David Silk
Austin Smith

AGENDA
PORTLAND PLANNING BOARD MEETING

The Portland Planning Board will hold a meeting on Tuesday, February 25, 2020, ROOM 209, 2nd Floor, City Hall, 389 Congress Street. **Public comments will be taken for each item on the agenda during the estimated allotted time and written comments should be submitted to planningboard@portlandmaine.gov**.

WORKSHOP - 4:30 PM

i. Level III Site Plan & Master Development Plan; 1 Portland Square; North River IV, LLC., Applicant. (estimated time 4:30 - 5:30 p.m.) The Planning Board will hold a workshop to consider a revised Level III Site Plan and Master Development Plan for the Portland Square development, a phased mixed-use project located at 1 Portland Square. The 6.45 acre site is zoned B-3 and is bound by Spring, Commercial, Center, Cotton and Cross Streets.

ii. Level III Site Plan; 113 W. Commercial Street; FDS JBB Portland, LLC., Applicant. (estimated time 5:30 - 6:30 p.m.) The Planning Board will hold a workshop to review a proposal for a development of a two story, 62,300 square foot medical clinic and associated site improvements. The subject property is 366,067 square feet in size and is zoned B-5b.

iii. Level III Site Plan; 100 Andover Road; MaineHealth dba Maine Behavioral Healthcare, Applicant. (estimated time 6:30 p.m.) The Planning Board will hold a workshop to review a proposal for the development of a 28,200 square foot medical office building. The subject property is 9.3 acres in size and is zoned I-M.

PUBLIC HEARING - 7:30 PM

1. ROLL CALL AND DECLARATION OF QUORUM

2. COMMUNICATION AND REPORTS

3. REPORT OF ATTENDANCE AT THE MEETING HELD ON FEBRUARY 18, 2020

Afternoon Workshop
Recode: Dundon, Dunfey, Eaton, Mazer, Silk and Stanley present; Smith absent.

4. REPORTS OF DECISIONS AT THE MEETINGS HELD ON FEBRUARY 18, 2020

i. There were no public hearing projects on the agenda to report on.

5. NEW BUSINESS

i. Level III Site Plan; 175 Fore River Parkway; Northern Light Mercy Hospital, Applicant. (estimated time 7:30 p.m.) The Planning Board will hold a public hearing on a proposal for a 20,140 square foot hospital building expansion, a new 34,987 square foot ambulatory surgical center, and additional campus parking, along with modifications to campus driveways and associated site improvements. The subject property is a 33.5 acre medical campus zoned I-L, C26 and I-H.

Memorandum
Planning and Urban Development Department
Planning Division

To:	Sean Dundon, Chair and Members of the Portland Planning Board
From:	Matthew Grooms, AICP, Senior Planner
Date:	February 21, 2020
Re:	Level III Site Plan and Master Development Plan, Portland Square, North River IV, LLC
Project #:	PL-000599-2019 and
Meeting Date:	February 25, 2020

I. INTRODUCTION

North River IV, LLC has submitted a Level III site plan and Master Development Plan (MDP) application for a phased mixed-use redevelopment of a two-block area (existing surface parking tied to Portland Square One and Two) in Portland's Downtown and Old Port district.

As proposed, the Master Development Plan includes four separate phases, five new buildings and a development scheme consisting of 135-room hotels, 502,067 square feet of office space, 68,899 square feet of retail space, 58 apartments (one- and two- bedroom) and 1,087 structured parking spaces.

Figure 1: Development Site in context

Simultaneously, a site plan application for Phase 2 of the development, encompassing a seven-level, 851 space parking garage with commercial and office wrap along with a separate eight-story mixed-use development consisting of ground level commercial and upper-level office use has also been submitted.

Given the overlap between the MDP and Level III site plan application, these two applications will be reviewed simultaneously. This memorandum will provide an overview of review criteria compliance for both the MDP and Level III site plan and is anticipated as the last workshop prior to the public hearing for both applications. A total of 213 notices were sent to property owners within 500 feet of the site and a legal ad ran in the *Portland Press Herald* on February 15th and 16th. A Neighborhood Meeting was held on May 22, 2019 for the MDP, and on January 30, 2020 for the site plan. The meeting notes are provided (Applicants Submittal (Combined Documents).

Applicant: North River IV, LLC, Christopher Flagg

Consultants: Stephen Weatherhead, Winton Scott Architects; Patrick Carroll, Carroll Associates; Barry Sheff, Woodard and Curran; John Swan, Owen Haskell, Jacques Dan, North River Company/Waterfront Maine

II. PROJECT DATA (MDP)

Existing Zoning	B-3 Downtown Business, DE Overlay, PAD, Old Port Historic District		
Existing Use	Surface Parking Lot (542 spaces)		
Proposed Use	Office Space	525,542 SF	
	Retail Space	53,269 SF	
	Apartments	82 (1- and 2- bedroom units)	
	Hotel	135 Rooms	
	Structured Parking	1,236 spaces	
Property Size	6.45 acres		
	Existing	*Proposed*	*Net Change*
Building Footprint	42,643 SF	187,833 SF	145,190 SF
Building Floor Area	273,191 SF	1,047,859 SF	774,668 SF
Impervious Surface Area	225,000 SF	300,000 SF	50,000 SF
Parking Spaces	584 spaces	1,236	652
Bicycle Parking Spaces	10	98	88

Level III Site Plan

Existing Zoning	B-3 Downtown Business, DE Overlay, PAD	
Existing Use	Surface Parking Lot (542 spaces)	
Proposed Use	Office Space	159,026 SF
	Retail Space	21,545 SF
	Structured Parking	851 spaces
Property Size	2.26 acres	

III. SCOPE OF MASTER DEVELOPMENT PLAN REVIEW

A Master Development Plan is a regulatory option for sites with one acre or more in cumulative lot area that is designed as a cohesive and integral development program consisting of multiple buildings and associated site improvements, built in phases over an extended timeframe (Sec. 14-522).

Master Development Plan submission requirements are purposefully not as detailed as Site Plan and (when applicable) Subdivision requirements, which will be required before any development on the site can proceed. When reviewing and making the eventual decision of this application under the review standards of Section 14-524.a.3.ciii, Section 14-524.f.iv (*Planning Board Master Development Plan Decisions*) states:

> *The Planning Board shall approve, approve with conditions, or deny a Master Development Plan application based upon the applicable review standards. An approval, including an approval of waivers, establishes the general parameters to be adhered to for the development, including the supporting documentation for floor area ratio and/or residential density, general types of uses, building coverage, generalized open space plans and infrastructure systems.*
>
> *A Master Development Plan approval shall not be construed as final authorization of the development. Approval shall confer pending proceeding status upon the development with the effect of maintaining the applicability of regulations in effect at the time of approval for as long as the master Development Plan approval remains valid, including permissible extensions if granted.*

With this framework thus established, the master development plan, once approved, may be considered as a set of guidelines that govern and inform future phases of the development. The Planning Board, in its review, is approving a programmatic concept that establishes the major brush strokes or elements of the project, such as collective infrastructure needs, overall site configuration and disposition, connectivity both within the project site and to the surrounding area, typical materials and their contextual appropriateness, scale and massing, and interface of proposed uses within the built environment.

The parameters established by the MDP provide a developer with a certain level of flexibility that allows a planned development to react and respond to contemporaneous trends while also providing the city with significant predictability in terms of future built form and function. For example, under a future buildout scenario, the breakdown of general uses/total square footage/building footprint/design elements etc, may be slightly altered and still found to be generally consistent and compatible with the approved MDP. However, elimination of major project components, say for example a predominant pedestrian zone or proposed activation at ground level would be considered inconsistent and require amendment of the MDP.

IV. PLANNING BOARD WORKSHOPS

The Planning Board has held three workshops on the Portland Square MDP. The first two workshops, held on May 28, 2019 and August 13, 2019 respectively, focused on site and building design with additional discussion on program of uses, infrastructure improvements and phasing. The third workshop, held on October 8, 2019 focused on compliance of the project with Traffic Movement Permit (TMP) requirements and a discussion of Transportation Demand Management (TDM) measures to be implemented. For a complete overview of those meeting materials, please refer back to the archived agendas for those dates. https://www.portlandmaine.gov/129/Agendas-Minutes.

The Board, in its review of the master development plan, has generally been supportive of the project, in particular redevelopment of two large surface parking lots with mixed-use program, strong emphasis on ground-level activation and pedestrian oriented spaces and networks, and the cohesion and massing of the lower block (between Fore Street and Commercial Street).

A consistent sentiment raised in the first three workshops was a concern that the proposed phase two parking garage was too large, occupying the entirety of the upper block (between Spring Street and Fore Street) with limited ground-level activation along Spring Street and no mid-block permeability. At originally more than 1,000 parking spaces, the Board noted that in the event other phases don't proceed, the parking garage would provide substantially more parking than is required for the existing Portland Square tenants. Aside from feedback related to the scale and use of the upper block site, the Board also directed the applicant to carefully consider ground-level treatment along B-street facades (Cotton, Cross and Center Streets), the interface of building/tenant space entrances with adjoining streets, the use of specialized architectural treatments at the various building corners and plans for interim off-site parking while the garage is under construction.

Regarding traffic and TDM measures, the Board concurred with staff in asking that the applicant's traffic simulation model be updated and calibrated so that traffic from other sources be factored in, that the Gorham's Corner intersection (Pleasant, Danforth, Center, Fore, York Streets) be further evaluated for improvement, that the high crash location (HCL) at York Street and Park Street be reassessed for mitigation.

V. REVISED MASTER DEVELOPMENT PLAN

When submitted in April of 2019, the Portland Square MDP consisted of five separate phases, intended to be built out over a ten-year timeline, with much of the infrastructure improvements taking place in the first two phases.

Prior Phasing Plan:

Phase 1: 135-room hotel with ground level commercial space and roof bar.
Phase 2: 1,000 car parking garage with office, commercial and residential wrap.
Phase 3: Office building with ground level commercial space, structured parking and construction of pedestrian way.
Phase 4: Residential building with ground-level commercial space.
Phase 5: Two office buildings atop upper block parking structure.

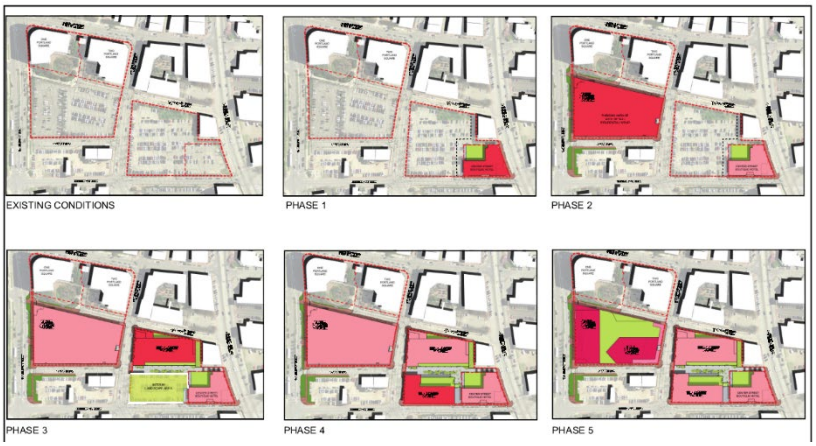

Figure 2: Prior Phasing Plan

Following the last workshop in October, the applicant communicated to staff that the development team was in the process of redesigning the upper block to construct a stand-alone office building and smaller parking garage. The proposed redesign, which is discussed in more detail below, addresses many of the concerns that had been previously raised, namely the lack of activation along Spring Street, which would now be fully activated, and the lack of mid-block permeability. Staff met with the applicant on November 12, 2019 to preview the changes and provide initial feedback, and as stated above, a formal resubmit of both the MDP and Level III site plan associated with the upper block development were received in late December. As a result of this programmatic change, the phasing plan has been revised as follows:

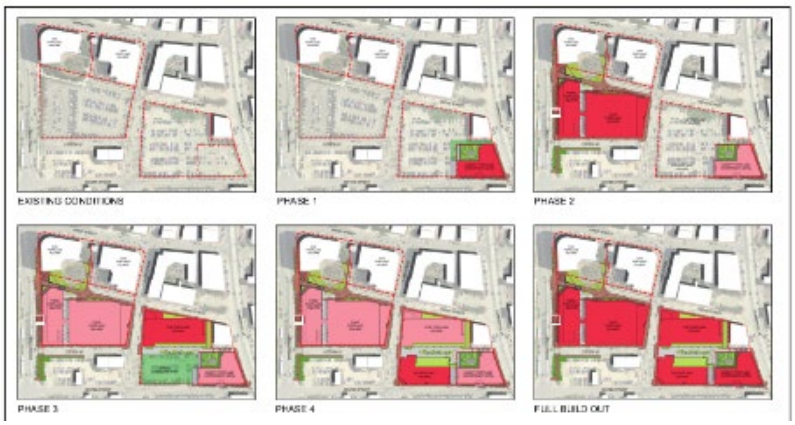

Figure 3: Updated Phasing Plan. Note changes to upper block.

Revised Phasing Plan:

Phase 1: Hotel with ground level commercial space and roof bar.
Phase 2: Stand-alone office building with ground level commercial, 851-car parking garage with commercial and office wrap. Building are separated by service corridor.
Phase 3: Office building with ground level commercial space, structured parking and construction of pedestrian way.
Phase 4: Residential building with ground-level commercial space.

VI. ASSESSMENT OF COMPLIANCE WITH MASTER DEVELOPMENT PLAN CRITERIA

In response to this feedback, and on account of the major programmatic shift in the project, the applicant resubmitted materials in late December which substantially address the concerns raised by the Board and staff in previous workshops and staff communications. In particular, site and building design are well integrated with the surrounding environment and both individual uses and buildings are thoughtfully articulated. The scale and massing concerns related to the upper block have been effectively mitigated with this redesign, and the materials and

architectural elements chosen present a clear and cohesive development scheme that honestly express the various uses being proposed.

Section 14-524 of the city's land use code establishes standards under which Master Development Plan applications must be reviewed. Per this section, Master Development Plans shall adhere to the following requirements:

a. *A designated tract of land consisting of a parcel or parcels of contiguous land or land on both sides of a street, totaling one (1) acre or more;*

   Staff Comment: The project area totals 6.45 acres spread across multiple contiguous parcels and separated by Fore Street. The property meets this requirement.

b. *Developed in a comprehensive, design-integrated manner, according to an overall master development plan;*

   Staff Comment: The project's site and building design elements have been extensively reviewed. Individual buildings are designed so as to not only relate to one another but to the surrounding built-environment as well. Uses are clearly articulated through architectural elements and one can easily move throughout the site and into adjacent areas by means of improved pedestrian and vehicular connections. The MDP complies with this requirement.

c. *Consistent with the City's Comprehensive Plan and consistent with City Council approved master plans and facility plans for off-premise infrastructure, including but not limited to, trails, pedestrian and bicycle network, view corridors, environmental management, sewer and stormwater, streets, or other facilities (see Section 15 of the Technical Manual);*

   Staff Comment: The proposal to redevelop an underutilized property in Portland's downtown with a mixture of uses that will support Portland's economy, future housing needs, demand for additional amenities and services, and use of structured parking over surface parking are all supported by Portland's Plan 2030. In addition, the applicant is continuing to work with staff on the final design of their Spring Street frontage, including final parking layout and bicycle facilities details. The MDP complies with this requirement.

d. *Developed so as to locate buildings and improvements in a manner that provides usable open space, preserves significant natural features, as defined by the site plan ordinance standards, and preserves existing trees to the maximum extent possible;*

   Staff Comment: The property is almost entirely developed, with minimal landscaping around the perimeter, and more substantially behind the Richardson Wharf building and where the discontinued portion of Cross Street meets Spring Street. The MDP eliminates much of the existing landscaping in order to meet the 5-foot build-to-line requirement of the B-3 zone, and instead, proposes street trees in accordance with City standards and enhanced landscape areas within the lower-block pedestrian corridor and within and adjacent to the existing pocket park where Cross Street terminates near Spring Street, adjacent to the existing Portland Square One and Two buildings. The site does not contain significant natural features and meets the intent of this requirement.

Figure 4: Updated Landscape Plan

e. *Ordinance standards for designated landmarks or for properties within designated historic districts or designated historic landscapes, if applicable. When proposed adjacent to or within one hundred (100) feet of designated landmarks, historic districts or historic landscapes, the Master Plan shall be developed so as to be generally compatible with the major character-defining elements of the landmark or portion of the district in the immediate vicinity of the proposed development;*

Staff Comment: On July 24th, the Historic Preservation Board conducted an advisory review of the Portland Square MDP. The advisory review was pursuant to the site plan ordinance's "100-foot rule" which requires that the Historic Preservation Board or Staff provide input to the Planning Board with respect to the proposed development's "general compatibility with the major character-defining elements" of adjacent landmarks or historic districts.

In this case, a portion of the lower development block is located within the boundary of the Portland Waterfront Historic District and other portions are located within 100 feet of the boundary.

The components of the applicant's overall development that fall squarely within the historic district boundary are the hotel (which has already been reviewed and approved by the Historic Preservation Board), the grand stairs that will immediately abut the hotel, and the rear elevation of the office building located at the corner of Fore and Cross Street. The proposed residential structure at the corner of Fore and Center Street abut the district boundary on Center Street. In sum, a substantial portion of the lower block redevelopment will be located within or within immediate proximity of the Portland Waterfront Historic District.

The upper block development will affect only one designated historic structure, the 2 ½ story Tracey-Causer Building at the corner of Fore and Cotton Streets. As such, the issue of compatibility is more limited for this block. The component of the proposed development with the most immediate visual relationship to the Tracey-Causer Block will be the parking garage's retail/residential wrap that fronts onto Fore Street.

In conducting its advisory review, the Board fully recognized that at this Master Development Plan stage of project planning, the design of individual structures is still at a conceptual level and that numerous design details remain to be confirmed. As such, the Board focused its review on "high level" design considerations. The Board was also mindful of the fact that the allowable building heights per zoning for much of the development site exceed the height of historic structures in the immediate vicinity. They recognized, for example, that it would be unlikely that the proposed development could be found compatible with the diminutive Tracey-Causer Block in regards to building height and overall scale. As such, other visual characteristics of the context (material palette, proportions, fenestration, rhythm of solids and voids, etc.) become more important considerations in achieving reasonable compatibility.

The Historic Preservation Board response to the proposal was generally very favorable. One member noted that the conceptual design proposal was remarkably successful given the size and complexity of the overall development program, the number of uses proposed, the number of individual street frontages that needed to be addressed, the need to architecturally differentiate the buildings and the need to include structured parking for 1300+ cars within the two block site. Board members agreed that the "big moves", as illustrated in the MDP drawings, were successful. These included appropriate siting for the individual uses, with the residential building located at the west end of the lower block, the retail/residential wrap of the upper block facing Fore Street, and the elevations of the 7-story parking garage facing Spring and Cotton.

Board members also found the visual relationship of the project to Commercial Street's historic streetscape successful, in that the proposed structures immediately north of Commercial Street did not loom over the historic warehouses lining Commercial or visually distract from them and were likewise enthusiastic about the pedestrian courtyard that will provide mid-block permeability and pedestrian activity within the interior of the lower block.

Given the conceptual nature of the individual building designs at this time, Board comments were necessarily general. The Board understood that there will be an opportunity for a more detailed advisory review when individual projects are brought forward for site plan review. And for components of the development located *within* the historic district boundary, such as the monumental stairs descending to Commercial Street, the Board will be conducting a full review.

f. An efficient use of land which properly considers topography and protects significant natural features including, but not limited to, waterways, wetlands, floodplains and wildlife;

Staff Comment: As mentioned above, the site does not contain significant natural features, and the proposed design thoughtfully incorporates the grade change into its development program. For example, at the corner of Cross and Spring Street, a view easement is proposed to be enhanced. Within the lower block, a monumental external stairway is proposed, to bridge the grade change between Fore and Commercial Street, and bridge that gap, providing valuable outdoor space available to the general public.

g. An efficient use of land demonstrating full coordination of its own site development and surrounding context including, but not limited to, the land uses and functions contemplated, architecture, open space and pedestrian networks, vehicular access and circulation, and all other infrastructure.

Staff Comment: From a design and land-use perspective, the MDP successfully packages a number of different uses important to the vitality of Portland's downtown, including substantial new office space for local employers, a convenient location for additional off-street parking for not only development tenants but as well for occasional public use, opportunities for new downtown housing, and different sized commercial spaces, ranging from small stands within the pedestrian corridor to a much larger spaces suitable to a small urban grocery store. Utility infrastructure will be comprehensively updated to accommodate future phases of the development. The development incorporates a number of open spaces for people to congregate and features strong pedestrian connections both within the development and to adjacent areas of the City.

From a vehicle circulation perspective, the development introduces new connectivity with Cotton Street being continued through to Spring Street, and vehicular entrances to the various garages are planned so as to minimize conflict with pedestrians and limit vehicle queuing throughout the development area.

Based upon these factors, staff finds that the MDP as proposed complies with this requirement.

h. Linked and coordinated with surrounding land uses, infrastructure and off-site public facilities, including but not limited to the public-school system, where appropriate, in a manner that is safe, efficient, non-injurious to the public, and an improvement or benefit to the public where possible; and

Staff Comment: Based upon the program of uses, the development is well integrated with surrounding land-uses and is not anticipated to have a significant impact on public facilities such as schools, though it is well situated for residents to access such facilities.

i. Designed with sizing of street and other infrastructure systems to accommodate the overall service demand of the Master Plan;

Staff Comment: Regarding utility infrastructure, the applicant has provided a plan to comprehensively update infrastructure in the area of the project to serve the development. For a discussion of traffic mitigation and demand management, please see the discussion below.

j. Designed to create a street grid pattern that reflects average city block sizes of the neighborhood for street connectivity;

Staff Comment: The MDP illustrates a strengthening of the city's street grid, with Cotton Street being reconnected to Spring Street, as likely a new two-way street. As proposed, on-street parking along Spring Street would be converted from front-in angled parking to parallel, which would make available additional space for sidewalks. The lower block under this proposal is bifurcated by a shared-access pedestrian corridor providing mid-block permeability, and sidewalks generally are being widened.

k. Designed as to create a cohesive identity through building scale, massing, and articulation; use of quality exterior materials, architectural detailing at pedestrian scale; consistency of design and materials for

streetscape and pedestrian amenities; framing of outdoor open space and linkages; a clear conveyance of the function and significance of various buildings, entrances, and features; and to generally comply with design and development standards of the zone in which it is located;

Staff Comment: A design review was completed on February 12, 2020, conducted by Caitlin Cameron, Urban Designer, Deb Andrews, Historic Preservation Program Manager and Matthew Grooms, Planner. The City's Urban Designer produced a memo to articulate the findings of that review (Attachment 1).

Figure 5: Rendering of the Upper Block office building

- Relationship with Context:
  - **Transition**: The residential building was revised to be simpler and more consistent throughout – staff continue to support the location of this building on the block to best relate to and transition from this large-scale contemporary building to the small-scale, historic fabric.

Figure 6: Rendering of the park and alley between the upper block office building and garage

  - **Not all corners need special emphasis**. From an urban design perspective, emphasis at Center Street is the most appropriate location (though a chamfered corner is not the only method to achieve this emphasis). The ground floor in this location is also shown as recessed which staff question in terms of relationship of the building to the street and overall massing relationship to the corner. **The mid-block corner on Fore was revised to remove the curved corner as preferred by staff/Board.** The building face at Spring Street includes an angled massing to the mid-block connection – due to the massing and programmatic changes to the Upper Block, this no longer is a primary entrance to the office building. This gesture helps alleviate the length and scale of the building on Spring Street. By setting back this corner of the block, a street-facing pedestrian

Figure 7: View from the corner of Spring and Cotton Streets

space is created. This will be an appropriate pedestrian-scale amenity appropriately placed for circulation and passive use while also creating a "forecourt" to the large-scale building and indicate a "turning of the corner" to the mid-block passage area.

- **Streets:** The "B streets" are not expected to maintain the level of activity and pedestrian amenity found on Spring, Fore, and Commercial streets, and challenged by the grade change. Refer also to the Historic Preservation review on this topic. For these streets to be less active is appropriate. The interface on Fore Street is active and generally meets the PAD criteria in both blocks. Spring Street is considered an "A" street – **the program change now allows this ground floor to be occupied with retail or other active uses. The sidewalk and building interface also reflect this with human-scaled canopies, landscape and seating elements to provide enclosure between the large-scale building and the wide street. The on-street parking also provides a transition and buffer between the sidewalk and street. The project will increase the level of activation and pedestrian amenity appropriately for a PAD encouragement street which is interpreted to be the aspirational vision for building relationship with the pedestrian level on Spring.**

- Circulation:
  - The Lower Block: Staff support the block layout with the mid-block circulation. The grade change is significant and during Site Plan review, further review and iteration should make this connection as hospitable, active, legible, and secure as possible. For example, differentiating the office entries from the retail entries, indicating from the street that this is public space, designing the retail spaces to be feasible, providing sight lines that create security and comfort.
  - **The Upper Block was revised and now breaks the block into two buildings – the office building facing Spring Street, and the garage with an active liner facing Fore Street. This is a positive change in terms of scale, pedestrian scale activation, and creates a mid-block alley. This alley should continue to be designed keeping in mind CPTED and safety criteria.**
  - **Clarify the entrance locations. The locations and design of these entrances should be differentiated according to use and include strategic emphasis to contribute to the urban scale circulation and legibility of the uses and buildings. A circulation plan or site plan that indicates pedestrian entrances is requested.**

- Architectural Design: Generally, the MDP design review evaluates how the buildings relate to the streetscape/human scale from the long-views.
  - Lower Block: The residential building has a consistent material palette and character – staff support this direction. The uses of these buildings should be differentiated – the building does not feel very residential in character. **Clarification is requested regarding the entrance locations and design.** *During Site Plan review, staff would like to further evaluate the roofline, the entrance design and differentiating the residential from the commercial uses.*
  - Lower Block: The office building massing and composition transition well between the buildings in context. The fenestration, material selection and transition, and proportions on the side streets require further iteration and review.
  - Upper Block: **Staff support the recent changes to the project that have resulted in more active uses and ground floor design facing Spring Street. There is a distinguished base, middle, top**

to the building which is in keeping with the B-3 design standards. In addition, the building includes articulation and detail that provides scale and visual interest (material texture and relief, canopies, storefront). The main entrance was moved to the middle of the Spring Street façade (previously a garage driveway) which breaks up the pedestrian experience on the block and provides some symmetricality and hierarchy to the building; this is emphasized with a canopy. The brick material is now carried throughout the "middle" portion and wraps around the building whereas previously the brick was an applied veneer to the Spring Street façade. The building scale is mitigated by varying the massing of the upper floors and angling the corner of the building towards the mid-block alley. The result, however, are forms and rooflines that are complex and anachronistic with the character of buildings in Portland and the immediate context. Staff discussed with the applicant solutions for simplifying and unifying the building tops/stepback portions as much as feasible. One suggestion is to keep the material palette, including color, consistent throughout to unify these forms.

- In order to bring visual interest and scale to the less active "B" street elevations - predominantly in-active garage facades – the design uses screen devices, green screen with plantings. These are encourages, especially as they relate to the pedestrian experience recognizing that these facades will be less visible with surrounding block development. Staff suggest that the screens be revised to relate to datum lines found in the Spring Street office building.

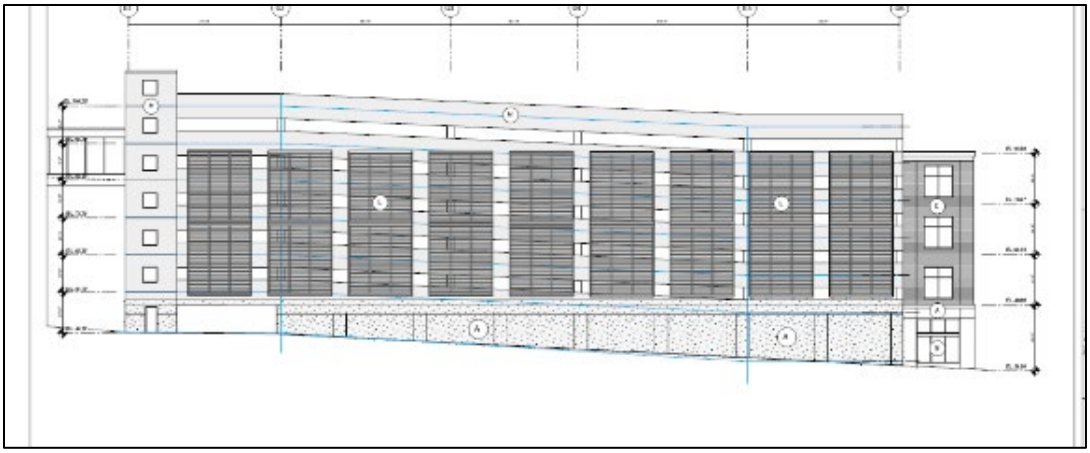

Figure 8: Image of screening along Cotton Street

- Overall, there are elements that create cohesive identity – material palette being one. Staff support the direction of the material palette and encourage further iteration that considers the simplicity of architectural expression found in the context.

- Additional Considerations
  - Refer to the memorandum from Deb Andrews for a summary of the Historic Preservation Board review regarding compatibility.
  - PAD streets: Fore, Center, Commercial; PAD Encouragement streets: Spring, Center
  - The B-3 Design Standards also look for parking structures to have the ability to convert to other uses.
  - *Staff recommend that the MDP approval define which aspects of the design are being approved in MDP versus what must be revised, reviewed, and approved at a Site Plan level.*

l. Inclusive of provisions for the ownership and maintenance of usable open space as appropriate;

Staff Comment: The lower block pedestrian corridor shall be made accessible by public access easement and the pocket park at adjacent to the upper block office building and Portland Square One and Two has been, and will continue to be maintained as a space available to the public. The MDP as proposed meets this requirement.

m. For areas proposed as future development phase(s), the proposed interim conditions shall be managed and maintained to ensure stable, safe and attractive site conditions.

Staff Comment: The proposed phasing plan addresses the interim conditions of the site, replacing existing surface parking with either building or landscaped area at the earliest practicable point in the process.

VII. TRAFFIC MOVEMENT PERMIT OVERVIEW (TMP)

As defined under Maine state statute 704—A, a traffic movement permit is required of any project that generates 100 or more passenger car equivalents at peak hour. Any project surpassing this threshold is required to make adequate provision for traffic movement of all types into and out of the project area such that any traffic increase that is attributable to the project will not result in unreasonable congestion or unsafe conditions within the vicinity of the development. For a complete discussion of the TMP process as it relates to this project, please see the staff memo for the October 8, 2019 workshop. https://portlandme.civicclerk.com/Web/Player.aspx?id=558&key=-1&mod=-1&mk=-1&nov=0.

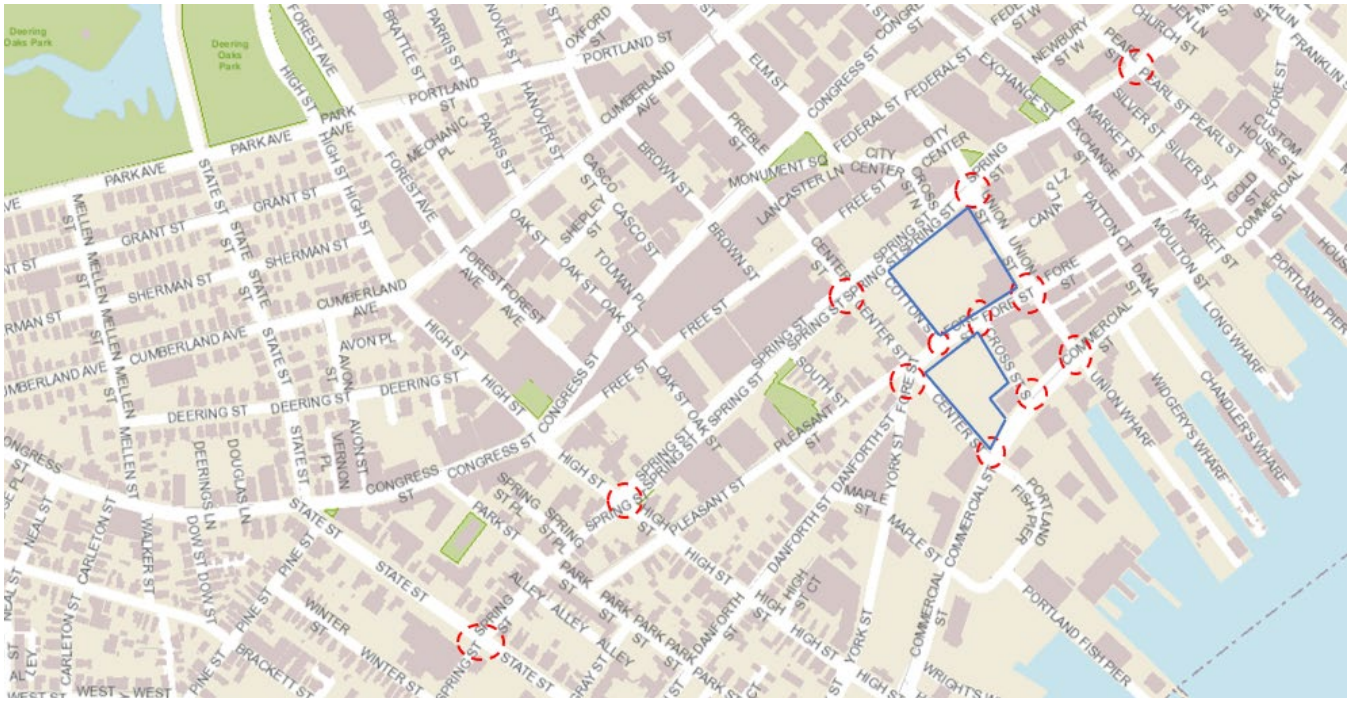

Figure 9: TMP Study Area for Portland Square with site shown outlined in blue. Note, Franklin Arterial is not shown here though is considered part of the study area.

Following the workshop in October, the applicant was advised to update their Traffic Impact Statement (TIS) to correctly assign vehicle, pedestrian and bicycle counts, calibrate their traffic simulation model to include trips from

other users as opposed to isolated Portland Square trips, provide a more robust alternatives analysis for improvements to Gorham's Corner, provide capacity analysis modeling for Franklin Arterial, and assess how other recommendations related to streetscape improvements, such changes to pedestrian phasing at the Commercial Street/Center Street intersection both with and without the westbound right-turn lane onto Center Street.

The applicant has submitted several supplemental documents intended to address these comments, and have since had to adjust their model to account for the upper block program changes and relocation of vehicle entrances into the garage. Based upon this revised information, Tom Errico, P.E. with T.Y. Lin has provided the following comments (Attachment 3):

- I continue to review existing traffic volumes and will be comparing the data provided in the Study with historical counts to confirm reasonableness. I was surprised that the data indicates the morning peak hour occurred from 8:00-9:00AM, which is later than expected. The Applicant shall provide the traffic count sheets for review.

  Status: The applicant has provided the requested counts sheets and I find the count data to be acceptable

- The purpose of collecting actual field-based intersection vehicle queue information was to incorporate some level of calibration to the Synchro/SimTraffic model. While it is not expected that the model will perfectly match existing conditions, the City would like to have a high level of confidence in the model output. It is unclear if the Applicant used the existing queue data to calibrate the model and if so, documentation should be provided. If not, the Applicant should use the queue data to enhance or confirm the accuracy of the model. A full review of the model will take place after calibration documentation/incorporation occurs.

  Status: The calibration of the model has not been performed. The intent of conducting existing queue observations was to compare that information with an Existing Model, not a future model. A comparison of existing queues to an existing volume and traffic control model shall be performed. I would note that some of the following comments should be considered pending until the calibration documentation is provided.

  Current Status: The applicant has provided information on field versus model queue data and the City has suggested specific areas to calibrate. Results of the model are pending, and the City is currently coordinating with the applicant on this effort.

- The Study noted that Cotton Street is being extended to Spring Street and will be restricted to right-turn in/out movements. At the Cotton Street/Fore Street intersection left-turns from Cotton Street will be prohibited. The City would like the Study to provide analysis/documentation that led the Applicant to propose these turn restrictions. This will help to provide an informed decision when considering vehicle delays, geometric elements, and full street accessibility.

  Current Status: The applicant has coordinated with the City given the new development program and assumptions noted above are acceptable.

- As the Study notes the level of service conclusions for some of the study intersections do not match actual conditions due to issues outside of the Study area. We do not find the modeling results to be helpful in assessing project impacts when the Study presents a network that is functioning very well with little delay.

We request that the Study/model account for these outside influences so that system operations before and after project completion can be fully understood.
Status: The model has been revised to include the Commercial Street/Beach Street intersection. See above for model calibration.

- The Synchro model at the High Street/Spring Street intersection shall be modified to reflect existing lane configurations on the High Street approach.

  Status: The model has been revised and I have no further comment.

- The Study should document the benefits of changing the pedestrian phasing at the Commercial Street/Center Street intersection. The analysis should also be performed with and without the elimination of the westbound right-turn lane onto Center Street, as suggested in the Commercial Street Operations Study. The Study does note that movements from Center Street will have failing conditions in the future.

  Status: The applicant has conducted the requested analysis. I am working with City staff on the desired recommendation.

- The Study should identify a menu of suggested mitigation strategies at the Pleasant Street/York Street/Center Street/Fore Street intersection (Gorham's Corner). This will include an Alternatives Analysis and shall include concepts previously provided to the Applicant (Roundabout and Pedestrian Enhancements Improvements). This Analysis should include measures including levels of service, multi-modal accommodations, cost, right-of way impacts, etc. The Study documents failing conditions and when viewing the animation feature of SimTraffic vehicle queues will impact adjacent intersections including the Spring Street/Center Street intersection. I would note that this location abuts the site and would be expected to be impacted from a vehicle and pedestrian/bicycle perspective.

  Status: The applicant conducted an initial alternatives analysis at this location. The analysis did not include a roundabout alternative and the City would like to understand the operational benefits and has requested detailed traffic modeling. This work is pending.

- The Franklin Street analysis portion of the Section #7 is pending, and comments will be provided upon receipt of that information.

  Status: The applicant shall provide a memorandum summarizing traffic modeling results with Adaptive Traffic Signal Technology (this information shall be included on the Section 7 report). The applicant shall provide the following:

  - Traffic volumes used in each of the scenarios evaluated
  - For all intersection movements on Franklin Street:
    - Vehicle Delay (in seconds)
    - 50% Queue (in feet)
    - 95% Queue (in feet)
    - Spillback from one intersection to the next (if any)
  - Video of the simulation runs
  - Travel time by scenario from Commercial Street to Marginal Way

Current Status: This information was provided on February 17, 2020 and appears to comply with the additional data request. Review of the information is on-going.

VIII. TRANSPORTATION DEMAND MANAGEMENT (TDM) PLAN

In accordance with Portland's site plan ordinance, new commercial development exceeding 50,000 square feet of floor area is required to provide a transportation demand management plan, a document that outlines goals, strategies and monitoring provisions for reducing the number of peak hour vehicle trips and encouraging alternative modes of transportation. Typically, a TDM is required of new site plan applications, though both City staff and members of the Planning Board have encouraged the applicant to develop a TDM framework for the master development plan (MDP) that would govern future phases of the development. The TDM for Portland Square is included in Applicants Submittal (Combined Documents).

At the workshop in October, staff noted that the TDM Plan contained all required sections per Technical Manual requirements, and asked that multi-modal trips, accounted for within both the TMP and TDM plans, be identified clearly within each document, and that such trip reductions not count towards reduction targets for the TDM plan. Staff also requested a more robust monitoring plan which would include monitoring of demand during the construction of the Phase 2 garage. Staff also provided a number of other suggestions, such as developing tenant profiles in the future, installing electronic transportation information displays around the site and providing transportation access guides in multiples media forms.

Figure 10 Graphic showing 1/4 and 1/2 mile radius from development site in the context of pedestrian and bicycle infrastructure.

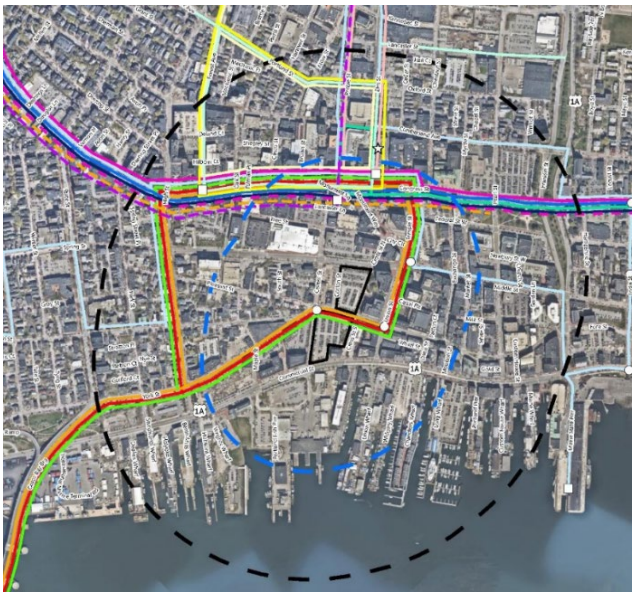

Figure 11: Graphic showing 1/4 and 1/2 mile radius from development site in the context of available bus routes.

IX. SITE PLAN REVIEW

Concurrent with the MDP application, the applicant has also submitted a Level III site plan application for Phase 2 of the development, consisting of a new eight-story mixed-use building with 144,976 square feet of office space and 17,795 square feet of ground level retail along with a separate parking structure with 851 parking spaces and 14,050 square feet of upper level office wrap and 3,750 square feet of ground-level retail space. This development occupies the upper block as referenced in the MDP application. As part of this development, Cotton Street will be extended to connect with Spring Street, enhancing the existing street grid, and sidewalks will be either improved or enhanced

along both sides of Cotton Street. Similarly, the sidewalk along Spring Street is shown as substantially enhanced, made possible by converting diagonal on-street parking to parallel parking and narrowing the street. The City continues to strive to retain on-street parking wherever possible when reviewing new development proposals, and to balance this need with other design goals. Other site improvements include new street and site lighting, enhancement of the pocket park at the terminus of the Cross Street extension, and planting of new street trees along project frontages.

A. SITE PLAN STANDARDS (Section 14-526)

The proposed development has been reviewed by staff for conformance with the relevant review standards of Portland's site plan ordinance and applicable regulations. Staff comments are listed below.

a) Transportation Standards

1. Impact on Surrounding Street Systems and Access and Circulation
   The MDP triggers a traffic movement permit (TMP) and is being reviewed in accordance with state developed guidelines. Review of TMP materials is ongoing, and staff plan to have final recommendations on traffic mitigation for the entire development scheme, available at the next meeting.

2. Access and Circulation

   a. Site Access and Circulation – The project site occupies a prominent location in Downtown Portland, with primary access to the site being from either Spring Street or Fore Street. The proposal also involves reconnection of Cotton Street with Spring Street, which should improve area-wide connectivity. Vehicular entrances to the garage are located off of either Cotton or Cross Street, and are positioned to minimize conflicts with pedestrians and reduce vehicle queueing impacts. Staff do recommend that stop bars be provided at stop-controlled approaches, and that the applicant should confirm sightlines at these locations (Attachment 3).

   b. Loading and Servicing – The redesign of the upper block improved facilities for vehicular loading and servicing, with a new service corridor and loading facilities located off of the Cross Street extension into the project site.

   c. Sidewalks – A prominent feature of this development is the area-wide improvement to sidewalks. Along all frontages, sidewalks are being widened and enhanced with planters and seating areas. A new sidewalk is being constructed along both sides of Cotton Street, and a service corridor separating the two buildings will serve as a mid-block permeability across the site. One comment from staff, is that the curb extensions shown on the site plan should be reduced in dimension. Curb extensions should extend no further than six feet into a parking lane, and associated curb radii should be designed so as to accommodate snow removal and maintenance equipment.

3. Public Transit Access
   The development is proximate to a number of public transit routes discussed in more detail within the TDM plan, which seeks to encourage public transit usage by tenants. This project is located within ¼ mile of a transit shelter and is not required to construct a new shelter.

4. Parking
   a. Vehicle – A total of 851 parking spaces are provided on-site and according to the TDM plan, should provide sufficient peak hour parking supply under a full-build out scenario of the MDP when coupled with other TDM measures.

   b. Bicycle – Upon full build-out of the MDP, there will be a total of 81 bicycle spaces, which shall include bicycle racks on Spring, Cotton and Fore Streets, as well as space within the

garage. Staff is asking that the applicant provide additional information on the total number of bicycle spaces associated with this phase.

c. Snow Storage – Given site constraints, the development will require snow removal to an off-site location.

5. Transportation Demand Management
Please see discussion of the TDM Plan above.

b) Environmental Quality Standards

1. Preservation of Significant Natural Features
The site is almost entirely occupied by surface parking, and contains no significant natural features.

2. Landscaping and Landscape Preservation
   a. Landscape Preservation – The existing pocket park located at the terminus of the Cross Street extension within the site is proposed to be enhanced under this development, and shall maintain existing landscape. Existing vegetation along the Spring Street frontage will be taken down during construction.

   b. Site Landscaping – As this is an urban infill development, opportunities for site landscaping are somewhat limited. The applicant proposes to provide street trees as required along all frontage with generously sized tree wells, and is proposing to enhance the existing pocket park on-site.

3. Water Quality, Storm Water Management and Erosion Control
Per Maine DEP Ch. 500 requirements, the project is not required to provide stormwater quality treatment, on the basis of surface parking area being replaced largely by roof area, which has significantly cleaner run-off. Michael Guethle, P.E. with Wright Pierce, has reviewed the stormwater management plan and found it to meet City standards. (Attachment 4)

c) Public Infrastructure and Community Safety Standards

1. Consistency with City Master Plans – Project is consistent with both the Comprehensive Plan and Spring Street Master Plan.

2. Public Safety and Fire Prevention (CPTED and Fire) – Staff have encouraged the applicant to consider CPTED principals in the design of the alley between the garage and office building. The Fire Department notes that E-911 addressing will need to be confirmed, and have noted that an existing fire hydrant will need to be relocated, which is shown on the applicant's plans.

3. Availability and Adequate Capacity of Public Utilities – Utility Capacity letters have been provided.

d) Site Design Standards

1. Massing, Ventiliation and Wind Impact
No adverse impacts related to massing, ventilation or wind are anticipated.

2. Shadows
No adverse impacts related to shadows are anticipated.

3. Snow and Ice Loading
No snow storage is proposed, and based upon the building's structure and roof design, no concerns related to snow and ice loading is anticipated.

4. View Corridors

There is an existing easement that protects the views from Spring Street, looking towards Casco Bay down Cross Street. This area is maintained as open, and new trees have intentionally been minimized to maintain the view.

5. Historic Resources
Deb Andrews, Historic Preservation Program Manager, has participated in all design reviews and provided advisory review comments for the development, satisfying this requirement.

6. Exterior Lighting
New street and site lighting is proposed around and within the development that conforms with Sections 10 and 12 of the City's Technical Manual.

7. Noise and Vibration
No adverse impacts related to noise and vibration are anticipated.

8. Signage and Wayfinding
No signage or wayfinding is proposed as part of this development.

9. Zoning Related Design Standards
Please see design review comments above.

X. NEXT STEPS

Staff is looking to have the Planning Board clearly define the major design elements of the project to be codified as part of the MDP approval process. These elements would carry forward as the structure of the MDP framework, which when determining overall consistency, would be considered most important. The applicant should also continue to provide information as requested for the TMP application, which should include a repackaged Traffic Impacts Statement. Staff will be looking to have the Planning Board make a recommendation on the Master Development Plan and Site Plan moving forward to a public hearing.

Subject: Design Review – 1 Portland Square Master Plan, Site Plan
Written by: Caitlin Cameron, Urban Designer
Date of Review: Wednesday, February 12, 2020

The proposed master plan for Portland Square was reviewed according to the Master Plan criteria but must also generally comply with the B3 design standards. A portion of the project area is also within the Commercial Street Historic District or within 100' of historic landmarks and will require Historic Preservation review. The review of this revised proposal was conducted by Caitlin Cameron, Matt Grooms, and Deb Andrews. The Historic Preservation Board also conducted a preliminary review on the previous version of this application – those comments remain relevant and unchanged for those portions of the project nearest Commercial Street. The greatest area of change is for the Upper Block.

Design Considerations: In Master Development Plan review, the design considerations include:

- Developed in a comprehensive, design-integrated manner
- Designed to be in conformance with Portland's Historic Preservation Ordinance standards . . . the Master Plan shall be developed so as to be generally compatible with the major character-defining elements of the portion of the district in the immediate vicinity
- Coordination with surround context including open space and pedestrian networks
- Designed to create a street grid pattern that reflects average city block sizes of the neighborhood for street connectivity
- Designed so as
    - to create a cohesive identity through building scale, massing, and articulation
    - use of quality exterior materials, architectural detailing at pedestrian scale
    - consistency of design and materials for streetscape and pedestrian amenities
    - framing of outdoor open space and linkages
    - a clear conveyance of the function and significance of various buildings, entrances, and features
    - to generally comply with the design and development standards of the zone (B3)

Context: The immediate context includes taller, more contemporary buildings to the west, surface parking lots, and smaller scale, historic buildings both commercial and residential. Though the design and placement of buildings should be sensitive to neighboring residential and park contexts, the zoning, block size, and street widths allow for considerable scale of building on these two blocks. There is considerable grade change throughout these two blocks contributing to some of the design decisions.

Staff Comment – Final MDP comments (new comments highlighted with bold text)
Since the previous workshops, the program and block layout of the Upper Block changed. Staff focused on general, big-picture responses to the block layout, forms and massing, and character of architecture depicted. The circulation, entrances, and building interface with the street is also considered at this level. The following comments are meant to bring to the Board's attention the topics discussed and areas of concern.

Overall, staff support the Master Development Plan as presented with a few specific revisions that should be reviewed and addressed during the Site Plan process.

Relationship with Context:

- **Transition:** The residential building was revised to be simpler and more consistent throughout – staff continue to support the location of this building on the block to best relate to and transition from this large-scale contemporary buildings to the small-scale, historic fabric.

- **Not all corners need special emphasis**. From an urban design perspective, emphasis at Center Street is the most appropriate location (though a chamfered corner is not the only method to achieve this emphasis). The ground floor in this location is also shown as recessed which staff question in terms of relationship of the building to the street and overall massing relationship to the corner. **The mid-block corner on Fore was revised to remove the curved corner as preferred by staff/Board.** The building face at Spring Street includes an angled massing to the mid-block connection – due to the massing and programmatic changes to the Upper Block, this no longer is a primary entrance to the office building. This gesture helps alleviate the length and scale of the building on Spring Street. By setting back this corner of the block, a street-facing pedestrian space is created. This will be an appropriate pedestrian-scale amenity appropriately placed for circulation and passive use while also creating a "forecourt" to the large-scale building and indicate a "turning of the corner" to the mid-block passage area.

- **Streets:** The "B streets" are not expected to maintain the level of activity and pedestrian amenity found on Spring, Fore, and Commercial streets, and challenged by the grade change. Refer also to the Historic Preservation review on this topic. For these streets to be less active is appropriate. The interface on Fore Street is active and generally meets the PAD criteria in both blocks. Spring Street is considered an "A" street – **the program change now allows this ground floor to be occupied with retail or other active uses. The sidewalk and building interface also reflect this with human-scaled canopies, landscape and seating elements to provide enclosure between the large-scale building and the wide street. The on-street parking also provides a transition and buffer between the sidewalk and street. The project will increase the level of activation and pedestrian amenity appropriately for a PAD encouragement street which is interpreted to be the aspirational vision for building relationship with the pedestrian level on Spring.**

Circulation:

- The Lower Block: Staff support the block layout with the mid-block circulation. The grade change is significant and during Site Plan review, further review and iteration

should make this connection as hospitable, active, legible, and secure as possible. For example, differentiating the office entries from the retail entries, indicating from the street that this is public space, designing the retail spaces to be feasible, providing sight lines that create security and comfort.

- **The Upper Block was revised and now breaks the block into two buildings – the office building facing Spring Street, and the garage with an active liner facing Fore Street. This is a positive change in terms of scale, pedestrian scale activation, and creates a mid-block alley. This alley should continue to be designed keeping in mind CPTED and safety criteria.**

- **Clarify the entrance locations. The locations and design of these entrances should be differentiated according to use and include strategic emphasis to contribute to the urban scale circulation and legibility of the uses and buildings. A circulation plan or site plan that indicates pedestrian entrances is requested.**

Architectural Design:

Generally, the MDP design review evaluates how the buildings relate to the streetscape/human scale and also from the long-views.

- Lower Block: The residential building has a consistent material palette and character – staff support this direction. The uses of these buildings should be differentiated – the building does not feel very residential in character. **Clarification is requested regarding the entrance locations and design.** *During Site Plan review, staff would like to further evaluate the roofline, the entrance design and differentiating the residential from the commercial uses.*

- Lower Block: The office building massing and composition transition well between the buildings in context. The fenestration, material selection and transition, and proportions on the side streets require further iteration and review.

- Upper Block: **Staff support the recent changes to the project that have resulted in more active uses and ground floor design facing Spring Street. There is a distinguished base, middle, top to the building which is in keeping with the B-3 design standards. In addition, the building includes articulation and detail that provides scale and visual interest (material texture and relief, canopies, storefront). The main entrance was moved to the middle of the Spring Street façade (previously a garage driveway) which breaks up the pedestrian experience on the block and provides some symmetricality and hierarchy to the building; this is emphasized with a canopy. The brick material is now carried throughout the "middle" portion and wraps around the building whereas previously the brick was an applied veneer to the Spring Street façade. The building scale is mitigated by varying the massing of the upper floors and angling the corner of the building towards the mid-block alley. The result, however, are forms and rooflines that are complex and anachronistic with the character of buildings in Portland and the immediate context. Staff discussed with the applicant solutions for simplifying and unifying the building tops/stepback portions as much as feasible. One suggestion is to keep the material palette, including color, consistent throughout to unify these forms.**

- **In order to bring visual interest and scale to the less active "B" street elevations - predominantly in-active garage facades – the design uses screen devices, green screen with plantings. These are encourages, especially as they relate to the pedestrian experience recognizing that these facades will be less visible with surrounding block development. Staff suggest that the screens be revised to relate to datum lines found in the Spring Street office building.**

- Overall, there are elements that create cohesive identity – material palette being one. Staff support the direction of the material palette and encourage further iteration that considers the simplicity of architectural expression found in the context.

Additional Considerations

- Refer to the memorandum from Deb Andrews for a summary of the Historic Preservation Board review regarding compatibility.
- PAD streets: Fore, Center, Commercial; PAD Encouragement streets: Spring, Center
- The B-3 Design Standards also look for parking structures to have the ability to convert to other uses.
- *Staff recommend that the MDP approval define which aspects of the design are being approved in MDP versus what must be revised, reviewed, and approved at a Site Plan level.*

Portland Maine Yes. Google's good here.

Matthew Grooms <mgrooms@portlandmaine.gov>

Portland Square - Status Traffic Comments

Matthew Grooms <mgrooms@portlandmaine.gov> Fri, Feb 21, 2020 at 4:06 PM
To: Matthew Grooms <mgrooms@portlandmaine.gov>

Hi Matt – the following summarizes a status update of my October 7, 2019 comments in response to information provided by Gorrill Palmer dated December 20, 2019. I would note that the review of information is fragmented and difficult to compare to the September 2019 Section 7 Traffic Study, particularly given project program changes. Accordingly, the applicant is being asked to submit a revised Section 7 Study in its entirety. I anticipate the revised Section 7 to be transmitted soon, given recent communication with Gorrill Palmer.

- I continue to review existing traffic volumes and will be comparing the data provided in the Study with historical counts to confirm reasonableness. I was surprised that the data indicates the morning peak hour occurred from 8:00-9:00AM, which is later than expected. The Applicant shall provide the traffic count sheets for review.

Status: The applicant has provided the requested counts sheets and I find the count data to be acceptable.

- The purpose of collecting actual field-based intersection vehicle queue information was to incorporate some level of calibration to the Synchro/SimTraffic model. While it is not expected that the model will perfectly match existing conditions, the City would like to have a high level of confidence in the model output. It is unclear if the Applicant used the existing queue data to calibrate the model and if so, documentation should be provided. If not, the Applicant should use the queue data to enhance or confirm the accuracy of the model. A full review of the model will take place after calibration documentation/incorporation occurs.

Status: The calibration of the model has not been performed. The intent of conducting existing queue observations was to compare that information with an Existing Model, not a future model. A comparison of existing queues to an existing volume and traffic control model shall be performed. I would note that some of the following comments should be considered pending until the calibration documentation is provided.

Current Status: The applicant has provided information on field versus model queue data and the City has suggested specific areas to calibrate. Results of the model are pending, and the City is currently coordinating with the applicant on this effort.

- The Study noted that Cotton Street is being extended to Spring Street and will be restricted to right-turn in/out movements. At the Cotton Street/Fore Street intersection left-turns from Cotton Street will be prohibited. The City would like the Study to provide analysis/documentation that led the Applicant to propose these turn restrictions. This will help to provide an informed decision when considering vehicle delays, geometric elements, and full street accessibility.

Current Status: The applicant has coordinated with the City given the new development program and assumptions noted above are acceptable.

- As the Study notes the level of service conclusions for some of the study intersections do not match actual conditions due to issues outside of the Study area. We do not find the modeling results to be helpful in assessing project impacts when the Study presents a network that is functioning very well with little delay. We request that the Study/model account for these outside influences so that system operations before and after project completion can be fully understood.

Status: The model has been revised to include the Commercial Street/Beach Street intersection. See above for model calibration.

- The Synchro model at the High Street/Spring Street intersection shall be modified to reflect existing lane configurations on the High Street approach.

Status: The model has been revised and I have no further comment.

- The Study should document the benefits of changing the pedestrian phasing at the Commercial Street/Center Street intersection. The analysis should also be performed with and without the elimination of the westbound right-turn lane onto Center Street, as suggested in the Commercial Street Operations Study. The Study does note that movements from Center Street will have failing conditions in the future.

Status: The applicant has conducted the requested analysis. I am working with City staff on the desired recommendation.

- The Study should identify a menu of suggested mitigation strategies at the Pleasant Street/York Street/Center Street/Fore Street intersection (Gorham's Corner). This will include an Alternatives Analysis and shall include concepts previously provided to the Applicant (Roundabout and Pedestrian Enhancements Improvements). This Analysis should include measures including levels of service, multi-modal accommodations, cost, right-of way impacts, etc. The Study documents failing conditions and when viewing the animation feature of SimTraffic vehicle queues will impact adjacent intersections including the Spring Street/Center Street intersection. I would note that this location abuts the site and would be expected to be impacted from a vehicle and pedestrian/bicycle perspective.

Status: The applicant conducted an initial alternatives analysis at this location. The analysis did not include a roundabout alternative and the City would like to understand the operational benefits and has requested detailed traffic modeling. This work is pending.

- The Franklin Street analysis portion of the Section #7 is pending, and comments will be provided upon receipt of that information.

Status: The applicant shall provide a memorandum summarizing traffic modeling results with Adaptive Traffic Signal Technology (this information shall be included on the Section 7 report). The applicant shall provide the following:

  - Traffic volumes used in each of the scenarios evaluated
  - For all intersection movements on Franklin Street:
    - Vehicle Delay (in seconds)
    - 50% Queue (in feet)
    - 95% Queue (in feet)
    - Spillback from one intersection to the next (if any)
  - Video of the simulation runs
  - Travel time by scenario from Commercial Street to Marginal Way

Current Status: This information was provided on February 17, 2020 and appears to comply with the additional data request. Review of the information is on-going.

If you have any questions, please contact me.

Portland Square comments

1 message

Mike Tremblay <mtremblay@portlandmaine.gov> Fri, Feb 21, 2020 at 10:57 AM
To: Matthew Grooms <mgrooms@portlandmaine.gov>

Matt,

I have the following comments on Portland Square heading into the workshop on Tuesday.

Waiver table

- The waiver table should be edited to reflect the newest design, as needed.

- Waiver 1 Cotton Street design: Edit or remove, to reflect new design, which includes a west-side sidewalk extending to Spring Street, two 11-foot travel lanes, and a parking lane. The Applicant has worked with DPW to arrive at an acceptable cross-section for Cotton Street.

- Waiver 2 Street grades: DPW supports this waiver given the design constraints on Cotton Street.

- Waiver 3 K-Values: DPW supports this waiver given the design constraints on Cotton Street.

Site plan

- Stop bars should be shown at stop-controlled approaches. Sightlights should be verified to ensure vehicles can see oncoming traffic from the stop bar.

- Curb extension design is too severe. Curb extensions should extend about 6 feet into the parking lane and no further. Curb radii within the curb extension should accommodate snow removal and maintenance equipment, typically a 10-20' radius. We recognize these changes may result in 1-2 fewer parking spaces along Cotton Street.

TDM

- The Applicant is providing 69 long-term bicycle parking spaces in the garage and 12 bicycle parking spaces outside of the building for short-term use. The Applicant's TDM plan should include a provision that additional bicycle parking (short-term and/or long-term) be provided if demand indicates a need. The project site is in a very bikeable location.

- The Applicant proposes unbundled parking for office and residential uses. This is extremely desirable and is a significant incentive to reduce car dependency among employees and residents of the site.

- As the site becomes more occupied, and parking occupancy counts indicate that the site is overparked, the Applicant should make more parking spaces publically available (monthly or hourly public parking) and available to adjacent land uses that may need parking. This will help reduce traffic related to circling for parking, and help to alleviate parking demand among current, underparked businesses.

- While implied in the TDM plan, commuter surveys should lead to action items to further improve the TDM plan based on the survey responses.

RESURGAM
CITY OF PORTLAND, MAINE

WRIGHT-PIERCE
Engineering a Better Environment

MEMORANDUM

TO:	Matthew Grooms, AICP; Planner	**DATE:**	2/20/2020
FROM:	Michael Guethle, PE; Jan Wiegman, PE	**PROJECT NO.:**	14273B
SUBJECT:	3 Portland Square – Level III Site Plan, 000873-2019		

Wright-Pierce has reviewed the updated Level III Site Plan Application information provided for the redevelopment at Portland Square. The proposed project is located on a 2.3+/- acre site bound by Cotton Street, Spring, Street, Upper Cross Street, and Fore Street. The proposed project includes redevelopment of the existing surface parking lot with a multi-story parking structure and mixed-use commercial and residential space, as well as additional utility and site infrastructure improvements.

Documents Reviewed by Wright-Pierce:

- Level III Site Plan application, uploaded (most recent) February 8, 2020
- Engineering Permitting Plans, uploaded (most recent) February 8, 2020
- Reviewer Comment Response Letter, dated (most recent) February 7, 2020

Comments:

1) Level III Site Plan applications with the City of Portland must submit a stormwater plan pursuant to the regulations of MaineDEP Chapter 500 Stormwater Management Rules. This includes conformance with the Basic, General, and Flooding Standards (Ref: Technical Manual, Section 5. II. Applicability in Portland. C. a.; and Ref: City of Portland Code of Ordinances Sec. 14-526. Site Plan Standards, (b). 3. b.)
    a. General Standard: The applicant has provided information regarding the size and scope of the project indicating the project is subject to the General Standard under the requirements of the Site Location of Development Act (SLODA). The project is being reviewed under the redevelopment guidelines and requirements.

i. The applicant has provided an impact analysis to compare pre-development and post-development land use pollutant rankings under MaineDEP redevelopment guidelines. This analysis indicated that the proposed development had a lower pollutant ranking than the existing site and is therefore required to treat 50% of the proposed site's disturbed surface area, with priority placed on the highest-ranked pollutant for the site.

    1. Applicant has updated the pollutant impact ranking for developed surfaces to be consistent between the narrative and calculations. No further action necessary.
    2. Applicant has provided the following calculations:
        a. Total square feet of site required to receive treatment;
        b. Total square feet of proposed site receiving treatment;
        c. Total % of high-pollutant ranking surfaces receiving treatment;
        d. Total percentage of non-roof impervious area receiving treatment.

    Based on the information provided in the calculations, the applicant has provided water quality treatment for surface runoff based on the redevelopment area, and has placed priority to treat high-pollutant impact ranking surfaces. No further action necessary.

ii. Proprietary R-Tank systems and Peak Diversion Stormfilters have been provided for runoff treatment. Inverts for pipe elevations are consistent between the plans and calculations for R-Tank systems and Stormfilter system. Applicant has indicated Filterra units have been removed from the proposed stormwater treatment plan. No further action necessary.

iii. Additional requirements apply for the Peak Diversion Stormfilter as a result of it's approval for use as a proprietary treatment device. Applicant has demonstrated most of these requirements. Applicant shall clarify the following requirements:

1. Review and approval by the manufacturer for the proposed use and sizing of the Stormfilter cartridge is required to ensure conformance with the manufacturer's design specifications. Applicant shall provide a letter from the manufacturer confirming this requirement is met.

iv. The applicant has indicated a maintenance agreement for stormwater treatment systems will be provided as the design progresses. Applicant has noted an executed maintenance contract for the BMP system is required and may be included as a Condition of Approval.

1. This approval shall meet the requirements of the StormFilter cartridge system's manufacturer.

b. Flooding Standard: The applicant has submitted updated calculations indicating the total surface flows to the separated storm drain at the intersection of Fore Street and Cross Street. The provided calculations indicate off-site surface runoff rates are not increased as a result of the development in the 24-hour, 2-year, 10-year, and 25-year rain events. No further action necessary.

