clause of this table for those buildings located in transition zones. Refer to IDP "Chapter 5. Design" for methodology on determining heights.
Building heights (min.)	Three stories, except in transition zones, where the minimum building height shall be two stories. Minimum building heights shall not apply to building awnings, associated kiosks, pavilions or similar building components.
Building length (max.)	Length of proposed parking garage at 222 St John St shall not exceed 500 feet as measured roughly parallel to St John St.
Building setbacks (min.)	Minimum building setbacks shall be governed by the Minimum Setbacks Map in Figure 8-E. Additional requirements are listed in the transition zones and Congress Street build-to zone sections of this table.
Congress Street build-to zone[1]	A build-to zone is identified for some properties that abut Congress Street. See Minimum Setbacks Map in Figure 8-E for the location of build-to zone. i. The Congress Street build-to zone extends between 0 to 40 feet from the right-of-way boundary. ii. Buildings located in these parcels must have a minimum of 70% of the façade facing Congress Street located within the build-to zone.
Transition zones	Transition zones are identified inside the IOZ boundary in areas where the IOZ abuts or is located across a public right-of-way from a residential zone or a historic-designated district. See Maximum Building Heights Map in Figure 8-D for location of transition zones. i. Transition zones shall extend 50 feet into the parcel from the parcel boundary. ii. Transition zones that abut a Residential zone with or without an intervening public right-of-way shall have a maximum height limit that matches the maximum height permitted within that Residential zone. iii. In areas where the IOZ abuts a residential zone without an intervening public right-of-way, minimum side and rear yard requirements of the abutting residential zone apply within the IOZ boundary, unless noted otherwise in Minimum Setbacks Map in Figure 8-E.

[1]A "build-to zone" is the area on the lot where all or a portion of the street-facing building facade must be located, measured as a minimum and max. yard (setback) range from the public right-of-way boundary.

Notes: 1. Minimum building heights also apply. Refer to Table 8-D.
2. For buildings with residential use above the ground floor, the following height maximums apply: 70 ft. maximum height = 7 stories, and 85 ft. maximum height = 8 stories.

FIGURE 8-D: MAXIMUM BUILDING HEIGHTS

* Refer to Table 8-D Dimensional Requirements

FIGURE 8-E: MINIMUM SETBACKS

and single-occupancy vehicle trips to and from MMC by employees and visitors.

b. The TDM Plan shall establish parking and trip reduction targets associated with the short-term (0-2 years), mid-term (2-5 years), and the long-term (5+ years), as well as a data collection plan.

2. *Parking.* Parking requirements in the IOZ shall be established at the time of site plan review based on a parking study that includes a campus-wide analysis of demand and supply. The parking demand study shall determine parking requirements and shall be sufficient to alleviate parking pressure on surrounding neighborhoods.

Parking studies developed by MMC shall integrate parking and trip reduction achievements and data contained in the TDM Plan.

H. Environment. Development proposed by MMC shall be designed to integrate with the surrounding context, including open space and pedestrian networks and infrastructure.

I. Mitigation measures. MMC shall mitigate site plan impacts to off-premise infrastructure in a manner proportionate to those impacts. Mitigation may include financial or in-kind contributions to existing or planned City projects focused on mitigating the impacts of MMC development. Mitigation contribution shall be determined based on the City's standard procedure in effect at the time of site plan review.

J. Neighborhood integration and engagement

1. For the purpose of keeping surrounding residential areas appraised of its future development plans, and to address any neighborhood issues related to the operations of the MMC Bramhall campus, MMC shall adhere to the ongoing community engagement principles identified in the approved Institutional Development Plan.

2. MMC shall conduct ongoing community engagement, including the formation of a Neighborhood Advisory Committee comprised of representatives of MMC, the Parkside neighborhood, the West End neighborhood, the Western Promenade Neighborhood Association, the St. John Valley neighborhood, the Libbytown neighborhood, and the City.

K. Construction management

1. At the time of site plan review, MMC shall submit a construction management plan substantially in accordance with those construction management principles identified in the approved Institutional Development Plan for review and approval by the Planning Authority.

2. The construction management plan shall include a construction schedule, as well as strategies for managing neighborhood communication and noise, air quality, traffic, and parking impacts associated with the construction as set forth on the construction management template developed by the City and attached and incorporated to the IDP as Appendix A.

L. Other requirements

1. *Helipad.* Proposed changes to MMC's helipads, including changes to preferred flight routes, shall be reviewed and

approved by the Planning Authority in accordance with the approved Institutional Development Plan.

2. *Snow ban parking.* When the City of Portland declares a snow parking ban, MMC shall make parking available to neighbors in a designated parking area on or near its campus upon the following condition: Due to the patterns of patient flow in the hospital, the hours of snow ban parking for registered vehicles during an announced City of Portland snow parking bans are 6:00 p.m. until 6:00 a.m. Vehicles that are not moved out of these parking areas by the applicable time each morning are subject to towing at the owner's expense.
3. *Healthy communities.* Recognizing that a stable residential and commercial environment is key to the health of any neighborhood, MMC commits to supporting its existing and future neighbors in the St. John Valley, Parkside, West End, Western Prom, and Libbytown neighborhoods. Accordingly, MMC shall implement and participate in the healthy communities programs as described below.
    a. Caring Community Grants. MMC shall develop an annual grant program with available funds of up to $30,000. Goals, priorities, eligibility requirements, program guidelines, and allocation approach will be developed by the MMC Neighborhood Advisory Committee, as described in Chapter 6 of the IDP approved on September 26, 2017. Neighborhood associations or other entities located or operating in the St. John Valley, Parkside, West End, Western Promenade, and Libbytown neighborhoods may apply for grant funding relating to the following initiatives:
        i. Neighborhood investment and Infrastructure: Focused on creating strong, safe, accessible and vibrant neighborhoods.
        ii. Quality of life: Focused on improving access to recreation, arts or cultural experiences in the neighborhoods.
        iii. Diversity and inclusion: Focused on fostering the building of relationships and understanding among diverse groups, including capacity building and outreach activities.
        iv. Public Safety: Focused on supporting public safety programs through training programs, equipment or other means in the neighborhoods.
        v. Environmental sustainability: Focused on preventing waste, increasing recycling or supporting other programs that work to improve the environment.
    b. Healthy Neighborhoods Program. MMC shall initiate and adopt a memorandum of understanding (MOU) by and between MMC, the City of Portland, and other community partners establishing a

Healthy Neighborhoods program. Such a program shall be designed to fund and execute housing and community improvement and development programs in St. John Valley and the other neighborhoods surrounding MMC's Bramhall Campus.

8.3.7 The Roux Institute at Northeastern University Overlay Zone Regulatory Framework

A. Applicability. All development proposed by the Roux Institute at Northeastern University ("Roux Institute") within the boundary of the Roux Institutional Overlay Zone (IOZ) shall be consistent with the approved Institutional Development Plan (IDP), consistent with the Comprehensive Plan, and meet applicable standards of the Land Use Code, unless such standards are superseded by the following regulatory framework. This regulatory framework shall govern future development by the Roux Institute within the IOZ unless amended by the Portland City Council upon formal application of the Roux Institute. The Roux Institutional Overlay Zone shall have the boundaries depicted below and shall include the approximately thirteen-acre property located at 1 Bean Pot Circle and identified as parcels 447-Aoo1 and A002 in the City's assessing records.

B. Phasing and monitoring

1. The Roux Institute campus will be developed in phases, as set forth in the IDP. The IDP will be updated on a regular basis to ensure that the data is current and that the document remains accurate.

FIGURE 8-F: ROUX INSTITUTIONAL OVERLAY ZONE BOUNDARY

Accordingly, monitoring reports will be filed every three years and shall include a summary of progress on IDP implementation and of acquisitions and divestment since the date of IDP approval. At the time of the submission of the monitoring report, any updates to the IDP shall be identified which may result from updated master planning, changes in baseline information, or changes in the adjacent neighborhood which affect the campus, to allow the IDP to remain current. Updates and minor amendments not described below shall be reviewed administratively by the Planning Authority.

2. At completion of each phase, the Roux Institute campus shall have the appearance of a complete and comprehensive design. Permanent and meaningful public space shall be

established in the first phase to ensure public benefit. Interim conditions shall be designed for a pleasant pedestrian experience through planting, lighting, wayfinding, graphics, artwork, or ornamental fencing to provide screening, buffers, and enhancement. Interim areas of the site which are not actively used for parking or construction staging will be appropriately landscaped or accommodate gathering on lawns or other aesthetically hardened spaces.

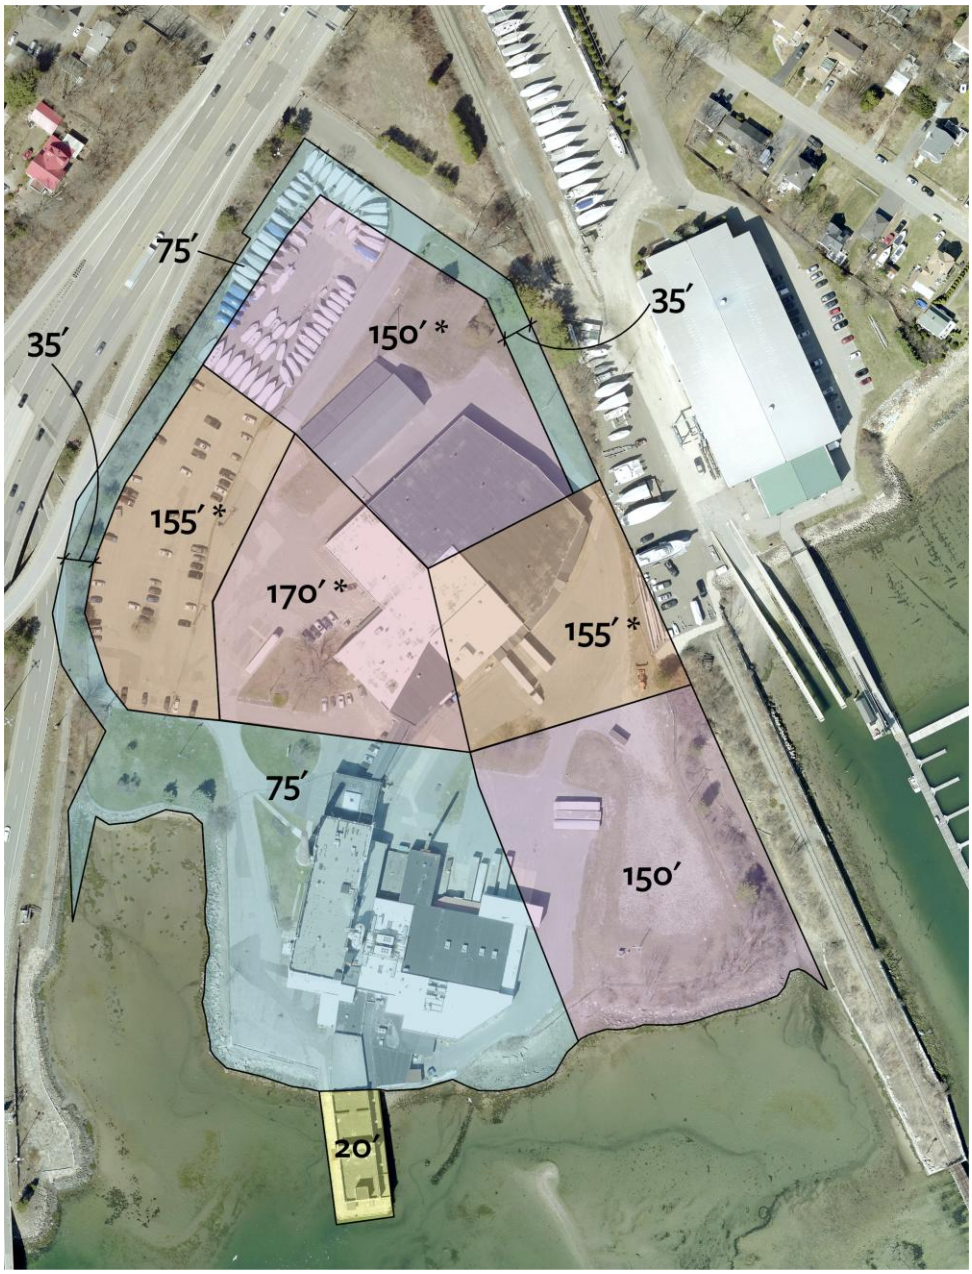
3. Minor amendments that change the approach to parking, transportation, neighborhood engagement or design shall be reviewed by the Planning Board for consistency with the objectives of the IDP. This review may occur simultaneously with the site plan review of a proposed project.
4. Major amendments shall be reviewed by the Planning Board and are required under the following circumstances:
    a. A change to the regulatory framework is required.
    b. The IDP is no longer representative of the institutional mission or approach to community as a result of redevelopment in the area or City upgrades to neighborhood planning (such as roadway changes, infrastructure upgrades, community design, lighting).
    c. A change in approach to parking, transportation, neighborhood engagement or design is inconsistent with the objectives of the IDP, resulting in a modification to the applicable objectives.
5. Review of major amendments may occur simultaneously with the site plan review of the proposed project.

C. Uses

1. The Roux Institute **c**ampus will encompass a variety of uses to support the mission of the Institute. Campus uses will include classrooms and laboratories, housing, faculty offices, dining areas, convening spaces, fitness centers, retail facilities, entrepreneurial spaces, light manufacturing, incubator space, research and design facilities, hotel, and office space. The mixture of uses is intended to support collaboration with private industry, other institutions, and community organizations. A range of rental housing options will provide on-site opportunities for students, faculty, staff, and their families, easing some of the housing pressure and traffic that might otherwise result from new residents attracted to Portland by the institute. Housing units not occupied by residents affiliated with the Roux Institute may be made available to the public to further assist in easing the housing pressure.
2. The Roux Institute campus will be designed to include uses that will welcome neighbors to the campus, including publicly available open space, waterfront access, recreational opportunities, restaurant, dining, small neighborhood grocery, and/or other limited retail options.
3. In addition to the uses permitted in the underlying zone, laboratory and research

facilities, low-impact industrial uses, and high-tech manufacturing shall also be permitted as a matter of right in all buildings that are located within the IOZ and on land owned or leased by the Roux Institute. On the pier residential uses are explicitly prohibited and any allowed use on the pier must be a functionally water-dependent use. Ground floor retail, restaurant, or comparable community-oriented uses that provide services to local residents, students, faculty and staff shall be expressly permitted whether ancillary to or supporting the educational institution, and shall be open and welcoming to the general public.

4. Within the boundary of the IOZ, hotels shall be limited as follows:
   a. No more than one hotel shall be located in the IOZ.
   b. The hotel shall contain no more than 130 rooms.
   c. The hotel shall be no more than eight stories in height, not including structured parking. There shall be no more than two levels of above grade structured parking beneath the first floor of the hotel. Nothing herein is intended to preclude the co-location of hotel use and structured parking on one or more levels of the hotel.



D. Dimensional requirements
   1. *Applicability.* All principal buildings and structures located within the IOZ and located on land owned or leased by the Roux Institute shall be subject to the dimensional requirements of the underlying zone, except where modified by the provisions of this section.
   2. *Rules of measurement*
      a. Publicly accessible corridor: A corridor accessible to the general public that is open to the sky or enclosed with a minimum width of 20 feet. Enclosed portions of publicly accessible corridors shall have a minimum height of 30 feet.
      b. Street wall: Within the Roux IOZ the term "street wall" shall mean a wall or portion of a wall that includes the principal entry to a building facing a street, public right-of-way, major pedestrian access routes, or open spaces. Orientation of the principal entry to a building shall be determined by the applicant.
   3. *Maximum building heights.* Maximum building heights for new principal buildings in the IOZ shall be governed by the Roux IOZ Height Map (Figure 8-G).
   4. *Minimum and maximum street wall heights.* New principal buildings in the IOZ shall rise to a minimum street wall height of 45 feet and may rise to a maximum street wall height of 105 feet.
   5. *Stepback requirements*. At a height not lower than the minimum street wall height or higher than the maximum street wall height, a stepback with a minimum depth of at least 10 feet shall be provided. Required stepbacks shall only apply to a building's street wall.
   6. *Building length requirements*
      a. For buildings with a length greater than 250 feet, a continuous, publicly accessible corridor that connects two

streets, public rights-of-way, major pedestrian or bicycle access routes, or open spaces shall be provided, with the precise location to be identified, defined, and reviewed under site plan review. Building length shall be measured at grade in a straight line between the outer corners of the designated street wall.

b. Publicly accessible corridors need not be linear and may have necessary grade changes.
c. Any building wall situated along a publicly accessible corridor shall be designed to provide sufficient architectural and graphic amenities to provide visual interest, transparency between interior activities and pedestrian activity, or active uses and relate the building, and its use to passersby.
d. Publicly accessible corridors shall:
    i. Include bicycle and pedestrian amenities such as benches and other seating;
    ii. Be illuminated to levels that are adequate but not excessive for the safety, comfort, and conveniences of occupants and users of the site, and
    iii. Provide access to the public during regular operating hours of the institute.
e. The Roux Institute may close off public access to a publicly accessible corridor during special events or when determined necessary by the institute for security or public safety purposes.

7. *Transitions and buffers*
    a. The campus is surrounded by existing buffers, with I-295 to the west, state-owned vacant parcels to the north, the rail corridor and marine business to the east, and Casco Bay to the south. In addition to the existing buffers, development shall further ease the transition to and from the campus.
    b. Public open space will ease transition from the smaller scale of Sherwood Street. A transition onto the campus will also be accomplished through thoughtful façade design at the pedestrian level. Potential nuisance features like dumpsters, air handlers, and parking will be appropriately screened. Buildings will avoid blank walls to respect the adjacent neighborhood and facilitate a sense of permeability and welcome.
    c. The shoreline transition area between the buildings and the water will serve as meaningful public open space. Building facades facing the water will be considered public-facing, with views designed for interest from the water and Eastern Promenade Trail.
    d. The transition area between the campus and I-295 contains a height limitation of 75 feet along the edge and between the highway and the B&M Cannery Building, preserving the historic view of the building from the highway and easing the transition to the greater allowable building heights in the center of campus.

e. The transition area along the edge of the campus adjacent to the rail corridor also contains a height limitation of 75 feet along the edge of the property closest to the residential neighborhood, further easing the transition to the greater allowable

1. *: Above height of 75 feet, no building floorplate shall exceed 35,000 square feet.
2. Above height of 50 feet, no two buildings shall be closer than 40 feet apart.
3. Building heights for buildings that span two or more height zones shall be measured by calculating the highest point (as defined in the Land Use Code) of that portion of the building within a particular height zone. If the roof is sloped, height is measured at the midpoint of that portion of the slope located within the particular height zone.
4. Functionally water-dependent structures on the pier are limited to 20 feet in height. Light poles on the pier are limited to 35 feet in height. On the pier height is measured from the top of the pier deck to the top of the roof of a functionally water-dependent structure or to the top of a light pole.

FIGURE 8-G: HEIGHT OVERLAY MAP

building heights at the center of campus, mitigating shadow impacts to adjacent properties.

E. Transportation

1. *Transportation demand management (TDM)*
   a. At the time of the first site plan review following IDP approval, the developer shall submit a campus-wide TDM Plan substantially in accordance with those TDM objectives and strategies identified in the approved IDP. The TDM Plan may be phased into short-, mid-, and long term actions to allow for progressive implementation over time.
   b. The TDM Plan shall be designed to provide transportation choice with the goal of reducing parking demand and single-occupancy vehicle trips to and from the Roux Institute campus and from the Roux Institute campus by students, faculty, staff, institutional partners, and visitors.
   c. The TDM Plan shall establish parking, mode share, and trip reduction targets associated with each phase of development, as well as a data collection plan.
   d. Annual monitoring reports will be submitted for the TDM Plan. TDM monitoring reports shall include a summary of progress towards targets established in the TDM Plan. If deficiencies are identified, they will be resolved in accordance with the site plan approval.
2. *Traffic movement permit (TMP)*
   a. Any development that will generate over 100 passenger car equivalents will trigger TMP review which will determine applicable mitigation for that development program. There are contributions anticipated to area-wide elements to support trip reduction targets, such as contribution to the development of shared use path infrastructure and support for additional transit service to the campus. The TMP review may consider an individual site plan or may cover more than one site plan. Each of the TMP submissions and review will continue to contemplate capacity for multimodal connections to continue to reduce automobile trips.
   b. Mode shares and trip reduction targets have been identified in the IDP and will be updated and modified with each TMP submission as necessary.
3. *Bicycle and pedestrian access and safety*
   a. A Transportation, Access, and Circulation Plan has been provided in the IDP. At the time of the first site plan review, the developer shall submit an updated Plan. Where possible, the bicycle and pedestrian access routes shall connect to established bicycle and/or pedestrian facilities. The developer shall look to establish new bicycle and pedestrian

bicycle and/or pedestrian facilities where feasible.

b. The site and building design shall not prohibit the enhancement of transit service to and from the site.

c. Bicycle, pedestrian, transit, and motorized vehicular facilities proposed to and from the site shall provide sufficient capacity and allow for safe connections for modes of transportation.

d. Sherwood Street shall be improved to accommodate bicycles and pedestrians within the existing right-of-way. Separate sidewalks and bicycle lanes shall be provided where feasible.

4. *Parking.* Parking requirements in the IOZ, including but not limited to parking ratios, shall be established at the time of site plan review for each phase of development based on a parking study that includes a campus-wide analysis of demand and supply. Parking studies shall integrate parking and trip reduction achievements and data contained in the TDM Plan. Parking requirements shall be determined in accordance with the requirements in the Land Use Code in effect at the time of site plan review.

5. *Circulation*

a. The campus shall contain a bike and pedestrian circulation network which includes a perimeter access loop, an internal system of pathways and a major campus "promenade" which will link campus developments, the upland, and the waterfront.

b. The perimeter access path for bicycle and pedestrians will serve to connect the campus to primary site entry points from the community and provide a continuous recreational loop. Where appropriate, the perimeter access path will be enhanced by wayfinding, lighting, landscaping, and safe crossings at vehicular intersections. Where possible, building facades will respond to the perimeter access path for views into the building and periodic activation to building entrances.

c. Internal campus circulation pathways will connect major open spaces, buildings entrances, and outdoor plazas to create a network of multiple pathways including the perimeter access path. Pathways will be located along or oriented toward facades that have active programs, architectural articulation, appropriately scaled entrances, and windows. Pathways will avoid traveling along stretches of undifferentiated or blank facades back doors or service areas. Pathways will be generally lower-velocity systems than the access loop. Where appropriate, the internal campus circulation pathways will be enhanced by wayfinding, lighting, landscaping, and safe crossings at vehicular intersections.

d. The campus promenade will serve as a major organizing feature

connecting the upland and the water and providing access to open spaces, allowing views of the principal campus of buildings, and connecting to the internal campus circulation pathways and perimeter access path. The promenade will be enhanced by lighting, wayfinding, landscape buffers, and open spaces. Viewsheds and topography along the promenade will emphasize the Roux Institute and Burnham & Morrill (B&M) Cannery Building, pier, and other principal buildings and spaces.

F. Environment

1. The IOZ shall contain a minimum of three acres of public open space designed to enhance waterfront access and provide bicycle/pedestrian network connectivity. This open space requirement shall be met at the completion of construction of the first site plan approval and shall be maintained at all phases of development. The three acres need not be contiguous and may be provided in new and/or different locations following completion of development phases. The public open space shall be meaningful space, functioning as recreation areas, social gathering spaces, or natural buffers consisting of a diverse mix of native woody and herbaceous vegetation, including a well-distributed mix of trees. The method of assuring public access to the public open space shall be determined at site plan review.
2. A Sustainability and Resilience Charter will be created by the Roux Institute for the campus. The charter shall contain sustainability goals related to development categories such as energy, water, transportation, equity, and resilience and may be revised over time in response to evolving technology and industry standards. The charter will require all development on the campus to utilize critical components of industry standard benchmarking systems such as LEED, SITES, WELL, ILFI, and Passive House. The charter will be submitted to the Planning Authority prior to submission of the first site plan application. Proposed site plans shall be consistent with the goals outlined in the charter.
3. Development shall utilize lighting designs required for safety and comfort and that minimize impact to the night sky in accordance with light pollution reduction standards in ANSI/ASHRAE/IESNA 90.1-2007 or its most current edition.
4. Development shall be carried out in such a way as to minimize the impacts of sea level rise, protecting infrastructure and site features by designing to a minimum of 2-feet above the Base Flood Elevation (BFE) as shown on the most current FEMA Flood Insurance Rate Map.
5. The shoreline edge and immediate adjacent upland shall be protected through shoreline armoring and vegetation to prevent erosion and enhance natural resource protection. Vegetation shall consist of a diverse mix of native woody and herbaceous vegetation. Work in coastal wetlands and

significant wildlife habitats (as defined by the Maine Department of Environmental Protection) will be minimized to the maximum extent practicable and shall comply with all applicable local, state and federal permitting requirements in effect at the time.

6. Design of exterior building envelopes will be in developed in compliance with the bird-friendly building and design requirements set forth in Article VII-A of Chapter 6 of the City of Portland Code of Ordinances, except that bird safe materials must be used for the entire façade of all buildings regardless of building height.

G. Mitigation measures

1. Site plan impacts to off-premise infrastructure shall be mitigated in a manner proportionate to those impacts. Mitigation may include financial or in-kind contributions to existing or planned City projects focused on mitigating the impacts of the development. Mitigation contribution shall be determined based on the City's standard procedure in effect at the time of site plan review.
2. Impacts to natural resources shall be mitigated in accordance with local, state and federal permitting standards in effect at the time.

H. Design. All buildings within the IOZ shall adhere to the design guidelines set forth in the IDP.

I. Neighborhood integration

1. *Neighborhood engagement*
   a. For the purposes of keeping surrounding residential areas apprised of its future development plans, and to address any neighborhood issues related to the operations of the Roux Institute campus, the Roux Institute shall adhere to the ongoing neighborhood engagement principles identified in the IDP.
   b. Ongoing community engagement shall be conducted, including the continuation of neighborhood forums and maintenance of the Roux Institute campus website.
   c. A Community Advisory Group shall be created for the purpose of sharing information on project development, planning, and seeking input. To the extent practicable, the group shall be comprised of representatives of interested groups such as the East Deering Neighborhood, East Deering Neighborhood Association, East Deering Neighborhood for Responsible Development, Front Street Area Neighborhood, a tenant representative from Portland Housing Authority's Washington Gardens and Front Street developments, recreation, parks and trails, including the Friends of Payson Park, from sustainability, rail, bicycle/pedestrian, public transit, Portland Harbor, Portland Public Schools, including a Presumpscot School parent, higher education, and the business community.
   d. A designated community contact shall be engaged to be the point of contact

for providing information to the neighborhood and receiving feedback.

2. *Construction management.* At the time of site plan review, Northeastern University shall submit a Construction Management Plan substantially in accordance with the construction management principles identified in the Institutional Development Plan for review and approval by the Planning Authority.

J. Historic preservation

1. *Historic preservation review.* The B&M Cannery Building has been designated as a local historic landmark. The area of designation includes the B&M Cannery Building, as well as the area of the former Codfish Building and pier. The Historic Preservation Board's review of activity within the site of the former Codfish Building and pier is limited to review of any activity that would require a Certificate of Appropriateness that is proposed on a newly constructed pier. A Certificate of Appropriateness will not be required for the demolition of the Codfish Building or construction of a new pier and related infrastructure, including future alterations to the pier structure.
2. *Required interpretive elements.* Northeastern University shall include interpretive element(s) on top of or within the surface of the new pier that convey the history and significance of the Codfish Building. Prior to construction of said elements, the University shall submit the proposal to the Historic Preservation Board for its review and approval. The interpretive elements shall be designed in a manner that does not interfere with the use and functionality of the pier as a marine passenger facility and for water access by the Roux Institute and the public.
3. *100-foot review exemption.* The B&M Cannery Building is exempt from Subsection 13.6.4(E)(2) for review of development within 100 feet of a landmark.

8.4 ISLAND TRANSFER STATION OVERLAY

8.4.1 Purpose

The purpose of the Island Transfer Station Overlay Zone is to establish a location for a transfer station for municipal solid waste and municipal public works activities. This zone shall be established through a conditional rezoning process in order to ensure the imposition of appropriate conditions for the protection of neighboring properties.

8.4.2 Permitted uses

A. Municipal solid waste facilities, including compactors and storage bins, provided that the compactor shall be located within a fully enclosed structure.
B. Recycling facilities, provided that all recycling areas shall be buffered and screened from neighboring properties.
C. Municipal garages, material storage, and parking for vehicles.
D. Maintenance of municipal vehicles and equipment.
E. Minor wind energy systems co-located with public industrial or utility facilities, subject to the applicable standards within Article 6.

8.4.3 Conditions

Requirements for setbacks and any operational limitations shall be established as part of the conditional rezoning process.

8.5 PEDESTRIAN ACTIVITIES DISTRICT (PAD) OVERLAY

8.5.1 Purpose and applicability

The purpose of the Pedestrian Activities District (PAD) Overlay is to ensure that key areas within the City, as identified on the PAD Overlay Zone map (Figure 8-H), are maintained as active, walkable, pedestrian-oriented activity centers. As such, the overlay requires that street-level frontages within those areas identified on the PAD Overlay Zone map should be occupied with active uses as identified in this section.

8.5.2 Use restrictions

A. Within the PAD Overlay Zone, a minimum of 75% of the street level frontage, measured as a percentage of total building length excluding areas of vehicular and pedestrian egress, and any mechanical or electrical equipment rooms servicing the building, shall consist of the uses specified below. Such uses shall occupy a minimum of 40 feet in depth, measured from the street facing façade of the building.

1. Bars
2. Cultural facilities
3. General services
4. Governmental uses
5. Hotels
6. Low-impact industrial, provided that only retail sales of products produced on site,

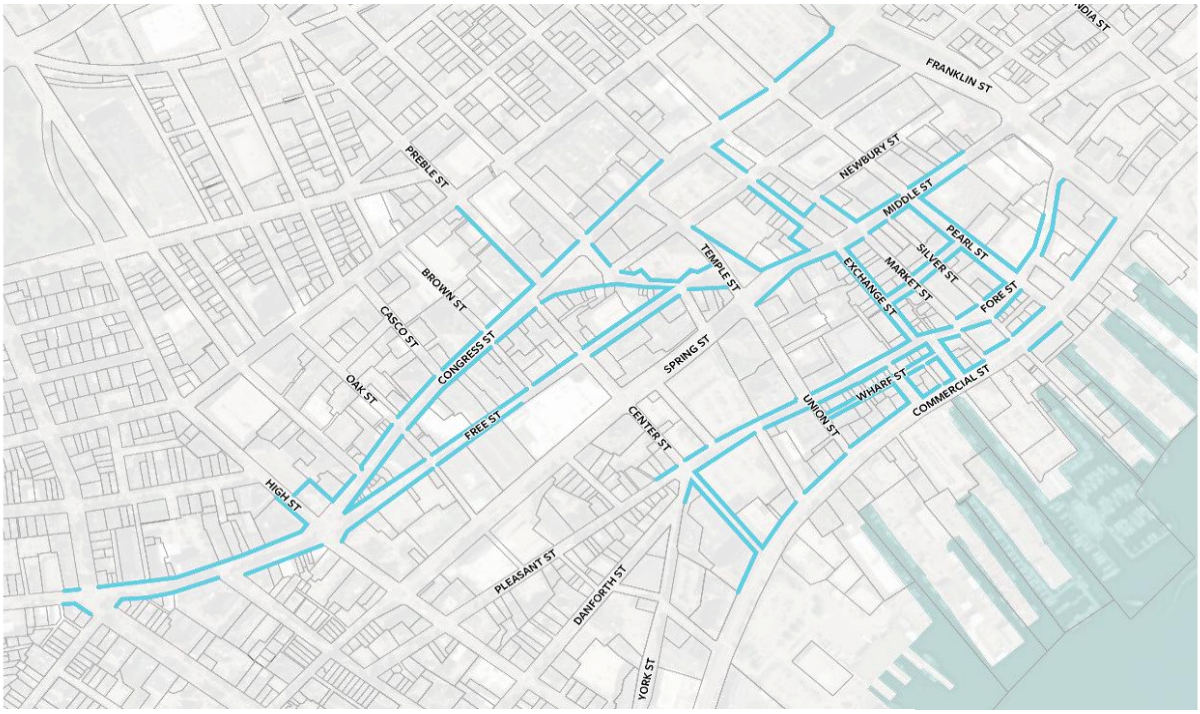


FIGURE 8-H: PEDESTRIAN ACTIVITIES DISTRICT (PAD) OVERLAY

or eating and drinking areas shall be located within the required active use area.

7. Restaurants, including food preparation areas visually oriented toward the street.
8. Retail
9. Specialty food services, provided that only retail sales of products produced on site, or eating and drinking areas shall be located within the required active use area.
10. Studios for artists and craftspeople.
11. Theaters and performance halls, provided that only ticket and refreshment sales, lobbies, lounges and entrances shall be located within the required active use area.
12. Other uses may be allowed, provided the applicant can demonstrate to the Building Authority that the proposed use is substantially similar to a use listed above and will generate pedestrian interest and activity.

B. First floor windows shall be transparent with uses visible from the public right-of-way.

C. For buildings that have frontage on more than one street located within the PAD overlay zone, the above requirements apply to each frontage. In no event shall any required active use area be used for storage or service entrances, including loading docks, dumpsters and compactors, except as provided in Subsection 8.5.4.

D. Buildings located within the areas identified on the PAD Overlay Zone map shall comply with the Vacant Commercial Properties Ordinance, as outlined in Chapter 6, Article XXX. of the City Code.

8.5.3 Conditional uses

Any use permitted in the B-3 zone may be authorized as a conditional use subject to the floor area and transparency requirements of Subsection 8.5.2, provided that the Planning Authority shall be substituted for the Board of Appeals as the reviewing authority. Such uses shall meet the general conditional use standards of Section 6.5.2, and the following conditions and standards:

A. The applicant shall prove by competent evidence (including but not limited to reliable documentation of advertising, real estate brokerage efforts, and other sales mechanisms) that the space has been actively marketed, and, in the case of new construction, available for permitted uses in the PAD Overlay Zone for a period of six months and that it has been unable to market the space for a permitted use in accordance with Subsection 8.5.2.

B. The Planning Authority may impose reasonable conditions concerning the design, appearance, use, and extent of use of the space along the street frontage to ensure maximum pedestrian compatibility and interest.

C. Notwithstanding the above, the Planning Authority may authorize a reduction in the percentage of required ground floor pedestrian-oriented uses where the physical limitations of an existing building so require. Any such reduction shall be the least necessary to provide relief and shall include mitigating design factors.

8.5.4 Exceptions

For buildings that have 40 feet or less of frontage

on a street within the PAD Overlay Zone, the ground floor area requirements for permitted uses under Subsection 8.5.2 shall be reduced to 50% of the frontage where required to accommodate a service entrance. For buildings that have frontage on more than one street located within a PAD Overlay Zone, only one such frontage shall be permitted to reduce the required active use area to 50% of the frontage.

8.6 UNIVERSITY OF SOUTHERN MAINE OVERLAY

8.6.1 Purpose

The intention of the University of Southern Maine Overlay Zone is to establish an overlay zone in which an existing university campus can be continued and reasonably expanded within defined boundaries, in addition to those uses permitted in the underlying zone or zones. The purpose of this section is to recognize the unique qualities of a university campus while at the same time protecting the value and integrity of established neighborhoods.

8.6.2 Location and applicability

The University of Southern Maine Overlay Zone is intended to encompass and define the University of Southern Maine campus west of Forest Avenue. Properties in the University of Southern Maine Overlay Zone shall continue to be governed by the regulations applicable to the underlying zone except as specifically modified by this section.

8.6.3 Permitted uses

A. In addition to the permitted uses allowed in the underlying zones and notwithstanding anything to the contrary in the use regulations for the underlying zones, post-secondary schools and university uses are permitted in the University of Southern Maine Overlay Zone, including, but not limited to:
   1. Classrooms.
   2. Laboratory and research facilities.
   3. Student unions.
   4. Dining halls.
   5. Bookstores.
   6. Auditoriums.
   7. Concert and lecture halls.
   8. Gymnasiums.
   9. Libraries.
   10. Outdoor use areas, such as “quads”, greens, parks, gardens, art installations, and other active and passive noncommercial recreation spaces.
   11. Faculty and student housing.
   12. Parking lots and garages.
   13. Community meeting spaces.
   14. Administrative and faculty offices.
   15. Transportation facilities.
   16. Maintenance facilities.
   17. Utility buildings.
   18. Student health services.
   19. Daycare facilities, nursery schools, and kindergartens.
   20. Other buildings, structures and uses customarily incidental to a university.
B. On lots fronting on Chamberlain Avenue and Exeter Street, university uses shall be limited to faculty housing, graduate student housing, faculty offices, and administrative offices.

8.6.4 Conditional uses

The following uses are permitted as provided in Section 6.5:

A. Minor wind energy systems, subject to the standards of subsection 6.4.41.

8.6.5 Dimensional requirements

University buildings and structures shall be subject to the dimensional requirements of the underlying zone, except as follows:

A. Minimum setbacks. Minimum setbacks shall be the same as in the underlying zone, except as shown on the University Campus Overlay Setback Map, incorporated herein by reference. Side and rear setbacks shall not be required between buildings on contiguous lots owned by the university on the condition that such contiguous lots shall be considered merged and shall not be separately conveyed unless required setbacks in the underlying zones are provided.

B. Maximum building height. Maximum building height shall be the same as in the underlying zone, except as shown on the University Campus Overlay Height Map, incorporated herein by reference.

C. Minimum building height. All new freestanding buildings in height zone B and height zone C must be built to a height of at least 35 feet or designed and constructed so that they can be expanded to 35 feet or higher. As used in this paragraph, the term "new freestanding building" means any building which is not an addition to or expansion of a building which existed on the date of enactment of the University of Southern Maine Overlay Zone. Minimum building height provisions shall not apply to maintenance facilities, utility buildings, information kiosks, additions to and/or relocations of designated historic structures, and transportation facilities, including bus shelters, parking attendant booths, and other similar structures.

D. Maximum impervious surface ratio. A maximum of 66% of the total land area within the University of Southern Maine Overlay Zone, exclusive of public streets, shall be impervious.

E. Maximum coverage by buildings. 40% of the total land area within the University of Southern Maine Overlay Zone, exclusive of public streets, shall be covered by building footprint.

8.6.6 Parking

The amount of parking required for any university building or building addition shall be determined by the Planning Board during site plan review, based on an analysis of campus-wide parking demand and supply, pursuant to a comprehensive university parking management plan, and treating all contiguous land (including land on opposite sides of the street) owned by the university as one lot. In determining the amount of parking required for any university building, the Planning Board may take into account factors such as:

A. The availability of off-campus parking and shuttle transportation to and from such off-campus facilities.

B. The ratio of commuter students to resident students.

C. The use of centrally located on-campus parking facilities so situated that students, faculty, staff and visitors arriving on campus can reasonably be expected to park in the central facilities and walk to their various on-campus destinations during the course of a school day.

D. Shared use of a single parking facility by two or more buildings when the peak parking demand period for such buildings do not

overlap.

E. Development and implementation of a parking management plan which discourages on-street parking. On-street parking shall not be used to satisfy the university's parking demand.
F. Development and implementation of programs designed to reduce the number of automobiles parking on campus, such as ride share programs and incentives for use of bicycles and public transportation.

8.6.7 Loading

The amount of loading area required for any university building shall be determined by the Planning Board during site plan review, based on a campus-wide analysis, treating all contiguous lots owned by the university as one lot. In determining the amount of loading space required for any university building, the Planning Board may take into account factors such as:

A. The use of centrally located on-campus loading facilities so situated that vehicles making deliveries can load and unload in the central facilities, provided no single location is overburdened with loading facilities.
B. Shared use of a single loading facility by two or more buildings.
C. Impacts of the loading area on adjacent uses outside the University of Southern Maine Overlay Zone.

8.6.8 Signage

Signs shall comply with the requirements of Article 19, except as those regulations are modified or augmented below:

A. Signs shall be designed in accordance with signage standards promulgated by the university, providing for a unified and ADA-compliant campus-wide system for identification, orientation, and regulatory signage.
B. Banners are allowed as follows:
    1. Generic banners containing the logo and colors of the university, used for decorative purposes.
    2. Banners used for advertising university events, which can be displayed for a maximum of four weeks prior to and one week following the event.

8.6.9 Design principles and standards

All development in the University of Southern Maine Overlay Zone is subject to the requirements contained within the City of Portland *Design Manual*.

8.7 WAYNFLETE SCHOOL OVERLAY

8.7.1 Purpose

The intent of this section is to establish a Waynflete School Overlay Zone which protects the value and integrity of established residential neighborhoods, establishes clearly defined boundaries beyond which residential conversions cannot occur and results in no net loss of dwelling units, while allowing Waynflete School, an existing private day school, to continue and reasonably augment its existing uses and programs, thereby maintaining compatible development at medium densities appropriate to the existing neighborhood patterns. As used in this section, the term "Waynflete School" includes any successor institution that operates as a private day school.

8.7.2 Location and applicability

The Waynflete School Overlay Zone, as shown on

the zoning map, is intended to encompass and define Waynflete School's principal campus on the Portland peninsula. Properties in the Waynflete School Overlay Zone shall continue to be governed by the regulations applicable to the underlying zone except as specifically modified by this section.

8.7.3 Subdistricts

The Waynflete School Overlay Zone consists of two subdistricts. Except where otherwise specified in this Section 8.7, all provisions of this Waynflete School Overlay Zone apply in both subdistricts. The subdistricts, as shown on the Waynflete School Overlay Zone subdistrict map, incorporated herein by reference, are as follows:

A. The Campus Core subdistrict defines the interior core of the campus and is intended to allow compact development of school uses, with specific space and bulk regulations designed to accommodate school uses.
B. The Campus Edge subdistrict is intended to preserve residential character along the streets bordering the campus by limiting the amount of residential space which can be converted to school uses, by maintaining a number of dwelling units within the subdistrict which equals the number of dwelling units existing in the subdistrict at the time of enactment of this Overlay Zone, and by encouraging mixed-use buildings along the street frontages. The space and bulk regulations of the RN-3 zone continue to apply within the Campus Edge subdistrict.

8.7.4 Permitted uses

In addition to the permitted uses allowed in the underlying zones and notwithstanding anything to the contrary in the use regulations for the underlying zones, the following uses are permitted in the Waynflete School Overlay Zone:

A. School uses. Elementary, middle and secondary school uses including, but not limited to, the following:
    1. Classrooms.
    2. Laboratory facilities.
    3. Dining halls.
    4. Auditoriums.
    5. Concert and lecture halls.
    6. Gymnasiums.
    7. Libraries.
    8. Outdoor use areas, such as "quads", greens, parks, gardens, art installations, and other active and passive recreation spaces.
    9. Parking lots and structures.
    10. Community meeting spaces.
    11. Administrative and faculty offices.
    12. Transportation facilities.
    13. Maintenance facilities.
    14. Utility buildings.
    15. Student health services.
    16. Bookstores.
    17. Accessory uses which are customarily incidental and subordinate to the location, function and operation of a private day school.
B. Residential uses. Faculty or staff housing, which shall be considered a residential use, and not a school use, for all purposes under this overlay zone.

8.7.5 Prohibited uses

A. Boarding schools.
B. Dormitories.

8.7.6 Residential conversions prohibited

A. Conversions of existing residential buildings within the Waynflete School Overlay zone shall be prohibited.
B. The existing houses at 11 Fletcher Street, 3 Storer Street, 305 Danforth Street, and 299 Danforth Street shall not be relocated from their locations existing as of January 20, 2010. This provision shall not apply to garages.
C. At no time shall the number of dwelling units within the Waynflete School Overlay Zone be reduced below four (the number existing at the time of enactment of this Overlay Zone).

8.7.7 Dimensional requirements

Buildings and structures in the Waynflete School Overlay Zone shall be subject to the applicable dimensional requirements of the underlying zones, except as follows:

A. Minimum setbacks shall be the same as in the underlying zone, except that side and rear setbacks shall not be required between buildings on contiguous lots owned or occupied by Waynflete School on the condition that such contiguous lots shall be considered merged and shall not be separately conveyed unless required yard dimensions in the underlying zones are provided.
B. Minimum street frontage shall be the same as in the underlying zone, except that all the land within the Waynflete School Overlay Zone owned or occupied by Waynflete School shall be considered a single lot for the purpose of complying with minimum street frontage.
C. Maximum coverage by buildings shall be the same as in the underlying zone, except that in the Campus Core subdistrict the maximum coverage by buildings shall be 40% and all the land within the Campus Core subdistrict owned or occupied by Waynflete School shall be considered a single lot for the purpose of calculating maximum coverage by buildings.

8.7.8 Parking

The amount of parking required for any change of use, new building, or building addition within the zone shall be determined during site plan review, based on an analysis of school-wide demand and supply, pursuant to a comprehensive school-wide Transportation Demand Management Plan (TDM), and treating all land owned by Waynflete School within the Waynflete School Overlay Zone as one lot. Any existing parking management or TDM plan approved as part of a previous approval shall remain in effect until revised or updated pursuant to this section. In determining the amount of parking required for any building within the Waynflete School Overlay Zone, the Planning Authority or the Planning Board may take into account factors such as:

A. The use of centrally located on-campus parking facilities so situated that students, faculty, staff and visitors arriving on campus can reasonably be expected to park in the central facilities and walk to their various on-campus destinations during the course of a school day.
B. Shared use of a single parking facility by two or more buildings when the peak parking demand periods for such buildings do not overlap.
C. Development and implementation of a parking management plan which discourages on-street parking.
D. Development and implementation of a TDM

plan subject to the review and approval of the Planning Authority or the Planning Board. The TDM plan shall employee elements such as public transit initiatives, parking cash-out, car sharing, car and van pooling incentives, provision of bicycle and pedestrian commuting accommodations, guaranteed ride home programs, employee surveys, newsletters, alternative transportation information sharing, and other such strategies that reduce single occupancy vehicle trips to and from Waynflete school. Waynflete School shall follow the standards and guidelines for developing a TDM plan found in the TDM section of the City of Portland *Technical Manual*.

8.7.9 Loading

The amount of loading area required for any building within the Waynflete School Overlay Zone shall be determined by the Planning Board during site plan review, based on a campus-wide analysis, treating all land owned by Waynflete School within the Waynflete School Overlay Zone as one lot. In determining the amount of loading space required for any building within the Waynflete School Overlay zone, the Planning Board may take into account factors such as:

A. The use of centrally located on-campus loading facilities so situated that vehicles making deliveries can load and unload in central facilities, provided no single location is overburdened with loading facilities.
B. Shared use of a single loading facility by two or more buildings.
C. Impacts of the loading area on adjacent uses outside the Waynflete School Overlay Zone.

8.7.10 Signage

Signs shall comply with the requirements of Article 19.

8.7.11 Restrictions

Notwithstanding the conditional use provisions for institutional uses within the RN-3 or RN-5 zones, Waynflete School cannot locate a school use listed in Subsection 8.7.4 on any lot in the RN-3 or RN-5 zones outside the boundaries of the Waynflete School Overlay Zone that was occupied by a residential use or structure on or after January 20, 2010. This restriction does not prevent Waynflete School from seeking a conditional use permit for a school use, where otherwise allowed by the zoning regulations, on lots outside the Waynflete School Overlay Zone that were not occupied by a residential use or structure on or after January 20, 2010.

Att. B

Article XXX. Vacant Commercial Properties

A)

B) SEC. 6-XXX. PURPOSE

The purpose of this article is to promote public welfare, economic development and vibrancy in the city by incentivizing occupancy in its street-level commercial spaces.

C) SEC. 6-XXX. APPLICABILITY

This article shall apply to all buildings in the city zoned for commercial use with storefronts on the ground level.

D) SEC. 6-XXX. DEFINITIONS

The following words, terms and phrases, when used in this ordinance, shall have the following meaning:

Vacant commercial property shall mean any commercial real property with buildings that have a visible storefront on the ground level that has not been used or occupied for a period of at least 90 consecutive days and is not undergoing construction, rehabilitation, renovation, or repair to make the building fit for occupancy.

Property owner shall mean a person or entity who alone or severally with others:

(a) Has legal or equitable interest to any commercial building or has care, charge, or control of any commercial building in any capacity including but not limited to agent, executor, administrator, trustee, or guardian of the estate of the holder of legal title;
(b) Is a tenant with a legal right to possess an entire commercial building;
(c) Is a mortgagee in possession of any commercial building;

(d) Is an agent, trustee, receiver, or other person appointed by the courts and vested with possession or control of any commercial property; or

(e) Is an officer or trustee of an association of unit owners of a condominium or cooperative which contains a vacant commercial property.

Temporary Art shall mean works of art for public viewing displayed inside windows or on exterior surfaces of vacant commercial properties which comply with the city's temporary public art guidelines.

E) SEC. 6-XXX. REGISTRATION REQUIRED

Not more than thirty (30) days after a commercial property becomes a vacant commercial property as defined in this article, the property owner shall register the vacancy with the city's housing and economic development department. The registration shall include the address and location of the vacant commercial property, the current permitted use for the property pursuant to the city's permit records and the city's land use code, the size and layout of the available space, the reason for the vacancy, the desired rent amount, the date when the vacant commercial property was last occupied and the contact information for the property owner or person with authority to remedy the property vacancy.

The city's housing and economic development department shall establish a registry of vacant commercial properties which shall include all of the above information about vacant commercial properties. The registry shall be publicly available on the city's website within ninety (90) days of the effective date of this article. The housing and economic development department shall update the status of the vacant commercial properties in the registry at least quarterly.

Sec. 6-XXX Registration Fee

Upon initial registration and by January 1st of each year thereafter, property owners shall pay the city a registration fee for each vacant commercial property in the amounts set

DRAFT

forth below. A vacant commercial property shall not be considered registered unless and until this fee is paid in full.

f) $250.00 for properties have been vacant for more than 3 months and less than one year;
g) $1,000.00 for properties that have been vacant for at least one year but less than two years;
h) $2,000.00 for properties that have been vacant for at least two years but less than three years;
i) $3,500.00 for properties that have been vacant for at least three years but less than five years;
j) $5,000.00 for properties that have been vacant for at least five years but less than ten years; and
k) $7,500.00 for properties that have been vacant for at least ten years, plus an additional $1,000.00 for each year in excess of ten years.

Sec. 6-XXX. Waiver.

The housing and economic development director may grant a waiver of the registration fee upon written request from the property owner if the housing and economic director determines, in their sole discretion, that one of the following conditions is met:

a) At the time of registration of a vacant commercial property, a property owner installs temporary art in any exterior-facing window or upon other safe, visible exterior surfaces for the period of the vacancy; or

b) That special or extenuating circumstances exist that prevent the property from being used or occupied and failure to use or occupy a vacant commercial building does not violate the purpose or intent of this ordinance.

Any waiver granted under this section must be reduced to writing and set forth the grounds for the waiver. All waivers shall be available on the registry.

Any waiver granted under this section may be revoked by the director of housing and economic development in the event they

determine that either of the two above conditions is no longer met. In the event a waiver is revoked, the director of housing and economic development shall provide written notice to the property owner and the property owner shall have thirty (30) days from the date of that notice to pay the registration fee in full.