2) Grading and Drainage

a. Catch basin details have been revised. Applicant has confirmed catch basins with City Right-Of-Way would have 3-foot sumps. No further action necessary.

b. A catch basin at the corner of Cross Street and Fore Street was originally proposed within the pedestrian tipdown ramp. Applicant has relocated this basin. No further action necessary.

c. Spot grades generally indicate brick driveway tipdowns and crosswalks will have 2% maximum cross-slope. However, we recommend final construction plans and details indicate maximum cross-slopes for these areas.

3) Utility Connections

a. Ability to serve letters have not been provided for all utilities impacted by the proposed project, but have been requested by the applicant for applicable utilities. The applicant has indicated that ability to serve letters will be submitted to Planning upon receipt. These can be included as a condition of approval.
b. Connection to Existing Stormwater Systems: E-mail, or otherwise written, confirmation from the Department of Public Works accepting this connection is requested to confirm that this connection is appropriate under Land Use section 14-526 (b) 3 a. (iv); and 14-526 (c) 3 a. This confirmation is typically provided similar to a capacity to serve letter, and can be a condition of approval. Applicant has indicated they are in the process of finalizing connections to the existing drainage systems.

RE: Three Portland Square, Level III Site Plan Application

Dear James,

On behalf of North River IV, LLC, we are pleased to submit updates to a Level III Application for the development of Three Portland Square property currently owned by North River IV. The original Application was filed in September, 2019 and as the design progresses soon after that time the Owners realized that the project needed to make significant changes to be viable. This led to a delay in momentum, but we believe it results in a much better project and are hopeful of your support moving forward.

Project Description

The project site occupies an important City block of approximately 2.26 acres of land in the heart of downtown at the edge of the Old Port Neighborhood bounded by Spring, Fore, Cotton and upper Cross Streets. The property is directly adjacent to and will be well integrated with approximately 260,000 sf of mixed-use space in One Portland Square One and Two Portland Square. The property also provides a transition between the Downtown Business District to the north, less dense mix of residential and commercial buildings to the west, and the Commercial Street corridor to the south.

This project offers an opportunity to bridge these varied built environments, “fill in” a significant hole in the urban fabric, and enhance and extend the pedestrian environment present in the Old Port and the Commercial Street Corridor. The buildings are designed with continuous street level storefronts along Fore Street. The Master Development Plan currently under review proposes multiple pedestrian amenities across both development sites, intending to improve pedestrian linkages and circulation throughout the site. This First Phase of the project proposes to develop a new urban plaza at Spring Street between One Portland Square and the new building that reinforces view corridors toward the water from Spring Street, and integrate with the park/plaza space behind One-Two Portland Square as it continues on to connect to Fore Street and through to Commercial Street.

All sidewalks will be widened and street trees added. Along Spring Street, planned additional amenities including seating, planters, lighting, and green screen panels or artist designed decorative metal screen panels that obscure the structured parking and provide visual interest at the street level. The plaza mentioned above will include plantings, seating, dedicated space for food carts, and a sculpture element in an effort to activate this important pedestrian space.

A key element of the proposed Site Plan is reconfiguration of Spring Street. The Plan as submitted reconfigures the parking along Spring Street from angle parking to parallel spaces, allowing a significant increase in sidewalk width and ability to provide pedestrian amenities in front of the proposed building without a loss in on-street parking. We believe this provides the strong pedestrian activation requested by

Staff, allows softening of the building façade, and is in conformance with the Spring Street Master Plan as adopted by the City. We understand the City is still reviewing this design and look forward to further conversation about the layout as the project is reviewed by DPW and Planning Staff.

Major modifications since the initial submission in September include separation of the Office Tower from the Garage. This decision was made based on constructability of the upper site, but results in a stronger relationship with Spring Street and the adjacent 1 PS. The parking structure (freestanding with retail/ office wrap along Fore Street) has been re-designed to accommodate a total of 851 vehicles, meeting the demand for the total buildout of the upper site, while accommodating the demand of existing parking for One-Two Portland Square and the Fathom Hotel.

This project is subject to a Traffic Movement Permit and Transportation Demand Management Plan currently being reviewed as part of the Master Development Plan, as well as an Amendment to the Maine DEP SLOD permit which is currently in place on the property. Copies of these documents as well as a project specific Parking Demand and TDM Plan for this phase are included in this application.

Attached and made part of this Application are documents, reports, plans, and images that describe the Three Portland Square Application in full detail. We believe the Application is complete and welcome the opportunity to work closely with City Staff, Planning Board, and interested residents of Portland during its review and approval.

With Regards,

Portland, ME 04101

Re: Letter of authorization for Portland Square development project.

Dear Ms. Barhydt,

On behalf of North River Company, in its capacity as the Manager of North River IV LLC, which is the owner of record for the parcel of land bounded by 486-504 Fore Street, 8-30 Cross Street, 273-285 Commercial Street and 3-19 Center Street (legal description: Map 38, Block G, Lots 1-3-5), (a/k/a "Portland Square lower parking lot"), this letter shall authorize Patrick Carroll of Carroll Associates and Steve Weatherhead of Winton Scott Architects to act as agents in procedural actions related to obtaining City of Portland Planning Board approvals associated with the proposed development project located on the Portland Square lower parking lot.

Sincerely,

Peter L. Pachios

GENERAL DOCUMENT AND DRAWINGS CHECKLIST
Please submit each document as a separate PDF file
Please confirm by electronically checking the boxes to the left

** PLEASE FILL OUT AND UPLOAD SEPARATELY THE ZONING TABLE AND WAIVER TABLE AS NOTED BELOW **

GENERAL APPLICATION DOCUMENTS	
Yes ☑ NA ☐	**Project Description** • Cover Letter with detailed project description
Yes ☑ NA ☐	**Completed Checklist – Level II and Level III Site Plan** (this document)
Yes ☑ NA ☐	**Right, Title and Interest** • Deeds, leases, or purchase and sales agreements
Yes ☑ NA ☐	**Evidence of State or Federal Approvals** • Permits or letters of non-jurisdiction, if applicable
Yes ☑ NA ☐	**Zoning Assessment** • Table listing required and proposed uses and dimensional standards Zoning Assessment Table
Yes ☑ NA ☐	**Existing and/or Proposed Easements or Covenants, applicable.** • Evidence of existing easements and any proposed easements
Yes ☑ NA ☐	**Waiver Requests** • Written request for waiver describing request and reason Waiver Table
Yes ☑ NA ☐	**Financial Capability** • Letter or evidence from a financial institution or third party verifying financial capacity to undertake project
Yes ☑ NA ☐	**Technical Capability** • Evidence of technical capability of applicant and consultants – resumes and/or examples of past projects

LEVEL II AND LEVEL III SITE PLAN
STANDARDS AND SUBMISSION CHECKLIST

Provide assessment of compliance with standards and include supplemental documentation, as applicable
Please Submit each document as a separate PDF file

TRANSPORTATION

Yes	NA	
☑	☐	**Transportation Analysis- Traffic Impact (14-526 (a) 1)** • Provisions for pedestrian, bicycle, vehicle, and loading circulation and incremental volume of traffic impacts • Traffic Impact Study (Technical Manual, Section 1) if applicable
☑	☐	**Access and Circulation (14-526 (a) 2 a)** • Access and internal circulation, addressing ADA access • Access and egress impacts on traffic flows • Description and use of drive-up features, if applicable
☑	☐	**Loading and Servicing (14-526 (a) 2 b)** • Loading and servicing needs, route and travel way geometrics for deliveries • Turning templates for delivery vehicles, if applicable
☑	☐	**Sidewalks (14-526 (a) 2 c)** • Sidewalks and condition along street frontages and internal walkways • Engineered details for ADA ramps and public sidewalk details meeting sidewalk materials policy and ADA ramp construction details as applicable (Technical Manual, Section 1)
☑	☐	**Public Transit (14-526 (a) 3), if applicable** • Existing available transit services • Proposed site plan design details, such as easement, pad base, and shelter
☑	☐	**Off-Street Parking: Vehicle & Motorcycle/Scooter) (14-526 (a) 4 a and c)** • Expected parking demand, proposed parking supply, ADA parking, and applicable Zoning Requirements • Address Technical Manual standards (Section 1) for curb cut separation and parking lot layout and locate on site plan
☑	☐	**Bicycle Parking (14-526 (a) 4 b)** • Address bicycle parking requirements and identify locations on-site • Construction details for bike racks (Technical Manual, Section 1)
☑	☐	**Snow Storage (14-526 (a) 4 d)** • Management plan for snow removal and locate snow storage areas on plan
☑	☐	**Traffic Demand Management (TDM) (14-526 (a) 5), if applicable** • Develop TDM with Trip Reduction Targets and Strategies

ENVIRONMENTAL AND LANDSCAPE FEATURES	
Yes NA ☑ ☐	**Preservation of Significant Natural Features (14-526 (b) 1), if applicable** • Trees, plants, habitats listed on State or Federal list of endangered or threatened • High and moderate value waterfowl and wading habitat • Aquifers on Casco Bay Islands • Waterbodies (including wetlands, watercourses, significant vernal pools and floodplains) • Proposed preservation areas and protection measures • Documentation from environmental consultants, determinations from applicable state agencies
Yes NA ☑ ☐	**Landscaping and Landscape Preservation (14-526 (b) 2 a)** • Preservation of trees and preservation within required zoning setbacks (Technical Manual, Section 4) • Protection measures of existing vegetation during construction • Protection measures within Shoreland Zone, if applicable
Yes NA ☑ ☐	**Site Landscaping (14-526 (b) 2 b)** • Screening and buffering of service areas and between non-residential and residential uses • Planting plans with plant schedule and sizes (Technical Manual, Section 4)
Yes NA ☐ ☑	**Parking Lot Landscaping (14-526 (b) 2 b ii), if applicable** • Landscaped islands within parking areas (Technical Manual, Section 4)
Yes NA ☑ ☐	**Street Trees (14-526 (b) 2 b iii)** • Existing Heritage or Feature Trees on site and measures to preserve • Identify street trees on the plan meeting the site plan and Technical Manual standards (Section 4) or identify alternative measures, if applicable
ENVIRONMENTAL AND STORMWATER	
Yes NA ☑ ☐	**Water Quality, Stormwater Management and Erosion Control (14-526 (b)3 a)** • Stormwater report in compliance with Section 5 of Technical Manual and DEP Chapter 500 stormwater for basic, general and flooding standards, as applicable • Erosion control plan and measures • Evidence of compliance with Urban Impaired Stream Standards pursuant to DEP Chapter 500 stormwater, as applicable • Subsurface sanitary sewage disposal and groundwater protection

PUBLIC INFRASTRUCTURE AND SAFETY	
Yes ☑ NA ☐	**Consistency with City Master Plans (14-526 (c) 1)** • Identify consistency with master plans • Proposed easements, rights and improvements to connect or continue off-premises public infrastructure, as applicable
Yes ☑ NA ☐	**Public Safety and Fire Prevention (14-526 (c))** • Address Crime Prevention through Environmental Design (CPTED) (Technical Manual, Section 3) • Emergency vehicle access • Address consistency with public safety standards (Technical Manual, Section 3) • Submit a code summary referring NFPA 1 and all Fire Department standards (Technical Manual, Section 3) – Fire Checklist
Yes ☑ NA ☐	**Availability and Adequacy of Public Utilities (14-526 (c) 3) (Technical Manual, Sections 2 & 9)** • Electrical services, including providing underground services • Identify existing and proposed connections for public utilities and required public utility upgrades • Sewer line connections are required, if there is a main within 200 feet • Proposed solid waste management facilities on-site and management for the site • Written evidence of the ability to serve from utility companies, as applicable
SITE DESIGN	
Yes ☑ NA ☐	**Massing, Ventilations and Wind Impact (14-526 (d) 1)** • Wind and ventilation impacts on adjoining structures and/or adjacent public spaces. Wind study, if applicable • Bulk, location or height impacts on adjoining structures • Identify and locate HVAC equipment and venting away from public spaces and residential properties • Identify screening and manufacturing specifications for noise, if applicable
Yes ☐ NA ☑	**Shadows (14-526 (d) 2), if applicable** • Shadow analysis of impacts on publicly accessible open space (Technical Manual, Section 11)
Yes ☑ NA ☐	**Snow and Ice Loading (14-526 (d) 3)** • Building design to prevent snow and ice from loading or falling onto adjacent properties or public ways
Yes ☑ NA ☐	**View Corridors (14-526 (d) 4), if applicable** • Protection of designated view corridors (Portland Design Manual, Appen. 1)

Yes ☑ NA ☐	**Historic Resources (14-526 (d) 5), if applicable** • Identify developments within Historic Districts or affecting Designated Landmarks • Certificate of Appropriateness or other evidence • Identify Developments within 100 feet of Historic Districts or affecting Designated Landmarks. Advisory HP review may be required • Address preservation and documentation of Archaeological Resources
Yes ☑ NA ☐	**Exterior Lighting (14-526 (d) 6)** • Cut sheets of on-site light fixtures and any architectural or specialty lights (Technical Manual, Section 12) • Engineered details for any lights proposed in street right-of-way (Technical Manual, Section 10)
Yes ☐ NA ☑	**Noise and Vibration (14-526 (d) 7)** • Evidence of noise levels for equipment, such as equipment specifications, to demonstrate consistency with zoning requirements
Yes ☐ NA ☑	**Signage and Wayfinding (14-526 (d) 8), if applicable** • Signage plan showing the location, dimensions, height and setback of all existing and proposed signs. Signs in Historic Districts are reviewed by Historic Preservation staff • Proposed commercial and directional signage on site
Yes ☑ NA ☐	**Zone Related Design Standards (14-526 (d) 5)** • Address Historic Preservation Design Review, if applicable • Address any applicable design review standards by zone • Address submission requirements from Design Manual, page 1, addressing neighborhood context • Description of exterior materials, color, finish, and samples
Construction Management Plan	
Yes ☑ NA ☐	**Construction Management Plan** • Construction Management Document and Plan

LEVEL II AND LEVEL III SITE PLAN
DRAWINGS CHECKLIST

Please upload the following DRAWINGS with the listed details into e-Plan as separate pdfs

RECENT BOUNDARY SURVEY (stamped by Maine Licensed Surveyor)

- [x] Must be in compliance with Technical Manual, Section 13

SITE PLAN(s) (stamped by Maine Licensed Engineer) including:

Existing Conditions

- [x] Approximate location of structures on abutting property
- [x] Topography
- [ ] Locate water courses
- [ ] Delineate wetlands
- [x] Zone lines

Proposed Site Plan

- [x] Ground floor area, and grade elevations for all buildings

Access, Circulation, and Parking

- [x] Streets and intersections adjacent to site, any proposed geometric modifications
- [x] Location, dimensions and materials of all existing and proposed driveways, vehicle, bicycle, & pedestrian access ways with corresponding curb lines
- [x] Engineered specifications/ cross-sections for proposed driveways, sidewalks & paved areas
- [x] Location and dimensions of proposed loading areas
- [ ] Existing and proposed transit infrastructure with dimensions/ engineering specifications
- [x] Location of vehicle and bicycle parking with dimensions and engineering specifications

Site Considerations

- [ ] Identify snow storage areas
- [x] Location of fire hydrants
- [ ] Location of solid waste management facilities

UTILITY PLAN including:

- [x] Existing utilities on site and within public streets
- [x] Location, sizing and directional flows of all existing and proposed utilities
- [x] Location and dimensions of off-premises public or publicly accessible infrastructure adjacent to site
- [x] Electric utility infrastructure

GRADING AND DRAINAGE PLAN including:

- [x] Existing grades and drainage
- [x] Proposed grades
- [x] Proposed stormwater management meeting Technical Manual (Section 5), standards
- [ ] Location and proposed alteration of a water course
- [ ] Preservation or alteration of wetlands

EROSION CONTROL

- [x] Must be in compliance with Technical Manual, Section 5

LANDSCAPE PLAN including:

- [x] Existing vegetation to be preserved and preservation measures
- [x] Proposed landscaping and buffers
- [x] Planting schedule

RECORDING PLAT, if applicable
☑ If Subdivision, must be in compliance with requirements of Section 14-496 (b)
ARCHITECTURAL PLANS AND RENDERINGS including:
☑ Exterior building elevations, color renderings, illustrations of all sides
☑ Location and dimensions of all existing and proposed HVAC and mechanical equipment, all proposed screening
☐ Provide context drawings, if applicable (Design Manual, page 1)
☑ Floor plans

NORTH RIVER COMPANY

Bulgroup Properties was established in 1981 and managed by Tickly Bender Realty Corp., a predecessor to North River Company LLC ("NRC"). NRC is a privately held real estate investment and management firm based in New York City. NRC invests in and manages real property on behalf of high net worth and institutional investors.

NRC owns and operates a highly-diversified portfolio of office, mixed-use, fine art storage, industrial and retail property. Presently, NRC owns and operates over 3,500,000 square feet of mixed-use properties and over 275 acres of ground-up development in New York, Massachusetts, Maine, Vermont, New Hampshire, Pennsylvania, Colorado and California. NRC has closed on more than 30 acquisitions and dispositions over the past 20 years, representing over $1.6 billion in aggregate transaction volume.

NRC seeks to acquire, manage and develop strategically located real estate assets to provide long-term value to investors through cash flow and asset appreciation. NRC's management experience in a variety of transactions provides a broad background in many types of investments from stabilized assets to value-add properties to long-term redevelopment opportunities. NRC's long-term viewpoint endeavors to successfully take advantage of and protect against adverse market conditions.

NRC's traditional investment structure involves the creation of a special purpose entity to acquire an asset with NRC or an affiliate as the manager of the investment. Depending on the equity level required and the anticipated return and hold period of the investment, investment partners range from a single institutional investor to a syndication of individual private capital and family offices. NRC's management team typically invests between 10% and 20% of the required equity of each transaction.

NRC's management team has extensive commercial real estate investment management experience in an array of markets. NRC's efforts include complex joint-venture arrangements, redevelopment of existing occupied properties, ground-up development, repositioning assets, leasing, property management, assembly of new businesses to create new income streams (self-storage, antique mall, gallery, event space, etc.) and asset management and investment reporting. The management team maintains strong relationships with governmental, civic and business leaders in each location NRC operates. Members of NRC's team belong to local and national real estate boards/associations, as well as several notable non-profit organizations and academic institutions. NRC takes an active, "hand-on" approach, carefully selecting in-house management teams in each market. NRC's full-service business model has consistently delivered results for tenants and investors.

Management Team

Coleman P. Burke
Founder & Chairman

As the Chairman and Managing Partner of NRC and its related entities, Coley is responsible for overseeing the development and execution of NRC's investment strategy. With more than 45 years of real estate investment, development and management experience, Coley plays a central role in identifying new opportunities, capital raising, and in our overall investment and management strategy. Coley graduated from St. Paul's School in 1959, Yale University in 1963 and Case Western Reserve University Law School in 1970. He spent four years (1963-1967) as a Ltjg., Fleet OOD and Communications Officer in the United States Navy. Prior to founding NRC, Coley was admitted to the New York State Bar and practiced law at Burke & Burke in New York City from 1970 to 1983.

Christopher S. Flagg
President

As President of NRC and its related entities, Chris oversees day-to-day management of all aspects of the firm, which includes managing our teams in New York, Massachusetts, Maine, New Hampshire, Vermont, Pennsylvania, Colorado and California, as well as capital raising. With over 29 years of real estate investment, development and management experience, Chris plays a leading role in the strategic direction of NRC. Chris joined the management team in 1990. Chris graduated from Deerfield Academy in 1983 and received a B.A. degree from Hamilton College in 1987.

Christopher H. Pachios
Vice President

As Vice President of NRC and its related entities, Chris helps to oversee day-to-day operations of the firm, while primarily focusing on new acquisitions, business development and sourcing equity and debt. Chris joined the management team in 2003. Prior to joining the firm, Chris worked as a commercial real estate broker in Boston and New York. Chris is also a partner in a family real estate business founded by his grandfather in Portland, Maine. Chris graduated from St. Paul's School in 1994 and received a B.A. degree from Bowdoin College in 1998.

Peter L. Pachios
Managing Director

As Managing Director of NRC and its related entities, Peter's responsibilities include acquisitions, asset management, leasing, operations and development. Peter joined the management team in 2007. Prior to joining the firm, Peter worked for the Boston Red Sox, primarily focusing on growing the non-baseball related business. Peter is also a partner in a family real estate business founded by his grandfather in Portland, Maine. Peter graduated from St. Paul's School in 1999 and received a B.A. degree from Georgetown University in 2003.

Adam K. Myers
Managing Director, Chief Engineer

As Managing Director and Chief Engineer of NRC and its related entities, Adam's broad range of responsibilities include acquisitions, construction management, asset management, operations, and property management. Adam leads the development, construction and maintenance initiatives throughout the company's portfolio. Adam joined the management team in 2011. Prior to joining the firm, Adam worked for over 10 years in real estate development and construction management. He founded, owned and operated a project management consulting company that specialized in commercial construction across North America. Adam graduated from Kenyon College with a B.A. degree in 1997 and the Daniels College of Business at the University of Denver with an M.B.A in 2006.

Anthony J. Gatti
Vice President, Maine Operations

Tony joined NRC in 1993. As Vice President, Tony oversees the day-to-day operations of the Portland, Brunswick and Waterville, Maine teams, primarily focusing on leasing, tenant relations and property management. Anthony is a native of Maine and lives in Scarborough, Maine.

Daniel P. Jacques
Construction Manager, Maine Operations

Dan joined NRC in 2005 as part of the construction management, maintenance and operations team. Dan served as NRC's construction supervisor on the Merrill's Wharf redevelopment for Pierce Atwood. Prior to joining the firm, Dan worked in project management as the east coast manager for a worldwide chemical engineering company. Dan is a Maine native, and graduated with a B.A. from the University of Maine in 1979 and attended the Muskie School at the University of Southern Maine from 1988 to 1989.

CARROLL ASSOCIATES

Firm Description

Carroll Associates is a small consulting firm engaged in the practice of landscape architecture, land planning, and site design. The firm was created in 1993, and is involved in a wide range of design and planning projects throughout Maine and New England.

The firm provides professional services to a broad-based clientele that includes municipal and institutional organizations, architects, engineers, real estate developers, and private individuals. While maintaining a diverse workload, the firm is entrenched in public, urban, and residential based planning and design work. Carroll Associates has significant experience in public, urban waterfront settings, institutional projects ranging from elementary schools to university work; municipal projects and recreational projects including work at Acadia National Park. The overriding objective in each is to provide a sensitive and well thought out solution which respects the natural environment and creates a functional and inviting setting for the building and its user.

Carroll Associates has been involved with many complex state and municipal projects which are specifically relevant to this project. Relevant Site Planning and Urban Design projects in Portland include the following:

- Ocean Gateway Ferry Terminal
- Marriot Residence Inn
- Riverwalk Condominiums (unbuilt)
- Maine State Pier Redevelopment Design Competition (selected design, unbuilt)
- Merrill's Wharf Redevelopment
- Thompsons Point Redevelopment
- International Marine Terminal Expansion
- Portland Gateway Hotel

In all of these projects the ability to integrate a new facility or program with historical buildings, complex physical and environmental sites, and established neighborhoods was critical to the overall success of the project.

We are well experienced with working within an interdisciplinary design team and the need to provide strong design solutions with limited budgets. Key to the firm's success is the commitment to providing attention and focusing on the specific needs of the client, remaining flexible and bringing projects to closure on time and within budget.

Professional services offered through Carroll Associates may include any or all of the following:

- Site Selection and Analysis
- Program Development and Budgeting
- Site Feasibility/ Utilization Studies
- Recreation Planning and Design
- Site Master Planning
- Construction Documents, Bidding, and Administration
- Consultant Team Coordination and Management
- Local, State, and Federal Permitting and Approvals

Brick Hill, South Portland, ME

Brickhill consisted of redevelopment of former Maine Youth Center into mixed use 'Smart Growth' project. The program for the 56 acre site includes 300 affordable housing apartments and condominiums, 250,000 SF of professional office space, recreation amenities including an 8 acre park, boat launch, community gardens, and hiking trails while preserving the historic brick structures on the site. The project is 100% completed in 2017. Carroll Associates provided Master Planning and Site Design Services for the project since 2001.

Forefront at Thompsons Point

The Forefront at Thompson's Point is a mixed-use development located on an existing vacant industrial site on the Fore River in Portland Maine. The original program consisted of a new Sports Event Cente, Concert Hall with an adjacent outdoor amphitheater seating 4500, a 235 room hotel, cultural center, restaurants, and approximately 180,000 sf of professional office space. Carroll Associates has been retained by the Developer to provide Master Planning and Landscape Architectural Services on the project.

Oceangate and Maine State Pier Redevelopment

Redevelopment of underutilized portion of Portland waterfront to provide new berthing for cruise ships and international ferry terminal. Oceangate Project includes extensive parking for ferry arrivals and departures, passengers, and tour busses; integration of adjacent narrow gauge railway, extension of existing streets to provide critical connections, and outdoor plazas and parks providing strong pedestrian connectivity to adjacent open space systems. Maine State Pier project includes redevelopment of aging waterfront pier and landside property to provide strong mixed use including office, retail, hotel, and a 2 acre park and with direct access to the waterfront.

Harborcorp, Portsmouth, NH

Redevelopment of vacant property in West End of Portsmouth, NH to provide mixed use development. Project envisions up to 115 Hotel rooms, 24 Condominium Units, Conference Facilities, Retail, dedicated parkland, and Structured Parking. The project ties into the existing Sheraton Hotel across the street. Approvals are in place and construction is expected to begin in 2019

CARROLL ASSOCIATES

PATRICK J. CARROLL
Principal Landscape Architect

Professional Registration:
Maine, New Jersey, New Hampshire, CLARB

Education:
Utah State University
Bachelor of Landscape Architecture,1978

Prior Experience
Carroll Associates, Portland ME 1993-
Moore Weinrich Architects, ME 1989- 2003
Environmental Planning and Design, ME 1988
Design Workshop, CO 1982- 1988
Land Design, UT 1989- 1988

As founder of Carroll Associates, Pat brings 40 years of landscape Architectural experience on a wide variety of projects throughout Maine, New England, and the Western United States. His successful project experience on largescale master planning and urban design provides a strong basis for solving complex design issues and managing important design and permitting challenges. His sensitivity and understanding of environmental constraints and culture provides for successful projects that are fitting and appropriate to each setting.

Erin Kay
Project Manager

Professional Registration:
Maine

Education:
Rhode Island School of Design
Master of Landscape Architecture, 2010

University of New Hampshire
BA Studio Art, 2004

Prior Experience
Carroll Associates, Portland ME 2013-
Crossby/Schlessinger, MA 2010- 2013

Erin joined Carroll Associates in 2010, and brings significant experience in urban design and planning from her experience in Boston prior to joining the firm. She has actively participated in many of the larger urban projects Carroll Associates has undertaken in the last five years, including Thompsons Point, Harborcorp and other complex and challenging projects. Her ability to quickly synthesize a site and develop creative solutions make her a valuable member of the design team.

WSA

WINTON SCOTT
ARCHITECTS

5 Milk Street, Portland, ME 04101
207.774.4811|www.wintonscott.com

Established in 1975, Winton Scott Architects is a small, design-oriented architectural practice located in Portland, Maine. Our work encompasses a diverse array of project types and scales ranging from multi-block urban developments, to historic renovations, commercial and institutional buildings, and multifamily and single family residences.

Our firm has been recognized numerous times for design excellence by the Maine and New England Chapters of the American Institute of Architects, as well as the United States Green Building Council; and our work has been profiled in national trade journals, local publications, and several books focussed on design and architecture.

Winton Scott Architects is comprised of a staff of six, including four senior architects ranging in experience from 15 to 45 years. The office is organized horizontally with all staff members capable of managing projects from program and design through production of construction documents and construction contract administration. This depth of experience and continuity in staffing have allowed WSA to take on large, complex projects while consistently delivering the highest level of professional services to our clients. The culture of the office is that of an open, creative collaboration of seasoned architects striving for the highest level of design excellence and client satisfaction.

We believe that architecture should be sustainable, adaptable, timeless, and derivative of its context and function. All buildings, even the most modest in scale and budget, can be at once artful, functional, and inspiring if they are rigorously conceived and executed with craft and precision. Each of our designs responds to the specific needs of our clients and the individual character of a particular site and its surrounding context.

WINTON SCOTT
ARCHITECTS

Winton Scott, NCARB
President

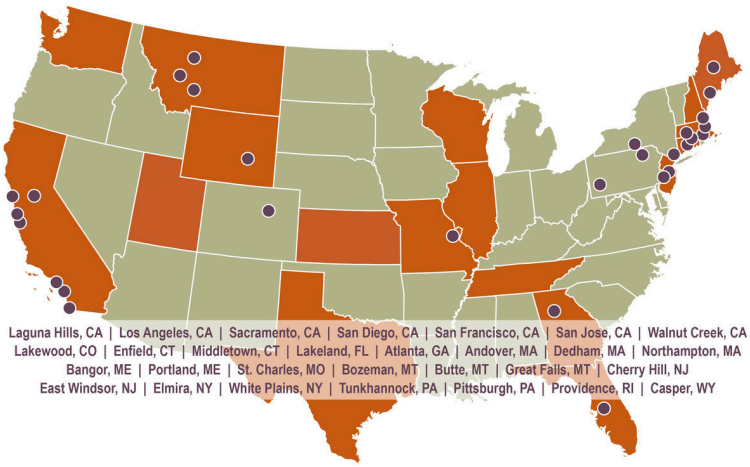
Professional Registrations	Maine, Massachusetts, and NCARB Certification
Other Experience	Louis I. Kahn, Architect, Philadelphia, PA Senior Project Architect Phillips Exeter Library Eero Saarinen and Assoc., New Haven Designer and Job Captain Ford Foundation Headquarters
Education	University of Texas, Bachelor of Architecture with Highest Honors, 1960

Before founding founding Winton Scott Architects in 1975, Winton Scott had built an impressive list of project experiences with some of the most highly respected architectural firms in the country. During this same period, he also accepted several teaching appointments with some notable schools of architecture, honing his own design interests.

Although Winton is a skilled designer, comfortable with any site, any building type and any scale, one of his special interests is urban design. His keen sensibilities in this arena are dramatically apparent in several recent projects completed by WSA

Stephen W. Weatherhead, RA
Principal

Professional Registrations	Licensed Architect, State of Maine
Education	Syracuse University, Bachelor of Architecture Professional Degree, 1988 Syracuse University in Florence, Italy Architecture Study Abroad Program, 1986



Steve joined Winton Scott Architects in 1994 to take on the role of Project Architect for the renovations to Merrill Auditorium. Since that time, he has gained extensive design and management experience on a wide range of renovation and new construction projects undertaken by the firm. His work encompasses projects ranging from custom homes to large scale commercial and institutional projects as well as a large portion of the firm's municipal work which includes a multitude of projects completed for the City of Portland.

With over 28 years of experience in all phases of architectural practice from conceptual design through construction, Steve knows how to effectively manage the design team and lead an open process that has consistently produced successful building projects based on the specific needs of his clients. He has managed projects for WSA totaling over $100M in construction value that have utilized a full range of project delivery methods both in the private and public sectors.

PROFILE OF THE FIRM

Woodard & Curran is an integrated engineering, science, and operations company. Privately held and steadily growing, we serve public and private clients locally and nationwide.

Talented people are at the heart of our firm. Our company was founded in 1979 on a simple business concept: provide an enjoyable place to work with opportunity, integrity, and commitment, and we will attract talented people. It happened. At the heart of our company are people who are experts in their fields and passionate about what they do, showing a level of commitment and integrity that drive results for our clients. You experience this power every day in our actions, our solutions, and our promises kept.

Commitment evident in personal approach

Our commitment is reflected in the personal attention, collaborative resources, and dedication to results that we devote to each project. We assign the right people with the right expertise to the job, and provide clients with easy accessibility to senior experts.

Our work is characterized by responsiveness, resourcefulness, and willingness to do what it takes to get the job done properly. Examples range from helping communities garner state and federal funding for wastewater treatment system improvement to managing a multi-vendor manufacturing project through a major snowstorm and getting production lines up and running. We are experts at navigating the complexities of environmental regulations and have been involved in transforming many brownfields sites into marketable properties. In defining moments like these, it is commitment that brings our clients results.

Woodard & Curran serves clients locally and nationwide from offices throughout the U.S. Headquartered in Portland, Maine, the firm operates offices in the locations noted above, as well as treatment facilities in the states that appear in orange.

Operating with integrity

Our integrity impacts our decision-making at all junctures of our work — from the openness of our communication to the fairness of our prices to placing your interests above our pocketbook. We hire people who share our values of honesty, respect, and fairness and who want to do the right thing. They, in turn, treat everyone — our people, our clients, regulators, and stakeholders — respectfully and honestly.

Full-service firm with multidisciplined staff

Our integrity and commitment are matched only by the depth of our expertise. Our staff are specialists in their fields, offering in-depth understanding of cutting-edge technology, astute problem-solving, multidisciplinary engineering, and expert regulatory guidance. The firm has received numerous honors and awards, and we have ranked among *Engineering News-Record's* top 100 environmental firms every year since 2000.

Services to the private sector

Woodard & Curran provides a range of site/civil and environmental engineering, science, and operations support to companies in the real estate sector, as well as to hospitals, colleges and universities, and law firms, helping our clients realize their project vision.

BARRY SHEFF, PE
PRINCIPAL-IN-CHARGE

Professional Profile

Barry is a Senior Principal and Senior Project Manager with over 25 years' experience working with the public sector on infrastructure planning and implementation, and with the private sector on urban revitalization projects. He is responsible for design and project management, with expertise engaging and facilitating stakeholder processes. His project work has involved utility infrastructure with focus on stormwater and wastewater utility planning studies, evaluations, and engineering; green infrastructure; master development planning and site design; and environmental/land-use permitting at the local, state, and federal levels. Barry focuses his work on sustainable environmental design and is committed to collaborating with owners and stakeholders to develop practical solutions to complex problems. He has been involved in numerous projects with high-performance buildings and LEED certification. Barry has a track record of understanding client expectations, consistent budget controls and excellent communication skills that enable him to drive the success of small and large projects of varying complexities.

Related Experience

Maine Medical Center, Portland, ME – Parking Garage. Principal-in-Charge for the permitting and design of the new 2,000+ car parking garage in St. John Valley neighborhood of Portland. The project is the result of a partnership between a private land-owner and Maine Medical Center (MMC) as part of the hospital's major campus expansion. Woodard & Curran's work involves site options analysis, land-use and environmental permitting, site/civil engineering and utility infrastructure design for the multi-level parking structure to serve MMC employees. Focus areas of the project involve the coordination with employee shuttle services, and the need for accommodating employee commuting patterns and routes while reducing demand on the existing urban street network surrounding the hospital campus.

Patrons Oxford Insurance – Patrons Oxford Insurance Headquarters. Principal-in-Charge for the permitting and design of the new Patrons Oxford Insurance Headquarters in Portland, Maine. The project was the first development in the Portland Technology Park in Portland (designed by Woodard & Curran). The project involved close coordination with the design team and owner, and included the low impact design considerations for parking and site features, as well as integration into the Technology Park's stormwater management plan.

East Brown Cow Management Inc., South Portland, ME – Sable Oaks Office.
Principal-in-Charge responsible for civil site design and land-use permitting of a 45,000-SF office building with associated parking lot, access drives, plazas, and landscaping. The project included design of stormwater treatment systems, erosion control, site amenities, and utilities. Permitting efforts involved the City of South Portland, Maine Department of Environmental Protection (DEP), Army Corps of Engineers, and Federal Aviation Administration given proximity to the Portland International Jetport.

Education

- Bachelors, Civil / Environmental Engineering, University of Vermont

Registrations

- Registered Professional Engineer - ME, #9708
- NCEES License - National, 60366
- Maine DOT Local Project Administration Tier 1 Certification

Professional Associations

- American Society of Civil Engineers
- American Public Works Association
- New England Water Environment Association (NEWEA)
- Order of the Engineer

East Brown Cow Management Inc., Portland, ME – Hyatt Place Hotel. Principal-in-Charge for this redevelopment project to convert an existing parking lot on a 20,000 SF urban parcel of land into an 80,000 SF hotel. We collaborated with the architect and owner's representative to provide local permitting and site / civil engineering design associated with the project. The project was complicated by private power distribution infrastructure that crossed the site and needed to be maintained, as well as the City's desire to have off-site roadway improvements incorporated into the project.

PDT Architects, Portland, ME – Adams School Workforce Housing. Project Manager for this urban redevelopment project, supporting AVESTA Housing and its design team. Located in the Munjoy Hill neighborhood of Portland, the project is a result of a public RFP for redevelopment proposals of this brownfield site, the home of a former elementary school. The project involved the demolition of the existing Adams School building and site amenities, and remediation of environmental contamination; and development of a 16-unit affordable ownership-housing complex, with public open space and playground area. Our work involved local and state environmental permitting, and site engineering and design associated with the placement of this project in a densely developed residential neighborhood. The engineering effort required an intensive balance of earthwork activities to control remediation costs and ensure adequate environmental protections for the residents and users of the open spaces.

The Watermark and Ocean Gateway Garage – Mixed Use Development. Project Manager for the environmental due diligence phases (Phase 1 environmental site assessment and soil/groundwater investigations), site design, and permitting for this private mixed use development on the Portland waterfront (adjacent to the Ocean Gateway facility) with boutique hotel, luxury condominiums, retail, commercial space, office building, 750-car parking garage, and additional surface parking lots. Site/civil work includes layout, grading, drainage, erosion and sedimentation control, and utility design. Permitting includes City Site Plan, Subdivision, Historic Preservation, Maine DEP Site Law, and Maine Historic Preservation permitting. The parking garage was constructed while the remaining portions of the project were unbuilt.

MaineDOT, Portland, ME – Ocean Gateway Multimodal Facility. Program and Project Manager of the permitting and design for implementing first phase of the Master Plan of the redevelopment of a 19.5-acre ship repair facility to a multi-use marine transportation facility on Portland's waterfront. The phase one facility encompassed the former Bath Iron Works site and the associated City-owned land-based infrastructure. Under Barry's responsible charge, Woodard & Curran prepared, submitted, and obtained land-use and environmental permits for the project, including local land-use and Board of Harbor Commissioners approvals; Maine Department of Public Safety Construction Permit; Maine Traffic Movement Permit; U.S. Army Corps of Engineers Department of the Army Permit; and Maine DEP Site Location of Development Permit and Natural Resources Protection Act. We also designed the site infrastructure (vehicle queuing, pick-up and drop-off, short- and long-term parking) to be flexible in its use. The project includes the design of City streets, a major regional trail connection, and the narrow gauge passenger railway. The design creates a new city block and the impetus for economic development. The design of utility infrastructure and blending the facility into an existing congested urban environment proved challenging, but in the end, met the City's future needs. Barry was responsible for working with a steering committee to develop and refine concepts working within available construction funding constraints, and for preparing Phase 1 improvement recommendations as a summary of the preliminary design efforts. As the Program Manager, Barry was responsible for managing the contract with the State of Maine and the 10-firm design team.

University of Southern Maine, Portland, ME – Community Education Center and Parking Garage. Project Manager/Engineer responsible for site and utility design of a 1200-car parking garage, 500-seat lecture hall, and 15,000-SF office classroom building. Coordinated the site survey; completed preliminary site evaluations; prepared grading and utility plans for surface parking areas, open space, and roadways; developed construction documents; completed stormwater design; coordinated with the City of Portland for roadway realignments and discontinuances; coordinated design plans with the project architect and landscape architect; and prepared technical specifications for construction documents. Coordinated with the regulatory agency; prepared local Demolition Permit applications; prepared Application for Maine DEP Site Law and City's Major Site Plan Applications under tight time frames. The project is LEED Gold certified.

City of Portland, ME – Bayside Adapts, Phase I. Principal-in-Charge of the team providing planning and engineering services to facilitate the City's first climate change adaptation planning effort, for the City's Bayside neighborhood. The focus of the project was to conduct a Sewer and Stormwater Data Gap Analysis, and public engagement process to help the community identify a socially responsible, technically sound and financially feasible adaptive strategy to protect the Bayside Neighborhood from the effect of rising tides, extreme rain events and storm surge. Our work involved coordination and contracting with a subconsultant, RPS ASA to evaluate and recommend sea level rise and storm surge scenarios appropriate for City of Portland's planning horizon.

BECKER
STRUCTURAL ENGINEERS

About Us

Becker Structural Engineers, Inc., was founded in 1995 and is a full service structural consulting firm with a staff of twenty-seven. We provide practical, cost-effective and innovative solutions on a wide range of challenging projects in three practice areas; buildings, parking structures and bridges.

We believe in competency and character as our defining values. We are pro-active and interactive in our approach. Our dedicated staff and our investment in technology allows us to deliver high quality service on multiple large and small projects simultaneously. We embrace an engineering approach to projects which combines classical engineering theory and practical experience, paired with the versatility and efficiency of Autodesk Revit to create structural models which interact and coordinate with architectural and mechanical models to define the comprehensive building system. This approach advances the design and coordination of our projects.

Our building design practice includes residential, commercial, education and public institutional buildings. We have substantial experience with contemporary building design which is complemented by an extensive background and expertise renovating and restoring historic structures. Our design capabilities are complemented by our construction phase services, which include construction reviews for general conformance and implementation and administration of the IBC Special Inspections Program. We believe a strong job site presence contributes to enhanced quality and improved construction efficiency. Working with the owner, architects, contractor and testing agencies our office provides a full range of construction monitoring capabilities.

Becker Structural Engineers have been the selected structural engineering consultant for municipalities, owners and developers throughout New England. Recent and relevant work includes on-going services under a **General Consulting Services for the City of Portland** and a **General A/E Services** agreement with the **Portland Housing Authority.** Significant buildings in Portland include the multi-story medical offices for **InterMed**, the **Hyatt Hotel** located on Fore St. and the rehabilitation of the **historic Twitchell-Champlain** building on Merill's Wharf which now serves as the law offices for Pierce Atwood**.** We strive to integrate ourselves in understanding the overall approach that each owner is seeking to obtain, with guidance on analysis and cost recommendations to fit within the sustainability of the program design.

STRUCTURAL ENGINEERS

Paul B. Becker, P.E., SECB
President

As the founder of Becker Structural Engineers, Paul has over thirty-eight years of structural engineering experience in New England and the Mid-Atlantic States. His technical experience covers all aspects of the structural engineering profession including complex building systems using steel framing, cast in place, precast and post-tensioned concrete, deep foundation support systems, earth retaining structures, masonry and timber framing. He has served as lead design engineer and project manager, responsible for establishing and monitoring schedules, budgets and quality control on projects with construction costs of up to $75 million. As Principal in Charge of a project, he collaborates with the client and project team to establish the project scope, schedule and contracts and monitors the progress and quality of work.

OUR STORY

In 1905, Peter Consigli, a skilled mason, established Peter Consigli & Sons in Milford, Massachusetts, on the cornerstones of hard work, integrity and pride in craftsmanship. Four generations and over 100 years later, Consigli has grown from a local business into one of the largest construction managers in the Northeast.

With more than 1,000 employees corprate-wide and 90 in Maine, Consigli has expanded its roots, while maintaining its core competencies as a true builder with more than 350 skilled carpenters, laborers and masons on staff.

RELEVANT EXPERIENCE

Consigli has extensive knowledge of every component included in the Portland Square project from a wealth of lessons learned from similar projects. We are experts in parking garage construction having completed more than a dozen in recent years, including five of 750 cars or more. On the following pages we have demonstrated our experience with parking structures, deep foundations and office buildings in urban environments.

CONSIGLI
Est. 1905

Cow Plaza Hotel LLC, Hyatt Place Hotel, Portland, ME

New construction of a 80,000 sq. ft. hotel in downtown Portland. The facility, located at the corner of Fore and Union Streets, contains 130 guest rooms and 1,000 sq. ft. of street-level retail space, a swimming pool and other high-end amenities.

East Brown Cow Inc., Canal Zero, Portland, ME

20,000 sq. ft. renovation and re-branding of East Brown Cow's Canal Plaza in Portland's Downtown will bring new life to the quiet plaza, which rests between four corporate office buildings. The plaza will feature locally quarried pavers, stairs and retaining wall and a new boutique circular building constructed of a mixture of exposed architectural concrete and a custom curtainwall system.

Aura, Club Renovations/Expansion, Portland, ME

8,460 sq. ft. renovation and 14,400 sq. ft. new construction to Portland's iconic nightclub will allow the venue to hold larger events, conferences, private events and weddings. Project scope includes demolition and reconstruction of much of the existing building and new kitchen, bar areas, dance floors and finishes. The project is being executed across three distinct phases with carefully planned urban logistics.

Maine Medical Center, Employee Parking Garage, Portland, ME

New 810,000 sq. ft., 2,400-car parking garage built to support Maine Medical Center's master plan in providing a consolidated parking option for employees. The nine-story garage will be supported on steel H-piles and cast-in-place concrete foundations with the above-grade structure consisting of precast concrete. Construction will occur adjacent to occupied businesses, private residences and active railroad tracks.

City of Portsmouth, Foundry Place Parking Garage, Portsmouth, NH

This six-story, 618-space parking garage on Deer Street, while also making roadway improvements. This challenging site—located in a tidal zone and abutted on both sides by a freight railroad and residential neighborhood—is also a heavily-contaminated brownfield, hosting heavy metals, lead, petroleum and oil. Extensive remediation efforts will be required, in tandem with abatement and demolition of several small existing structures on the site.

RELEVANT EXPERIENCE

CONSIGLI
Est. 1905

City Square II Development Co., CitySquare Underground Garage, Worcester, MA

Construction of a 564-space, 160,000 sq. ft. two-story below-grade garage as part of the CitySquare development in Worcester. The project required management of hazardous soils, challenging logistics and groundwater issues. The project also included the Installation of a public plaza atop the new below-grade structure.

Related Beal, Lovejoy Wharf, Boston, MA

New construction of a 250,000 sq. ft., 17-story residential building featuring 157 luxury condominiums plus amenities, public spaces and 2,000 sq. ft. of ground-floor retail space. This cast-in-place concrete structure was built around an active, waterfront site, adjacent to the TD Garden and Zakim Bridge.

Maine Historical Society, Brown Library & Longfellow Garden, Portland, ME

This 10,000 sq. ft. renovation and 10,000 sq. ft. expansion of historic library was completed within a constricted urban site; included upgrades to M/E/P and life safety systems and ADA requirements. The addition features a dramatic Kawneer curtain wall façade.

MaineHealth, Corporate Headquarters, Portland, ME

Conversion of a 1940s retail building, originally built for Sears & Roebuck, into 90,000 sq. ft. Class A office space for this leading regional healthcare network. The central core of the building was removed to create a new atrium that maximizes natural light throughout the building. Consigli procured and managed the installation of custom furniture systems.

Immucell Corp., Mast-out Facility, Portland, ME

16,800 sq. ft. new construction of a pharmaceutical-grade production facility for Mast Out, a treatment for a common infection found in cows worldwide. The cGMP facility will house space for fermentation, laboratory, processing and warehouse program areas, and it is utilizing pre-fabrication for equipment and building systems to manage the aggressive schedule.

Re: North River IV, LLC and North River Company, LLC

To Whom It May Concern:

North River Company ("NRC"), the Manager of North River IV LLC, which is the owner of record of the properties known as Portland Square, Portland, ME, has had a banking relationship with People's United Bank, N.A. since 2010. In that time, People's United Bank has provided NRC and its affiliates with real estate financings in excess of $170,000,000, including loans for acquisition, new development and complex renovation projects. We consider the principals of NRC to be of the highest character and, based on our knowledge of NRC's management expertise, financial condition and access to significant liquid assets, People's United Bank would be comfortable entertaining requests for financing any type of real estate project and of any size.

NRC and its affiliates have access to cash reserves and credit facilities well in excess of $20,000,000 with People's United Bank.

People's United Bank is a subsidiary of People's United Financial, Inc., a diversified financial services company with over $45 Billion in assets. Founded in 1842, People's United Bank is a community-based, regional bank in the Northeast offering commercial and retail banking, as well as wealth management services through a network of nearly 400 retail locations in Connecticut, New York, Massachusetts, Vermont, New Hampshire and Maine.

If I may be of any further assistance regarding this highly valued relationship, please contact me at (207) 828-3023 or by email at timothy.mcmachen@peoples.com.

Sincerely,

Timothy J. McMachen

EXHIBIT A

Legal Description

Tract 1:

Parcel One - One Portland Square.

Units No. 1, 2, 3, 4, 5, and 6 of One Portland Square, a business condominium, situated at the corner of Union and Spring Streets in the City of Portland, County of Cumberland and State of Maine, as more particularly described in the Declaration of One Portland Square, a business condominium, dated as of October 27, 1987 and recorded in the Cumberland County Registry of Deeds on October 29, 1987 in Book 8039, Page 37, and in the plats and plans incorporated into the declaration and recorded in the Cumberland County Registry of Deeds in Plan Book No. 166, Page 44 sheets 1 through 13, by virtue of the recording of which declaration, plats and plans, the declarant created the condominium pursuant to the Maine Condominium Act, Title 33 of the Maine Revised Statutes of 1964, as amended, Chapter 31, Sections 1601-101 et seq., as amended.

Parcel Two - Upper Parking

A parcel of land shown as "Lot 3" on a land title survey prepared for Northland Realty Corporation by Lewis & Wasina, Inc. dated April 5, 1995, Project No. 9508 located on the southerly side of Spring Street Arterial, the easterly side of Cotton Street and the northerly side of Fore Street, City of Portland, County of Cumberland, State of Maine, and being more particularly described as follows:

Beginning at a found rebar at the intersection of the northerly right of way line of Fore Street and the easterly right of way line of Cotton Street;

Thence, N24° 18' 44" W along the easterly right of way line of Cotton street a distance of 356.32 feet to a set 5/8 inch rebar with aluminum cap stamped "Lewis & Wasina PLS 2114" at the southerly right of way line of Spring Street Arterial;

Thence, N65° 47' 27" E along the southerly right of way line of Spring Street Arterial a distance of 89.72 feet to a found rebar;

Thence, continuing to follow the southerly right of way line of Spring Street Arterial along a curve to the left having a delta of 3° 11' 35", a radius 3887.30 feet, an arc length of 216.65 feet and a chord bearing and length of N64° 11' 39" E, 216.62 feet to a found drill hole in a concrete sidewalk;

Thence, S11° 09' 10" E following the former easterly right of way line of cross street, now discontinued, along lot 1 and lands conveyed by deed to Two Portland Square limited partnership as shown on said plan a total distance of 413.33 feet to a found rebar on the northerly right of way line of Fore Street;

Thence, S78° 49' 49" W along the northerly right of way line of Fore Street a distance of 79.03 feet to a found rebar;

Thence, S75° 13' 06" W along the northerly right of way line of fore street a distance of 137.10 feet to the point of beginning.

All the above mentioned found rebar are 5/8 inch with aluminum cap stamped "SMRT RLS 1314".

Reference should be made to the plan for further details of the boundary and easements.

The basis of bearing for this description is magnetic North, 1972, as shown on said plan.

Parcel Three - Lower Parking

A certain lot or parcel of land being the majority of the block bounded northerly by Fore Street, easterly by Cross Street, southerly by Commercial Street and westerly by Center Street in the City of Portland, County of Cumberland, and State of Maine and further bounded and described as follows:

Beginning at a drill hole at the intersection of the northwesterly line of Commercial Street and the easterly line of Center Street, said point also being the most southwesterly corner of certain land conveyed to the Atbro Corporation by Deed dated October 3, 1979, and recorded in the Cumberland County Registry of Deeds in Book 4506, Page 48;

Thence North 43° 29' 22.8" East along Commercial Street, a distance of 69.18 feet to a reinforcing rod;

Thence North 46° 50' 30" East along said Commercial Street, a distance of 54.32 feet to a reinforcing rod;

Thence North 52° 30' 11.2" east along said Commercial Street, a distance of 35.64 feet to a drill hole;

Thence North 24° 17' 37.6" West along land formerly of Ari Newman and Lee Beamis, and now Harbor Landing Condominium, see Declaration of Condominium recorded in Book 6505, Page 312, Cumberland County Registry of Deeds, a distance of 93.23 feet to a reinforcing rod;

Thence North 65° 44' 46" East along land now or formerly of said Ari Newman and Lee Beamis, a distance of 109.60 feet to a P.K. spike in the westerly line of Cross Street;

Thence North 13° 21' 13.9" West along said Cross Street, a distance of 287.70 feet to a reinforcing rod, said point being located at the intersection of the westerly line of Cross Street and the southerly line of Fore Street;

Thence South 69° 41' 09.0" West along said Fore Street, a distance of 318.64 feet to a reinforcing rod, said point being located at the intersection of the southerly line of Fore Street and the easterly line of Center Street;

Thence South 24° 16' 16.2" East along said Center Street, a distance of 451.12 feet to the point of beginning.

Excepting from the above described premises those premises taken by the State of Maine by its Department of Transportation set forth in its notice of layout and taking dated August 21, 1991 and recorded in the Cumberland County Registry of Deeds in Book 9688, Page 341.

Tract 2: Two Portland Square.

A certain lot or parcel of land with any buildings thereon situated at the intersection of Fore Street and Union Street in the City of Portland, County of Cumberland, and State of Maine, being Lot 2 on plan for Two Portland Square Subdivision by Stevens Morton Rose & Thompson dated October 22, 1987, revised to September 18, 1989 and recorded in Plan Book 182, Page 29.

Subject to and together with that certain parking easement established in Declaration of Easement by Portland Square limited partnership dated December 18, 1989 and recorded in Book 9028, Page 117, as affected by Subject Property Notice dated December 18, 1989 and recorded in Book 9028, Page 136, and by Permitted Parking Areas Plan dated December 18, 1989 and recorded in Book 9028, Page 141.

Rights, easements, covenants, conditions and restrictions set forth in Declaration of Easement by Portland Square Limited Partnership dated October 30, 1987, recorded at Book 8045, Page 303, as affected by Additional Declaration of Easement dated December 18, 1989, recorded at Book 9028, Page 92, Release of Easement dated December 18, 1989, recorded at Book 9028, Page 97, Subject Property Notice dated December 18, 1989, recorded at Book 9028, Page 102, and Permitted Parking Areas Plan dated December 18, 1989, recorded at Book 9028, Page 112.

EXISITING AND/OR PROPOSED EASEMENTS OR COVENANTS

The following Easements and/or Covenants are existing and/or proposed for the Portland Square Project:

1. Easements within the discontinued section of Cross Street between Spring Street and Fore Street, including the following:
    - 50-foot sewer easement to City of Portland.
    - 50-foot Scenic Easement/ View Corridor, to City of Portland
    - 10-foot pedestrian easement
    - 27-foot utility easement to Central Maine Power
    - 27-foot utility easement to Northern Utilities
    - 10-foot storm drainage easement across Portland Square One and Portland Square Two
    - 25-foot x 35-foot easement to Portland Water District at the intersection of Fore Street and Cross Street
2. Drive Through Teller Easement on Portland Square Two parcel (Lot2)
3. Licenses for building footings, overhangs and canopies located within the public street rights-of-ways.

These easements and licenses will be shown on the ALTA Existing Conditions Survey, Subdivision Plan, or Site Plans that are made part of this Application.

Att. I

BK7168PG0048

19647

QUITCLAIM DEED WITH COVENANT

KNOW ALL PERSONS BY THESE PRESENTS, that PORTLAND SQUARE LIMITED PARTNERSHIP, a limited partnership organized and existing under the laws of the Commonwealth of Massachusetts, and having a place of business at 2150 Washington Street, Newton, Massachusetts 02162, for consideration paid, does hereby remise, release, bargain, sell, convey and forever quitclaim unto the CITY OF PORTLAND, a Maine municipal corporation having a principal place of business at 389 Congress Street, Portland, Maine, with quitclaim covenant, the following-described easements in and to a certain portion of Cross Street as described in Exhibit A attached hereto and incorporated herein by reference, which portion was duly discontinued by order of the City Council of the said City of Portland on January 6, 1986:

A perpetual easement for the maintenance, repair and replacement of certain public utility facilities, to wit, all such facilities on and under the surface of the said discontinued portion of Cross Street, including pipes and associated structures and equipment, as may be necessary for the collection of sewage and storm water, as and where the same may presently exist, together with the right to enter upon any portion of the said discontinued portion of Cross Street at all times and with vehicles and equipment and to do therein all things necessary for the foregoing purposes; provided, however, that the Grantee shall promptly restore the surface of the said discontinued portion of Cross Street to substantially the same condition, using the same or substantially similar materials, as existed immediately prior to any opening thereof occasioned by the exercise of any of the foregoing rights.

Also, a perpetual easement for the lawful use and passage of pedestrians on and over such portion or portions of the said discontinued portion of Cross Street as may thus be described on a plan of Portland Square entitled "Cross Street Easement Plan" dated January 3, 1986, and prepared by Hunter-Ballew Associates, which plan is on file with the City of Portland Department of Planning and Urban Development, as the same may from time to time be duly amended by agreement of the Grantor and Grantee.

Also, a perpetual easement for the scenic view of all points of general interest as such view may presently or hereafter be visible in a generally southeasterly direction from any portion of the said discontinued portion of Cross Street, it being the intent hereof to establish and maintain a substantially unobstructed visual corridor for the full length and width of the said discontinued portion of Cross Street; for the foregoing purposes, no substantial building or structure shall be erected or installed on or over any portion of the said discontinued portion of Cross Street; provided, however, that

nothing herein shall be construed to prohibit customary site improvements, including, by way of example and not of limitation, railings, walkways, lighting, trees, landscaping, steps, bollards, planters, retaining walls, street furniture and regulatory and informational signs.

IN WITNESS WHEREOF, the said Portland Square Limited Partnership has caused this instrument to be executed and sealed by Peter Barber, Vice President of Northland Realty Corporation, general partner of Northland Union Street Limited Partnership, general partner of Portland Square Limited Partnership, thereunto duly authorized this 25th day of April, 1986.

SEAL

EXHIBIT A

All that portion of Cross Street situated in Portland, Maine lying between the Northerly sideline of Fore Street and the Southerly sideline of Spring Street Arterial, being a strip of land approximately fifty (50) feet in width more particularly described as follows: beginning at a point on the Northerly side of Fore Street at the most Southerly corner of land described in deed from S. Richard Mack to Atbro Corp., dated April 18, 1980 and recorded in the Cumberland County Registry of Deeds in Book 4591, Page 289; thence on a course of North eleven degrees, nine minutes, nine and 6/10 seconds West (N 11° 9' 9.6" W) by said land now or formerly of Atbro Corp., other land now or formerly of Atbro Corp. and land now or formerly of City of Portland four hundred nine and 23/100 (409.23) feet to the Southerly sideline of Spring Street Arterial; thence Westerly by said sideline of Spring Street Arterial fifty-two (52) feet, more or less, to land now or formerly of City of Portland; thence South eleven degrees, nine minutes, and nine and 6/10 seconds East (S 11° 9' 9.6" E) by said land of City of Portland and other land now or formerly of Atbro Corp. three hundred seventy-six and 82/100 (376.82) feet to the Northerly sideline of Fore Street at the Easterly corner of land described in deed from Browneo Realty Inc. to Atbro Corp. dated September 10, 1979 and recorded in said Registry of Deeds in Book 5035, Page 321; thence Easterly by said sideline of Fore Street fifty-two (52) feet, more or less, to the point of beginning.

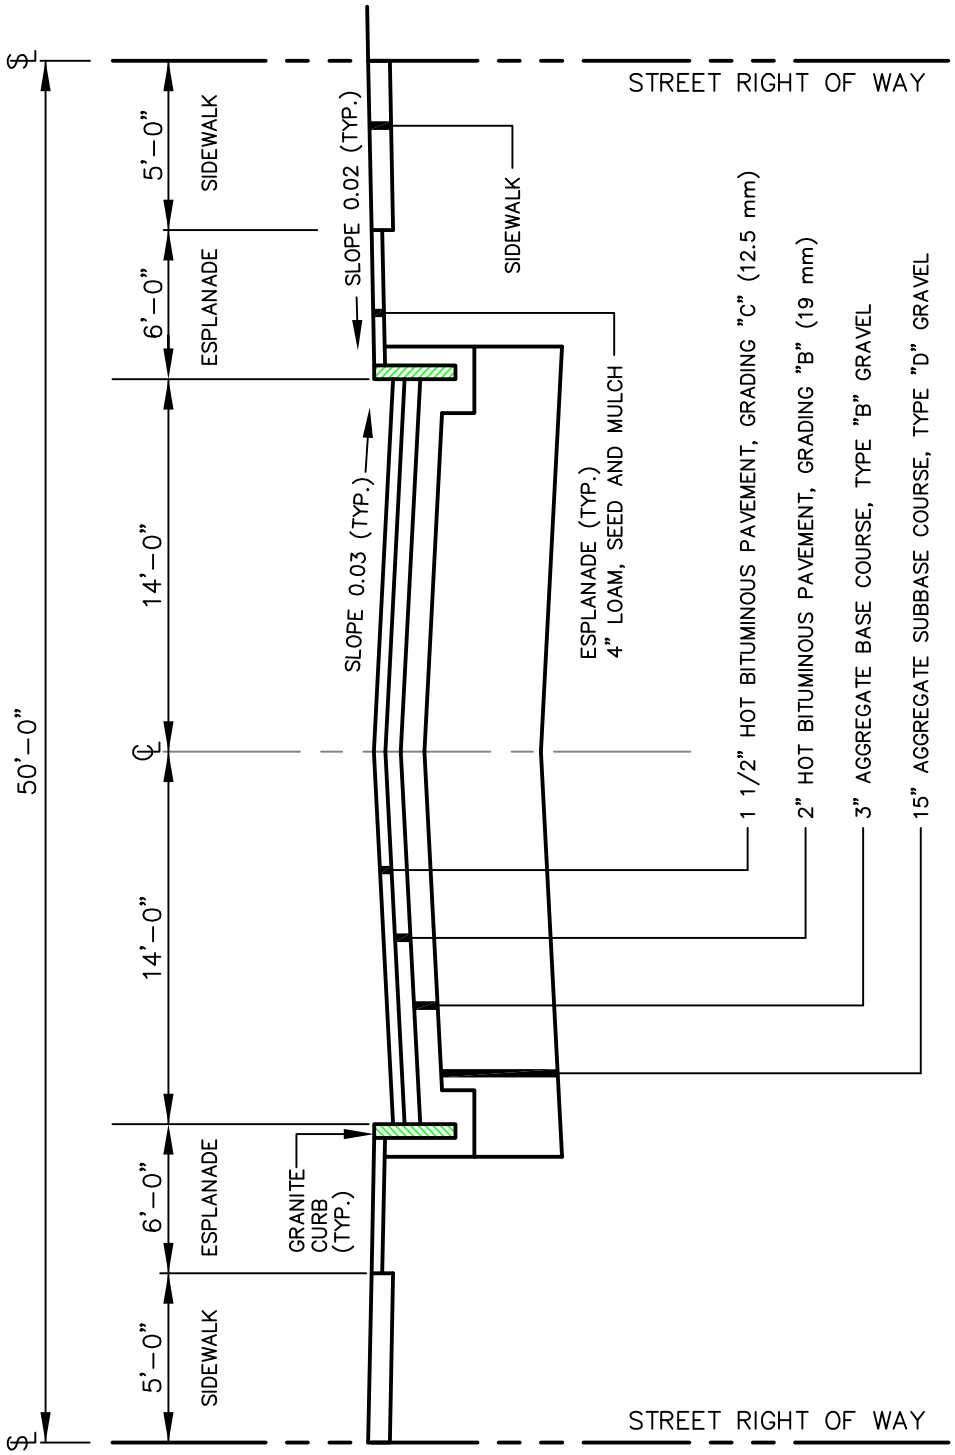
EVIDENCE OF STATE OR LOCAL APPROVALS

3 Portland Square will require the following permits and approvals:

Permit Required	Submittal Date	Anticipated Approval Date
• Level III Site Plan and Subdivision (PH1)	10/01/2019	12/24/2019
• Maine DEP SLODA Amendment	10/15/2019	12/24/2019
• State Fire Marshall	08/01/2020	10/01/2020

The Portland Square Project currently has the following Permits and Approvals either in place or under review/ pending:

Portland Square One



• Site Plan Approval from City of Portland		November, 1985	July, 1986
• Maine DEP SLODA	#L-013526-26-B-N		July 25, 1986
	#L-013526-26-B-A		July 27, 1987
• Site Plan Amendment from City of Portland		April 10, 2019	June 25, 2019
• SLODA Parking Amendment -City of Portland		April 10, 2019	June 25, 2019
• City of Portland Master Development Plan		04/05/2019	11/26/2019
• Maine DOT Traffic Movement Permit		09/05/2019	11/26/2019

Portland Square Two

• Site Plan Approval from City of Portland		1988	July 18, 1989
• Maine DEP SLODA	#L-013526-26-C-A		June 19, 1989
	#L-013526-26-C-A (Corrected)		July 21, 1989
	#L-013526-26-D-C		December 21, 1989
	#L-013526-26-F-M		November 30, 1990
	#L-013526-26-G-T		February 2, 1996
	#L-013526-26-H-N		February 15, 1996

Copies of all Approvals and Findings of Fact are attached to this Application.

Standard to be Waived: Cite Ordinance or Technical Manual Standard	**Cite Standard Language:** Cite specific language of applicable Ordinance or Technical Manual Standard	**Waiver Being Sought:** Describe waiver being sought. Ex. – We are requesting a two-way parking lot drive aisle width of 20' feet.	**Justification for Waiver:** Address specific waiver criteria, if applicable, and document reasons for the waiver request.
Local Street Lane Width & Esplanade Technical Manual Section 1 Figure I-1 Local Street Cross Section	Refer to attached Figure I-1.	The proposed Cotton St ROW includes two 11-foot lanes, an 8-foot parallel parking lane, an existing 8-foot sidewalk and a proposed 12-foot sidewalk. Sidewalk on the western side of Cotton St will not be extended to Spring Street.	Increasing the lane width to 14-feet and adding esplanades would eliminate 13 proposed on-street parking spaces. Extending sidewalk on the western edge of Cotton St. would require extensive grading on private property not owned by the developer
Street Grades at Intersections Technical Manual Section 1.4.1	"Street grades at intersections shall not be more than three (3) percent for a distance of one hundred (100) feet from the center of the intersection."	Cotton St is proposed to slope at max. 2 percent for the first 44 feet from the Spring St centerline, and max. 3.89 percent for the first 48 feet from the Fore St centerline.	Meeting this standard would cause the road grade to exceed the maximum slope of 8 percent. The intersection of Cotton St and Fore St is proposed to remain the same due to adjacent buildings
K-Values Technical Manual Section 1.5	"The K values corresponding to the minimum vertical curve lengths for the above street classifications and vertical curve types(sag curve or crest curve) are as follows: Local Streets Crest Vertical Curves: K = 20	Cotton Street Crest Vertical Curves: K = 4.80 Sag Vertical Curves: K = 4.80	Setting vertical curves that meet the standard is impossible since there is not enough road length for the change in elevation (50' at Spring St to 31' at Fore St).

LOCAL STREET CROSS SECTION
NOT TO SCALE

DATE: AUGUST 2009 REVISED:	CITY OF PORTLAND, MAINE TECHNICAL STANDARDS MANUAL	**TRANSPORTATION SYSTEMS AND STREET DESIGN** SECTION I	FIGURE: **I-1**

TRANSPORTATION

Transportation Analysis- Traffic Impact (14-526(a)1)

See Traffic Impact Study by Gorrill Palmer dated 09.17.2019 which is made a part of this Application.

Access and Circulation (14-526 (a)2a)

Vehicular access to the project will be from three adjacent streets and driveways. Access to the lowest level of parking will be from the Cross Street extension, coinciding with current access to the surface lot. Cotton Street will provide access to second level of parking with an entrance located midblock between Fore and Spring Streets. The third level of the garage will be accessed from Spring Street, with an entrance midblock between Cotton and Cross Streets. The Traffic Study analyzes each entrance and its impact on traffic flows in the neighborhood. No drive-up facilities are planned for this project, however two existing remote bank kiosks in the driveway between 1 Portland Square and Two Portland Square will remain in use.

Loading and Servicing (1-526(a)2b)

All service and deliveries to the proposed building will be from a dedicated service area located on the east side of the building, with access from the Cross Street Extension driveway. This service area will provide a secure area for truck deliveries to the office towers. Service to Two Portland Square will be enhanced by widening of the driveway between the two buildings, allowing a service vehicle to stop and unload without blocking thru traffic between Cross Street and Union Street. Service for retail and residential uses along Fore Street will be from Cotton Street, where a reserved service area will be established, allowing deliveries to this project as well as the Tracy Causer Block of retail uses. Turning templates for delivery vehicles will be submitted under a separate cover as part of this application.

Sidewalks (14-526 (a)2c)

The project envisions widened pedestrian sidewalks along all four sides of the development. Along Fore Street, the sidewalk will be widened resulting from a proposed slight change in the curbline to eliminate a non-conforming bump-out at Cotton/ Fore Street and bring the curbline closer to parallel with the south side of the street. The sidewalk at Cotton Street will be maintained at a 10 ft width. Along Spring Street, the sidewalk will be widened to approximately 23 feet in width, allowing landscaping, pedestrian amenities and activation between Cotton Street and Union Street. Along the east side (Cotton Street Extension), a major pedestrian corridor is envisioned, 16- 18 feet in width, connecting lower Cross Street and providing a strong pedestrian connection between Commercial Street and Monument Square to the North. We are also proposing to integrate this walkway into the existing 1-2 Portland Square garden and plaza, providing strong connections to those buildings and out to Union Street.

All sidewalks will be constructed to City of Portland Standards with brick walkways, raised granite tree wells and street trees, and populated with planters, benches, bike racks and streetlights to activate them from a pedestrian viewpoint.

Public Transit (14-526 (a)3)

The project is located in one of the best served areas of the City from a transit perspective. Routes within a quarter mile walking distance of the site include:

- Portland Metro Service
- Metro BREEZ Express Service
- South Portland Bus Service
- ZOOM Turnpike Express
- Intercity Shuttlebus

Portland Square is served by one bus stop on Union Street directly in front of 2 Portland Square, as well as bus stops at the corner of Pleasant/ Center Street and Middle Street near the corner of Temple and Union Streets. The closest bus shelter is on Congress Street.

A full description of the Public Transit services is documented in the Portland Square Transportation Demand Management Plan by VHB, dated September 10, 2019 and included in full with this application.

Off Street Parking: Vehicle and Motorcycle/ Scooter (14-526 (a) 4a and c)

The project proposes to create a total of 1000 parking spaces in the garage as a major component to this project. The parking will be spread over 6 floors, with egress from Spring Street, Cotton Street, and the Cross Street Extension. The floor plans for the garage illustrate the layout of parking on each floor as well as the ramp connections between all floors.

A memorandum from VHB is attached to this application which identifies the Parking Demand based on the retail, office, and residential uses proposed for this project.

Bicycle Parking (14-526 (a) 4b)

The proposed site is located among a grid network of low speed, bike friendly streets on the Portland peninsula. The site is within proximity of dedicated bike lanes on Spring Street, Commercial Street, the Casco Bay Bridge, and Eastern Promenade Trail. A full description of the bicycle transit services is documented in the Portland Square Transportation Demand Management Plan by VHB, dated September 10, 2019 and included in full with this application.

The project proposes to install a series of bicycle racks on Spring, Cotton, and Fore Streets, as well as accommodate secured bicycle parking within the garage.

Snow Storage (14-526 (a) 4d)

The project is intending to remove all snow from the site as it accumulates. No snow storage areas are envisioned.

Traffic Demand Management (TDM) (14-526 (a) 5)

A Traffic Demand Management Plan for the full buildout of Portland Square has been prepared by VHB, and is part of the overall MDP Application currently being reviewed by the City. An update to that TDM Plan specifically addressing this phase of the project is attached to this application.

PUBLIC INFRASTRUCTURE AND SAFETY

CONSISTENCY WITH CITY MASTER PLANS (14-526 (c) 1)

The Project is consistent with and complements the following Local Policy Goals as outlined in the Portland Plan 2030, as adopted in June, 2017, as well as compliant with related City Master Plans, off premises infrastructure, including sewer and stormwater, streets, trails, pedestrian and bicycle network, environmental management or other public facilities.

Environment

- Adopt sustainable land use and transportation policies that support connectivity, walkable neighborhoods, and multimodal transportation. The project envisions development on a vacant parcel in the heart of Portland's Old Port,

Housing

- *Encourage additional contextually appropriate housing density to neighborhood centers, concentration of services and transportation nodes and corridors as a means of supporting complete neighborhoods.* The proposed project increases the density of the housing in the Old Port District, providing critical housing in a neighborhood that is within walking distance of Metro bus routes, Public open space and existing commercial services in the Old Port.
- *Pursue policies that enable people that work in Portland to have the option to live in Portland.* The project allows employees and residents to live-work-play within close proximity of each other, encouraging walkability and reducing transportation demands.
- *Encourage quality sustainable design in new housing development*. The project is designed to meet the most stringent building requirements for efficiency, air quality, and long-term maintenance and sustainability. The Owner and project design team are committed to meeting or exceeding these goals.

Recreation and Open Space

- *Provide high quality, well designed, well maintained, safe and integrated parks, trails, open spaces, and recreational opportunities accessible to all residents.*
- *Strengthen connections between open spaces.*

The proposed plaza at Spring Street and its integration with the existing garden and plaza at One-Two Portland Square provide a high quality urban open space connecting this project to the Old Port, Monument Square, and Commercial Street activity zones. View corridors down Cross Street have been maintained and enhanced. Significant open space will become more attractive and usable by residents, tenants, and visitors to Portland.

Transportation

The project provides an appropriate amount of off-street parking to accommodate the current and future needs of the development. A Transportation Demand Management Plan has been developed for the entire Portland Square project and its implementation is critical to use of alternative transportation modes to reduce the demand on parking for the project.

We have also reviewed the other related City Master Plans on file and believe this project is consistent with the intent of the following:

- Spring Street Master Plan

PUBLIC SAFETY AND FIRE PREVENTION (14-526 (c))

CPTED

The project has been designed to be consistent with CPTED Principals in the following ways:

- Natural Surveillance. All public and semipublic components of the project have been designed to allow maximum visibility at all pedestrian and vehicular entrances. All walkways and stairways will be well lit. The existing overgrown shrubbery at One Portland Square will be removed and replanted to provide better visibility and integration of the garden area with the 3 PS project. Landscape beds along the project perimeter will consist of low plant materials minimizing opportunities for hiding spaces.

  All lighting will meet the Standards of Section 12 of the Technical Manual. Walkways, entrances, and garages will be lit to allow safe movement in/out or off the site.
  Mechanical Surveillance Systems may be deployed at building entrances and inside the parking garage to monitor areas not easily observed.
- Access Management. The project consists primarily of public sidewalks along streets making wayfinding fairly apparent. Building entrances will be well marked and lit to guide users to/ from the facility. The site plan is very linear along these streets providing a high sense of visibility for the pedestrian.
- Territorial Reinforcement. The project is designed to delineate the public and semipublic space within and adjacent to the project. Public space consists of all public sidewalks. The Spring Street Plaza and connection down to Fore Street, while privately owned and maintained, will be accessible to the public. The intent is to integrate this walkway with the existing garden and plaza areas at One-Two Portland Square, providing a welcoming connection and greenspace for the public as well as building tenants.

Emergency vehicle Access

- Emergency vehicle access is available on all sides of the proposed building. The project was reviewed by the Fire Department at a Pre-Application meeting and found to be generally in conformance with Emergency Access Requirements. The Design Team understands that further discussion with Fire and Police will be forthcoming throughout the design and review process.

Public Safety Standards

Additional Public Safety Standards outlined in Section 3 of the Technical Standards have been reviewed and found to be in conformance. Fire Hydrants are located on Spring and Fore Street at the intersection of Cotton Street, providing access directly in front of the proposed structures. We are working closely with the City 911 Coordinator on the addressing of the buildings, and signage will be developed that provides clear visibility of the building entrances and addresses from the public right-of-way.

Fire Checklist

- Please note the Fire Code Memorandum form Winton Scott Architects which is provided with this Application.

AVAILABILITY AND ADEQUACY OF PUBLIC UTILITIES (14-526 (c) 3)

The project will be served by public utilities which are allocated directly adjacent to the site. See Utility Memorandum by Woodard and Curran dated October 1, 2019**.**

ENVIRONMENTAL AND STORMWATER

Water Quality, Stormwater Management, and Erosion Control (14-526 (b) 3a)

The following materials and plans are submitted with this application to meet the requirements of Chapter 14-526 (b)3a:

- Stormwater Management Report, by Woodard and Curran, dated October 1, 2019, 2019
- Erosion Control Plans and Details, by Woodard and Curran, dated October 1, 2019

SITE DESIGN

See 3 Portland Square Level III Site plan Submission Design Notes by Winton Scott Architects dated September 26, 2019 which is made a part of this Application.

SITE DESIGN

See 3 Portland Square Level III Site plan Submission Design Notes by Winton Scott Architects dated September 26, 2019 which is made a part of this Application.

Winton Scott Architects

3 Portland Square Level III Site Plan Submission

Project Design Narrative
September 26, 2019

Project Site:

This Level III application is for the first phase build out of the upper lot portion of the Portland Square Master Development Plan currently under review by the Planning Board. The project site is the entire upper lot bound by Spring Street, Fore Street, Cotton Street, and the former upper Cross Street which is now part of the parcel owned by the applicant. The project site is in the B3 Zone and fronts a Pedestrian Activity overlay Zone on Fore Street and a Pedestrian Activity Encouragement Zone on Spring Street.

There is a significant change in grade of approximately 21' along the length of the block running from the high ground at Spring Street down to Fore Street, and allowable building heights of 125' from Spring St to a point 100' from the centerline of the Fore Street R.O.W. where the allowable height drops to 85'. The maximum allowable street wall height at Spring Street is 90 feet and the maximum street wall height at Fore Street is 65'.

Project Program:

The project encompasses the following proposed uses:

21,511 s.f.	of Office Space
5,565 s.f.	of Retail Space
392,159 s.f.	of Structured Parking (1,000 spaces)
37,103 s.f.	of Residential Space (24 Apartments)

The amount of parking proposed as part of this project, together with structured parking proposed in the Master Development Plan for the lower site, and existing parking located within the 2 Portland Square building, is intended to meet the entire need of the full build out development of both sites and the existing 1 & 2 Portland Square buildings. Because of this, the parking count proposed in this project exceeds what is required to support the phase1 uses listed above as it is based on the spaces needed to support the entire Master Development when it is fully implemented in the future.

Primary Design Considerations:

The site occupies an interesting area in the heart of downtown positioned at the western edge of the Fore Street Old Port neighborhood. The site itself is currently used as surface parking, and it is also flanked by additional open parking sites to the north across Spring Street, to the west across Cotton Street, and to the south across Fore

Street - the site of future phases of the Master Development Plan that will eventually replace this surface parking lot.

The site is not within and does not abut any Historic Districts but it is in close proximity to the Tracy Causer Building that survived the great fire of 1866 which is an individual listing in the Historic Preservation Ordinance.

The site context also contains a variety of building scales. Fore street to the east is the heart of the Old Port with its rich historic fabric and pedestrian centered streets. To the north is the downtown business district with its larger more contemporary structures such as 1 & 2 Portland Square, Canal Plaza, and the Civic Center. To the west, the fabric begins to transition to a less dense mix of residential and commercial buildings. To the south, is the Commercial Street corridor with its mix of water based industries along the piers combined with vibrant commercial structures.

This project offers an opportunity to bridge these varied built environments, “fill in” a significant hole in the urban fabric, and enhance and extend the pedestrian environment present in the Old Port and the Commercial Street Corridor. The Development Master Plan currently under review proposes multiple pedestrian amenities across both development sites intending to improve pedestrian linkages and circulation. This First Phase project proposes to develop a new plaza at Spring Street between 1 Portland Square and the new building that provides views down toward the water from Spring Street and connects to a pedestrian stair and walkways leading down into the existing park space behind 1 and 2 Portland Square and continues on to connect to Fore Street.

The buildings are designed with continuous street level storefronts along Fore Street and sidewalks along Cotton and Spring Streets will be widened and street trees added. Along Spring Street, additional amenities are planned including seating, planters, new lighting, and green screen panels or artist designed decorative metal screen panels that obscure the structured parking and provide visual interest at the street level. The plaza will include plantings, seating, and a sculpture element

Brick and pre-cast concrete elements are the predominant building material for the parking garage, retail storefronts and apartments while the upper levels of the offices also make use of glass and metal cladding.

Zoning Summary:

The project site sits within the B-3 Downtown Business Zone and is also affected by the Downtown Height Overlay, the Pedestrian Activity Overlay Zone and the Downtown Entertainment Overlay Zone. Downtown Urban Design Guidelines apply as well.

B3 Zone:	The project conforms to all dimensional, bulk, and density requirements in the ordinance. All proposed uses are allowable in the zone. Minimum building height is met at all street facades. Off-Street parking and loading is required in conformance with Divisions 20 and 21 Because the property is within 100’ of an individually listed landmark building, the project is subject to review by the Historic Ordinance Review Board for general compatibility of building forms and materials with the historic context.

Downtown Height Overlay:

As described above under Project Site, the site falls within two height limits. The allowable height is 125' above average Grade along Spring Street to a point 100' back from the centerline of the Fore Street R.O.W. where the allowable height drops to 85'. The Maximum allowable street wall height is 65' along Fore Street and 90' along Spring Street and Cotton Street.

All proposed heights meet the requirements above. On fore Street, the project provides a 15' setback at the 65' street wall height in conformance with the ordinance, where the building continues up one additional story.

The methodology for determining the average existing grade for the project has been reviewed with the zoning administrator and is as follows:

Average of existing grades at proposed building face/property line at 4 corners of site. (Note the hotel parcel is excluded from the calculation)

Corner of Cotton and Spring Street:	EL. 50.8'
Corner of Cotton and Fore Street:	EL. 30.3'
Corner of Fore and former Upper Cross Street	EL. 28.5'
Corner of Spring and former Upper Cross Street	EL. 51.1'

50.8 + 30.3 + 28.5 + 51.1 = 160.7 / 4 = EL. 40.175' = Average Grade.

Pedestrian Activity Overlay:

The site's frontage on Fore Street must adhere to the requirements of the PAD Overlay. Spring Street frontage must adhere to PAD encouragement zone requirements. The project as proposed provides glass storefront and allowable uses such as retail in excess of the minimum 75% of street frontage with 20' deep minimum spaces required in the PAD Overlay Zone.

Downtown Overlay Zone:

The project is not proposing any entertainment type uses so the provisions Entertainment of the DEOZ do not apply.

MEMORANDUM

TO: Patrick Carroll, Carroll Associates Landscape Architects
FROM: Lauren Swett, PE & Amy LeBel, EIT
DATE: December 20, 2019
RE: Three Portland Square – Utilities

The proposed Portland Square redevelopment will be serviced by public water (for fire protection and domestic use), sanitary sewer, electric, natural gas and telecommunications. The proposed locations of the utility services are shown on the Utility Plan included in the Design Drawings.

WATER

The proposed development will be provided with both fire protection water service and domestic water service by the Portland Water District from mains located on Spring Street, Cotton Street and Fore Street. The project team met with representatives from Portland Water District on September 19, 2019 to review anticipated water demand and service connections for the proposed development. During this meeting, Portland Water District indicated the existing water mains on Fore Street and Cotton Street are insufficient to service the proposed development; therefore, replacement of segments of the Fore Street and Cotton Street water mains will be required. The project team will continue to coordinate the design with representatives from Portland Water District as the design progresses. A copy of the Ability to Serve Determination letter from Portland Water District will be provided upon receipt.

SEWER

Several sanitary sewer services to the buildings are proposed to connect to sewer infrastructure within Cotton Street (Office Tower), Fore Street (Fore Street Wrap) and Upper Cross Street (Parking Structure) as shown on the Utility Plan to accommodate the various uses of the buildings. If restaurant uses are proposed, internal grease traps will be utilized. Drainage within covered parking areas will be collected by floor drains and directed to an oil water separator prior to discharge into the sewer main within Upper Cross Street. A Wastewater Capacity Application will be sent to the Portland Department of Public Works to request confirmation of ability to serve the proposed development. The ability to serve confirmation will be provided to the Planning Department directly by the Department of Public Works.

GAS

The proposed buildings will utilize natural gas service provided by Unitil. A service connection through Upper Cross Street from the existing gas main in Fore Street is proposed. We will be coordinating with Unitil on the location and size of the gas service. A copy of the Ability to Serve Determination letter from Unitil will be provided upon receipt.

ELECTRIC

The proposed building will utilize underground electric services fed from Fore Street and Upper Cross Street as shown on the Utility Plan. A transformer is proposed east of the building and north of the driveway in a landscaped area. Adequate screening will be provided. As the design progresses, the project team will continue to coordinate the design with representatives from Central Maine Power (CMP). A copy of the Ability to Serve Determination letter from CMP will be provided upon receipt.

SOLID WASTE

Adequate provisions for recycling and solid waste disposal have been made. General solid waste, construction, demolition, and land-clearing debris will be managed in full accordance with all applicable laws and will not cause a deleterious effect on the environment.

Commercial Solid Waste

All solid waste materials and recyclables from the proposed redevelopment project will be transported and disposed of, or recycled, in accordance with applicable laws and regulations. The proposed design includes a service and loading area located between the office tower and parking structure. Access to this service and loading area will be provided via Upper Cross Street. Service will be scheduled to minimize impacts to business hours to the greatest extents practicable. A solid waste management plan with schedules for solid waste removal will be developed for the proposed buildings.

Construction & Land Clearing Debris

As with any construction project, the proposed construction will generate construction waste and demolition debris (CDD). The construction contractor will be responsible for hauling the CDD or contracting with a waste management service to haul the CDD, from the project site. The contractor will be fully responsible for handling, managing, and disposing of all waste generated by construction in accordance with Maine Solid Waste Management Regulations – 06-096 CMR 400-409. The contractor will be bound by contract to dispose of all materials in full accordance with all applicable local state and federal regulations. Actual waste volumes will be measured at the time of construction.

Special & Hazardous Waste

The proposed development is not anticipated to produce any hazardous waste. A previous site investigation adjacent to the hotel site on the Portland Square property identified the presence of typical urban fill, as is seen on redevelopment sites throughout the City. We anticipate that soils from the site may be classified as special waste and shall be handled and disposed of accordingly.

MEMORANDUM

TO: Patrick Carroll, Carroll Associates Landscape Architects
FROM: Lauren Swett, PE & Amy LeBel, EIT
DATE: October 1, 2019
RE: Portland Square Garage – Stormwater Management – Preliminary Design

This Preliminary Stormwater Management Memo describes the proposed stormwater management approach for the project. A complete stormwater management plan, including design calculations will be submitted under separate cover as part of a Site Location of Development Application.

Existing Conditions

The 2.35 +/- acre existing property, located in a highly developed urban environment, currently consists of a paved parking lot surrounded by a landscaped esplanade containing shrubs and trees. A breakdown of existing cover conditions is provided below in Table 1. The site slopes from north to south towards Fore Street, from approximate elevation 51' down to 29'. In general, runoff from the parking lot drains via sheet flow in a southerly direction to a series of catch basins that discharge to the separated storm drain on Cotton Street. This storm drain discharges to the separated storm drain on Fore Street and ultimately to the storm drain in Cross Street. We have been communicating with Brad Roland from the Department of Public works to confirm our understanding of these existing stormwater connections.

Table 1: Portland Square Existing Conditions Surface Cover Breakdown

Cover Type	Surface Area (SF)
Pervious	13,125
Roof Impervious	0
Non-Roof Impervious	79,575
Total Redevelopment Area	92,700

Proposed Development

The proposed building covers almost the entire parcel, as required per zoning setbacks. The proposed project also includes redevelopment of the adjacent Portland Square plaza, stairs and private access driveway (referred to as Upper Cross Street). The site layout is shown in the project drawings submitted under separate cover. It should be noted that a 22,000 square-foot green roof is planned as part of construction of future Phase 5 of the Portland Square Master Development Plan. The following table shows the surface cover breakdown for the proposed redevelopment project (Phase 2 only).

Table 2: Portland Square Proposed Conditions Surface Cover Breakdown

Cover Type	Surface Area (SF)
Pervious	2,315
Roof Impervious	73,960
Non-Roof Impervious	16,425
Total Redevelopment Area	92,700

Stormwater runoff from the site will discharge to separated storm drain in Cotton Street and Upper Cross Street, which ultimately discharge to the separated storm drain in Fore and Cross Street, like in the existing condition.

STORMWATER STANDARDS

The redevelopment project will abide by regulations of Maine DEP Chapter 500 Stormwater Management Rules as applicable to Site Law and City of Portland Technical Manual Section 5 including Basic, General and Flooding Standards. Due to the project location, it will not be required to comply with the Phosphorous and Urban Impaired Stream Standards. The following sections discuss stormwater management requirements for the Site relative to these Standards.

Basic Standard (Soil Erosion and Sedimentation Control)

Erosion and sediment control measures will be utilized during construction to ensure that the work will not result in the release of sediment off-site. Proposed erosion and sediment control measures are included in the design drawings, which include a narrative and construction details describing the plan for all temporary and permanent erosion control techniques to be utilized on this project in accordance with MaineDEP Best Management Practices.

The overall goal of the Soil Erosion and Sediment Control Plan is to restrict the potential for erosion and sedimentation during construction. A variety of erosion control techniques will be implemented to achieve this goal, including:

- Installation and maintenance of stabilized construction entrances at the travelled interface between stabilized and non-stabilized portions of the construction site;
- Diversion barriers to keep up-gradient runoff from flowing through active construction areas;
- Positive grades throughout the construction site to direct flow to sediment control barriers;
- Installation and maintenance of sediment barriers adjacent to and down-gradient of the construction site;
- Catch basin inlet protection devices;
- Preservation and maintenance of vegetated areas to the maximum extent possible;
- Temporary stabilization of disturbed vegetated areas to be exposed for more than seven days;
- Application of permanent seeding and mulching (or other permanent surface treatment as indicated on the drawings) applied as soon as areas achieve final grades;
- Controls for fugitive dust, debris, and other materials; and
- Inspection of all in-place measures after every significant rainfall until the site is permanently stabilized.

All measures will be implemented in accordance with the “Maine Erosion and Sedimentation Handbook for Construction: Best Management Practices”. All temporary measures will be installed prior to any earthmoving operation and removed after the areas are permanently stabilized.

All control measures will be maintained in effective operating condition until the Site is permanently stabilized. The Contractor will be responsible for implementing and maintaining all erosion and sediment control measures. Inspections shall be performed at least once a week, as well as before and after storm events. A person with knowledge of stormwater management and erosion and sediment control, including the standards and conditions in the permit, shall conduct the inspections and perform maintenance of the facilities. If maintenance or modifications are necessary, implementation will be completed within seven days and prior to any rainfall event.

Permanent erosion control measures will include vegetation and pavement. After construction, the responsible party for the owner will conduct inspections of the Site per the inspection and maintenance requirements outlined later in this memorandum.

Site Location of Development General Standard (Water Quality)

Woodard & Curran assessed the regulatory thresholds for permitting under MaineDEP Stormwater Law and MaineDEP Site Location of Development (Site Law) for the proposed redevelopment of Portland Square. The Portland Square property received a Site Location of Development Act Order (#L-013526-A-N) (SLOD) from the DEP in 1986. Since that time, a number of amendments have been made to that permit. The current project proposes to redevelop existing surface parking lots with structured parking, retail space, residences, and offices. This change requires an amendment to the existing SLOD, which will be reviewed by the City of Portland as part of their Delegated Review Authority.

An impact analysis was conducted for the proposed redevelopment project to determine treatment requirements based on land use and pollutant rankings provided in Table 2 of Maine DEP Chapter 500 Rules. The existing site is largely comprised of a high use paved surface parking lot (pollutant ranking 5). The proposed site will primarily be comprised of flat building roof (pollutant ranking 3). The ranked impact change is less than zero, and the project is being permitted under Site Law; therefore, 50 percent of the developed area must be treated in accordance with Table 3 in Chapter 500.

Through continued discussions with the Maine Department of Environmental Protection (DEP), we have received feedback that a stormwater treatment system is not required for the area converted from surface parking to rooftop. The DEP commented that "the net reduction in pollutant export from this redevelopment will be much greater than what is required by the Chapter 500 redevelopment standard." The attached email from Jeff Dennis, biologist with the Watershed Management Unit in the Division of Environmental Protection at the Maine DEP, includes detailed discussion on the topic. No additional stormwater *quality* measures are proposed for the roof area. Separate management of water *quantity* is described later in this memo.

City of Portland Redevelopment Standard (Water Quality)

In accordance with Section 5 of the Technical Manual, projects including redevelopment of non-roof impervious area greater than 5,000 square feet shall provide stormwater quality treatment in accordance with the General Standard for at least 50 percent of the redeveloped non-roof impervious area. Approximately 16,425 square-feet of non-roof impervious surface is proposed, requiring treatment for approximately 8,213 square-feet of impervious area. The proposed stormwater systems have been designed based on Volume III of the DEP Stormwater BMP Manual.

Proprietary Filterra bioretention systems have been selected to provide stormwater quality treatment for the Site. The proposed treatment system includes a Filterra Peak Diversion (FTPD) vault sized to treat 7,830 square-feet of impervious area in the plaza adjacent to Spring Street and a Standard Filterra (FT) vault sized to treat 1,915 square-feet of impervious area on Upper Cross Street. The combination of the two treatment measures results in treatment of greater than 50 percent of the non-roof redeveloped area. Overflow will be directed via gutter flow into an adjacent catch basin. We have sized the proposed Filterra bioretention systems per MaineDEP sizing guidelines as shown in the table on the following page.

The proposed Filterra bioretention configurations and details are included on the Site Plan Drawings. Final treatment calculations will be provided with the final Stormwater Management Plan submitted with the SLOD application.

Table 3: Filterra Sizing

Filterra Model Number	*Area in Acres*	*Treatment Flow Rate at 140"/hr (cfs)*	*Outlet Pipe Size*
4x4	0.100	0.05	4"
4x6	0.151	0.08	4"
4x8	0.202	0.10	4"
6x6	0.227	0.12	4"
6x8 / 4x12	0.301	0.16	4"
6x10	0.378	0.19	6"
6x12	0.454	0.23	6"
7x13	0.573	0.29	6"

Flooding Standard (Water Quantity)

Chapter 500 Stormwater Rules require that the stormwater management system detain, retain, or result in the infiltration of the stormwater flows from the 24-hour storm of the 2-year, 10-year, and 25-year frequencies, such that peak flows from the post-development Site do not exceed those from the pre-development Site.

Adequate provisions will be made to collect and control stormwater via a proposed R-Tank subsurface detention system, which is being designed to store and treat stormwater volumes generated from a portion of the roof. The R-Tank system is proposed within the Cotton Street sidewalk due to space constraints on site from zoning building setback requirements and the existing City sewer easement east of the site. It is proposed that this system is installed in the right-of-way within the sidewalk, but licensed to the Applicant; the owner of the site will be responsible for all inspection and maintenance of the system as described later in this memorandum. We are finalizing design, but it will ensure that the peak runoff rates for the 24-hour, 2-, 10-, and 25-year Type III storm events will be maintained or reduced below existing conditions. Stormwater from the Site will continue to discharge to the separated storm drain at the intersection of Fore Street and Cross Street. Final calculations will be provided with the SLOD application.

INSPECTION AND MAINTENANCE OF STORMWATER SYSTEMS

General inspection and maintenance during and after construction must take place in accordance with the requirements outlined in Chapter 500, Stormwater Management, Appendix B, Inspection and Maintenance and Stormwater Management, Maine Department of Environmental Protection Publication No. DEPLW0738. During construction, the contractor will be responsible for inspection and maintaining the Site. Upon completion, the property owner will be responsible for implementing the maintenance and inspection requirements for the stormwater management system associated with the new development. The responsible party will ensure that stormwater management facilities are properly maintained and inspected in accordance with the attached Stormwater Inspection and Maintenance Plan.

Subject: RE: Center Street Hotel Stormwater

Mike,

It turns out that the Kraken filter system has been evaluated by a consultant and a report on that evaluation will soon be sent to Washington State Department of Ecology for a General Use Level Designation (GULD) approval under the state's Technology Assessment Program (TAPE) program. I was able to get access to the summary and individual storm data on which the report is based. While the summary data suggests that the Kraken would provide the necessary level of pollutant removal for us to approve the system under the Innovative Measures provision in Chapter 500, review of the individual storm data revealed a problem with the sampling methodology that makes it impossible for us to assess the validity of the evaluation's conclusions. We will be looking into this further but at this point are not able to approve the Kraken device as an innovative measure. If you would like more detail on this, I would be glad to discuss it with you.

I discussed the situation yesterday with Mark Stebbins, Director of the Land Division in DEP's Bureau of Land Resources. While the language in the Redevelopment section of Chapter 500 (Section C.2.d) would require the Center Street Hotel project to provide treatment for 50% of the stormwater runoff from the site because the project is part of the Portland Square Master Development Plan and thus requires Site Location of Development approval, we agree that it is not appropriate to require treatment of runoff at the hotel site for the following reasons:

1. Development of the hotel site will replace nearly 2 acres of very high use parking with a roof. Only 15% of this site will be non-roof land use. The result of this, using phosphorus export coefficients in Volume II of the Maine Stormwater Management Manual, is a greater than 60% reduction in export from the site for phosphorus, and likely a similar reduction for other pollutants. This change of land use by itself will reduce export of pollutants from the site by more than twice as much as would treating 50% of the runoff from the existing parking lot. Additional pollutant removal will likely be accomplished by the green roof that will cover a portion of the hotel structure.

2. The hotel project is part of the much larger Portland Square Master Development Plan, which, when completed, will result in well over 7 acres of very high use parking being replaced by roofed structured parking and roofed retail and residential businesses. There will be no parking exposed to precipitation and the drains within the roofed structured parking will drain to the sanitary sewer and the treatment plant. Much of the roof associated with these structures will also be green roof. The net reduction in pollutant export from this redevelopment will be much greater than what is required by the Ch 500 redevelopment standard. Though it is not given credit as an innovative measure, replacement of high use parking with a roofed structure is a much more effective pollutant reduction BMP than the approved General Standard BMPs. We will be looking into approving roofed parking as an innovative measure for new development, not just redevelopment.

3. The stormwater from the hotel site will discharge indirectly to the Commercial Street combined sewer. As such, most of this runoff will be treated in the PWD wastewater treatment plant before being discharged to the Fore River. The long term plan for abatement of CSOs from this combined sewer is to add storage to the system so that stormwater from the area will continue to be sent to the treatment plan, rather than separating the sewer and discharging the stormwater directly to the Fore River. Therefore, it is likely that stormwater from this area will continue to receive secondary treatment at the treatment plant for the long term.

If you have any questions, give me a call or send an email.

EXTERNAL: This email originated from outside of the State of Maine Mail System. Do not click links or open attachments unless you recognize the sender and know the content is safe.
Good morning,

As far as Wright-Pierce is concerned, we are effectively needing MaineDEP agreement on the treatment method, as the City's regulations defer to MaineDEP-approved devices, and in turn their acceptance new treatment measures. Our initial comments suggested condition of approval was based on obtaining monitoring data to suit these needs; per Lauren's explanation below we agree that further discussions have indicated monitoring will not likely be beneficial for this site.

I am open to removing my suggested condition of approval regarding monitoring, and instead including a condition that "stormwater treatment using the Kraken will be dependent on MaineDEP's additional review of the Kraken manufacturer's test data for the project site". If needed, I can modify my formal review comments to incorporate this change.

Lauren and I briefly discussed other available BMPs on the phone earlier this week, and I will let her follow up on the design constraints regarding the Kraken system as opposed to others.

Thank you all,

-Mike

Subject: Re: Center Street Hotel Stormwater

Hi Lauren,

I am okay with the condition, though I am curious if DEP has accepted other proprietary systems suitable for small infill sites, that could serve as a backup to the Kraken if it is not accepted? Our view is that treatment, even for roof area, is preferable to no treatment, and if we do hear on Tuesday that the Kraken is not acceptable, then I would be prepared to answer questions on whether or not there are alternatives.

I will work on the draft condition language this morning, and will try to circulate with enough time for your feedback.

Thanks,

Matt

On Tue, Jul 2, 2019 at 5:39 PM Lauren Swett <lswett@woodardcurran.com> wrote:

> Hi Mike and Matt,
>
> I have been having some discussions with Jeff Dennis on the approach on stormwater management at the Center Street Hotel. Mike you had included a potential condition in your comments, and I want to propose tweaking that some.
>
> We have been approaching stormwater with the Kraken system proposed to be an "Innovative Treatment Measure", that isn't yet an approved BMP, but could be used with some added conditions of treatment monitoring associated with it. There was some misunderstanding at the DEP on how the innovative treatment system process is supposed to work, but I think as of this week, we have a handle on it, and I've had a variety of discussions with Jeff Dennis who has the authority over these applications. A few things:
>
> - The Kraken is proposed for treatment of roof runoff, which is generally a lot cleaner than parking lot runoff. While this is good, it means that monitoring of the system won't give much useful data because the starting point before it goes through the treatment system is pretty clean.
> - The Kraken manufacturer has done a number of tests themselves (in more useful scenarios), and they are working on getting that data to Jeff Dennis, possibly tomorrow, but more likely by the end of the week, and Jeff won't have a chance to review until next week.
> - In the case that the Kraken is not acceptable (which I'm guessing won't be the case!) Jeff also has some justification information on not providing any treatment at all, with the replacement of parking lot with roof providing adequate improvement. This is something that would need more discussion, and we're only going to approach that if the Kraken isn't going to work (again, I'm pretty confident it will be OK).
>
> Mike's original condition I believe referred to continuing to work with the DEP to determine appropriate monitoring requirements. Could we instead have a condition that stormwater treatment using the Kraken will be dependent on the final review of the Kraken manufacturer's test data? And, if the Kraken is found to not meet the DEP's standards for innovative treatment measures, we will work with the DEP to appropriately address stormwater treatment on the site.

Mike, let me know what you think of that, relative to your review, and Matt, let me know if you think that makes sense. And Jeff, please weigh in to make sure this sounds appropriate to you. If the data comes in before next Tuesday's public hearing, and Jeff looks at it and is comfortable with it relative to our project, we could just make the condition go away Tuesday night at the meeting.

Thanks everyone for working with us on this! We want to ultimately do the right thing here, and it seems like the different paths we're considering will all result in improvement.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cumberland County and Part of Oxford County, Maine
Survey Area Data: Version 16, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Data not available.

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
HIB	Hinckley loamy sand, 3 to 8 percent slopes	A	3.0	100.0%
Totals for Area of Interest			**3.0**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

STORMWATER INSPECTIONS & MAINTENANCE PLAN

Portland Square Garage

General inspection and maintenance during and after construction must take place in accordance with the requirements outlined in Appendix B of the Maine Department of Environmental Protection (MaineDEP) Chapter 500 Rules. Upon completion of the project, the Owner will assume responsibility for overseeing the property, including the inspection and maintenance of the Site's stormwater drainage system outlined herein. A person with knowledge of stormwater management and erosion and sediment control, including the standards and conditions in the permit, shall conduct the inspections and perform maintenance of the facilities.

Inspection and maintenance activities will be performed per the attached checklist and schedule; an example page of the BMP Maintenance Log that shall be kept on-site is also attached.

INSPECTION AND MAINTENANCE OF STORMWATER SYSTEMS

The inspection and maintenance criteria outlined in Chapter 500 Stormwater Regulations will be followed. Monitoring and maintenance is critical for the proper operation of the stormwater management system. First year post-construction monitoring differs primarily by its increased frequency to assure proper system functioning. Post-construction routine monitoring is based on USEPA requirements for good housekeeping practices. Stormwater infrastructure consists of manholes, catch basins, stormwater piping, Filterra Bioretention Systems and RTank Detention System. Inspection and maintenance of the proprietary treatment systems will be performed per the attached manufacturer guidelines.

Inspection frequency should be at least once every six months and after every major storm in the first year following construction. Trash, debris, and sediment shall be removed from storm drain pipes, manholes and catch basins as needed on a semi-annual basis.

STORMWATER MANAGEMENT MAINTENANCE TASKS AND RECOMMENDED SCHEDULE

Commented [AL1]: Do we need this?

TASKS	CATCH BASINS	MANHOLES	STORM DRAIN PIPES	FILTERRA BIORETENTION SYSTEM	R-TANK SUBSURFACE DETENTION SYSTEM	SCHEDULE
Inspect for sediment accumulation	X	X	X	X	X	Spring and Fall
Remove sediment accumulation	X	X	X	X	X	As needed
Clean debris	X	X	X	X	X	As needed
Inspect structural elements during wet weather and compare to as-built plans	X	X	X	X	X	Annually
Make adjustments or replacements as determined by wet weather observations	X	X	X	X	X	As needed
Keep records of all inspections and maintenance activities	X	X	X	X	X	Annually
Have a professional engineer perform emergency inspections upon identification of severe problems	X	X	X	X	X	As needed

STORMWATER INSPECTION CHECKLIST

Inspection by: _____ Date: _____

Stormwater Management Feature	Condition						Comments
Subsurface Detention System*	no siltation		some siltation		heavily silted in		
Subsurface Detention System*	no clogging/flooding		some clogging/flooding		heavy clogging/flooding		
Subsurface Detention System*	outlet free of erosion		some erosion at outlet		outlet heavily eroded		
Subsurface Detention System*	inlet/outlet clear		some debris		completely blocked		
Filterra Bioretention System**	No sediment or trash accumulation		Some sediment or trash accumulation		Excessive sediment or trash accumulation		
Filterra Bioretention System**	Plants healthy and pest-free		Plants are somewhat healthy		Plants are not healthy (no growth or excessive growth)		
Filterra Bioretention System**	Structure is in good condition.		Structure has small visible cracks.		Structure has cracks wider than ½ inch.		

** See attached manufacturer's guidelines for R-Tank maintenance and inspection.*

CONTECH®
ENGINEERED SOLUTIONS

Introduction

Thank you for your purchase of the Filterra® Bioretention System. Filterra is a specially engineered stormwater treatment system incorporating high performance biofiltration media to remove pollutants from stormwater runoff. The system's biota (vegetation and soil microorganisms) then further breakdown and absorb captured pollutants. All components of the system work together to provide a sustainable long-term solution for treating stormwater runoff.

The Filterra system has been delivered to you with protection in place to resist intrusion of construction related sediment which can contaminate the biofiltration media and result in inadequate system performance. These protection devices are intended as a best practice and cannot fully prevent contamination. It is the purchaser's responsibility to provide adequate measures to prevent construction related runoff from entering the Filterra system.

Included with your purchase is Activation of the Filterra system by the manufacturer as well as a 1-year warranty from delivery of the system and 1-year of routine maintenance (mulch replacement, debris removal, and pruning of vegetation) up to twice during the first year after activation.

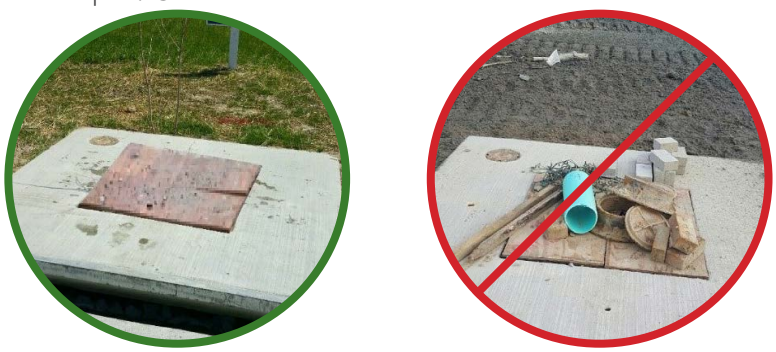
Design and Installation

Each project presents different scopes for the use of Filterra systems. Information and help may be provided to the design engineer during the planning process. Correct Filterra box sizing (by rainfall region) is essential to predict pollutant removal rates for a given area. The engineer shall submit calculations for approval by the local jurisdiction. The contractor is responsible for the correct installation of Filterra units as shown in approved plans. A comprehensive installation manual is available at www.ContechES.com.

Activation Overview

Activation of the Filterra system is a procedure completed by the manufacturer to place the system into working condition. This involves the following items:

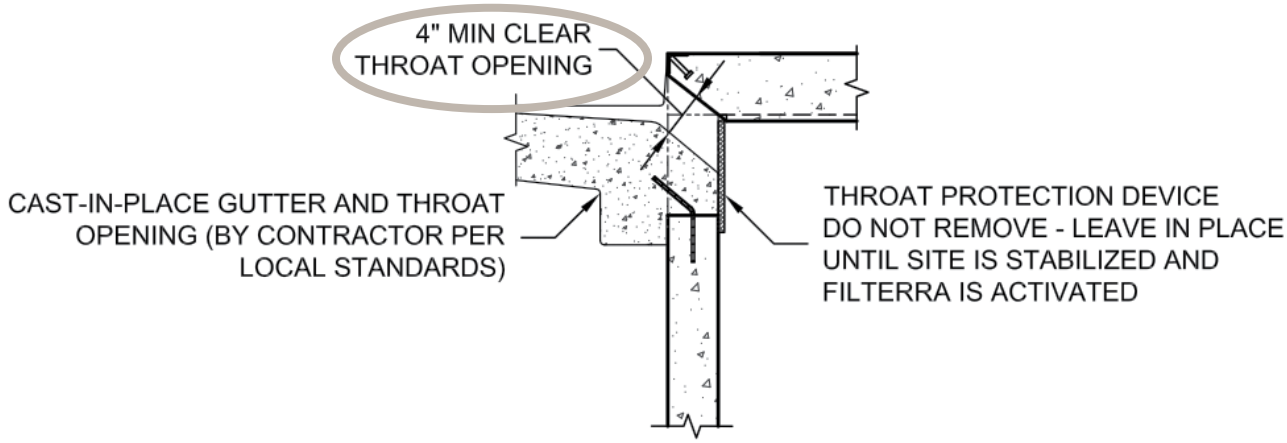
- Removal of construction runoff protection devices
- Planting of the system's vegetation
- Placement of pretreatment mulch layer using mulch certified for use in Filterra systems.



Activation MUST be provided by the manufacturer to ensure proper site conditions are met for Activation, proper installation of the vegetation, and use of pretreatment mulch certified for use in Filterra systems.

Minimum Requirements

The minimum requirements for Filterra Activation are as follows:



1. The site landscaping must be fully stabilized, i.e. full landscaping installed and some grass cover (not just straw and seed) is required to reduce sediment transport. Construction debris and materials should be removed from surrounding area.

2. Final paving must be completed. Final paving ensures that paving materials will not enter and contaminate the Filterra system during the paving process, and that the plant will receive runoff from the drainage area, assisting with plant survival for the Filterra system.

3. Filterra throat opening should be at least 4" in order to ensure adequate capacity for inflow and debris.

An Activation Checklist is included on page 12 to ensure proper conditions are met for Contech to perform the Activation services. A charge of $500.00 will be invoiced for each Activation visit requested by Customer where Contech determines that the site does not meet the conditions required for Activation.

Filterra Plant Selection Overview

A Plant List has been enclosed with this packet highlighting recommended plants for Filterra systems in your area. Keep in mind that plants are subject to availability due to seasonality and required minimum size for the Filterra system. Plants installed in the Filterra system are container plants (max 15 gallon) from nursery stock and will be immature in height and spread at Activation.

It is the responsibility of the owner to provide adequate irrigation when necessary to the plant of the Filterra system.

The "Planting Requirements for Filterra Systems" document is included as an appendix and discusses proper selection and care of the plants within Filterra systems.

Warranty Overview

Refer to the Contech Engineered Solutions LLC Stormwater Treatment System LIMITED WARRANTY for further information. The following conditions may void the Filterra system's warranty and waive the manufacturer provided Activation and Maintenance services:

- Unauthorized activation or performance of any of the items listed in the activation overview
- Any tampering, modifications or damage to the Filterra system or runoff protection devices
- Removal of any Filterra system components
- Failure to prevent construction related runoff from entering the Filterra system
- Failure to properly store and protect any Filterra components (including media and underdrain stone) that may be shipped separately from the vault

Routine Maintenance Guidelines

With proper routine maintenance, the biofiltration media within the Filterra system should last as long as traditional bioretention media. Routine maintenance is included by the manufacturer on all Filterra systems for the first year after activation. This includes a maximum of 2 visits to remove debris, replace pretreatment mulch, and prune the vegetation. More information is provided in the Operations and Maintenance Guidelines. Some Filterra systems also contain pretreatment or outlet bays. Depending on site pollutant loading, these bays may require periodic removal of debris, however this is not included in the first year of maintenance, and would likely not be required within the first year of operation.

These services, as well as routine maintenance outside of the included first year, can be provided by certified maintenance providers listed on the Contech website. Training can also be provided to other stormwater maintenance or landscape providers.

Why Maintain?

All stormwater treatment systems require maintenance for effective operation. This necessity is often incorporated in your property's permitting process as a legally binding BMP maintenance agreement. Other reasons to maintain are:

- Avoiding legal challenges from your jurisdiction's maintenance enforcement program.
- Prolonging the expected lifespan of your Filterra media.
- Avoiding more costly media replacement.
- Helping reduce pollutant loads leaving your property.

Simple maintenance of the Filterra is required to continue effective pollutant removal from stormwater runoff before discharge into downstream waters. This procedure will also extend the longevity of the living biofilter system. The unit will recycle and accumulate pollutants within the biomass, but is also subjected to other materials entering the inlet. This may include trash, silt and leaves etc. which will be contained above the mulch layer. Too much silt may inhibit the Filterra's flow rate, which is the reason for site stabilization before activation. Regular replacement of the mulch stops accumulation of such sediment.

When to Maintain?

Contech includes a 1-year maintenance plan with each system purchase. Annual included maintenance consists of a maximum of two (2) scheduled visits. Additional maintenance may be necessary depending on sediment and trash loading (by Owner or at additional cost). The start of the maintenance plan begins when the system is activated.

Maintenance visits are scheduled seasonally; the spring visit aims to clean up after winter loads including salts and sands while the fall visit helps the system by removing excessive leaf litter.

It has been found that in regions which receive between 30-50 inches of annual rainfall, (2) two visits are generally required; regions with less rainfall often only require (1) one visit per annum. Varying land uses can affect maintenance frequency; e.g. some fast food restaurants require more frequent trash removal. Contributing drainage areas which are subject to new development wherein the recommended erosion and sediment control measures have not been implemented may require additional maintenance visits.

Some sites may be subjected to extreme sediment or trash loads, requiring more frequent maintenance visits. This is the reason for detailed notes of maintenance actions per unit, helping the Supplier and Owner predict future maintenance frequencies, reflecting individual site conditions.

Owners must promptly notify the (maintenance) Supplier of any damage to the plant(s), which constitute(s) an integral part of the bioretention technology. Owners should also advise other landscape or maintenance contractors to leave all maintenance to the Supplier (i.e. no pruning or fertilizing) during the first year.

Exclusion of Services

Clean up due to major contamination such as oils, chemicals, toxic spills, etc. will result in additional costs and are not covered under the Supplier maintenance contract. Should a major contamination event occur the Owner must block off the outlet pipe of the Filterra (where the cleaned runoff drains to, such as drop inlet) and block off the throat of the Filterra. The Supplier should be informed immediately.

Maintenance Visit Summary

Each maintenance visit consists of the following simple tasks (detailed instructions below).

1. Inspection of Filterra and surrounding area
2. Removal of tree grate and erosion control stones
3. Removal of debris, trash and mulch
4. Mulch replacement
5. Plant health evaluation and pruning or replacement as necessary
6. Clean area around Filterra
7. Complete paperwork

Maintenance Tools, Safety Equipment and Supplies

Ideal tools include: camera, bucket, shovel, broom, pruners, hoe/rake, and tape measure. Appropriate Personal Protective Equipment (PPE) should be used in accordance with local or company procedures. This may include impervious gloves where the type of trash is unknown, high visibility clothing and barricades when working in close proximity to traffic and also safety hats and shoes. A T-Bar or crowbar should be used for moving the tree grates (up to 170 lbs ea.). Most visits require minor trash removal and a full replacement of mulch. See below for actual number of bagged mulch that is required in each media bay size. Mulch should be a double shredded, hardwood variety. Some visits may require additional Filterra engineered soil media available from the Supplier.

Box Length	Box Width	Filter Surface Area (ft^2)	Volume at 3" (ft^3)	# of 2 ft^3 Mulch Bags
4	4	4	4	2
6	4	6	6	3
8	4	8	8	4
6	6	9	9	5
8	6	12	12	6
10	6	15	15	8
12	6	18	18	9
13	7	23	23	12

Maintenance Visit Procedure

Keep sufficient documentation of maintenance actions to predict location specific maintenance frequencies and needs. An example Maintenance Report is included in this manual.

1. Inspection of Filterra and surrounding area

- Record individual unit before maintenance with photograph (numbered). Record on Maintenance Report (see example in this document) the following:

Record on Maintenance Report the following:

Standing Water	yes | no
Damage to Box Structure	yes | no
Damage to Grate	yes | no
Is Bypass Clear	yes | no

If yes answered to any of these observations, record with close-up photograph (numbered).

2. Removal of tree grate and erosion control stones

- Remove cast iron grates for access into Filterra box.
- Dig out silt (if any) and mulch and remove trash & foreign items.

3. Removal of debris, trash and mulch

Record on Maintenance Report the following:

Silt/Clay	yes | no
Cups/ Bags	yes | no
Leaves	yes | no
Buckets Removed	_____

- After removal of mulch and debris, measure distance from the top of the Filterra engineered media soil to the top of the top slab. Compare the measured distance to the distance shown on the approved Contract Drawings for the system. Add Filterra media (not top soil or other) to bring media up as needed to distance indicated on drawings.

Record on Maintenance Report the following:

Distance to Top of Top Slab (inches)	_____
Inches of Media Added	_____

4. Mulch replacement

- Add double shredded mulch evenly across the entire unit to a depth of 3".
- Refer to Filterra Mulch Specifications for information on acceptable sources.
- Ensure correct repositioning of erosion control stones by the Filterra inlet to allow for entry of trash during a storm event.
- Replace Filterra grates correctly using appropriate lifting or moving tools, taking care not to damage the plant.

5. Plant health evaluation and pruning or replacement as necessary

- Examine the plant's health and replace if necessary.
- Prune as necessary to encourage growth in the correct directions

Record on Maintenance Report the following:

Height above Grate	_____ (ft)
Width at Widest Point	_____ (ft)
Health	healthy | unhealthy
Damage to Plant	yes | no
Plant Replaced	yes | no

6. Clean area around Filterra

- Clean area around unit and remove all refuse to be disposed of appropriately.

7. Complete paperwork

- Deliver Maintenance Report and photographs to appropriate location (normally Contech during maintenance contract period).
- Some jurisdictions may require submission of maintenance reports in accordance with approvals. It is the responsibility of the Owner to comply with local regulations.

Maintenance Checklist

Drainage System Failure	Problem	Conditions to Check	Condition that Should Exist	Actions
Inlet	Excessive sediment or trash accumulation.	Accumulated sediments or trash impair free flow of water into Filterra.	Inlet should be free of obstructions allowing free distributed flow of water into Filterra.	Sediments and/or trash should be removed.
Mulch Cover	Trash and floatable debris accumulation.	Excessive trash and/or debris accumulation.	Minimal trash or other debris on mulch cover.	Trash and debris should be removed and mulch cover raked level. Ensure bark nugget mulch is not used.
Mulch Cover	"Ponding" of water on mulch cover.	"Ponding" in unit could be indicative of clogging due to excessive fine sediment accumulation or spill of petroleum oils.	Stormwater should drain freely and evenly through mulch cover.	Recommend contact manufacturer and replace mulch as a minimum.
Vegetation	Plants not growing or in poor condition.	Soil/mulch too wet, evidence of spill. Incorrect plant selection. Pest infestation. Vandalism to plants.	Plants should be healthy and pest free.	Contact manufacturer for advice.
Vegetation	Plant growth excessive.	Plants should be appropriate to the species and location of Filterra.		Trim/prune plants in accordance with typical landscaping and safety needs.
Structure	Structure has visible cracks.	Cracks wider than 1/2 inch or evidence of soil particles entering the structure through the cracks.		Vault should be repaired.
Maintenance is ideally to be performed twice annually.				

Filterra Inspection & Maintenance Log

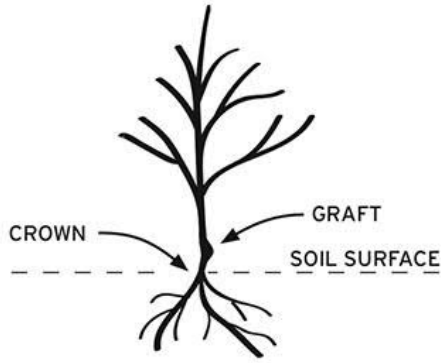
Attach additional sheets as necessary.



NOTE: A charge of $500.00 will be invoiced for each Activation visit requested by Customer where Contech determines that the site does not meet the conditions required for Activation. ONLY Contech authorized representatives can perform Activation of Filterra systems; unauthorized Activations will void the system warranty and waive manufacturer supplied Activation and 1st Year Maintenance.

_____ _____

Signature Date

Appendix 2 – Planting Requirements for Filterra® Systems

Plant Material Selection

- Select plant(s) as specified in the engineering plans and specifications.
- Select plant(s) with full root development but not to the point where root bound.
- Use local nursery container plants only. Ball and burlapped plants are not permitted.
- For precast Filterra systems with a tree grate, plant(s) must not have scaffold limbs at least 14 inches from the crown due to spacing between the top of the mulch and the tree grate. Lower branches can be pruned away provided there are sufficient scaffold branches for tree or shrub development.
- For precast Filterra systems with a tree grate, at the time of installation, it is required that plant(s) must be at least 6" above the tree grate opening at installation for all Filterra configurations. This DOES NOT apply to Full Grate Cover designs.
- Plant(s) shall not have a mature height greater than 25 feet.
- For standard 21" media depth, a 7 – 15 gallon container size shall be used. Media less than 21" (Filterra boxes only) will require smaller container plants.
- For precast Filterra systems, plant(s) should have a single trunk at installation, and pruning may be necessary at activation and maintenance for some of the faster growing species, or species known to produce basal sprouts.

Plant Installation

- During transport protect the plant leaves from wind and excessive jostling.
- Prior to removing the plant(s) from the container, ensure the soil moisture is sufficient to maintain the integrity of the root ball. If needed, pre-wet the container plant.
- Cut away any roots which are growing out of the container drain holes. Plants with excessive root growth from the drain holes should be rejected.
- Plant(s) should be carefully removed from the pot by gently pounding on the sides of the container with the fist to loosen root ball. Then carefully slide out. Do not lift plant(s) by trunk as this can break roots and cause soil to fall off. Extract the root ball in a horizontal position and support it to prevent it from breaking apart. Alternatively the pot can be cut away to minimize root ball disturbance.
- Remove any excess soil from above the root flare after removing plant(s) from container.
- Excavate a hole with a diameter 4" greater than the root ball, gently place the plant(s).
- If plant(s) have any circling roots from being pot bound, gently tease them loose without breaking them.
- If root ball has a root mat on the bottom, it should be shaved off with a knife just above the mat line.
- Plant the tree/shrub/grass with the top of the root ball 1" above surrounding media to allow for settling.
- All plants should have the main stem centered in the tree grate (where applicable) upon completion of installation.
- With all trees/shrubs, remove dead, diseased, crossed/rubbing, sharply crotched branches or branches growing excessively long or in wrong direction compared to majority of branches.
- To prevent transplant shock (especially if planting takes place in the hot season), it may be necessary to prune some of the foliage to compensate for reduced root uptake capacity. This is accomplished by pruning away some of the smaller secondary branches or a main scaffold branch if there are too many. Too much foliage relative to the root ball can dehydrate and damage the plant.
- Plant staking may be required.

Mulch Installation

- Only mulch that has been meeting Contech Engineered Solutions' mulch specifications can be used in the Filterra system.
- Mulch must be applied to a depth of 3" evenly over the surface of the media.

Irrigation Requirements

- Each Filterra system must receive adequate irrigation to ensure survival of the living system during periods of drier weather.
- Irrigation sources include rainfall runoff from downspouts and/or gutter flow, applied water through the tree grate or in some cases from an irrigation system with emitters installed during construction.
- At Activation: Apply about one (cool climates) to two (warm climates) gallons of water per inch of trunk diameter over the root ball.
- During Establishment: In common with all plants, each Filterra plant will require more frequent watering during the establishment period. One inch of applied water per week for the first three months is recommended for cooler climates (2 to 3 inches for warmer climates). If the system is receiving rainfall runoff from the drainage area, then irrigation may not be needed. Inspection of the soil moisture content can be evaluated by gently brushing aside the mulch layer and feeling the soil. Be sure to replace the mulch when the assessment is complete. Irrigate as needed**.
- Established Plants: Established plants have fully developed root systems and can access the entire water column in the media. Therefore irrigation is less frequent but requires more applied water when performed. For a mature system assume 3.5 inches of available water within the media matrix. Irrigation demand can be estimated as 1" of irrigation demand per week. Therefore if dry periods exceed 3 weeks, irrigation may be required. It is also important to recognize that plants which are exposed to windy areas and reflected heat from paved surfaces may need more frequent irrigation. Long term care should develop a history which is more site specific.

** Five gallons per square yard approximates 1 inch of water Therefore for a 6' by 6' Filterra approximately 20-60 gallons of water is needed. To ensure even distribution of water it needs to be evenly sprinkled over the entire surface of the filter bed, with special attention to make sure the root ball is completely wetted. NOTE: if needed, measure the time it takes to fill a five gallon bucket to estimate the applied water flow rate then calculate the time needed to irrigate the Filterra. For example, if the flow rate of the sprinkler is 5 gallons/minute then it would take 12 minutes to irrigate a 6' by 6' filter.

R-TANK OPERATION, INSPECTION & MAINTENANCE

Operation

Your ACF R-Tank System has been designed to function in conjunction with the engineered drainage system on your site, the existing municipal infrastructure, and/or the existing soils and geography of the receiving watershed. Unless your site included certain unique and rare features, the operation of your R-Tank System will be driven by naturally occurring systems and will function autonomously. However, upholding a proper schedule of Inspection & Maintenance is critical to ensuring continued functionality and optimum performance of the system.

Inspection

Both the R-Tank and all stormwater pre-treatment features incorporated into your site must be inspected regularly. Inspection frequency for your system must be determined based on the contributing drainage area, but should never exceed one year between inspections (six months during the first year of operation).

Inspections may be required more frequently for pre-treatment systems. You should refer to the manufacturer requirements for the proper inspection schedule.

With the right equipment your inspection and measurements can be accomplished from the surface without physically entering any confined spaces. If your inspection does require confined space entry, you MUST follow all local/regional requirements as well as OSHA standards.

R-Tank Systems may incorporate Inspection Ports, Maintenance Ports, and/or adjoining manholes. Each of these features are easily accessed by removing the lid at the surface. With the cover removed, a visual inspection can be performed to identify sediment deposits within the structure. Using a flashlight, ALL access points should be examined to complete a thorough inspection.

Inspection Ports
Usually located centrally in the R-Tank System, these perforated columns are designed to give the user a base-line sediment depth across the system floor.

Maintenance Ports
Usually located near the inlet and outlet connections, you'll likely find deeper deposits of heavier sediments when compared to the Inspection Ports.

Manholes
Most systems will include at least two manholes - one at the inlet and another at the outlet. There may be more than one location where stormwater enters the system, which would result in additional manholes to inspect.

Bear in mind that these manholes often include a sump below the invert of the pipe connecting to the R-Tank. These sumps are designed to capture sediment before it reaches the R-Tank, and they should be kept clean to ensure they function properly. However, existence of sediment in the sump does NOT necessarily mean sediment has accumulated in the R-Tank.

After inspecting the bottom of the structure, use a mirror on a pole (or some other device) to check for sediment or debris in the pipe connecting to the R-Tank.

R-TANK OPERATION INSPECTION & MAINTENANCE

If sediment or debris is observed in any of these structures, you should determine the depth of the material. This is typically accomplished with a stadia rod, but you should determine the best way to obtain the measurement.

All observations and measurements should be recorded on an Inspection Log kept on file. We've included a form you can use at the end of this guideline.

Maintenance

The R-Tank System should be back-flushed once sediment accumulation has reached 6" or 15% of the total system height. Use the chart below as a guideline to determine the point at which maintenance is required on your system.

R-Tank Unit	Height	Max Sediment Dept
Mini	9.5"	1.5"
Single	17"	3"
Double	34"	5"
Triple	50"	6"
Quad	67"	6"
Pent	84"	6"

Before any maintenance is performed on your system, be sure to plug the outlet pipe to prevent contamination of the adjacent systems.

To back-flush the R-Tank, water is pumped into the system through the Maintenance Ports as rapidly as possible. Water should be pumped into ALL Maintenance Ports. The turbulent action of the water moving through the R-Tank will suspend sediments which may then be pumped out.

If your system includes an Outlet Structure, this will be the ideal location to pump contaminated water out of the system. However, removal of back-flush water may be accomplished through the Maintenance Ports, as well.

For systems with large footprints that would require extensive volumes of water to properly flush the system, you should consider performing your maintenance within 24 hours of a rain event. Stormwater entering the system will aid in the suspension of sediments and reduce the volume of water required to properly flush the system.

Once removed, sediment-laden water may be captured for disposal or pumped through a Dirtbag™ (if permitted by the locality).