L) SEC. 6-XXX. ENFORCEMENT

M)

a) The director of housing and economic development or their designee shall have the primary responsibility for enforcement of this article.

b) Failure to register a vacant commercial property pursuant to this article shall be a civil violation subject to the general penalty provisions of section 1-5 of this Code.

c) The director of housing and economic development is authorized to institute, or cause to be instituted by the corporation counsel, in the name of the city, any and all actions, legal or equitable, that may be appropriate or necessary for the enforcement of the provisions of this article.

N) SEC. 6-XXX. SEVERABILITY

If any section, paragraph, sentence, word or phrase of this ordinance is for any reason held to be invalid or unenforceable by any court, such decision shall not affect the validity of the remaining provisions of this ordinance.

DRAFT

City of Portland | Housing and Econ. Development Dept.
Gregory P. Watson, AICP, Director

To: Housing and Economic Development Committee
Councilor Pious Ali, Chair

MEETING DATE
June 17, 2025

AGENDA ITEM
Commercial Vacancy Ordinance

PURPOSE
Staff are seeking recommendation from the Housing and Economic Development Committee (HEDC) regarding a commercial vacancy ordinance that will encourage economic vibrancy and promote the active uses of commercial spaces in downtown Portland.

COMMITTEE WORK PLAN/CITY COUNCIL GOAL ALIGNMENT
This item supports the HEDC Commercial Vacancy Program included on its 2025 workplan.

BACKGROUND/ANALYSIS
Since the Spring of 2024, the HED Director and staff have participated in a working group focused on neighborhood vibrancy in the Arts District. At the August 2024 HEDC meeting, staff provided information and options that the City could undertake to disincentivize commercial vacancies and activate downtown Portland, including a commercial vacancy ordinance. Based on support from Committee members at that meeting, HED Director and staff presented a draft policy at the April 15, 2025 HEDC meeting, which was revisited at the May meeting. The draft vacancy ordinance presented today incorporates several amendments from Councilor Sykes that were shared at the May 20, 2025 HEDC meeting.

The ordinance will promote the use of vacant space, encourage communication and collaboration between owners of vacant property and seekers of commercial space, collect data to inform future programs, and result in increased collaboration with Portland's artist community to provide active utilization of vacant space with a preference for locally sourced art. The ordinance will be geographically limited to the City's Pedestrian Activities District

(PAD) Overlay Zone (see map, right), which ensures that key areas within the City are maintained as active, walkable, pedestrian-oriented activity centers.

FIGURE 8-H: PEDESTRIAN ACTIVITIES DISTRICT (PAD) OVERLAY

Complementary actions taken by other City committees include the approval on June 2nd by the City Council of an interest-free loan product developed by the Portland Development Corporation. This new loan product is designed to support investment in storefronts located in Downtown Portland. In addition, the City is investing in area improvements to increase safety and activate public spaces.

FISCAL IMPACT

There will be no impact to the General Fund. Staff envision that facilitating the installation of artwork into vacant windows will entail a cost of up to $25,000 which would either come from grant funding or the Portland TOD Downtown TIF, or a combination of both.

CONCLUSION

Recommendation:
1. Motion to recommend to the Planning Board and City Council approval of the commercial vacancy ordinance.

NEXT STEPS:

If the Committee supports the ordinance as drafted, the proposal will proceed to the Planning Board for review and a recommendation on a text amendment to add a reference to the Vacancy Ordinance in the PAD Overlay Section of the Land Use Code. Following the Planning Board's recommendation, both the text amendment and vacancy ordinance will then move to the full City Council for their consideration and approval.

PRIOR COMMITTEE REVIEW

August 20th, 2024

Portland Commercial Vacancy Program Proposal

Benjamin Brennan <bbrennan207@gmail.com> Thu, Jul 3, 2025 at 12:29 PM
Reply-To: bbrennan207@gmail.com
To: planningboard@portlandmaine.gov

To Whom It May Concern,

I urge you to not put forward the Portland Commercial Vacancy Program for the following reasons:

- We want properties full and landlords are not purposefully keeping them vacant. Charging fees and requiring registration does not change the timeline or the ability to fill these spaces.
- The information requested within the registration is often confidential and/or does not reflect how commercial transactions work. Rent is just a portion of the negotiation process, but other factors like timing, tenant improvements, quality of tenant and length of commitment are just as important and cannot be predicted prior to finding the willing tenant.
- The City of Portland can help us keep storefronts full by endorsing the proposed Ambassador Program, which is already working well in Bangor and many cities across the country to keep cities clean, to help people in need find services, and to provide a sense of community and security to all who visit our downtowns.
- This ordinance does not reflect the reality of how commercial deals get done and how long it takes to come together.
- Overregulation could place downward pressure on the valuation of buildings downtown, which in turn could impact property taxes.

- The information requested within the registration is often confidential and/or does not reflect how commercial transactions work. Rent is just a portion of the negotiation process, but other factors like timing, tenant improvements, quality of tenant and length of commitment are just as important and cannot be predicted prior to finding the willing tenant.

Respectfully,

Ben Brennan
Portland City Resident

Imposing penalties on landlords with vacant storefronts does solve the root cause of the vacancy issue. The genesis is inappropriate behavior allowed to persist along the Congress Street corridor and other areas of the city. Penalizing landlords is akin to taking an aspirin to resolve cancer.

Commercial Vacancy ordinance - opposed

Justin Lamontagne <justin@dunhamgroup.com> Thu, Jul 3, 2025 at 1:34 PM
Reply-To: justin@dunhamgroup.com
To: "planningboard@portlandmaine.gov" <planningboard@portlandmaine.gov>

I believe this is a gross overstep by the city and a clear overreaction to the ills of one or two landlords along Congress St.

As a Portland resident and local business owner, the fact that time, money and energy is spent on creating policies like this is truly disappointing. We need real action and enforcement to clean up the Arts District, not more regulations and paperwork. The optics are terrible as Portland businesses struggle to stay open - this is remarkably tone deaf and not in line with the reality of the market.

Additionally, as a commercial real estate broker and Managing Partner at the Dunham Group, I strongly agree with MEREDA's points:

- This ordinance does not reflect the reality of how commercial deals get done and how long it takes to come together.
- Overregulation could place downward pressure on the valuation of buildings downtown, which in turn could impact property taxes.
- The information requested within the registration is often confidential and/or does not reflect how commercial transactions work. Rent is just a portion of the negotiation process, but other factors like timing, tenant improvements, quality of tenant and length of commitment are just as important and cannot be predicted prior to finding the willing tenant.

Please do not support this ordinance. Thank you for your work.

penalize property owners when storefronts go vacant

Sherwood Properties <sherwoodpropertiesoffice@gmail.com> Thu, Jul 3, 2025 at 4:05 PM
Reply-To: sherwoodpropertiesoffice@gmail.com
To: planningboard@portlandmaine.gov

We WANT our properties full and are not purposefully keeping them vacant. Charging fees and requiring registration does not change the timeline or our ability to fill these spaces.

· The information requested within the registration is often confidential and/or does not reflect how commercial transactions work. Rent is just a portion of the negotiation process, but other factors like timing, tenant improvements, quality of tenant and length of commitment are just as important and cannot be predicted prior to finding the willing tenant.

· The City of Portland can help us keep our storefronts full by:

o Endorsing the proposed Ambassador Program, which is already working well in Bangor and many cities across the country to keep cities clean, to help people in need find services, and to provide a sense of community and security to all who visit our downtowns.

Thank you

James

385 Congress Street Master Development Plan Amendment
385 Congress Street | CBLs 027 D001001 & CBL 027 D002001
PL-003359-2025

Submitted to:	Portland Planning Board	**Prepared By:**	Zach Powell, Senior Planner
Public Hearing Date:	July 8, 2025	**Date:**	July 3, 2025

I. INTRODUCTION

385 Congress Street LLC has submitted an application for a Master Development Plan (MDP) amendment for the MDP (PL-001970-2022) approved by the Planning Board on August 9, 2022. The proposed amendment would:

- Remove the southwestern portion of the block currently under review for the construction of a music venue from the MDP boundary (PL-003179-2024)
- Remove the proposed public amenity deck that straddled the hotel and condominium parcels, and
- Increase the proposed heights of the proposed hotel & residential buildings from 150 to 250 feet.

Figure 1: Rendering of the proposed massings for Phase 1 (in purple) and Phase 2 (in yellow) of the proposed MDP amendment, with the area proposed to be removed shown in dark gray.

The current MDP's first workshop established pending proceeding status on June 14, 2022 and this application is therefore subject to the Land Use Code standards in effect as of that date (Attachment 1). The proposed amendment is classified as a major amendment under §14.14.3. of the Land Use Code given the changes to the MDP boundary and the site's proposed open space.

This application is being referred to the Planning Board for compliance with the City of Portland's Land Use Code, Master Development Plan Standards, Section 14.7. An approved Master Development Plan is valid for a period of six years, which may be extended and/or amended.

The Planning and Urban Development Department mailed 104 notices advertising this meeting to property owners within 500 feet of the site. A legal advertisement ran in the June 26 and 27, 2025 editions of the *Portland Press Herald*.

Applicant: Joe Dasco, Reger Dasco Properties
Anticipated Hotel Operator: Marieke Thormann and Robin Payne, The Fathom Companies
Representing Agent: Daniel Riley, Sebago Technics Inc.

II. PREVIOUS APPROVALS

A. 385 Congress Street Master Development Plan & Traffic Movement Permit

On August 9, 2022, the Planning Board approved the 385 Congress Street MDP to facilitate a four-phased development of three attached buildings that include a hotel with 156 rooms, 297 condominium units, seven retail units totaling ±11,560 square feet, a ±5,100 square foot restaurant, a passive recreation space (Amenity Deck) totaling ±19,040 square feet, and a parking structure with a total of 337 automobile spaces. Both of the existing structures on the project site (±3,914 square foot storage building & ±13,408 square foot parking structure) were proposed to be demolished to facilitate the development of the site.

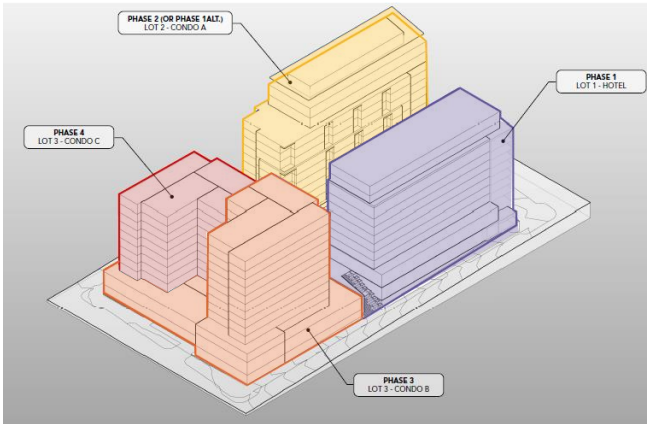

Figure 2: Phasing plan of 385 Congress Street MDP as approved on August 9, 2022.

Through §(b)(1)(e)(2) of the Design Manual, the Planning Board approved an expanded building setback beyond the maximum five-foot front setback permitted in the B-3 zone, permitting future buildings to be set back up to 22 feet along Congress Street, up to 16 feet on Cumberland Avenue, and up to six feet on Pearl Street to facilitate outdoor seating for retail uses and expanded sidewalk areas. Three waivers related to parking were granted to permit increased percentages of compact spaces, allow stacked parking spaces, and permit smaller aisle widths for the hotel valet parking area.

Along with the MDP, a Traffic Movement Permit (TMP) for all four phases was approved on February 14, 2023. Mitigation for the TMP required traffic monitoring of the hotel valet program for a period of three years, along with signal upgrades on Pearl Street at Congress Street and Cumberland Avenue. Given the proposed removal of the music venue site from the MDP, a separate TMP has been submitted for that project.

Additional information on the MDP approval can be found in the August 9, 2022 hearing materials and additional information on the TMP approval can be found in the February 14, 2023 hearing materials.

Figure 3: Rendering of proposed hotel on the southeastern corner of the MDP boundary.

B. Subdivision

On January 24, 2023, the Planning Board approved a subdivision application for the site, subdividing the original parcel that occupied the entire block into three parcels to facilitate the hotel site plan application discussed in the next subsection.

Additional information on this approval can be found in the January 24, 2023 hearing materials.

C. Site Plan (Hotel)

On February 14, 2023, the Planning Board approved major site plan application PL-002156-2022 for the construction of a mixed-use development including 179 hotel rooms, 9 condominium units, a ±4,630 square foot restaurant, and ±755 square feet of ground-floor retail on the southeastern corner of the site.

Additional information on this approval can be found in the February 14, 2023 hearing materials.

III. REQUIRED REVIEWS

Review	Applicable Standards
Master Development Plan (MDP)	Section 14.7
Previously Approved Waivers	**Applicable Standard**
Technical Standards - Sec. 14.1.2 – to construct structured parking on the portion of the site identified as Lots '2' and '3' where 96 of the total 267 spaces (±35%) will be compact parking spaces and construct structured parking on the portion of the site identified as 'Lot 1' that is 100% comprised of compact spaces.	Sec. 14.1.2 – Parking lots with greater than 10 spaces may be comprised of up to 20% compact parking spaces.
Technical Standards - Sec. 14.1.3 – to stripe parking spaces on the portion of the site identified as 'Lot 1' that have parallel valet parking spaces across the ends of double stacked, 90 degree compact spaces.	Sec. 14.1.3 – Parking lot layout shall conform to Figures I-28 thru I-32.
Technical Standards - Sec. 14.1.5 – to waive the minimum 24' drive aisle width in the garage on the portion of the site identified as 'Lot 1' to allow parallel valet parking spaces across the ends of double stacked, 90 degree compact spaces.	Sec. 14.1.5. – Vehicular access shall be provided by one or more aisles. Minimum widths of aisles are illustrated in Figures I-28 thru I-31.

IV. PROJECT DATA

Existing Zoning	B-3 (Downtown Business), Downtown Entertainment Overlay, PAD Overlay	
Existing Use	Off-Street Parking (Surface and Structured) (100 spaces)	
Proposed Use	Condominiums	342,050 SF (149 units) (was 297 units)
	Hotel	163,000 square feet (156 rooms) (no change in room count; was 69,300 SF)
	Retail & Restaurant	6,000 square feet (3 units) (was 11,560 SF & 7 units)
	Structured Parking	197,400 (457 spaces) (was 337 spaces & 120,400 SF)
Property Size	60,029 SF (1.37 acres)	

V. EXISTING CONDITIONS

The project site occupies the majority of a city block bounded to the north by Pearl Street, to the South by Myrtle Street, to the East by Congress Street, and to the West by a mid-block parcel boundary with property under common ownership proposed for the construction of a music hall.

The site currently serves as off-street parking (both surface and structured) for both daily and monthly use. The existing ±13,408 square foot parking structure is proposed to be demolished to facilitate the development of the site.

The site serves as a transitional area in a number of regards, including:

- Lots to the north with no building coverage (Top of the Old Port Parking & Lincoln Park) to lots to the south with high building coverage (City Hall, Press Hotel)
- Lower-density multi-family and smaller institutional uses from the west on Cumberland Avenue to medium-density commercial & institutional uses to the east on Congress Street
- Blocks to the west and south occupied by numerous lots to blocks to the east and north that are occupied by one lot (Central Fire Station, Top of the Old Port Parking, Lincoln Park)
- Smaller blocks and larger blocks with pedestrian access points to the south and southeast to larger blocks providing limited or no breaks for pedestrian access
- Downtown Neighborhood to Bayside Neighborhood
- Auto-centric uses & building design to the north and northeast to urban, pedestrian-centric uses to the west, south, and southeast

The subject block and immediate area are well-served by public transit. Approximately two blocks to the southwest is the METRO PULSE at Elm Street (Downtown Transportation Center), the hub for METRO where bus routes, #2, #4, #5, #7, and the Husky Line begin and end their routes. METRO bus routes #1, #7, #8, #9A, #9B and the Biddeford Saco Old Orchard Beach Transit 60 Green line can be accessed along Congress Street within one block of the site. South Portland Bus routes 21, 24A, and 24B can be accessed along Congress Street roughly two blocks southwest of the site. METRO bus route 8 is located along Cumberland Avenue less than one block from the site.

VI. RIGHT, TITLE & INTEREST

The owner of the property is 385 Congress, LLC. The owner and applicant for the construction of the hotel (The Fathom Companies) has entered into a Purchase and Sale Agreement (Document C) which serves as sufficient right-title-interest documentation for The Fathom Companies for the purpose of reviewing a master development plan application.

The submitted existing conditions survey submitted under the original Master Development Plan application (Plan 5) indicates the property has no existing easements.

VII. FINANCIAL & TECHNICAL CAPACITY

As part of the original Master Development Plan application, the applicant submitted a letter of financial capacity from their financial institution as documentation stating that the Applicant is in good standing (Document D).

VIII. MASTER DEVELOPMENT PLAN OBJECTIVES

A Master Development Plan (MDP) is a regulatory option, applied for at the discretion of the applicant, for sites with one acre or more in cumulative lot area that's designed as a cohesive and integral development program consisting of multiple buildings and associated site improvements built in phases over an extended timeframe (Section 14.7).

An approved MDP establishes parameters to be adhered to for the full development, including the supporting documentation for residential density, general types of uses, building coverage, open space plans, parking and circulation, and infrastructure systems such as stormwater management. MDPs may be developed concurrently with site plans and/or subdivisions, or independently. Approval does not constitute an authorization for development, but it does maintain the applicability of regulations in effect at the time of the approval for as long as the MDP approval remains valid. MDP submission requirements are deliberately

not as detailed as site plan and subdivision requirements to allow for some flexibility in the final buildout of a large, phased project. Site plan applications, and any other required approvals are required before any development on the site can proceed, as outlined by the City's Land Use Code.

As stated in Sections 14.3.2.B.- of the City's Land Use Code *a Master Development Plan approval, including an approval of waivers, establishes the general parameters for the development, including the general development program, massing, open space plan, and infrastructure plan. A Master Development Plan approval shall not be construed as final authorization of the development. Approval shall confer pending proceeding status upon the development in effect at the time of approval for as long as the Master Development Plan approval remains valid, including permissible extensions if granted. Subsequent site plan approvals shall be required.*

An MDP is intended to guide development over the life of a large-scale phased project, and should be viewed as a basic outline of the proposal which informs subsequent site plan applications. All Major site plan applications for each phase shall be in general conformance with the Master Development Plan.

IX. REVISED MASTER DEVELOPMENT PLAN

As submitted, the amended MDP would consist of two phases: the first proposing a 20-story building with 156-room hotel rooms, 9 condominium units, ±2,000 square feet of retail space, and 135 structured parking spaces; and the second proposing a 23-story building with 140 condominium units, ±4,000 square feet of retail space and 322 structured parking spaces. Significant changes from the current MDP include:

- Removing the western portion of the block from the MDP boundary, which now proposes the construction of a music hall
- Removal of the proposed second story amenity deck open space which will be occupied by private patios and exposed roof and/or vegetated areas with no access
- Increasing the proposed building heights from 150 to 250 feet (not including mechanical equipment)
- Increasing the number of proposed parking spaces from 337 to 457 spaces
- Establishing separate stormwater & sewer infrastructure for each lot on the block

Figure 4: Rendering of phases of proposed MDP amendment listing uses, building square footage, and number of proposed parking spaces.

Amendments to MDPs are classified as either minor or major in §14.14 of the Land Use Code as adopted on March 7, 2022 (Attachment 1). Changes exceeding the following list are classified as a major amendment:

A. Generally consistent with the approved plan.
B. Does not impact the layout of buildings and open space.
C. Does not propose new uses.
D. Does not increase building ground coverage, floor area ratio, or residential density.
E. Does not involve new waiver requests.
F. Does not affect any condition or requirement of the Planning Board.

The proposed changes to the MDP trigger major amendments due to the removal of western portion of the lot from the MDP boundary and consolidation of 140 dwelling units into one structure (Threshold A), eliminates the elevated amenity deck open space between the two towers (Threshold B), and an increase in the floor area ratio for both buildings (Threshold D).

As part of the MDP amendment application, the Applicant is requesting use of the 250-foot maximum height allowance for the block in the Height Map (Attachment 2) adopted on November 4, 2024. At the time of the MDP approval, the maximum height allowance for the block was 150 feet. While MDPs establish pending proceeding status for development at the time of the MDP approval, applicants may elect to utilize all or a portion of the most current code for the purpose of coming into greater conformity with current standards (Attachment 3). While the use of the current height map would be permitted as part of the MDP amendment, the MDP would also have to meet all current standards related to height as well. A discussion of the compliance with these standards is provided in the next section of this report.

VI. ZONING ANALYSIS

The site is encompassed by the B-3 Downtown Business Zone and Downtown Entertainment Overlay Zone. When approved, the site was located in the Pedestrian Activities District (PAD) encouragement area, but now the Congress Street frontage of the MDP is located within the PAD Overlay Zone.

The purpose statement for the B-3 zone includes the following relevant to the proposal:

- *Enhance and promote the orderly expansion of retail and service businesses downtown, satisfying the related needs of the city's resident, working and visitor populations;*
- *Encourage increased housing opportunity downtown for a diverse residential population;*
- *Support an active, walkable pedestrian environment through the encouragement of intensive mixed-use activities, through the enhancement and maintenance of public and private open space, and through the enlivenment and increased attractiveness of the street environment;*
- *Excellence in urban design;*

The purpose statement for the PAD Overlay is to ensure that key areas are maintained as active, walkable, pedestrian-oriented activity centers.

The zoning dimensional requirements are intentionally permissive in the B-3 zone and are intended to create dense, taller buildings that fill the site and maintain a street wall line. Regarding height for this block, there is a 90-foot maximum street wall height along Pearl Street, a 50-foot maximum street wall height along Congress and Myrtle Streets, and a maximum building height of 250 feet as detailed in the City's Height

Overlay map, included at the end of Article 7 in the City's Land Use Code. Compliance with B-3 dimensional standards is shown in the table below.

Table 7-C: B-3 Dimensional Standards		
Standard	Requirement	Proposed
Build-to zone	0-5 feet	0-22 feet (Waiver received for expanded setbacks in original MDP approval)
Build-to percentage (minimum)	100%	100%
Building length as a percentage of street frontage (minimum)	Lots greater than 50 feet in frontage: 60%	Complies. Longest length is 30 feet.
Blank wall area (maximum)	20 feet	Unclear. To be assessed during site plan reviews.
Structure height (maximum)	250 feet, with 90 foot maximum street wall height on Pearl Street (15 foot stepback) and 50 foot maximum on Congress and Myrtle Streets (15 foot stepback)	250 feet with street wall stepbacks from ground plane and at 50 feet

As submitted, and with expanded build-to-zone setbacks approved as part of the original MDP, the Master Development Plan is consistent with the B-3 dimensional standards and the Height Overlay Map. As part of the current Land Use Code, standards for towers (buildings or portions of building greater than 125 feet in height) were established in §7.5.3. Compliance with tower standards is shown in the table below.

§7.5.3.: Tower Dimensional Standards		
Standard	Requirement	Proposed
Stepback required	Not applicable since development meets exception described in §7.5.3(B)(1)(a).	Not applicable.
Tower floor plates (Maximum)	10,000 square feet	Lot 1 (Hotel): Complies. 9,622 square feet Lot 2 (Condominium): Complies. 9,671 square feet
Tower separation	All portions of buildings above 125 feet in height shall provide a minimum of 35 feet of setback from side and rear lot lines when abutting another tower.	Complies. As the second phase of development, the condominium tower will provide a 38-foot setback from the side setback with the hotel property.

As submitted, the Master Development Plan meets the tower dimensional standards of §7.5.3 of the Land Use Code.

Each future site plan and subdivision will be evaluated for conformance with zoning and site plan standards as well as undergoing design review under the B-3 Downtown Urban Design Guidelines which will include an advisory Historic Preservation review.

Downtown Urban Design Guidelines & Pedestrian Activities District (PAD) Overlay: The site is required to comply with the Downtown Urban Design Guidelines. This overlay zone, is intended to encourage ground floor uses that activate pedestrian spaces, creating a safe and vibrant pedestrian environment in Portland's downtown. Buildings located within the encouragement area are required to be designed and constructed to be reasonably capable of being converted to accommodate uses that are permitted in the PAD overlay zone, and all sidewalk areas and open space shall be designed to complement the general pattern of the downtown pedestrian environment.

§8.5.2 of the PAD Overlay requires that 75% of the street level frontage (excluding vehicular/pedestrian egress or mechanical /electrical equipment rooms) be occupied by active uses to a depth of 40 feet.

Overall, the illustrative floor plan for the hotel complies with this requirement, while the design of the condominium building does not comply. Staff have identified several potential design revisions, which may enable the condominium project to comply, including reconfiguration of the northern retail unit, mechanical equipment rooms, and storage areas. Additional review and revision will be required as part of the site plan review of the condominium building.

VII. STAFF REVIEW

A. Master Development Plan Review Standards Section 14.7

Section 14.7 of the City's Land Use Code establishes standards under which Master Development Plan applications must be reviewed. Per this section, Master Development Plans shall adhere to the following requirements:

Section 14.7.1. In general

a. *Designed to integrate with the surrounding context with respect to land use, architecture, open space and pedestrian networks, vehicular access and circulation, off-site public facilities and all other infrastructure.*

Staff Comment: The proposed uses of the site for multifamily housing, hotel, retail, and structured parking are similar & compatible with the surrounding area. Shadow studies have been submitted which confirm that the proposed design will not result in shadow impacts on adjacent open spaces (Ganley Plaza & Lincoln Park).

The surrounding area is a mixture of historic and new architecture and has been designated as a site with one of the tallest permitted heights to facilitate redevelopment of a site with significant surface parking.

A linear park has been proposed along Congress Street to reflect the surrounding street wall and neighboring urban open spaces.

The original MDP necessitated the submission of a Traffic Movement Permit (TMP), which was approved on February 9, 2023. Based on the changes to the MDP boundary and current TMP review for the adjacent

music hall, Consulting Traffic Engineer has confirmed with MaineDOT that a modification to the TMP will need to occur that aims to rewrite the permit to reflect changes in mitigation.