Step-By-Step Inspection & Maintenance Routine

1) **Inspection**
    a. Inspection Port
        i. Remove Cap
        ii. Use flashlight to detect sediment deposits
        iii. If present, measure sediment depth with stadia rod
        iv. Record results on Maintenance Log
        v. Replace Cap
    b. Maintenance Port/s
        i. Remove Cap
        ii. Use flashlight to detect sediment deposits
        iii. If present, measure sediment depth with stadia rod
        iv. Record results on Maintenance Log
        v. Replace Cap
        vi. Repeat for ALL Maintenance Ports
    c. Adjacent Manholes
        i. Remove Cover
        ii. Use flashlight to detect sediment deposits
        iii. If present, measure sediment depth with stadia rod, accounting for depth of sump (if present)
        iv. Inspect pipes connecting to R-Tank
        v. Record results on Maintenance Log
        vi. Replace Cover
        vii. Repeat for ALL Manholes that connect to the R-Tank

2) **Maintenance**
    a. Plug system outlet to prevent discharge of back-flush water
    b. Determine best location to pump out back-flush water
    c. Remove Cap from Maintenance Port
    d. Pump water as rapidly as possible (without over-topping port) into system until at least 1”
    of water covers system bottom
    e. Replace Cap
    f. Repeat at ALL Maintenance Ports
    g. Pump out back-flush water to complete back-flushing
    h. Vacuum all adjacent structures and any other structures or stormwater pre-treatment systems that require attention
    i. Sediment-laden water may be captured for disposal or pumped through a Dirtbag™.
    j. Replace any remaining Caps or Covers
    k. Record the back-flushing event in your Maintenance Log with any relevant specifics

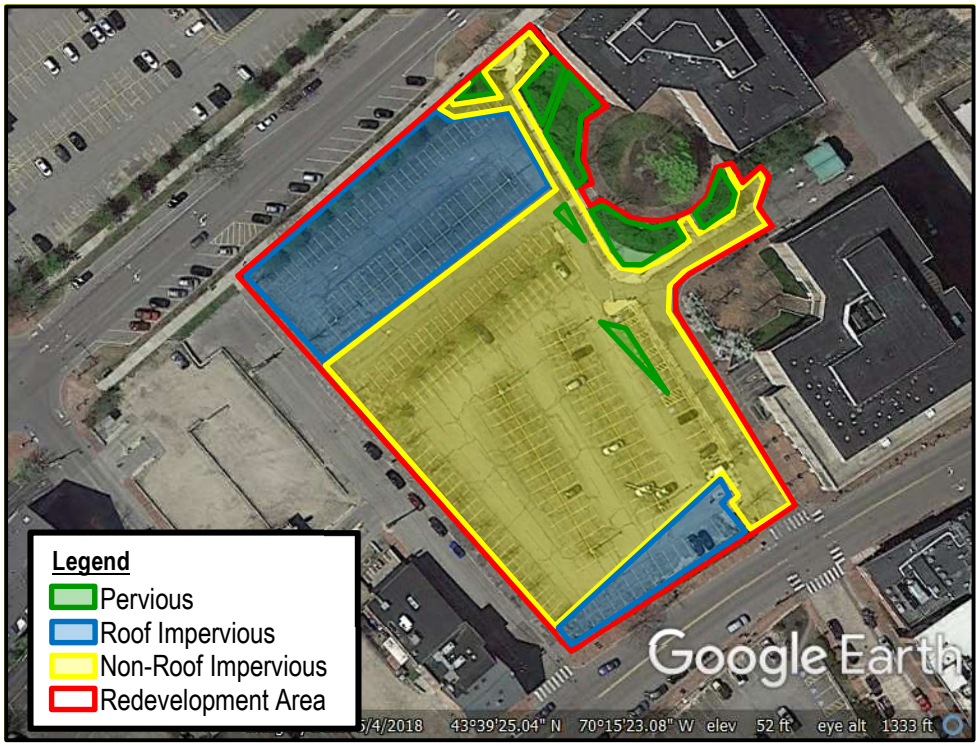
1. STORMWATER MANAGEMENT PLAN

This Stormwater Management Plan (SWMP) describes existing site conditions, the proposed development, compliance with applicable stormwater standards, and inspection and maintenance requirements for the proposed stormwater system associated with the Three Portland Square redevelopment project in Portland, Maine.

1.1 Existing Conditions

The 2.31 +/- acre project area, located in a highly developed urban environment, currently consists of a paved parking lot surrounded by a landscaped esplanade containing shrubs and trees. The site slopes from north to south towards Fore Street, from approximate elevation 51' down to 29'. In general, runoff from the parking lot drains via sheet flow in a southerly direction to a series of catch basins that discharge to the separated storm drain in Cotton Street, then to the separated storm drain in Fore Street and ultimately to the storm drain in Cross Street. There is no existing stormwater treatment on the site. The following figure and table portray the surface cover breakdown of the existing site.



Cover Type	Area Description	Surface Area (SF)
Pervious	Landscaped Esplanade & Plaza Landscaping	17,980
Roof Impervious	N/A	0
Non-Roof Impervious	Parking Lot, Plaza and Upper Cross Street	82,630
	Total Existing Redevelopment Area	100,610

1.2 Proposed Development

The proposed project includes redevelopment of the existing surface parking lot with an 8-story office building with ground-level retail (Office Tower), a 7-level parking structure, and a 4-story office building with ground level retail/restaurant (Fore Street Wrap), as well as redevelopment of the adjacent plaza, stairs and private access driveway (Upper Cross Street), and associated site improvements. The proposed development will result in approximately 2.31-acres of disturbance and approximately 2.15-acres of impervious area.

The proposed buildings and parking structure cover almost the entire parcel, as required per City's zoning setbacks. The site layout is shown in the project drawings submitted under separate cover. The following figure and table show the surface cover breakdown for the proposed redevelopment project.

Cover Type	Area Description	Surface Area (SF)
Pervious	Plaza Landscaping	7,025
Roof Impervious	Office Tower and Fore Street Wrap	26,570
Non-Roof Impervious	Parking Structure, Plaza, Alley and Upper Cross Street	67,015
	Total Proposed Redevelopment Area	100,610

Stormwater runoff from the site will discharge to storm drain in Cotton Street and Upper Cross Street, which ultimately discharge to the storm drain in Cross Street, similar to the existing conditions. We anticipate meeting with the City of Portland to discuss connections to the City's existing infrastructure – there is a need for additional clarity on which

systems are separated or combined in some of the streets impacted by the project. We want to ensure that the proposed infrastructure will integrate with the City's current and future stormwater systems.

The proposed subsurface stormwater management system will consist of R-Tanks for storage and Jellyfish Filters for stormwater treatment. The proposed stormwater management systems are discussed in further detail in the following sections.

1.3 Stormwater Standards

The project is subject to the MaineDEP Chapter 500 Stormwater Standards. The project is not located within the watershed of an Urban Impaired Stream and is therefore not subject to the Urban Impaired Stream Standard. The following sections describe the project's compliance with the applicable stormwater standards.

1.3.1 Basic Standard (Soil Erosion & Sediment Control)

A variety of erosion and sediment control measures will be utilized during construction, including but not limited to the following:

- Stabilized construction entrances;
- Up-gradient runoff diversion barriers;
- Downgradient sediment barriers;
- Catch basin inlet protection devices;
- Preservation and maintenance of vegetated areas to the maximum extent possible;
- Temporary stabilization of disturbed areas to be exposed for more than seven days;
- Permanent stabilization of final graded areas;
- Controls for fugitive dust, debris, and other materials; and
- Inspection of all measures until the Site is permanently stabilized.

Structural measures will be installed as shown on the design drawings. Details and specifications for these measures are included on the drawings. All measures will be implemented in accordance with the "Maine Erosion and Sedimentation Handbook for Construction: Best Management Practices". All temporary measures will be installed prior to any earth-disturbing activities and will be removed upon permanent stabilization of the Site. The Contractor will be responsible for implementing and maintaining all erosion and sediment control measures in an effective operating condition during construction. Permanent erosion control measures will include vegetation and pavement. After construction, the Owner will be responsible for inspecting and maintaining the Site as described in Section 1.4 of this Report.

1.3.2 General & Redevelopment Standards (Stormwater Quality)

An impact analysis was conducted for the proposed redevelopment project to determine treatment requirements based on land use and pollutant rankings provided in Table 2 of Maine DEP Chapter 500 Rules. The existing site is largely comprised of a high use paved surface parking lot (pollutant ranking 5). The proposed site will primarily be comprised of flat building roof (pollutant ranking 3). The ranked impact change is less than zero, and the project is being permitted under Site Law; therefore, 50 percent of the developed area must be treated in accordance with Table 3 in Chapter 500. Greater than 50% of the redeveloped area will be captured and treated. Impact analysis and water quality calculations are provided in Appendix B. A Jellyfish filter system with below-grade R-Tanks for water quality volume

storage has been selected as the water quality treatment BMP for the Site. The proposed stormwater treatment system was designed based on Volume III of the DEP Stormwater BMP Manual.

Alternative stormwater management methods were considered, including green roof. The green roof option was eliminated due to significant structural design and building cost implications. Above-grade storage systems, like underdrained soil filters and rain gardens, were ruled out as there is limited available space on the Site due to zoning setback requirements.

R-Tank

Adequate provisions have been made to direct stormwater runoff from the parking structure rooftop, alley, and portion of the plaza and office tower roof to the underground R-Tank storage system. The R-Tanks will be installed in the alley between the office tower and parking structure, as shown on the Site Plan Drawings.

Jellyfish Filter

The system has been designed in accordance with the MaineDEP proprietary BMP approval letter to Contech dated January 21, 2015. The Jellyfish Filters have been sized to accommodate the water quality flow from 1-inch of runoff for a minimum 50 percent of the redeveloped area. Larger storm events will bypass the filter cartridges via an internal weir. The proposed Jellyfish Filter configurations and details are included on the Site Plan Drawings.

1.3.3 Flooding Standard (Stormwater Quantity)

Chapter 500 Stormwater Rules require that the stormwater management system detain, retain, or result in the infiltration of the stormwater flows from the 24-hour storm of the 2-year, 10-year, and 25-year frequencies, such that peak flows from the post-development Site do not exceed those from the pre-development Site. An R-Tank subsurface detention system is proposed to ensure post-development flows do not exceed pre-development flows from the project site. The stormwater management system was designed utilizing the HydroCAD 10.00 Stormwater Modeling System by Applied Microcomputer Systems. Utilizing the HydroCAD software, a 24-hour duration and Type-III rainfall distribution was applied to the rainfall depths provided in Appendix H of the MaineDEP Chapter 500 Rules in order to estimate the peak flows that the stormwater management system will need to accommodate.

HydroCAD provides a lookup table for curve number (CN), which is a measure of the retention and runoff properties of various surfaces based on the Hydrological Soil Group (HSG) and land cover type using TR-55 methodology. According to the latest NRCS Web Soil Survey data, the Site fully consists of Hinckley loamy sand, which is a HSG A soil. The area of each land cover type was delineated utilizing topographical survey information and HydroCAD computed the final CN for each subcatchment based on an area-weighted average. The HydroCAD model provided in Appendix C considers one study point: the separated storm drain at the intersection of Fore Street and Cross Street. Subcatchments, study points and the proposed R-Tank subsurface detention system are shown on the Pre- and Post-Development Drainage Area Figures provided in Appendix D.

The Time of Concentration (Tc) is the time required for runoff to travel from the most hydrologically distant point of a subcatchment to the point of discharge. The Tc for each subcatchment was computed within HydroCAD as the sum of the travel times for each consecutive segment along the longest flow path. The longest flow path was delineated utilizing topographic survey data and partitioned into segments based on flow types, land cover and slopes. The primary types of flow include sheet flow, shallow concentrated flow, and channel flows; sheet flow typically occurs within the first 100-feet of runoff. A minimum Tc of six minutes was utilized for all subcatchment areas.

Adequate provisions have been made to collect and control stormwater via the proposed stormwater management system. Storm drainage pipes have been sized to convey peak flow from the 25-year storm event. The proposed R-Tank subsurface detention system has been designed to store and treat stormwater volumes generated from the top deck of the parking structure, alley and portions of the plaza and office tower roof. We have been working with ACF

Environmental to determine the appropriate size and layout that is required for the site. This design is shown on the drawings. The table below provides a summary of the peak runoff rates for the 24-hour, 2-, 10-, and 25-year Type III storm events.

Table 1: Pre- vs. Post- Stormwater Comparison

Study Point		Peak Runoff Rate (cfs)		
		2-Year Storm	10-Year Storm	25-Year Storm
1	Pre-Development	5.44	8.96	11.79
	Post-Development	5.20	8.13	10.68

As shown above, there is a net decrease in the post-development rate of runoff during all storms at the Site's study point. Additionally, stormwater from the Site will continue to discharge to the separated storm drain at the intersection of Fore Street and Cross Street. Therefore, stormwater from the Site will not overwhelm the City's existing stormwater and sewer infrastructure.

1.4 Inspection & Maintenance Requirements

General inspection and maintenance must take place during and after construction in accordance with the requirements outlined in Chapter 500, Stormwater Management, Appendix B, Inspection and Maintenance and Stormwater Management, Maine Department of Environmental Protection Publication No. DEPLW0738. A formal stormwater agreement will be executed as the permitting process progresses. During construction, the contractor will be responsible for inspection and maintaining the Site. Upon completion, the property owner will be responsible for implementing the maintenance and inspection requirements for the stormwater management system associated with the new development in accordance with the Stormwater Inspection and Maintenance Plan provided in Appendix A.

APPENDIX A: STORMWATER INSPECTION & MAINTENANCE PLAN

STORMWATER INSPECTION & MAINTENANCE PLAN

Three Portland Square, Portland, Maine

General inspection and maintenance during and after construction must take place in accordance with the requirements outlined in Appendix B of the Maine Department of Environmental Protection (MaineDEP) Chapter 500 Rules. Upon completion of the project, the Owner will assume responsibility for overseeing the property, including the inspection and maintenance of the Site's stormwater drainage system and treatment measures outlined herein. A person with knowledge of stormwater management and erosion and sediment control, including the standards and conditions in the permit, shall conduct the inspections and perform maintenance of the facilities.

Inspection and maintenance activities will be performed per the attached checklist, schedule, and manufacturer guidelines; an example page of the BMP Maintenance Log that shall be kept on-site is also attached.

INSPECTION AND MAINTENANCE OF STORMWATER SYSTEMS

Trash, debris, and sediment shall be removed from stormdrain pipes and catch basins as needed on a semi-annual basis. In addition to the inspection and maintenance of stormwater systems, paved areas will be inspected annually each spring. These areas will be kept clean and clear through periodic sweeping and winter plowing as required. Inspections will also ensure pavement markings are repainted as needed to maintain proper traffic circulation. Paved areas will be plowed and sanded as often as necessary to maintain public safety. Periodic sweeping of pavement will reduce the amount of sediment available to enter the stormwater systems, in turn reducing the need to clean the stormwater systems. The R-Tank and Jellyfish systems must be inspected and maintained per the manufacturer's guidelines, which are outlined in the attached guidance documents.

STORMWATER INSPECTION CHECKLIST

Inspection by: _____ Date: _____

Stormwater Management Feature	Condition						Comments
Vegetative cover	no bare spots, no evidence of rill erosion		some bare spots, some rill erosion		large bare areas, extensive erosion		
Subsurface Drainage System*	no siltation		some siltation		heavily silted in		
Subsurface Drainage System*	no clogging/flooding		some clogging/flooding		heavy clogging/flooding		
Subsurface Drainage System*	outlet free of erosion		some erosion at outlet		outlet heavily eroded		
Subsurface Drainage System*	inlet/outlet clear		some debris		completely blocked		
Jellyfish System**	Cartridges are in good condition		Cartridges in need of cleaning		Cartridges in need of replacement		
Jellyfish System**	no clogging/flooding		some clogging/flooding		heavy clogging/flooding		

**See attached manufacturer's guidelines for R-Tank maintenance and inspection.*
*** See attached manufacturer's guidelines for Jellyfish System maintenance and inspection.*

Recommended Actions: _____

_____

Actions Completed: _____ Date: _____

MAINTENANCE TASKS	**SCHEDULE**
Inspect for sediment accumulation	Spring and Fall
Remove sediment accumulation	As needed
Clean debris	As needed
Inspect for erosion	As needed
Reestablish vegetation in erosion areas	Early spring
Inspect structural elements during wet weather and compare to as-built plans	Annually
Make adjustments or replacements as determined by wet weather observations	As needed
Keep records of all inspections and maintenance activities	Annually
Have a professional engineer perform emergency inspections upon identification of severe problems	As needed

R-TANK OPERATION, INSPECTION & MAINTENANCE

Operation

Your ACF R-Tank System has been designed to function in conjunction with the engineered drainage system on your site, the existing municipal infrastructure, and/or the existing soils and geography of the receiving watershed. Unless your site included certain unique and rare features, the operation of your R-Tank System will be driven by naturally occurring systems and will function autonomously. However, upholding a proper schedule of Inspection & Maintenance is critical to ensuring continued functionality and optimum performance of the system.

Inspection

Both the R-Tank and all stormwater pre-treatment features incorporated into your site must be inspected regularly. Inspection frequency for your system must be determined based on the contributing drainage area, but should never exceed one year between inspections (six months during the first year of operation).

Inspections may be required more frequently for pre-treatment systems. You should refer to the manufacturer requirements for the proper inspection schedule.

With the right equipment your inspection and measurements can be accomplished from the surface without physically entering any confined spaces. If your inspection does require confined space entry, you MUST follow all local/regional requirements as well as OSHA standards.

R-Tank Systems may incorporate Inspection Ports, Maintenance Ports, and/or adjoining manholes. Each of these features are easily accessed by removing the lid at the surface. With the cover removed, a visual inspection can be performed to identify sediment deposits within the structure. Using a flashlight, ALL access points should be examined to complete a thorough inspection.

Inspection Ports
Usually located centrally in the R-Tank System, these perforated columns are designed to give the user a base-line sediment depth across the system floor.

Maintenance Ports
Usually located near the inlet and outlet connections, you'll likely find deeper deposits of heavier sediments when compared to the Inspection Ports.

Manholes
Most systems will include at least two manholes - one at the inlet and another at the outlet. There may be more than one location where stormwater enters the system, which would result in additional manholes to inspect.

Bear in mind that these manholes often include a sump below the invert of the pipe connecting to the R-Tank. These sumps are designed to capture sediment before it reaches the R-Tank, and they should be kept clean to ensure they function properly. However, existence of sediment in the sump does NOT necessarily mean sediment has accumulated in the R-Tank.

After inspecting the bottom of the structure, use a mirror on a pole (or some other device) to check for sediment or debris in the pipe connecting to the R-Tank.

R-TANK OPERATION INSPECTION & MAINTENANCE

If sediment or debris is observed in any of these structures, you should determine the depth of the material. This is typically accomplished with a stadia rod, but you should determine the best way to obtain the measurement.

All observations and measurements should be recorded on an Inspection Log kept on file. We've included a form you can use at the end of this guideline.

Maintenance

The R-Tank System should be back-flushed once sediment accumulation has reached 6" or 15% of the total system height. Use the chart below as a guideline to determine the point at which maintenance is required on your system.

R-Tank Unit	Height	Max Sediment Dept
Mini	9.5"	1.5"
Single	17"	3"
Double	34"	5"
Triple	50"	6"
Quad	67"	6"
Pent	84"	6"

Before any maintenance is performed on your system, be sure to plug the outlet pipe to prevent contamination of the adjacent systems.

To back-flush the R-Tank, water is pumped into the system through the Maintenance Ports as rapidly as possible. Water should be pumped into ALL Maintenance Ports. The turbulent action of the water moving through the R-Tank will suspend sediments which may then be pumped out.

If your system includes an Outlet Structure, this will be the ideal location to pump contaminated water out of the system. However, removal of back-flush water may be accomplished through the Maintenance Ports, as well.

For systems with large footprints that would require extensive volumes of water to properly flush the system, you should consider performing your maintenance within 24 hours of a rain event. Stormwater entering the system will aid in the suspension of sediments and reduce the volume of water required to properly flush the system.

Once removed, sediment-laden water may be captured for disposal or pumped through a Dirtbag™ (if permitted by the locality).

Step-By-Step Inspection & Maintenance Routine

1) **Inspection**
    a. Inspection Port
        i. Remove Cap
        ii. Use flashlight to detect sediment deposits
        iii. If present, measure sediment depth with stadia rod
        iv. Record results on Maintenance Log
        v. Replace Cap
    b. Maintenance Port/s
        i. Remove Cap
        ii. Use flashlight to detect sediment deposits
        iii. If present, measure sediment depth with stadia rod
        iv. Record results on Maintenance Log
        v. Replace Cap
        vi. Repeat for ALL Maintenance Ports
    c. Adjacent Manholes
        i. Remove Cover
        ii. Use flashlight to detect sediment deposits
        iii. If present, measure sediment depth with stadia rod, accounting for depth of sump (if present)
        iv. Inspect pipes connecting to R-Tank
        v. Record results on Maintenance Log
        vi. Replace Cover
        vii. Repeat for ALL Manholes that connect to the R-Tank

2) **Maintenance**
    a. Plug system outlet to prevent discharge of back-flush water
    b. Determine best location to pump out back-flush water
    c. Remove Cap from Maintenance Port
    d. Pump water as rapidly as possible (without over-topping port) into system until at least 1”
    of water covers system bottom
    e. Replace Cap
    f. Repeat at ALL Maintenance Ports
    g. Pump out back-flush water to complete back-flushing
    h. Vacuum all adjacent structures and any other structures or stormwater pre-treatment systems that require attention
    i. Sediment-laden water may be captured for disposal or pumped through a Dirtbag™.
    j. Replace any remaining Caps or Covers
    k. Record the back-flushing event in your Maintenance Log with any relevant specifics

Jellyfish® Filter Maintenance Guide

Jellyfish®

JELLYFISH® FILTER
INSPECTION & MAINTENANCE GUIDE

Jellyfish units are often just one of many structures in a more comprehensive stormwater drainage and treatment system.

In order for maintenance of the Jellyfish filter to be successful, it is imperative that all other components be properly maintained. The maintenance and repair of upstream facilities should be carried out prior to Jellyfish maintenance activities.

In addition to considering upstream facilities, it is also important to correct any problems identified in the drainage area. Drainage area concerns may include: erosion problems, heavy oil loading, and discharges of inappropriate materials.

TABLE OF CONTENTS

Inspection and Maintenance Overview 3

Inspection Procedure.....3

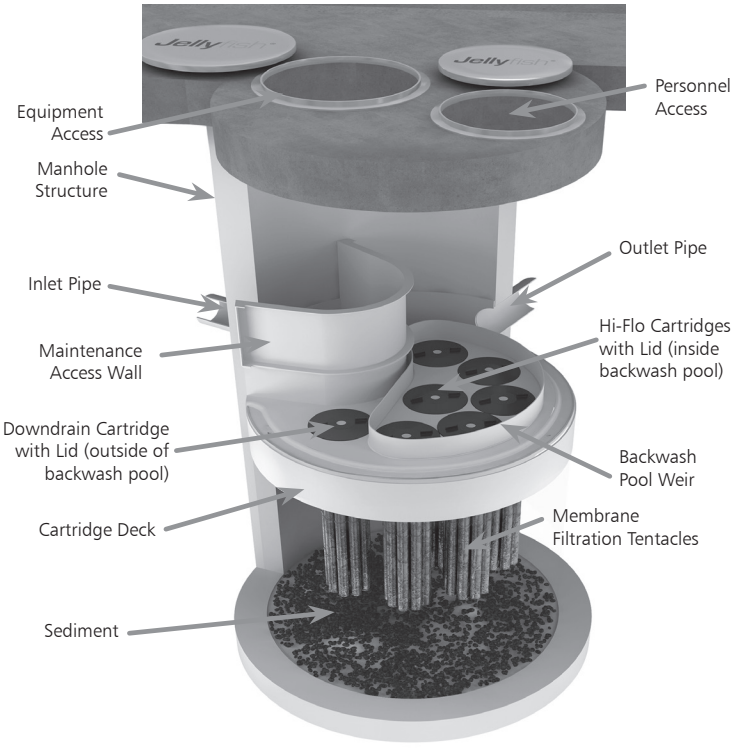
Maintenance Procedure.....4

Cartridge Assembly & Cleaning.....5

Inspection Process 7

1.0 Inspection and Maintenance Overview

The primary purpose of the Jellyfish® Filter is to capture and remove pollutants from stormwater runoff. As with any filtration system, these pollutants must be removed to maintain the filter's maximum treatment performance. Regular inspection and maintenance are required to insure proper functioning of the system.



Maintenance frequencies and requirements are site specific and vary depending on pollutant loading. Additional maintenance activities may be required in the event of non-storm event runoff, such as base-flow or seasonal flow, an upstream chemical spill or due to excessive sediment loading from site erosion or extreme runoff events. It is a good practice to inspect the system after major storm events.

Inspection activities are typically conducted from surface observations and include:

- Observe if standing water is present
- Observe if there is any physical damage to the deck or cartridge lids
- Observe the amount of debris in the Maintenance Access Wall (MAW) or inlet bay for vault systems

Maintenance activities include:

- Removal of oil, floatable trash and debris
- Removal of collected sediments
- Rinsing and re-installing the filter cartridges
- Replace filter cartridge tentacles, as needed

Note: Separator Skirt not shown

2.0 Inspection Timing

Inspection of the Jellyfish Filter is key in determining the maintenance requirements for, and to develop a history of, the site's pollutant loading characteristics. In general, inspections should be performed at the times indicated below; *or per the approved project stormwater quality documents (if applicable), whichever is more frequent*.

1. A minimum of quarterly inspections during the first year of operation to assess the sediment and floatable pollutant accumulation, and to ensure proper functioning of the system.
2. Inspection frequency in subsequent years is based on the inspection and maintenance plan developed in the first year of operation. Minimum frequency should be once per year.
3. Inspection is recommended after each major storm event.
4. Inspection is required immediately after an upstream oil, fuel or other chemical spill.

3.0 Inspection Procedure

The following procedure is recommended when performing inspections:

1. Provide traffic control measures as necessary.
2. Inspect the MAW or inlet bay for floatable pollutants such as trash, debris, and oil sheen.
3. Measure oil and sediment depth in several locations, by lowering a sediment probe until contact is made with the floor of the structure. Record sediment depth, and presences of any oil layers.
4. Inspect cartridge lids. Missing or damaged cartridge lids to be replaced.
5. Inspect the MAW (where appropriate), cartridge deck and receptacles, and backwash pool weir, for damaged or broken components.

3.1 Dry weather inspections

- Inspect the cartridge deck for standing water, and/or sediment on the deck.
- No standing water under normal operating conditions.
- Standing water inside the backwash pool, but not outside the backwash pool indicates, that the filter cartridges need to be rinsed.

Inspection Utilizing Sediment Probe

- Standing water outside the backwash pool is not anticipated and may indicate a backwater condition caused by high water elevation in the receiving water body, or possibly a blockage in downstream infrastructure.
- Any appreciable sediment (≥1/16") accumulated on the deck surface should be removed.

3.2 Wet weather inspections

- Observe the rate and movement of water in the unit. Note the depth of water above deck elevation within the MAW or inlet bay.
- Less than 6 inches, flow should be exiting the cartridge lids of each of the draindown cartridges (i.e. cartridges located outside the backwash pool).
- Greater than 6 inches, flow should be exiting the cartridge lids of each of the draindown cartridges and each of the hi-flo cartridges (i.e. cartridges located inside the backwash pool), and water should be overflowing the backwash pool weir.
- 18 inches or greater and relatively little flow is exiting the cartridge lids and outlet pipe, this condition indicates that the filter cartridges need to be rinsed.

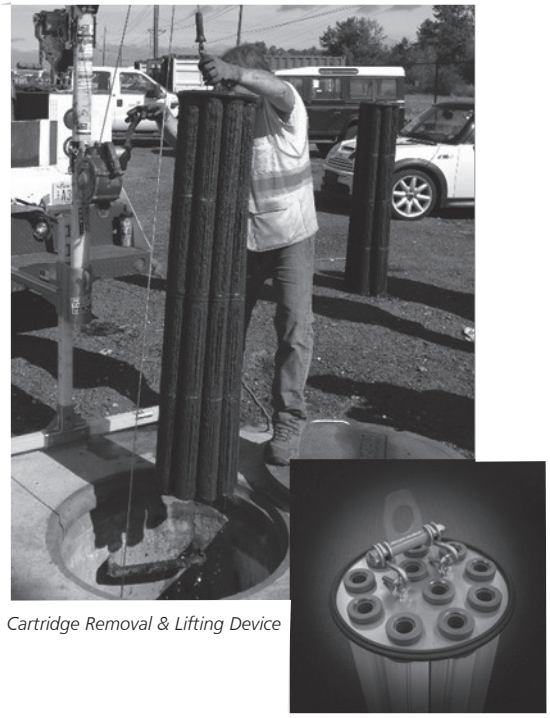
4.0 Maintenance Requirements

Required maintenance for the Jellyfish Filter is based upon results of the most recent inspection, historical maintenance records, or the site specific water quality management plan; whichever is more frequent. In general, maintenance requires some combination of the following:

1. Sediment removal for depths reaching 12 inches or greater, or within 3 years of the most recent sediment cleaning, whichever occurs sooner.
2. Floatable trash, debris, and oil removal.
3. Deck cleaned and free from sediment.
4. Filter cartridges rinsed and re-installed as required by the most recent inspection results, or within 12 months of the most recent filter rinsing, whichever occurs sooner.
5. Replace tentacles if rinsing does not restore adequate hydraulic capacity, remove accumulated sediment, or if damaged or missing. It is recommended that tentacles should remain in service no longer than 5 years before replacement.
6. Damaged or missing cartridge deck components must be repaired or replaced as indicated by results of the most recent inspection.
7. The unit must be cleaned out and filter cartridges inspected immediately after an upstream oil, fuel, or chemical spill. Filter cartridge tentacles should be replaced if damaged or compromised by the spill.

5.0 Maintenance Procedure

The following procedures are recommended when maintaining the Jellyfish Filter:



1. Provide traffic control measures as necessary.
2. Open all covers and hatches. Use ventilation equipment as required, according to confined space entry procedures. *Caution: Dropping objects onto the cartridge deck may cause damage*.
3. Perform Inspection Procedure prior to maintenance activity.
4. To access the cartridge deck for filter cartridge service, descend into the structure and step directly onto the deck. Caution: Do not step onto the maintenance access wall (MAW) or backwash pool weir, as damage may result. Note that the cartridge deck may be slippery.
5. Maximum weight of maintenance crew and equipment on the cartridge deck not to exceed 450 lbs.

5.1 Filter Cartridge Removal

1. Remove a cartridge lid.
2. Remove cartridges from the deck using the lifting loops in the cartridge head plate. Rope or a lifting device (available from Contech) should be used. *Caution: Should a snag occur, do not force the cartridge upward as damage to the tentacles may result. Wet cartridges typically weigh between 100 and 125 lbs*.
3. Replace and secure the cartridge lid on the exposed empty receptacle as a safety precaution. Contech does not recommend exposing more than one empty cartridge receptacle at a time.

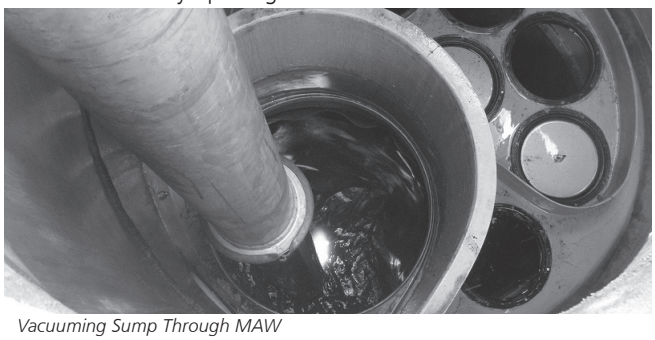
5.2 Filter Cartridge Rinsing

1. Remove all 11 tentacles from the cartridge head plate. Take care not to lose or damage the O-ring seal as well as the plastic threaded nut and connector.

Cartridge Removal & Lifting Device

2. Position tentacles in a container (or over the MAW), with the threaded connector (open end) facing down, so rinse water is flushed through the membrane and captured in the container.
3. Using the Jellyfish rinse tool (available from Contech) or a low-pressure garden hose sprayer, direct water spray onto the tentacle membrane, sweeping from top to bottom along the length of the tentacle. Rinse until all sediment is removed from the membrane. *Caution: Do not use a high pressure sprayer or focused stream of water on the membrane. Excessive water pressure may damage the membrane*.

4. Collected rinse water is typically removed by vacuum hose.
5. Reassemble cartridges as detailed later in this document. Reuse O-rings and nuts, ensuring proper placement on each tentacle.



5.3 Sediment and Flotables Extraction

1. Perform vacuum cleaning of the Jellyfish Filter only after filter cartridges have been removed from the system. Access the lower chamber for vacuum cleaning only through the maintenance access wall (MAW) opening. Be careful not to damage the flexible plastic separator skirt that is attached to the underside of the deck on manhole systems. Do not lower the vacuum wand through a cartridge receptacle, as damage to the receptacle will result.
2. Vacuum floatable trash, debris, and oil, from the MAW opening or inlet bay. Alternatively, floatable solids may be removed by a net or skimmer.

Vacuuming Sump Through MAW

3. Pressure wash cartridge deck and receptacles to remove all sediment and debris. Sediment should be rinsed into the sump area. Take care not to flush rinse water into the outlet pipe.
4. Remove water from the sump area. Vacuum or pump equipment should only be introduced through the MAW or inlet bay.
5. Remove the sediment from the bottom of the unit through the MAW or inlet bay opening.

Vacuuming Sump Through MAW

6. For larger diameter Jellyfish Filter manholes (≥8-ft) and some vaults complete sediment removal may be facilitated by removing a cartridge lid from an empty receptacle and inserting a jetting wand (not a vacuum wand) through the receptacle. Use the sprayer to rinse loosened sediment toward the vacuum hose in the MAW opening, being careful not to damage the receptacle.

5.4 Filter Cartridge Reinstallation and Replacement

1. Cartridges should be installed after the deck has been cleaned. It is important that the receptacle surfaces be free from grit and debris.
2. Remove cartridge lid from deck and carefully lower the filter cartridge into the receptacle until head plate gasket is seated squarely in receptacle. ***Caution: Do not force the cartridge downward; damage may occur.***
3. Replace the cartridge lid and check to see that both male threads are properly seated before rotating approximately 1/3 of a full rotation until firmly seated. Use of an approved rim gasket lubricant may facilitate installation. See next page for additional details.
4. If rinsing is ineffective in removing sediment from the tentacles, or if tentacles are damaged, provisions must be made to replace the spent or damaged tentacles with new tentacles. Contact Contech to order replacement tentacles.

5.5 Chemical Spills

Caution: If a chemical spill has been captured, do not attempt maintenance. Immediately contact the local hazard response agency and contact Contech.

5.6 Material Disposal

The accumulated sediment found in stormwater treatment and conveyance systems must be handled and disposed of in accordance with regulatory protocols. It is possible for sediments to contain measurable concentrations of heavy metals and organic chemicals (such as pesticides and petroleum products). Areas with the greatest potential for high pollutant loading include industrial areas and heavily traveled roads. Sediments and water must be disposed of in accordance with all applicable waste disposal regulations. When scheduling maintenance, consideration must be made for the disposal of solid and liquid wastes. This typically requires coordination with a local landfill for solid waste disposal. For liquid waste disposal a number of options are available including a municipal vacuum truck decant facility, local waste water treatment plant or on-site treatment and discharge.

Jellyfish Filter Components & Filter Cartridge Assembly and Installation

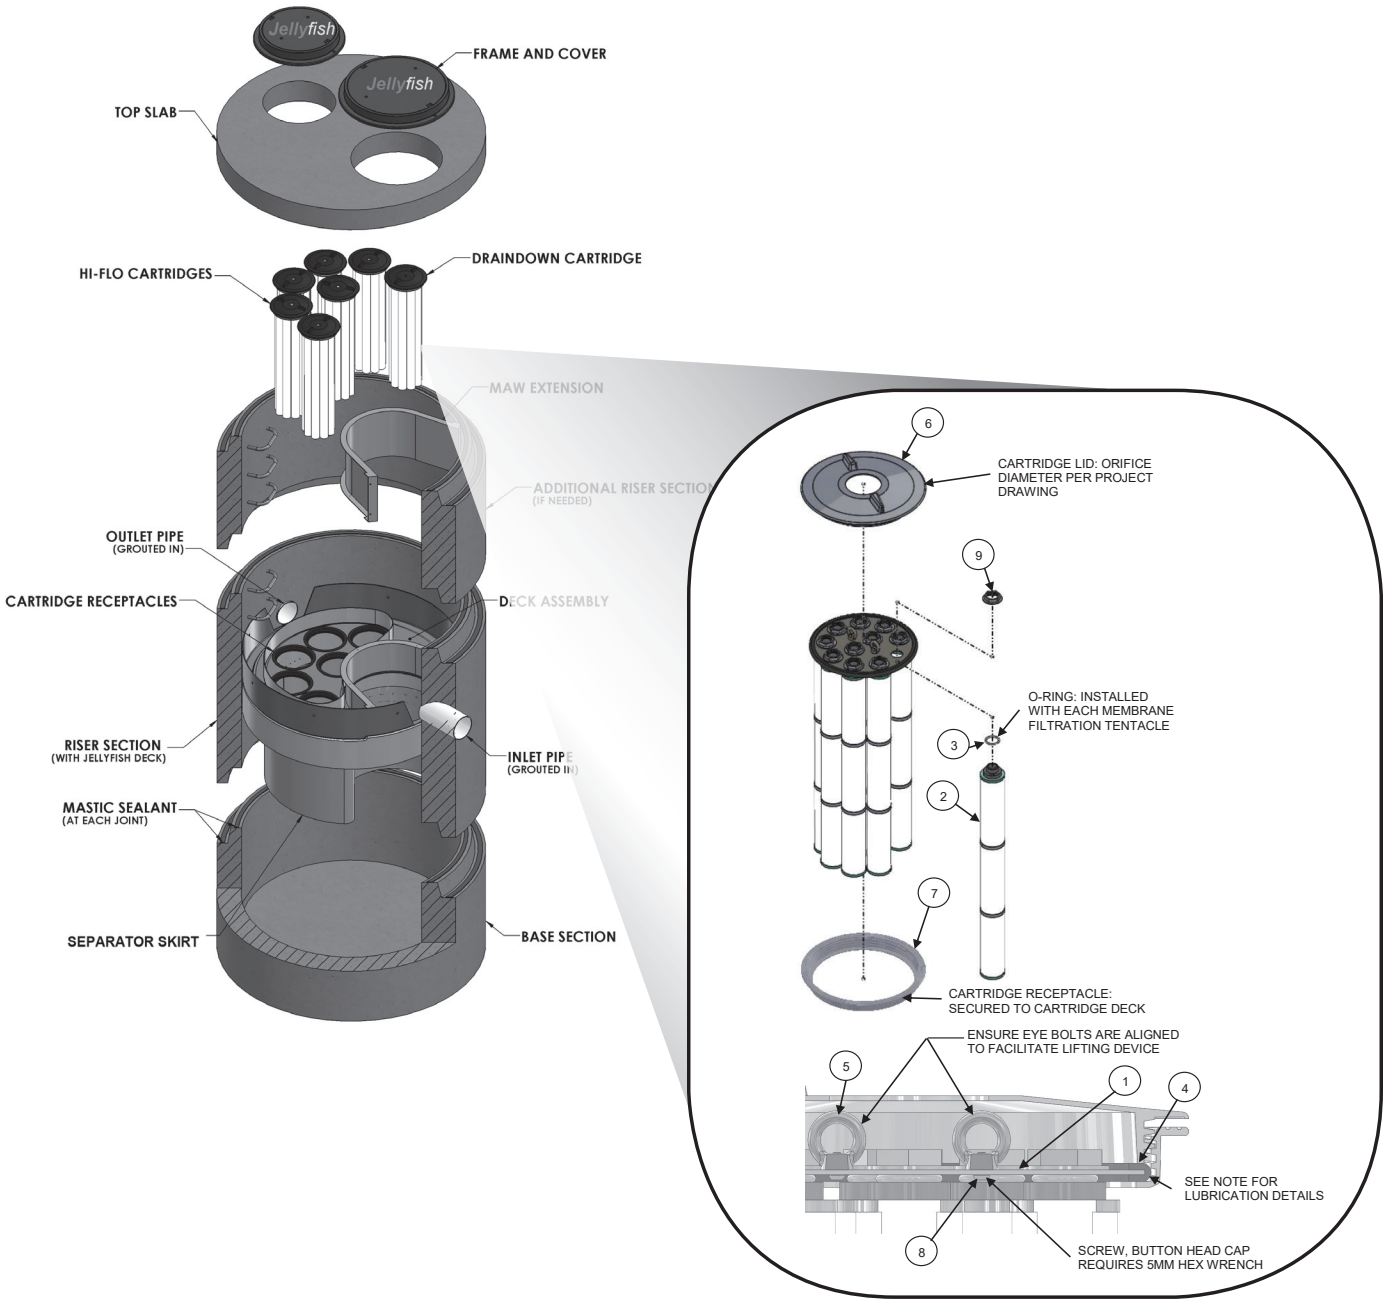


TABLE 1: BOM

ITEM NO.	DESCRIPTION
1	JF HEAD PLATE
2	JF TENTACLE
3	JF O-RING
4	JF HEAD PLATE GASKET
5	JF CARTRIDGE EYELET
6	JF 14IN COVER
7	JF RECEPTACLE
8	BUTTON HEAD CAP SCREW M6X14MM SS
9	JF CARTRIDGE NUT

TABLE 2: APPROVED GASKET LUBRICANTS

PART NO.	MFR	DESCRIPTION
78713	LA-CO	LUBRI-JOINT
40501	HERCULES	DUCK BUTTER
30600	OATEY	PIPE LUBRICANT
PSLUBXL1Q	PROSELECT	PIPE JOINT LUBRICANT

NOTES:

Head Plate Gasket Installation:
Install Head Plate Gasket (Item 4) onto the Head Plate (Item 1) and liberally apply a lubricant from Table 2: Approved Gasket Lubricants onto the gasket where it contacts the Receptacle (Item 7) and Cartridge Lide (ITem 6). Follow Lubricant manufacturer's instructions.

Lid Assembly:
Rotate Cartridge Lid counter-clockwise until both male threads drop down and properly seat. Then rotate Cartridge Lid clock-wise approximately one-third of a full rotation until Cartridge Lid is firmly secured, creating a watertight seal.

MEMORANDUM

TO: Patrick Carroll, Carroll Associates Landscape Architects
FROM: Lauren Swett, PE & Amy LeBel, EIT
DATE: December 20, 2019
RE: Three Portland Square – Roadway & Site Design

The proposed project is bounded by three City of Portland public roadways: Spring Street, Cotton Street, and Fore Street. The eastern side of the project is bounded by a private driveway that was formerly an extension of Cross Street. This driveway is referred to as "Upper Cross Street", but is no longer a public roadway. The following sections describe the roadway and site design considered along each roadway.

UPPER CROSS STREET

Upper Cross Street was previously discontinued and is currently privately owned by the developer and used as a service driveway for the existing Portland Square buildings. The proposed design includes a back-in service and loading area located east of the alley between the office tower and parking structure. Access to this service and loading area will be provided via Upper Cross Street. Daily service will be scheduled to minimize impacts to business hours to the greatest extents practicable. Figure 1 below shows turning movements for the service entrance.

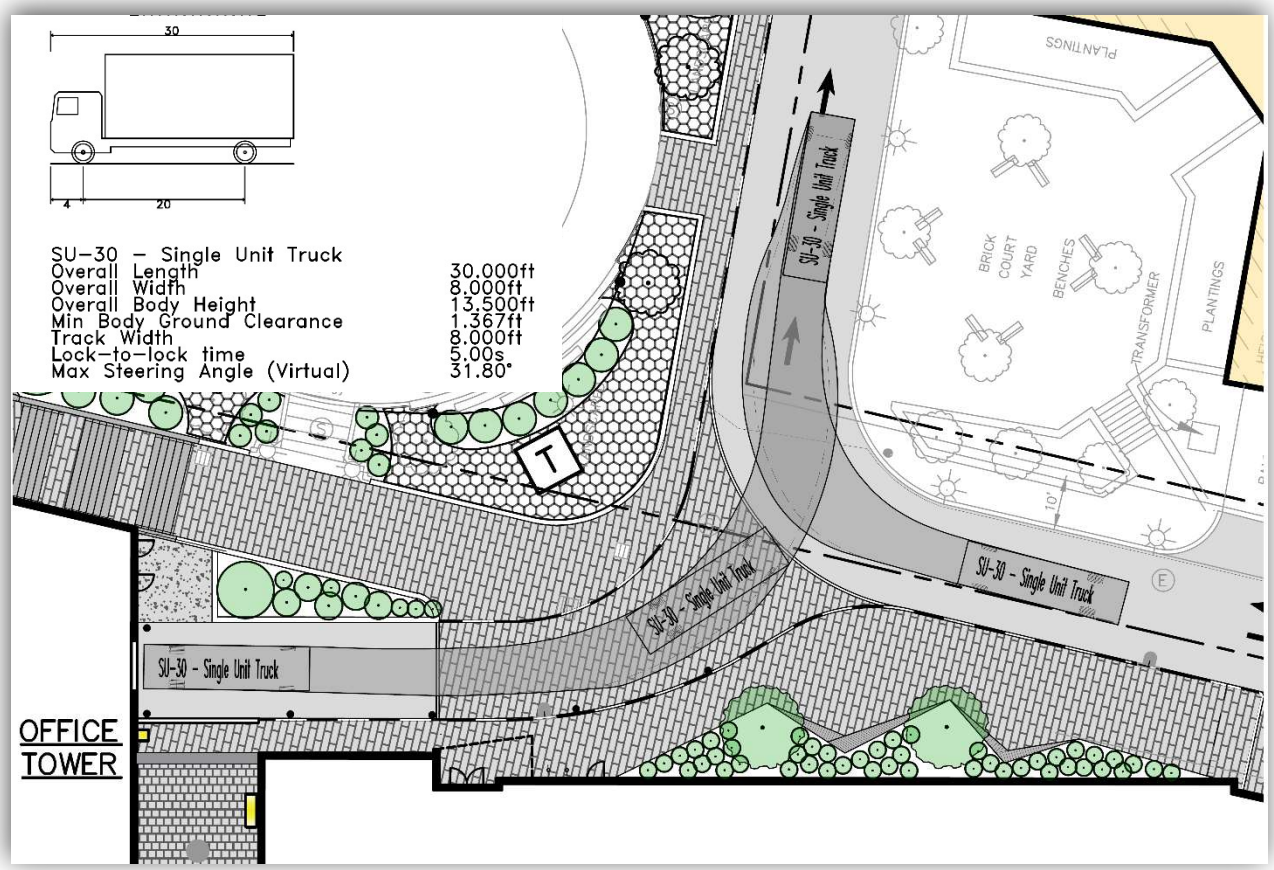

FIGURE 1 – THREE PORTLAND SQUARE SERVICE DRIVE TURNING MOVEMENTS

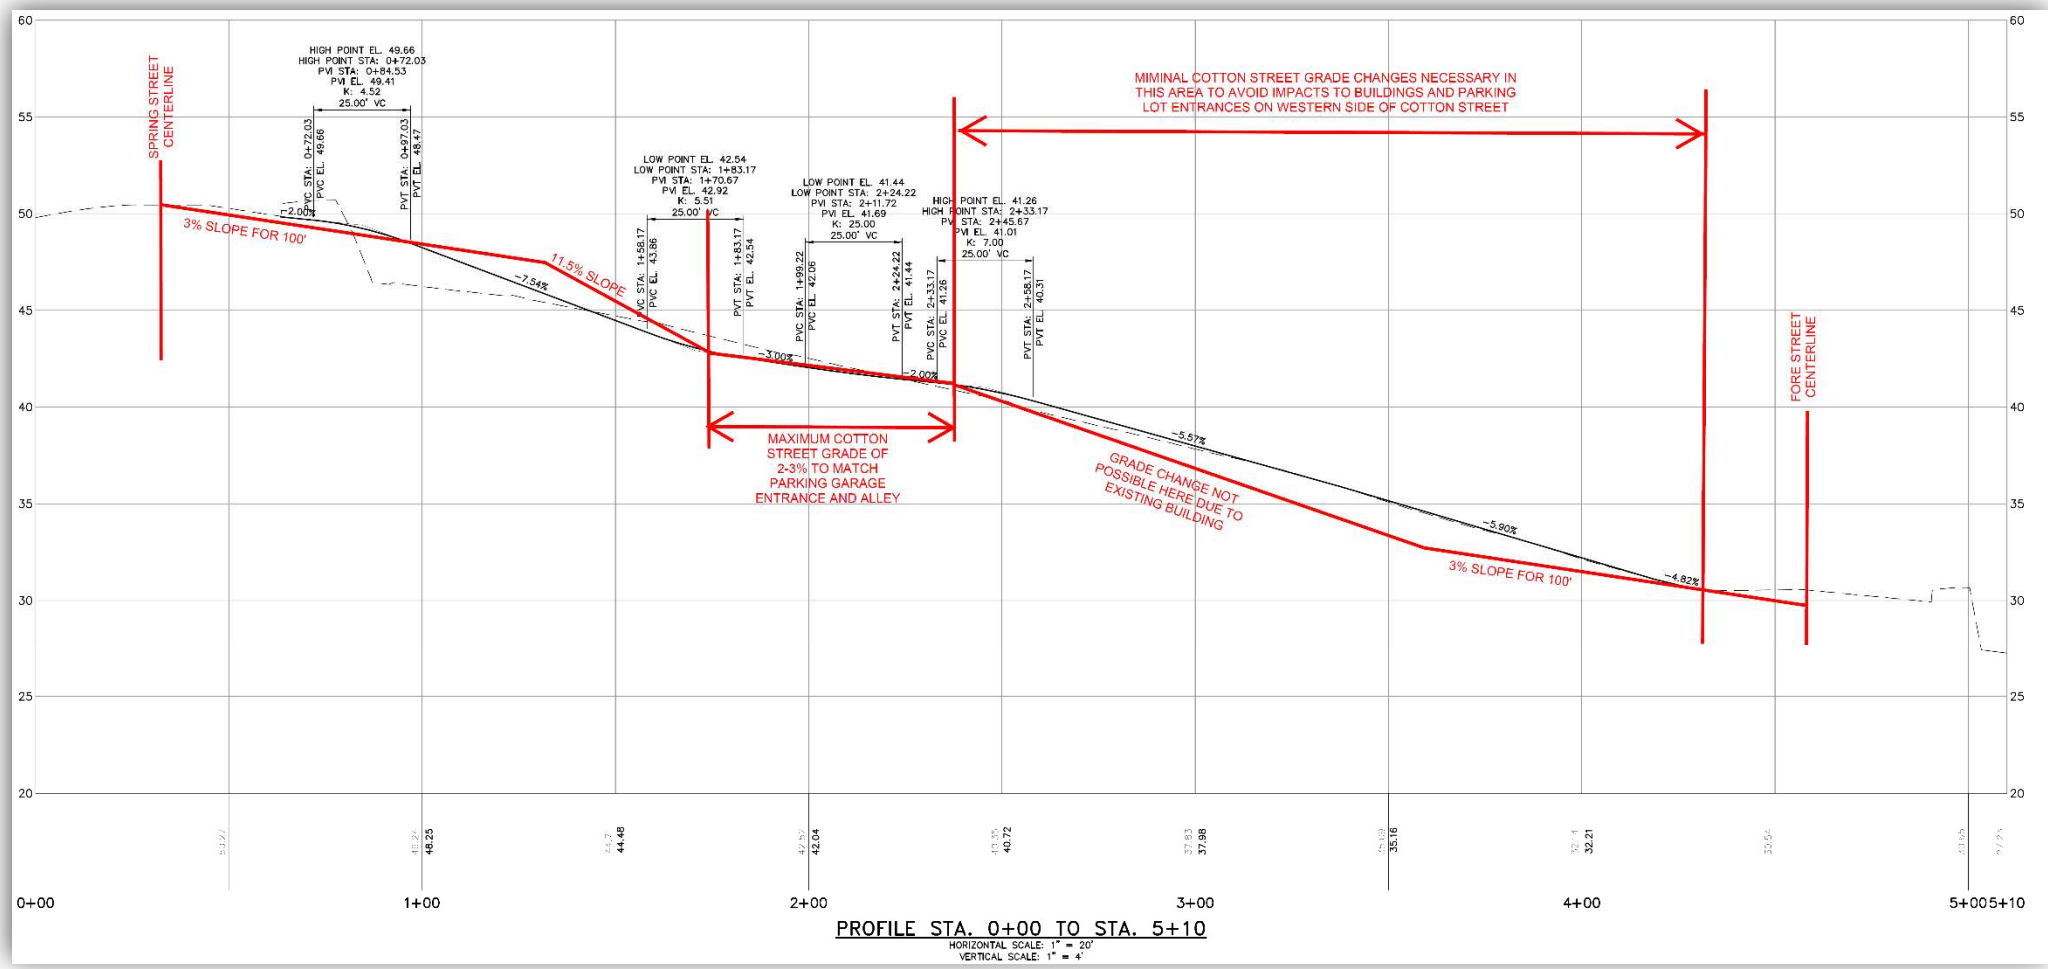
The brick sidewalk will be expanded along Upper Cross Street to provide a continuous 18-foot pedestrian corridor between Fore Street and Spring Street. Expansion of the sidewalk reduces the 2-way driveway width to a minimum width of 21 feet, which meets the City Standard for driveway width.

Additional improvements are proposed within the corridor between Fore Street and Spring Street to improve the pedestrian experience in this area. Expanded plaza spaces, stairways, and lighting will all be provided as shown on the site and landscaping plans.



COTTON STREET

Cotton Street is currently a dead-end street with a turnaround and parallel on-street parking spaces. The existing street ends with a pedestrian staircase to Spring Street. The proposed project includes redesign of Cotton Street to connect Cotton Street to Spring Street. Cotton Street is anticipated to primarily be used for access to the parking garage on Level G. On-street parallel parking spaces are proposed along both sides of Cotton Street.

A mountable curb and sloped driveway apron will be provided at the alley entrance on Cotton Street to accommodate periodic or occasional access for building service vehicles. Removal bollards will be provided at this entrance to reinforce pedestrian engagement in the alley and to prevent vehicle traffic beyond the occasional scheduled service vehicles. The Cotton Street alley entrance will not be utilized as daily service access; daily access will be provided via the back-in service and loading area off of Upper Cross Street.

Cotton Street has been designed as a local street in accordance with Section 1 of the City of Portland Technical Manual; however, due to spatial constraints, some of the standards were not able to be met as described below:

- 14-foot Lane Width: *Per the Local Street Cross Section Figure I-1 in the City's Technical Manual, the minimum travel lane width is 14 feet.*
    - The proposed Cotton Street roadway is 36 feet wide, with two 10-foot lanes and two 8-foot parallel parking lane. Increasing the lane width to 14 feet would eliminate on-street parking.
- Street Grades at Intersections: *Per Section 1.4.1 in the Technical Manual, streets shall slope no more than three percent for the first 100 feet from the center of an intersection.*
    - We will not be able to achieve 100 feet at a maximum slope of 3% at either end of Cotton Street. The proposed grades were selected to balance existing grades, garage entrance requirements, and steepness of slopes. This is described below and represented in the figure on the following page.
        - In the existing condition, Cotton Street does not achieve this standard at the Fore Street end. We are not changing the grade at the Fore Street intersection, and much of Cotton Street grades must remain at the existing condition in order to minimize impacts to the existing buildings on Cotton Street.
        - In the existing condition, there is no connection between Cotton Street and Spring Street. To make this connection utilizing a 3% slope for 100 feet at Spring Street, maintaining grades at the Fore Street end of the street, and providing access to the garage entrance and alley, the remaining portion of Cotton Street would have a slope of 11.5%, as shown on the figure below.

PROFILE STA. 0+00 TO STA. 5+10

HORIZONTAL SCALE: 1" = 20'
VERTICAL SCALE: 1" = 4'

- K-values: As noted above, Cotton Street slopes from an elevation of 50' at Spring Street down to 31' at Fore Street and roadway grade is inflexible for the lower third of the roadway due to existing buildings. The relatively short length from Spring Street to Fore Street (400 feet) further constrains the vertical design of the roadway. Lastly, to provide entry to the parking garage and alley, the slope across the entrance must be no more than three percent. Given these constraints, the vertical curve design will not meet the design K-values for a local street as defined in the City's technical manual. The K-values proposed are 4.52 for crest and 5.51 for sag, compared to City Standards of 20 and 30, respectively. This is not anticipated to result in significant impacts on the traffic anticipated on Cotton Street.

We request waivers for these standards as reflected in the waiver table provided with the application.

SPRING STREET

Spring Street is under paving moratorium that expires in June 2021. It is anticipated that work within Spring Street will be phased to eliminate impacts to Spring Street while under moratorium. Per the City of Portland Sidewalk and Driveway apron policy, the Spring Street sidewalk will be converted from concrete to brick from Center Street to Union Street.

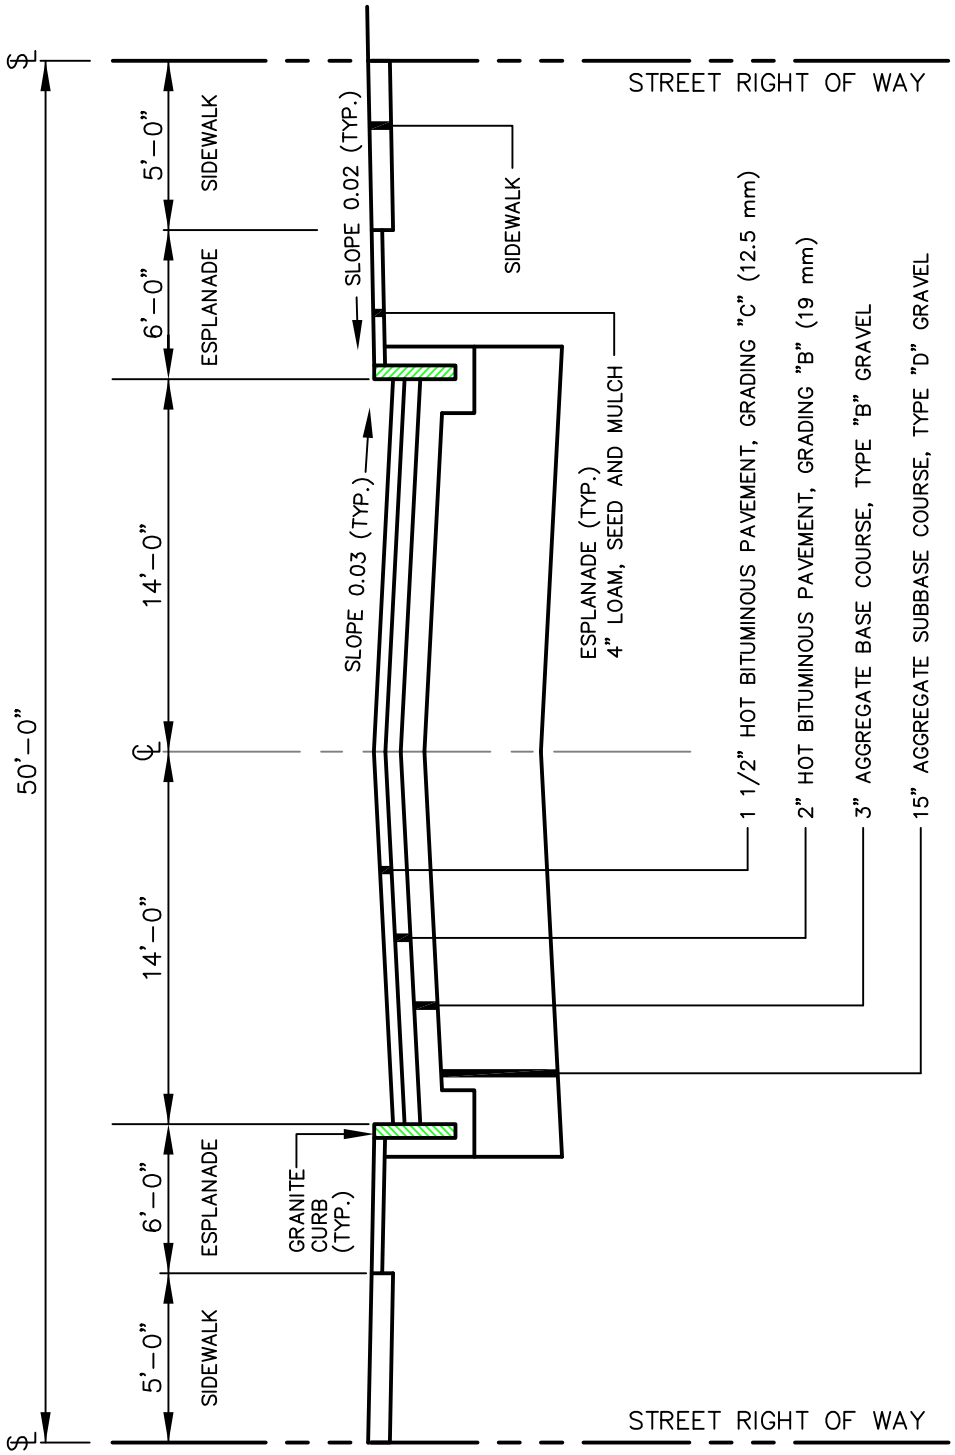
FORE STREET

The proposed parking structure features a retail/restaurant and office wrap along the Fore Street frontage. There are no garage entrances on Fore Street. The Fore Street paving moratorium expired in July 2019.

The sidewalk design along Fore Street includes the addition of a bump-out at the Cotton/Fore Street intersection to accommodate pedestrian crossing and the variable width sidewalk. A continuous 14' driving lane is provided on the northern side of Fore Street.

SITE IMPROVEMENTS

There is minimal site work proposed beyond the building footprints and roadway work. All alley and plaza site improvements are shown on the Landscaping and Site figures. Site grading and drainage has been designed to provide for pedestrian movements around the garage. Bicycle racks are provided around the site as shown on the Landscaping and Site figures. Site lighting has been proposed around the development to provide adequate light levels in accordance with the City standards. This has been shown on the proposed lighting plans.



SNOW MANAGEMENT

There is minimal on-site space available for snow storage. Snow removal will be managed on all site surfaces, and the Applicant will contract with a removal company as required.

ATTACHMENTS

- Waiver Table

Standard to be Waived: Cite Ordinance or Technical Manual Standard	Cite Standard Language: Cite specific language of applicable Ordinance or Technical Manual Standard	Waiver Being Sought: Describe waiver being sought. Ex. – We are requesting a two-way parking lot drive aisle width of 20' feet.	Justification for Waiver: Address specific waiver criteria, if applicable, and document reasons for the waiver request.
Local Street Lane Width & Esplanade Technical Manual Section 1 Figure I-1 Local Street Cross Section	Refer to attached Figure I-1.	The proposed Cotton St ROW includes two 11-foot lanes, an 8-foot parallel parking lane, an existing 8-foot sidewalk and a proposed 12-foot sidewalk. Sidewalk on the western side of Cotton St will not be extended to Spring Street.	Increasing the lane width to 14-feet and adding esplanades would eliminate 13 proposed on-street parking spaces. Extending sidewalk on the western edge of Cotton St. would require extensive grading on private property not owned by the developer
Street Grades at Intersections Technical Manual Section 1.4.1	"Street grades at intersections shall not be more than three (3) percent for a distance of one hundred (100) feet from the center of the intersection."	Cotton St is proposed to slope at max. 2 percent for the first 44 feet from the Spring St centerline, and max. 3.89 percent for the first 48 feet from the Fore St centerline.	Meeting this standard would cause the road grade to exceed the maximum slope of 8 percent. The intersection of Cotton St and Fore St is proposed to remain the same due to adjacent buildings
K-Values Technical Manual Section 1.5	"The K values corresponding to the minimum vertical curve lengths for the above street classifications and vertical curve types(sag curve or crest curve) are as follows: Local Streets Crest Vertical Curves: K = 20	Cotton Street Crest Vertical Curves: K = 4.80 Sag Vertical Curves: K = 4.80	Setting vertical curves that meet the standard is impossible since there is not enough road length for the change in elevation (50' at Spring St to 31' at Fore St).

December 20, 2019
Revised January 30, 2020

PROPOSED SITE LIGHTING

Requirements for site lighting are addressed by the City of Portland in two documents: The City of Portland, Maine - Code of Ordinances, and the City of Portland - Technical Manual. Listed below are the issues pertaining to the proposed site lighting as relates to the two city documents.

The City of Portland - Maine Code of Ordinances
Chapter 14 – Land Use
Article V Site Plan
14-526.6 Exterior Lighting
a. Site Lighting
(i) All exterior site lighting, including lighting of building entrances, shall be full cut-off with no light emitted above the horizontal plane or spilled onto adjacent properties and streets. Illumination levels shall be adequate but not excessive for safety, comfort and convenience of occupants and users of the site and shall conform to applicable standards of Section 12 of the Technical Manual.

RESPONSE: The *Illuminating Engineering Society of North America* (*IESNA*) classifies exterior luminaires in the publication *IESNA* TM-15-11 according to their potential for producing uplight. The rating system is a numeric index that ranges from zero (no uplight) to five (greater than 1000 lumens uplight. The proposed building mounted lighting luminaires are classified as having the following uplight ratings:

- Type S2 (U0) Zero Uplight Component
- Type S3a (U0) Zero Uplight Component
- Type S3b (U0) Zero Uplight Component
- Type S4 (U0) Zero Uplight Component
- Type 6 (U0) Zero Uplight Component
- Type S8 (U1) 0.4 Uplight Lumens (*less than 1/100% of the luminaire total*)

Three new low-level bollard lights are proposed with the following uplight classification ratings:

- Type S5 (U1) 2.6 Uplight Lumens (*less than 1% of the luminaire total*)

The roof deck parking level includes pole mounted, and building mounted light fixtures.

- Type S9 (U0) Zero Uplight Component
- Type S11 (U0) Zero Uplight Component

14-526.6 Exterior Lighting
a. Site Lighting
(ii) For major or minor site plans within or abutting a residential use or zone where light from the proposed development may adversely impact adjacent residential properties, exterior lighting shall employ house-side shielding.

RESPONSE: Not applicable (project does not abut a residential zone.

14-526.6 Exterior Lighting

c. Street Lighting

(i) Municipal street lighting shall be adequate for the safety and comfort of pedestrians and motorists and, where applicable, shall conform to specific lighting district requirements, as specified in Section 10 of the Technical Manual.

RESPONSE: The proposed new street lighting along the section of Spring Street that faces the project site are provided according to the City of Portland - Technical Manual as Designation X-5F. The proposed new street lighting along Cotton Street and Fore Street that faces the project site are provided according to the City of Portland - Technical Manual as Designation X-6B.

IESNA publishes lighting recommendations for street lighting in *IESNA* RP-8-14 Roadway Lighting. For intersections that are classified as connecting Collector Streets (Spring Street and Fore Street) and Local Streets (Cotton Street), and that have a medium potential of pedestrian activity, the *IESNA* recommends an average of 1.6 footcandles and an average-to-minimum illuminance uniformity of 4-to-1, or less. The calculated illuminance at grade in the intersections that surround the project site are as follows:

- Spring Street/Cotton Street Intersection
  - Minimum: 0.9 footcandles — Maximum: 2.5 footcandles
  - Average: 1.8 footcandles — Average-to-Minimum Uniformity: 2.0-to-1
- Fore Street/Cotton Street Intersection
  - Minimum: 0.9 footcandles — Maximum: 2.7 footcandles
  - Average: 1.6 footcandles — Average-to-Minimum Uniformity: 1.8-to-1
- Fore Street/Cross Street Intersection
  - Minimum: 0.6 footcandles — Maximum: 2.9 footcandles
  - Average: 1.7 footcandles — Average-to-Minimum Uniformity: 4.8-to-1

The *American Association of State Highway and Transportation Officials* (*AASHTO*) recommends illuminance levels for streets in Roadway Lighting Guide-2005. The recommended standard for Cotton Street and Upper Cross Street, which are classified as Local/Commercial streets, is an average of 0.8 footcandles, and an average-to minimum uniformity of 6-to-1, or better. The recommended standard for Spring Street and Fore Street, which are classified as a Collector/Commercial street, is an average of 1.1 footcandles, and an average-to minimum uniformity of 4-to-1, or better.

The existing streetlights along Spring Street that are located between Cotton Street and Upper Cross Street are proposed to remain in use. Replacement 50-watt, LED streetlights on two existing utility poles are proposed to be provided along Cotton Street. Two new streetlights that match the existing streetlights on Spring Street are proposed along Fore Street along the sidewalk on the project side of the street. The extension of Cross Street is proposed to be lighted from the new building, along with the existing pole lights on the north side of the street.

- Spring Street
  - Minimum: 0.9 footcandles — Maximum: 2.3 footcandles
  - Average: 1.6 footcandles — Average-to-Minimum Uniformity: 1.7-to-1
- Fore Street
  - Minimum: 0.8 footcandles — Maximum: 3.8 footcandles
  - Average: 1.9 footcandles — Average-to-Minimum Uniformity: 2.7-to-1
- Cotton Street
  - Minimum: 0.3 footcandles — Maximum: 3.0 footcandles
  - Average: 1.3 footcandles — Average-to-Minimum Uniformity: 4.2-to-1

The City of Portland Technical Manual
Section 10 Municipal Street Lighting Standards
10.2 General Standards
10.2.1. Lighting Design – Standard street lighting design shall conform to the following table:

STREET CLASSIFICATION	COMMERCIAL/INDUSTRIAL	
	Min. Avg. Foot Candles	Maximum Pole Spacing
Collector	1.2	130' (30'pole)
Local/Minor	0.9	130' (30'pole)

RESPONSE: The proposed street lighting illuminance levels meet the City standards for average illuminance.

Section 10 Municipal Street Lighting Standards
10.2 General Standards
10.2.2. New Metered Services for Light Fixtures
- *New Light Fixtures shall:*
  - *a) Not to be tied to the existing power utility leased lighting system.*
  - *b) Be provided with a NEMA 7-pin receptacle for future connection to the City of Portland lighting control system. Coordinate with the City of Portland for final connection and control testing.*
  - *c) Be specified with a color temperature of 3000K.*

RESPONSE: The proposed new streetlights will be specified according to the City of Portland - Technical Manual Type X-5F along Spring Street, and Type X-6B along both Cotton and Fore Streets. They will be specified with a 3000K color temperature. New streetlights will be designed to be direct connected to existing CMP secondary service conductors in an unmetered service.

Section 10 Municipal Street Lighting Standards
10.3 Accessories & Bollards
10.3.2. Wiring & Electrical
- *2" conduit (minimum) underground in light pole bases and cabinet base.*
- *Each light fused individually at base. Fuse holder type is a (Buchanan 65 kit Cat # 65U)*
- *Regular outlet on each pole just below the fixture to be fused at the bottom of the pole base with the same fuse kit as listed above.*
- *Any single photocell control for all lights shall be in the cabinet, rated for the circuit. This may require an all-purpose contactor.*
- *Wire size and circuit size shall be calculated by the design engineer and inspected by the city inspector to make sure it is correct. This would be done on a case by case basis because not all circuits, lights and systems are the same.*

RESPONSE: Conduits serving proposed streetlight poles will be 1-1/4" because two 2" conduits will not fit in the base of the streetlight pole bases. The proposed new streetlights will be specified with fusing at the pole base. The proposed streetlight poles are being specified to include a receptacle outlet. The proposed new streetlights will be specified with an integral photocell control. The wiring conductors for the proposed streetlights has been calculated and is noted on the Electrical Site Plan, Drawing E1.1.

Section 12 Site Lighting Standards
12.3 General Standards
Outdoor lighting standards listed below apply to all new developments.12.3.
1. *Uniformity: As measured in foot candles at grade, maximum-to-minimum illumination levels shall not exceed a ratio of twenty (20) to one (1.).*

RESPONSE: The maximum-to-minimum illumination ratio for the proposed street lighting is:

- Cotton Street 10.0-to-1
- Fore Street 5.4-to-1
- Spring Street 2.6-to-1

---

2. *Illumination Levels: Minimum, Maximum, and Average illumination levels for areas intended to be lighted, as measured at grade, shall be:*

Minimum	*0.2 footcandles (fc*
Maximum	*5.0 footcandles (fc)*
Average	*1.25 footcandles (fc)*

RESPONSE: The illumination levels for the proposed street lighting and lighting of intersections are listed above on Pages 2 and 3 of this report. The proposed minimum and maximum illuminance levels conform to the 12.3.2 standard.

The maximum illuminance at vehicular garage entrances exceed the 12.3.2 standard, however, it is suggested that this is appropriate considering the potential for vehicle/pedestrian conflict at these areas.

---

3. *Lumens: No fixture shall exceed 20,000 lumens (+/- 3%)*

Types of Lighting	Maximum Lumens Allowed
Building Entrance	3,500 lumens

RESPONSE: No proposed light fixtures has a lumen rating exceeding 20,000 lumens. The combined lumen rating for multiple light fixtures at vehicular garage entrances exceeds the 12.3.3 standard, however as stated regarding illuminance levels at garage entrances, it is suggested that this is appropriate considering the potential for vehicle/pedestrian conflict at these areas.

The combined lumen rating for multiple light fixtures at the pedestrian building entrance at Fore Street is 4,798.0 lumens. The combined lumen rating for multiple light fixtures at the pedestrian building entrance at Spring Street is 14,394.0 lumens. Although this exceeds the 12.3.3 standard it is suggested that this is appropriate considering that these light fixtures illuminate the main entrances to the facility and have shielding to prevent glare from being seen off-site.

- Fixture Type S2 21.0 lumens
- Fixture Type 3a 3,047.3 lumens
- Fixture Type S3b 1,524.2 lumens
- Fixture Type S4 2,005.3 lumens
- Fixture Type S5 336.0 lumens
- Fixture Type S6 2,399.0 lumens
- Fixture Type S8 2,117.0 lumens
- Fixture Type S9 5,492.0 lumens
- Fixture Type S11 31.0 lumens

4. *Light Trespass: The maximum illumination level at a property line shall not exceed 0.1-foot candle, as measured at grade, except where abutting industrial, or other non-sensitive uses. When a commercial or industrial use abuts a public right-of-way, or another commercial or industrial use, lighting must be designed so that the illumination at the property boundary line does not exceed 1.0 foot-candles.*

RESPONSE: Lighting is provided to illuminate the abutting sidewalks and streets. Street lighting within these sidewalks and streets exceed 1.0 footcandle but have been provided in conformance with recommended safety standards.

---

5. *Luminaire Types: All fixtures must be LED and shall not exceed 3000K Correlated Color Temperature (CCT). Screw in light fixtures must have LED lamp specified to be maximum of 3000K CCT.*

RESPONSE: All proposed light fixtures will be specified to utilize LED lamps with 3000K CCT.

---

6. *Full Cut-off Fixtures and Shielding Required: All outdoor lighting fixtures, including pole mounted and wall mounted luminaires, shall be constructed Full "cut-off" or with full shielding, type where lenses, refractors or lamp sources do not extend below the surface of the fixture housing and no direct light shall be directed at or above the horizontal plane.*

   Where the light source from an outdoor light fixture is visible beyond the property line, shielding shall be required to reduce glare so that the light source is not visible from within any residential dwelling unit.

   Light fixtures mounted under a canopy shall be recessed to that the lens cover is recessed into, or flush with, the underside (ceiling) of the canopy.

RESPONSE: All proposed light fixtures have full shielding. No light fixtures are visible from adjacent residential dwelling units. The construction of the proposed canopies does not allow for recessed light fixtures. The proposed light fixtures to be surface mounted on the underside of entrance canopies (Type S6) include recessed lenses that do not project below the fixture housing.

---

7. *Pedestrian Walkway Lighting: Pedestrian walkway light fixtures can be a combination of freestanding pole, bollard, in-place step or building mounted fixtures. For building mounted fixtures, the proposed fixture type will be in scale with the building elevation on which it is to be installed and meet the fixture height provisions of 12.3.8. Pedestrian lighting (bollards) shall meet the technical manual standards for full cut-off or an exception may be considered under 12.2.11.*

RESPONSE: All proposed light fixtures meet the 12.3.7 requirements.

8. *Fixture Height: Fixtures shall be mounted at the lowest height necessary to meet city standards and the height is measured from grade to the bottom of the light fixture.*

Type of Lighting	Maximum Fixture Height
Commercial/Office Uses	20 feet
Building Mounted/Entrances	below the roof eave and not to exceed 20 feet, whichever is lower
Bollard Fixtures	42 inches (3.5 ft)

RESPONSE: All proposed light fixtures meet the 12.3.8 requirements. The maximum height of proposed building mounted lights is 20 feet (within the alley). The height of proposed bollard lights is 38-1/4 inches.

---

9. *Lighting Curfew: For surface and structured parking, lighting in vehicle parking areas containing twenty (20) or more parking spaces shall be reduced to 50% of permitted levels from one hour after business closing to one hour before business opening. If lighting levels are already below 50% of permitted levels, no curfew adjustment is required. Motion sensor activated lighting shall be permitted during closing hours to activate additional lighting above the 50% permitted, for the purposes of public safety.*

RESPONSE: Interior lights within the parking garage, and roof deck garage parking lights, will be controlled by integral motion sensors to have their lighting level held at 50% of light output until motion is detected, whereupon the lighting shall automatically increase to 100% output. After 30 minutes without motion being detected, the lights shall automatically revert to 50% light output.

---

10. *Continued Maintenance: Lighting installations must be maintained in good repair to meet the provisions of this ordinance on an on-going basis.*

RESPONSE: All proposed lighting will be maintained in full working order.

---

11. *General Exceptions: proposed uses that demonstrate a need to exceed the specific site lighting limits shown below for safe and reasonable exercise of the proposed use must provide a professionally produced lighting plan which adheres to the current Illuminating Engineering Society of North America (IESNA) recommendations for the proposed use. The planning Authority may grant exceptions to the lighting standards with the finding that the light impacts do not create a public nuisance for abutting residential property. Unless otherwise specified below, exterior lighting shall conform to the recommendations put forth in Lighting for Exterior Environments RP-33-14, or its successor, published by the Illuminating Engineering Society of North America (IESNA). Lighting fixtures other than full cut-off fixtures may be allowed only if acceptable luminaires shall include internal and/or external glare control louvers and installed so as to minimize uplight and offsite light trespass.*

RESPONSE: The proposed lighting conforms to the recommendations published in Lighting for Exterior Environments RP-33-14

The following exceptions to the City of Portland – Maine Code of Ordinances are requested:

- Paragraph 14-526.6a(i)
  Proposed steplight Type S2 includes 0.4 lumens of uplight.
  Proposed bollard light Type S5 includes 2.6 lumens of uplight.

The following exceptions to the City of Portland Technical Manual are requested:

- Paragraph 10.3.2
  Proposed 1-1/4" conduit for street lighting circuits
- Paragraph 12.3.2
  Proposed maximum illuminance at garage vehicle entrances to be 10.6 footcandles (maximum)
- Paragraph 12.3.3
  Proposed combined lumens at the garage entrances: 6,094 lumens (maximum)
  Proposed combined lumens at the building entrance at Fore Street: 4,798.0 Lumens (maximum)
  Proposed combined lumens at the building entrance at Spring Street to be 14,394.0 Lumens (maximum)
- Paragraph 12.3.4
  Proposed illuminance greater than 1.0 footcandles at property lines as indicated on abutting sidewalks.

---

12. *Historic District, Architectural and Pedestrian Walkway Exception: Sites which are part of an historic district or require specific decorative lighting fixtures as means to achieve compatibility within an existing architectural context must meet the following standards:*
    a. *Lighting fixtures other than full cut-off fixtures may be allowed only if acceptable luminaires shall include internal and/or external glare control louvers and installed so as to minimize uplight and offsite light trespass.*
    b. *Low pressure sodium and metal halide lamps are prohibited.*

RESPONSE: The proposed building mounted lights above vehicle garage entrances (Type S3a) are specified to have a simple, rectangular profile that do not stand out as a style element. The proposed building mounted lights along the north, east and south facades (Type S4) are specified to be compatible with the building's architectural style. All proposed building mounted lights utilize LED lamps and have zero uplight component.

Section 12 Site Lighting Standards
12.5 Architectural and Specialty Lighting and Uplighting
RESPONSE: There is no architectural accent lighting, specialty lighting, or uplighting proposed.

Bartlett Design
LIGHTING & ELECTRICAL ENGINEERING
5 PALMER STREET BATH, MAINE 04530
TEL (207) 443-5447

3 Portland Square
Portland, Maine

December 20, 2019
Revised January 30, 2020

PROPOSED SITE LIGHTING LUMINAIRES AND STREET LIGHTING POLES

TYPE S1: NEW STREET LIGHT POLE AND LUMINAIRES MATCHING TYPE X-5F AS DESCRIBED IN THE CITY OF PORTLAND TECHNICAL MANUAL.

TYPE S1a: EXISTING STREET LIGHT TO REMAIN.

TYPE S1b: EXISTING POST LIGHT POLE AND LUMINAIRE MATCHING TYPE X-1 AS DESCRIBED IN THE CITY OF PORTLAND TECHNICAL MANUAL TO BE RELOCATED.

TYPE S2: RECESSED STEP LIGHT TO BE INSTALLED IN SEATING WALL WITH TOP OF LIGHT FIXTURE 4 INCHES BELOW WALL CAP.

TYPE S3a: 6'-0" LONG, LINEAR DOWNLIGHT TO BE MOUNTED ABOVE GARAGE VEHICLE ENTRANCES.

TYPE S3b: 3'-0" LONG, LINEAR DOWNLIGHT TO BE MOUNTED ABOVE GARAGE ELECTRICAL ROOM DOOR.

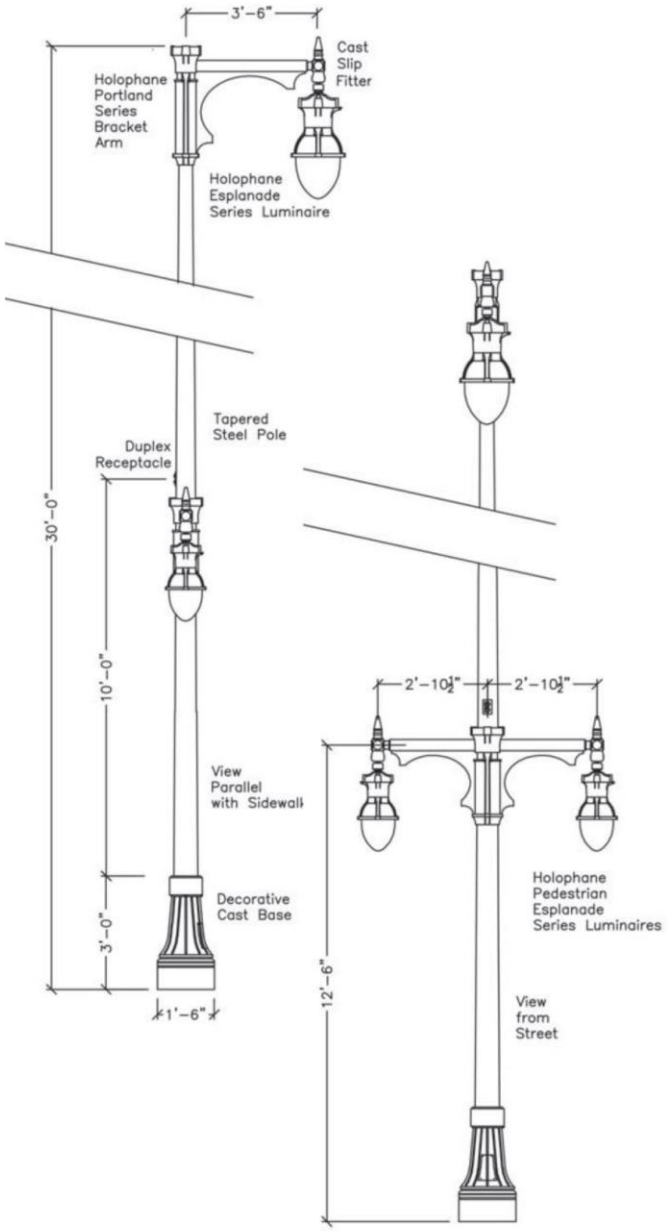
TYPE S4: WALL MOUNTED LIGHTS TO BE INSTALLED AROUND THE SPRING STREET, COTTON STREET, FORE STREET AND UPPER CROSS STREET BUILDING FACADES.

TYPE S5: 38-1/2" TALL BOLLARD LIGHT WITH SYMETRICAL OPTICAL DISTRIBUTION.

TYPE S6: DOWNLIGHT MOUNTED ON UNDERSIDE OF ENTRANCE CANOPY.

TYPE S7: EXISTING POST LIGHT ON ADJACENT PROPERTY OWNED AND OPERATED BY OTHERS.

TYPE S8: WALL MOUNTED AREA DOWNLIGHT TO BE INSTALLED ALONG THE SERVICE ALLEY. THE LIGHTS WILL BE INSTALLED 20'-0" ABOVE GRADE.



TYPE S9: NEW PARKING DECK LIGHT POLE AND LUMINAIRES TO INCLUDE A 16’-0” TALL POLE MOUNTED ON A 30-INCH RACHED CONCRETE FOUNDATION BASE.

TYPE S10: NEW STREET LIGHT POLE AND LUMINAIRES MATCHING TYPE X-6B AS DESCRIBED IN THE CITY OF PORTLAND TECHNICAL MANUAL.

TYPE S11: WALL MOUNTED LIGHT TO BE INSTALLED ON THE OUTSIDE WALL OF THE ELEVATOR LOBBY AT THE PARKING DECK LEVEL. THE LIGHT WILL BE INSTALLED 8’-0” ABOVE THE PARKING DECK.

Street & Sidewalk Lighting
DECORATIVE LIGHT - DOWNTOWN

LUMINAIRE
Holophane Esplanade LED II
Model:
ESL2-P20S-30K-AS-CMC-TG3-S-P7-NL2X2-BHDF13-200CMC

Cast aluminum housing with stainless steel hardware. Dropped refractor shall be thermal resistant borosilicate glass. Internal reflector and prismatic diffuser shall provide an IES Type IV distribution pattern. Luminaire shall include an integral ballast with modular wiring connectors and multi-volatage taps. Provide an internal receptacle type photocell control. LED 3000K color temperature

BRACKET ARM
Holophane Portland Series steel (custom)
Top Bracket Arm: Steel crossarm with a post-top fitting for a 3 1/2" by 8" tenon
Model: PD42-CA-RAL6012
Lower Bracket Arm: Steel dual crossarm
Model: PD69-CA-RAL6012

SLIP FITTER
Holophane
Model: WLLF200S-CA-RAL6012
2-3/8" O.D. with swivel cast fitter.

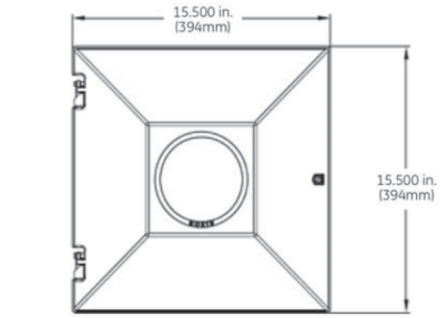
LIGHTING POLE
Holophane
Model: PM-18-CSB-CA-RAL6012

Tapered steel pole smooth shaft rated for a 90mph wind load with a 1.3 gust factor. Provide four hot-dipped galvanized steel L-type anchor bolts. Lighting pole shall be hot dip galvanized prior to powder coat paint.

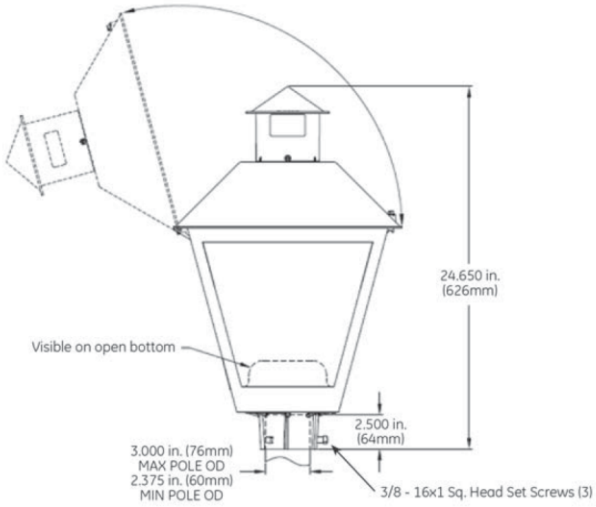
DECORATIVE BASE
Holophane
Model: PM18CSB-CA-RAL6012
Decorative clamshell cast aluminum base. Hardware shall be stainless steel.

DIMENSIONS
Overall Height = 30' 0"
Upper Bracket Arm Length = 3' 6"
Lower Bracket Arm Length = 2' 10 1/2"
Base Diameter = 18"

FINISH
Dark Green: RAL-6012 (custom)



APPLICATION
Street/pedestrian lighting combination.
Spacing:
One side: 90' - 100' on center
Alternating sides: 175' - 225' on center
Double-arm bracket arms parallel to sidewalk.



Date: **March, 2019**	**CITY OF PORTLAND, MAINE** TECHNICAL MANUAL	**MUNICIPAL STREET LIGHTING STANDARDS** SECTION 10	Figure: **X-5F**
Revised Date:	**DOWNTOWN COMBO**

Street & Sidewalk Lighting
STANDARD - RESIDENTIAL

Town & Country Post Top (EPTT)

LUMINAIRE
GE Evolve LED Post Top Town & Country (EPTT)
Model: EPTT-01-0-06-D-A-30-A-P-BLCKR-R

Die-case aluminum housing with acrylic refractor in white opal.

Pole-mounted, secondary surge protection
Voltage (120 through 277V)
Asymmetric HO, 56 watt
LED 3000K color temperature

LIGHTING POLE
Aluminum, smooth tapered pole with 5/32" thickness (.156").

EPA rating from 4.6 to 6.9 (using 110mph wind speed ratings from AAHTO).

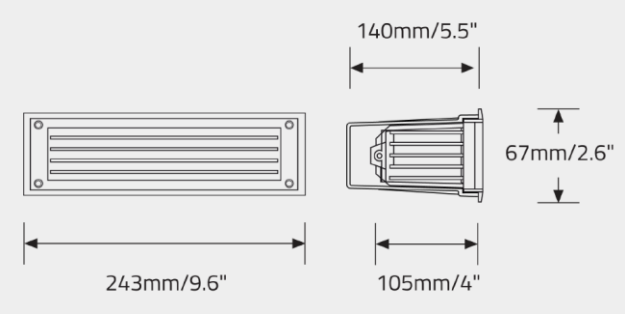
Maximum weight capacity = 75-100 lbs.

Base bolt pattern: 10" diagonal.

DIMENSIONS
Pole Height = 15' max.
Pole Diameter = 6" base tapered to 3"

FINISH
Black (standard)

APPLICATION
Standard sidewalk lighting for residential streets not specified for decorative lighting.



Spacing: According to Section 10.2.1

Fixture placed in furnishing zone unless space is limited. Placement on back of sidewalk or private property near sidewalk may be accommodated where space is a constraint.

Date: **March, 2019**	**CITY OF PORTLAND, MAINE** TECHNICAL MANUAL	**MUNICIPAL STREET LIGHTING STANDARDS** SECTION 10	Figure: **X-1**
Revised Date:	**RESIDENTIAL**		

TYPE S1a: Existing to remain

Housing: Low copper, die-cast aluminum highly resistant to oxidation.
Diffuser: 4mm/0.2" tempered glass.
Gasket: Silicone.
Finish: Powder coated.
Reflectors: High purity aluminum.
External screws: A4 stainless steel treated with highly antioxidant water-repellent lubricating solution to ensure easy opening.
Cable entry: Double silicon gland for DIA 10-14mm/0.4-0.5" cables.
Drivers: HPF, electronic 120-277V.
Rough-in housing: Thermoplastic.
Mechanical: For wall installation in poured concrete/brick.
Delivered Lumens: Delivered lumens & LPW based on 3000K (min 80 CRI).

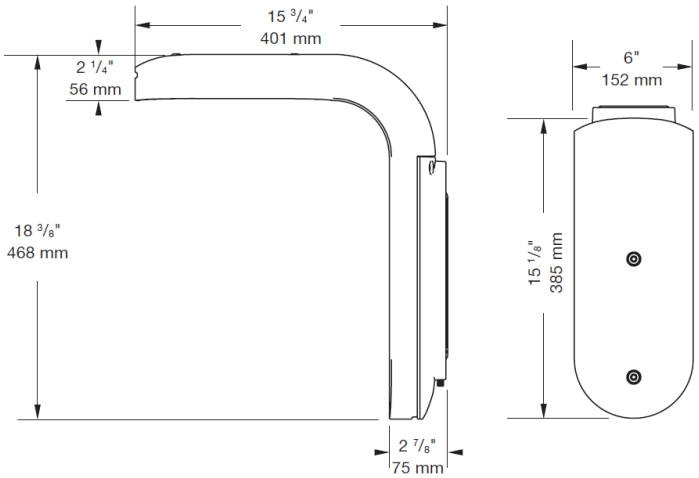
TORRES WALL MOUNT

Torres lights are a beautiful complement to urban landscapes and traditional and contemporary architecture, improving, but not altering, the composition. Advanced LED and optic design provide directed warm white light with superior visibility to extend the safe use of outdoor spaces. Torres lights are cast aluminum and offered in a full color palette finished with Landscape Forms proprietary Pangard II® HAPS, VOC, and lead-free polyester powdercoat.

General Description

- Aluminum wall mount bracket included
- Cast aluminum luminaire ships prewired and fully assembled
- Zero up-light, International Dark-Sky approved
- UL Listed, suitable for wet locations



Electrical

Surge protected 100V-277V 50/60 Hz, Class 2 integrated dimmable driver. LED cartridge with weatherproof quick disconnect provides ease of installation and serviceability. Torres wall mount light ships prewired.

Torres Wall Mount Light i4

Type 3 Distribution
Lamp: 4 Cree XHP50 LEDs
CCT: 3000K, 3500K, 4000K
L70: >100,000 hrs
Drive Current: 1000mA
Optic: LEDiL
Lens: Diffused Acrylite®
Power Supply: 100V-277V
LED Driver: TRP LED50W-048-C1050-D
Dimmable: 0-10V
BUG Rating: B0 U0 G1
IP Rating: IP66 for LED Cartridge
Weight: 23 lbs

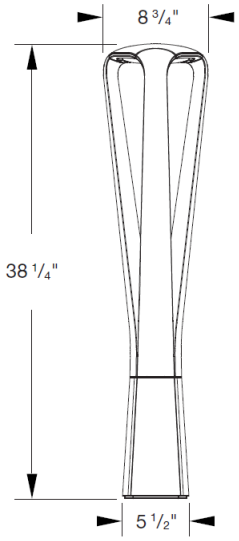
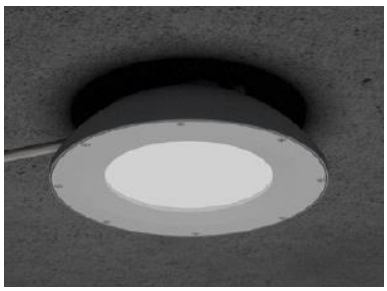
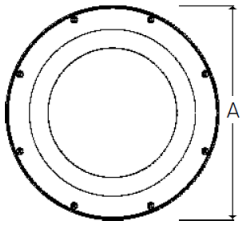
FGP PATH LIGHT



The FGP path light has a pleasing flower-like organic form created by three stems that rise from the connection with the base. The soft, triangular head holds LEDs in triangular arrays that cast illumination between the verticals in a clean footprint.



High-design surface mounted LED path light uses aiming angles, color rendering and glare reduction to shape and enhance lighting performance. Aluminum cartridge houses energy efficient LEDs and provides excellent thermal management. Fixture is made of durable cast aluminum with galvanized steel base plate. Mounting hardware and template included for ease of installation.



FGP Path Light Type 5

Type 5 Distribution
Lamp: 9 Cree XP-E2 LEDs
CCT: 3000K, 3500K, 4000K
Drive Current: 350mA
Optic: 9 Khatod Collimators
Lens: Diffused Acrylite®
Power Supply: 100V-277V
LED Driver: TRP LED12W-036
BUG Rating: B1 U1 G1
IP Rating: IP66 for LED Cartridge
Weight: 31lbs

SRT1 EDGE-LIT

- For ceiling mount and parking garage applications from an 8–15 foot mounting height
- Edge-lit flat lens for optimal visual comfort and uniformity across the lens
- Two optical distributions specifically design for parking garage and canopy applications are available making the Beacon Edge-Lit luminaire both versatile and functional
- UL/cUL listed for we locations, IP65 and 3G vibration rated
- Occupancy sensor available for complete on/off and dimming operation

HOUSING

- Die-cast aluminum housing ensures long electrical component life and luminaire performance
- Corrosion resistant powder coat finish both protects and provides architectural appearance
- One piece molded silicone gasket ensures weather proof seal
- Thermally isolated driver mounted to dedicated bracket reduces operating temperatures and increases driver life and reliability

CONSTRUCTION

- Manufactured with die cast aluminum
- Coated with a polyester finish that meets ASTM B117 corrosion test requirements and ASTM D522 cracking and loss of adhesion test requirements
- IFS polyester powder-coat electrostatically applied and thermocured. IFS finish consists of a five stage pretreatment regimen with a polymer primer sealer and top coated with a thermoset super TGIC polyester powder coat finish
- The finish meets the AAMA 2604 performance specification which includes passing a 3,000-hour salt spray test for corrosion resistance and resists cracking or loss of adhesion per ASTM D522 and resists surface impacts of up to 160 inch-pounds
- External hardware is corrosion resistant

OPTICS

- Cartridge is held together with internal brass standoffs soldered to the board so that it can be field replaced as a one-piece optical system
- One-piece silicone gasket ensures a weatherproof seal around each individual optic
- One-piece optical cartridge system consisting of an LED engine, optics, gasket and stainless steel bezel

INSTALLATION

- Mounting options for horizontal arm, vertical tenon or traditional arm mounting available. Mounting hardware included

ELECTRICAL

- Luminaire accepts 100V through 277V, 347V or 480V input 50 Hz to 60 Hz (UNV)
- Power factor is ≥ .90 at full load
- Dimming drivers are standard, but must contact factory to request wiring leads for purpose of external dimming controls
- Component-to-component wiring within the luminaire may carry no more than 80% of rated load and is certified by UL for use at 600VAC at 90°C or higher
- Plug disconnects are certified by UL for use at 600 VAC, 13A or higher. 13A rating applies to primary (AC) side only
- Fixture electrical compartment contains all LED driver components and a push-button terminal block for AC power connections
- Optional 7-pin ANSI C136.41-2013 Twist-Lock® photo control receptacle available. Compatible with ANSI C136.41 external wireless control devices
- Ambient operating temperature -40°C to 25°C
- Surge protection: 20kA
- Lifeshield™ Circuit (see Electrical Data)

CONTROLS

- Available with an optional passive infrared (PIR) motion sensor capable of detecting motion 360° around the luminaire. When no motion is detected for the specified time, the motion response system reduces the wattage to factory preset level, reducing the light level accordingly. When motion is detected by the PIR sensor, the luminaire returns to full wattage and full light

BC	Backshield (available for FR, 2, 3, 4, 4W Optics)

Accessories and Services (Ordered Separately)

☐ SCP-REMOTE	Remote Control for SCP/_F option. Order at least one per project to program and control the occupancy sensor
☐ SWUSB*	SiteSync interface software loaded on USB flash drive for use with owner supplied PC (Windows based only). Includes SiteSync license, software and USB radio bridge node
☐ SWTAB*	Windows tablet and SiteSync interface software. Includes tablet with preloaded software, SiteSync license and USB radio bridge node
☐ SWBRG	SiteSync USB radio bridge node only. Order if a replacement is required or if an extra bridge node is requested
☐ SW7PR+	SiteSync 7-Pin on fixture module On/Off/Dim, Daylight Sensor 120–480VAC

* When ordering SiteSync at least one of these two interface options must be ordered per project.
+ Available as a SiteSync retrofit solution for fixtures with an existing 7-pin receptacle.

Street & Sidewalk Lighting
DECORATIVE LIGHT - OLD PORT

LUMINAIRE
Holophane Washington Postlite II LED - Acrylic

Model: WAUE2-P20-30K-AS-BK-3-BK-6-P7-F-PCLL

Cast aluminium housing with stainless steel hardware.

Thermal resistant acorn borosilicate glass refractor with IES Type asymmetric Type IV distribution.

Luminaire shall include decorative ribs, solid band, and spike finial, with internal twist-lock receptacle type photocell control. LED 3000K

LAMP
IES Type asymmetric Type IV distribution
LED 3000K color temperature

LIGHTING POLE
Holophane North Yorkshire - Aluminum pole and base

Model: NYA-11-FTJ-17-P07-ABG-BK-R126A

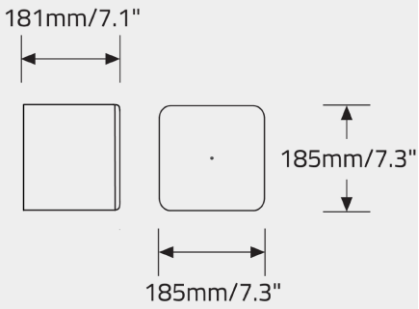
Tapered, fluted cast aluminum pole shaft rated for a 90mph wind load with a 1.3 gust factor.

Provide four hot-dipped galvanized steel L-type anchor bolts. Provide GFI rated duplex receptacle outlet.

Lighting pole shall be hot dipped galvanized prior powder coat paint.

DIMENSIONS
Overall Height = 14’ 3”
Pole Height = 10’ 7”
Taper = 5.5” to 3.5”
Base Diameter = 17”

FINISH
Black (standard)



APPLICATION
Street/Sidewalk lighting for two-way streets with parking on both sides.

Spacing: 60’ - 80’ on center (staggered pattern both sides of street)

CONSIGLI
Est. 1905

Construction Principles

The purpose of this Construction Management plan is to identify, mitigate and plan for all potential impacts throughout the duration of building the Mixed-Use Development at 3 Portland Square. Consigli Construction will be the contractor associated with the mixed-use parking garage, office and residential project. We committed to a seamless, incident free project by means of typical practices used to ensure that public safety and community are at the forefront of priorities.

Throughout this CM plan we will refer to specific examples of potential construction practices, traffic control scenarios, neighboring building considerations and public safety; as well as measures in which these items will be managed throughout the project to accommodate the community as much as possible. While we will take the necessary precautions to meet City and State requirements for traffic, noise, dust, vibration, etc., this project will be disruptive to adjacent properties compared to the current condition. Along with our subcontractor team members, it is imperative that we have complete participation from all parties affiliated with the project to maintain our strict safety requirements and ensure a quality building for DPD.

The Mixed-Use Development at 3 Portland Square includes the construction of a (6) story parking structured parking garage for (1000) cars, consisting of (24) Residential Units and (5) story office shell space starting a street level and (3) Retail Shell Spaces. The buildings total approximately 489,000 sf that will be primarily built out of precast, steel and concrete. The completion of the project is currently anticipated for February 2022.

Consigli has extensively planned the project's schedule, site logistics and safety protocols that will be thoroughly covered in this report with graphics and narratives. This CM plan will continually be updated to meet the needs of the project, community and the city as the project progresses. We aim to deliver a safe and quality project to DPD, their employees and the City of Portland by means of communication, teamwork and stewardship.

Construction Administration and Communication

Consigli Construction will be the Construction Manager on site throughout the duration of the project. As such, there will be a dedicated team of individuals tasked with managing quality, schedule, site logistics and safety. These personnel will manage and enforce the proposed CMP with all associated subcontractors and material vendors.

TBD – Senior Project Manager
207.XXX.XXXX, @consigli.com

TBD – Project Manager
207.XXX.XXXX, @consigli.com

TBD – Project Superintendent
207.XXX.XXXX, @consigli.com

Site Communication

With the proximity to occupied buildings, community outreach and communication will be imperative throughout construction to keep the public informed of the expected turbulence caused by the project. Site signage will be prominently displayed to show pedestrian access around the site and any updates to the proposed CMP.

Quarterly reporting and updating of the CMP will be required to update the City and community of the following activities:

1) Construction schedule updates
2) Material deliveries, including notice of any oversized loads that may impact public traffic
3) Requests for upcoming off-hours work including weekends and holidays
4) Notice of any upcoming activities that may produce strong noise, vibration or dust that could adversely affect the neighboring communities.
5) Requests for any street openings or public sidewalk work to be completed as part of the construction contract.

Construction Schedule

Project Work Hours

Construction work hours will be in accordance with section 17-18.

The project site is located within zoning group B2 – Business Community but is within proximity of buildings used for residential purposes. As such, work hours will be limited to Monday – Friday 7:00 am – 6:00 pm. Should work extend into Saturdays, the use of heavy equipment will be kept within the time constraints of 8:00 am – 4:00 pm.

Project Schedule/Logistics

The project is anticipated to be approximately 21 months in duration. Beginning in June 2020 the project will be turned over to NRC in February 2022.

Regarding scheduled work to take place within public streets and sidewalks, this work will comply with Section 25-129 – Noise, dust and debris. The installation and connection to public utilities, traffic lane reconfigurations, and sidewalk construction will require work to be executed within Spring Street, Fore Street and Cotton Street. This work will be scheduled and planned with the City of Portland prior to the execution. All logistical concerns will be addressed with the City prior to starting the work. The connection to public utilities is tentatively scheduled to happen in the Spring and Fall of 2021, with sidewalk construction tentatively scheduled to occur during the late Summer of 2021 and Fall of 2022. Temporary barricades, fencing, and signage will be required during the installation to control pedestrian/vehicle movements around the work.

Material Deliveries

The construction will require coordination of material deliveries throughout the duration of the project. The following Traffic Management Plans show the planned lay-down areas, truck routes and safety protocols that will be in place throughout the duration of construction. (See attached for anticipated construction traffic during the project)

1. During the site, concrete and structure erection work or other large deliveries, traffic turning off Commercial Street and Maple Street from the south into the project site will be necessary. A flagger will be employed as needed to assist in navigating loads off these streets to the project site.

Construction activities whether it be work going in place or material and equipment deliveries will create more activity along Spring Street, Fore Street, Cotton Street, and Cross Street.

Material Storage and Laydown Areas

The construction will require careful planning and management of the daily occurrences within the site limits. The Traffic Management Plans are currently outlined with designated fencing limits intend to keep all construction staging, lay down and temporary storage within the project limits and secured by temporary fencing. At certain times physical limits of the site will require usage of the adjacent streets, Spring Street, Fore Street, Cotton Street and Cross Street and will be closely coordinated with the City and abutters.

Specified areas will be granted to on-site subcontractors for staging materials managing their installation. With designated areas delegated to subcontractors, the site will remain accessible by incoming trucks without causing a queuing effect outside of the fence.

Contractor Parking

At the peak of construction, Consigli anticipates that up to 120 people will be on site working various trades associated with the buildings. All contractors, subcontractors and their employees will be prohibited from parking in on-street City spaces in the vicinity of the site and be required to park off-site in identified locations and private parking lots. Several off-site locations have been identified, and contractors, subcontractors and their employees will be encouraged to find their own private lots as well as encouraged to use shuttles, car pooling, taxis/drivers and public transportation. All subcontractors will be educated during the bidding process of this requirement. Language regarding off-street parking will be incorporated into the contract, and each employee will be informed of this requirement during their site safety orientation their first day on-site.

Consigli's on-site construction staff will monitor parking abutting the construction site on Spring Street, Fore Street and Cotton Street. Fines may be issued to construction workers associated with 3 Portland Square found parking outside designated areas.

Fire Protection for Construction Activities

The 2013 Standard for Safeguarding Construction, Alteration and Demolition Operations will be enforced on this project by utilizing best management practices to mitigate the fire risks associated with the construction. Consigli and its subcontractors will execute the following measures to provide a safe and secure work place:

1) PFD Fire Command Center: This centralized location will hold all current project information and will act as the first responders meeting point to obtain the most up to date information of construction. The following documents will be found at this location:
    a. Hot Work Permits: To be filled out daily by any person performing work that will generate a spark or create a potential fire risk on the job site. The permits are to be completed and approved by Consigli prior to work starting.
    b. Updated Construction Schedule
    c. Updated Construction Traffic Management Plan
    d. Pre-Incident Fire Plan

2) On-Site Fuel Storage: There will be a requirement for different flammable liquids throughout construction. A free-standing, 30-minute fire-rated enclosure will be built to safely and securely store all flammable liquids and gases. Fueling trucks will be used as needed but under no circumstances be allowed to be parked or stored on site for any extended period.

3) Means of Egress: The buildings will be permanently equipped with (8) 2-way stair assemblies for means of egress. During construction it is the intent to utilize these stairs to provide emergency egress throughout construction. If needed, we will provide temporary stair towers and these stairs will be identified with temporary signage throughout construction indicating the floor level and exit path direction.

4) Good Housekeeping: Consigli Construction will provide necessary dumpsters for the removal of debris from the site. All subcontractors are responsible for the daily clean-up of their work areas to ensure that no materials or tools are left out over night that could pose a hazard to the building. Daily safety walks by the Construction Superintendent will be utilized to ensure that all working floors are equipped with an inspected fire extinguisher and clear means of egress in the event of an emergency. Trash chutes and/or material hoisting equipment may be utilized to safely and efficiently remove all debris from the project.

5) On-site Security: The project site will be secured everyday by means of a temporary, construction fence and scrim. Lockable gates will be located at (6) locations for site access.

6) Rapid Communication: Evacuation notification will be provided by means of 2-way radios/cellular devices as well as strategically positioned air horns. Upon evacuation of the building all project personnel will report to the muster point location where the Construction Manager and all subcontractor foremen will perform accountability checks. The General Contractor field staff will then be dispatched to all project entry points and the PFD Command Center. Upon arrival of the first responders to the PFD Command Center the General Contractor will provide an accountability and incident briefing.

Public Safety

The construction will be near pedestrian right of ways and will interact with public traffic throughout the duration of the project. Material deliveries, the use of cranes, lifts and other heavy machinery all have the potential to impact typical public activity. As a member of the Portland community, Consigli will strive to limit, mitigate and avoid these potential impacts as much as possible by means of controlling noise, on-site dust, vibrations and traffic. By educating and informing the neighborhoods to the construction activities taking place we will aim to build a project that produces the minimal of impacts to the Spring Street, Fore Street, Cotton Street, and Cross Street communities.

Snow Removal

All contractors associated with the 3 Portland Square development will maintain access to sidewalks in front of their respected site throughout the winter.

Noise

Construction activities throughout the project will create noise that leaves the project site. It is the intent of the project team to limit the exposure to the noise by following section 17-18 of the City of Portland Code of Ordinances. This project site is located within proximity of buildings classified as residential. As such, the project hours will be limited the 7:00 am – 6:00 pm, Monday – Friday. Should any weekend or holiday work be required the use of heavy machinery will not commence before 8:00 am. When this work is required, no less than 2-week advanced notice will be provided to DPD and the neighboring communities.

Work related to the ground improvements, foundations, and the erecting of the structure will likely be the loudest activity experienced during construction. This work will take place from June 2020 – November 2021.

Dust Control/Air Quality

Maintaining an environmentally conscious project site will be a major priority for the project team to ensure safety not only for the neighboring communities but also for the construction workers on site day after day. All soils and debris will be kept within the project limits following the State of Maine Department of Environmental Protection erosion control Best Management Practices:

1) Erosion controlled construction entrances
2) Tarped dump trucks leaving the site with soil/debris
3) On-going sidewalk and street cleaning activities
4) The installation of temporary, compacted staging areas within the job site
5) Using wetting agents to control dust
6) Covering stock piles when material is to be piled for long periods of time
7) Smoking will not be allowed on the job site

Vibration Monitoring

Some of construction practices required for this project will result in ground vibration waves that may transmit to nearby buildings. Prior to any potential vibration causing activities taking place a pre-construction survey will be conducted to review and document existing conditions. The survey will encompass all properties abutting the proposed project to include the following addresses:

To Be Determined

Site demolition, site removals, vibratory compaction and ground improvements will be employed on this project and will be monitored by a third-party monitoring company. A pre-construction meeting will be planned with abutting property owners to discuss geological conditions, construction specifications and methods of installation that create vibration.

Dewatering

Some construction practices such as deep foundations will be required for this project and may require dewatering activities. *Final Plan and Locations To Be Determined.*

Traffic Control

Throughout the construction process Spring Street, Fore Street, Cotton Street, and Cross Street will experience increased traffic due to construction activities. Material deliveries, contractor access and public utility integration will be encountered and mitigated through coordinated Traffic Management Plans (provided within this CM Plan), on-site safety personnel, way-finding signage and well-organized traffic control devices. Consigli will strive to inform and direct the neighborhood to the activities taking place in public areas as they progress through completion. During the Spring and Fall of 2020 and 2021 public utility connections will be made in Spring Street, Fore Street Cotton Street and Cross Street. During the late Summer of 2021 and Spring of 2022, sidewalk improvements will be made adjacent to Spring Street, Fore Street, Cotton Street, and Cross Street.

The main access points to the construction project will be through the Cotton Street gates off Spring Street and Fore Street. To navigate tractor-trailers and other large vehicles to the project site a flagger will be stationed at Spring and Fore Street as needed to usher the trucks into the right of way. Due to the large turn radius of some of these trucks, it may be necessary to close parking spaces along Spring Street and Fore Street to establish the necessary entrance and exit gate. Secondary entrance and exit relief points will be created where Cross Street and Fore Street intersect. Work associated with foundations, utilities, sidewalk improvements and general site access will impact public parking spaces. Parking spaces adjacent to the site along Cotton Street are expected to be closed for most of the project. Periodic parking impacts will also occur adjacent to the site along Spring Street. Temporary lane closures will be required adjacent to the site along Spring Street and Fore Street for a variety of construction activities and will be closely coordinated with the City.

28. Existing DEP Permit number (if applicable):	L-013526-A-N		
29. Names of DEP staff person(s) present at the pre-application meeting:	NA		
30. Does agent have an interest in project? If yes, what is the interest?	☐ **Yes** ■ **No**		

CERTIFICATIONS AND SIGNATURES LOCATED ON PAGE 2

IMPORTANT: IF THE SIGNATURE BELOW IS NOT THE APPLICANT'S SIGNATURE, ATTACH LETTER OF AGENT AUTHORIZATION SIGNED BY THE APPLICANT.

By signing below the applicant (or authorized agent), certifies that he or she has read and understood the following :

CERTIFICATIONS / SIGNATURES

"I certify under penalty of law that I have personally examined the information submitted in this document and all attachments thereto and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I authorize the Department to enter the property that is the subject of this application, at reasonable hours, including buildings, structures or conveyances on the property, to determine the accuracy of any information provided herein.

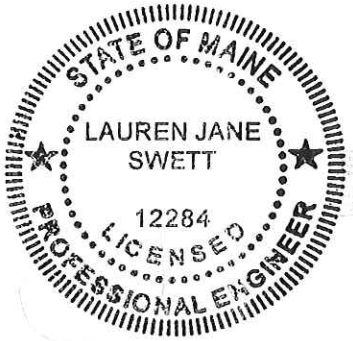
Further, I hereby authorize the DEP to send me an electronically signed decision on the license I am applying for with this application by emailing the decision to the electronic address located on the front page of this application (see #5 for the applicant and #10 for the agent)".

Signed: _____ **Title** Managing Director **Date:** 12/19/19

Notice of Intent to Comply with Maine Construction General Permit	**With this Site Law application form and my signature, I am filing notice of my intent to carry out work which meets the requirements of the Maine Construction General Permit (MCGP). I have read and will comply with all of the MCGP standards.** **If this form is not being signed by the landowner or lessee of the property, attach documentation showing authorization to sign.** **Signed** _____ **Date:** 12/19/19

NOTE: You must file a MCGP Notice of Termination (Form K) within 20 days of completing permanent stabilization of the project site.

CERTIFICATION



The person responsible for preparing this application and/or attaching pertinent site and design information hereto, by signing below, certifies that the application for development approval is complete and accurate to the best of his/her knowledge.

FORM B

PUBLIC NOTICE:
NOTICE OF INTENT TO FILE

Please take notice that

_____

(*Name, Address and Phone # of Applicant*)

_____

is intending to file a Site Location of Development Act permit application with the Maine Department of Environmental Protection pursuant to the provisions of 38 M.R.S.A. §§ 481 thru 490 on or about

_____

(Anticipated Filing Date)

The application is for

_____

(Description of the Project)

_____

at the following location:

_____

(*Project Location*)

A request for a public hearing or a request that the Board of Environmental Protection assume jurisdiction over this application must be received by the Department in writing, no later than 20 days after the application is found by the Department to be complete and is accepted for processing. A public hearing may or may not be held at the discretion of the Commissioner or Board of Environmental Protection. Public comment on the application will be accepted throughout the processing of the application.

For Federally licensed, permitted, or funded activities in the Coastal Zone, review of this application shall also constitute the State's consistency review in accordance with the Maine Coastal Program pursuant to Section 307 of the federal Coastal Zone Management Act, 16 U.S.C. § 1456. (Delete if not applicable.)

The application will be filed for public inspection at the Department of Environmental Protection's office in (*Portland, Augusta or Bangor*)(circle one) during normal working hours. A copy of the application may also be seen at the municipal offices in _____, Maine.

(*Town*)

Written public comments may be sent to the regional office in Portland, Augusta, or Bangor where the application is filed for public inspection:

MDEP, Central Maine Regional Office, 17 State House Station, Augusta, Maine 04333
MDEP, Southern Maine Regional Office, 312 Canco Road, Portland, Maine 04103
MDEP, Eastern Maine Regional Office, 106 Hogan Road, Bangor, Maine 04401

Not Applicable - City of Portland has Delegated Review

FORM C

PUBLIC NOTICE FILING AND CERTIFICATION

The DEP Rules, Chapter 2, require an applicant to provide public notice for all Site Location projects with the exception of minor revisions and condition compliance applications. In the notice, the applicant must describe the proposed activity and where it is located. **"Abutter"** for the purposes of the notice provision means any person who owns property that is BOTH (1) adjoining and (2) within one mile of the delineated project boundary, including owners of property directly across a public or private right of way.

1. **Newspaper:** You must publish the Notice of Intent to File in a newspaper circulated in the area where the activity is located. The notice must appear in the newspaper within 30 days prior to the filing of the application with the Department. You may use the attached Notice of Intent to File form, or one containing identical information, for newspaper publication and certified mailing.

2. **Abutting Property Owners:** You must send a copy of the Notice of Intent to File by certified mail to the owners of the property abutting the activity. Their names and addresses can be obtained from the town tax maps or local officials. They must receive notice within 30 days prior to the filing of the application with the Department.

3. **Municipal Office:** You must send a copy of the Notice of Intent to File and a **duplicate of the entire application** to the Municipal Office.

   ATTACH a list of the names and addresses of the owners of abutting property.

CERTIFICATION

By signing below, the applicant or authorized agent certifies that:

1. A Notice of Intent to File was published in a newspaper circulated in the area where the project site is located within 30 days prior to filing the application;
2. A certified mailing of the Notice of Intent to File was sent to all abutters within 30 days of the filing of the application;
3. A certified mailing of the Notice of Intent to File, and a duplicate copy of the application was sent to the town office of the municipality in which the project is located; and
4. Provided notice of, if required, and held a public informational meeting in accordance with Chapter 2, Rules Concerning the Processing of Applications, Section 14, prior to filing the application. Notice of the meeting was sent by certified mail to abutters and to the town office of the municipality in which the project is located at least ten days prior to the meeting. Notice of the meeting was also published once in a newspaper circulated in the area where the project site is located at least seven days prior to the meeting.

The Public Informational Meeting was held on _____.
Date

Approximately _____ members of the public attended the Public Informational Meeting.

NA **Section 24. Sunlight** (statement and drawing, if required)

Section 25. Notices
NA A. Evidence that notice sent
NA B. List of abutters for purposes of notice

1. DEVELOPMENT DESCRIPTION

This narrative is submitted in support of an amendment to the Portland Square Site Location of Development (SLOD) Permit for the Three Portland Square project in Portland, Maine.

1.1 PERMIT BACKGROUND & REQUIREMENTS

In 1986, the Maine Department of Environmental Protection (MaineDEP) issued a Site Location of Development (SLOD) Permit Order (No. L-013526-A-N) for Portland Square. Since that time, a number of amendments have been made to that permit. The proposed development will be constructed within the property limits regulated by the existing Portland Square SLOD Permit Order, and an amendment to that permit is required. The following report is provided for this permit amendment application. The City of Portland will be reviewing this application as part of their Delegated Review Authority granted by the Maine DEP.

A Master Development Plan for Portland Square was submitted to the City in April 2019. The Portland Square property encompasses four parcels on approximately 6.5 acres of land between Spring, Cotton, Center, Commercial and Cross Streets within the Old Port District of Portland. This property consists of two existing buildings, referred to as One and Two Portland Square, and the adjacent "Upper" and "Lower" surface parking lots. The Master Development Plan includes full development of the property over five phases. Separate SLOD Amendment Applications will be submitted for each phase of development. A SLOD Amendment Application has been submitted and approved for Portland Square Phase 1 (Center Street Hotel). This application is in support of Phase 2 (Three Portland Square).

1.2 OBJECTIVE AND DETAILS

The proposed buildings and parking structure will be constructed on Parcel II of the Portland Square property adjacent to the existing One and Two Portland Square buildings, and bounded by Spring Street, Cotton Street and Fore Street. The proposed project includes the redevelopment of the existing "Upper" surface parking lot with an 8-story office building with ground-level retail (Office Tower), a 7-level parking structure, and a 4-story office building with ground level retail/restaurant space (Fore Street Wrap). The proposed project also includes redevelopment of the adjacent Portland Square plaza, stairs and private access driveway (referred to as Upper Cross Street), and redesign of Cotton Street to provide connectivity from Fore Street to Spring Street.

In addition to the SLOD Amendment Application, the proposed project requires the following permits:

- City of Portland Level III Site Plan Review – In progress
- FAA Notice of Proposed Construction – Notice will be filed with the FAA at least 45 days prior to the start of construction.

No additional environmental permits from State or Federal regulators are required for this project as it does not exceed size or resource thresholds.

1.3 EXISTING FACILITIES

The Site is currently fully developed as a paved surface parking lot with mulched landscaped esplanades and sidewalk with street trees. There are no significant natural features or wetlands due to the intense level of existing development. Topography slopes from northwest to southeast towards Fore Street, from approximate elevation 51' down to 29'. A boundary survey of Portland Square was completed by Owen Haskell, Inc. Professional Land Surveyors in October 2018 and is attached to this Section.

1.4 TOPOGRAPHIC MAP

A USGS topographic map showing the approximate location of development boundaries is attached to this Section for your reference.

1.5 CONSTRUCTION PLAN

A Construction Management Plan prepared by Consigli Construction is included as an attachment to this section.

1.6 DRAWINGS

Project design plans showing the proposed improvements are included as an attachment to this section.

1.7 LIST OF ATTACHMENTS

The following documents are attached to this Section:

- Survey
- USGS Topographic Map
- Construction Management Plan (Bound Separately)
- Design Drawings (Bound Separately)

Plan References:

Utility Note:

THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM FIELD SURVEY INFORMATION AND EXISTING DRAWINGS. THE SURVEYOR MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH HE DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES. CALL 1–888–DIGSAFE AT LEAST THREE BUSINESS DAYS BEFORE PERFORMING ANY CONSTRUCTION. DUE TO OSHA CONFINED SPACE REQUIREMENTS, ALL INVERTS AND PIPE SIZES MUST BE VERIFIED PRIOR TO ANY CONSTRUCTION.

Flood Zone Note:

BY GRAPHIC PLOTTING ONLY, THIS PROPERTY IS IN ZONE C OF THE FLOOD INSURANCE RATE MAP, COMMUNITY PANEL NO. 230051 0013 B, WHICH BEARS AN EFFECTIVE DATE OF JULY 17, 1986 AND IS NOT IN A SPECIAL FLOOD HAZARD AREA.

EXHIBIT A

Legal Description

Tract 1:

Parcel One - One Portland Square.

Units No. 1, 2, 3, 4, 5, and 6 of One Portland Square, a business condominium, situated at the corner of Union and Spring Streets in the City of Portland, County of Cumberland and State of Maine, as more particularly described in the Declaration of One Portland Square, a business condominium, dated as of October 27, 1987 and recorded in the Cumberland County Registry of Deeds on October 29, 1987 in Book 8039, Page 37, and in the plats and plans incorporated into the declaration and recorded in the Cumberland County Registry of Deeds in Plan Book No. 166, Page 44 sheets 1 through 13, by virtue of the recording of which declaration, plats and plans, the declarant created the condominium pursuant to the Maine Condominium Act, Title 33 of the Maine Revised Statutes of 1964, as amended, Chapter 31, Sections 1601-101 et seq., as amended.

Parcel Two - Upper Parking

A parcel of land shown as "Lot 3" on a land title survey prepared for Northland Realty Corporation by Lewis & Wasina, Inc. dated April 5, 1995, Project No. 9508 located on the southerly side of Spring Street Arterial, the easterly side of Cotton Street and the northerly side of Fore Street, City of Portland, County of Cumberland, State of Maine, and being more particularly described as follows:

Beginning at a found rebar at the intersection of the northerly right of way line of Fore Street and the easterly right of way line of Cotton Street;

Thence, N24° 18' 44" W along the easterly right of way line of Cotton street a distance of 356.32 feet to a set 5/8 inch rebar with aluminum cap stamped "Lewis & Wasina PLS 2114" at the southerly right of way line of Spring Street Arterial;

Thence, N65° 47' 27" E along the southerly right of way line of Spring Street Arterial a distance of 89.72 feet to a found rebar;

Thence, continuing to follow the southerly right of way line of Spring Street Arterial along a curve to the left having a delta of 3° 11' 35", a radius 3887.30 feet, an arc length of 216.65 feet and a chord bearing and length of N64° 11' 39" E, 216.62 feet to a found drill hole in a concrete sidewalk;

Thence, S11° 09' 10" E following the former easterly right of way line of cross street, now discontinued, along lot 1 and lands conveyed by deed to Two Portland Square limited partnership as shown on said plan a total distance of 413.33 feet to a found rebar on the northerly right of way line of Fore Street;

Thence, S78° 49' 49" W along the northerly right of way line of Fore Street a distance of 79.03 feet to a found rebar;

Thence, S75° 13' 06" W along the northerly right of way line of fore street a distance of 137.10 feet to the point of beginning.

All the above mentioned found rebar are 5/8 inch with aluminum cap stamped "SMRT RLS 1314".

Reference should be made to the plan for further details of the boundary and easements.

The basis of bearing for this description is magnetic North, 1972, as shown on said plan.

Parcel Three - Lower Parking

A certain lot or parcel of land being the majority of the block bounded northerly by Fore Street, easterly by Cross Street, southerly by Commercial Street and westerly by Center Street in the City of Portland, County of Cumberland, and State of Maine and further bounded and described as follows:

Beginning at a drill hole at the intersection of the northwesterly line of Commercial Street and the easterly line of Center Street, said point also being the most southwesterly corner of certain land conveyed to the Atbro Corporation by Deed dated October 3, 1979, and recorded in the Cumberland County Registry of Deeds in Book 4506, Page 48;

Thence North 43° 29' 22.8" East along Commercial Street, a distance of 69.18 feet to a reinforcing rod;

Thence North 46° 50' 30" East along said Commercial Street, a distance of 54.32 feet to a reinforcing rod;

Thence North 52° 30' 11.2" east along said Commercial Street, a distance of 35.64 feet to a drill hole;

Thence North 24° 17' 37.6" West along land formerly of Ari Newman and Lee Beamis, and now Harbor Landing Condominium, see Declaration of Condominium recorded in Book 6505, Page 312, Cumberland County Registry of Deeds, a distance of 93.23 feet to a reinforcing rod;

Thence North 65° 44' 46" East along land now or formerly of said Ari Newman and Lee Beamis, a distance of 109.60 feet to a P.K. spike in the westerly line of Cross Street;

Thence North 13° 21' 13.9" West along said Cross Street, a distance of 287.70 feet to a reinforcing rod, said point being located at the intersection of the westerly line of Cross Street and the southerly line of Fore Street;

Thence South 69° 41' 09.0" West along said Fore Street, a distance of 318.64 feet to a reinforcing rod, said point being located at the intersection of the southerly line of Fore Street and the easterly line of Center Street;

Thence South 24° 16' 16.2" East along said Center Street, a distance of 451.12 feet to the point of beginning.

Excepting from the above described premises those premises taken by the State of Maine by its Department of Transportation set forth in its notice of layout and taking dated August 21, 1991 and recorded in the Cumberland County Registry of Deeds in Book 9688, Page 341.

Tract 2: Two Portland Square.

A certain lot or parcel of land with any buildings thereon situated at the intersection of Fore Street and Union Street in the City of Portland, County of Cumberland, and State of Maine, being Lot 2 on plan for Two Portland Square Subdivision by Stevens Morton Rose & Thompson dated October 22, 1987, revised to September 18, 1989 and recorded in Plan Book 182, Page 29.

Subject to and together with that certain parking easement established in Declaration of Easement by Portland Square limited partnership dated December 18, 1989 and recorded in Book 9028, Page 117, as affected by Subject Property Notice dated December 18, 1989 and recorded in Book 9028, Page 136, and by Permitted Parking Areas Plan dated December 18, 1989 and recorded in Book 9028, Page 141.

Rights, easements, covenants, conditions and restrictions set forth in Declaration of Easement by Portland Square Limited Partnership dated October 30, 1987, recorded at Book 8045, Page 303, as affected by Additional Declaration of Easement dated December 18, 1989, recorded at Book 9028, Page 92, Release of Easement dated December 18, 1989, recorded at Book 9028, Page 97, Subject Property Notice dated December 18, 1989, recorded at Book 9028, Page 102, and Permitted Parking Areas Plan dated December 18, 1989, recorded at Book 9028, Page 112.

3. FINANCIAL CAPACITY

3.1 PROJECT CONSTRUCTION COST

The construction budget for the proposed development is approximately $70,000,000.

3.2 FINANCING

Attached to this Section is a letter from the Senior Vice President of People's United Bank demonstrating that the developer has financial capacity to support the proposed project.

3.3 SLOD AFFORDABLE HOUSING/CITY OF PORTLAND INCLUSIONARY ZONING

The proposed redevelopment includes parking, office, and retail, and this section does not apply.

Re: North River IV, LLC and North River Company, LLC

To Whom It May Concern:

North River Company ("NRC"), the Manager of North River IV LLC, which is the owner of record of the properties known as Portland Square, Portland, ME, has had a banking relationship with People's United Bank, N.A. since 2010. In that time, People's United Bank has provided NRC and its affiliates with real estate financings in excess of $170,000,000, including loans for acquisition, new development and complex renovation projects. We consider the principals of NRC to be of the highest character and, based on our knowledge of NRC's management expertise, financial condition and access to significant liquid assets, People's United Bank would be comfortable entertaining requests for financing any type of real estate project and of any size.

NRC and its affiliates have access to cash reserves and credit facilities well in excess of $20,000,000 with People's United Bank.

People's United Bank is a subsidiary of People's United Financial, Inc., a diversified financial services company with over $45 Billion in assets. Founded in 1842, People's United Bank is a community-based, regional bank in the Northeast offering commercial and retail banking, as well as wealth management services through a network of nearly 400 retail locations in Connecticut, New York, Massachusetts, Vermont, New Hampshire and Maine.

If I may be of any further assistance regarding this highly valued relationship, please contact me at (207) 828-3023 or by email at timothy.mcmachen@peoples.com.

Sincerely,

Timothy J. McMachen
Senior Vice President
Commercial Real Estate

4. TECHNICAL ABILITY

4.1 NARRATIVE

On behalf of North River IV, LLC, Woodard & Curran is preparing this application for the Three Portland Square Project. Woodard & Curran is a national environmental consulting and engineering firm with expertise in site-civil engineering, stormwater management, and property development. Since the company was formed 40 years ago, Woodard & Curran has completed numerous site designs and permit applications for municipal, industrial, manufacturing, and commercial clients throughout the Northeast, and specifically within its home State of Maine. Woodard & Curran has been involved in numerous development projects in the Greater Portland Area and has developed working relationships with various consultants who are called upon, as necessary, to provide specialized services.

North River IV, LLC is also supported by a design team including Pat Carroll Landscape Architects, Winton Scott Architects and Becker Structural Engineers. Copies of the company profiles of the various design team partners are attached, providing further verification of technical capacity for this project.

CARROLL ASSOCIATES

Firm Description

Carroll Associates is a small consulting firm engaged in the practice of landscape architecture, land planning, and site design. The firm was created in 1993, and is involved in a wide range of design and planning projects throughout Maine and New England.