The Applicant has provided additional information on the valet operations for the hotel, given the change in the parking configuration (**Figure 5**). Guests would enter from Congress Street and drop off their cars interior to the site. Valets would then exit the site on Myrtle Street, drive around the block to enter on Congress Street to access parking via garage ramps.

Valets would return cars to guests by driving down the garage ramps, exit the garage from Myrtle Street, drive around the block to enter on Congress Street, where guests will then exit out onto Myrtle Street.

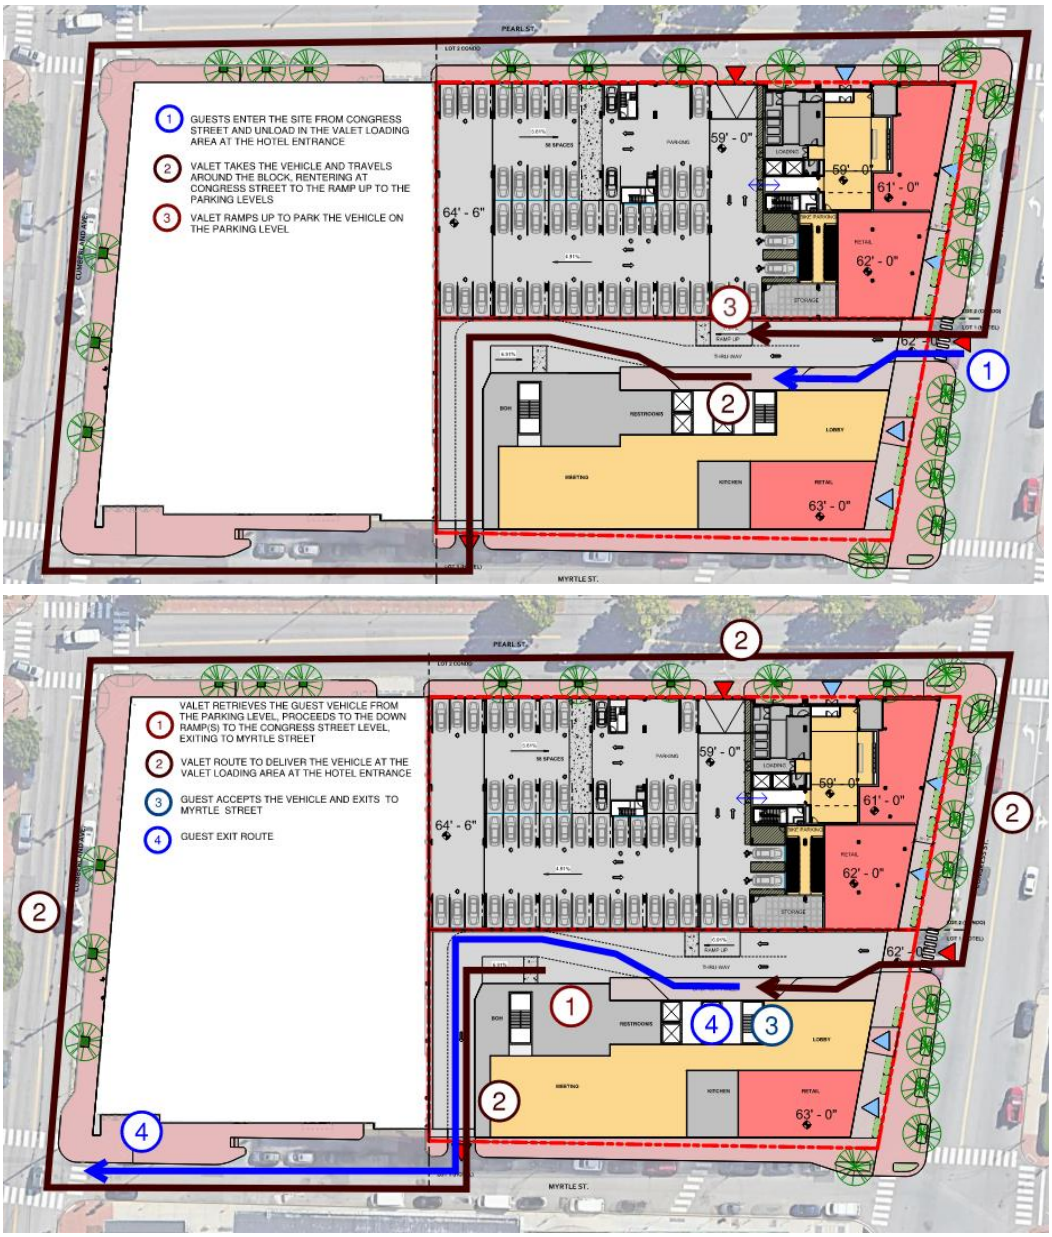

Figure 5: Diagrams showing drop-off (Top) and pickup valet operations (Bottom) for the illustrative hotel plans.

Overall, the proposed operations are similar to the plan approved for the original MDP, with the three-year monitoring conditions of the valet operations to remain as a component of the updated TMP.

In future site plan amendment/ site plan applications, City Staff encourage the implementation of shared parking facilities between the hotel and the condominium to minimize valet operations on Myrtle Street, Cumberland Avenue, and Pearl Street/eliminate the need for a curb cut on Myrtle Street. Opportunities to redesign the ramping for the hotel to minimize trips around the block to access the upper parking decks is also recommended by Staff. The subsequent site plan application for the hotel will be required to submit a waiver to Technical Manual §1.5.1. for driveway separation for the Myrtle Street.

The major site plan application for the condominium building will necessitate the submission of a parking demand study since the proposed parking (311) exceeds 110% of the required parking (159) for the proposed uses.

As compared to the original MDP, stormwater and sewer infrastructure is now proposed to be separate for each phase, with no easements between phases being required for sewer outfalls. The applicant's representing agent (Sebago Technics) has been coordinating stormwater and sewer improvements as part of the review of the music hall application for the MDP as well.

Each site will contain subsurface stormwater detention, with the detention tank for the hotel to be collocated with the linear park along Congress Street. Additional review and discussion of the profile, finishes, and programming of the linear park with the hotel's subsurface detention tank will need to be further reviewed as part of a future site plan amendment/ site plan application.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

b. Consistent with the objectives of this ordinance, consistent with the City's Comprehensive Plan, and consistent with City Council-approved master plans and facility plans for off-premise infrastructure.

Staff Comment: The submitted MDP is consistent with Council-approved master plans by:

- Proposing the construction of dense housing in Downtown and pedestrian enhancements such as curb extensions and expanded sidewalks to promote walkability and traffic calming (**Peninsula Transit Plan, 2009**)
- Providing infill development within a transit-oriented location with pedestrian-oriented streets to make walking more inviting, and connection to bus routes, bike networks, and other mobility options easier to access to other parts of the city. Providing residential density as well as employment and job density that can support and drive transit ridership as well as walk to work opportunities (**One Climate Future, 2021**)

The MDP aligns with the City's Comprehensive Plan by infilling an undeveloped site primarily used for automobile parking located at the heart of Portland's walkable downtown, proximate to some of the tallest structures in the city, with residential units, commercial uses, and pedestrian improvements that better reflect the downtown location.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

Natural features and open space

a. *Developed so as to locate buildings and improvements in a manner that considers existing topography, provides usable open space, preserves significant natural features as defined in Subsection 14.6.2, and preserves existing trees to the maximum extent possible.*

Staff Comment: The proposed development considers the existing topography by prioritizing street-level activation at the block corners while reinforcing Congress Street as the principal frontage for the MDP. Public open space has been proposed through a linear park along Congress Street, with private open space proposed on top of the podium level of the building, as well as private balconies for condominium units.

The property is currently entirely developed, with minimal landscaping around the perimeter and no significant natural features. The MDP contemplates eliminating all of the existing landscaping and proposing the planting of 15 trees, which would be an increase of 11 trees in the streetscape.

Based on the review of the hotel, tree plantings on Myrtle Street were deemed not to be viable by the Department of Public Works.

Staff is recommending that an existing condition for the MDP remain, which would require that existing street trees along Congress Street be reevaluated for preservation by the Applicant and the City Arborist as part of future site plan submissions.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

b. *Include provisions for the ownership and maintenance of usable open space as appropriate.*

Staff Comment: The applicant states that each lot would have separate maintenance and ownership for open space on the site at the ground level and on the podium level. Finalization of the design of these open spaces will occur during applicable site plan reviews, and the City will require that the applicant provide additional information regarding the long-term ownership and maintenance of open space as part of subsequent site plan applications.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

Historic Preservation

a. *Developed as so to conform with standards for designated landmarks or for properties within designated historic districts or historic landscape districts as found in Article 17.*

Staff Comment: Not applicable. The site is not a designated landmark or located within a historic district or historic landscape district.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be not applicable.

b. When proposed adjacent to or within one hundred (100) feet of designated landmark, historic district, or historic landscape, the master development plan shall be developed so as to be generally compatible with the major character-defining elements of the landmark or portion of the district in the immediate vicinity of the proposed development.

Staff Comment: The site is located within 100 feet of the Congress Street Historic District, including 380 & 389 Congress Street with two locally designated landmarks (Central Fire Station & Portland City Hall). The massing proposes the use of a base | middle | top design that reflects the character of the Congress Street Historic District and City Hall. Contextual setbacks are proposed to align with City Hall and provide a visual connection to Ganley Plaza.

Subsequent major site plan application design reviews will ensure that more specific elements of the buildings (e.g., materiality) are compatible with the surrounding context.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

Infrastructure

a. Designed with sizing of street and other infrastructure systems to accommodate the overall service demand of the plan.

Staff Comment: The proposed development would be serviced by public water, sanitary sewer, power, natural gas and telecommunications. The hotel would have sewer service from Myrtle Street, with the remaining utility connections from Congress Street, while the condominium would have all connections from Pearl Street. As part of the application, a new 8-inch storm drain is proposed to run under Congress and Pearl Streets to support City efforts to separate the combined sewer on Pearl Street.

Regarding stormwater management, the applicant has provided details of proposed improvements for each phase to service the overall development. This concept is to be refined and designed with more detail as part of each individual phase. The proposal qualifies as a redevelopment under MaineDEP Chapter 500, and is required to treat 50% of impervious surface. Two subsurface storage and treatment systems are proposed, with one system serving the hotel phase and the second serving the condominium phase.

The submitted application materials state that more detailed utility plans will be submitted upon submission of each separate major site plan application.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

b. Designed to create a street grid pattern that reflects average city block sizes of the surrounding neighborhood.

Staff Comment: The MDP occupies half of a city block, which reflects neighboring sites that occupy the majority to all of city blocks.

Finding of Fact: Based on the submitted application materials and description presented above this standard is determined to be met.

Design

a. Designed to create a cohesive identity through building scale, massing, and articulation; use of quality exterior materials and architectural detailing at pedestrian scale; consistency of design and materials for streetscape and pedestrian amenities; framing of outdoor open space and linkages; a clear conveyance of the function and significance of various buildings, entrances, and features; and to generally comply with design and development standards of the zone in which it is located.

Staff Comment: A Design Review was prepared by Urban Designer Sean King on July 2, 2025 detailing the compliance of the submitted application with the MDP design standards (Attachment 5). Based upon this review, it was determined that the MDP would create a cohesive identity through the inclusion of a podium design with ground-floor retail at the base and building stepbacks to achieve a consistent street wall and successfully integrate the proposed height of the hotel and condominium towers.

Materials and detailing have not been proposed as part of the application materials, and further review would occur as part of any future site plan.

City Staff requested additional information on the amenities proposed along Congress Street. Updated plans provide a linear park along the development's Congress Street frontage, similar to that which is provided along the Congress Street frontage of City Hall. This plan also distinguishes both pedestrian and vehicular zones through the use of different surface materials, and delineates public and private space. As detailed in the design memo, Staff consider this update to be successful and compliant with this MDP standard.

The inclusion of expanded sidewalks and ground-floor retail help to frame outdoor open spaces and linkages to open spaces both on and off-site. Staff are recommending requirements for continuity in materials, amenities and connectivity in the expanded sidewalks along Congress Street, which will be required to be considered by the applicant in future Site Plan applications. Under future site plan reviews, the Applicant should consider how street furniture, such as permanent outdoor seating, can be incorporated within the expanded sidewalk along Congress Street.

The function and significance of buildings, entrances and features has been demonstrated through the differing design of the hotel and condominium buildings, and differing projections/recesses for balconies that denote private open space, and which separate entrances along Congress Street and Pearl Street, respectively.

City Staff requested that the proposed building footprint, particularly at Congress & Pearl Streets, reinforce the street wall as originally proposed in the MDP, which the Applicant team has updated in their

materials. Additional diagrams have also been provided for the building to review compliance with tower standards.

As mentioned in the Zoning section, additional review and revision during site plan review will be required for the condominium building to meet the requirements of the PAD Overlay for the scale of pedestrian-oriented, active uses.

Through the submission of the waiver request for increased front setbacks and future staff review in subsequent site plan applications, the MDP meets the relevant MDP standards related to design. Additional design review against the B-3 design standards will be required in future site plan submittals.

VIII. PUBLIC COMMENT

As of the writing of this memorandum, no written public comments have been received.

IX. STAFF RECOMMENDATION

Subject to the proposed motions and condition of approval listed below, Planning Department Staff recommends that the Planning Board approve application PL-003359-2025 for a Master Development Plan Amendment at the subject property.

X. PROPOSED MOTIONS

A. MASTER DEVELOPMENT PLAN REVIEW

On the basis of the application, plans, reports and other information submitted by the applicant; findings and recommendations contained in the Planning Board Report for the public hearing on July 8, 2025 application #PL-003359-2025 relevant to the Master Development Plan regulations; and the testimony presented at the Planning Board hearing, the Planning Board [finds/does not find] that the plan is in conformance with the Master Development Plan standards of the Land Use Code subject to the following conditions of approval:

ONGOING/MONITORING

1. The Design Standards outlined in the City's Urban Design Review Memo dated June 13, 2025 in addition to the B-3 Downtown Business Design Standards shall guide the site plan review of all the MDP phases. The approval of the MDP does not imply approval of individual building designs and the public realm details as presented, which shall be addressed in Site Plan application and review; and
2. The Applicant shall work with the City Arborist to evaluate the preservation of street trees along Congress Street.

PRIOR TO ISSUANCE OF A BUIDLING PERMIT

3. The Applicant shall coordinate with the Planning Authority and the City's Third-Party Traffic Engineer to modify the Traffic Movement Permit for the Master Development Plan, to account for changes in programming, and the removal of Lot 3 of the 385 Congress Street Subdivision from the TMP scope.

XI. PLANNING BOARD DECISION

On the basis of the findings, conclusions and recommendations contained in the Planning Board report for the public hearing on July 8, 2025 related to application PL-003359-2025 for 385 Congress Street, which is attached to the draft approval letter and incorporated therein, the Planning Board **[adopts/does not adopt]** the approval letter as drafted as the Planning Board's decision for application PL-003359-2025, and authorizes the Planning Board Chair to sign the approval letter as drafted.

1 INTRODUCTORY PROVISIONS

1.1 TITLE

The title of this chapter of the City of Portland Code of Ordinances is the City of Portland Land Use Code and is referred to as the City of Portland Land Use Code or the Land Use Code.

1.2 ZONING MAP

The City of Portland zoning map is incorporated by reference.

1.3 PURPOSE

The intent of the Land Use Code is to protect the health, safety, and general welfare of the residents of Portland, consistent with the City's Comprehensive Plan, through standards that govern the orderly and compatible use of land, the form and mass of buildings, and the relationship of development to the public realm, Portland's open spaces, and the environment.

1.4 APPLICABILITY

No building or structure shall be erected, structurally altered, enlarged, repaired, moved, rebuilt, or used, and no land shall be sold, leased, conveyed, used, developed, or altered except in conformity with the provisions of this Land Use Code.

1.5 ENFORCEMENT

1.5.1 Enforcement

The Building Authority and/or a City of Portland Code Enforcement Officer is authorized to institute or cause to be instituted by the Corporation Counsel in the name of the City any and all actions, legal or equitable, that may be appropriate or necessary for the enforcement of the Land Use Code.

1.5.2 Violations

Any person being the owner or occupant of, having control of, or having the use of any building or premises or part thereof, who violates any of the provisions of this Land Use Code, shall be guilty of an offense and subject to the penalties and remedies provided in Chapter 1, Section 1-15 of the City of Portland Code of Ordinances and 30-A M.R.S. § 4452.

1.6 RELATIONSHIP WITH OTHER LAWS

1.6.1 Federal and state law

Where conditions, standards, or requirements imposed by any provision of this Land Use Code are found to be inconsistent with a provision listed in the law or regulations of the State of Maine or federal government, the more restrictive provision shall control.

1.6.2 City of Portland Land Use Code

If any provision of this Land Use Code contains an actual, implied, or apparent conflict with another provision of this code, the more restrictive provision shall control.

1.6.3 Fair Housing accommodation

The City of Portland may make reasonable modifications to the requirements of the Land Use Code to accommodate the needs of persons with disabilities as so defined in Title VII of the Civil Rights Act of 1968, as amended by the Fair Housing Amendments Act of 1988.

1.6.4 Comprehensive Plan

The Comprehensive Plan serves as the basic policy guide for this Land Use Code. Amendments to this Land Use Code shall be generally consistent with the current Comprehensive Plan.

1.6.5 Current versions and citations

All references to other regulations or manuals in this Land Use Code refer to the most current version and citation for those regulations or manuals, unless expressly indicated otherwise. When the referenced regulations or documents have been repealed and not replaced by other regulations or manuals, Land Use Code requirements for compliance are no longer in effect.

1.6.6 Private agreement

This Land Use Code does not nullify any private agreement or covenant. However, where this code is more restrictive than a private agreement or covenant, this code controls. The City does not enforce private agreements.

1.7 DELEGATION OF AUTHORITY

Whenever a provision requires the head of a department to perform an act or duty, that provision will be interpreted as authorizing the department head or officer to delegate that responsibility to others over whom he or she has authority.

1.8 RULES OF INTERPRETATION

1.8.1 Meaning of words and terms

All words and terms shall have the meanings shown in Article 3, unless otherwise expressly stated. For words or terms not specifically defined in this Land Use Code, they are interpreted by their common dictionary meaning or customary usage consistent with their context.

1.8.2 Graphics and illustrations

Graphics and illustrations are included to illustrate the intent of the text. In the case of a conflict between the text and any graphic or illustration, the text controls.

1.8.3 Lists and examples

Unless otherwise expressly indicated, lists of items or examples that use "including," "such as", or similar terms are intended to provide examples only, and shall not be construed as being limited to the items or examples listed.

1.8.4 Time

When a number of days is specified as a period from a certain day within which or after or before which an act is authorized or required to be completed, time is computed as the number of calendar days excluding the calendar day when the act is authorized or required to be completed. Business days shall be interpreted as days on which the City of Portland is open for business.

1.8.5 Obligatory terms and conjunctions

The terms in the text of the Land Use Code shall be interpreted in accordance with the following rules of construction:

A. The terms "must", "shall", or "will" are mandatory terms that express a requirement or impose an obligation.
B. The terms "must not", "shall not", "will not", and "may not" express a prohibition.
C. The term "should" expresses a recommendation or suggestion and does not express a requirement or imposition.

D. The term "may" is permissive and does not express a requirement or imposition.
E. The conjunction "and" indicates that all connected words or provisions apply.
F. The conjunction "or" indicates that the connected words or provisions may apply singly or in any combination.
G. The conjunction "either [...] or" indicates that the connected words or provisions apply singly, but not in combination.

1.8.6 Gender

Words denoting one gender apply to all genders.

1.8.7 Abbreviations

Building Authority. Either the Department of Permitting and Inspections, its director, or their designee.

Council. The Portland City Council.

Planning Authority. Either the Department of Planning and Urban Development, its director, or their designee.

Public Works Authority. Either the Department of Public Works, its director, or their designee.

1.9 SUCCESSIVE APPLICATIONS

Whenever any application, appeal, or other request filed pursuant to this Land Use Code has been finally denied on its merits, a second application, appeal or other request seeking essentially the same relief, whether or not in the same form or on the same theory, shall not be brought within one year of such denial unless, in the opinion of the authority or board before which it is brought, there has been a substantial change in circumstance or substantial new evidence is available.

1.10 AMENDMENTS

1.10.1 Authority

The City Council may amend this Land Use Code and the zoning map incorporated herein.

1.10.2 Procedure

A. An application for a text or zoning map amendment shall be filed with the Planning Authority. A payment of a nonrefundable application fee, as established by the City Council to cover administrative costs and costs of a hearing, shall accompany each application. The fee for text or zoning map amendment applications may be waived or reduced by the Planning Authority in the case of an application submitted by a governmental body or where an applicant can establish financial hardship. If a text or zoning map amendment application is withdrawn by an applicant prior to the submission of the advertisement copy to the newspaper to announce the public hearing, a refund of half of the amount of the application fee will be made to the applicant by the City provided that all costs incurred by the City have been paid in full by the applicant.
B. Once it is determined that the application is complete, the Planning Authority shall give a dated receipt to the applicant and, in the case of a map amendment, shall notify, by mail, all property owners within the limits of the proposed zoning map amendment and all property owners 500 feet beyond said area, except that for map amendments to a site located within industrial zone designations the notice range shall be 1,000 feet. The notice

hereunder shall include a brief description of the application, the address or location of the property involved, and contact information where additional information may be obtained. The cost of noticing shall be charged to the applicant.

C. A private applicant for a map amendment that would permit a development subject to major site plan review shall conduct neighborhood outreach according to the provisions for neighborhood meetings under Article 14.

D. The Planning Authority shall review the application against the standards of this article and make a recommendation to the Planning Board.

E. The Planning Board shall hold a public hearing in accordance with the provisions of Article 2 and make a recommendation to adopt, adopt with modifications, or not adopt the proposed map or text amendment, and forward the recommendation to the City Council.

F. The City Council shall review the proposed amendment and determine whether and how to amend the Land Use Code or zoning map.

1.10.3 Review fees

The applicant shall pay a fee to cover the professional and administrative costs for review and analysis associated with the amendment, including but not limited to planning, legal, engineering, or other services. The fee shall be based on the hours of review and processing time and the prevailing hourly rate for reimbursement of City costs. The City shall periodically invoice the applicant for such costs incurred by the City, which invoice shall be paid promptly by the applicant.

1.10.4 Review standards

Except as otherwise required by law, amendments to the City's Land Use Code shall be pursuant to and consistent with the Comprehensive Plan.

1.11 TRANSITION RULES

A permitted use established prior to the effective date of the Land Use Code that is now classified as a conditional use shall be deemed a lawful conditional use. Any subsequent addition, enlargement, or expansion of that use shall conform to the procedural and substantive requirements for conditional uses in Article 6. A permitted or conditional use established prior to the effective date of this Code that is now classified as a prohibited use shall be deemed a nonconforming use and is controlled by the provisions of Article 4.

2 ADMINISTRATION

2.1 PLANNING BOARD

2.1.1 Composition

There shall be a Planning Board of seven members. Members of the Planning Board shall be residents of the city and shall not be officers or employees of the City. Members shall serve without compensation.

2.1.2 Appointments

A. **Terms.** The members of the Planning Board shall be appointed by the City Council for terms of three years. Such members shall serve until their successors are duly appointed and qualified. Such terms shall be staggered so that the terms of not more than three members shall expire in any calendar year; providing, however, such service shall not extend to over 120 days after expiration of their term. Members may serve for three consecutive three-year terms.

B. **Vacancies.** Permanent vacancies on the Planning Board shall be filled by the City Council, in the same manner as other appointments hereunder, for the unexpired term of the former member.

2.1.3 Removal of members

Any member of the Planning Board may be removed for cause by the City Council at any time, provided, however, that before any such removal, such member shall be given an opportunity to be heard in their own defense at a public hearing.

2.1.4 Officers

A. **Chair.** The members of the Planning Board shall annually elect one of their number as chair to preside at all meetings and hearings and to fulfill the customary functions of that office. The chair may administer oaths.

B. **Vice chair.** The members of the Planning Board shall annually elect one of their number as vice chair. In the absence of the chair, the vice chair shall act as chair and shall have all the powers of the chair. The vice chair shall have such other powers and duties as may be provided by the rules of the Planning Board.

2.1.5 Committees

The chair of the Planning Board shall assign the members of the board to such regular and special committees as may be established by the board. Such committees shall have no final authority but shall assist the board in the conduct of its business by making recommendations to it concerning such specific items as may be assigned to them for study and report. The board shall adopt such rules as it shall deem appropriate to govern the organization and operation of its committees. Committee meetings deliberative in nature shall be open to the public in accordance with Title 1 M.R.S. § 401 et seq.

2.1.6 Quorum and necessary vote

As to any matter requiring a hearing, no business shall be transacted by the Planning Board without a quorum, consisting of four members, being present. The vote of at least four members shall be necessary to authorize any action by the board. If less than a quorum is present, the hearing may be adjourned for a period not exceeding three weeks at any one time. The Planning Authority shall notify

in writing all members of the date of the adjourned hearing and shall notify such other interested parties as may be directed in the vote of adjournment.

2.1.7 Conflicts

No member of the Planning Board shall participate in the hearing or disposition of any matter in which he or she has an interest. Any question of whether a member has a conflict of interest sufficient for a member to be recused shall be decided by a majority vote of the members present, except the member whose possible conflict is being examined. Where such vote results in a tie, the subject member shall be recused from the matter.

2.1.8 Meetings and procedures

A. **Meetings.** Regular meetings of the Planning Board shall be held at the call of the chair or as provided by rule of the board. Special meetings may be called by the chair or any four members of the Board or at the request of the City Council.