The firm provides professional services to a broad-based clientele that includes municipal and institutional organizations, architects, engineers, real estate developers, and private individuals. While maintaining a diverse workload, the firm is entrenched in public, urban, and residential based planning and design work. Carroll Associates has significant experience in public, urban waterfront settings, institutional projects ranging from elementary schools to university work; municipal projects and recreational projects including work at Acadia National Park. The overriding objective in each is to provide a sensitive and well thought out solution which respects the natural environment and creates a functional and inviting setting for the building and its user.

Carroll Associates has been involved with many complex state and municipal projects which are specifically relevant to this project. Relevant Site Planning and Urban Design projects in Portland include the following:

- Ocean Gateway Ferry Terminal
- Marriot Residence Inn
- Riverwalk Condominiums (unbuilt)
- Maine State Pier Redevelopment Design Competition (selected design, unbuilt)
- Merrill's Wharf Redevelopment
- Thompsons Point Redevelopment
- International Marine Terminal Expansion
- Portland Gateway Hotel

In all of these projects the ability to integrate a new facility or program with historical buildings, complex physical and environmental sites, and established neighborhoods was critical to the overall success of the project.

We are well experienced with working within an interdisciplinary design team and the need to provide strong design solutions with limited budgets. Key to the firm's success is the commitment to providing attention and focusing on the specific needs of the client, remaining flexible and bringing projects to closure on time and within budget.

Professional services offered through Carroll Associates may include any or all of the following:

- Site Selection and Analysis
- Program Development and Budgeting
- Site Feasibility/ Utilization Studies
- Recreation Planning and Design
- Site Master Planning
- Construction Documents, Bidding, and Administration
- Consultant Team Coordination and Management
- Local, State, and Federal Permitting and Approvals

Brick Hill, South Portland, ME

Brickhill consisted of redevelopment of former Maine Youth Center into mixed use 'Smart Growth' project. The program for the 56 acre site includes 300 affordable housing apartments and condominiums, 250,000 SF of professional office space, recreation amenities including an 8 acre park, boat launch, community gardens, and hiking trails while preserving the historic brick structures on the site. The project is 100% completed in 2017. Carroll Associates provided Master Planning and Site Design Services for the project since 2001.

Forefront at Thompsons Point

The Forefront at Thompson's Point is a mixed-use development located on an existing vacant industrial site on the Fore River in Portland Maine. The original program consisted of a new Sports Event Cente, Concert Hall with an adjacent outdoor amphitheater seating 4500, a 235 room hotel, cultural center, restaurants, and approximately 180,000 sf of professional office space. Carroll Associates has been retained by the Developer to provide Master Planning and Landscape Architectural Services on the project.

Oceangate and Maine State Pier Redevelopment

Redevelopment of underutilized portion of Portland waterfront to provide new berthing for cruise ships and international ferry terminal. Oceangate Project includes extensive parking for ferry arrivals and departures, passengers, and tour busses; integration of adjacent narrow gauge railway, extension of existing streets to provide critical connections, and outdoor plazas and parks providing strong pedestrian connectivity to adjacent open space systems. Maine State Pier project includes redevelopment of aging waterfront pier and landside property to provide strong mixed use including office, retail, hotel, and a 2 acre park and with direct access to the waterfront.

Harborcorp, Portsmouth, NH

Redevelopment of vacant property in West End of Portsmouth, NH to provide mixed use development. Project envisions up to 115 Hotel rooms, 24 Condominium Units, Conference Facilities, Retail, dedicated parkland, and Structured Parking. The project ties into the existing Sheraton Hotel across the street. Approvals are in place and construction is expected to begin in 2019

CARROLL ASSOCIATES

PATRICK J. CARROLL
Principal Landscape Architect

Professional Registration:
Maine, New Jersey, New Hampshire, CLARB

Education:
Utah State University
Bachelor of Landscape Architecture,1978

Prior Experience
Carroll Associates, Portland ME 1993-
Moore Weinrich Architects, ME 1989- 2003
Environmental Planning and Design, ME 1988
Design Workshop, CO 1982- 1988
Land Design, UT 1989- 1988

As founder of Carroll Associates, Pat brings 40 years of landscape Architectural experience on a wide variety of projects throughout Maine, New England, and the Western United States. His successful project experience on largescale master planning and urban design provides a strong basis for solving complex design issues and managing important design and permitting challenges. His sensitivity and understanding of environmental constraints and culture provides for successful projects that are fitting and appropriate to each setting.

Erin Kay
Project Manager

Professional Registration:
Maine

Education:
Rhode Island School of Design
Master of Landscape Architecture, 2010

University of New Hampshire
BA Studio Art, 2004

Prior Experience
Carroll Associates, Portland ME 2013-
Crossby/Schlessinger, MA 2010- 2013

Erin joined Carroll Associates in 2010, and brings significant experience in urban design and planning from her experience in Boston prior to joining the firm. She has actively participated in many of the larger urban projects Carroll Associates has undertaken in the last five years, including Thompsons Point, Harborcorp and other complex and challenging projects. Her ability to quickly synthesize a site and develop creative solutions make her a valuable member of the design team.

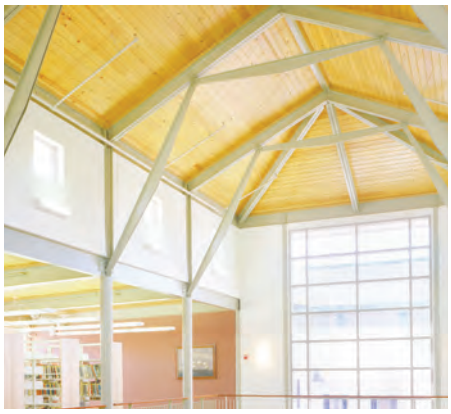
WSA

WINTON SCOTT
ARCHITECTS

5 Milk Street, Portland, ME 04101
207.774.4811|www.wintonscott.com

Established in 1975, Winton Scott Architects is a small, design-oriented architectural practice located in Portland, Maine. Our work encompasses a diverse array of project types and scales ranging from multi-block urban developments, to historic renovations, commercial and institutional buildings, and multifamily and single family residences.

Our firm has been recognized numerous times for design excellence by the Maine and New England Chapters of the American Institute of Architects, as well as the United States Green Building Council; and our work has been profiled in national trade journals, local publications, and several books focussed on design and architecture.



Winton Scott Architects is comprised of a staff of six, including four senior architects ranging in experience from 15 to 45 years. The office is organized horizontally with all staff members capable of managing projects from program and design through production of construction documents and construction contract administration. This depth of experience and continuity in staffing have allowed WSA to take on large, complex projects while consistently delivering the highest level of professional services to our clients. The culture of the office is that of an open, creative collaboration of seasoned architects striving for the highest level of design excellence and client satisfaction.

We believe that architecture should be sustainable, adaptable, timeless, and derivative of its context and function. All buildings, even the most modest in scale and budget, can be at once artful, functional, and inspiring if they are rigorously conceived and executed with craft and precision. Each of our designs responds to the specific needs of our clients and the individual character of a particular site and its surrounding context.

WINTON SCOTT
ARCHITECTS

Winton Scott, NCARB
President

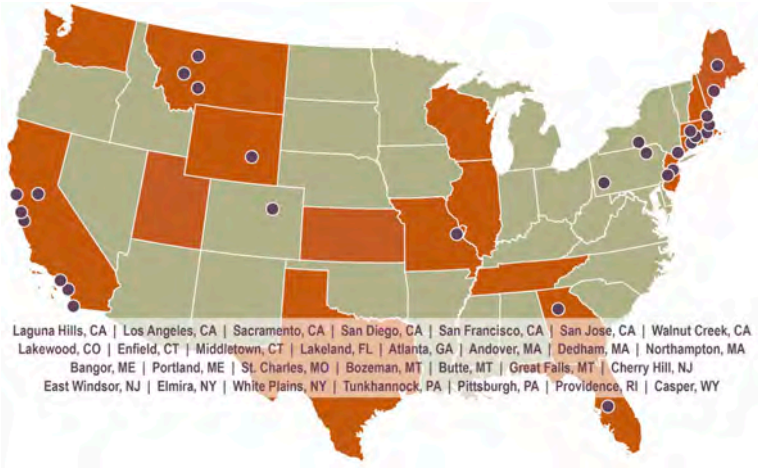
Professional Registrations	Maine, Massachusetts, and NCARB Certification
Other Experience	Louis I. Kahn, Architect, Philadelphia, PA Senior Project Architect Phillips Exeter Library Eero Saarinen and Assoc., New Haven Designer and Job Captain Ford Foundation Headquarters
Education	University of Texas, Bachelor of Architecture with Highest Honors, 1960

Before founding founding Winton Scott Architects in 1975, Winton Scott had built an impressive list of project experiences with some of the most highly respected architectural firms in the country. During this same period, he also accepted several teaching appointments with some notable schools of architecture, honing his own design interests.

Although Winton is a skilled designer, comfortable with any site, any building type and any scale, one of his special interests is urban design. His keen sensibilities in this arena are dramatically apparent in several recent projects completed by WSA

Stephen W. Weatherhead, RA
Principal

Professional Registrations	Licensed Architect, State of Maine
Education	Syracuse University, Bachelor of Architecture Professional Degree, 1988 Syracuse University in Florence, Italy Architecture Study Abroad Program, 1986



Steve joined Winton Scott Architects in 1994 to take on the role of Project Architect for the renovations to Merrill Auditorium. Since that time, he has gained extensive design and management experience on a wide range of renovation and new construction projects undertaken by the firm. His work encompasses projects ranging from custom homes to large scale commercial and institutional projects as well as a large portion of the firm's municipal work which includes a multitude of projects completed for the City of Portland.

With over 28 years of experience in all phases of architectural practice from conceptual design through construction, Steve knows how to effectively manage the design team and lead an open process that has consistently produced successful building projects based on the specific needs of his clients. He has managed projects for WSA totaling over $100M in construction value that have utilized a full range of project delivery methods both in the private and public sectors.

PROFILE OF THE FIRM

Woodard & Curran is an integrated engineering, science, and operations company. Privately held and steadily growing, we serve public and private clients locally and nationwide.

Talented people are at the heart of our firm. Our company was founded in 1979 on a simple business concept: provide an enjoyable place to work with opportunity, integrity, and commitment, and we will attract talented people. It happened. At the heart of our company are people who are experts in their fields and passionate about what they do, showing a level of commitment and integrity that drive results for our clients. You experience this power every day in our actions, our solutions, and our promises kept.

Woodard & Curran serves clients locally and nationwide from offices throughout the U.S. Headquartered in Portland, Maine, the firm operates offices in the locations noted above, as well as treatment facilities in the states that appear in orange.

Commitment evident in personal approach

Our commitment is reflected in the personal attention, collaborative resources, and dedication to results that we devote to each project. We assign the right people with the right expertise to the job, and provide clients with easy accessibility to senior experts.

Our work is characterized by responsiveness, resourcefulness, and willingness to do what it takes to get the job done properly. Examples range from helping communities garner state and federal funding for wastewater treatment system improvement to managing a multi-vendor manufacturing project through a major snowstorm and getting production lines up and running. We are experts at navigating the complexities of environmental regulations and have been involved in transforming many brownfields sites into marketable properties. In defining moments like these, it is commitment that brings our clients results.

Operating with integrity

Our integrity impacts our decision-making at all junctures of our work — from the openness of our communication to the fairness of our prices to placing your interests above our pocketbook. We hire people who share our values of honesty, respect, and fairness and who want to do the right thing. They, in turn, treat everyone — our people, our clients, regulators, and stakeholders — respectfully and honestly.

Full-service firm with multidisciplined staff

Our integrity and commitment are matched only by the depth of our expertise. Our staff are specialists in their fields, offering in-depth understanding of cutting-edge technology, astute problem-solving, multidisciplinary engineering, and expert regulatory guidance. The firm has received numerous honors and awards, and we have ranked among *Engineering News-Record's* top 100 environmental firms every year since 2000.

Services to the private sector

Woodard & Curran provides a range of site/civil and environmental engineering, science, and operations support to companies in the real estate sector, as well as to hospitals, colleges and universities, and law firms, helping our clients realize their project vision.

BARRY SHEFF, PE
PRINCIPAL-IN-CHARGE

Professional Profile

Barry is a Senior Principal and Senior Project Manager with over 25 years' experience working with the public sector on infrastructure planning and implementation, and with the private sector on urban revitalization projects. He is responsible for design and project management, with expertise engaging and facilitating stakeholder processes. His project work has involved utility infrastructure with focus on stormwater and wastewater utility planning studies, evaluations, and engineering; green infrastructure; master development planning and site design; and environmental/land-use permitting at the local, state, and federal levels. Barry focuses his work on sustainable environmental design and is committed to collaborating with owners and stakeholders to develop practical solutions to complex problems. He has been involved in numerous projects with high-performance buildings and LEED certification. Barry has a track record of understanding client expectations, consistent budget controls and excellent communication skills that enable him to drive the success of small and large projects of varying complexities.

Related Experience

Maine Medical Center, Portland, ME – Parking Garage. Principal-in-Charge for the permitting and design of the new 2,000+ car parking garage in St. John Valley neighborhood of Portland. The project is the result of a partnership between a private land-owner and Maine Medical Center (MMC) as part of the hospital's major campus expansion. Woodard & Curran's work involves site options analysis, land-use and environmental permitting, site/civil engineering and utility infrastructure design for the multi-level parking structure to serve MMC employees. Focus areas of the project involve the coordination with employee shuttle services, and the need for accommodating employee commuting patterns and routes while reducing demand on the existing urban street network surrounding the hospital campus.

Patrons Oxford Insurance – Patrons Oxford Insurance Headquarters. Principal-in-Charge for the permitting and design of the new Patrons Oxford Insurance Headquarters in Portland, Maine. The project was the first development in the Portland Technology Park in Portland (designed by Woodard & Curran). The project involved close coordination with the design team and owner, and included the low impact design considerations for parking and site features, as well as integration into the Technology Park's stormwater management plan.

East Brown Cow Management Inc., South Portland, ME – Sable Oaks Office. Principal-in-Charge responsible for civil site design and land-use permitting of a 45,000-SF office building with associated parking lot, access drives, plazas, and landscaping. The project included design of stormwater treatment systems, erosion control, site amenities, and utilities. Permitting efforts involved the City of South Portland, Maine Department of Environmental Protection (DEP), Army Corps of Engineers, and Federal Aviation Administration given proximity to the Portland International Jetport.

Education

- Bachelors, Civil / Environmental Engineering, University of Vermont

Registrations

- Registered Professional Engineer - ME, #9708
- NCEES License - National, 60366
- Maine DOT Local Project Administration Tier 1 Certification

Professional Associations

- American Society of Civil Engineers
- American Public Works Association
- New England Water Environment Association (NEWEA)
- Order of the Engineer

East Brown Cow Management Inc., Portland, ME – Hyatt Place Hotel. Principal-in-Charge for this redevelopment project to convert an existing parking lot on a 20,000 SF urban parcel of land into an 80,000 SF hotel. We collaborated with the architect and owner's representative to provide local permitting and site / civil engineering design associated with the project. The project was complicated by private power distribution infrastructure that crossed the site and needed to be maintained, as well as the City's desire to have off-site roadway improvements incorporated into the project.

PDT Architects, Portland, ME – Adams School Workforce Housing. Project Manager for this urban redevelopment project, supporting AVESTA Housing and its design team. Located in the Munjoy Hill neighborhood of Portland, the project is a result of a public RFP for redevelopment proposals of this brownfield site, the home of a former elementary school. The project involved the demolition of the existing Adams School building and site amenities, and remediation of environmental contamination; and development of a 16-unit affordable ownership-housing complex, with public open space and playground area. Our work involved local and state environmental permitting, and site engineering and design associated with the placement of this project in a densely developed residential neighborhood. The engineering effort required an intensive balance of earthwork activities to control remediation costs and ensure adequate environmental protections for the residents and users of the open spaces.

The Watermark and Ocean Gateway Garage – Mixed Use Development. Project Manager for the environmental due diligence phases (Phase 1 environmental site assessment and soil/groundwater investigations), site design, and permitting for this private mixed use development on the Portland waterfront (adjacent to the Ocean Gateway facility) with boutique hotel, luxury condominiums, retail, commercial space, office building, 750-car parking garage, and additional surface parking lots. Site/civil work includes layout, grading, drainage, erosion and sedimentation control, and utility design. Permitting includes City Site Plan, Subdivision, Historic Preservation, Maine DEP Site Law, and Maine Historic Preservation permitting. The parking garage was constructed while the remaining portions of the project were unbuilt.

MaineDOT, Portland, ME – Ocean Gateway Multimodal Facility. Program and Project Manager of the permitting and design for implementing first phase of the Master Plan of the redevelopment of a 19.5-acre ship repair facility to a multi-use marine transportation facility on Portland's waterfront. The phase one facility encompassed the former Bath Iron Works site and the associated City-owned land-based infrastructure. Under Barry's responsible charge, Woodard & Curran prepared, submitted, and obtained land-use and environmental permits for the project, including local land-use and Board of Harbor Commissioners approvals; Maine Department of Public Safety Construction Permit; Maine Traffic Movement Permit; U.S. Army Corps of Engineers Department of the Army Permit; and Maine DEP Site Location of Development Permit and Natural Resources Protection Act. We also designed the site infrastructure (vehicle queuing, pick-up and drop-off, short- and long-term parking) to be flexible in its use. The project includes the design of City streets, a major regional trail connection, and the narrow gauge passenger railway. The design creates a new city block and the impetus for economic development. The design of utility infrastructure and blending the facility into an existing congested urban environment proved challenging, but in the end, met the City's future needs. Barry was responsible for working with a steering committee to develop and refine concepts working within available construction funding constraints, and for preparing Phase 1 improvement recommendations as a summary of the preliminary design efforts. As the Program Manager, Barry was responsible for managing the contract with the State of Maine and the 10-firm design team.

University of Southern Maine, Portland, ME – Community Education Center and Parking Garage. Project Manager/Engineer responsible for site and utility design of a 1200-car parking garage, 500-seat lecture hall, and 15,000-SF office classroom building. Coordinated the site survey; completed preliminary site evaluations; prepared grading and utility plans for surface parking areas, open space, and roadways; developed construction documents; completed stormwater design; coordinated with the City of Portland for roadway realignments and discontinuances; coordinated design plans with the project architect and landscape architect; and prepared technical specifications for construction documents. Coordinated with the regulatory agency; prepared local Demolition Permit applications; prepared Application for Maine DEP Site Law and City's Major Site Plan Applications under tight time frames. The project is LEED Gold certified.

City of Portland, ME – Bayside Adapts, Phase I. Principal-in-Charge of the team providing planning and engineering services to facilitate the City's first climate change adaptation planning effort, for the City's Bayside neighborhood. The focus of the project was to conduct a Sewer and Stormwater Data Gap Analysis, and public engagement process to help the community identify a socially responsible, technically sound and financially feasible adaptive strategy to protect the Bayside Neighborhood from the effect of rising tides, extreme rain events and storm surge. Our work involved coordination and contracting with a subconsultant, RPS ASA to evaluate and recommend sea level rise and storm surge scenarios appropriate for City of Portland's planning horizon.

BECKER
STRUCTURAL ENGINEERS

About Us

Becker Structural Engineers, Inc., was founded in 1995 and is a full service structural consulting firm with a staff of twenty-seven. We provide practical, cost-effective and innovative solutions on a wide range of challenging projects in three practice areas; buildings, parking structures and bridges.

We believe in competency and character as our defining values. We are pro-active and interactive in our approach. Our dedicated staff and our investment in technology allows us to deliver high quality service on multiple large and small projects simultaneously. We embrace an engineering approach to projects which combines classical engineering theory and practical experience, paired with the versatility and efficiency of Autodesk Revit to create structural models which interact and coordinate with architectural and mechanical models to define the comprehensive building system. This approach advances the design and coordination of our projects.

Our building design practice includes residential, commercial, education and public institutional buildings. We have substantial experience with contemporary building design which is complemented by an extensive background and expertise renovating and restoring historic structures. Our design capabilities are complemented by our construction phase services, which include construction reviews for general conformance and implementation and administration of the IBC Special Inspections Program. We believe a strong job site presence contributes to enhanced quality and improved construction efficiency. Working with the owner, architects, contractor and testing agencies our office provides a full range of construction monitoring capabilities.

Becker Structural Engineers have been the selected structural engineering consultant for municipalities, owners and developers throughout New England. Recent and relevant work includes on-going services under a **General Consulting Services for the City of Portland** and a **General A/E Services** agreement with the **Portland Housing Authority.** Significant buildings in Portland include the multi-story medical offices for **InterMed**, the **Hyatt Hotel** located on Fore St. and the rehabilitation of the **historic Twitchell-Champlain** building on Merill's Wharf which now serves as the law offices for Pierce Atwood**.** We strive to integrate ourselves in understanding the overall approach that each owner is seeking to obtain, with guidance on analysis and cost recommendations to fit within the sustainability of the program design.

BECKER
STRUCTURAL ENGINEERS

Paul B. Becker, P.E., SECB
President

As the founder of Becker Structural Engineers, Paul has over thirty-eight years of structural engineering experience in New England and the Mid-Atlantic States. His technical experience covers all aspects of the structural engineering profession including complex building systems using steel framing, cast in place, precast and post-tensioned concrete, deep foundation support systems, earth retaining structures, masonry and timber framing. He has served as lead design engineer and project manager, responsible for establishing and monitoring schedules, budgets and quality control on projects with construction costs of up to $75 million. As Principal in Charge of a project, he collaborates with the client and project team to establish the project scope, schedule and contracts and monitors the progress and quality of work.

- Commonwealth of Pennsylvania (#057589)

5. NOISE

Mechanical systems located on the rooftops of the proposed buildings will be screened to mitigate noise impacts. Noise associated with the proposed development is not anticipated to negatively impact surrounding development in its urban setting.

6. VISUAL

Fore Street and Spring Street in the Portland Square area are urban, developed streets with only one or two significant parcels remaining to be developed. The proposed buildings will replace a visually unappealing surface parking lot and have been designed to work in concert with existing and proposed surrounding developments.

7. WILDLIFE & FISHERIES

The Site is fully developed and there are no known areas of significant natural features, including areas of significant wildlife habitats or wetlands. The attached Official Species List identifies the northern long-eared bat, which has been listed as a Federally Threatened Species, in association with the project area; however, there are no critical habitat areas located within the project area. Based on US Fish & Wildlife information, the northern long-eared bat typically lives in caves during the winter months, and in trees larger than three inches in diameter during the summer, with migration between these two habitats in the spring in the fall. Tree-clearing for this project will be minimal and limited to only removal and replacement of street trees and landscaping trees and vegetation; it is not anticipated that this project will have a negative impact on the northern long-eared bat species.

As described in Section 14, erosion and sedimentation control measures will be utilized during construction to ensure that the work will not result in release of sediment to natural resources. These measures will be in accordance to the MaineDEP Erosion Control Best Management Practices.

A letter was sent to the Maine Department of Inland Fisheries and Wildlife (MDIFW) on December 19, 2019, requesting information regarding any known threatened or endangered species or critical habitat relative to the project area. A copy of the response will be forwarded upon receipt.

Project Name: Portland Square Phase II

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies the threatened, endangered, candidate, and proposed species and designated or proposed critical habitat that may occur within the boundary of your proposed project or may be affected by your proposed project. This species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 et seq.).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC Web site at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seq.), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the Endangered Species Consultation Handbook at: http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

This species list also identifies candidate species under review for listing and those species that the Service considers species of concern. Candidate species have no protection under the Act but are included for consideration because they could be listed prior to completion of your project. Species of concern are those taxa whose conservation status is of concern to the Service (i.e., species previously known as Category 2 candidates), but for which further information is needed.

If a proposed project may affect only candidate species or species of concern, you are not required to prepare a Biological Assessment or biological evaluation or to consult with the Service. However, the Service recommends minimizing effects to these species to prevent future conflicts. Therefore, if early evaluation indicates that a project will affect a candidate species or species of concern, you may wish to request technical assistance from this office to identify appropriate minimization measures.

Please be aware that bald and golden eagles are not protected under the Endangered Species Act but are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.). Projects affecting these species may require development of an eagle conservation plan: http://www.fws.gov/windenergy/eagle_guidance.html Information on the location of bald eagle nests in Maine can be found on the Maine Field Office Web site: http://www.fws.gov/mainefieldoffice/Project%20review4.html

Additionally, wind energy projects should follow the wind energy guidelines: http://www.fws.gov/windenergy/ for minimizing impacts to migratory birds and bats. Projects may require development of an avian and bat protection plan.

Migratory birds are also a Service trust resource. Under the Migratory Bird Treaty Act, construction activities in grassland, wetland, stream, woodland, and other habitats that would result in the take of migratory birds, eggs, young, or active nests should be avoided. Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g.,

cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm and at: http://www.towerkill.com; and at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

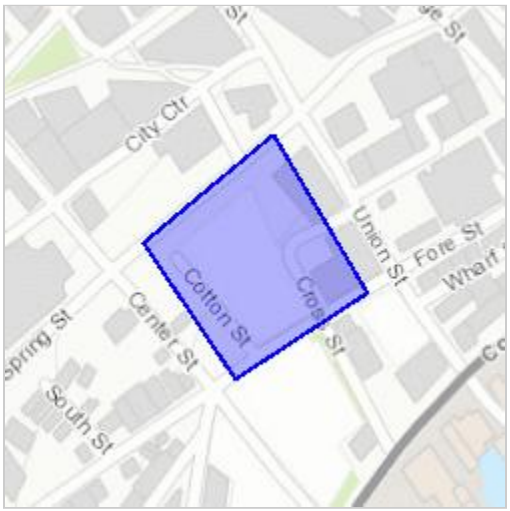
Project Summary

Consultation Code: 05E1ME00-2020-SLI-0004

Event Code: 05E1ME00-2020-E-00038



Project Name: Portland Square Phase II

Project Type: DEVELOPMENT

Project Description: Redevelopment of existing surface parking lot with a parking garage and mixed-use space.

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/place/43.65581794579938N70.25671779687991W

Counties: Cumberland, ME

Endangered Species Act Species

There is a total of 1 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

RE: Three Portland Square – Environmental Review Request

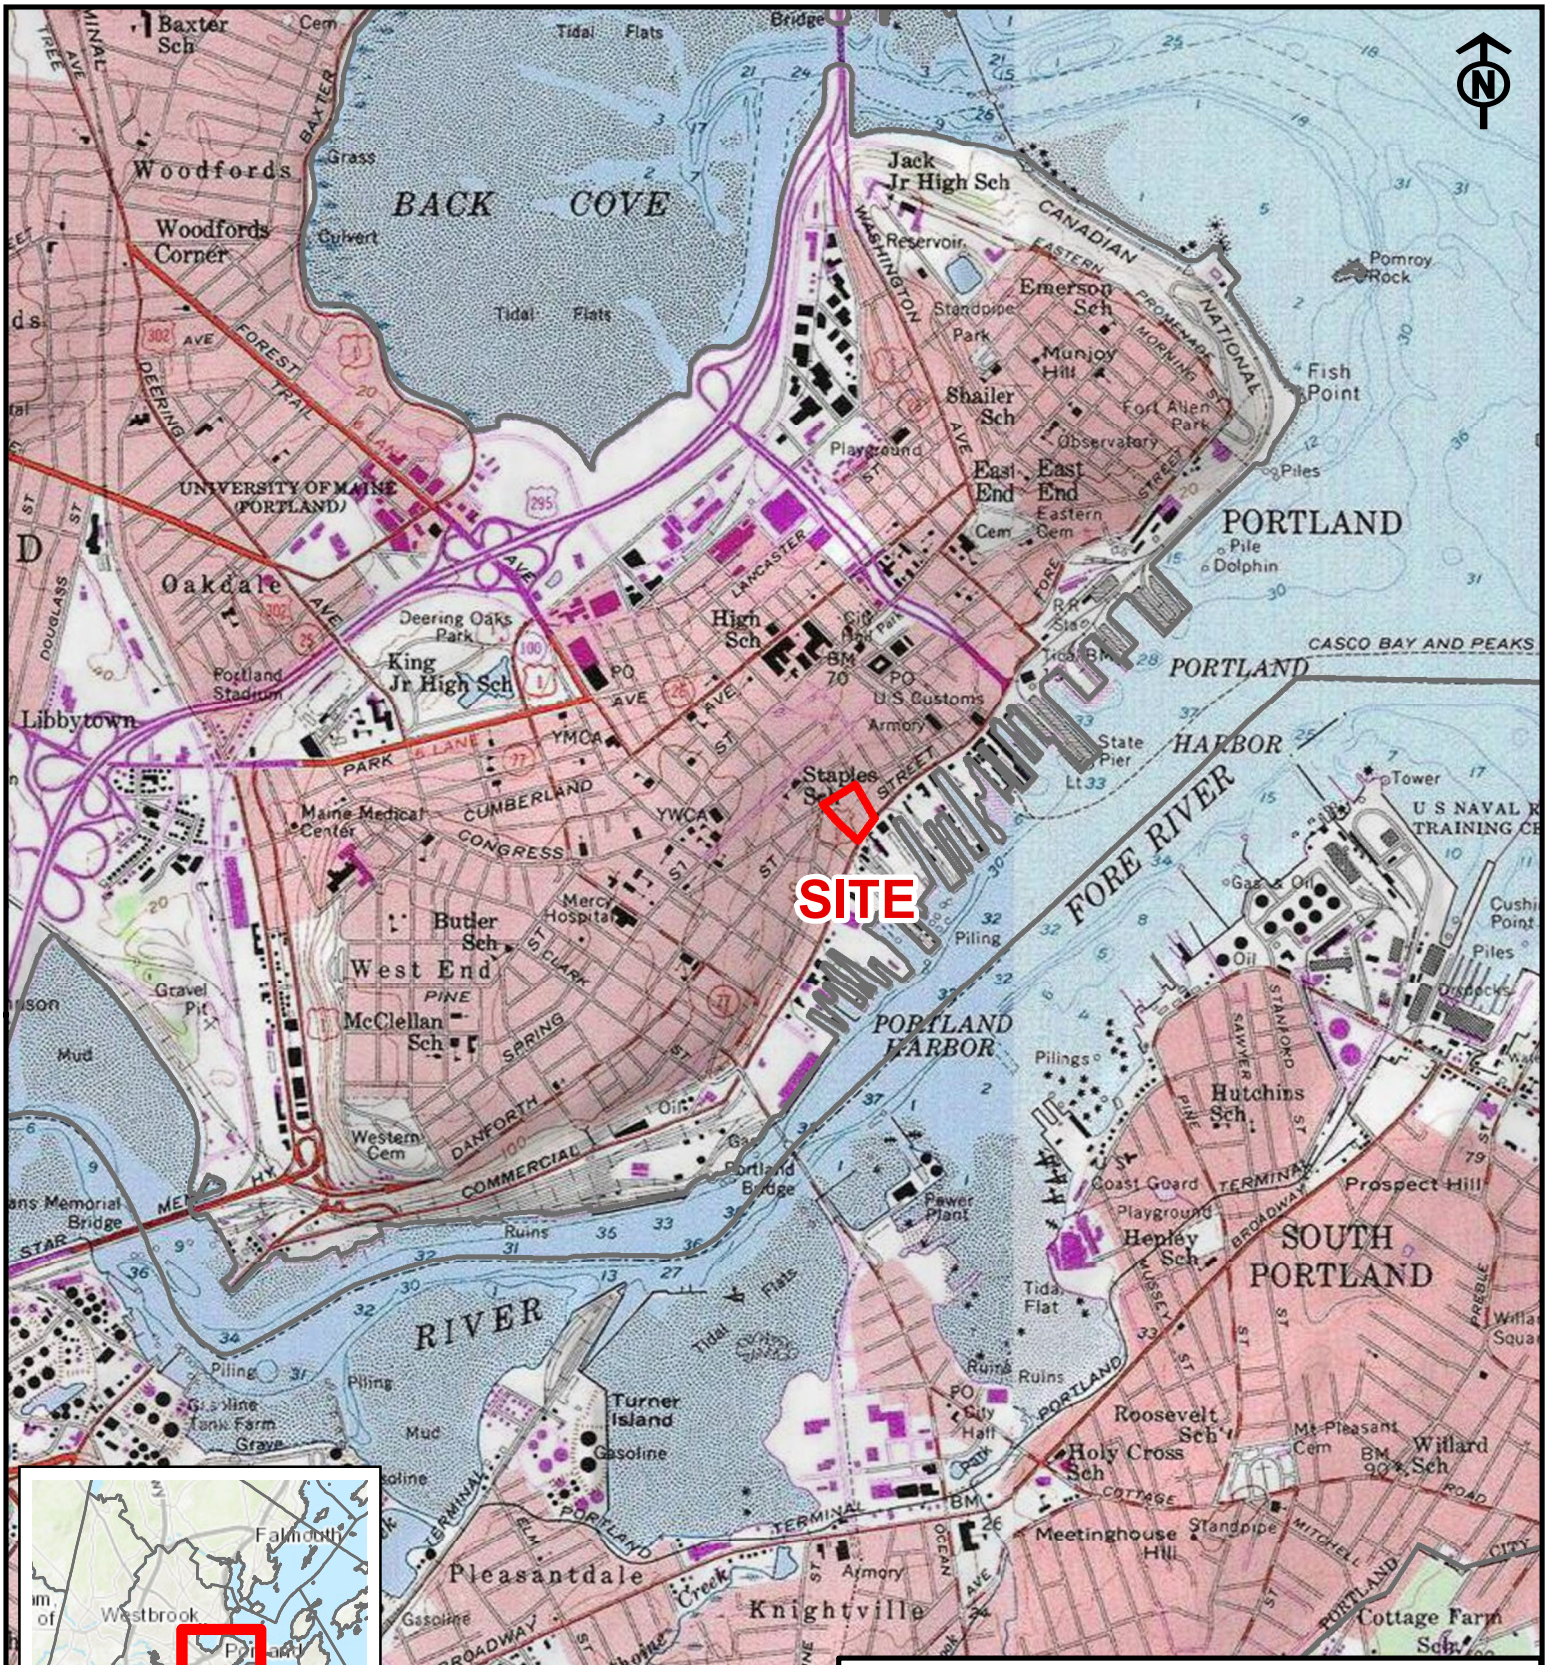
To Whom It May Concern:

North River IV, LLC is proposing to redevelop an approximately 2.3-acre property bounded by Spring Street, Cotton Street and Fore Street in Portland, Maine. The site is currently fully developed as a surface parking lot with perimeter landscaping features. The proposed project will include construction of an 8-story office building with ground-level retail, a 7-level parking structure, and a 4-story office building with ground level retail/restaurant, as well as the redevelopment of the adjacent Portland Square plaza, stairs, private access driveway and Cotton Street.

The proposed work will require a Maine Department of Environmental Protection Site Location of Development Permit Amendment, which requires coordination with the Maine Department of Inland Fisheries and Wildlife (MDIFW). On behalf of North River IV, LLC, we are requesting a review of the project area for any known threatened or endangered species or critical habitat. A Site Location Map and Site Plan have been attached for your reference.

We appreciate your review of this project. If you have any questions regarding this information or the proposed project, please do not hesitate to contact me at 207-558-3763 or lswett@woodardcurran.com. Thank you for your assistance.

Sincerely,



WOODARD & CURRAN

8. HISTORIC SITES

The proposed Three Portland Square project is not located within any City of Portland Historic Preservation Districts. The project is located adjacent to a historic landmark, the Tracy-Causer Building, which is located across Cotton Street from the site. Work has been done to avoid impacts to existing grades around this building. Appropriate consultation with the City of Portland Historic Preservation staff will be completed as required. A request was made to the Maine Historic Preservation Commission (MHPC) for information regarding any known historic properties relative to the project area on December 19, 2019. A copy of the response will be forwarded upon receipt.

Re: Three Portland Square – Project Review Request

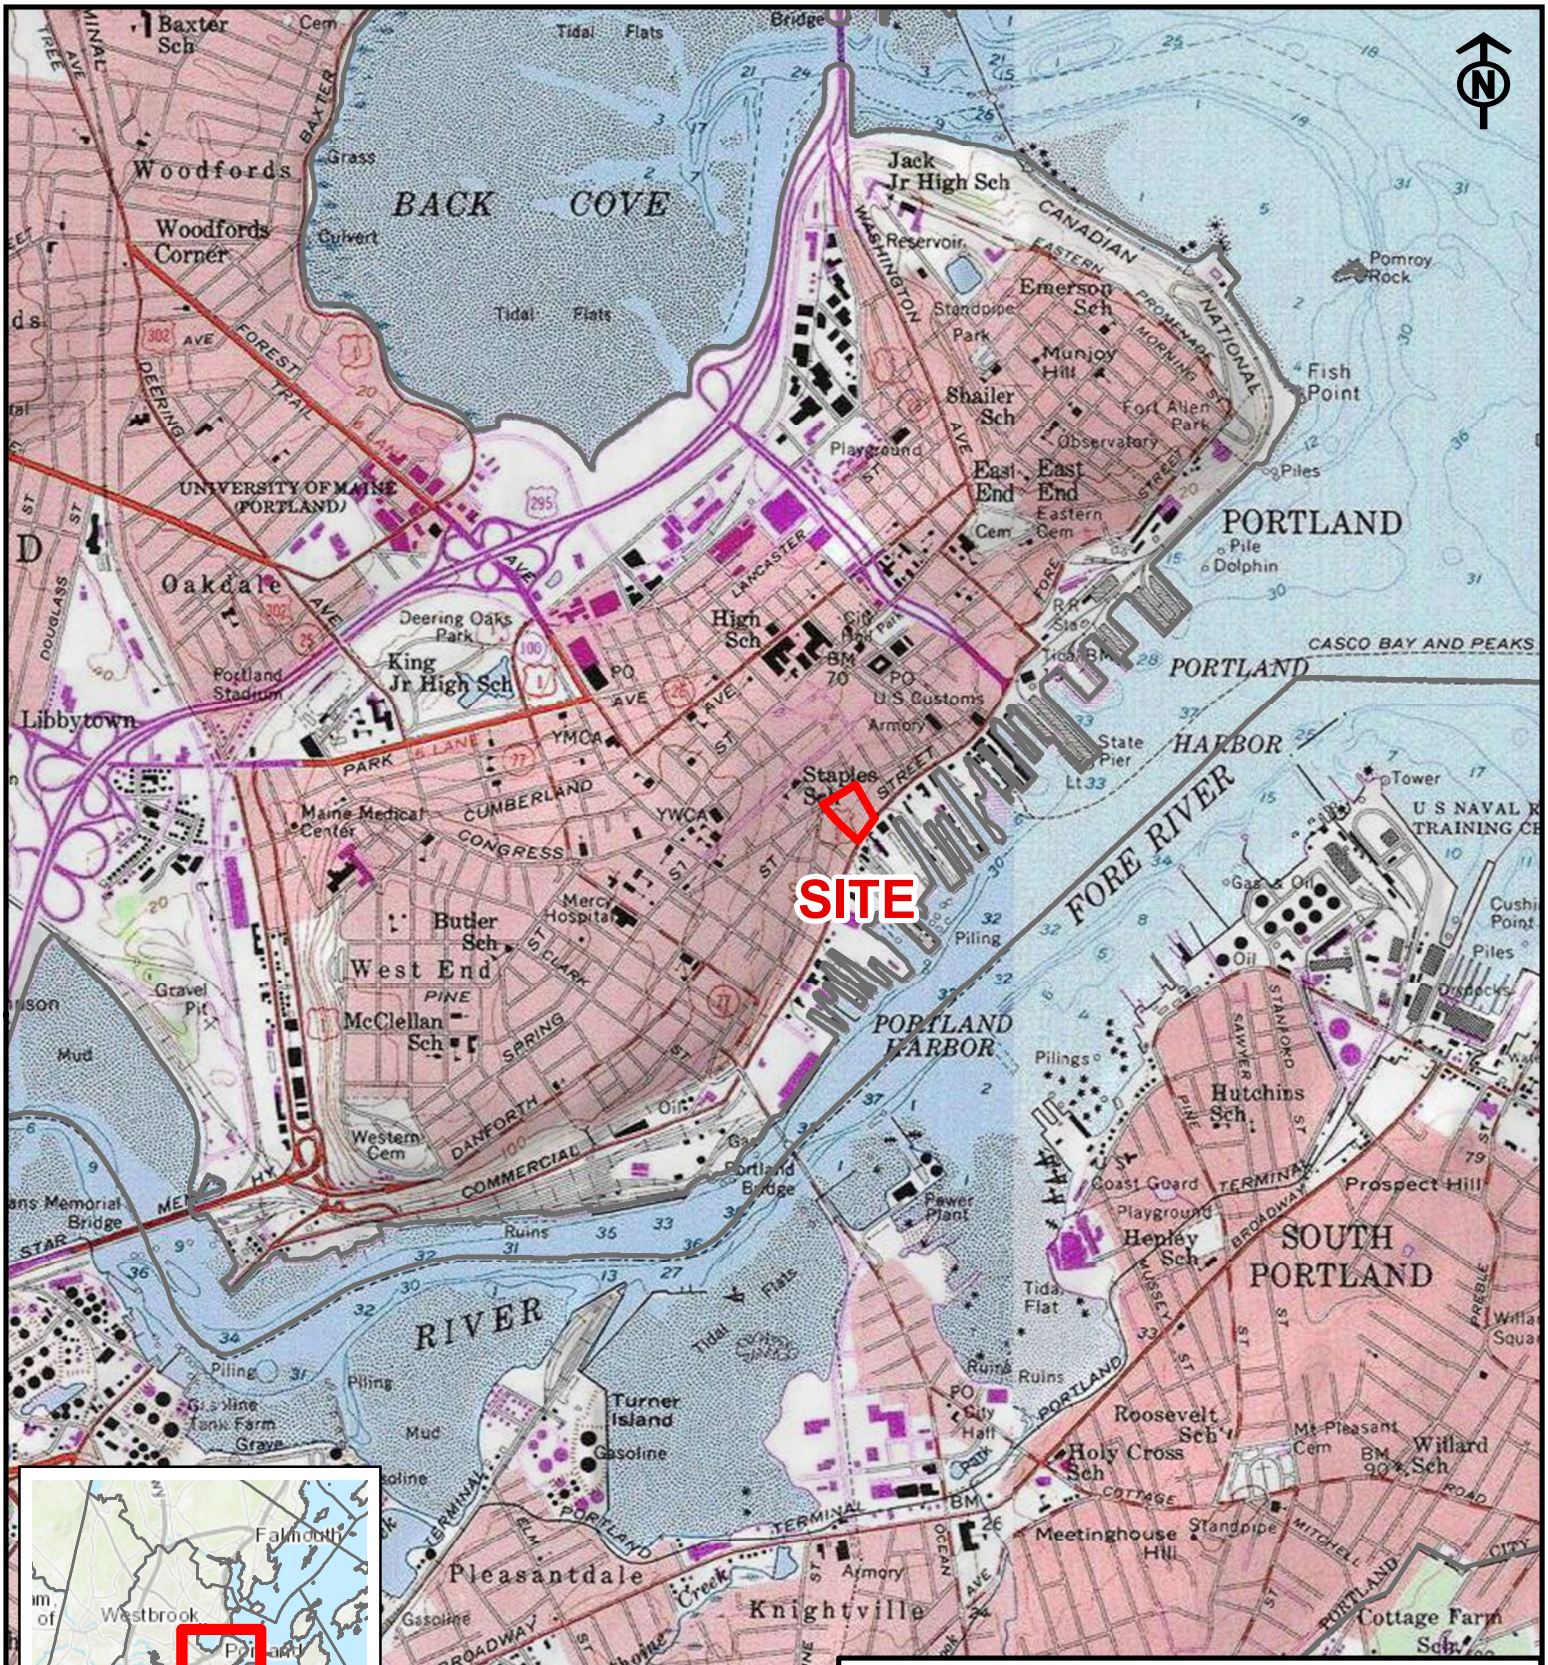
Dear Mr. Mohney:

North River IV, LLC is proposing to redevelop an approximately 2.3-acre property bounded by Spring Street, Cotton Street and Fore Street in Portland, Maine. The site is currently fully developed as a surface parking lot with perimeter landscaping features. The proposed project will include construction of an 8-story office building with ground-level retail, a 7-level parking structure, and a 4-story office building with ground level retail/restaurant, as well as the redevelopment of the adjacent Portland Square plaza, stairs, private access driveway and Cotton Street.

The proposed work will require a Maine Department of Environmental Protection Site Location of Development Permit Amendment, which requires coordination with the Maine Historic Preservation Commission. On behalf of North River IV, LLC, we are requesting a review of the project area for any known historic properties. The proposed project is not located within or adjacent to a City of Portland Historic Preservation District. A USGS topographic map has been attached for your reference.

We appreciate your review of this project. If you have any questions regarding this information or the proposed project, please do hesitate to contact me at 207-558-3763 or lswett@woodardcurran.com. Thank you for your assistance.

Sincerely,



WOODARD & CURRAN

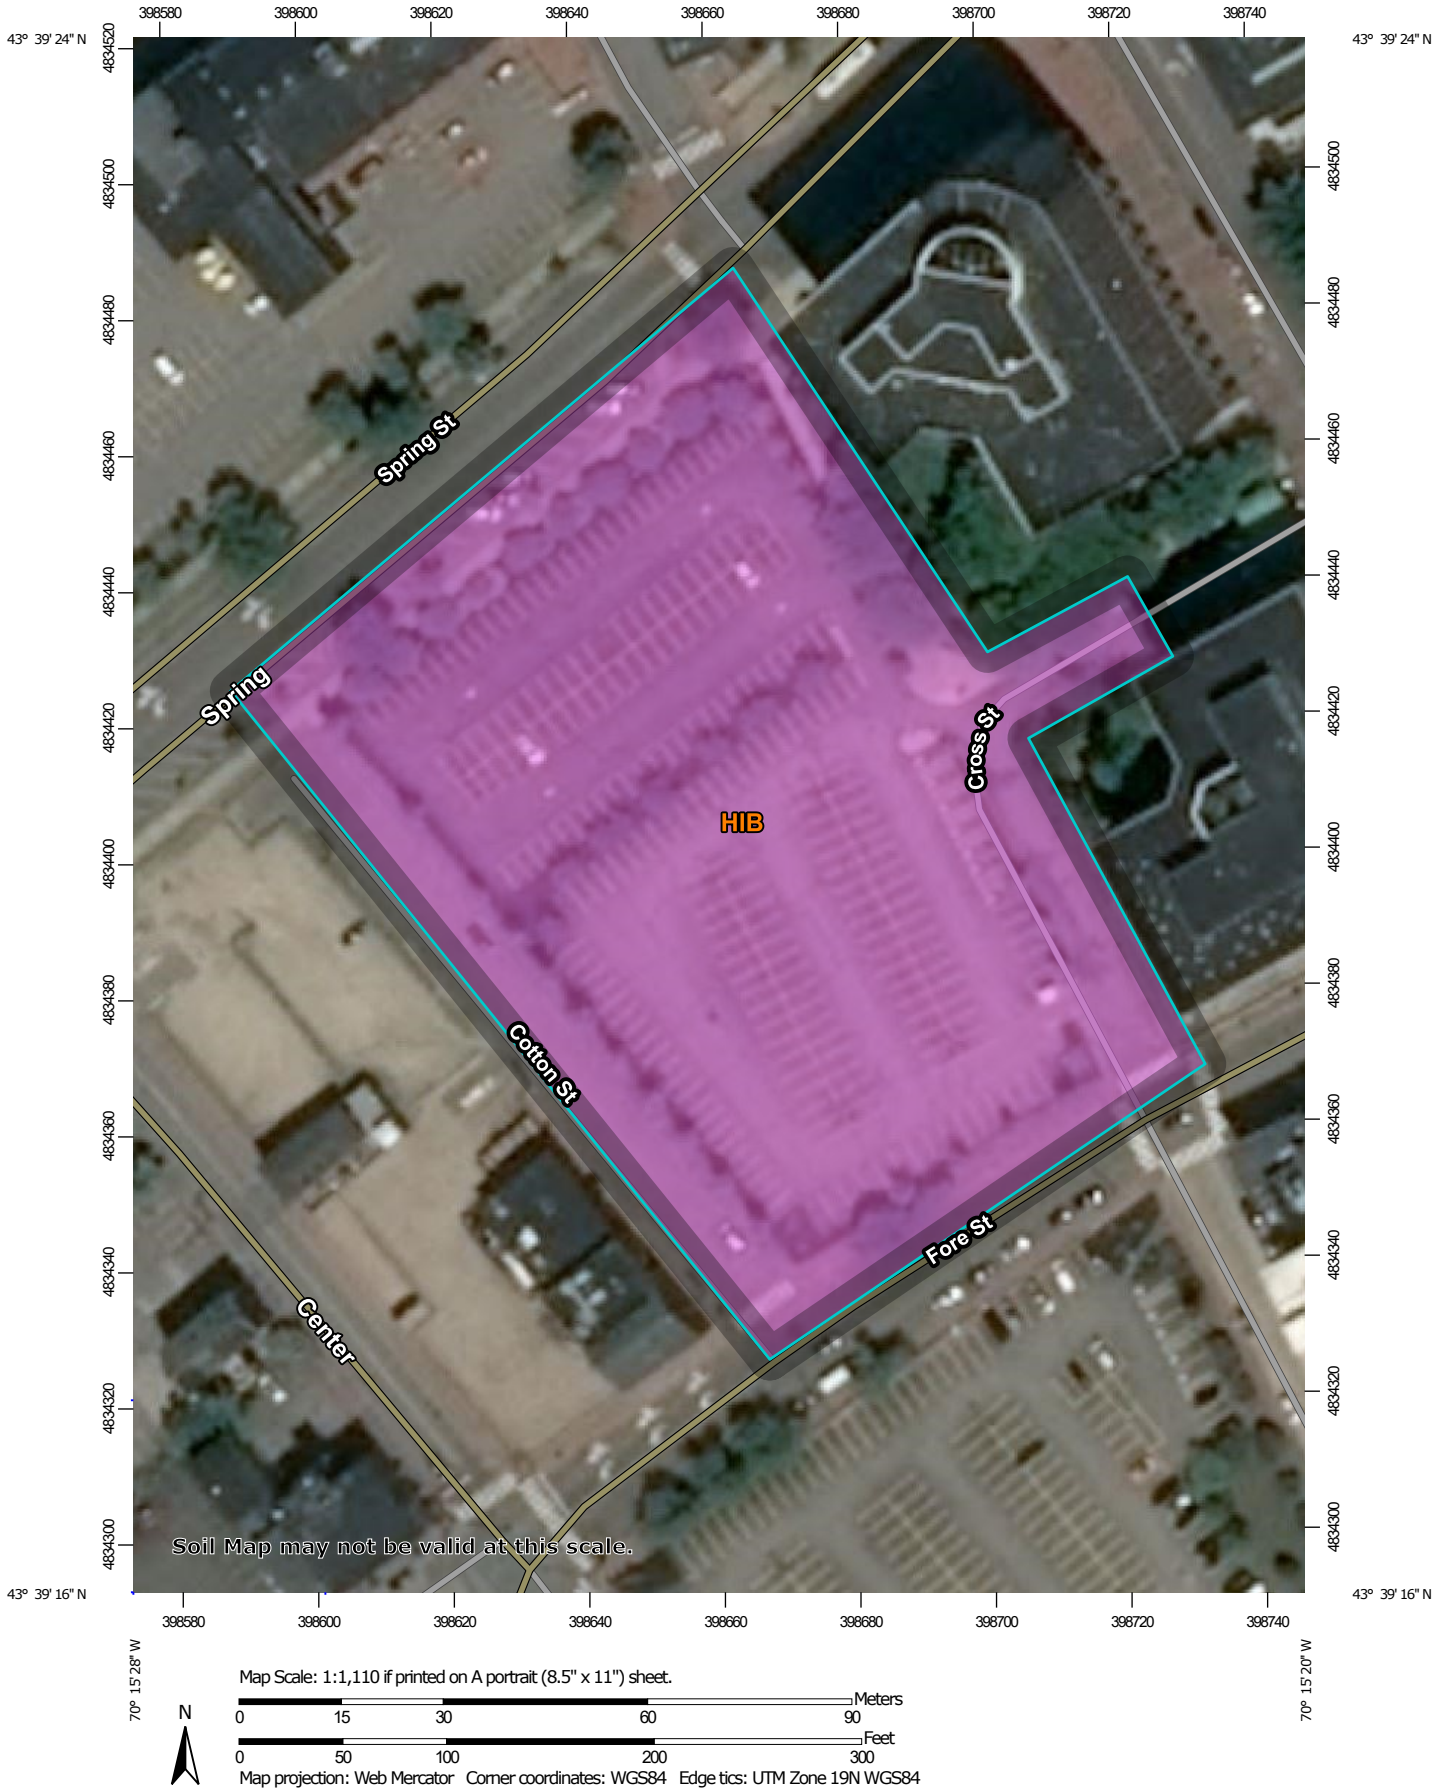
10. BUFFERS

This project is occurring entirely on previously developed land. The proposed buildings cover almost the entire site, as required per City of Portland Zoning setback requirements. Therefore, this section is not applicable.

11. SOILS

11.1 NARRATIVE

According to the Cumberland County Soil Survey, the Site contains of Hinckley Loamy Sand (HIB). This soil designation consists of gravely and sandy soil deposits.



Haley & Aldrich, Inc. performed a subsurface exploration and preliminary geotechnical engineering evaluation in December 2016, and issued the attached report entitled *Preliminary Geotechnical Evaluation – Portland Square Development.* Subsurface explorations identified the presence of 'man-placed fill soils' on site, overlying naturally-deposited marine soil, glacial till and bedrock. The subsurface explorations consisted of eighteen test borings over the Portland Square project area; nine of these test borings are within the project area of the proposed Three Portland Square development. The soils profile encountered during the test borings generally consisted of bituminous concrete overlying about 2- to 9-feet of man-placed fill, which was generally underlaid with 6- to 20-feet of marine deposit consisting of variable density clays, silts and sands, 0- to 7 feet of glacial till and weathered bedrock.

Additionally, groundwater levels were documented in each observation well and test boring. Groundwater was encountered from elevation 15.5 to 40.8.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cumberland County and Part of Oxford County, Maine
Survey Area Data: Version 16, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Data not available.

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
HIB	Hinckley loamy sand, 3 to 8 percent slopes	A	3.0	100.0%
Totals for Area of Interest			**3.0**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

12. STORMWATER

The attached Stormwater Management Plan describes the proposed stormwater management measures for the project, as shown on the design drawings attached to Section 1 of this Report. A USGS map and a soils map are attached to Section 1 and Section 11 of this Report, respectively. The Erosion and Sedimentation Control Plan for the proposed project is summarized in further detail in Section 14 of this Report.

12.1 LIST OF ATTACHMENTS

- Stormwater Management Plan (Bound Separately)

13. URBAN IMPAIRED STREAM

The proposed project is not located within the watershed of an Urban Impaired Stream; the Urban Impaired Stream standard does not apply.

14. BASIC STANDARDS

The overall goal of the Soil Erosion and Sedimentation Plan is to reduce the potential for erosion and sedimentation at the site and prevent any transportation of sedimentation down-gradient of the site. A variety of erosion control techniques will be implemented to achieve this goal. During construction, these include:

- Installation and maintenance of construction entrances at the travelled interface between stabilized and non-stabilized portions of the project site;
- Diversion barriers to keep up-gradient runoff from flowing through the active construction areas;
- Positive grades throughout the construction site to direct flow to sediment control barriers;
- Installation and maintenance of sediment barriers adjacent to and down-gradient of the construction site;
- Catch basin inlet protection devices;
- Preservation and maintenance of vegetated areas to the maximum extent possible;
- Temporary stabilization of disturbed vegetated areas to be exposed for more than seven days;
- Application of permanent seeding and mulching (or other permanent surface treatment as indicated on the drawings) applied as soon as areas achieve final grades;
- Controls for fugitive dust, debris, and other materials; and
- Inspection of all in-place measures after every significant rainfall until the site is permanently stabilized.

All measures will be implemented in accordance with the "Maine Erosion and Sedimentation Handbook for Construction: Best Management Practices". All temporary measures will be installed prior to any earthmoving operation and removed after the areas are permanently stabilized. All control measures will be maintained in an effective operating condition until the Site is permanently stabilized. Permanent erosion control measures will include vegetation and pavement. The Contractor will be responsible for implementing and maintaining all erosion and sediment control measures and conducting inspections in accordance with the attached *Stormwater Erosion & Sediment Control Inspection Report Form* (or equivalent).

Inspections shall be performed at least once a week, as well as before and after storm events. A person with knowledge of stormwater management and erosion and sediment control, including the standards and conditions in the permit, shall conduct the inspections and perform maintenance of the facilities. If maintenance or modifications are necessary, implementation will be completed within seven days and prior to any rainfall event. After construction, the responsible party for the owner will conduct inspections of the Site per the inspection and maintenance requirements outlined in Section 12 of this Report.

15. GROUNDWATER

As noted previously, a subsurface investigation has been completed, and groundwater levels were documented in each observation well and test boring. Groundwater was encountered from elevation 15.5' to 40.8'. Some construction practices such as deep foundations and dewatering activities will be required for this project. The final foundation and dewatering plan will be developed prior to construction.

16. WATER SUPPLY

The proposed development will be provided with both fire protection water service and domestic water service by the Portland Water District from mains located on Spring Street, Cotton Street and Fore Street. Proposed water service locations are shown on the Utility Plan included in the design drawings attached to Section 1 of this Report.

The project team met with representatives from Portland Water District on September 19, 2019 to review anticipated water demand and service connections for the proposed development. During this meeting, Portland Water District indicated the existing water mains on Fore Street and Cotton Street are insufficient to service the proposed development; therefore, replacement of segments of the Fore Street and Cotton Street water mains will be required. The project team will continue to coordinate the design with representatives from Portland Water District as the design progresses. A copy of the Ability to Serve Determination letter from Portland Water District will be provided upon receipt.

17. WASTEWATER DISPOSAL

Several sanitary sewer services to the buildings are proposed to connect to sewer infrastructure within Cotton Street (Office Tower), Fore Street (Fore Street Wrap) and Upper Cross Street (Parking Structure) to accommodate the various uses of the buildings. The proposed locations of the sanitary sewer services are shown on the Utility Plan included in the design drawings attached to Section 1 of this Report. Internal grease traps will be utilized if restaurant uses are proposed in the retail spaces. Drainage within covered parking areas will be collected by floor drains and directed to an oil water separator prior to discharge into the sewer main within Upper Cross Street.

A Wastewater Capacity Application will be submitted to the Portland Department of Public Works as part of the Level III Site Plan application process to request confirmation of ability to serve the proposed development. The ability to serve confirmation will be provided to the Planning Department directly by the Department of Public Works.

18. SOLID WASTE

Adequate provisions for recycling and solid waste disposal have been made. General solid waste, construction, demolition, and land-clearing debris will be managed in full accordance with all applicable laws and will not cause a deleterious effect on the environment.

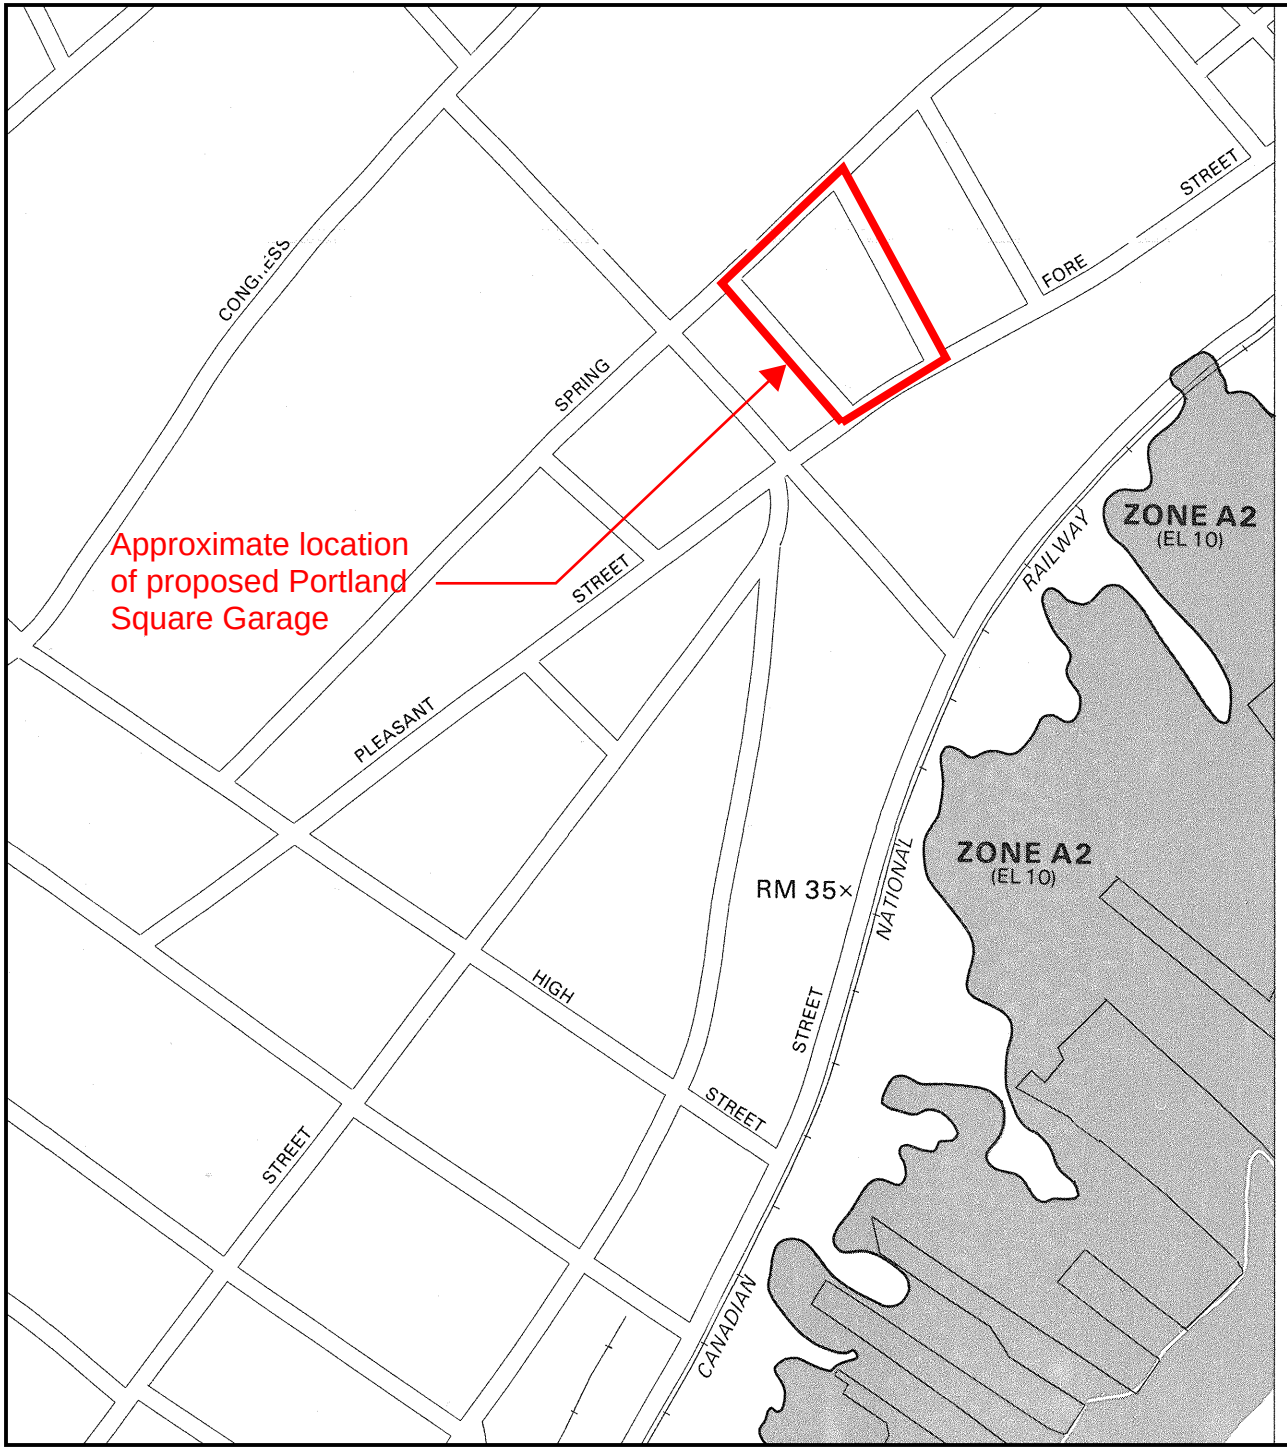
18.1 COMMERCIAL SOLID WASTE

All solid waste materials and recyclables from the proposed redevelopment project will be transported and disposed of, or recycled, in accordance with applicable laws and regulations. The proposed design includes service and loading area located between the office tower and parking structure. Access to this service and loading area will be provided via Upper Cross Street. Service will be scheduled to minimize impacts to business hours to the greatest extents practicable. A solid waste management plan with schedules for solid waste removal will be developed for the proposed building.

18.2 CONSTRUCTION & LAND CLEARING DEBRIS

As with any construction project, the proposed construction will generate construction waste and demolition debris (CDD). The contractor will be responsible for hauling the CDD or contracting with a waste management service to haul the CDD from the project site. The contractor will be fully responsible for handling, managing, and disposing of all waste generated by construction in accordance with Maine Solid Waste Management Regulations – 06-096 CMR 400-409. The contractor will be bound by contract to dispose of all materials in full accordance with all applicable local state and federal regulations. Actual waste volumes will be measured at the time of construction.

18.3 SPECIAL & HAZARDOUS WASTE



The proposed development is not anticipated to produce any hazardous waste. A previous site investigation on the Portland Square property identified the presence of typical urban fill, as is seen on redevelopment sites throughout the City. We anticipate that soils from the site may be classified as special waste and shall be handled and disposed of accordingly.

19. FLOODING

The proposed development is not located within a flood hazard zone, as shown on the FEMA Flood Insurance Rate Map attached to this Section. The proposed development will not cause or increase flooding or cause an unreasonable flood hazard to any adjacent structures. The 100-year flood plain is located off-site and is not within the viewport of the design drawings; therefore, the 100-year flood plain is not shown on the design drawings attached to Section 1 of this Report.

20. BLASTING

Some construction means and methods that may be used on this project will cause vibrations that could be transmitted through the ground to nearby buildings. Project specifications will be prepared that require the contractor to conduct pre-construction surveys prior to the start of potential vibration causing activities, the following will occur. The pre-construction survey(s) will be used to review and document existing building conditions. Site demolition and removals, installation/removal of temporary earth support systems, excavation, vibratory compaction and foundation construction will be completed on this project. If deemed necessary, ground vibrations will be monitored at nearby buildings and used to confirm that measured vibrations are below the maximum permissible that are required by the specifications.

The proposed buildings have been sited and designed to avoid impacts to bedrock. If bedrock is encountered during construction and blasting is required, the specifications will require that the contractor prepare and submit a blasting plan for review for compliance with all project-specific, local, state and federal requirements and regulations. A pre-construction meeting will be planned with abutting property owners to generally discuss construction means and methods that could cause vibrations.

21. AIR EMISSIONS

The project is not a commercial, industrial or institutional development that will require an air emissions license, so this section is not applicable.

22. ODORS

The proposed development will not involve any processes that emit significant odors; this section is not applicable.

23. WATER VAPOR

The proposed development will not use water for any processes that would emit water vapor; this section is not applicable.

24. SUNLIGHT

The proposed development will not block any access to sunlight for any structures utilizing solar energy; this section is not applicable.

25. PUBLIC NOTICE EVIDENCE

The City of Portland has Delegated Review Authority for the proposed project; it is our understanding that the Applicant is not required to complete their own Public Notice, and that the City will issue a Public Notice as part of their internal permit process.

Subject: Preliminary Geotechnical Evaluation
Portland Square Development
Portland, Maine

Ladies and Gentlemen:

This report presents the results of previous and recent subsurface exploration programs and preliminary geotechnical engineering evaluations including a discussion of how the subsurface conditions may impact the proposed development. This work was undertaken at your request and in accordance with our proposal, dated 20 September 2016, and your subsequent authorization.

Elevations

Elevations referenced herein are in feet and reference Portland City Datum (PCD). PCD relates to the National Geodetic Vertical Datum of 1929 (NGVD 29) as follows:

Elevation in ft (PCD) = Elevation in ft (NGVD 29) + 0.02 ft

Site Location, Existing Site Conditions and Historic Site Development

The Portland Square Development project is located on roughly two city blocks in downtown Portland that are generally bound by Commercial Street to the east, Center Street to the south, Spring Street to the west and Cross Street to the north as shown on Figure 1, Project Locus.

The Portland Square Parking Lot (Upper Lot) is generally bound by Spring Street to the west, Cotton Street to the south, Fore Street to the east and the One/Two Portland Square properties to the north. The site is currently being used as a commercial, at-grade (surface) parking facility. Existing site grades generally slope down from Center Street (west) to Fore Street (east) from approximately El. 52 to El. 28.

The Fore Street Parking Lot (Lower Lot) is generally bound by Fore Street to the west, Center Street to the south, Commercial Street to the east and Cross Street to the north. The existing Richardson Wharf Building is located in the northeast corner of the site adjacent to Commercial Street and is not part of the development project. Like the Upper Lot, the Lower Lot is currently being used as a commercial, surface parking facility. Existing site grades generally slope down from Fore Street (west) to Commercial Street (east) from approximately El. 28 to El. 10.

Based on our review of Historical Sanborn maps of the site (Upper and Lower Lots), it appears that each Lot contained multiple structures (buildings) between approximately 1886 and 1980. In general, the structures consisted of residential buildings or those that housed industrial, commercial or manufacturing facilities (e.g., blacksmith, machine, metal and wood shops) as well as ice houses and lumber yards. Each Lot became essentially vacant of above-grade structures between 1980 and 1986. Historical Sanborn Maps of the Lots are provided for informational purposes in Appendix D.

Based on our discussions with the project team and our review of preliminary master plans for the Upper and Lower Lots (see Appendix E) provided by Winton Scott Architects (WSA) dated August 2016 (Upper Lot) and June 2016 (Lower Lot), it is our understanding that the proposed site improvements generally include construction of an urban infill, mixed-use development consisting of a combination of commercial office, retail and residential space with multiple levels of parking (both at and below grade). It is also our understanding that the development will likely be constructed in multiple phases. Please note that the specific plan layout and finish floor slab levels of the proposed structures have not yet been finalized.

Our current understanding of the proposed development on the Upper Lot includes the following general elements:

- Office Building 1: 6-story tower on top of 5 levels of structured parking, 109,980 square feet (sf)
- Office Building 2: 6-story tower on top of 5 levels of structured parking, 100,400 sf

Below grade parking is currently planned beneath the footprint of Office Buildings 1 and 2. The elevation of the lowest parking level is currently planned at El. 29, approximately 23 ft below existing site grades along Center Street. Access to/from the below grade parking area is planned off Cotton Street. Ground floor retail/restaurant space is planned along Fore Street.

Our current understanding of the proposed development on the Lower Lot includes the following general elements:

- Building 3: 3-story tower above 4-levels of structured parking with some retail and residential space, 61,433 sf
- Buildings 4 and 5: 4-story residential towers above 1-level retail and 2- levels of structured parking
- Building 6: 6-story hotel

Below grade parking is currently planned beneath the footprint of the Buildings 3, 4, 5 and a portion of Building 6. The elevation of the lowest parking level (Ground Level) is currently planned at El. 6.42, approximately 22 to 26 ft below existing site grades adjacent to Fore Street. Access to/from Level 1 of the below grade parking area is planned off Cross Street as site grades at Cross Street on the north side of this portion of the site roughly match the proposed Level 1slab elevation (i.e., El. 16.92). The Ground Level parking area will be accessed by the ramp from Level 1 inside of the garage.

In addition to the proposed buildings summarized above, additional site improvements will likely include stormwater management, site roadways and supporting utility infrastructure needed to service the planned development. The details of these site improvements, including proposed site grading have not yet been developed.

Subsurface Exploration Programs

Multiple subsurface exploration programs have been undertaken at and adjacent to the site. Test borings were drilled by Haley & Aldrich in the vicinity of the site for design and construction of One and Two Portland Square, Canal Plaza and the Porteous Warehouse Development (bound by Commercial Street, York Street and Foundry Lane, located south of the Fore Street parking lot, across Center Street). In addition, test borings were drilled under the supervision/direction of Haley & Aldrich in 1985 and 1987 for preliminary geotechnical and phase I/II environmental site assessments completed on both the Upper Lot and Lower Lot sites. Additionally, and most recently, due diligence and preliminary phase geotechnical subsurface exploration programs for the subject project were completed by Haley & Aldrich in 2015 and 2016, respectively.

The approximate locations of relevant test borings are shown on Figures 2 and 3, Site and Subsurface Exploration Location Plans and test boring logs are provided in Appendix A.

2015 DUE DILIGENCE PHASE EXPLORATION PROGRAM

Haley & Aldrich completed a subsurface exploration program consisting of four test borings, designated HA15-1(OW) through HA15-4(OW), within the limits of the Upper and Lower Lots. “As-drilled” test boring locations were determined in the field by Haley & Aldrich by taping distances from existing site features upon the completion of drilling.

The test borings were drilled by New England Boring Contractors (NEBC) of Hermon, Maine during the period 10 to 12 August 2015. The test borings were advanced through overburden soils and terminated in/on bedrock at depths ranging from approximately 18 to 30 ft BGS using a Mobile Drill B-53 truck-mounted drill rig and 3-in. outside diameter (OD; NW size) steel casing.

Soil samples were generally collected continuously through man-placed fill soils and at standard, 5-ft intervals in naturally-deposited soils, by driving a 1-3/8-in. inside diameter (ID) split-spoon sampler with a 140-lb hammer dropped from a height of 30 in., as indicated on the test boring logs. The number of hammer blows required to advance the sampler through each 6-in. interval was recorded and is

provided on the logs. The uncorrected SPT N-value (N-uncorrected) is defined as the total number of blows required to advance the sampler through the middle 12 in. of the 24-in. sampling interval (24-in. long split-spoon sampler).

A photoionization detector (PID) was used in the field to screen for the presence of volatile organic compounds (VOCs) in the recovered man-placed fill soil samples. Elevated PID readings were recorded on individual test boring logs provided in Appendix A of this report.

Approximately 4.5 ft of bedrock was sampled in test boring HA15-1(OW) using a 2.0-in. (NQ-size) ID diamond-tipped core barrel.

Observation wells were installed in each of the completed boreholes to provide information on the static groundwater level at the sites. The observation wells consisted of 1-in. ID, machine-slotted PVC well screen and solid PVC riser pipe cut just below existing ground surface. Each observation well was outfitted with a flush-mounted steel roadway box. Observation well installation and groundwater monitoring reports are provided in Appendix B.

A Haley & Aldrich engineer was present on site to monitor the explorations and document the soil, rock, and groundwater conditions encountered in the explorations and prepare test boring logs. All soil and rock samples were collected and preserved in glass jars and wooden boxes. All soil and bedrock samples are available for review upon request. The available soil and bedrock samples are currently being stored at the Haley & Aldrich laboratory facility in Portland, Maine.

2016 PRELIMINARY PHASE EXPLORATION PROGRAM

Haley & Aldrich completed a preliminary subsurface exploration program consisting of 18 test borings, designated HA16-1 through HA16-18 within the limits of the Upper (HA16-1 through HA16-9) and Lower Lots (HA16-10 through HA16-18). “As-drilled” test boring locations were determined in the field by Haley & Aldrich by taping distances from existing site features upon the completion of drilling.

The test borings were drilled by New England Boring Contractors (NEBC) of Londonderry, New Hampshire under contract with Woodard & Curran (WC; project environmental consultant) during the period 3 to 17 October 2016. In general, the test borings were advanced through overburden soils and terminated in/on bedrock at depths ranging from approximately 15 to 43 ft below ground surface (BGS) using a Acker Drill AD-II truck-mounted drill rig and 4-in. outside diameter (OD; HW size) steel casing.

Soil samples were generally collected continuously through man-placed fill soils and at standard, 5-ft intervals in naturally-deposited soils, by driving a 1-3/8-in. inside diameter (ID) split-spoon sampler with a 140-lb hammer dropped from a height of 30 in., as indicated on the test boring logs. The number of hammer blows required to advance the sampler through each 6-in. interval was recorded and is provided on the logs. The uncorrected SPT N-value (N-uncorrected) is defined as the total number of blows required to advance the sampler through the middle 12 in. of the 24-in. sampling interval (24-in. long split-spoon sampler).

A photoionization detector (PID) was used by WC personnel in the field to screen for the presence of volatile organic compounds (VOCs) in the man-placed fill soil samples recovered from select test borings.

Approximately 5 to 7 ft of bedrock was sampled (cored) in each test boring except HA16-5, HA16-9, HA16-11, HA16-12 and HA16-16. Bedrock samples were collected using a 1.875-in. (NX-size) ID diamond-tipped core barrel.

A Haley & Aldrich geologist was present on site to monitor the explorations and document the soil, rock, and groundwater conditions encountered in the explorations and prepare test boring logs. All soil and rock samples were collected and preserved in glass jars and wooden boxes. All soil and bedrock samples are available for review upon request. The available soil and bedrock samples are currently being stored at the Haley & Aldrich laboratory facility in Portland, Maine.

Subsurface Conditions

The subsurface conditions encountered at the site consist of man-placed fill soils overlying multiple naturally-deposited geologic units. Additional details are provided on the test boring logs included in Appendix A. In addition, a summary of the soil units and thicknesses encountered within each test boring that was completed under the direction of Haley & Aldrich during the 2015 (due diligence phase) and 2016 (preliminary phase) subsurface exploration programs is provided on Table I. Please refer to subsurface profiles shown on Figures 4-6 for a graphical representation of the soil conditions across the sites (Upper and Lower Lots). A general description of soil, bedrock and groundwater conditions encountered in the due diligence and preliminary phase test borings are provided separately, below.

Please note that soil descriptions provided on the test boring logs do not represent actual field conditions other than at the specific test boring locations. Actual conditions encountered between test boring locations may vary from those described herein and shown in Table I and Figures 4-6.

Geologic Unit	Approximate Encountered Thickness (ft)	Generalized Description
Man-Placed Fill	2 to 24 (2 to 9 within Upper Lot and 12 to 24 within Lower Lot)	Loose to very dense poorly-graded SAND with variable amounts of silt (SP, SP-SM), silty SAND with variable amounts of gravel (SM), poorly-graded gravel with variable amounts of sand (GP), well graded SAND with variable amounts of silt and gravel (SW, SW-SM), well graded GRAVEL with sand (GW) and medium stiff to hard SILT (ML) with variable amounts of sand and gravel. Portions of the layer contained shell, organic, wood, concrete, brick, ceramic, glass, coal, slag, ash, rubber, and leather fragments. 1 to 5-ft thick layers of wood or concrete were encountered in test borings HA16-11, HA16-12 and HA16-16 through HA16-18. A strong petroleum-like odor was noted within the layer between approximately 3 and 12 ft BGS in test boring HA16-13. *(encountered in each test boring)*
Marine Deposit	0 to 20	very soft to hard SILT (ML) and CLAY (CL) with variable amounts of or interbedded with poorly-graded SAND (SP) or silty SAND with gravel (SM) and very loose to very dense silty SAND with variable amounts of gravel or lean clay (SM) and well graded GRAVEL with variable amounts of silt and sand (GW, GW-GM) (*encountered in each test boring except HA16-16 and HA16-18*)
Glacial Till	0 to 8	very dense well graded SAND with gravel (SW) (*encountered in test borings HA15-1(OW) through HA15-4(OW), HA16-1, HA16-8 and HA16-13*)
Bedrock	moderately hard to hard, fresh to highly weathered PHYLLITE and QUARTZITE. Up to 7 ft of weathered bedrock was encountered overlying more competent material at some test boring locations. Top of bedrock surface encountered in each test boring is shown on Figures 2 and 3 and graphically on Figures 4 and 5. *(sampled/cored in each test boring except HA15-1(OW) through HA15-4(OW), HA16-5, HA16-9, HA16-11, HA16-12 and HA16-16)*	

GROUNDWATER CONDITIONS

Observation wells were installed in each of the due diligence phase boreholes (i.e., HA15-1 through HA15-4). The observation wells were installed to provide information on the static groundwater level at the site and to determine whether the groundwater levels are affected by tidal fluctuations in nearby Fore River.

Beginning on 17 June 2016 downhole pressure transducers were installed in observation wells HA15-2(OW) and HA15-4(OW) and were programmed to record the groundwater level once every 15 minutes. The transducers were removed and data were downloaded on 6 December 2016. Observation well installation reports are provided in Appendix C and a graphical representation of the measured groundwater levels during the period 17 June to 6 December 2016 are provided for reference in Figure 8.

In addition, water levels were measured in the 1985, 1987 and 2016 boreholes upon the completion of drilling. It should be noted that the drilling means and methods used (HSAs; no water added during advancement of the boreholes) to drill the test borings likely did not significantly influence the static water levels. However, steel casing and drilling fluid (water) was used to drill the 2016 test borings. Therefore, it is our opinion that the measurements in the 1985 and 1987 test borings provide reasonable estimates of groundwater levels across the sites for this preliminary phase of the project.

The measured water levels in each observation well and test boring are summarized below. Static groundwater levels at each observation well and test boring location is also shown on Figures 2 and 3.

Site	Approximate Range in Ground Surface Elevation (ft, PCD)	Deepest Proposed Ground Floor Elevation (Approximate Bottom of Excavation)	Approximate Range in Water Level Elevation (ft, PCD)
Upper Lot	El. 52 (upper) to El. 28 (lower)	El. 29 (El. 26)	El. 40 (upper) to El. 16 (lower)
Lower Lot	El. 32 (upper) to El. 10 (lower)	El. 8.4 to El. 6.4 (upper) to El. 11 to El. 15 (lower) (El. 3.4 upper to El. 12 lower)	El. 16 to El. 18 (upper) to El. 4 to 5 (lower)

Based on the measured water levels summarized above and our understanding of the proposed FFEs for structures on the Upper and Lower Lots, we offer the following:

- Upper Lot:
  - Water levels could be 1 to 11 ft (approximate) above the FFE within the upper half of the site.
  - Water levels could be 5 to 13 ft (approximate) below the FFE within the lower half of the site.

- Lower Lot:
  - Water levels could be up to 12 ft (approximate) above the FFE within the upper half of the site.
  - Water levels could be in excess of 3 ft below the FFE within the lower half of the site.

Based on the water level readings measured in observation well HA15-4(OW) (adjacent to Commercial Street) it appears that the static water levels measured are not influenced by tidal fluctuations in the nearby Fore River.

In general, water levels may fluctuate with season, precipitation, local soil/bedrock conditions, excavation means and methods, temperature and tidal conditions. Therefore, water levels may vary from those summarized above, provided on the testing boring logs included in Appendix A and shown on Figures 2, 3 and 7.

Geotechnical Laboratory Testing

A geotechnical laboratory testing program was undertaken on representative soil samples collected during the 2016 subsurface exploration program to aid in soil classification and evaluation of reuse potential. The laboratory testing program consisted of 16 grain size analyses. All laboratory testing was performed in accordance with applicable American Society for Testing Materials (ASTM) testing procedures by GeoTesting Express of Acton, Massachusetts.

A summary of laboratory testing is summarized below and actual laboratory test results are provided in Appendix B.

Soil Unit	No. of Tests	Generalized Descriptions
Fill	6	clayey SAND with gravel, silty SAND with gravel, GRAVEL with silt and sand
Marine Deposit	10	CLAY with varying amounts of sand and gravel, sandy SILT, clayey SAND with gravel, silty SAND with varying amounts of gravel

Impacts of Subsurface Conditions on Proposed Development

Based on the subsurface conditions encountered in the 1985/1987 and 2015 and 2016 test borings completed by Haley & Aldrich and our current understanding of the project, we have the following general geotechnical "observations" regarding future development of the Upper (Portland Square) and Lower (Fore Street) Lots.

Please refer to Figures 4 and 5, Subsurface Profiles, for a graphical representation of the soil conditions across the site. Proposed building ground floor slab levels are shown on the profiles along with proposed finish floor elevations and anticipated bottom of excavation needed to construct the building foundation systems.

- Due to the historic presence of structures on each site, as shown on the historic Sanborn maps included in Appendix D, and layers of concrete and wood and miscellaneous debris encountered within the man-placed fill soils during our due diligence and preliminary phase subsurface investigations, it is likely that demolition debris and/or abandoned building foundations or other obstructions will be encountered during construction (excavation and foundation installation/construction). These potential obstructions may include, but are not limited to granite blocks, wood piles, concrete slabs, railroad rails, footings, pile caps, foundation walls and grade beams.

- Based on the elevation of the top of bedrock as compared to the planned finish floor elevation of the lowest floor slabs, we anticipate that up to approximately 13 ft of rock removal will be required in the upper portion of the Upper Lot to construct the building foundations and lowest level floor slab. We do not anticipate rock removal to be needed to construct the building foundations and lowest level floor slab in the lower portion of the Upper Lot or in the Lower Lot.

- Due to the proximity of the water table to the planned finish floor elevation of the lowest floor slab in the upper portion of both the Upper and Lower Lots, we anticipate that either a foundation drainage system or a membrane waterproofing system will be need to protect the below grade portions of the buildings from water infiltration and would be designed to resist hydrostatic pressures. The foundation drainage system would likely consist of a network of perimeter and underslab drains that ideally would connect by gravity to an existing or proposed storm drain system at the site. The membrane waterproofing system would likely be needed on the below grade portions of foundation walls and below slabs/mats. The feasibility of both options should be evaluated during the design phase of the project. The use of vapor barriers beneath the lowest level floor slab in residential and retail spaces will likely be needed.

- Due to the relatively shallow depth of the top of bedrock as compared to the planned finish floor elevation of the lowest floor slab, we estimate that structures occupying the upper one-half (approximate) of the Upper Lot could be supported by shallow, spread footing or mat foundations bearing on bedrock.

- Due to the presence and compressible nature of the man-placed fill and marine silt/clay soils present within some portions of the site, we estimate that structures occupying the lower one-half (approximate) of the Upper Lot and the entirety of the Lower Lot would likely need to be supported by deep foundations (i.e., driven piles or drilled shafts) or on shallow, spread footing foundations bearing in improved ground. Possible ground improvement technologies appropriate for the site and subsurface conditions are aggregate piers (APs), grouted aggregate piers (GAPs) and geo-concrete columns (GCCs). Additional evaluations are required to further explore the technical feasibility and cost of these systems. Depending on the magnitude of actual column loads, it may be possible to support some of the buildings on the lower portion of the Upper Lot on shallow footing or mat foundations. Detailed evaluations will be needed as well as interaction with the Structural Engineer to evaluate this.

- Considering that existing site grades will not be raised (except for Building 6), and in some cases lowered, we anticipate that the lowest level floor slab for most, if not all of the buildings could be designed and constructed as a soil-supported, slabs-on-grade.

- Based on the subsurface conditions present at the sites and the seismic requirements of the latest edition of the International Building Code (IBC), it is likely that buildings would have to be designed in accordance with a "Site Class D" classification. A more rigorous evaluation will be conducted during the design phase once the locations and FFE's of the buildings are finalized.

- Temporary support of excavation systems will be required to construct the below grade portions of the buildings on the upper portion of both the Upper and Lower Lots. Based on planned FFE's of the buildings and existing site grades we anticipate that a drilled-in soldier pile and lagging system with internal and/or external bracing will be the most cost effective system. Additional evaluations will be required during the design phase to determine the technical feasibility of different systems and their design requirements.

Please note that additional explorations and analyses should be conducted during future phases of the project to verify the accuracy of these observations as they relate to future site development plans.

Recommendations for Future Work

There are several items that require additional evaluation and consideration during the preliminary and final design, and contract document preparation phases of the project. These items are summarized below.

- Additional subsurface explorations within the Upper and Lower Lots may be required in order to:
  - Better define the top of bedrock surface for more accurate determination of quantities that will require removal during construction.

  - Determine the limits of where shallow foundations can be used to support the proposed structures and also to determine where building foundation bearing conditions and type will change.
  - Collect rock samples for laboratory testing and determination of engineering properties needed to design temporary lateral earth support systems and drilled shaft building foundations bearing in/on bedrock (especially if design column loads require the foundations to resist axial uplift and lateral forces)

- Evaluation of the use of ground improvement techniques and shallow, spread footing foundations in lieu of a deep foundation system across a portion of the proposed building footprints.

- Evaluations to determine final foundation support requirements for the buildings.

- Development of geotechnical specifications such as earthwork, rock removal/blasting (if used), temporary lateral earth support, dewatering, driven/drilled pile installation and testing (if used) and ground improvement (if used) will be required.

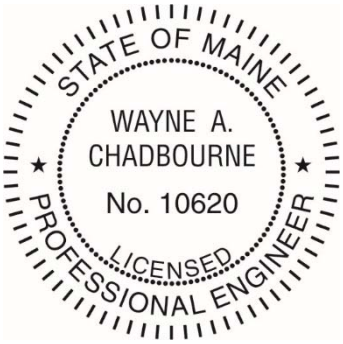
- Additional groundwater data is needed determine the most cost effective, technically feasible system to protect the below grade spaces.

- Evaluations to determine the most cost effective temporary support of excavation system for both the Upper and Lower Lots.

Limitations of Recommendations

This memorandum is prepared for the exclusive use of WSA relative to the Portland Square Development in Portland, Maine. There are no intended beneficiaries other than WSA. Haley & Aldrich shall owe no duty whatsoever to any other person or entity on account of the Agreement or the memorandum. Use of this memorandum by any person or entity other than of WSA for any purpose whatsoever is expressly forbidden unless such other person or entity obtains written authorization from WSA and from Haley & Aldrich. Use of this memorandum by such other person or entity without the written authorization WSA and Haley & Aldrich shall be at such other person's or entities sole risk, and shall be without legal exposure or liability to Haley & Aldrich.

Use of this memorandum by any person or entity, including by WSA, for a purpose other than relative to the Portland Square Development in Portland, Maine is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the memorandum is adequate for such other use. Use of this memorandum by any other person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entities sole risk, and shall be without legal exposure or liability to Haley & Aldrich.



The information provided herein is based, in part, upon the data obtained from the referenced subsurface explorations. The nature and extent of variations between explorations may not become evident until construction. If variations then appear, it may be necessary to reevaluate the recommendations of this memorandum.

Closure

We greatly appreciate the opportunity to provide preliminary level geotechnical engineering consulting services on this project and trust this meets your present needs. We look forward to our continued association with you through preliminary and final design, construction document preparation, and construction. Please do not hesitate to contact us if you require additional information or have questions regarding any of the information provided herein.

Sincerely yours,
HALEY & ALDRICH, INC.

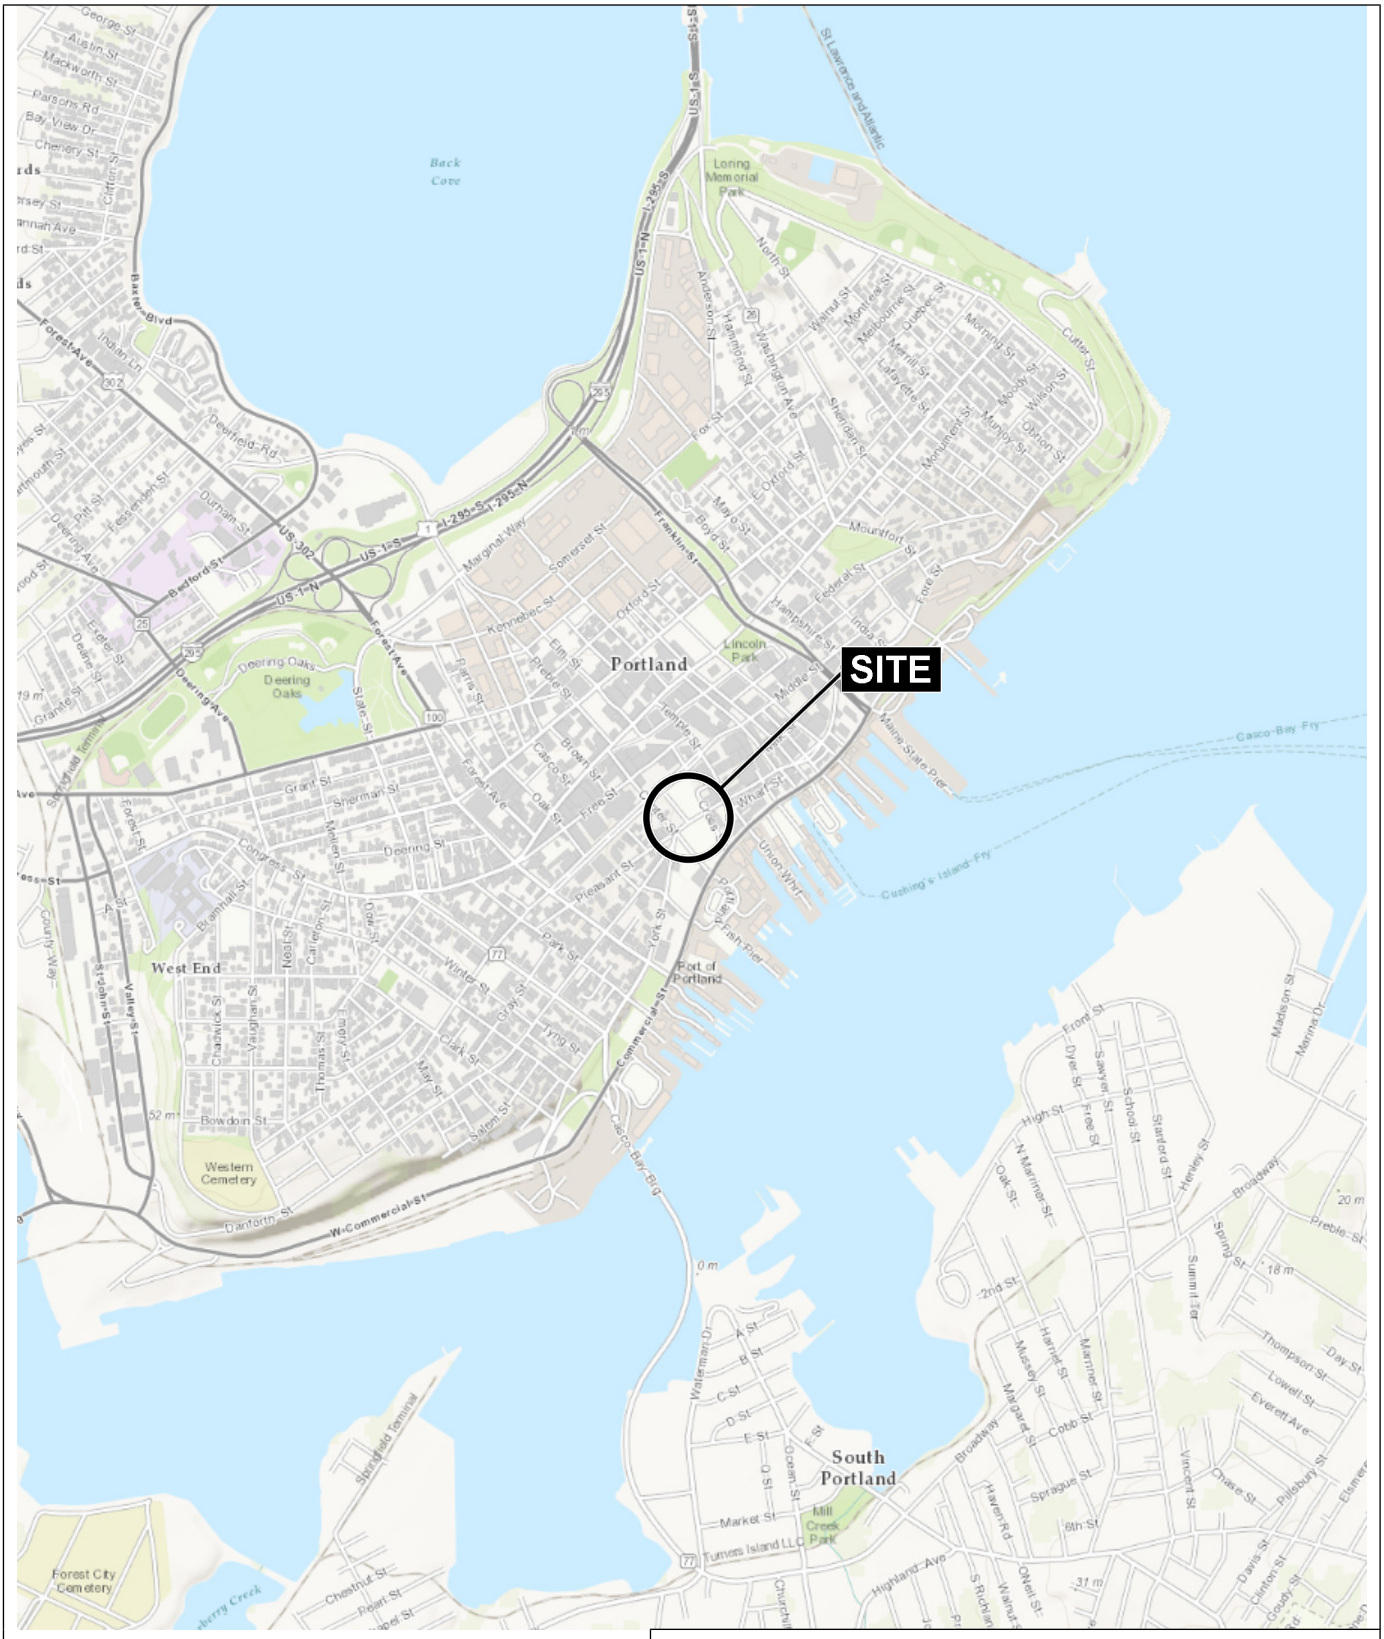
Notes:

[1] Test boring locations are shown on Figures 2 and 3, Site and Subsurface Exploration Location Plans.

[2] Ground surface elevations were determined by Haley & Aldrich, Inc. by interpolating between existing topographic contour information.

[3] Elevations are measured in feet and reference Portland City Datum.



[4] "NE" indicates stratum was not encountered in test boring.

[5] "--" indicates test boring was not drilled deep enough to determine presence of stratum.

[6] "> 2.0" indicates test boring was not drilled deep enough to determine full thickness of stratum, which is greater than the value shown.

[7] Top of bedrock in test borings HA15-1(OW) through HA15-4(OW), HA16-5, HA16-9 and HA16-16 determined based on drill action and observation of wash water contents, coring/sampling not conducted.

NOTES

1. EXISTING SITE CONDITIONS, CONTOURS OF EXISTING GROUND SURFACE ELEVATIONS AND THE LOCATION AND ORIENTATION OF EXISTING AND PROPOSED SITE FEATURES ARE TAKEN FROM THE ELECTRONIC AUTOCAD FILE ENTITLED, "S1.1 L2 and L3.dwg." PROVIDED TO HALEY & ALDRICH, INC. BY WINTON SCOTT ARCHITECTS ON 4 AUGUST 2015.
2. THE PLAN LOCATION OF HISTORIC SUBSURFACE EXPLORATIONS IS APPROXIMATE AND WAS DETERMINED BY OVERLAYING HISTORIC TEST BORING LOCATION PLANS ON TO THE EXISTING CONDITIONS PLAN AND SHOULD BE CONSIDERED APPROXIMATE.
3. 2015 AND 2016 TEST BORING LOCATIONS SHOWN ARE APPROXIMATE AND WERE ESTIMATED BY HALEY & ALDRICH BY TAPING/PACING DISTANCES FROM EXISTING SITE FEATURES.
4. LIMITS AND PLAN LOCATION OF PROPOSED STRUCTURES TAKEN FROM PRELIMINARY CONCEPTUAL MASTER PLANS PROPOSED BY WINTON SCOTT ARCHITECTS DATED 21 AUGUST 2016 (SEE APPENDIX E).

LEGEND:

DESIGNATION AND APPROXIMATE LOCATION OF TEST BORING DRILLED UNDER THE DIRECTION OF HALEY & ALDRICH, INC. IN 1985, 1987, 2015 AND 2016

APPROXIMATE GROUND SURFACE ELEVATION AT TEST BORING LOCATION DETERMINED BY INTERPOLATING BETWEEN ELEVATION CONTOURS

APPROXIMATE PERPENDICULAR OFFSET DISTANCE AND DIRECTION MEASURED FROM THE SUBSURFACE PROFILE LINE

STANDARD PENETRATION TEST (SPT) N-VALUE (BLOWS PER FOOT); WOR = WEIGHT OF RODS; WOH = WEIGHT OF HAMMER

PERCENT RECOVERY
PERCENT ROCK QUALITY DESIGNATION (RQD)

DENOTES SPLIT-SPOON OR AUGER REFUSAL ENCOUNTERED, JUDGED TO BE BEDROCK

GROUNDWATER LEVEL MEASURED IN COMPLETED BOREHOLE OR OBSERVATION WELL ON DATE SPECIFIED

DENOTES OBSERVATION WELL INSTALLED IN COMPLETED BOREHOLE

NOTES:

1. SEE FIGURES 2 AND 3 FOR LOCATION AND ORIENTATION OF SUBSURFACE PROFILES.
2. EXISTING GROUND SURFACE ELEVATIONS AT TEST BORING LOCATIONS ARE APPROXIMATE AND WERE DETERMINED BY INTERPOLATION USING TOPOGRAPHIC CONTOUR INFORMATION PROVIDED BY WINTON SCOTT ARCHITECTS IN THE ELECTRONIC AUTOCAD FILE ENTITLED, "S1.1 L2 AND L3.dwg," ON 4 AUGUST 2015.
3. EXISTING AND PROPOSED SITE FEATURES AND CONTOURS OF EXISTING GROUND SURFACE ELEVATIONS ARE TAKEN FROM THE ELECTRONIC AUTOCAD FILE ENTITLED, "S1.1 L2 AND L3.dwg," PROVIDED BY WINTON SCOTT ARCHITECTS ON 4 AUGUST 2015.
4. LINES REPRESENTING CHANGES IN STRATA SHOWN ON THE SUBSURFACE PROFILES ARE BASED ON LINEAR INTERPOLATION BETWEEN SUBSURFACE EXPLORATIONS. THESE INTERPRETED STRATA LINES DO NOT REPRESENT ACTUAL FIELD CONDITIONS OTHER THAN AT SPECIFIC EXPLORATION LOCATIONS.
5. LOCATIONS OF THE 1958, 1987, 2015 AND 2016 TEST BORINGS ARE APPROXIMATE AND WERE DETERMINED IN THE FIELD BY TAPING/PACING DISTANCES FROM EXISTING SITE FEATURES.
6. ELEVATIONS ARE IN FEET AND REFERENCE PORTLAND CITY DATUM.
7. REFER TO APPENDIX A FOR LOGS OF THE 1985, 1987, 2015 AND 2016 TEST BORINGS COMPLETED UNDER THE DIRECTION OF HALEY & ALDRICH, INC.

RE: Portland Square Development, Portland, ME (GTX-305581)

Dear Bryan:

Enclosed are the test results you requested for the above referenced project. GeoTesting Express, Inc. (GTX) received 16 samples from you on 11/4/2016. These samples were labeled as follows:

Boring	Sample	Depth
HA16-1	S1 + S2	1.0-5.0 ft
HA16-1	S3	5.0-7.0 ft
HA16-1	S4	10.0-12.0 ft
HA16-2	S4	9.0-11.0 ft
HA16-3	S2 + S3	3.0-7.0 ft
HA16-4	S1 + S2	1.0-3.5 ft
HA16-4	S3	5.0-7.0 ft
HA16-4	S4	10.0-12.0 ft
HA16-5	S4	10.0-12.0 ft
HA16-7	S2 + S3	3.0-7.0 ft
HA16-7	S5	15.0-17.0 ft
HA16-8	S5	15.0-17.0 ft
HA16-10	S2 + S3	3.0-7.0 ft
HA16-11	S2	3.0-4.9 ft
HA16-11	S5 + S6	10.5-14.5 ft
HA16-13	S2	3.0-5.0 ft

GTX performed the following test on each of these samples:

ASTM D422 - Grain Size Analysis - Sieve Only

A copy of your test request is attached.

The results presented in this report apply only to the items tested. This report shall not be reproduced except in full, without written approval from GeoTesting Express. The remainder of these samples will be retained for a period of sixty (60) days and will then be discarded unless otherwise notified by you. Please call me if you have any questions or require additional information. Thank you for allowing GeoTesting Express the opportunity of providing you with testing services. We look forward to working with you again in the future.

Respectfully yours,

Jonathan Campbell
Assistant Laboratory Manager

GeoTesting EXPRESS

WARRANTY and LIABILITY

GeoTesting Express (GTX) warrants that all tests it performs are run in general accordance with the specified test procedures and accepted industry practice. GTX will correct or repeat any test that does not comply with this warranty. GTX has no specific knowledge as to conditioning, origin, sampling procedure or intended use of the material.

GTX may report engineering parameters that require us to interpret the test data. Such parameters are determined using accepted engineering procedures. However, GTX does not warrant that these parameters accurately reflect the true engineering properties of the *in situ* material. Responsibility for interpretation and use of the test data and these parameters for engineering and/or construction purposes rests solely with the user and not with GTX or any of its employees.

GTX's liability will be limited to correcting or repeating a test which fails our warranty. GTX's liability for damages to the Purchaser of testing services for any cause whatsoever shall be limited to the amount GTX received for the testing services. GTX will not be liable for any damages, or for any lost benefits or other consequential damages resulting from the use of these test results, even if GTX has been advised of the possibility of such damages. GTX will not be responsible for any liability of the Purchaser to any third party.

Commonly Used Symbols

A	pore pressure parameter for $\Delta\sigma_1 - \Delta\sigma_3$
B	pore pressure parameter for $\Delta\sigma_3$
CAI	CERCHAR Abrasiveness Index
CIU	isotropically consolidated undrained triaxial shear test
CR	compression ratio for one dimensional consolidation
CSR	cyclic stress ratio
C_c	coefficient of curvature, $(D_{30})^2 / (D_{10} \times D_{60})$
C_u	coefficient of uniformity, D_{60}/D_{10}
C_c	compression index for one dimensional consolidation
C_α	coefficient of secondary compression
c_v	coefficient of consolidation
c	cohesion intercept for total stresses
c'	cohesion intercept for effective stresses
D	diameter of specimen
D	damping ratio
D_{10}	diameter at which 10% of soil is finer
D_{15}	diameter at which 15% of soil is finer
D_{30}	diameter at which 30% of soil is finer
D_{50}	diameter at which 50% of soil is finer
D_{60}	diameter at which 60% of soil is finer
D_{85}	diameter at which 85% of soil is finer
d_{50}	displacement for 50% consolidation
d_{90}	displacement for 90% consolidation
d_{100}	displacement for 100% consolidation
E	Young's modulus
e	void ratio
e_c	void ratio after consolidation
e_o	initial void ratio
G	shear modulus
G_s	specific gravity of soil particles
H	height of specimen
H_R	Rebound Hardness number
i	gradient
I_S	Uncorrected point load strength
$I_{S(50)}$	Size corrected point load strength index
H_A	Modified Taber Abrasion
H_T	Total hardness
K_o	lateral stress ratio for one dimensional strain
k	permeability
LI	Liquidity Index
m_v	coefficient of volume change
n	porosity
PI	plasticity index
P_c	preconsolidation pressure
p	$(\sigma_1 + \sigma_3) / 2$, $(\sigma_v + \sigma_h) / 2$
p'	$(\sigma'_1 + \sigma'_3) / 2$, $(\sigma'_v + \sigma'_h) / 2$
p'_c	p' at consolidation
Q	quantity of flow
q	$(\sigma_1 - \sigma_3) / 2$
q_f	q at failure
q_o, q_i	initial q
q_c	q at consolidation
S_r	Post cyclic undrained shear strength
T	temperature
t	time
U, UC	unconfined compression test
UU, Q	unconsolidated undrained triaxial test
u_a	pore gas pressure
u_e	excess pore water pressure
u, u_w	pore water pressure
V	total volume
V_g	volume of gas
V_s	volume of solids
V_s	shear wave velocity
V_v	volume of voids
V_w	volume of water
V_o	initial volume
v	velocity
W	total weight
W_s	weight of solids
W_w	weight of water
w	water content
w_c	water content at consolidation
w_f	final water content
w_l	liquid limit
w_n	natural water content
w_p	plastic limit
w_s	shrinkage limit
w_o, w_i	initial water content
α	slope of q_f versus p_f
α'	slope of q_f versus p_f'
γ_t	total unit weight
γ_d	dry unit weight
γ_s	unit weight of solids
γ_w	unit weight of water
ε	strain
ε_{vol}	volume strain
ε_h, ε_v	horizontal strain, vertical strain
μ	Poisson's ratio, also viscosity
σ	normal stress
σ'	effective normal stress
σ_c, σ'_c	consolidation stress in isotropic stress system
σ_h, σ'_h	horizontal normal stress
σ_v, σ'_v	vertical normal stress
σ'_{vc}	Effective vertical consolidation stress
σ_1	major principal stress
σ_2	intermediate principal stress
σ_3	minor principal stress
τ	shear stress
φ	friction angle based on total stresses
φ'	friction angle based on effective stresses
φ'_r	residual friction angle
φ_{ult}	φ for ultimate strength

Observation Well Installation and Groundwater Monitoring Reports

HALEY ALDRICH

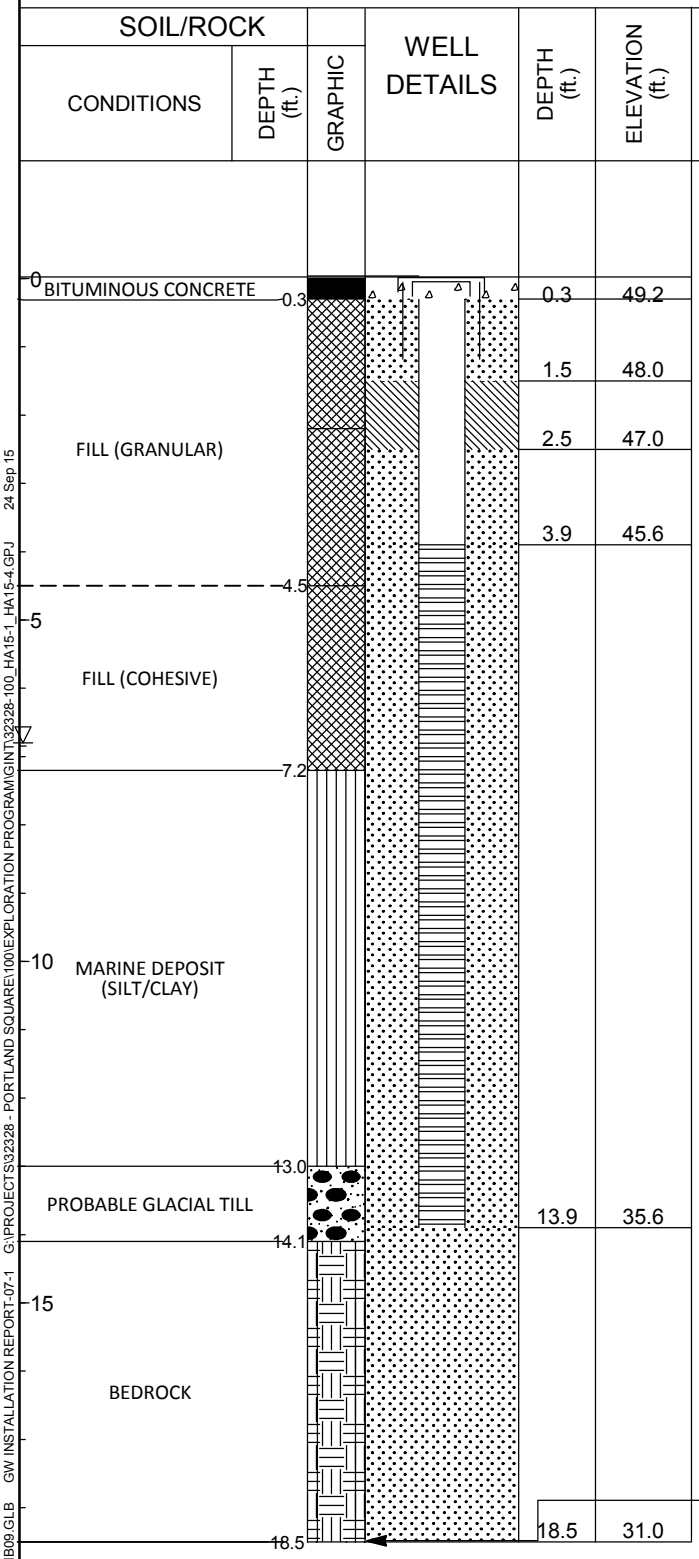
GROUNDWATER OBSERVATION WELL INSTALLATION REPORT



Well No. HA15-1(OW)
Boring No. HA15-1(OW)

Project	Portland Square Development
Location	Portland, Maine
Client	Winton Scott Architects
Contractor	New England Boring Contractors
Driller	C. Dupuis
Initial Water Level (depth bgs)	6.8 ft

Well Diagram: Riser Pipe; Screen; Filter Sand; Cuttings; Grout; Concrete; Bentonite Seal

File No. 32328-100
Date Installed 11 Aug 2015
H&A Rep. K. Russ
Location See Plan

Ground El. 49.5
Datum Portland City Datum

WELL CONSTRUCTION DETAILS

Type of protective cover	EMCO Hex. Bolt
Depth of Roadway Box below ground surface	0.0 ft
Depth of top of riser below ground surface	0.6 ft
Type of protective casing	Roadway Box
Length	0.8 ft
Inside diameter	6.0 in.
Depth of bottom of Roadway Box	0.8 ft
Type of riser pipe	Schedule 40 PVC
Inside diameter of riser pipe	1.0 in.
Depth of bottom of riser pipe	3.9 ft

Type of Seals	Top of Seal (ft)	Thickness (ft)
Cold Patch	0.0	0.3
Bentonite	1.5	1.0
	-	-
	-	-

Diameter of borehole	3.0 in.
Depth to top of well screen	3.9 ft
Type of screen	Machine slotted Sch 40 PVC
Screen gauge or size of openings	0.010 in.
Diameter of screen	1.0 in.
Type of Backfill around Screen	Filter Sand
Depth to bottom of well screen	13.9 ft
Bottom of silt trap	0.0 ft
Depth of bottom of borehole	18.5 ft

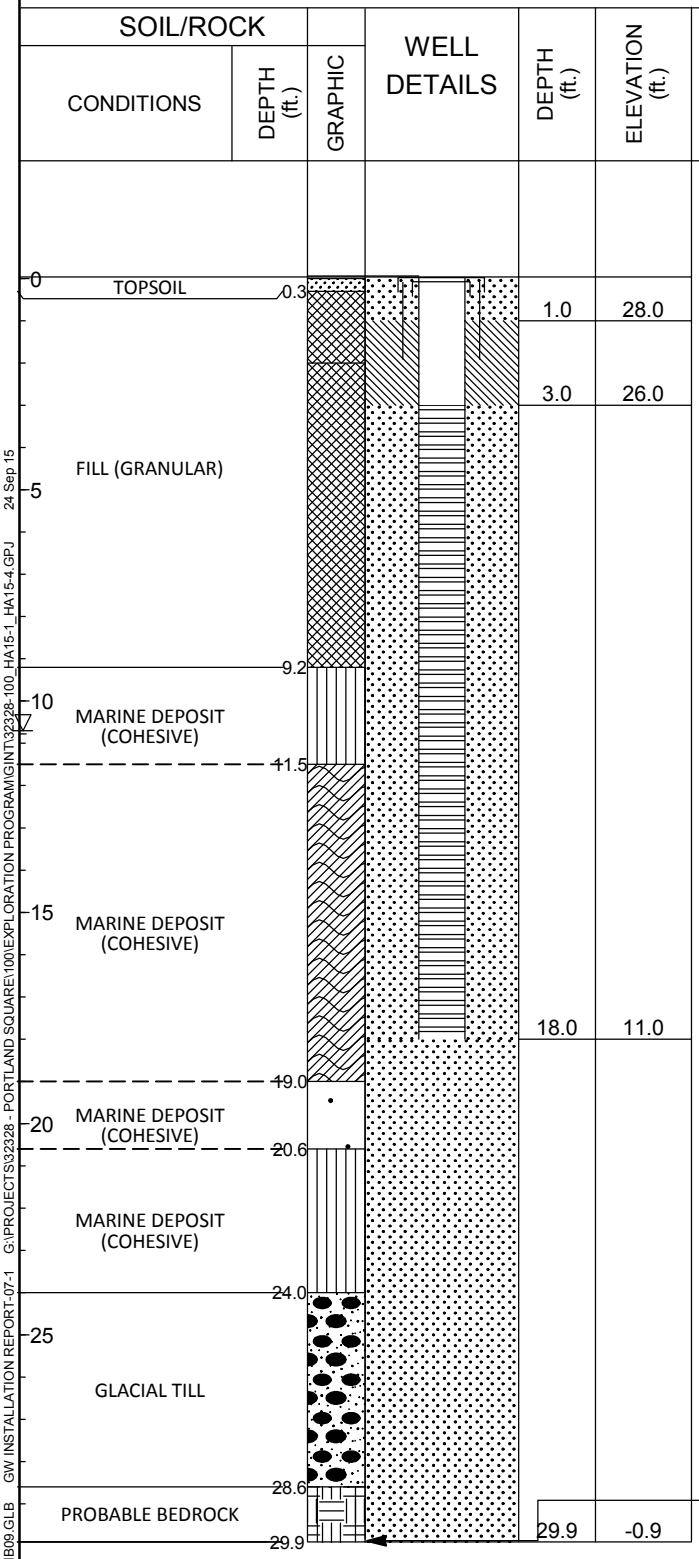
GROUNDWATER OBSERVATION WELL INSTALLATION REPORT



Well No. HA15-2(OW)
Boring No. HA15-2(OW)

Project	Portland Square Development
Location	Portland, Maine
Client	Winton Scott Architects
Contractor	New England Boring Contractors
Driller	C. Dupuis
Initial Water Level (depth bgs)	10.7 ft

Well Diagram: Riser Pipe, Screen, Filter Sand, Cuttings, Grout, Concrete, Bentonite Seal

File No. 32328-100
Date Installed 12 Aug 2015
H&A Rep. K. Russ
Location See Plan

Ground El. 29.0
Datum Portland City Datum

WELL CONSTRUCTION DETAILS

Type of protective cover	EMCO Hex. Bolt
Depth of Roadway Box below ground surface	0.0 ft
Depth of top of riser below ground surface	0.2 ft
Type of protective casing	Roadway Box
Length	0.8 ft
Inside diameter	6.0 in.
Depth of bottom of Roadway Box	0.8 ft
Type of riser pipe	Schedule 40 PVC
Inside diameter of riser pipe	1.0 in.
Depth of bottom of riser pipe	3.0 ft

Type of Seals	Top of Seal (ft)	Thickness (ft)
Bentonite	1.0	2.0
	-	-
	-	-
	-	-

Diameter of borehole	3.0 in.
Depth to top of well screen	3.0 ft
Type of screen	Machine slotted Sch 40 PVC
Screen gauge or size of openings	0.010 in.
Diameter of screen	1.0 in.
Type of Backfill around Screen	Filter Sand
Depth to bottom of well screen	18.0 ft
Bottom of silt trap	0.0 ft
Depth of bottom of borehole	29.9 ft

EDR Inquiry # 4348218.1

Contact: Dave Dearden

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Haley & Aldrich, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

JUNE 30, 2016

Portland Water District
FROM SEBAGO LAKE TO CASCO BAY

January 14, 2020

Lauren Swett, PE
Woodard and Curran
41 Hutchins Drive
Portland, ME 04102

RE: 3-6 Portland Square, Capacity to Serve

Dear Lauren:

Based on the information provided to date, the Portland Water District can grant a conceptual level Capacity to Serve determination, in support of the Portland Square Master Development Plan, for the above referenced project with respect to water and sewer treatment capacity. This letter is not an approval of the project at this time nor shall it be used to demonstrate approval from the District for any reason beyond support of the Portland Square Master Development Plan. The development team will need to submit plans to PWD for review and approval at site plan application with the City of Portland for each phase of the project. PWD will issue a separate Ability to Serve determination letter for each phase of the project after plans have been reviewed and approved by the district. Only after receiving an Ability to Serve determination may the developer commence with water and wastewater improvements.

This Capacity to Serve determination shall be used to identify the condition of the existing water and wastewater system, and the steps to be taken by the development team, at their cost, to bring the existing infrastructure up to current standards to service the proposed development.

The District owns and operates water mains in Spring Street, Cotton Street, Fore Street and Cross Street immediately adjacent to the proposed project at 3-6 Portland Square. The existing 12-inch ductile iron water main (1972) in Spring Street has the capacity to serve the proposed development. The existing 6-inch cast iron water main (1888) in Cotton Street, and the existing 6-inch cast iron water main (1883) in Cross Street do not have the capacity to serve the proposed development and must be renewed by the developer; size to be determined by the District once domestic water and fire sprinkler demands are calculated. The existing 8-inch cast iron water main (1886) in Fore Street will need to be renewed by the development team with an 8-inch ductile iron water main, along the frontage of the property between Center Street and Cross Street; limits of renewal to be determined by PWD.

225 DOUGLASS STREET P.O. BOX 3553 PORTLAND, MAINE 04104-3553
PHONE: 207.774.5961 FAX: 207.761.8307 WEB: WWW.PWD.ORG

The sewer collection system adjacent to the site is owned and operated by the City of Portland. The East End Wastewater Treatment Facility has the capacity to serve the wastewater generated at this site. The type of wastewater generated is not expected to require treatment beyond what is typical for a similar use.

This Capacity to Serve determination is made based on information provided by the development team regarding the size, use, and proposed phasing of the project. As redevelopment continues on the peninsula, contemplated improvements associated with this project will be evaluated at each phase to ensure proper development of the water and wastewater systems.

As the project progresses, we advise you to submit any preliminary design plans to the MEANS Group for water and wastewater infrastructure for District review and approval. The District will work with you to ensure that your design meets our current standards.

Sincerely,
Portland Water District

Robert Bartels, PE
Senior Project Engineer

CARROLL ASSOCIATES

3 Portland Square
Neighborhood Meeting Certification

I, Patrick J. Carroll hereby certify that a neighborhood meeting was held on January 30, 2020 at One Portland Square, Lower Level at 5:30 pm.

I also certify that on January 15, 2020 invitations were mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes property owners within 500 feet of the proposed development or within 1000 feet of a proposed industrial subdivision or industrial zone change.

2. Residents on the "interested parties" list.

3. A digital copy of the notice was also provided to the Planning Division (jmy@portlandmaine.gov and ldobson@portlandmaine.gov) and the assigned planner to be forwarded to those on the interested citizen list who receive e-mail notices.

Signed,

February 7, 2020

Attached to this certification are:

1. Copy of the invitation sent
2. Sign-in sheet
3. Meeting minutes

CARROLL ASSOCIATES

Neighborhood Meeting Invitation

January 13, 2020

Dear Neighbor:

Please join us for a neighborhood meeting to discuss our plans for **Three Portland Square**, the proposed development for a 2.26 Acre site located at Spring, Cotton, Cross, and Fore Streets in Portland. This project represents Phase 2 of the Proposed Portland Square Master Development Plan which is currently undergoing Review.

Meeting Location: 1 Portland Square, Café on lower level

Meeting Date: Thursday, January 30, 2020

Meeting Time: 5:30 pm

(The City code requires that property owners within 500 feet (1000 feet for proposed industrial subdivisions and industrial zone changes) of the proposed development and residents on an "interested parties list", be invited to participate in a neighborhood meeting. A sign-in sheet will be circulated and minutes of the meeting will be taken. Both the sign-in sheet and minutes will be submitted to the Planning Board.)

If you have any questions, please call my office at 207-772-1552.

Signed,

CARROLL ASSOCIATES

Patrick J. Carroll, Principal

Note:

Under Section 14-32(C) and 14-524(a)d of the City Code of Ordinances, an applicant for a Level III development, subdivision of over five lots/units, or zone change is required to hold a neighborhood meeting within 30 days of submitting a preliminary application or 21 days of submitting a final site plan application, if a preliminary plan was not submitted. The neighborhood meeting must be held at least seven days prior to the Planning Board public hearing on the proposal. Should you wish to offer additional comments on this proposed development, you may contact the Planning Division at 874-8721 or send written correspondence to the Planning and Urban Development Department, Planning Division, 4th Floor, 389 Congress Street Portland, ME 04101 or by email: to bab@portlandmaine.gov

Three Portland Square

01/30/2020

Neighborhood meeting minutes

Attendees: see attached sign-in sheet.

- Presentation from Pat Carroll, Steve Weatherhead, Larry Osmer:
- This meeting is required for site plan approval process
- Planning Board workshop 02/25, expected public hearing 2nd March meeting.
- Slide show (attached)
    - Neighborhood context
    - Project boundaries
    - Master Development Plan
    - Program & square footages of each building and use group
    - Overview typical floor plans
    - Cross-section
    - Site improvements / landscaping plan / site features and amenities
    - New plaza level at Spring Street between 1 & 3 Portland Square
    - Utility connections
    - Construction management plan
        - Construction traffic & access, loading & unloading
        - No shutdown of Cotton Street near Fore, sequencing of work on Cotton Street to avoid service disruption to Rivalries parking lot
    - Renderings and architectural expression
        - Height & setbacks
        - Materials & fenestration
        - Relation to neighborhood scale & context

- Questions from attendees:
    - Q: What is the project timeline? A: Aiming for site plan approval in February, construction permits summer 2020, occupancy 2022.
    - Q: Expecting excavation will require blasting? A: Small amount of ledge removal, not sure if will require blasting.
    - Q: Are you planning to build both buildings at the same time? A: Yes, aiming to fast track garage and open that a few months ahead of time to bring parking online ASAP.
    - Q: What is the plan for construction crew parking? A: Construction management plan discusses a mix of strategies, including parking in neighborhood garages and carpooling / van pooling.
    - Q: Why was parking count reduced from ~1,200 to ~850? A: This was a balance of parking and maximizing rentable square footage. Combination of cost estimating and pushback from lack of active uses on Spring Street led to current design. Suggest attending workshop 02/25. Refer to VHB parking study materials. Traffic Demand Management Plan encourages car pooling, using alternate modes of transportation, car charging stations, etc.
    - Q: How many spaces are currently on upper lot? A: 236
    - Q: Make sure you have exceptional lighting around the whole project. A: We are following new municipal lighting guidelines.

- Q: Was the alley requested by City? Seems like a dead space. A: Alley was required to maintain separations between building and maintain light to both adjacent buildings. We are working now to activate the alley with interesting lighting and street furniture.
- Q: Is there a solar component? A: We haven't gotten to that yet, we have talked about it.
- Q: Is Cross Street one way or two way? A: Two way going to Fore, one way going to Union.
- Q: How will work on Cotton Street affect the steps and elevations for the parking lot on the west side of Cotton Street? How to service 2 and 10 Cotton Street? Rivalries takes all deliveries through front door. A: Sequencing plan shows phased work on Cotton Street that maintains access on Cotton Street. Any disruption of Cotton Street would be temporary. Need to understand access needs on Cotton Street. During this time, this would be a business interruption for the tenants in these buildings. We will do our best to accommodate tenants and their deliveries.
- Where is service and loading entrance for 3PS? A: Upper Cross Street, near 1PS.

Re: 3 Portland Square Level III Site Plan Submittal – North River IV, LLC
Response to Planning Staff Comments

Dear Matt:

Thank you for coordinating the review of the proposed development of Phase 2 of the Portland Square Project located at 3 Portland Square in Portland, Maine. We received the January 21, 2020 memo from Wright-Pierce, the 3rd party peer reviewer for the City of Portland, and provide the following response and additional information.

Since our previous submission, adjustments have been made to the stormwater management system to avoid conflicts with the building footings. Additionally, design of the stormwater treatment system, and coordination with the manufactures of the system components have progressed. The following stormwater management documents are enclosed with this letter. They include modifications to the stormwater management system and changes to address comments from Wright-Pierce:

- C-201 Grading, Drainage and Erosion Control Plan
- C-304 Civil Details - 5
- Post-Development HydroCAD Model

Additionally, we received a response from the Maine Department of Inland Fisheries & Wildlife (MDIFW) confirming there are no locations of Endangered, Threatened, or Special Concern species within the project area. The MDIFW response letter is enclosed for your reference.

To support the Level III Site Plan process, we provide the following responses to the comments we received from Wright-Pierce dated January 21, 2020.

Basic Standard

Per the City's Technical Manual "Portland Stormwater Management Standards and Maine Dep Chapter 500 Stormwater Management", an Erosion & Sediment Control management plan, notes, and details per the Chapter 500 Rules must be provided to meet the Basic Standard.

- *Erosion and Sedimentation Control best practices were shown on the Erosion and Sedimentation Control Plan, and are indicated on the Grading and Drainage Plan. No further action necessary.*
    - Noted.
- *A written inspection, maintenance and housekeeping plan was provided. No further action necessary.*
    - Noted.

General Standard

The applicant has provided information regarding the size and scope of the project indicating the project is subject to the General Standard under the requirements of the Site Location of Development Act (SLODA). The project is being reviewed under the redevelopment guidelines and requirements.

The applicant has provided an impact analysis to compare pre-development and post-development land use pollutant rankings under MaineDEP redevelopment guidelines. This analysis indicated that the proposed development had a lower pollutant ranking than the existing site and is therefore required to treat 50% of the proposed site's disturbed surface area, with priority placed on the highest-ranked pollutant for the site.

- *Pollutant ranking for both the existing and proposed parking areas was noted as 5 in the narrative, and 4 in the calculations. Please confirm the correct value and update calculations as necessary.*
    - The narrative incorrectly referred to the parking area pollutant ranking. The calculations are correct. The parking areas are pollutant impact ranking 4 (medium use parking lot) for both the existing and proposed condition. Currently, the surface parking lot is used primarily during working hours and does not appear to have high turnover rates. Similarly, the proposed parking garage is being provided to service the surrounding office uses and is not anticipated to have a high turnover rate.
- *Calculations are provided for determining the amount of area requiring treatment. Please confirm the following items:*
    - *Total square feet of site required to receive treatment* – 50% of total redevelopment area of 2.31 acres = 50,307 SF
    - *Total square feet of proposed site receiving treatment* – 50,612 SF
    - *Total % of high-pollutant ranking surfaces receiving treatment*
        - Pollutant Ranking 5 – No areas exist on site
        - Pollutant Ranking 4 – 80.8% of 1.16 acres
        - Pollutant Ranking 3 – 13.2% of 0.61 acres
        - Pollutant Ranking 2 – 32.6% of 0.44 acres
        - Pollutant Ranking 1 – 0% of 0.10 acres
        - Pollutant Ranking 0 – No areas exist on site

          Note that all areas listed above have not changed, and are consistent with previously submitted stormwater calculations.
    - *Total percentage of non-roof impervious area receiving treatment* – 70.2%
- *Proprietary R-Tank systems and Jellyfish filters have been provided for runoff treatment. Please provide the following clarifications:*
    - *Inverts for pipe elevations for Jellyfish filters and R-Tank systems;*
        - The invert elevations for the R-Tank systems and the Peak Diversion StormFilter have been added to the Grading, Drainage and Erosion Control Plan (Sheet C-201).
    - *Filterra units are shown on the October 2019 plan set, which is the most recent grading plan available; updated plans and narrative with the December 2019 Stormwater Management Report did not have Filterra Units. Please confirm if Filterra units are still proposed.*
        - Filterra units are no longer proposed and have been removed from the plans. The current plans do not show any Filterra Units.