1. *Workshops.* Workshops of the Planning Board or any of its committees may be held at the call of the board or committee chair, as the case may be, for the presentation of information by the Director of the Department of Planning & Urban Development, their staff, an applicant, or others. These meetings will be open for public comment according to the rules of the Planning Board. Such meetings, unless open to the public as provided in Title 1 M.R.S. § 401 et seq. shall be informational only and shall not result in final decisions on any matter.
2. *Public hearings.* Public hearings shall be held as required by the various statutes, codes, and ordinances pursuant to which matters are brought before the Planning Board and shall be conducted in accordance with relevant state law, the Land Use Code, and the rules of the board.

B. **Notice.** The Planning Authority shall give notice of the time and place of public workshops and hearings, including a brief description of the application(s) to be considered, as follows:

1. *Site plan and subdivision.* Notice shall be given to the general public by publication in a newspaper of general circulation in the City of Portland at least two times, the date of the first publication to be at least 10 calendar days prior to the workshop or hearing. Notice shall also be sent by regular United States mail at least 10 calendar days in advance of the workshop or hearing date to the applicant, the owner(s) of the subject property, and all owners of property located within 500 feet of the subject property, except that for subdivisions within industrial zones the notice range shall be 1,000 feet.
2. *Land Use Code or zoning map amendment.* Notice of public hearing shall be publicly posted in the municipal office at least 13 days before the public hearing on such application. In addition, notice of said public hearing must be published at least two times in a newspaper of general circulation in the City of Portland. The date of the first publication must be at least 12 days prior to any public hearing and the date of the second publication must be at

least seven days prior to the public hearing. For map amendments, notice shall be sent by regular United States mail to at least 13 calendar days in advance of any workshop or hearing date to all property owners within the area proposed for rezoning and all property owners 500 feet beyond said area, except that rezoning to industrial zone designations the notice range shall be 1,000 feet.

3. *Contract or conditional zoning.* Notice of public hearing shall be posted in the City Clerk's office at least 13 days prior to the public hearing and shall be published in a newspaper of general circulation within the city at least two times, the date of the first publication to be at least seven days prior to the hearing. Notice shall also be sent to the owners of all property abutting the property to be rezoned at their last known address. This notice shall contain a copy of the proposed conditions and restrictions, with a map indicating the property to be rezoned.

The cost of noticing shall be charged to the applicant.

C. **Procedures.** The Planning Board shall adopt its own rules for the conduct of its business not inconsistent with the statutes of the state and this article. Such rules shall be filed with the Planning Authority and with the City Clerk. Any and all rule changes shall be placed on a City Council public agenda as a communication requiring a public hearing. Any rule may be vetoed, in whole or in part, by order of the Council within 45 days of the date of filing with the City Clerk. No rules change shall take effect until that time period has elapsed. If a part of a rule is vetoed, the remainder shall continue in effect. Any rule so adopted, which is not required by the statutes of the state or by this article, may be waived by the chair upon good cause being shown. Except as otherwise provided in Subsection 2.1.8(A)(1), all meetings, hearings, and deliberations of the Planning Board and its committees shall be open to the public in accordance with Title 1 M.R.S. § 401 et seq. Testimony at any hearing may be required by the Planning Board to be given under oath.

D. **Keeping of records.** The Director of the Department of Planning & Urban Development shall designate a member of their staff who shall attend all Planning Board proceedings. The staff shall provide for the keeping of minutes of the proceedings of the Board, showing the vote of each member on every question, or their absence or failure to vote, and shall maintain the permanent records and decisions of all Board meetings, hearings, and proceedings and all correspondence of the Board, as required by statute. Such records shall be public records open to inspection during working hours upon reasonable notice.

2.1.9 Record and decisions

A. **Record.** The minutes of the staff, and the transcript if one is made, and all exhibits, papers, applications, and requests filed in any proceeding before the Planning Board and the decision of the Board shall constitute the record.

B. **Decision.** Every final decision of the Planning Board and every recommendation of the Planning Board to the City Council shall include written findings of fact, and shall specify the reason or reasons for such decision or

recommendation. The Planning Authority shall mail notice of any decision of the Planning Board to the applicant.

2.1.10 Jurisdiction and authority

In addition to the jurisdiction conferred on it by other provisions of state law and the ordinances of the City and in accordance therewith, the Planning Board shall have the following jurisdiction and authority:

A. To prepare and recommend a Comprehensive Plan to the City Council.
B. To prepare and recommend to the City Council changes in and amendments to the Comprehensive Plan.
C. To aid and assist the City Council and departments and agencies of the City in implementing general plans and in planning, developing, and completing specific projects.
D. To hear, review, and approve, conditionally approve, or deny master development plans and major site plans.
E. To hear, review, and approve, conditionally approve, or deny applications for subdivision approval.
F. To hear, review, and approve or deny applications for conditional uses listed in Article 6.
G. To hear, review, and offer its recommendations to the City Council on applications for amendments to, or revisions of, this Land Use Code.
H. To review and offer its recommendations to the City Council on certain public projects.
I. To review and approve, conditionally approve, or disapprove site plans for regulated projects in shoreland areas.
J. To prepare and offer its recommendations to the City Council with regard to the City's annual Capital Improvement Program.
K. Upon reasonable request, to make its special knowledge and expertise available to any official, department, board, or agency of the city, county, state, or federal governments to aid them in the performance of their respective duties relating to the planning and development of the city and its region, including request from the City Council to review proposed developments in which the developer does not have the right, title, or interest in all the property necessary for the proposed development because some or all of that property is owned by the City.
L. To make such investigations, maps and reports, and recommendations in connection therewith, relating to the planning and development of the city as seem desirable.
M. To employ or contract with such experts and other assistants as may be necessary or convenient to carry out its duties hereunder and to pay for their services and for such other expenses as may be necessary and proper, provided, however, that such expenditures shall not exceed such funds as may be appropriated for such purposes by the City Council.
N. To hear, review, and offer its recommendations to the City Council on petitions for street vacations and discontinuances.
O. To hear, review, and decide appeals where it is alleged there is an error in any decision, requirement, or determination made by the Planning Authority.
P. To approve, following a public hearing and at the recommendation of the Public Works Authority and the Planning Authority, *Technical*

Manual and *Design Manual* standards, provided that such standards shall be additional to and consistent with the provisions of this Land Use Code, necessary and reasonable, and in accordance with sound engineering and urban design practice.

2.1.11 Administrative appeals

A. **Application procedures.** An appeal may be taken to the Planning Board by any person affected by a final decision of the Planning Authority except as provided elsewhere in this Land Use Code. Such appeal shall be taken within 30 days of the action complained of by filing with the Planning Authority an application for appeal specifying the grounds thereof. The application shall be in such form as specified by the Planning Authority. A payment of a nonrefundable filing fee, as established by the City Council to cover administrative costs and costs of hearing, shall accompany each application. The Planning Authority shall forthwith transmit to the Planning Board all of the papers constituting the record upon which the action appealed from was taken.

B. **Public hearing.** A public hearing shall be set, advertised and conducted by the Planning Board in accordance with the provisions of this article.

C. **Action**. Within 30 days following the close of the public hearing, the Planning Board shall render a decision on the appeal in the manner and form specified in the provisions of this article and the statutes of the state. The failure of the board to act within 30 days shall be deemed a denial of the appeal unless mutually extended in writing by the appellant and the board. Within five days of such decision or failure to act notice thereof shall be mailed to each party.

D. **Conditions and limitations.** Any right granted by the reviewing board on appeal shall be subject to the same conditions and limitations as if secured without the necessity of an appeal.

2.1.12 Planning Board appeals

An appeal from any final decision of the Planning Board as to any matter over which it has final authority may be taken by any party or by any authorized officer or agent of the City to the superior court in accordance with Rule 80B of the Maine Rules of Civil Procedure. No appeal shall lie concerning any matter as to which the power of the Board is limited to the making of a recommendation.

2.2 HISTORIC PRESERVATION BOARD

2.2.1 Composition

The Historic Preservation Board shall consist of seven voting members who shall serve without compensation. Members shall not be officers or employees of the City. Members shall have demonstrated interest, knowledge, ability, experience, or expertise in restoration, rehabilitation, or neighborhood conservation or revitalization and shall be residents of the city.

2.2.2 Appointments

A. **Terms.** Members shall be appointed by the Council for terms of three years. Appointments shall be staggered so that the terms of not more than three members expire in any calendar year. Members may serve for three consecutive three-year terms.

B. **Vacancies.** Vacancies on the Historic Preservation Board shall be filled within 60 days. However, every member shall continue in office after expiration of the term until a

successor has been appointed. Vacancies on the Historic Preservation Board shall be filled for the unexpired term of the former member.

2.2.3 Removal of members

Members may be removed for cause by the Council. Cause shall include, but is not limited to, the failure to attend meetings without good cause. Any member proposed to be removed shall be given written notice and an opportunity to be heard prior to final action.

2.2.4 Officers

A. **Election and terms.** Officers of the Historic Preservation Board shall consist of a chair and vice chair. Officers shall be elected by the Historic Preservation Board and shall serve a term of one year and shall be eligible for re-election.

B. **Chair.** The chair shall preside at all meetings and hearings and fulfill the customary functions of that office.

C. **Vice chair.** In the absence of the chair, the vice chair shall act as chair and shall have all the powers of the chair. The vice chair shall have such other powers and duties as may be provided by the rules of the Historic Preservation Board.

2.2.5 Conflicts

No member of the Historic Preservation Board shall participate in the hearing or disposition of any matter in which he or she has an interest.

2.2.6 Meetings and procedures

A. **Meetings.** Regular meetings of the Historic Preservation Board shall be held no less frequently than monthly. Special meetings may be called by the chair or any four members or at the request of the chair of the Planning Board.

B. **Notice.** The Planning Authority shall give notice of the time and place of Historic Preservation Board public workshops and hearings, including a brief description of the application(s) to be considered, as follows:

1. *Landmark or district nomination.* Notice shall be given to the general public by publication in a newspaper of general circulation in the City of Portland at least two times, the date of the first publication to be at least 10 calendar days prior to the workshop or hearing. Notice shall be sent by regular United States mail at least 10 calendar days in advance of the workshop or hearing date to the applicant and to the owner(s) of the subject property or properties.
2. *Certificate of Appropriateness review.* Notice shall be given to all property owners within 100 feet of the property at least seven days prior to the date of the workshop or public hearing.
3. *Major site plan review.* For alteration or new construction that is classified as a major site plan under Article 14, notice shall be given to all property owners within 500 feet of the property at least seven days prior to the date of the workshop or hearing.

The cost of noticing shall be charged to the applicant.

C. **Procedures.** The Historic Preservation Board may adopt procedural rules for the conduct of its business not inconsistent with this article, including the creation of a subcommittee

structure to enhance efficiency in consideration of Historic Preservation Board business. Such rules shall be filed with the Planning Authority and with the City Clerk. All such rules shall be subject to veto, in whole or in part, by the Council within 45 days of such filing. The initial rules shall take effect when filed, subject to veto as provided above. Amendments to the rules shall take effect upon expiration of said veto period. Any rule may be waived by the chair upon good cause being shown.

2.2.7 Record and decisions

A. The Director of the Department of Planning & Urban Development or their designated staff representative shall attend all Historic Preservation Board meetings. The staff shall provide for the keeping of tape recordings or minutes of the proceedings of the Historic Preservation Board, showing the vote of each member on every question or their absence or failure to vote, and shall maintain the records and decisions of all meetings, hearings, and proceedings and all correspondence of the Historic Preservation Board. Copies of permanent records shall be filed with the City Clerk. Staff shall publish and distribute copies of the records, reports, and decisions of the Historic Preservation Board to Historic Preservation Board members and to others upon approval of the Historic Preservation Board.

B. No final action shall be taken by the Historic Preservation Board which could in any manner deprive or restrict the owner of a property in its use, alteration, maintenance, disposition, or demolition until such owner either has knowledge of the proceeding or is sent notice offering opportunity to be heard. This paragraph shall not affect the interim protection provisions of Section 17.6.

C. Every recommendation or recommended decision of the Historic Preservation Board shall include written findings of fact and shall specify the reason or reasons for such action.

D. Staff shall mail notice of any final determination or recommendation of the Historic Preservation Board to the applicant and property owner(s).

2.2.8 Responsibilities

The Historic Preservation Board shall have the following responsibilities:

A. To conduct or administer an ongoing survey to identify historically, culturally, architecturally, and archaeologically significant areas, sites, structures, and objects.

B. To review all areas, sites, structures, and objects listed in the National Register of Historic Places, including the boundaries of areas so listed, and make recommendations to the Planning Board and City Council for the designation of those areas, sites, structures, and objects as local landmarks or districts.

C. To investigate and recommend to the Planning Board and City Council the designation of areas, sites, structures, and objects not listed in the National Register of Historic Places as local landmarks and districts and to make recommendations to the Planning Board concerning sites, structures, and objects that have contributing significance or are intrusions within nominated or designated districts.

D. To keep and make available to the public a register of all areas, sites, structures, and

objects that have been designated as landmarks or districts, including all information required as part of each designation.

E. Upon request, to advise and assist owners of landmarks and property, sites, structures, or objects within districts on physical and financial aspects of preservation, renovation, rehabilitation, and reuse and for procedures for inclusion on other registers of significant areas, sites, structures, and objects, including the National Register of Historic Places.

F. To recommend to the Planning Board the nomination of areas, sites, structures, and objects to the National Register of Historic Places or to any State of Maine Register of Historic Places that may be established.

G. To participate in the Certified Local Government Program of the National Historic Preservation Act Amendments of 1980 and the Maine Historic Preservation Commission, and carry out any responsibilities delegated to it under that program, including review and comment on any National Register nominations submitted to the Historic Preservation Board.

H. To seek funding for which the City of Portland is eligible through the Certified Local Government Program to assist in local preservation projects, including projects undertaken by local non-profit organizations.

I. To, upon request by the City Council, participate in any review of federal actions or undertakings pursuant to Section 106 of the National Historic Preservation Act, attend informational and educational programs sponsored by the Maine Historic Preservation Commission, and prepare an annual report of the activities of the Historic Preservation Board.

J. To inform and educate the citizens of Portland concerning the cultural, historic, architectural, and archeological heritage of the city by publishing appropriate maps, newsletters, brochures, and pamphlets and by sponsoring programs and seminars.

K. To hold meetings and public hearings to review applications for Certificates of Appropriateness affecting proposed or designated landmarks and districts and to recommend approval or disapproval of Certificates of Appropriateness.

L. To provide testimony to the Board of Appeals in connection with any application for a Certificate of Economic Hardship.

M. To develop design guidelines affecting landmarks or districts for review and approval by the Planning Board.

N. To advise the Planning Board as to recommendations on any preservation or conservation easements that the City of Portland may have or be offered as a gift or otherwise.

O. To advise the Planning Board as to the administration of such gifts, grants, and money as may be appropriated for the purposes of this article upon authorization and approval by the City Council.

P. To provide comment, as appropriate, to the Planning Board and/or City Council on matters pertaining to historic preservation in Portland.

Q. To confer recognition upon the owners of landmarks or properties, sites, structures, or objects within districts by means of certificates, plaques, or markers.

R. To assist the Planning Board in the development of a preservation component in the Comprehensive Plan of the City of Portland.

S. To periodically review the Land Use Code and to make recommendations to the Planning Board concerning any amendments appropriate for the protection and continued use of landmarks or properties, sites, structures, or objects within districts.

2.2.9 Administrative appeals

A. **Application procedures.** An appeal may be taken to the Historic Preservation Board by any person affected by a decision of the Planning Authority relative to Article 17. Such appeal shall be taken within 30 days of the action complained of by filing with the Planning Authority an application for appeal specifying the grounds thereof. The application shall be in such form as specified by the Planning Authority. A payment of a nonrefundable filing fee, as established by the City Council to cover administrative costs and costs of hearing, shall accompany the application. The Planning Authority shall forthwith transmit to the Historic Preservation Board all of the papers constituting the record upon which the action appealed from was taken.

B. **Public hearing.** A public hearing shall be set, advertised, and conducted by the Historic Preservation Board in accordance with the provisions of this article.

C. **Action.** Within 30 days following the close of the public hearing, the Historic Preservation Board shall render a decision on the appeal in the manner and form specified in the provisions of this article and the statutes of the state. The failure of the board to act within 30 days shall be deemed a denial of the appeal unless mutually extended in writing by the appellant and the Board. Within five days of such decision or failure to act notice thereof shall be mailed to each party.

D. **Conditions and limitations.** Any right granted by the board on appeal shall be subject to the same conditions and limitations as if secured without the necessity of an appeal.

2.2.10 Historic Preservation Board appeal

A. **Historic Preservation Board decision.** An appeal from any final decision of the Historic Preservation Board as to any matter over which it has final authority may be taken by any party or by any authorized officer or agent of the City to the Planning Board, adhering to the requirements of Subsection 2.1.11 of this article.

B. The Planning Board shall deny the appeal unless it finds that the action of the Historic Preservation board was arbitrary or capricious or was not based on substantial evidence. Review by the Planning Board under this subsection is intended to be appellate in nature. Except where the Planning Board determines that injustice would result, the Planning Board shall determine the appeal without considering any facts or arguments which were not presented to the Historic Preservation Board. Where the Planning Board finds it necessary to consider such new evidence in order to do substantial justice, it shall remand the matter to the Historic Preservation Board for further consideration, unless it determines that the resulting delay is likely to result in undue hardship to the applicant.

C. **Planning Board decision. T**he Planning Board's decision on an appeal from a decision of the Historic Preservation Board shall be final with respect to the application or matter initially

presented to the Historic Preservation Board. An appeal from any final decision of the Planning Board as to any matter over which it has final authority may be taken by any party or by any authorized officer or agent of the city to the superior court in accordance with Rule 80B of the Maine Rules of Civil Procedure. No appeal shall lie concerning any matter as to which the power of the board is limited to the making of a recommendation.

2.3 ZONING BOARD OF APPEALS

2.3.1 Composition

There shall be a Board of Appeals of seven members. Members of the Board shall be residents of the city and shall not be officers or employees of the City or any of its agencies or departments. Members shall serve without compensation.

2.3.2 Appointments

A. **Terms.** The members of the Board of Appeals shall be appointed by the City Council for terms of three years. Terms shall be staggered so that the terms of no more than three members shall expire in any calendar year. Such members shall serve until their successors are duly elected and qualified provided, however, that such service shall not extend to over 120 days after expiration of their term. Members may serve for three consecutive three-year terms.

B. **Vacancies.** Permanent vacancies on the Board of Appeals shall be filled by the City Council, in the same manner as other appointments under this article, for the unexpired term of a former member whose place has become vacant.

2.3.3 Removal of members

Any member of the Board of Appeals may be removed for cause by the City Council at any time, provided, however, that before any such removal, such member shall be given an opportunity to be heard in their own defense at a public hearing.

2.3.4 Officers

A. **Chair.** The members of the Board of Appeals shall annually elect one of their number as chair to preside at all meetings and hearings and to fulfill the customary functions of that office. In the absence of the chair, the secretary shall act as chair and shall have all the powers of the chair.

B. **Secretary.** The members of the Board of Appeals shall annually elect one of their number as secretary. The secretary shall fulfill the duties provided by statute and this article and have such other duties as may be provided by the rules of the board.

C. **Pro tempore officers.** In the absence of both the chair and the secretary, the board shall elect a chair pro tempore from among its number and the chair pro tempore shall have all the powers of the chair during the chair's and the secretary's absence. In the absence of the secretary, or when the secretary is serving as chair, the board shall elect a secretary pro tempore from among its number and the secretary pro tempore shall have all the powers of the secretary during the secretary's absence or service as chair.

2.3.5 Quorum and necessary vote

No business shall be transacted by the Board of Appeals without a quorum, consisting of four members, being present. The concurring vote of at

least four members of the board shall be necessary to grant any request or application or to sustain any appeal. Any matter that receives fewer than four votes shall be deemed to have been denied.

2.3.6 Conflicts

No member of the Board of Appeals shall participate in the hearing or disposition of any matter in which he or she has an interest. Any question of whether a member has a conflict of interest sufficient to disqualify him or her shall be decided by a majority vote of the members, except the member who is being challenged. Where such a vote results in a tie, the challenged member shall be deemed disqualified.

2.3.7 Meetings and procedures

A. **Staff.** The Building Authority or their designee shall serve as staff to the Board of Appeals.

B. **Meetings.** Regular meetings of the Board of Appeals shall be held at the call of the chair or as provided by the rules of the board. Special meetings shall be called by the chair at the request of any two members of the board or at the request of the City Council. All meetings and hearings of the board shall be open to the public. For all matters properly brought before the Board of Appeals, the board shall select a reasonable time and place for a public hearing following the submission of the subject application.

C. **Notice.** The Building Authority shall give notice of public hearings in the form and manner and to the persons herein specified. The notice shall include the time and place of such hearing, a description of the contents of the matter to be heard and the address or location of the property involved. Where notice by mail is required, it shall be mailed at least seven days in advance of the hearing date by regular United States mail. Notices shall be given to each of the following as specified:

1. In all cases, to the petitioner.
2. In all cases, to all residents of the city by publication in a newspaper of general circulation in the city at least once, not more than 30 nor less than five days before the date of the hearing, and by mail to the applicant.
3. In the case of hearings relating to zoning appeals, a variance, or a conditional use, to the Planning Board and City Council by reasonable means.
4. In the case of hearings relating to a variance request from the provisions of Article 11, the application and all supporting information supplied by the applicant shall be forwarded to the State of Maine Commission of the Department of Environmental Protection at least 20 days prior to action by the board.
5. In the case of hearings related to a variance or conditional use, by mail to the owners of all the property within 500 feet of such parcel or tract.
6. In the case of hearings related to all other appeals, by mail to the owners of property directly abutting, and directly across a street or alley from the subject property.

For purposes of this subsection, the owners of property shall be considered to be the parties listed by the Assessor's Department as those against whom taxes are assessed. Failure of any property owner to receive a notice of public hearing shall not necessitate another hearing and shall not invalidate any action of the board.

The cost of noticing shall be charged to the applicant.

D. **Procedures.** The Board of Appeals shall adopt its own rules of procedure for the conduct of its business not inconsistent with the statutes of the state and this article. Such rules shall be filed with the City Clerk. Any rule so adopted which relates solely to the conduct of hearings, and which is not required by the statutes of the state or by this article, may be waived by the board upon good cause being shown.

1. *Conduct of hearings.*
   a. Any person may appear and testify at a public hearing, either in person or by a duly authorized agent or attorney, and may submit documentary evidence, provided, however, that the Board shall exclude irrelevant, immaterial and unduly repetitious evidence.
   b. The applicant and any abutter or similar person with standing shall in addition have the right to present witnesses on their own behalf and offer rebuttal evidence, to cross examine all witnesses testifying in opposition to their position through the chair, and to examine and introduce any documents produced at the hearing.
2. All other matters pertaining to the conduct of hearings shall be governed by the provisions of the relevant state statutes, this article, and the rules promulgated by the Board of Appeals.

2.3.8 Records and decisions

A. **Record.** The recording of testimony, if any, and all exhibits, papers, applications, and requests filed in any proceeding before the Board of Appeals and the decision of the board shall constitute the record.

B. **Decision.** Every decision of the Board of Appeals shall include findings of the fact, shall refer to the evidence in the record and the exhibits, plans or specifications upon which such decision is based, shall specify the reason or reasons for such decision, and shall contain a conclusion or statement separate from the findings of fact setting forth the specific relief granted or denying relief. The Building Authority shall hand deliver or mail a copy of the decision to the applicant, the Planning Board, and City Council within seven days of such decision, and shall also file the decision with the City Clerk.

2.3.9 Jurisdiction and authority

The Board of Appeals shall have the following jurisdiction and authority:

A. To hear and decide appeals from the granting or denial of any permit required by Chapter 6, Article II or Chapter 10 of the City of Portland Code of Ordinances.

B. To hear and decide appeals from any decision or order made by the Building Authority pursuant to the provisions of this chapter, except that decisions relating to enforcement of the Shoreland Zone provisions of this chapter may not be appealed to the Board of Appeals and may only be appealed directly to Superior Court in accordance with M.R. Civ. P. 80B and 30-A M.R.S. §§ 2691 & 4483.

C. To review interpretations of the Zoning Administrator or their designee, except that decisions on such interpretations shall be advisory only and shall not be appealable.

D. To hear and grant or deny applications for variances from the terms of this Land Use Code, including but not limited to terms related to use; dwelling unit conversion; space and bulk, such as lot size, density, and setbacks; parking; loading; and signs.

E. To hear and grant or deny applications for conditional uses, as specified in Article 6.

2.3.10 Administrative appeals

A. **Application procedures.** Application for any appeal to the board shall be submitted to the Building Authority. A payment of a nonrefundable application fee, as established by the City Council to cover administrative costs and costs of a hearing, shall accompany each application. The application shall be in such form as prescribed by the Building Authority.

B. **Public hearing.** A public hearing shall be set, advertised and conducted by the Board of Appeals in accordance with Subsection 2.3.7.

C. **Standard of review.** The standard of review for appeals pursuant to Subsections 2.3.9(A), (B), and (C) shall be de novo. The appellant shall bear the burden of proof.

D. **Conditions and limitations on rights granted by appeal.** Any right granted by the Board of Appeals on appeal shall be subject to the same conditions and limitations as if secured without the necessity of an appeal.

2.3.11 Variances

A. **Application procedures**

1. Application for a variance shall be submitted to the Building Authority. A payment of a nonrefundable application fee, as established from time to time by the City Council to cover administrative costs and costs of a hearing, shall accompany each application. The application shall be in such form as prescribed by the Building Authority.
2. A public hearing shall be set, advertised, and conducted by the Board of Appeals in accordance with Subsection 2.3.7.
3. All decisions by the board shall be rendered in a manner and form not inconsistent with the statutes of this state.

B. **Undue hardship variance.** An undue hardship variance may be granted by the board only where strict application of the ordinance, or a provision thereof, to the petitioner and his or her property would cause undue hardship. The words "undue hardship" as used in this subsection mean the following:

1. The land in question cannot yield a reasonable return unless a variance is granted.
2. The need for a variance is due to the unique circumstances of the property and not to the general conditions in the neighborhood.
3. The granting of a variance will not alter the essential character of the locality.
4. The hardship is not the result of action taken by the applicant or prior owner.

C. **Disability variance**

1. *By the Board of Appeals.* Notwithstanding the provisions of subsection (B) above, the

board may grant a variance to an owner of a residential dwelling for the purpose of making that dwelling accessible to a person with a disability who resides in or regularly uses the dwelling. The board shall restrict any variance granted under this subsection solely to the installation of equipment or the construction of structures necessary for access to or egress from the dwelling by the person with the disability. The board may impose conditions on the variance, including limiting the variance to the duration of the disability or to the time that the person with the disability lives in the dwelling. The term "structures necessary for access to or egress from the dwelling" shall include railing, wall, or roof systems necessary for the safety or effectiveness of the structure. For the purpose of this subsection, a disability has the same meaning as a physical or mental disability under 5 M.R.S. § 4553.

2. *By the Building Authority.* Notwithstanding the provisions of subsections (B) and (C(1)) above, the Building Authority may issue a permit to the owner of a dwelling for the purpose of making a dwelling accessible to a person with a disability who resides in or regularly uses the dwelling. If the permit requires a variance, the permit is deemed to include that variance solely for the installation of equipment or the construction of structures necessary for access to or egress from the dwelling for the person with a disability.

D. **Practical difficulty variance.** Notwithstanding the provisions of subsections (B) and (C) above, the Board of Appeals may grant a variance from the dimensional standards of this Land Use Code that relate to lot area, lot coverage, frontage, and setback requirements when strict application of these standards would both preclude a permitted use of the property and result in significant economic injury to the applicant. Significant economic injury shall mean that the value of the property if the variance were denied would be substantially lower than its value if the variance were granted. To satisfy this standard, the applicant need not prove that denial of the variance would mean the practical loss of all beneficial use of the land. In granting a practical difficulty variance, all of the following conditions must be found to exist:

1. The need for a variance is due to the unique circumstances of the property, and not to the general conditions in the neighborhood.
2. The granting of the variance will not produce an undesirable change in the character of the neighborhood and will not have an unreasonably detrimental effect on either the use or fair market value of abutting properties.
3. The practical difficulty is not the result of action taken by the applicant or a prior owner.
4. No other feasible alternative is available to the applicant, except a variance.
5. The granting of a variance will not have an unreasonably adverse effect on the natural environment.
6. The property is not located, in whole or in part, within a shoreland area, as defined in 38 M.R.S. § 435, nor within a Shoreland

Zone or flood hazard area, as defined in this Land Use Code.

E. Specified variances prohibited

1. No use permitted in medium- and high-density residential zones shall be permitted in low-density residential zones. No use permitted in mixed-use or office zones shall be permitted in any residential zone. No use permitted in industrial and airport zones shall be permitted in any mixed-use, office, or residential zone. No use permitted in residential zones shall be permitted in any industrial or airport zone. The general use categories are listed below:
   a. Low-density residential: IR-1, IR-2, IR-3, R-1, R-2, R-3.
   b. Medium- and high-density residential: R-4, R-5/R-5a, R-6/R-6a.
   c. Mixed-Use/Office: B-1/B-1b, B-2/B-2b/B-2c, B-3/B-3b/B-3c, B-4, B-5/B-5b, B-6, B-7, I-B, R-P, O-P.
   d. Industrial: I-L/I-Lb, I-M/I-Ma/I-Mb, I-H/I-Hb, A-B.
2. A variance may only be granted with respect to the generally applicable space and bulk requirements of the zone in which the property is located and not from any provision that allows a deviation from those requirements.
3. No variance shall be granted which would permit the creation of a lot or parcel that cannot be developed in compliance with the zoning, subdivision, and other regulations applicable thereto.
4. No variance shall be granted which would result in a use or development of the lot or parcel in question which would not be in harmony with the general purpose and intent of this Land Use Code or the Comprehensive Plan; which would be materially detrimental to the public welfare or materially injurious to the enjoyment, use, or development of property or improvement permitted in the vicinity; or which would materially impair an adequate supply of light and air to properties and improvements in the vicinity, substantially increase congestion in the public streets, increase the danger of flood or fire, or endanger the public safety.
5. No variance shall be granted which would be greater than the minimum variance necessary to relieve the undue hardship or the hardship of the applicant.
6. No variance shall be granted from the minimum lot sizes set forth in Subsection 4.3.1 for lots in the IR-1 and IR-2 zones.
7. No variance shall be granted from the requirements in Subsection 6.4.1.

F. Conditions on variances; variances less than requested. Reasonable conditions and safeguards relating to construction, character, location, landscaping, screening, and other matters may be imposed upon the premises benefited by a variance as considered necessary to prevent injurious effects upon other property and improvements in the vicinity or upon public facilities and services. Such conditions shall be expressly set forth in the resolution granting the variance and in the notice informing the applicant thereof. Violation of such conditions and safeguards shall be a violation of this article. A variance less than or different from that requested may be granted when the record supports the

applicant's right to some relief but not to the relief requested.

G. **Limitations on variances.** No variance permitting the erection or alteration of a building shall be valid for a period longer than two years, unless a building permit for such erection or alteration is issued and construction is actually begun within that period and is thereafter diligently pursued to completion. No variance relating to the establishment or maintenance of a use not involving a building or structure shall be valid for a period longer than two years, unless an occupancy permit is issued and a use commenced within such period.

H. **Recording of variances.** No variance shall be valid unless, within 90 days of final approval of the variance, a certificate describing the variance has been recorded by the applicant for the variance in the registry of deeds as required by 30 M.R.S. § 4353(5).

2.3.12 Violations

In addition to any other remedies available, the Board of Appeals after notice and hearing may revoke any variance or other relief granted under this section when the provisions of this chapter or the conditions under which the relief was granted have not been complied with.

2.3.13 Appeals

An appeal from any final decision of the Board of Appeals may be taken by any aggrieved party to the superior court in accordance with Rule 80B of the Maine Rules of Civil Procedure and 30-A M.R.S. §§ 2691 & 4483., except as otherwise specifically provided in this article.

3 DEFINITIONS

Accessory dwelling unit. A dwelling unit subordinate in size to the principal residential structure(s) on a lot and located either within the principal residential structure(s) or in an accessory structure.

Adult business establishment. Any business, including but not limited to any bookstore, newsstand, novelty store, nightclub, bar, cabaret, amusement arcade, or theater, which:

A. Keeps for public patronage or permits or allows the operation of any adult amusement device as defined in Chapter 4 of the City of Portland Code of Ordinances; or
B. Customarily, meaning more often than an average of one calendar week during any calendar month of operation, exhibits motion pictures or displays any other visual representation described or advertised as being "X rated" or "for adults only," or which customarily excludes persons from any portion of the premises by reason of immaturity of age by the use of such, or similar, phrases; or
C. Is adjudged to be in violation of 17 M.R.S. §§ 2911, 2912.

Affordable housing. Housing for which the percentage of income a household is charged in rent and other housing expenses or must pay in monthly mortgage payments (including condominium/HOA fees, mortgage insurance, other insurance and real estate taxes), does not exceed 30% of a household's income, or other amount established in City regulations that does not vary significantly from this amount.

After-hours entertainment license. Any of the music, dancing, and special entertainment licenses required or authorized by Chapter 4, Article III of the City of Portland Code of Ordinances.

Agriculture. The practice of farming, including the cultivation of the soil for the growing of crops and rearing of animals to provide food and other products. Agriculture may include nurseries, greenhouses, and truck gardens, provided that there is no sale of products not produced on the premises.

Airport restricted access areas. Runways, taxiways, and other areas of the Jetport accessible to aircraft, whether access is restricted by the Federal Aviation Administration or not.

Alley. Any way designed primarily for vehicular and pedestrian or utility access to the back or side of premises otherwise abutting on a street, except driveways unless officially designated otherwise.

Animal-related services. Establishments principally for the training or boarding of animals. Such uses shall not include veterinary services.

Approval. An affirmative decision on an application, including an approval with conditions.

Appurtenance. A device or structure not designed for human occupancy and attached to the exterior of a building.

Auto service station. A business selling gasoline, diesel, or propane fuel, providing services specific to electric vehicles, or providing motor vehicle repairs including, but not limited to, tune-ups, engine repair,

brake work, muffler replacement, tire repair, or similar activities. Such businesses may also include car-washes and/or vacuums.

Back office use. An office-related use with minimal public visitation and minimal direct service to the general public, primarily to provide support services to larger organizations such as educational institutions, social service agencies, or business headquarters.

Bar. Any establishment required to be licensed to sell alcoholic beverages for on-premises consumption, which is not regularly used for the purpose of providing full-course meals, as defined in Title 28-A of the Maine Revised Statutes, on the premises.

Bed and breakfast. A building that contains between two and nine guest rooms; is used to provide or offer overnight accommodations for transient guests; has an owner, manager, or operator living in the building as a permanent resident; does not provide cooking facilities in any of the guest rooms; and does not provide meals other than breakfast, which shall be offered only to overnight guests.

Blasting operations. The use of explosives for purposes of breaking up and removing soil, rock, and ledge, related to construction and development of real estate within the city.

Building. A roofed and walled structure built for permanent use.

Building, accessory. A detached roofed and walled structure that is incidental and subordinate in area and extent, and/or use to the principal building(s) on the property. A lot may have more than one accessory building.

Building addition. Any increase to footprint, floor area, or volume of an existing building.

Building alteration. A change or rearrangement in the structural supports, exterior appearance, or removing from or otherwise affecting the exterior appearance of a building.

Buildings, attached. Two or more independent buildings that share at least one common party wall but have full building separation and independent principal entries; not free-standing. Attached buildings may or may not have common ownership.

Building, principal. The main roofed and walled structure on a lot having the predominant area, extent, and/or use. A lot may have more than one principal building. When a garage is attached to the principal building in a substantial manner as by an enclosed area with roof or common wall, it shall be considered as a part of the principal building.

Clinics. Any establishment where patients are examined and treated by one or more health care providers, such as, but not limited to, physicians, dentists, psychologists, or social workers. Clinics may include laboratory services and facilities for ambulatory or outpatient surgical procedures.

Coastal wetland. All tidal and subtidal lands; all lands with vegetation present that is tolerant of salt water and that occurs primarily in a salt water or estuarine habitat; and/or any swamp, marsh, bog, beach, flat, or other contiguous low land that is

subject to tidal action during the highest tide level for the year in which an activity is proposed as identified in tide tables published by the National Ocean Service. Coastal wetlands may include portions of coastal sand dunes.

Commercial vessel. Any watercraft used principally in a business or trade, including common carriers of passenger or freight, whether for governmental, nonprofit, or emergency purposes, but not including pleasure craft used principally for recreational purposes.

Common areas. Portions of a lodging house which are available for use by all residents of the lodging house. Common areas shall include, but are not limited to, one or more of the following: kitchens, living rooms, recreation rooms, improved basements, and finished porches. Bathrooms, stairways, hallways, and storage areas shall not be counted as common areas.

Communication studio. A commercial or public communication facility, including radio and television broadcasting and receiving stations and studios.

Community hall. A building or portion of a building used for social, recreational, artistic, civic, or educational community functions. Such a facility would be open to the public for such functions, which, for example, could include but not be limited to performances, dance, exhibitions, cultural exchange, training programs and workshops, neighborhood meetings, or gatherings. As part of these functions and activities, it shall be permissible to serve food, subject to other applicable codes and ordinances.

Condominium. Any interest in real estate created pursuant to the Unit Ownership Act, 33 M.R.S. § 560 et seq., or its equivalent, as it may from time to time be amended.

Congregate care facility. A residential development intended to facilitate aging in place that includes individual dwelling units with support services which provide assistance to residents. The population of a congregate care facility shall consist of persons 55 years of age or older and their spouses. A congregate care facility may also accommodate the needs of persons with disabilities and their spouses that are younger than 55 years of age, provided the majority of the residents are 55 years of age or older. Services to be provided shall include the following:

A. Transportation for essential support activities.
B. Provision of at least one meal per day.
C. Programmed social activities which are facilitated by staff.
D. Provision of personal care services including, but not limited to, housekeeping, laundry, and minimal health monitoring.
E. Installation of emergency call buttons or systems in each unit.

Correctional pre-release facility. A facility housing up to 12 persons, plus staff, serving a primary clientele of persons in correctional pre-release programs.

Drive-through. A facility which provides a service directly to a motor vehicle occupant and where the customer drives a motor vehicle onto the premises and to a window or mechanical device through or by which the customer is served with or without

exiting the vehicle. Drive-throughs do not include major or minor auto service stations.

Drive-through features. Features associated with drive-throughs including but not limited to designated travel or stacking lanes, intercom systems, menu boards, service windows, kiosks, mechanical devices, etc.

Dwelling unit. One or more rooms forming a single unit for habitation by one family, including food preparation, living, sanitary, and sleeping facilities.

Dwelling, multi-family. A building or portion thereof containing three or more dwelling units.

Dwelling, single-family. A single building containing one dwelling unit.

Dwelling, two-family. A single building containing two dwelling units.

Earth-moving activity. Any removal or placement, excavation, filling, stockpiling, or grading of soil, earth, loam, sand, gravel, rock, and other mineral deposits.

Easement. A right, privilege, or liberty which one has in land owned by another for some special and definite purpose.

Emergency operations. Operations conducted for the public health, safety, or general welfare, such as protection of resources from immediate destruction or loss, law enforcement, and operations to rescue human beings and livestock from the threat of destruction or injury.

Emergency shelter. A facility providing temporary overnight shelter to homeless individuals in a dormitory-style or per-bed arrangement.

Entrance, principal. The main point of access for pedestrians into a building. A building may have more than one principal entrance.

Esplanade. That portion of a street which is located between the curbline and the edge of the sidewalk closest to the street.

Essential services. The construction, alteration, or maintenance of gas, electrical, or communication facilities; steam, fuel, electric power, or water transmission or distribution lines, towers and related equipment; telephone cables or lines, poles, and related equipment; gas, oil, water, slurry, or other similar pipelines; municipal sewage lines, collection, or supply systems; and associated storage tanks. Such systems may include towers, poles, wires, mains, drains, pipes, conduits, cables, fire alarms and police call boxes, traffic signals, hydrants, and similar accessories, but shall not include service drops or buildings which are necessary for the furnishing of such services.

Explosives. Any material or container containing a chemical compound or mixture that is commonly used or intended for the purpose of producing an explosion and that contains any oxidizing and combustible materials or other ingredients in such proportions, quantities, or packaging that an ignition by fire, by friction, by compound or mixture may cause such a sudden generation of highly heated gasses that the resultant gaseous pressures are capable of producing destructive effects on contiguous objects, but shall not mean the

components for handloading rifle, pistol and shotgun ammunition, or fireworks.

Family. One or more individuals related by blood, marriage, civil union, adoption, or guardianship and/or up to eight unrelated individuals living together in a dwelling unit as a single nonprofit housekeeping unit.

Fill. Soil, earth, loam, sand, gravel, rock and other mineral deposits.

Filling. The placement of soil, earth, loam, sand, gravel, rock and other mineral deposits. Filling shall include stockpiling.

Fixture, fully shielded. A light fixture or luminous tube constructed and mounted such that all light emitted by the fixture or tube, either directly from the lamp, tube, or a diffusing element, or indirectly by reflection or refraction from any part of the light fixture, is projected below the horizontal. If the lamp or tube, any reflective surface, or lens cover (clear or prismatic) is visible when viewed from above or directly from the side, from any angle around the fixture or tube, the fixture or tube is not fully shielded.

Flag. A fabric sheet of square, rectangular, or triangular shape having no enclosing or supporting framework that is typically mounted on a pole.

Foundation. The supporting substructure of a building or other structure, excluding wooden sills and post supports, but including basements, slabs, frost walls, or other base consisting of concrete, block, brick, or similar material.

Freshwater wetland. Freshwater swamps, marshes, bogs, and/or similar areas which are both:

A. Of ten or more contiguous acres or of less than ten contiguous acres and adjacent to a surface water body except for any river, stream or brook such that, in a natural state, the combined surface area is in excess of ten acres or of less than ten acres that is depicted on the Shoreland Zoning map.
B. Inundated or saturated by surface or ground water at a frequency and for a duration sufficient to support, and which under normal circumstances do support, a prevalence of wetland vegetation typically adapted for life in saturated soils.

Freshwater wetlands may contain small stream channels or inclusions of land that do not conform to the criteria of this definition.

General office. An office for the conducting or managing of a business or the practice of a profession, including that of a licensed health care provider, so long as such office does not include laboratory services and facilities for ambulatory surgical procedures.

General services. Establishment primarily engaged in rendering services to persons or business on a fee basis, including but not limited to banks, health clubs, laundries, employment services, management services, personnel services, or maintenance services.

Handicapped family unit. A dwelling unit which provides living facilities for handicapped persons. A handicapped family unit may also provide counseling and support services. Staff members may also be included in the population.

Helistop. An area used for the landing of helicopters at any location other than an airport. Such area shall include a landing area or pad, and may include parking required for access to the landing area or pad, a loading and unloading area for emergency vehicles, and other related facilities other than maintenance and repair facilities.

Hospital. An institution providing health services, primarily on an inpatient basis, and medical or surgical care of the sick or injured, including as an integral part of the institution such related facilities as laboratories, outpatient departments, training facilities, central service facilities, and staff offices.

Hostel. An overnight lodging facility for transient guests that provides sleeping rooms and common spaces for cooking. A hostel shall not be used as an emergency shelter.

Hotel. A building used for more or less temporary occupancy of individuals who are lodged with or without meals.

Impervious surface. Area covered with low-permeability material that is highly resistant to infiltration by water, such as asphalt, concrete, or rooftop, and areas such as gravel roads and unpaved parking areas that will be compacted through design or use to reduce their permeability.

Industrial, high-impact. Industrial activity involving the manufacturing, packaging, assembly, or distribution of finished products from either raw materials or previously prepared material which are generally incompatible with residential, commercial, and lower-impact industrial uses and sensitive natural areas due to their high generation of traffic, noise levels, emissions, lighting, and odors.

Industrial, low-impact. Industrial activity involving the manufacturing, packaging, assembly, or distribution of finished products from previously prepared material, including but not limited to the following: artist studios, bakeries; breweries; distilleries; bottling; coffee roasters; commercial kitchens; pharmaceuticals; machine shops; watchmakers; makers of precision instruments, musical instruments, toys and sporting goods, pottery and ceramics using only previously pulverized clay, wood products, jewelry; assembly of electrical components; canteen services; tool and die shops; plant and tree nurseries; and the packaging of foods. Low-impact industrial uses do not include the processing of raw materials or salvaging operations. Low-impact industrial uses are generally compatible, due to their size and nature of impact, with residential, commercial and other low impact industrial uses.

Intermediate care facility. A facility which provides, on a regular basis, health-related care and services for more than 13 individuals who do not require the degree of care and treatment which a hospital or extended care facility is designed to provide but who, because of their mental or physical condition, require such care and services above the level of room and board. Said facility must be licensed as a board care, residential care facility or equivalent pursuant to the regulations promulgated by the State of Maine Department of Health and Human Services.

Kitchen facilities. Facilities used for the preparation of meals, including refrigerators and devices used for the cooking and preparation of food.

Lodging house. A house, building or portion thereof containing two or more rooming units, as well as common areas, and providing such units to individuals on not less than a monthly basis for compensation.

Long-term or extended care facility. An institution or a distinct part of an institution that is licensed or approved to provide full-time convalescent or chronic care, or health care under medical supervision for 24 or more consecutive hours, to nine or more individuals who, by reason of advanced age, illness, or infirmity are unable to care for themselves, and who are not related to the governing authority by marriage, blood, or adoption.

Lot. A parcel or area of land that is designated as an individual unit for use, development, or ownership that is either: a) a parcel or area of land that is separately described in a deed or on a plan recorded in the Cumberland County Registry of Deeds; b) a contiguous combination of such lots under common ownership and designated as one unit for development; or c) a newly established parcel meeting all the dimensional requirements of the zone in which it is located.

Lot of record. A nonconforming parcel or area of land that: a) is separately described in a deed or on a plan recorded in the Cumberland County Registry of Deeds as of the date designated in the relevant provision of this chapter and b) conformed to the requirements of this chapter as of the date designated in the relevant provision of this chapter.

Low-income household. A household having an income not exceeding 80% of median income for area of residence as set forth in regulations promulgated from time to time by the United States Department of Housing and Urban Development pursuant to 42 U.S.C. sections 1437 et seq.

Low-income housing unit for rent. A dwelling unit for which:

A. The rent is affordable to a household earning 80% or less of Area Median Income (AMI) as defined by the United States Department of Housing and Urban Development (HUD).
B. The unit is rented to a household earning 80% or less of AMI.
C. The requirements of (A) and (B) above are limited by deed restriction or other legally binding agreement for the applicable length of time in this ordinance.

Low-income housing unit for sale. A dwelling unit for which:

A. The sale price is affordable to a household earning 100% or less of Area Median Income (AMI).
B. The unit is sold to a household earning 100% or less of AMI.
C. The requirements of (A) and (B) above are limited by deed restriction or other legally binding agreement for future sales for the applicable length of time in this ordinance.

Manufactured housing. A structural unit or units designed for residential occupancy and constructed in a manufacturing facility and then transported by the use of its own chassis or placement on an independent chassis to a building site. The term includes any type of building which is constructed at

a manufacturing facility and then transported to a building site where it is utilized for housing and may be purchased or sold by a dealer in the interim. For purposes of this article, two types of manufactured housing are included. They are:

A. Those units constructed after June 15, 1976, which the manufacturer certifies are constructed in compliance with the standards required by the United States Government Department of Housing and Urban Development, as such standards are from time to time revised or amended, meaning structures, transportable in one or more sections, which in the traveling mode are 14 body feet or more in width and are 750 or more square feet, and which are built on a permanent chassis and designed to be used as dwellings, with or without permanent foundations, when connected to the required utilities, including the plumbing, heating, air conditioning, and electrical systems contained therein. This term also includes any structure which meets all the requirements of this subparagraph except the size requirements and with respect to which the manufacturer voluntarily files a certification required by the Secretary of the United States Department of Housing and Urban Development and complies with the standards established under the National Manufactured Housing Construction and Safety Standards Act of 1974, United States Code, Title 42, Section 5401 et seq.; and

B. Those units constructed after June 15, 1976, which the manufacturer certifies are constructed in compliance with the state's Manufactured Housing Act and regulations, meaning structures, transportable in one or more sections, which are not constructed on a permanent chassis and are designed to be used as dwellings on foundations when connected to required utilities, including the plumbing, heating, air conditioning, or electrical systems contained therein.

Any unit which does not fall within the definitions of this section and which is legally sited within the city on December 18, 1989, may be relocated to any location in the city in which manufactured housing is allowed.

Manufactured housing park. A parcel of land under unified ownership approved by the Planning Board under 30-A M.R.S. § 4358 for the placement of single-component manufactured housing.

Marijuana cultivation facility. A cultivation facility required to be licensed pursuant to 28-B M.R.S. § 201 or any other facility engaged primarily in the business of planting, propagation, growing, harvesting, drying, curing, grading, trimming, or other processing of marijuana, including mature marijuana plants, immature marijuana plants, seedlings, and marijuana seeds, for use or sale.

Marijuana manufacturing facility. A manufacturing facility required to be licensed pursuant to 22 M.R.S. § 2423-F or 28-B M.R.S. § 201.

Marijuana product. As defined by 22 M.R.S. § 2422 or 28-B M.R.S. § 102.

Marijuana retail store. A retail establishment licensed to sell marijuana, marijuana products, immature marijuana plants, and seedlings to adult use or medical marijuana customers. A marijuana retail store is only authorized as a principal use, and is not permitted as an accessory use. A marijuana

retail store may not exceed a maximum gross floor area of 2,000 square feet. A marijuana retail store shall not include a registered dispensary.

Marijuana testing facility. A facility licensed to develop, research and test marijuana, marijuana products and other substances as defined by 22 M.R.S. § 2422 or 28-B M.R.S. § 102.

Marina. A commercial operation providing floats, slips, and piers intended primarily for berthing of noncommercial vessels and the provision of related services such as supplies, fuel, equipment and repairs, which may be provided both to tenants and non-tenants.

Military personnel berthing. A building, or portion thereof, which is primarily used as, and intended for, temporary living quarters for military personnel.

Moderate-income household. A household having an income not exceeding 120% of median income for area of residence as set forth in regulations promulgated from time to time by the United Sates Department of Housing and Urban Development pursuant to 42 U.S.C. sections 1437 et seq.

Multi-family development. The construction or creation of three or more dwelling units on any parcel of land or the addition of two or more dwelling units cumulatively within a three-year period.

Multiplex. A residential development consisting of three or more horizontally or vertically attached dwelling units, or a series of such attached dwelling units, and the construction of at least one building.

Neighborhood center. A building or portion of a building used for recreational, artistic, social, educational, health, culture, or similar activities and services, usually owned and operated by a public or nonprofit group or agency. As part of these functions and activities, it shall be permissible to serve food, subject to other applicable codes and ordinances.

Non-commercial vessel berthing. The use of berthing space for berthing of watercraft other than commercial vessels. Berthing space used in the following manner shall not be included in the calculation of the number of linear feet under this use category:

A. Space used principally for sale or repair of vessels.
B. Commercial vessel tenant space used by a noncommercial vessel for a period not exceeding ten consecutive days while the primary commercial vessel tenant is conducting its business or trade.

Normal high-water line (non-tidal waters). That line which is apparent from visible markings, changes in the character of soils due to prolonged action of the water or changes in vegetation, and which distinguishes between predominantly aquatic and predominantly terrestrial land. Areas contiguous with rivers that support non-forested wetland vegetation and hydric soils and that are at the same or lower elevation as the water level of the river during the period of normal high-water are considered part of the river.

Office park. Separate office buildings planned, constructed, or managed on an integrated coordinated basis.

Off-peninsula. All land located north of I-295.

On-peninsula. All land located south of I-295.

Open space. Any park and any other area outside of a building open to the public.

Owner. Any person that has any interest, legal or beneficial, in any parcel or lot.

Piers, docks, wharves, bridges and other structures and uses extending over or beyond the normal high-water line or within a wetland, temporary. Structures which remain in or over the water for less than seven months in any period of 12 consecutive months.

Piers, docks, wharves, bridges and other structures and uses extending over or beyond the normal high-water line or within a wetland, permanent. Structures which remain in or over the water for seven months or more in any period of 12 consecutive months.

Place of assembly. A building or portion of a building used as a community hall, neighborhood center, private club, or fraternal organization, or place of religious assembly. This definition shall not include buildings or portions of buildings used as a community hall, neighborhood center, private and fraternal organization, or place of religious assembly where 15 or fewer people, not including the permanent residents of a single-family dwelling, assemble.

Place of religious assembly. A building or portion of a building used for religious worship or instruction including, but not limited to, churches, synagogues, masjids, mosques, and other places of worship.

Planned residential unit development (PRUD). A residential subdivision consisting of attached or detached dwellings intended for separate ownership and land to be owned and used in common, with open spaces, recreational areas, access ways, and buildings which are designed, built, and managed in accordance with a unified development plan.

Planned unit development (PUD). A development consisting of either detached or attached single-family dwelling units and commercial or other uses, on substantially-sized properties of greater than 20 acres and designed to be compatible with the surrounding built and natural environment.

Plant canopy. As defined by 28-B M.R.S. § 102.

Preschool facility. Facility which provides a regular program of care and protection for children generally younger than those attending elementary school, which may also encompass daycare facilities.

Private club or non-profit social and recreational facility. A private club or nonprofit social and recreational facility is open exclusively to members and to their bona fide guests accompanying them, in order to promote fellowship, social living, proper recreation, civic responsibility, neighborhood responsibility, community welfare, or other endeavors. It shall be permissible to serve food and meals on such premises provided adequate dining room space and kitchen facility are available and are provided within all regulations of this Land Use Code and other applicable codes and ordinances.

Recent flood plain soils. Recent flood plain soils include the following soil series as described and identified by the National Cooperative Soil Survey: Alluvial. Charles, Cornish, Fryeburg, Hadley, Limerick, Lovewell, Medomak, Ondawa, Podunk, Rumney, Saco, Suncook, and Winooski.

Recreation and amusement centers. Facilities equipped for the conduct of sports or indoor leisure time recreation activities, including games of skill or games of chance licensed either by the City of Portland or by the State of Maine. Such facilities may limit admission either to members or to persons paying an entrance fee.

Registered dispensary. A registered medical marijuana dispensary as defined by 22 M.R.S. § 2422.

Registered patient. As defined by 22 M.R.S. § 2422.

Repair services. Establishments primarily engaged in rendering services related to the maintenance or repair of goods. In industrial zones only, repair services shall include motor vehicle repair services.

Restaurant. Any food service establishment with indoor seating capacity for ten or more patrons.

Retail. Any shop or store offering goods or merchandise to the general public for direct consumption and not for resale, or food service establishment with indoor seating capacity for nine or fewer patrons. Retail shall not include gasoline, diesel, or propane fuel sales.

Roadway. That portion of a street between the regularly established curblines, or that part of a street or alley devoted to vehicular traffic.

Rooming unit. One or more rooms forming a single unit used, or intended to be used, for living and sleeping purposes by an individual or a family, but not designed for food preparation. In a suite of rooms, each room that provides sleeping accommodations shall be counted as one rooming unit for the purpose of this chapter.

Self-storage facility. A fully enclosed building with individual, secured units (accessed with or without supervision) used for the exclusive purpose of storage of non-hazardous business or personal materials.

Sexually explicit. The display or depiction of sex organs during actual or simulated sexual intercourse or sexual acts as defined in 17 A M.R.S. § 251.

Sheltered care group home. A facility which, in addition to providing food and shelter to a defined population of up to 12 individuals, provides guidance or counseling services as a primary function of the facility.

Shore frontage. The length of a lot bordering on a water body or wetland measured in a straight line between the intersections of the lot lines with the shoreline.

Sidewalk. That portion of a street not included in the roadway, and devoted in whole or part to pedestrian traffic.

Site. All contiguous land under the same ownership or control, whether proposed for development or not, except where development is limited to a lot or lots within a subdivision.

Small-scale marijuana caregiver. A registered caregiver who sells or dispenses marijuana to no more than five individual registered patients in any one calendar month; does not process or manufacture marijuana using chemicals or solvents; and cultivates no more than: 1) 250 square feet of plant canopy where located in a single-family dwelling or commercial space; or 2) 125 square feet of plant canopy where located in a dwelling unit within a two-family or multi-family building.

Solar access. Space open to the sun and clear of overhangs or shade, including orientation of buildings and lots to the sun, so as to permit the use of active and/or passive solar energy systems on individual properties.

Solar energy system. A complete assembly consisting of one or more solar collectors and associated mounting hardware or equipment, intended to provide for the collection, storage, and distribution of solar energy for heating or cooling, electricity generation, or solar/thermal hot water systems. Solar energy systems shall include the following:

A. Accessory solar energy system. A system as defined above where power generation is incidental to a principal use, which may take the form of either a building integrated or roof-mounted solar array of any size, or a ground-mounted array occupying less than 1,000 square feet of air-space over ground area.

B. Minor solar energy system. A system as defined above where power generation is considered a principal use, which may take the form of either a building- or roof-mounted solar array of any size, or a ground-mounted system occupying between 1,000 and 9,999 square feet of ground area.

C. Major solar energy system. A system as defined above where power generation is considered a principal use, which may take the form of either a building or roof-mounted solar array of any size, or a ground-mounted system occupying greater than 10,000 square feet of ground area.

Solar energy system, building-integrated. A solar energy system that is an integral part of a principal or accessory building and include, but are not limited to, photovoltaic or hot water systems that are contained within roofing materials, windows, walls, skylights and awnings.

Solar energy system, ground-mounted. Also known as free-standing solar energy systems, a solar energy system that is structurally mounted to the ground. The panels may be stationary or revolving and of any size.

Solar energy system, roof-mounted. A solar energy system in which solar panels are mounted on top of the structure of a roof either as a flush-mounted system or as modules fixed to frames which can be tilted toward the south at an optimal angle.

Sounds, impulse. Sound events characterized by brief excursions of sound pressure, each with a duration of less than 1 second.

Sounds, tonal. Sound waves usually perceived as a hum or whine because their instantaneous sound pressure varies essentially as a simple sinusoidal function of time.

Special needs independent dwelling unit. A dwelling unit developed and managed by a nonprofit organization for habitation by persons with special social, physical or mental needs beyond strictly economic needs. Such persons shall be provided required levels of supervision, care and/or counseling services appropriate to their special needs, and the services shall be provided by either the sponsoring nonprofit agency or through another entity with which the agency has entered into a contractual arrangement.

Sports complex. One or more facilities located on the same parcel of land where athletic events are held and with a combined seating capacity of at least 6,000 seats.

Stockpiling. Any placement or creation of piles or loads of soil, loam, sand, gravel, rock, or other mineral deposits upon a site for the purpose of storage, warehousing, or reserving for future use.

Stormwater retention area. A pond or basin used for the permanent storage of stormwater runoff.

Stormwater detention area. A storage area for the temporary storage of stormwater runoff which does not contain water during non-storm conditions.

Stream. A free-flowing body of water from the outlet of the confluence of two perennial streams as depicted on the most recent edition of a United States Geological Survey 7.5-minute series topographic map, or if not available, a 15-minute series topographic map, to the point where the body of water becomes a river or flows to another water body or wetland within a shoreland area, or any stream designated within a Stream Protection Zone.

Street. A public way established by or maintained under public authority, or a way dedicated to the use of the public and appearing on the official map of the city.

Street line. The line of demarcation between private property and a street.

Street, cul-de-sac or dead end. A street with only one outlet.

Structure. Anything constructed or erected of more than one member having a permanent or semi-permanent location on another structure or in or on the ground, including without limitation buildings, fences, gazebos, signs, antennas, satellite sending or receiving dishes, and swimming pools. Stockpiles shall be considered structures for the purposes of dimensional requirements.

Studios for artists and craftspeople. A facility for the production of arts and crafts products such as paintings, sculpture, or other arts, or the practice of arts such as music or dance, or the production of custom, hand-crafted, or limited production of products such as furniture, wood, clay, and metal products, publications, and similar low-impact arts and crafts activities.

Subdivider. Any individual, firm, association, syndicate, partnership, corporation, trust, or any other legal entity commencing proceedings under these regulations to effect a subdivision of land hereunder for himself, herself, or for another.

Subdivision. As defined in 30 A M.R.S. § 4401 and 4402.

Tasting room. A facility for the sampling of beer, wine, spirits, other alcoholic or non-alcoholic beverages, or food.

Telecommunication tower. Radio masts or tower structures built primarily to hold telecommunication antennas.

Tenant. Any occupant in lawful possession of a rental unit, whether by lease, sublease, or otherwise.

Theater or performance hall. Any establishment devoted to showing motion pictures, or for dramatic, musical, or live performances.

Transient guest. A person who occupies a facility offering accommodations on an overnight basis for compensation and whose actual occupancy is limited to no more than 15 days out of any 60-day period.

Tributary stream. A channel between defined banks created by the action of surface water, which is characterized by the lack of terrestrial vegetation or by the presence of a bed, devoid of topsoil, containing waterborne deposits or exposed soil, parent material or bedrock; and which is connected hydrologically with other water bodies. Tributary stream does not include rills or gullies forming because of accelerated erosion in disturbed soils where the natural vegetation cover has been removed by human activity.

Upland edge of a wetland. The boundary between upland and wetland. For purposes of a coastal wetland, this boundary is the line formed by the landward limits of the salt tolerant vegetation and/or the highest annual tide level, including all areas affected by tidal action. For purposes of a freshwater wetland, the upland edge is formed where the soils are not saturated for a duration sufficient to support wetland vegetation, or where the soils support the growth of wetland vegetation but such vegetation is dominated by woody stems that are six meters or taller.

Use. The purpose for which land or structures thereon is designed, arranged, or intended to be occupied, or for which it is occupied, maintained, rented, or leased.

Utility substation. Any sewage or water pumping station, electric power substation, transformer station, telephone equipment enclosures, or other similar structures owned or operated by a utility.

Vegetation. All live trees, shrubs, ground cover, and other plants including, without limitation, trees both over and under four inches in diameter, measured at four and one-half feet above ground level.

Very low-income household. A household having an income not exceeding 50% of median income for area of residence as set forth in regulations promulgated from time to time by the United States Department of Housing and Urban Development pursuant to 42 U.S.C. section 1437 et seq.

Warehousing, storage, and distribution. The storage of goods, wares, and merchandise in a warehouse from which distribution occurs. May include wholesale use, but not retail or direct sales to consumers.

Watercourse. Any natural or artificial stream, river, creek, ditch, channel, swale, canal, conduit, culvert, drain, waterway, gully, ravine, or wash in which water flows in a definite direction or course, either continuously or intermittently, or which has a definite channel, bed, and banks, and includes any area adjacent thereto subject to inundation by reason of overflow or floodwater.

Water-dependent uses. Those uses that require, for their primary purpose, location on submerged lands or that require direct access to, or location in, coastal or inland waters and which cannot be located away from these waters.

Wetlands (outside of shoreland zones). Those areas which have two or more of the following:

A. A water table at or near the surface during the growing season;
B. Very poorly drained soils, including Sebago mucky peat; or
C. Obligate wetland vegetation.

Very poorly drained soils and obligate wetland vegetation shall be as defined and illustrated in the United States Department of Interior, Fish and Wildlife Service publication of Wetland Plants of the State of Maine (1986).

Wind energy system. A wind energy generator and all associated facilities.

Wind energy system, useful life. The period for which the system has been designed by the manufacturer to operate in a safe manner, including the period during which new parts and refurbishment allow it to continue operating safely.

Wholesale. Sale for resale, not for direct consumption.

Workforce housing unit for rent. A dwelling unit for which:

A. The rent is affordable to a household earning 80% or less than of AMI.
B. The unit is rented to a household earning 80% or less of AMI.
C. The requirements of (A) and (B) above are limited by deed restriction or other legally binding agreement for the applicable length of time in this ordinance.

Workforce housing unit for sale. A dwelling unit for which:

A. The purchase price is affordable to a household earning 80% or less of AMI.
B. The unit is sold to a household earning 80% or less of AMI.
C. The requirements of (A) and (B) above are limited by deed restriction or other legally binding agreement for the applicable length of time in this ordinance.

4 NONCONFORMING USES, STRUCTURES, & LOTS

4.1 CONTINUATION

Any building, structure, lots, or use, that was legally existing at the time of its creation and made nonconforming by the provisions of this Land Use Code or any amendment thereto may be continued although such building, structure, lot, or use does not conform with the provisions of this Land Use Code.

4.2 NONCONFORMING USES

4.2.1 Increase in nonconforming use

A. A structure whose use is wholly nonconforming shall not be altered so as to increase the cubical content or the extent of nonconformity, except as provided for in (C), below.

B. A nonconforming use on premises outside of a building shall not be extended or allowed to occupy additional land area.

C. No alterations, modifications, or additions shall be made so as to increase the cubical content or the degree of nonconforming use, nor shall a nonconforming use be extended to any other part of a structure, unless such extension of a nonconforming use is solely for the purpose of bringing the use into compliance with health or safety codes, or to correct a condition which is determined by the Board of Appeals to constitute a health or safety problem. In either case, the expansion shall be limited to the minimum necessary to accomplish that purpose.

D. Except as expressly provided herein, any alteration, modification, or addition permitted under this subsection shall be in compliance with all other applicable sections of this Land Use Code. Nothing within this subsection shall be construed to permit an increase in the number of units in a building which is nonconforming as to the number of dwelling units or will become nonconforming as a result of such alteration, modification, or addition.

4.2.2 Change of nonconforming use

When a nonconforming use has been changed to a permitted use, it shall not thereafter be changed back to any non-permitted use. For purposes of this subsection, a use shall be deemed to have been so changed when an existing nonconforming use is terminated and a permitted use is commenced and continued for a period of seven days. Any change of use in violation of this article shall be deemed to be an abandonment of the lawfully existing nonconforming use. A lawful nonconforming use shall not be changed to any use other than a use permitted in the zone in which the use is located or to any use other than a nonconforming use of a more restricted zone, as set forth in the following schedule, provided that in no such case shall any structural alterations be made in any building except those required by law, ordinance, or other regulations:

A. In a mixed-use zone, from any use permitted in an industrial zone to any use permitted in a mixed-use zone.

B. In a B-1/B-1b zone, from any use permitted in a B-3 zone to any use permitted in a B-2 zone.

C. In a residential zone, from any use permitted in a B-2 zone to any use permitted in a B-1/B-1b zone.

D. In a residential zone, from any use permitted in any other residential zone to any use permitted in a more restrictive residence zone. For the purpose of this subsection, an R-6 zone shall be

deemed the least restrictive and an R-1 zone shall be deemed the most restrictive, with the intervening zones restricted in order of zone number.

4.2.3 Discontinuance of use of land

A nonconforming use of land where no buildings or only incidental or accessory buildings are employed together with such use shall not be changed to any other nonconforming use, and if such use is discontinued for a period of 90 days, it shall not be reestablished.

4.2.4 Discontinuance of use of property

If a legally nonconforming nonresidential use is discontinued for a period of 12 months or if a legally nonconforming residential use is discontinued for a period of 24 months, such discontinuance shall constitute an abandonment of the use and the property shall not thereafter be occupied or used except in conformity with the provisions of this article. A nonconforming use of land which is incidental or accessory to such nonconforming use shall be considered as being discontinued at the same time as the nonconforming use of the structure. In cases of foreclosure or similar situations involving a legally nonconforming use, the Planning Authority shall be authorized to extend the aforementioned period up to an additional five years provided that the extension is for good cause and the minimum length considered necessary to resume the legally nonconforming use of the structure. If the Planning Authority extends the period for resuming the nonconforming use, any associated existing nonconformities of structures and land shall also be extended. For buildings in the Shoreland Zone, state regulations may also govern and provide for a shorter period of time for nonconforming properties.

4.3 NONCONFORMING LOTS

4.3.1 Lots of record

A. A lot of record that has been held in separate and distinct ownership from adjoining lots as of the relevant date below shall be considered a buildable lot if it meets the following minimum standards:

1. A lot of record as of June 5, 1957 may be considered a buildable lot in the R-1, R-2, R-3, R-4, R-5, R-5a, or R-6 zones provided that: a) the applicable setback dimensions can be met; b) the lot has a minimum street frontage of 40 feet or the applicable street frontage of the zone, whichever is less; and c) the lot has a minimum lot size of 5,000 square feet or the applicable minimum lot size of the zone, whichever is less.
2. A lot of record as of June 5, 1984 may be considered a buildable lot in the R-1, R-2, R-3, R-4, R-5, R-5a, or R-6 zones provided that the applicable setback dimensions can be met.
3. A lot of record as of July 15, 1985 may be considered a buildable lot in the IR-1 and IR-2 zones, provided that the applicable setback dimensions can be met and provided further that a lot in the IR-1 zone has a minimum lot area of 10,000 square feet and a lot in the IR-2 zone has a minimum lot area of 6,500 square feet unless the lot is served by both public sewer and public water, in which case the lot has a minimum area of 5,000 square feet.

B. A lot of record that has been held in common ownership with any adjoining lot(s) at any point after the relevant date below shall be considered a buildable lot only if: 1) none of the lot(s) are in the Shoreland Zone; 2) any existing structure meets, or will be modified to meet, the applicable setback dimensions; and 3) it meets the following minimum standards:

1. A lot of record as of June 5, 1957 may be considered a buildable lot in the R-1, R-2, R-3, R-4, R-5, R-5A, or R-6 zones provided that: a) the applicable setback dimensions can be met; b) the lot has a minimum street frontage of 40 feet or the applicable street frontage of the zone, whichever is less; and c) the lot has a minimum lot size of 5,000 square feet or the applicable minimum lot size of the zone, whichever is less.
2. A lot of record as of June 5, 1984 may be considered a buildable lot in the R-1, R-2, R-3, R-4, R-5, R-5A, or R-6 zones provided that the applicable setback dimensions can be met.
3. So long as the setbacks are met, any nonconformities of structures and buildings, existing prior to June 5, 1957, on developed lots of record shall be considered lawfully existing nonconformities.

4.4 NONCONFORMING BUILDINGS/STRUCTURES

4.4.1 Restoration or reconstruction

A. A lawful nonconforming nonresidential structure may be maintained, repaired, or reconstructed in kind within a one-year period or within a two-year period for a lawful nonconforming residential structure, but no alterations, modifications, or additions shall be made to it, except as provided in Subsections 4.4.2 and 4.4.3.

B. A nonconforming structure damaged by fire, explosion, flood, riot, act of the public enemy, accident of any kind, decay, or otherwise may be maintained, repaired, reconstructed, restored or rebuilt only where:

1. The restoration or reconstruction is of a building which is lawfully nonconforming only as to lot area, setbacks, or any other dimensional requirements.
2. Where the restoration or reconstruction will occur entirely within the existing footprint and previous shell of the building and where no alterations, modifications, or additions will be made except as provided in this article and as permitted in Subsections 4.4.2 and 4.4.3.
3. Restoration or reconstruction is commenced within one year for a nonconforming nonresidential structure, or two years for a nonconforming residential structure, of the initial damage where such damage is sudden and accidental and is diligently pursued to completion without expiration of permits. For buildings in the Shoreland Zone, state regulations may also govern and provide for a shorter period for restoration or reconstruction of nonconforming structures.
4. Restoration or reconstruction necessitated by decay must be commenced within one year of the demolition of the building and diligently pursued to completion without expiration of permits.

5. Any reconstruction, under this provision, in the R-6 zone on a lot with 10,000 square feet or less, other than the exact restoration of a previously existing building on the site, shall comply with the applicable standards contained within the City of Portland *Design Manual*.

4.4.2 Alteration or modification

Alteration or modification may be made to a building which is lawfully nonconforming as to any dimensional requirement where the proposed changes in existing exterior walls and/or roofs would be within the space occupied by the existing shell of the building, and would not create any new nonconformity nor increase any existing nonconformity, except as provided elsewhere in this article and as permitted under Subsection 4.4.3. This subsection shall not apply to buildings located within the Shoreland Zone and existing on June 15, 1992, which are nonconforming only as to setbacks from wetlands, tributary streams, or other water bodies, which shall be regulated in accordance with Subsection 4.4.5.

4.4.3 Building extensions

Existing principal buildings which are lawfully nonconforming as to dimensional requirements may be enlarged subject to the following provisions:

A. No modification to an existing nonconforming building shall increase any existing nonconformity of a lot, use, or structure, except as provided in (D) below.

B. No modification to an existing nonconforming building shall create new noncompliance with any provision of this Land Use Code.

C. Existing buildings that are lawfully nonconforming as to required minimum setbacks may be vertically or horizontally expanded provided that the area of expansion meets all current dimensional requirements, except as provided in (D) below.

D. A vertical expansion above a portion of a building that is lawfully nonconforming as to minimum setbacks may be permitted a one-time increase of one additional story provided that:

1. No portion of the expansion horizontally extends beyond the nonconforming portion of the first story of the structure.
2. Any portion of a vertical expansion above the permitted one additional story shall meet the required minimum setback.

4.4.4 Enclosure of porches in required setbacks

Any open porch existing with a roof over the same on June 5, 1957, and encroaching upon any setback required by this chapter may be enclosed if the major portion of the enclosure is of glass.

4.4.5 Expansions in the Shoreland Zone

A nonconforming structure may be added to or expanded if such addition or expansion does not increase the nonconformity of the structure and is in accordance with the following provisions:

A. After January 1, 1989, if any portion of a structure is less than the required setback from the normal high water line of a water body or tributary stream or the upland edge of a wetland that portion of the structure shall not be expanded, as measured in floor area or volume, by 30% or more, during the lifetime of the structure. If a replacement structure conforms with the requirements of this subsection, and is less than the required setback from a water body, tributary stream, or

wetland, the replacement structure may not be expanded if the original structure existing on January 1, 1989 had been expanded by 30% in floor area and volume since that date.

B. Whenever a new, enlarged, or replacement foundation is constructed under a nonconforming structure, the structure and new foundation must be placed such that the setback requirement is met to the greatest practical extent as determined by Building Authority, basing its decision the criteria specified in (C) below. If the completed foundation does not extend beyond the exterior dimensions of the structure, except for expansion in conformity with (A) above, and the foundation does not cause the structure to be elevated by more than three additional feet as measured from the uphill side of the structure (from original ground level to the bottom of the first floor sill), it shall not be considered to be an expansion of the structure.

C. A nonconforming structure may be relocated within the boundaries of the parcel on which the structure is located, provided that the site of the relocation conforms to all setback requirements to the greatest practical extent as determined by the Building Authority, and provided that the applicant demonstrates that the present subsurface sewage disposal system meets the requirements of state law, the State of Maine Subsurface Wastewater Disposal Rules, or that a new system can be installed in compliance with state law, such rules, and all applicable chapters of the City of Portland Code of Ordinances. In no event shall a structure be relocated in a manner that causes the structure to be more nonconforming. In determining whether the building relocation meets the setback requirements to the greatest practical extent, the Building Authority shall consider the size of the lot, the slope of the land, the potential for soil erosion, the location of other structures on the property and on adjacent properties, the location of septic system and other on site soils suitable for septic systems, and the type and amount of vegetation to be removed to accomplish the relocation. When it is necessary to remove vegetation within the water or wetland setback are in order to relocate a structure, the Building Authority shall require replanting of native vegetation to compensate for the destroyed vegetation. In addition, the area from which the relocated structure was removed must be replanted with vegetation. Replanting shall be required as follows:

1. Trees removed in order to relocate a structure must be replanted with at least one native tree, three feet in height, for every tree removed. If more than five trees are planted, no one species of tree shall make up more than 50% of the number of trees planted. Replaced trees must be planted no further from the water or wetland than the trees that were removed.
2. Other woody and herbaceous vegetation and ground cover that are removed or destroyed in order to relocate a structure must be re-established within the setback area. The vegetation and/or ground cover must consist of similar native vegetation and/or ground cover that was disturbed, destroyed or removed.
3. Where feasible, when a structure is relocated on a parcel the original location

of the structure shall be replanted with vegetation which may consist of grasses, shrubs, trees, or a combination thereof.

D. Buildings in existence on January 1, 1989, and located in the Shoreland Zone may be expanded once during the lifetime of the structure up to 25 feet toward a freshwater wetland or tributary stream, provided that a minimum setback of 40 feet is maintained and that the existing floor area or volume is not increased by more than 30%, and shall not create any undue environmental impact or flood-prone condition.

4.4.6 Nonconformity as to number of dwelling units

A. **Purpose.** The purpose of this provision is to establish a process whereby certain dwellings which contain more dwelling units than the number permitted by the applicable provisions of the Land Use Code may be recognized as legal, nonconforming uses.

B. **Application.** Application for validation of such nonconforming dwelling units shall be on a form provided by the Building Authority, and will be accompanied by:

1. An application fee as established by the City Council to cover administrative costs.
2. A plan, drawn to scale, which shows the location of the building(s) on the lot, parking, easements, dumpsters, fencing, public ways, and any other significant feature.
3. A floor plan for each unit in the dwelling, whether or not it is the subject of the application.

C. **Eligibility.** In order for a nonconforming dwelling unit to be validated by administrative action of the Building Authority as authorized herein, the Building Authority must find, based on competent evidence, supported by public records, that:

1. The nonconforming dwelling units were either in existence April 1, 2005, or the structure in which they are located was originally designed to accommodate more than the number of such units presently in use.
2. The applicant neither constructed nor established the nonconforming dwelling units.
3. The nonconforming dwelling units comply with or can be made to comply with current standards of Chapter 10 of the City of Portland Code of Ordinances, including the National Fire Protection Association Life Safety Code and the National Fire Protection Association 1: Fire Prevention Code, as amended.
4. Each of the nonconforming dwelling units complies with, or can be made to comply with, provisions of the Chapter 6 of the City of Portland Code of Ordinances, as amended, including, but not limited to, the minimum standards for space and occupancy, the minimum plumbing standards, and the minimum ventilation standards.
5. The structure containing the nonconforming dwelling units is located in the R-3, R-4, R-5/R-5a, R-6/R-6a, R-7, B-1/B-1b, B-2/B-2b/B-2c, or IS-FBC zones.

In the absence of legally competent evidence, supported by records (such as, but not limited to, Assessor's records, purchase and sale agreements, affidavits, deeds, mortgages, as

well as reliable secondary sources), that the conditions of (C)(1), (2), (3), (4), or (5) above can be met, the Building Authority may not approve the application, but shall advise the applicant that the matter may be appealed to the Board of Appeals.

D. **Notice to abutters**. Upon receipt of a completed application, the Building Authority will provide the owners of abutting properties and the owners of property situated within 300 feet of the structure notice of the application, along with a notice that they may object to the Building Authority's acting on the application and require the applicant to appeal to the Board of Appeals. The notice shall advise the abutters and owners of property within 300 feet that any objection must be submitted in writing to the Building Authority within 10 days of the date of the notice sent to them. The failure of any property owner to receive the notice described above shall not invalidate any action by the Building Authority. The Building Authority shall promptly notify the applicant of receipt of the objection, that the Building Authority is without authority to proceed, and advise the applicant that, within 30 days from receipt of the letter, an application may be filed to have the matter reviewed by the Board of Appeals as a conditional use.

E. **Approval of application.** The Building Authority may approve the application, provided that the evidence presented satisfies all of the requirements of this subsection and provided that no abutter nor person entitled to notice has requested that the application be referred to the Board of Appeals, instead of the Building Authority. Upon approval of the application, final inspection by the Building Authority certifying the units as in compliance with all applicable codes, and receipt of an inspection fee as established by the City Council for each nonconforming dwelling unit which has been recognized as a lawful, nonconforming use, the Building Authority will issue a certificate of occupancy.

F. **Disapproval of application.** In the event the application is not approved by the Building Authority or in the event of a timely objection filed by a person qualified herein to file such an objection, the applicant, within 30 days from the decision of the Building Authority or objection, may appeal the matter to the Board of Appeals as a conditional use.

G. **Action by Board of Appeals.** The Board of Appeals shall treat applications filed under this subsection as an application for a conditional use, applying the standards applicable to conditional uses under Section 6.5 as well as the requirements of this subsection.

H. **Dimensional and parking requirements**.In making decisions under this subsection, neither the Building Authority nor the Board of Appeals shall apply the dimensional or parking requirements which would otherwise apply in the zones where the nonconforming dwelling units are situated.

I. **Exclusions.** The provisions of this subsection shall not apply to rooming units, but shall apply to efficiency apartments under Chapter 6 of the City of Portland Code of Ordinances. The Board of Appeals is without jurisdiction to grant any relief (including, but not limited to, variances) which would recognize the particular dwelling units which are the subject of this subsection as legal, nonconforming uses,

except in strict compliance with each requirement of this subsection.

J. **Prior judicial and administrative action.** Decisions of any court or administrative body, including but not limited to, the Building Authority, the Planning Board, or the Board of Appeals, made prior to the effective date of this subsection and which addressed the number of nonconforming dwelling units in a particular structure, will not bar relief under this subsection.

5 ZONES

5.1 ESTABLISHMENT OF ZONES

In order to carry out the provisions of this Land Use Code, the City of Portland shall be divided into the zones in Table 5-A.

5.2 ZONING MAP

5.2.1 Zoning map adopted

The zones in Table 5-A are shown upon a map filed in the Department of Planning and Urban Development. Such zoning map, with amendments, is hereby adopted as the official zoning map of the City of Portland and as part of this Land Use Code.

5.2.2 Zone boundaries when uncertain

Where uncertainty exists with respect to the boundaries of the various zones, as shown on the zoning map, the following rules shall apply:

A. Unless otherwise indicated, zone boundary lines are the center lines of streets, alleys, parkways, waterways, or rights-of-way of public utilities and railroads or such lines extended.

B. Unless otherwise shown, lines within blocks less than 200 feet wide are median lines between their sides, and lines within blocks 200 feet or more wide are 100 feet distant from the less restricted side of the block.

C. The depictions of the Shoreland Zone and Stream Protection Zone on the zoning map are illustrative of the general location of such zones. The actual boundaries of these zones shall be determined by measurement of the distance indicated on the map and in this Land Use Code from the normal high-water line of the water body or the upland edge of wetlands. Where such measurement is not the same as the location of the boundary of the zoning

map, the measurement shall control, unless the zoning map indicates that the zone boundary shall follow an existing property line.

5.2.3 Extension of zone lines

Where a zone boundary line divides a lot in single or joint ownership of record at the time such line is established, the provisions of this Land Use Code for the less restricted portion of such lot shall extend not more than 30 feet into the more restricted portion, provided that the lot has at least 20 feet of street frontage in the less restrictive zone when taken together with adjacent premises which are under the same or equivalent ownership or control. If such boundary line divides a business or industrial zone from a residential zone, no frontage on a street other than the principal business street in the less restrictive zone may be taken into consideration in connection with the right herein granted. This subsection shall not apply to differing dimensional requirements, including height, within a zoning district.

5.3 CONDITIONAL OR CONTRACT ZONING

5.3.1 Authority and purpose

Pursuant to 30-A M.R.S.§ 4352(8), conditional or contract zoning is hereby authorized for rezoning of property where, for reasons such as the unusual nature or unique location of the development proposed, the City Council finds it necessary or appropriate to impose, by agreement with the property owner or otherwise, certain conditions or restrictions in order to ensure that the rezoning is consistent with the City's Comprehensive Plan. Conditional or contract zoning shall be limited to where a rezoning is requested by the owner of the property to be rezoned. The conditional or contract zoning must be consistent with the Comprehensive Plan, and rezoned areas must be consistent with the existing and permitted uses within the original zone. Nothing in this section shall authorize either an agreement to change or retain a zone or a rezoning which is inconsistent with the City's Comprehensive Plan.

5.3.2 In the I-H zone

A conditional or contract rezoning shall only be approved in the I-H or I-Hb zones if, after public hearing and opportunity for public comment, the reviewing body finds that the applicant has carried the burden of proof to show that the proposed development meets the following standards:

A. The proposed development is consistent with the Comprehensive Plan.
B. The proposed development is consistent with the purposes of the underlying zone.
C. The proposed development is designed and operated so that it will prevent undue adverse environmental impacts, substantial diminution of the value or utility of neighboring structures, or significant hazards to the health or safety of neighboring residents by controlling noise levels, emissions, traffic, lighting, odors, and any other potential negative impacts of the proposal.
D. All plans must include complete information of processes, materials, or methods of storage to be used by the development and shall specify how hazardous impacts to neighboring properties will be prevented.

5.3.3 Hearing

The Planning Board shall conduct a public hearing in accordance with Section 2.1.8 prior to any property being rezoned under this section.

5.3.4 Conditions and restrictions

Conditions and restrictions imposed under the authority of this section shall relate only to the physical development and operation of the property and may include, by way of example:

A. Limitations on the number and types of uses permitted.
B. Restrictions on the scale and density of development.
C. Specifications for the design and layout of buildings and other improvements.
D. Schedules for commencement and completion of construction.
E. Performance guarantees securing completion and maintenance of improvements, and guarantees against defects.
F. Preservation of open space and buffers, and protection of natural areas and historic sites.
G. Contributions toward the provision of municipal services required by the development.
H. Provisions for enforcement and remedies for breach of any condition or restriction.

5.3.5 Amendments

Except as expressly modified in any contract or conditional rezoning agreement, the use and occupancy of any property within the City of Portland used or occupied pursuant to a contract or conditional rezoning agreement otherwise shall be governed by and comply with the provisions of the Land Use Code of the City of Portland and any applicable amendments thereto or replacement thereof.

5.3.6 Enforcement

Notwithstanding language in any contract or conditional zoning to the contrary, any violation of a conditional or contract zone shall be enforced pursuant to 30-A M.R.S. § 4452, as may be amended from time to time, or in any other manner available by law. No alleged violation of a contract or conditional rezoning may be prosecuted until the City has delivered written notice of the alleged violation(s) to the owner or operator of the property that is subject to the contract or conditional rezoning and given the owner or operator an opportunity to cure the violation(s) within 30 days of receipt of the notice. In addition, if such an enforcement action should result in a finding that the terms of the conditional or contract zone have been violated, then the City may act to modify or rescind the conditional or contract zone and to rezone the property.

5.4 BASE ZONE PURPOSE STATEMENTS

Base zone purpose statements shall be as established in Tables 5-B to 5-G.

TABLE 5-B: RESIDENTIAL ZONE PURPOSE STATEMENTS

R-1	To provide for lower density residential development characterized by single-family homes on individual lots in outlying areas of the city and along traffic corridors with limited additional traffic capacity.
R-2	To provide for low-density residential development characterized by single-family homes on individual lots in outlying areas of the city and along traffic corridors with limited additional traffic capacity.
R-3	To provide for medium-density residential development characterized by single-family homes on individual lots and also to provide for planned residential unit developments on substantially sized parcels.
R-4	To preserve the unique character of the Western Promenade area of the city by controlling residential conversions and by allowing the continued mix of single-family, two-family, and low-rise multi-family dwellings and other compatible development at medium densities.
R-5	To provide appropriate areas of the city for medium-density residential development characterized by single-family, two-family and low-intensity multifamily dwellings on individual lots; to ensure the stability of established medium-density neighborhoods by controlling residential conversions; and to provide for planned residential unit development on substantially-sized parcels.
R-5a	To provide for moderate-density residential development in off-peninsula locations that can provide a unique residential living experience with a high degree of natural site amenities; and to provide areas of the city in the general proximity of the peninsula that have the capability for adequate municipal services, including traffic corridors with adequate traffic capacity, that can appropriately accommodate a more intensive use of land than other lower-density zoned land and be compatible with surrounding neighborhoods; and to increase affordable housing opportunities in off-peninsula locations by providing a moderate-density zone.
R-6	To set aside areas on the peninsula for housing characterized primarily by multi-family dwellings at a high density providing a wide range of housing for differing types of households; to conserve the existing housing stock and residential character of neighborhoods by controlling the scale and external impacts of professional offices and other nonresidential uses; and to encourage new housing development consistent with the compact lot development pattern typically found on the peninsula.
R-6a	To encourage neighborhood livability with higher density multi-family housing on large parcels located off the peninsula along major public transportation routes, near service areas, and in redevelopment (underutilized) or infill areas.

TABLE 5-C: ISLAND ZONE PURPOSE STATEMENTS

IR-1	To provide for low-intensity residential, recreational, and rural uses in the less developed areas of the islands in order to preserve the rustic character of the islands, to protect groundwater resources and natural and scenic areas, and to permit only appropriate low-intensity development in areas lacking adequate public facilities and services.
IR-2	To protect the character of existing developed residential neighborhoods on the islands and to allow infill where there are adequate public services. Expansion or extension of an existing IR-2 zone should be strictly limited, generally focused toward areas adjacent to existing village IR-2 areas, and restricted by such factors as adequacy of access, whether adequate water will be available for private use and for fire protection, and whether soils in the area are adequate for subsurface water disposal or whether public sewers are available. IR-2 rezoning on substantially sized parcels should not be considered for those sites that should be more appropriately zoned otherwise.
IR-3	To allow for a planned unit development in a manner compatible with both the natural and built environment, which provides for adequate circulation and waterfront access, adequate water supply for private use and fire protection, and safe and clean disposal of solid and septic wastes. The following guidelines shall be considered, among others, in establishing an IR-3 zone: A. An IR-3 zone should have a minimum land area of 20 acres. B. A site for an IR-3 zone should be able to accommodate higher density development by providing buffers from surrounding areas on a substantially-sized parcel for which natural amenities are capable of being conserved in a development plan for the site. C. IR-3 zones should not be established unless issues of municipal services, including infrastructure, education, and police and fire services and other municipal services can be appropriately and adequately addressed. D. The differences in scale and intensity of uses between existing development and the IR-3 zone, and the cumulative impact on the overall density of the island, should be mitigated by appropriate open space and buffer areas. E. The development plan should have the capability of meeting the development review standards of the zone.
I-B	To provide limited areas on the islands for retail and service establishments that primarily serve the needs of the local island market area.

TABLE 5-D: MIXED-USE ZONE PURPOSE STATEMENTS

B-1	To provide limited areas for the location of small-scale commercial establishments intended to serve a local market. Uses that are complimentary, quiet, and generally do not disturb the comfort and enjoyment of the adjoining neighborhood environment are encouraged, and should be designed for the pedestrian scale and to provide convenient access for nearby residents and workers to walk in to purchase goods and services. Buildings and uses shall be designed with attractive storefronts or similar features, with windows and doors convenient to a public sidewalk. This zone encourages mixed-use buildings, such as commercial first floor with residential uses above or combined retail/office uses in a multi-story structure. The zone also provides the opportunity for high residential density. Suitable locations for this zone may include street intersections and arterial streets with existing or proposed traditional neighborhood retail and service uses.
B-1b	To provide appropriate opportunities for the establishment of small-scale ground floor commercial uses to serve a local market, while supporting mixed-use buildings with residential uses above ground floor commercial space and on the ground floor where the principal street frontage is maintained for active commercial uses. The zone also provides the opportunity for mixed use and high residential density. Suitable locations for this zone may include street intersections, arterial streets, and sites with existing or traditional neighborhood retail and service uses.
B-2	To provide appropriate locations for the development and operation of community centers offering a mixture of commercial uses, housing, and services serving the adjoining neighborhoods and the larger community. The variety, sites, and intensity of the permitted commercial uses in the B-2 zone are intended to be greater than those permitted in the B-1/B-1b zones. The zone provides a broad range of goods and services with a mixture of large and small buildings, such as grocery stores, shops and services located in major shopping centers and along arterial streets. Such establishments should be readily accessible by automobile, by pedestrians and by bicycle. Development in the B-2 zone should relate to the surrounding neighborhoods by design, orientation, and circulation patterns. The zone should provide locations for moderate to high-density housing in urban neighborhoods along arterials.
B-2b	To provide neighborhood and community retail, business and service establishments that are oriented to and built close to the street. The B-2b zone is appropriate in areas where a more compact urban development pattern exists or where a neighborhood-compatible commercial district is established which exhibits a pedestrian scale and character. Such locations may include the peninsula and other arterials and intersections with an existing urban or neighborhood-oriented building pattern. The B-2b should provide locations for moderate to high-density housing in urban neighborhoods along arterials.
B-2c	To protect and enhance the quiet enjoyment of adjoining residential neighborhoods from the impacts of businesses that serve liquor and from other uses that are incompatible with adjoining neighborhoods due to noise.
B-3 & B-3b	To maintain and enhance the role of the downtown as the business and commercial center of the region; to enhance and promote the orderly expansion of retail and service businesses downtown, satisfying the related needs of the city's resident, working, and visitor populations; to encourage increased housing opportunity downtown for a diverse residential population; to enhance the pedestrian environment through the encouragement of intensive mixed-use activities, through the enhancement and maintenance of public and private open space, and through the enlivenment and increased attractiveness of the street environment; to encourage excellence in urban design; to preserve and capitalize on the unique character and historic fabric of the downtown through the encouragement of reuse of significant existing structures; to provide opportunity for an enhanced presence and integration of the arts and cultural activities; to reinforce the role of the downtown as a meeting place for community residents and visitors alike from all walks of life and all socio- economic groups; to provide adequate parking and transportation facilities which promote accessibility, enhance and encourage development opportunity, and enhance and protect the pedestrian environment; In the Pedestrian Activities District (PAD) Overlay Zone, to create continuity of pedestrian-oriented uses along streets where such uses predominate and along streets which, over time, will establish and maintain a strong retail and pedestrian-oriented use pattern; and to provide for the relocation of residents who are displaced by development.

TABLE 5-D (CONT.): MIXED-USE ZONE PURPOSE STATEMENTS

B-3c	In addition to the purpose of the B-3 and B-3b zone, to promote the safety, quiet enjoyment, and general welfare of citizens residing in a dense urban neighborhood by decreasing the conflicts between residential uses and loud late-night activities. The B-3c zone recognizes that the business uses appropriate in this zone are constrained by the proximity of multi-unit elderly housing.
B-4	To provide appropriate locations in the city for the development and operation of businesses catering primarily to highway-oriented trade along major arterials (uses which have market areas which are primarily dependent on the regional highway network or serve a regional or larger market), as well as to provide appropriate locations for large-scale commercial uses that require larger land areas to accommodate their operations.
B-5 & B-5b	To provide areas of the peninsula near the downtown where a mixture of uses, including marine, industrial, commercial, and residential, is encouraged. The B- 5 and B-5b zones are characterized by larger underdeveloped lots with great potential for denser, clustered, urban mixed-use development and more efficient reuse of existing land and buildings. It is anticipated that the dense, mixed-uses of the B-5 and B-5b zones will rely on a shared infrastructure system, including service alleys, parking lots, public transportation facilities, stormwater management, and driveways.
B-6	To establish a zoning district for the upland portion of the Eastern Waterfront area. The B-6 zone encourages this district to acquire a distinctly urban form through development that emphasizes a quality pedestrian experience, promotes public transit, and demonstrates exemplary urban design. The zone promotes a range of uses to achieve 24-hour urban vitality and shared use of parking infrastructure as recommended in the Eastern Waterfront Master Plan for redevelopment. The B-6 zone promotes a mixed-use development pattern envisioned for urban land on Portland's peninsula.
B-7	To establish a zoning district for urban areas in which the City has adopted master plans for redevelopment. Certain areas, including but not limited to Bayside, lie at the perimeter of the established downtown and contain significant redevelopment opportunities. The B-7 zone encourages these districts to acquire a distinctly urban form through dense development featuring a mix of uses such as housing, retail, offices, research and development, and artisan studios and that emphasizes a quality pedestrian experience, promotes public transit, and demonstrates exemplary urban design. Use of multi-modal transportation is strongly encouraged and is advanced by the installation of bicycle amenities, such as bicycle racks and storage areas. The zone promotes a wide range of uses in high quality structures and public open spaces to achieve 24-hour urban vitality and shared parking infrastructure. The B-7 zone promotes a mixed-use development pattern envisioned on Portland's peninsula.

TABLE 5-E: OFFICE ZONE PURPOSE STATEMENTS

O-P	To provide substantial areas for integrated development of offices in a park- or campus-like setting which are of the highest quality, are well-designed and maintained, and are compatible with their natural surroundings.
R-P	To provide appropriate location for the development and operation of low-intensity business uses, including offices on or near major arterials, that are compatible in scale, density and use with surrounding and adjacent residential neighborhoods; or to serve as a transition or buffer zone between residential and more intensive nonresidential zones.

TABLE 5-F: INDUSTRIAL AND AIRPORT ZONE PURPOSE STATEMENTS

I-L & I-Lb	To provide areas in which low-impact industrial uses, and limited other uses serving employees and residents of the surrounding neighborhood, will be compatible with adjacent residential uses, will provide a buffer between residential neighborhoods and higher impact industrial zones, or will stand alone as a smaller scale industrial district. The I-L zone is located adjacent to residential neighborhoods, business uses and other industrial uses where the low-intensity nature of the uses, as well as their strict performance standards, will ensure the compatibility of the uses with other adjacent industrial and nonindustrial uses. Performance standards for uses in the I-L zone are designed to maintain compatibility between low impact industrial uses and neighboring nonindustrial and industrial uses.
I-M, I-Ma, & I-Mb	To provide zones in areas of the city in which low- and moderate-impact industries and transportation-related uses will coexist. I-M and I-Ma zones are located on arterials or collectors. The I-Mb zone is similarly located on the peninsula. These locations provide for direct access onto arterials, thereby protecting residential neighborhoods from drive-through traffic. The purpose of the I-M, I-Ma and I-Mb industrial zones is also to provide for larger industrial buildings and for the limited or controlled use of areas outside of structures for storage of materials and machinery. These facilities often require large volumes of imported materials and products which result in large volumes of shipping and receiving. Often uses may be highway-oriented and transportation-related, thus relying on citywide and regional transportation infrastructure. Industrial uses in these moderate-impact industrial zones may require separation from higher-impact uses.
I-H & I-Hb	To provide areas suitable for higher impact industrial uses than are permitted in other industrial zones and other uses that are capable of demonstrating, through design, layout and topography, their compatibility with, or non-intrusion on, existing or future higher impact industrial uses on adjacent or neighboring I-H zoned properties. Due to the intensity of use, the I-H zones are intended for uses which may require extensive outdoor storage and usage and may utilize heavy equipment. Processes may require separation from residential or sensitive environmental areas. The I-H zones are separated from other nonindustrial uses as well as natural or constructed features. High-impact industrial uses will be of a higher intensity, with a greater lot coverage, than the other zones.
A-B	To provide an area for the development of airport-related enterprises. Appropriate uses permitted in this zone are those customarily associated with the operation of the airport terminal and individual airlines and accessory uses to provide for the comfort and convenience of the airport's patrons and employees.

TABLE 5-G: OPEN SPACE ZONE PURPOSE STATEMENT

R-OS	To preserve and protect open space as a limited and valuable resource; to permit the reasonable use of open space, while simultaneously preserving and protecting its inherent open space characteristics to assure its continued availability for public use as scenic, recreation, and conservation or natural resource area, and for the containment and structuring of urban development; to provide a suitable location for large-scale regional sports and athletic facilities; and to develop an open space system throughout the city, which provides the highest quality parks, plazas, and pedestrian environment. The R-OS zone may include parcels of public property and private property legally restricted from intensive use or development through deed, covenant, or otherwise.

6 USE STANDARDS

6.1 APPLICABILITY

The use of buildings, structures, and land are governed by this article, except when superseded by other applicable laws or ordinances. It is the intent that, when in doubt, this article should be interpreted to accommodate the goals of the City's Comprehensive Plan and other plans.

6.2 DETERMINATION OF USE

6.2.1 Use tables

Tables 6-A to 6-F shall determine if a use is permitted (●), conditional (◐), or not permitted ( ), as a principal use within a zone. Unless otherwise noted, where a use is listed in terms of square footage, square footage figures shall correspond to the total floor area of the use.

6.2.2 Unlisted uses

A. Uses not expressly listed as permitted or conditional in Tables 6-A to 6-F are prohibited as principal uses except that a use may be permitted subject to meeting the following performance-based standards:
   1. The proposed use is consistent with the purposes of the zone.
   2. The proposed use is closely related to a permitted or conditional use in terms of character, scale, and external impacts.
   3. The buildings and structures associated with the proposed use are designed and operated so that it will prevent undue adverse environmental impacts, substantial diminution of the value or utility of neighboring structures, or significant hazards to the health or safety of neighboring residents by controlling noise levels, emissions, traffic, lighting, odor, and any other potential negative impacts.

B. The review authority shall determine whether the uses not listed as permitted or conditional uses meet the above standards. If it is determined that the use does not meet the above criteria, it shall not be permitted.

C. The review authority may impose reasonable conditions of approval on the proposed use to ensure that it is similar in character and impact to a permitted or conditional use.

6.2.3 Multiple uses

A site may contain more than one principal use, so long as each principal use is allowed within the zone.

6.3 CHANGE OF USE

A change of use from one use in these tables to another is governed by the requirements of the new use. The use of any part of any building, structure, or property shall not be changed to any other use, whether principal or accessory and whether alterations in the building, structure, or property are involved or not, until a permit and certificate of occupancy authorizing such change of use has first been secured from the Building Authority in accordance with Chapter 6 of the City of Portland Code of Ordinances.

[1] Permitted if permitted in the adjacent or nearest residential zone. In other cases, permitted if located above first floor commercial, or on first floor where a minimum depth of 25 ft. along the principal frontage is maintained for commercial use.
[2] Permitted on the ground floor only in the B-1b zone.
[3] Permitted in the B-2 and B-3 zones only.
[4] Permitted as a conditional use in the B-2 only. Expansion of auto service stations in existence as of 11/15/99 permitted as a conditional use in the B-2b and B-2c zones.
[5] Not permitted in the B-2c and B-3c zones.
[6] Permitted in the B-2 zone. Conditional in the B-2b and B-2c.
[7] Permitted only if an expansion of an existing dairy.
[8] Permitted with a retail component only. Low-impact industrial uses greater than 10,000 SF are permitted in the B-2 only.
[9] Printing and publishing of 10,000 SF or less, or expansion of printing and publishing establishments greater than 10,000 SF in existence as of 4/4/88, shall be treated as a conditional use.
[10] Permitted in the B-2/B-2b/B-2c as a conditional use if 10,000 SF or less. Self-storage permitted in the B-4 zone. Self-storage permitted as a conditional use in the B-5 zone (on-peninsula locations only) in buildings existing as of 12/16/15. Self-storage permitted as a conditional use in the B-3 zone in buildings existing as of 1/1/1995; the area of the building dedicated to self-storage shall not exceed 30% of the total building area and may not be located directly adjacent to or facing a public right-of-way. Self-storage not permitted in the B-2/B-2b/B-2c, B-6, and B-7 zones.
[11] See PAD Overlay for additional use regulations.
[12] Structured parking shall be permitted. Surface parking shall be treated as a conditional use.
[13] Hotels shall be limited to no more than 150 rooms.
[14] Wholesale is allowed as conditional use, providing the wholesale operation is associated with an onsite retail establishment and occupies less than 15,000 SF.