- *The applicant has indicated a maintenance agreement for stormwater treatment systems will be provided as the design progresses. An executed maintenance contract for the BMP system is required and may be included as a Condition of Approval.*
    - Noted.

Flooding Standard

The applicant has submitted calculations indicating the total surface flows to the separated storm drain at the intersection of Fore Street and Cross Street.

- *These calculations indicate runoff rates will be less in the proposed condition than in the existing condition in 24-hour, 2-year, 10-year, and 25- year interval storm events. No further action necessary.*
    - The stormwater management system on the site has been modified to avoid building footings. We have also revised our treatment device from a Jelly Fish to a Peak Diversion StormFilter. We have revised the detail sheet to reflect this change. This has also resulted in changes to invert elevations, which changed the post-development HydroCAD model. As shown below, there continues to be a net decrease in the post-development rate of runoff during all storms at the Site's study point. An updated HydroCAD model is attached.

Study Point		Peak Runoff Rate (cfs)		
		2-Year Storm	10-Year Storm	25-Year Storm
1	Pre-Development	5.44	8.96	11.79
	Post-Development	5.16	8.12	9.89

- *See comment 3d, below, for additional City requirements for connections to the existing system.*
    - Noted, see further response below.

Grading and Drainage

- *Catch basin details have been provided. Please confirm intent for 'Drain Basin – 24"' Sheet C-301 and '24" Diam. Catch Basin" Sheet C-302. Please confirm catch basins have 3-foot sumps.*
    - The 'Drain Basin – 24' detail has been removed from Sheet C-301. Catch basins to be provided within the City of Portland Right-of-Way will be standard catch basins with 3-foot sumps.
- *A catch basin at the corner of Cross Street and Fore Street is within the pedestrian tipdown ramp. Standard granite inlet details may not be appropriate for this application and additional detailing may be necessary.*
    - This catch basin has been shifted to be located outside of the tipdown.
- *Sheet C1-C3 for a project in the Boyd Street community were provided. These pages were not reviewed as we anticipate they were accidentally uploaded and part of another project. Please confirm if these plans are used for reference.*
    - Please disregard these plan sheets.

Utility Connections

- *Utility work within the Right-Of-Way is being reviewed by others.*
    - Noted.

- *Ability to serve letters have not been provided for all utilities impacted by the proposed project, but have been requested by the applicant for applicable utilities. The applicant has indicated that ability to serve letters will be submitted to Planning upon receipt.*
    - Woodard & Curran met with Brad Roland from Portland Public Works on Friday January 17, 2020 to discuss separated sewer and storm drain surrounding the site. The drainage plan is being updated per this discussion, and further utility coordination is ongoing relative to changes to infrastructure in Cotton Street.

      Ability to serve approval from Public Works for sewer and Portland Water District for public water will be provided when available.
- *It is understood that grease trap sizing is being reviewed by Department of Public Works. Applicant shall defer to comments from Department of Public Works on this item.*
    - Noted.
- *Connection to Existing Stormwater Systems: E-mail, or otherwise written, confirmation from the Department of Public Works accepting this connection is requested to confirm that this connection is appropriate under Land Use section 14- 526 (b) 3 a. (iv); and 14-526 (c) 3 a. This confirmation is typically provided similar to a capacity to serve letter, and can be a condition of approval.*
    - Noted. Further coordination is ongoing with the Department of Public Works on the proposed stormdrain modifications proposed for Cotton Street.
- *Applicant has stated utilities are being sized to coordinate with future phases of development. No further action necessary.*
    - Noted.

If you have any questions or require additional information, please do not hesitate to contact me at (207) 558-3763 or by email at lswett@woodardcurran.com.

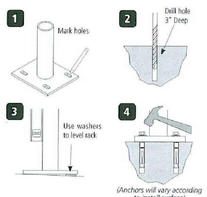
BACKFLOW PREVENTER
N.T.S.

Tools Needed for Installation

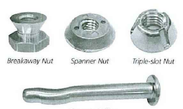
Tape Measure
Marker or Pencil
Masonry Drill Bit
Drill (Hammer drill recommended)
Hammer
Wrench 9/16"
Level
Washers (for leveling if necessary)



Recommended Base Materials:

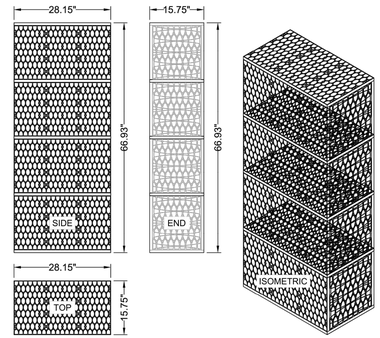
Solid concrete is the best base material for installation. Ask your Dero Rack representative which anchor is appropriate for your application to ensure the proper anchors are shipped with your rack. Be sure nothing is underneath the base material that could be damaged by drilling.

Installation:



3/8" anchors are shipped with the rack. Place the rack in the desired location. Use a marker or pencil to outline the holes of the flange onto the base material. Drill the holes in accordance with the specifications shipped with the anchors. Make sure the holes are at least 6" away from any cracks in the base material.

Tamper Resistant Fasteners



The concrete spike is a permanent anchor. The top of the wedge anchor can also be pounded sideways after installation so that it cannot be removed. Other tamper resistant fasteners are also available for purchase.

When using the special tamper resistant nuts, always set and first tighten the anchors. Once the rack is installed, replace two nuts from the bracket (opposite sides from each other) with the tamper resistant fastener. DO NOT OVERTIGHTEN the tamper resistant nut.

If you have any questions about installation or other features of the Bike Rack, please call us toll free at 1-800-298-4915

FRAME AND COVER
(DIAMETER VARIES)
N.T.S.

ELEVATION

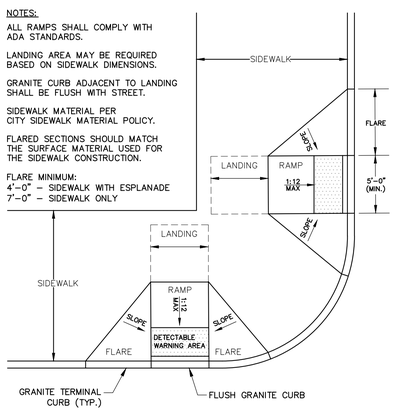
PERFORMANCE SPECIFICATION
FILTER CARTRIDGES SHALL BE MEDIA-FILLED, PASSIVE, SIPHON ACTUATED, RADIAL FLOW, AND SELF CLEANING. **RADIAL MEDIA DEPTH SHALL BE 7 INCHES.** FILTER MEDIA CONTACT TIME SHALL BE AT LEAST **36 SECONDS.**
SPECIFIC FLOW RATE SHALL BE **2 GPM/SF (MAXIMUM)**. SPECIFIC FLOW RATE IS THE MEASURE OF THE FLOW (GPM) DIVIDED BY THE MEDIA SURFACE CONTACT AREA (SF). MEDIA VOLUMETRIC FLOW RATE SHALL BE **6 GPM/CF OF MEDIA (MAXIMUM).**

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH REPRESENTATIVE. www.ContechES.com
4. STORMFILTER WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
5. STRUCTURE SHALL MEET AASHTO HS20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 5' AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE STORMFILTER STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL SECTIONS AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH OUTLET PIPE INVERT WITH OUTLET BAY FLOOR.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO PROTECT CARTRIDGES FROM CONSTRUCTION-RELATED EROSION RUNOFF.
F. CONTRACTOR TO REMOVE THE TRANSFER HOLE COVER WHEN THE SYSTEM IS BROUGHT ONLINE.

8'x6' PEAK DIVERSION STORMFILTER
N.T.S.

NOTES:
ALL RAMPS SHALL COMPLY WITH ADA STANDARDS.



LANDING AREA MAY BE REQUIRED BASED ON SIDEWALK DIMENSIONS.

GRANITE CURB ADJACENT TO LANDING SHALL BE FLUSH WITH STREET.

SIDEWALK MATERIAL PER CITY SIDEWALK MATERIAL POLICY.

FLARED SECTIONS SHOULD MATCH THE SURFACE MATERIAL USED FOR THE SIDEWALK CONSTRUCTION.

FLARE MINIMUM:
4'-0" - SIDEWALK WITH ESPLANADE
7'-0" - SIDEWALK ONLY

SIDEWALK RAMP AT INTERSECTION

ADA ACCESSIBLE CURB RAMPS

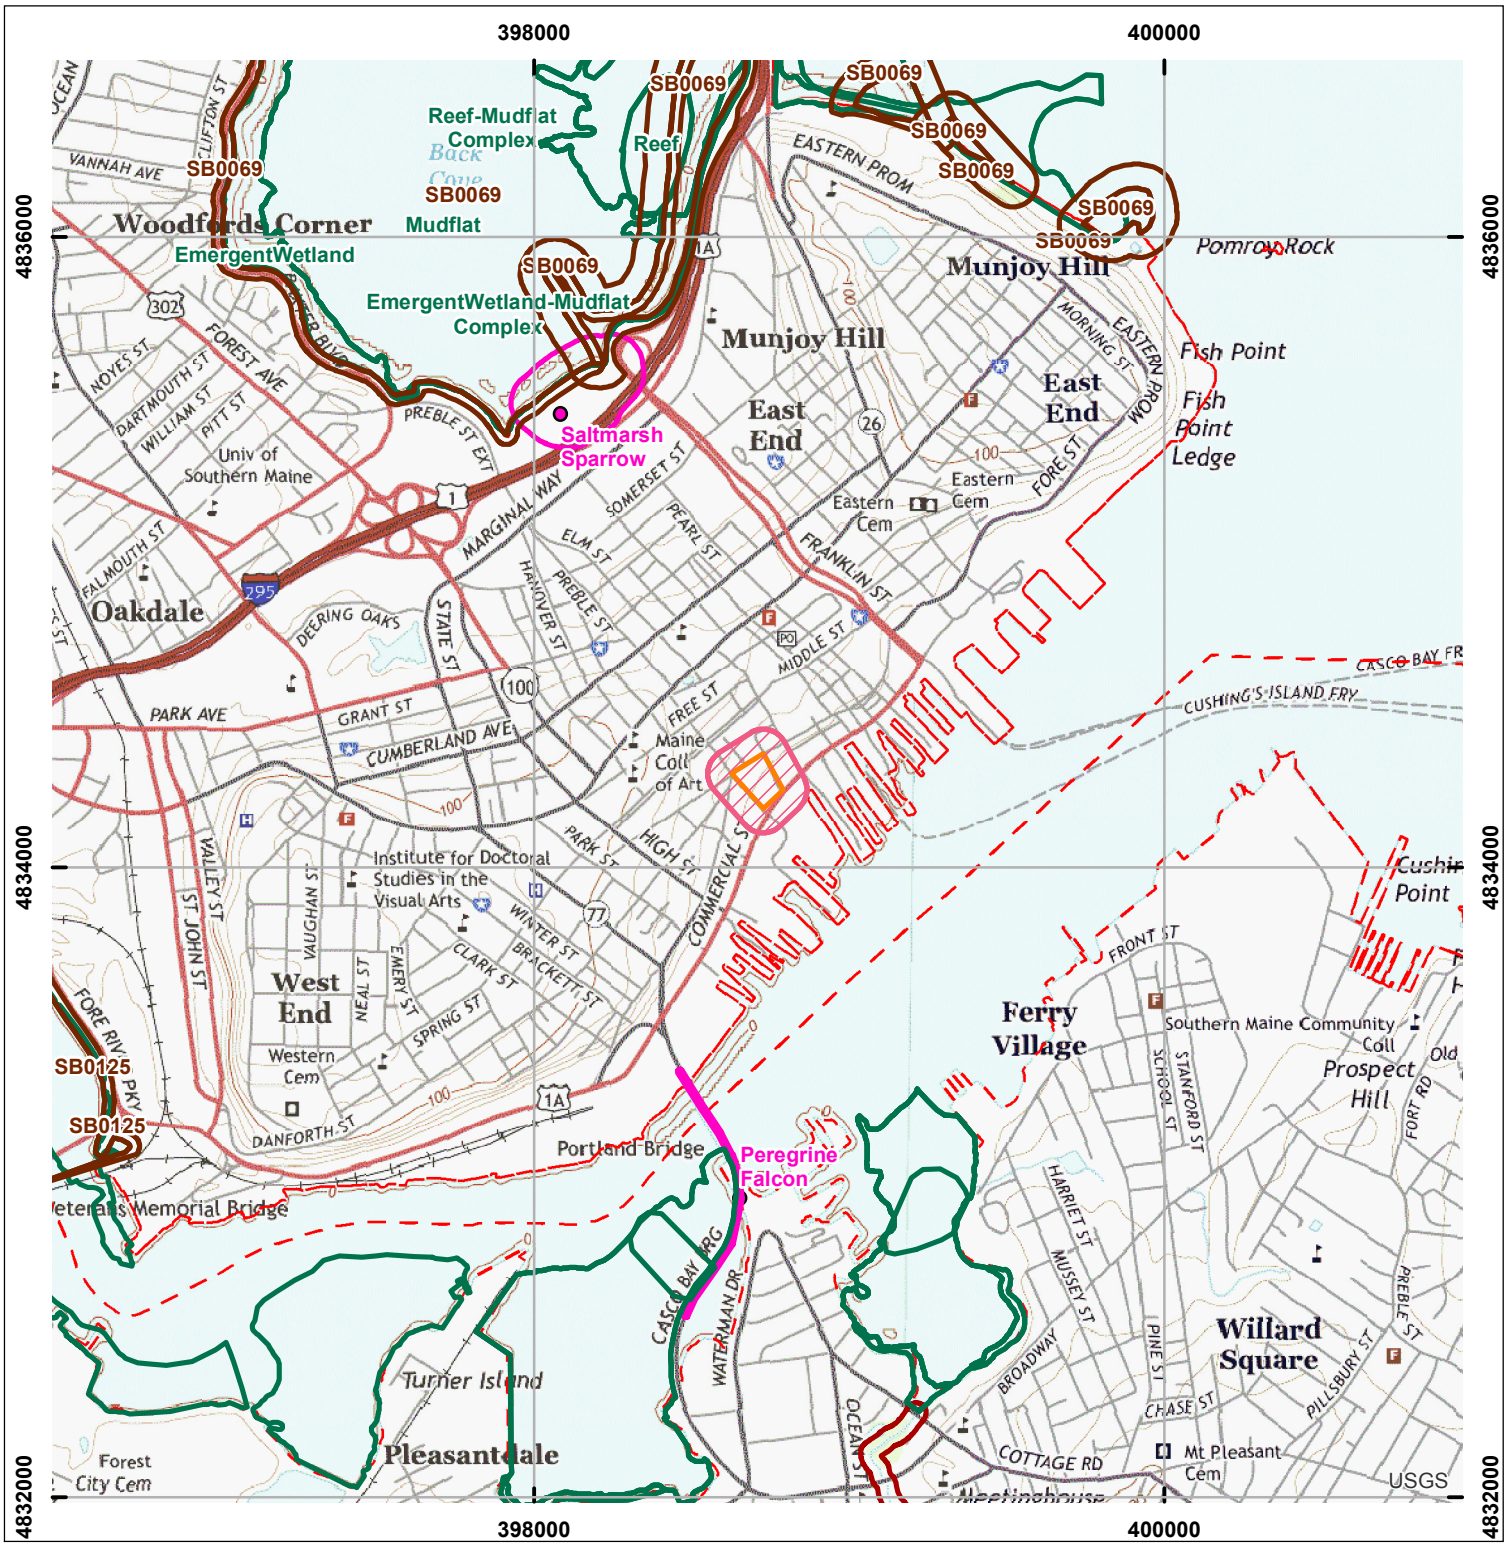
RE: Information Request –Redevelop Spring Cotton and Fore Street Project, Portland

Dear Lauren:

Per your request received on January 03, 2020, we have reviewed current Maine Department of Inland Fisheries and Wildlife (MDIFW) information for known locations of Endangered, Threatened, and Special Concern species; designated Essential and Significant Wildlife Habitats; and inland fisheries habitat concerns within the vicinity of the *Redevelop Spring Cotton and Fore Street* project in Portland.



Our information indicates no locations of Endangered, Threatened, or Special Concern species within the project area that would be affected by your project. Additionally, our Department has not mapped any Essential or Significant Wildlife Habitats or inland fisheries habitats that would be directly affected by your project.

This consultation review has been conducted specifically for known MDIFW jurisdictional features and should not be interpreted as a comprehensive review for the presence of other regulated features that may occur in this area. Prior to the start of any future site disturbance we recommend additional consultation with the municipality, and other state resource agencies including the Maine Natural Areas Program, Maine Department of Marine Resources, and Maine Department of Environmental Protection in order to avoid unintended protected resource disturbance.

Please feel free to contact my office if you have any questions regarding this information, or if I can be of any further assistance.

Best regards,

Becca Settele
Wildlife Biologist

RE: Three Portland Square, Level III Site Plan Application
Response to Staff Comments

Dear Matt,

We are in receipt of Review Staff Comments relating to the Portland Square Project and offer the following Responses:

Matt Grooms, Site Plan Review Comments dated 01/27/2020

Comment #1. *The applicant should provide information on where gates internal to the garage would be located, and assess how gate placement will impact vehicle queues and the potential for conflict between vehicles and pedestrians.*
Response*:* The parking garage gates are located at the entry/ exit of the two entrances typical of most garages in Portland. There is little vehicle queuing available between the travel lane and gate. G/P is assessing the amount of vehicle queuing available on Cotton and Cross Streets and will be submitting a memorandum addressing this under a separate cover.

Comment #2. *The project as shown meets all zoning dimensional requirements for the B-3 zone.*
Response. We agree.

Comment #3. *The project shall conform with the street and site lighting requirements of the City's Technical Manual. Reuse of existing cobrahead and town & country light fixtures is not permitted, and shall be replaced as necessary with either the downtown combo fixtures along Spring Street or Old Port Fixtures elsewhere within the development. Please see Sec. 10 of the City's Technical Manual for more information.*

Comment #4. *S8 light fixtures, proposed within the alley between the office building and parking garage, exceed the allowable lumen count. The lighting cut sheet provides a lesser lumen count, and so applicant should confirm that the amount listed in the memo is correct.*

Comment #5. *Roof mounted S9 light fixtures exceed permissible light trespass limits. If considering roof-top parking as a surface lot, then maximum foot candle limits are 4.0, with an average foot candle of 0.5.*
Response to Comments #2-5. See Response Letter and revised Site Lighting submittals from Bartlett Design.

Comment #6. *Site lighting exceeds allowable light trespass of 1.0 foot candles at the property line. Given the downtown location of this project and requirements of the B-3 zone related to building location, staff recommend that the applicant submit a formal waiver request to permit the current lighting scheme.*
Response. We will submit a Waiver Request for this Standard.

Comment #7. *City staff will coordinate with the applicant to plant additional street trees along Spring, Union and Fore Street along frontages for Portland Square One and Two.*
Response. We have been in contact with the City Arborist.. We have specific responses to his comments below.
Comment #8. *Regarding the on-street parking configuration along Spring Street, we are waiting for additional concrete guidance from City Management on a final recommendation. This will be forwarded as soon as it is received.*
Response. We understand the latest City position on the Spring Street design is to provide the parallel parking as proposed. We will continue to work through the details of that design with City Staff.

Jeff Tarling, Landscape Review Comments dated 01/21/2020

Comment #1. *Tree & Landscape topics for 3 Portland Square -First, the original Portland Square tree and landscape elements have been very successful. The groves of mature trees planted at large specimen sizes have created an important established feel to the site. Going forward, it is important to use these features, hopefully saving and protecting the mature trees, as a model for the future phases.*
Response: we agree and intend to preserve and protect much of what currently exists in the 1 Portland Square garden. Proposed improvements in this area will consist of protection of large mature trees, removal/ replacement of overgrown shrubs along the edges of the garden, allowing the garden to be fully integrated with the new proposed development.

Comment #2. *Street trees - we would like to suggest that the city street trees along the original Portland Square buildings and the proposed street trees have a fair chance of survival. No question that limited root zone, compaction and exposure to deicing salts have resulted in about a total loss of most of the street trees. The Ginkgo trees along Fore Street are struggling and likely to be removed later this year. We would recommend revisiting the best methods to grow and maintain Street trees in the current site plan review. The use of raised tree planters, structural soil or better yet, 'Silva Cels' to ensure that the new trees will survive longer. As shown, the Spring Street street tree element is perhaps the highest priority given the boulevard effect of the street and the existing canopy, shade trees. We would recommend large tree planters and the use of Sila Cels to create the needed soil volume to grow canopy trees. Regular raised granite tree planters could be the standard along Union and Fore Streets. Cotton Street is quite narrow and tree pits with tree grates likely the only option. We can work with the project team to revise the tree types if needed.*
Response: We are not proposing any sidewalk work along the Union and Fore Street frontages of One and Two Portland Square, and as such are not proposing to install raised planters or street trees in these locations. Along Spring and Fore Streets raised granite planters are proposed, the Spring Street planters are oversized to 5 ft x 25ft, which we believe should provide adequate soil volume for those trees. The Fore Street planters conform with the City Standard of 5 ft x 8 ft, and the tree grates along Cotton Street are proposed to be 4 ft x 6 ft due to the narrow sidewalk width.

We have researched the use of Silva-cells and believe they are cost prohibitive for this project, adding approximately $50-60,000 or more to the Site Development Cost. We believe they are appropriate in the right situation, but note they have not been installed on any City project that we are aware of in the past, primarily because of their high cost to the project..

Comment #3. *Cross Street Extension will play an even more important role for pedestrian circulation under the proposed master plan. We would like to see additional tree planting / landscape elements near the Four Portland Square edges.*
Response: We agree, and will be adding trees along the west side of Cross Street between Fore Street and the Garage pedestrian entrance.

Comment #4. *Overall the Portland Square Master Plan should improve street tree growing conditions along project edges. Future site plans should be consistent in treatment. Tree and landscapes should also recognize limitations to success - lack of adequate soil volume, deicing salts as major factors.*
Response. We agree with Jeff's objectives and believe the current Landscape Plan achieves those goals.

We continue to value the working relationship with City Staff and believe the level of communication has resulted in a better project for everyone. We look forward to our meeting on February12 and subsequent review with the Planning Board.

RE: Three Portland Square, Level III Site Plan Application

Dear Matt,

On behalf of North River IV, LLC, we are pleased to submit responses to the Staff Review comments we received last week regarding the ongoing review of the MDP and Level III Applications for the development of Three Portland Square property currently owned by North River IV. These comments follow our resubmission of plans and support documents on December 20, 2019, as well as a Staff Review meeting convened on January 22, 2020. The following items are attached to this Response Letter and are uploaded to the respective e-Plan site:

- Updated Traffic Demand Management Plan, from VHB, Inc. This update is based on informal comments from Bruce Hyman in an email to VHB dated January 22, 2020.
- Revised Electrical and Lighting Plans and details, from Bartlett Design. This is in response to Site Plan Review comments from Matt Grooms in an email dated January 27, 2020.
- Revised Architectural modeling and building elevations, by Winton Scott Architects, based on informal conversations with Caitlin Cameron, Urban Designer.
- Revised Stormwater and Utility Plans, by Woodard and Curran, based on a Review memo from Wright Pierce, peer reviewer dated January 21, 2020.
- Response to Review Comments from Jeff Tarling, City Arborist, by Carroll Associates.
- Uploading of documentation from the Neighborhood Meeting that was held on January 30, 2020.

Response to Traffic Comments by Tom Errico and Mike Trembley are still being formulated, and will be hopefully submitted prior to our Staff Meeting scheduled for February 12.

Attached and made part of this Application are documents, reports, plans, and images that describe the Three Portland Square responses in full detail. We believe the project provides many benefits to the City of Portland and welcome the opportunity to work closely with City Staff, Planning Board, and interested residents of Portland during its review and approval.

With Regards,
CARROLL ASSOCIATES

RESPONSE TO CITY REVIEW COMMENTS PERTAINING TO SITE LIGHTING

Site Plan Review Comments:

- The project shall conform with the street and site lighting requirements of the City's Technical Manual. Reuse of existing cobrahead and town & country light fixtures is not permitted, and shall be replaced as necessary with either the downtown combo fixtures along Spring Street or Old Port Fixtures elsewhere within the development. Please see Sec. 10 of the City's Technical Manual for more information.
  RESPONSE:
  The revised Level III Site Submission documents have been revised to provide street lighting that conforms to Section 10 of the City's Technical Manual.

- S8 light fixtures, proposed within the alley between the office building and parking garage, exceed the allowable lumen count. The lighting cut sheet provides a lesser lumen count, and so applicant should confirm that the amount listed in the memo is correct.
  RESPONSE:
  The revised Level III Site Submission documents have been revised to consistently indicate that the lumen rating for the Type S8 lights is 2,117 lumens.

- Roof mounted S9 light fixtures exceed permissible light trespass limits. If considering roof-top parking as a surface lot, then maximum foot candle limits are 4.0, with an average foot candle of 0.5.
  RESPONSE:
  The revised Level III Site Submission documents have been revised to provide lighting levels at the roof parking deck with an average of 0.5 footcandles, and a maximum of 1.9 footcandles.

- Site lighting exceeds allowable light trespass of 1.0 foot candles at the property line. Given the downtown location of this project and requirements of the B-3 zone related to building location, staff recommend that the applicant submit a formal waiver request to permit the current lighting scheme.
  RESPONSE:
  The suggested waiver will be included in the revised Level III site submission documents.

CONSIGLI
Est. 1905

Construction Principles

The purpose of this Construction Management plan is to identify, mitigate and plan for all potential impacts throughout the duration of building the Mixed-Use Development at 3 Portland Square. Consigli Construction will be the contractor associated with the mixed-use parking garage, office and residential project. We committed to a seamless, incident free project by means of typical practices used to ensure that public safety and community are at the forefront of priorities.

Throughout this CM plan we will refer to specific examples of potential construction practices, traffic control scenarios, neighboring building considerations and public safety; as well as measures in which these items will be managed throughout the project to accommodate the community as much as possible. While we will take the necessary precautions to meet City and State requirements for traffic, noise, dust, vibration, etc., this project will be disruptive to adjacent properties compared to the current condition. Along with our subcontractor team members, it is imperative that we have complete participation from all parties affiliated with the project to maintain our strict safety requirements and ensure a quality building for DPD.

The Mixed-Use Development at 3 Portland Square includes the construction of a (6) story parking structured parking garage for (1000) cars, consisting of (24) Residential Units and (5) story office shell space starting a street level and (3) Retail Shell Spaces. The buildings total approximately 489,000 sf that will be primarily built out of precast, steel and concrete. The completion of the project is currently anticipated for February 2022.

Consigli has extensively planned the project's schedule, site logistics and safety protocols that will be thoroughly covered in this report with graphics and narratives. This CM plan will continually be updated to meet the needs of the project, community and the city as the project progresses. We aim to deliver a safe and quality project to DPD, their employees and the City of Portland by means of communication, teamwork and stewardship.

Construction Administration and Communication

Consigli Construction will be the Construction Manager on site throughout the duration of the project. As such, there will be a dedicated team of individuals tasked with managing quality, schedule, site logistics and safety. These personnel will manage and enforce the proposed CMP with all associated subcontractors and material vendors.

TBD – Senior Project Manager
207.XXX.XXXX, @consigli.com

TBD – Project Manager
207.XXX.XXXX, @consigli.com

TBD – Project Superintendent
207.XXX.XXXX, @consigli.com

Site Communication

With the proximity to occupied buildings, community outreach and communication will be imperative throughout construction to keep the public informed of the expected turbulence caused by the project. Site signage will be prominently displayed to show pedestrian access around the site and any updates to the proposed CMP.

Quarterly reporting and updating of the CMP will be required to update the City and community of the following activities:

1) Construction schedule updates
2) Material deliveries, including notice of any oversized loads that may impact public traffic
3) Requests for upcoming off-hours work including weekends and holidays
4) Notice of any upcoming activities that may produce strong noise, vibration or dust that could adversely affect the neighboring communities.
5) Requests for any street openings or public sidewalk work to be completed as part of the construction contract.

Construction Schedule

Project Work Hours

Construction work hours will be in accordance with section 17-18.

The project site is located within zoning group B2 – Business Community but is within proximity of buildings used for residential purposes. As such, work hours will be limited to Monday – Friday 7:00 am – 6:00 pm. Should work extend into Saturdays, the use of heavy equipment will be kept within the time constraints of 8:00 am – 4:00 pm.

Project Schedule/Logistics

The project is anticipated to be approximately 21 months in duration. Beginning in June 2020 the project will be turned over to NRC in February 2022.

Regarding scheduled work to take place within public streets and sidewalks, this work will comply with Section 25-129 – Noise, dust and debris. The installation and connection to public utilities, traffic lane reconfigurations, and sidewalk construction will require work to be executed within Spring Street, Fore Street and Cotton Street. This work will be scheduled and planned with the City of Portland prior to the execution. All logistical concerns will be addressed with the City prior to starting the work. The connection to public utilities is tentatively scheduled to happen in the Spring and Fall of 2021, with sidewalk construction tentatively scheduled to occur during the late Summer of 2021 and Fall of 2022. Temporary barricades, fencing, and signage will be required during the installation to control pedestrian/vehicle movements around the work.

Material Deliveries

The construction will require coordination of material deliveries throughout the duration of the project. The following Traffic Management Plans show the planned lay-down areas, truck routes and safety protocols that will be in place throughout the duration of construction. (See attached for anticipated construction traffic during the project)

1. During the site, concrete and structure erection work or other large deliveries, traffic turning off Commercial Street and Maple Street from the south into the project site will be necessary. A flagger will be employed as needed to assist in navigating loads off these streets to the project site.

Construction activities whether it be work going in place or material and equipment deliveries will create more activity along Spring Street, Fore Street, Cotton Street, and Cross Street.

Material Storage and Laydown Areas

The construction will require careful planning and management of the daily occurrences within the site limits. The Traffic Management Plans are currently outlined with designated fencing limits intend to keep all construction staging, lay down and temporary storage within the project limits and secured by temporary fencing. At certain times physical limits of the site will require usage of the adjacent streets, Spring Street, Fore Street, Cotton Street and Cross Street and will be closely coordinated with the City and abutters.

Specified areas will be granted to on-site subcontractors for staging materials managing their installation. With designated areas delegated to subcontractors, the site will remain accessible by incoming trucks without causing a queuing effect outside of the fence.

Contractor Parking

At the peak of construction, Consigli anticipates that up to 120 people will be on site working various trades associated with the buildings. All contractors, subcontractors and their employees will be prohibited from parking in on-street City spaces in the vicinity of the site and be required to park off-site in identified locations and private parking lots. Several off-site locations have been identified, and contractors, subcontractors and their employees will be encouraged to find their own private lots as well as encouraged to use shuttles, car pooling, taxis/drivers and public transportation. All subcontractors will be educated during the bidding process of this requirement. Language regarding off-street parking will be incorporated into the contract, and each employee will be informed of this requirement during their site safety orientation their first day on-site.

Consigli's on-site construction staff will monitor parking abutting the construction site on Spring Street, Fore Street and Cotton Street. Fines may be issued to construction workers associated with 3 Portland Square found parking outside designated areas.

Fire Protection for Construction Activities

The 2013 Standard for Safeguarding Construction, Alteration and Demolition Operations will be enforced on this project by utilizing best management practices to mitigate the fire risks associated with the construction. Consigli and its subcontractors will execute the following measures to provide a safe and secure work place:

1) PFD Fire Command Center: This centralized location will hold all current project information and will act as the first responders meeting point to obtain the most up to date information of construction. The following documents will be found at this location:
    a. Hot Work Permits: To be filled out daily by any person performing work that will generate a spark or create a potential fire risk on the job site. The permits are to be completed and approved by Consigli prior to work starting.
    b. Updated Construction Schedule
    c. Updated Construction Traffic Management Plan
    d. Pre-Incident Fire Plan

2) On-Site Fuel Storage: There will be a requirement for different flammable liquids throughout construction. A free-standing, 30-minute fire-rated enclosure will be built to safely and securely store all flammable liquids and gases. Fueling trucks will be used as needed but under no circumstances be allowed to be parked or stored on site for any extended period.

3) Means of Egress: The buildings will be permanently equipped with (8) 2-way stair assemblies for means of egress. During construction it is the intent to utilize these stairs to provide emergency egress throughout construction. If needed, we will provide temporary stair towers and these stairs will be identified with temporary signage throughout construction indicating the floor level and exit path direction.

4) Good Housekeeping: Consigli Construction will provide necessary dumpsters for the removal of debris from the site. All subcontractors are responsible for the daily clean-up of their work areas to ensure that no materials or tools are left out over night that could pose a hazard to the building. Daily safety walks by the Construction Superintendent will be utilized to ensure that all working floors are equipped with an inspected fire extinguisher and clear means of egress in the event of an emergency. Trash chutes and/or material hoisting equipment may be utilized to safely and efficiently remove all debris from the project.

5) On-site Security: The project site will be secured everyday by means of a temporary, construction fence and scrim. Lockable gates will be located at (6) locations for site access.

6) Rapid Communication: Evacuation notification will be provided by means of 2-way radios/cellular devices as well as strategically positioned air horns. Upon evacuation of the building all project personnel will report to the muster point location where the Construction Manager and all subcontractor foremen will perform accountability checks. The General Contractor field staff will then be dispatched to all project entry points and the PFD Command Center. Upon arrival of the first responders to the PFD Command Center the General Contractor will provide an accountability and incident briefing.

Public Safety

The construction will be near pedestrian right of ways and will interact with public traffic throughout the duration of the project. Material deliveries, the use of cranes, lifts and other heavy machinery all have the potential to impact typical public activity. As a member of the Portland community, Consigli will strive to limit, mitigate and avoid these potential impacts as much as possible by means of controlling noise, on-site dust, vibrations and traffic. By educating and informing the neighborhoods to the construction activities taking place we will aim to build a project that produces the minimal of impacts to the Spring Street, Fore Street, Cotton Street, and Cross Street communities.

Snow Removal

All contractors associated with the 3 Portland Square development will maintain access to sidewalks in front of their respected site throughout the winter.

Noise

Construction activities throughout the project will create noise that leaves the project site. It is the intent of the project team to limit the exposure to the noise by following section 17-18 of the City of Portland Code of Ordinances. This project site is located within proximity of buildings classified as residential. As such, the project hours will be limited the 7:00 am – 6:00 pm, Monday – Friday. Should any weekend or holiday work be required the use of heavy machinery will not commence before 8:00 am. When this work is required, no less than 2-week advanced notice will be provided to DPD and the neighboring communities.

Work related to the ground improvements, foundations, and the erecting of the structure will likely be the loudest activity experienced during construction. This work will take place from June 2020 – November 2021.

Dust Control/Air Quality

Maintaining an environmentally conscious project site will be a major priority for the project team to ensure safety not only for the neighboring communities but also for the construction workers on site day after day. All soils and debris will be kept within the project limits following the State of Maine Department of Environmental Protection erosion control Best Management Practices:

1) Erosion controlled construction entrances
2) Tarped dump trucks leaving the site with soil/debris
3) On-going sidewalk and street cleaning activities
4) The installation of temporary, compacted staging areas within the job site
5) Using wetting agents to control dust
6) Covering stock piles when material is to be piled for long periods of time
7) Smoking will not be allowed on the job site

Vibration Monitoring

Some of construction practices required for this project will result in ground vibration waves that may transmit to nearby buildings. Prior to any potential vibration causing activities taking place a pre-construction survey will be conducted to review and document existing conditions. The survey will encompass all properties abutting the proposed project to include the following addresses:

To Be Determined

Site demolition, site removals, vibratory compaction and ground improvements will be employed on this project and will be monitored by a third-party monitoring company. A pre-construction meeting will be planned with abutting property owners to discuss geological conditions, construction specifications and methods of installation that create vibration.

Dewatering

Some construction practices such as deep foundations will be required for this project and may require dewatering activities. *Final Plan and Locations To Be Determined.*

Traffic Control

Throughout the construction process Spring Street, Fore Street, Cotton Street, and Cross Street will experience increased traffic due to construction activities. Material deliveries, contractor access and public utility integration will be encountered and mitigated through coordinated Traffic Management Plans (provided within this CM Plan), on-site safety personnel, way-finding signage and well-organized traffic control devices. Consigli will strive to inform and direct the neighborhood to the activities taking place in public areas as they progress through completion. During the Spring and Fall of 2020 and 2021 public utility connections will be made in Spring Street, Fore Street Cotton Street and Cross Street. During the late Summer of 2021 and Spring of 2022, sidewalk improvements will be made adjacent to Spring Street, Fore Street, Cotton Street, and Cross Street.

The main access points to the construction project will be through the Cotton Street gates off Spring Street and Fore Street. To navigate tractor-trailers and other large vehicles to the project site a flagger will be stationed at Spring and Fore Street as needed to usher the trucks into the right of way. Due to the large turn radius of some of these trucks, it may be necessary to close parking spaces along Spring Street and Fore Street to establish the necessary entrance and exit gate. Secondary entrance and exit relief points will be created where Cross Street and Fore Street intersect. Work associated with foundations, utilities, sidewalk improvements and general site access will impact public parking spaces. Parking spaces adjacent to the site along Cotton Street are expected to be closed for most of the project. Periodic parking impacts will also occur adjacent to the site along Spring Street. Temporary lane closures will be required adjacent to the site along Spring Street and Fore Street for a variety of construction activities and will be closely coordinated with the City.

27. Natural Resources Protection Act permit required?:	☐ **Yes** ☐ **No**	**If yes:** ☐ **PBR** ☐ **Tier 1** ☐ **Full Permit** ☐ **Tier 2**	
28. Existing DEP Permit number (if applicable):	L-013526-A-N		
29. Names of DEP staff person(s) present at the pre-application meeting:	NA		
30. Does agent have an interest in project? If yes, what is the interest?	☐ **Yes** ■ **No**		

CERTIFICATIONS AND SIGNATURES LOCATED ON PAGE 2

IMPORTANT: IF THE SIGNATURE BELOW IS NOT THE APPLICANT'S SIGNATURE, ATTACH LETTER OF AGENT AUTHORIZATION SIGNED BY THE APPLICANT.

By signing below the applicant (or authorized agent), certifies that he or she has read and understood the following :

CERTIFICATIONS / SIGNATURES

"I certify under penalty of law that I have personally examined the information submitted in this document and all attachments thereto and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I authorize the Department to enter the property that is the subject of this application, at reasonable hours, including buildings, structures or conveyances on the property, to determine the accuracy of any information provided herein.

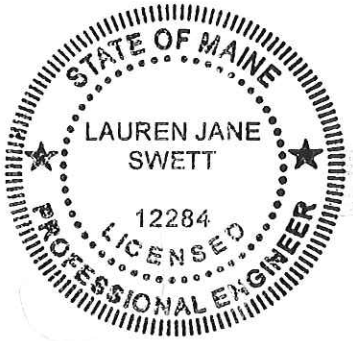
Further, I hereby authorize the DEP to send me an electronically signed decision on the license I am applying for with this application by emailing the decision to the electronic address located on the front page of this application (see #5 for the applicant and #10 for the agent)".

Signed: _____ **Title** Managing Director **Date:** 12/19/19

Notice of Intent to Comply with Maine Construction General Permit	**With this Site Law application form and my signature, I am filing notice of my intent to carry out work which meets the requirements of the Maine Construction General Permit (MCGP). I have read and will comply with all of the MCGP standards.** **If this form is not being signed by the landowner or lessee of the property, attach documentation showing authorization to sign.** **Signed** _____ **Date:** 12/19/19

NOTE: You must file a MCGP Notice of Termination (Form K) within 20 days of completing permanent stabilization of the project site.

CERTIFICATION



The person responsible for preparing this application and/or attaching pertinent site and design information hereto, by signing below, certifies that the application for development approval is complete and accurate to the best of his/her knowledge.

FORM B

PUBLIC NOTICE:
NOTICE OF INTENT TO FILE

Please take notice that

_____

(*Name, Address and Phone # of Applicant*)

_____

is intending to file a Site Location of Development Act permit application with the Maine Department of Environmental Protection pursuant to the provisions of 38 M.R.S.A. §§ 481 thru 490 on or about

_____

(Anticipated Filing Date)

The application is for

_____

(Description of the Project)

_____

at the following location:

_____

(*Project Location*)

A request for a public hearing or a request that the Board of Environmental Protection assume jurisdiction over this application must be received by the Department in writing, no later than 20 days after the application is found by the Department to be complete and is accepted for processing. A public hearing may or may not be held at the discretion of the Commissioner or Board of Environmental Protection. Public comment on the application will be accepted throughout the processing of the application.

For Federally licensed, permitted, or funded activities in the Coastal Zone, review of this application shall also constitute the State's consistency review in accordance with the Maine Coastal Program pursuant to Section 307 of the federal Coastal Zone Management Act, 16 U.S.C. § 1456. (Delete if not applicable.)

The application will be filed for public inspection at the Department of Environmental Protection's office in (*Portland, Augusta or Bangor*)(circle one) during normal working hours. A copy of the application may also be seen at the municipal offices in _____, Maine.

(*Town*)

Written public comments may be sent to the regional office in Portland, Augusta, or Bangor where the application is filed for public inspection:

MDEP, Central Maine Regional Office, 17 State House Station, Augusta, Maine 04333
MDEP, Southern Maine Regional Office, 312 Canco Road, Portland, Maine 04103
MDEP, Eastern Maine Regional Office, 106 Hogan Road, Bangor, Maine 04401

Not Applicable - City of Portland has Delegated Review

FORM C

PUBLIC NOTICE FILING AND CERTIFICATION

The DEP Rules, Chapter 2, require an applicant to provide public notice for all Site Location projects with the exception of minor revisions and condition compliance applications. In the notice, the applicant must describe the proposed activity and where it is located. **"Abutter"** for the purposes of the notice provision means any person who owns property that is BOTH (1) adjoining and (2) within one mile of the delineated project boundary, including owners of property directly across a public or private right of way.

1. **Newspaper:** You must publish the Notice of Intent to File in a newspaper circulated in the area where the activity is located. The notice must appear in the newspaper within 30 days prior to the filing of the application with the Department. You may use the attached Notice of Intent to File form, or one containing identical information, for newspaper publication and certified mailing.

2. **Abutting Property Owners:** You must send a copy of the Notice of Intent to File by certified mail to the owners of the property abutting the activity. Their names and addresses can be obtained from the town tax maps or local officials. They must receive notice within 30 days prior to the filing of the application with the Department.

3. **Municipal Office:** You must send a copy of the Notice of Intent to File and a **duplicate of the entire application** to the Municipal Office.

   ATTACH a list of the names and addresses of the owners of abutting property.

CERTIFICATION

By signing below, the applicant or authorized agent certifies that:

1. A Notice of Intent to File was published in a newspaper circulated in the area where the project site is located within 30 days prior to filing the application;
2. A certified mailing of the Notice of Intent to File was sent to all abutters within 30 days of the filing of the application;
3. A certified mailing of the Notice of Intent to File, and a duplicate copy of the application was sent to the town office of the municipality in which the project is located; and
4. Provided notice of, if required, and held a public informational meeting in accordance with Chapter 2, Rules Concerning the Processing of Applications, Section 14, prior to filing the application. Notice of the meeting was sent by certified mail to abutters and to the town office of the municipality in which the project is located at least ten days prior to the meeting. Notice of the meeting was also published once in a newspaper circulated in the area where the project site is located at least seven days prior to the meeting.

The Public Informational Meeting was held on _____.
Date

Approximately _____ members of the public attended the Public Informational Meeting.

NA **Section 24. Sunlight** (statement and drawing, if required)

Section 25. Notices
NA A. Evidence that notice sent
NA B. List of abutters for purposes of notice

1. DEVELOPMENT DESCRIPTION

This narrative is submitted in support of an amendment to the Portland Square Site Location of Development (SLOD) Permit for the Three Portland Square project in Portland, Maine.

1.1 PERMIT BACKGROUND & REQUIREMENTS

In 1986, the Maine Department of Environmental Protection (MaineDEP) issued a Site Location of Development (SLOD) Permit Order (No. L-013526-A-N) for Portland Square. Since that time, a number of amendments have been made to that permit. The proposed development will be constructed within the property limits regulated by the existing Portland Square SLOD Permit Order, and an amendment to that permit is required. The following report is provided for this permit amendment application. The City of Portland will be reviewing this application as part of their Delegated Review Authority granted by the Maine DEP.

A Master Development Plan for Portland Square was submitted to the City in April 2019. The Portland Square property encompasses four parcels on approximately 6.5 acres of land between Spring, Cotton, Center, Commercial and Cross Streets within the Old Port District of Portland. This property consists of two existing buildings, referred to as One and Two Portland Square, and the adjacent "Upper" and "Lower" surface parking lots. The Master Development Plan includes full development of the property over five phases. Separate SLOD Amendment Applications will be submitted for each phase of development. A SLOD Amendment Application has been submitted and approved for Portland Square Phase 1 (Center Street Hotel). This application is in support of Phase 2 (Three Portland Square).

1.2 OBJECTIVE AND DETAILS

The proposed buildings and parking structure will be constructed on Parcel II of the Portland Square property adjacent to the existing One and Two Portland Square buildings, and bounded by Spring Street, Cotton Street and Fore Street. The proposed project includes the redevelopment of the existing "Upper" surface parking lot with an 8-story office building with ground-level retail (Office Tower), a 7-level parking structure, and a 4-story office building with ground level retail/restaurant space (Fore Street Wrap). The proposed project also includes redevelopment of the adjacent Portland Square plaza, stairs and private access driveway (referred to as Upper Cross Street), and redesign of Cotton Street to provide connectivity from Fore Street to Spring Street.

In addition to the SLOD Amendment Application, the proposed project requires the following permits:

- City of Portland Level III Site Plan Review – In progress
- FAA Notice of Proposed Construction – Notice will be filed with the FAA at least 45 days prior to the start of construction.

No additional environmental permits from State or Federal regulators are required for this project as it does not exceed size or resource thresholds.

1.3 EXISTING FACILITIES

The Site is currently fully developed as a paved surface parking lot with mulched landscaped esplanades and sidewalk with street trees. There are no significant natural features or wetlands due to the intense level of existing development. Topography slopes from northwest to southeast towards Fore Street, from approximate elevation 51' down to 29'. A boundary survey of Portland Square was completed by Owen Haskell, Inc. Professional Land Surveyors in October 2018 and is attached to this Section.

1.4 TOPOGRAPHIC MAP

A USGS topographic map showing the approximate location of development boundaries is attached to this Section for your reference.

1.5 CONSTRUCTION PLAN

A Construction Management Plan prepared by Consigli Construction is included as an attachment to this section.

1.6 DRAWINGS

Project design plans showing the proposed improvements are included as an attachment to this section.

1.7 LIST OF ATTACHMENTS

The following documents are attached to this Section:

- Survey
- USGS Topographic Map
- Construction Management Plan (Bound Separately)
- Design Drawings (Bound Separately)

Plan References:

Utility Note:

THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM FIELD SURVEY INFORMATION AND EXISTING DRAWINGS. THE SURVEYOR MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH HE DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES. CALL 1–888–DIGSAFE AT LEAST THREE BUSINESS DAYS BEFORE PERFORMING ANY CONSTRUCTION. DUE TO OSHA CONFINED SPACE REQUIREMENTS, ALL INVERTS AND PIPE SIZES MUST BE VERIFIED PRIOR TO ANY CONSTRUCTION.

Flood Zone Note:

BY GRAPHIC PLOTTING ONLY, THIS PROPERTY IS IN ZONE C OF THE FLOOD INSURANCE RATE MAP, COMMUNITY PANEL NO. 230051 0013 B, WHICH BEARS AN EFFECTIVE DATE OF JULY 17, 1986 AND IS NOT IN A SPECIAL FLOOD HAZARD AREA.

EXHIBIT A

Legal Description

Tract 1:

Parcel One - One Portland Square.

Units No. 1, 2, 3, 4, 5, and 6 of One Portland Square, a business condominium, situated at the corner of Union and Spring Streets in the City of Portland, County of Cumberland and State of Maine, as more particularly described in the Declaration of One Portland Square, a business condominium, dated as of October 27, 1987 and recorded in the Cumberland County Registry of Deeds on October 29, 1987 in Book 8039, Page 37, and in the plats and plans incorporated into the declaration and recorded in the Cumberland County Registry of Deeds in Plan Book No. 166, Page 44 sheets 1 through 13, by virtue of the recording of which declaration, plats and plans, the declarant created the condominium pursuant to the Maine Condominium Act, Title 33 of the Maine Revised Statutes of 1964, as amended, Chapter 31, Sections 1601-101 et seq., as amended.

Parcel Two - Upper Parking

A parcel of land shown as "Lot 3" on a land title survey prepared for Northland Realty Corporation by Lewis & Wasina, Inc. dated April 5, 1995, Project No. 9508 located on the southerly side of Spring Street Arterial, the easterly side of Cotton Street and the northerly side of Fore Street, City of Portland, County of Cumberland, State of Maine, and being more particularly described as follows:

Beginning at a found rebar at the intersection of the northerly right of way line of Fore Street and the easterly right of way line of Cotton Street;

Thence, N24° 18' 44" W along the easterly right of way line of Cotton street a distance of 356.32 feet to a set 5/8 inch rebar with aluminum cap stamped "Lewis & Wasina PLS 2114" at the southerly right of way line of Spring Street Arterial;

Thence, N65° 47' 27" E along the southerly right of way line of Spring Street Arterial a distance of 89.72 feet to a found rebar;

Thence, continuing to follow the southerly right of way line of Spring Street Arterial along a curve to the left having a delta of 3° 11' 35", a radius 3887.30 feet, an arc length of 216.65 feet and a chord bearing and length of N64° 11' 39" E, 216.62 feet to a found drill hole in a concrete sidewalk;

Thence, S11° 09' 10" E following the former easterly right of way line of cross street, now discontinued, along lot 1 and lands conveyed by deed to Two Portland Square limited partnership as shown on said plan a total distance of 413.33 feet to a found rebar on the northerly right of way line of Fore Street;

Thence, S78° 49' 49" W along the northerly right of way line of Fore Street a distance of 79.03 feet to a found rebar;

Thence, S75° 13' 06" W along the northerly right of way line of fore street a distance of 137.10 feet to the point of beginning.

All the above mentioned found rebar are 5/8 inch with aluminum cap stamped "SMRT RLS 1314".

Reference should be made to the plan for further details of the boundary and easements.

The basis of bearing for this description is magnetic North, 1972, as shown on said plan.

Parcel Three - Lower Parking

A certain lot or parcel of land being the majority of the block bounded northerly by Fore Street, easterly by Cross Street, southerly by Commercial Street and westerly by Center Street in the City of Portland, County of Cumberland, and State of Maine and further bounded and described as follows:

Beginning at a drill hole at the intersection of the northwesterly line of Commercial Street and the easterly line of Center Street, said point also being the most southwesterly corner of certain land conveyed to the Atbro Corporation by Deed dated October 3, 1979, and recorded in the Cumberland County Registry of Deeds in Book 4506, Page 48;

Thence North 43° 29' 22.8" East along Commercial Street, a distance of 69.18 feet to a reinforcing rod;

Thence North 46° 50' 30" East along said Commercial Street, a distance of 54.32 feet to a reinforcing rod;

Thence North 52° 30' 11.2" east along said Commercial Street, a distance of 35.64 feet to a drill hole;

Thence North 24° 17' 37.6" West along land formerly of Ari Newman and Lee Beamis, and now Harbor Landing Condominium, see Declaration of Condominium recorded in Book 6505, Page 312, Cumberland County Registry of Deeds, a distance of 93.23 feet to a reinforcing rod;

Thence North 65° 44' 46" East along land now or formerly of said Ari Newman and Lee Beamis, a distance of 109.60 feet to a P.K. spike in the westerly line of Cross Street;

Thence North 13° 21' 13.9" West along said Cross Street, a distance of 287.70 feet to a reinforcing rod, said point being located at the intersection of the westerly line of Cross Street and the southerly line of Fore Street;

Thence South 69° 41' 09.0" West along said Fore Street, a distance of 318.64 feet to a reinforcing rod, said point being located at the intersection of the southerly line of Fore Street and the easterly line of Center Street;

Thence South 24° 16' 16.2" East along said Center Street, a distance of 451.12 feet to the point of beginning.

Excepting from the above described premises those premises taken by the State of Maine by its Department of Transportation set forth in its notice of layout and taking dated August 21, 1991 and recorded in the Cumberland County Registry of Deeds in Book 9688, Page 341.

Tract 2: Two Portland Square.

A certain lot or parcel of land with any buildings thereon situated at the intersection of Fore Street and Union Street in the City of Portland, County of Cumberland, and State of Maine, being Lot 2 on plan for Two Portland Square Subdivision by Stevens Morton Rose & Thompson dated October 22, 1987, revised to September 18, 1989 and recorded in Plan Book 182, Page 29.

Subject to and together with that certain parking easement established in Declaration of Easement by Portland Square limited partnership dated December 18, 1989 and recorded in Book 9028, Page 117, as affected by Subject Property Notice dated December 18, 1989 and recorded in Book 9028, Page 136, and by Permitted Parking Areas Plan dated December 18, 1989 and recorded in Book 9028, Page 141.

Rights, easements, covenants, conditions and restrictions set forth in Declaration of Easement by Portland Square Limited Partnership dated October 30, 1987, recorded at Book 8045, Page 303, as affected by Additional Declaration of Easement dated December 18, 1989, recorded at Book 9028, Page 92, Release of Easement dated December 18, 1989, recorded at Book 9028, Page 97, Subject Property Notice dated December 18, 1989, recorded at Book 9028, Page 102, and Permitted Parking Areas Plan dated December 18, 1989, recorded at Book 9028, Page 112.

3. FINANCIAL CAPACITY

3.1 PROJECT CONSTRUCTION COST

The construction budget for the proposed development is approximately $70,000,000.

3.2 FINANCING

Attached to this Section is a letter from the Senior Vice President of People's United Bank demonstrating that the developer has financial capacity to support the proposed project.

3.3 SLOD AFFORDABLE HOUSING/CITY OF PORTLAND INCLUSIONARY ZONING

The proposed redevelopment includes parking, office, and retail, and this section does not apply.

Re: North River IV, LLC and North River Company, LLC

To Whom It May Concern:

North River Company ("NRC"), the Manager of North River IV LLC, which is the owner of record of the properties known as Portland Square, Portland, ME, has had a banking relationship with People's United Bank, N.A. since 2010. In that time, People's United Bank has provided NRC and its affiliates with real estate financings in excess of $170,000,000, including loans for acquisition, new development and complex renovation projects. We consider the principals of NRC to be of the highest character and, based on our knowledge of NRC's management expertise, financial condition and access to significant liquid assets, People's United Bank would be comfortable entertaining requests for financing any type of real estate project and of any size.

NRC and its affiliates have access to cash reserves and credit facilities well in excess of $20,000,000 with People's United Bank.

People's United Bank is a subsidiary of People's United Financial, Inc., a diversified financial services company with over $45 Billion in assets. Founded in 1842, People's United Bank is a community-based, regional bank in the Northeast offering commercial and retail banking, as well as wealth management services through a network of nearly 400 retail locations in Connecticut, New York, Massachusetts, Vermont, New Hampshire and Maine.

If I may be of any further assistance regarding this highly valued relationship, please contact me at (207) 828-3023 or by email at timothy.mcmachen@peoples.com.

Sincerely,

Timothy J. McMachen
Senior Vice President
Commercial Real Estate

4. TECHNICAL ABILITY

4.1 NARRATIVE

On behalf of North River IV, LLC, Woodard & Curran is preparing this application for the Three Portland Square Project. Woodard & Curran is a national environmental consulting and engineering firm with expertise in site-civil engineering, stormwater management, and property development. Since the company was formed 40 years ago, Woodard & Curran has completed numerous site designs and permit applications for municipal, industrial, manufacturing, and commercial clients throughout the Northeast, and specifically within its home State of Maine. Woodard & Curran has been involved in numerous development projects in the Greater Portland Area and has developed working relationships with various consultants who are called upon, as necessary, to provide specialized services.

North River IV, LLC is also supported by a design team including Pat Carroll Landscape Architects, Winton Scott Architects and Becker Structural Engineers. Copies of the company profiles of the various design team partners are attached, providing further verification of technical capacity for this project.

CARROLL ASSOCIATES

Firm Description

Carroll Associates is a small consulting firm engaged in the practice of landscape architecture, land planning, and site design. The firm was created in 1993, and is involved in a wide range of design and planning projects throughout Maine and New England.

The firm provides professional services to a broad-based clientele that includes municipal and institutional organizations, architects, engineers, real estate developers, and private individuals. While maintaining a diverse workload, the firm is entrenched in public, urban, and residential based planning and design work. Carroll Associates has significant experience in public, urban waterfront settings, institutional projects ranging from elementary schools to university work; municipal projects and recreational projects including work at Acadia National Park. The overriding objective in each is to provide a sensitive and well thought out solution which respects the natural environment and creates a functional and inviting setting for the building and its user.

Carroll Associates has been involved with many complex state and municipal projects which are specifically relevant to this project. Relevant Site Planning and Urban Design projects in Portland include the following:

- Ocean Gateway Ferry Terminal
- Marriot Residence Inn
- Riverwalk Condominiums (unbuilt)
- Maine State Pier Redevelopment Design Competition (selected design, unbuilt)
- Merrill's Wharf Redevelopment
- Thompsons Point Redevelopment
- International Marine Terminal Expansion
- Portland Gateway Hotel

In all of these projects the ability to integrate a new facility or program with historical buildings, complex physical and environmental sites, and established neighborhoods was critical to the overall success of the project.

We are well experienced with working within an interdisciplinary design team and the need to provide strong design solutions with limited budgets. Key to the firm's success is the commitment to providing attention and focusing on the specific needs of the client, remaining flexible and bringing projects to closure on time and within budget.

Professional services offered through Carroll Associates may include any or all of the following:

- Site Selection and Analysis
- Program Development and Budgeting
- Site Feasibility/ Utilization Studies
- Recreation Planning and Design
- Site Master Planning
- Construction Documents, Bidding, and Administration
- Consultant Team Coordination and Management
- Local, State, and Federal Permitting and Approvals

Brick Hill, South Portland, ME

Brickhill consisted of redevelopment of former Maine Youth Center into mixed use 'Smart Growth' project. The program for the 56 acre site includes 300 affordable housing apartments and condominiums, 250,000 SF of professional office space, recreation amenities including an 8 acre park, boat launch, community gardens, and hiking trails while preserving the historic brick structures on the site. The project is 100% completed in 2017. Carroll Associates provided Master Planning and Site Design Services for the project since 2001.

Forefront at Thompsons Point

The Forefront at Thompson's Point is a mixed-use development located on an existing vacant industrial site on the Fore River in Portland Maine. The original program consisted of a new Sports Event Cente, Concert Hall with an adjacent outdoor amphitheater seating 4500, a 235 room hotel, cultural center, restaurants, and approximately 180,000 sf of professional office space. Carroll Associates has been retained by the Developer to provide Master Planning and Landscape Architectural Services on the project.

Oceangate and Maine State Pier Redevelopment

Redevelopment of underutilized portion of Portland waterfront to provide new berthing for cruise ships and international ferry terminal. Oceangate Project includes extensive parking for ferry arrivals and departures, passengers, and tour busses; integration of adjacent narrow gauge railway, extension of existing streets to provide critical connections, and outdoor plazas and parks providing strong pedestrian connectivity to adjacent open space systems. Maine State Pier project includes redevelopment of aging waterfront pier and landside property to provide strong mixed use including office, retail, hotel, and a 2 acre park and with direct access to the waterfront.

Harborcorp, Portsmouth, NH

Redevelopment of vacant property in West End of Portsmouth, NH to provide mixed use development. Project envisions up to 115 Hotel rooms, 24 Condominium Units, Conference Facilities, Retail, dedicated parkland, and Structured Parking. The project ties into the existing Sheraton Hotel across the street. Approvals are in place and construction is expected to begin in 2019

CARROLL ASSOCIATES

PATRICK J. CARROLL
Principal Landscape Architect

Professional Registration:
Maine, New Jersey, New Hampshire, CLARB

Education:
Utah State University
Bachelor of Landscape Architecture,1978

Prior Experience
Carroll Associates, Portland ME 1993-
Moore Weinrich Architects, ME 1989- 2003
Environmental Planning and Design, ME 1988
Design Workshop, CO 1982- 1988
Land Design, UT 1989- 1988

As founder of Carroll Associates, Pat brings 40 years of landscape Architectural experience on a wide variety of projects throughout Maine, New England, and the Western United States. His successful project experience on largescale master planning and urban design provides a strong basis for solving complex design issues and managing important design and permitting challenges. His sensitivity and understanding of environmental constraints and culture provides for successful projects that are fitting and appropriate to each setting.

Erin Kay
Project Manager

Professional Registration:
Maine

Education:
Rhode Island School of Design
Master of Landscape Architecture, 2010

University of New Hampshire
BA Studio Art, 2004

Prior Experience
Carroll Associates, Portland ME 2013-
Crossby/Schlessinger, MA 2010- 2013

Erin joined Carroll Associates in 2010, and brings significant experience in urban design and planning from her experience in Boston prior to joining the firm. She has actively participated in many of the larger urban projects Carroll Associates has undertaken in the last five years, including Thompsons Point, Harborcorp and other complex and challenging projects. Her ability to quickly synthesize a site and develop creative solutions make her a valuable member of the design team.

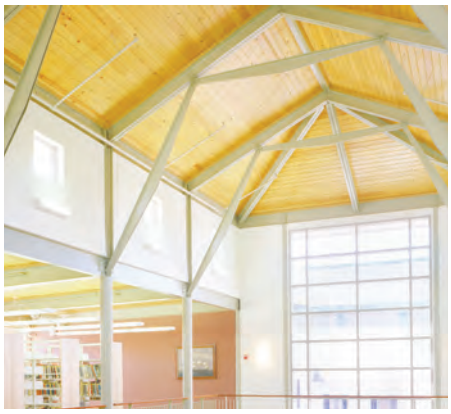
WSA

WINTON SCOTT
ARCHITECTS

5 Milk Street, Portland, ME 04101
207.774.4811|www.wintonscott.com

Established in 1975, Winton Scott Architects is a small, design-oriented architectural practice located in Portland, Maine. Our work encompasses a diverse array of project types and scales ranging from multi-block urban developments, to historic renovations, commercial and institutional buildings, and multifamily and single family residences.

Our firm has been recognized numerous times for design excellence by the Maine and New England Chapters of the American Institute of Architects, as well as the United States Green Building Council; and our work has been profiled in national trade journals, local publications, and several books focussed on design and architecture.



Winton Scott Architects is comprised of a staff of six, including four senior architects ranging in experience from 15 to 45 years. The office is organized horizontally with all staff members capable of managing projects from program and design through production of construction documents and construction contract administration. This depth of experience and continuity in staffing have allowed WSA to take on large, complex projects while consistently delivering the highest level of professional services to our clients. The culture of the office is that of an open, creative collaboration of seasoned architects striving for the highest level of design excellence and client satisfaction.

We believe that architecture should be sustainable, adaptable, timeless, and derivative of its context and function. All buildings, even the most modest in scale and budget, can be at once artful, functional, and inspiring if they are rigorously conceived and executed with craft and precision. Each of our designs responds to the specific needs of our clients and the individual character of a particular site and its surrounding context.

WINTON SCOTT
ARCHITECTS

Winton Scott, NCARB
President

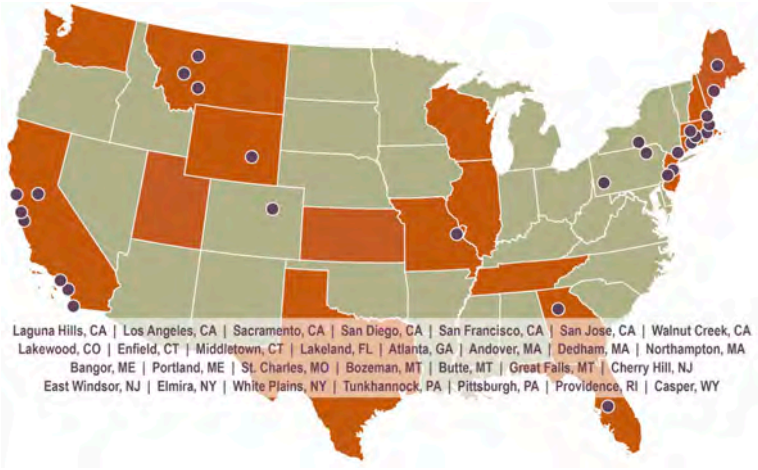
Professional Registrations	Maine, Massachusetts, and NCARB Certification
Other Experience	Louis I. Kahn, Architect, Philadelphia, PA Senior Project Architect Phillips Exeter Library Eero Saarinen and Assoc., New Haven Designer and Job Captain Ford Foundation Headquarters
Education	University of Texas, Bachelor of Architecture with Highest Honors, 1960

Before founding founding Winton Scott Architects in 1975, Winton Scott had built an impressive list of project experiences with some of the most highly respected architectural firms in the country. During this same period, he also accepted several teaching appointments with some notable schools of architecture, honing his own design interests.

Although Winton is a skilled designer, comfortable with any site, any building type and any scale, one of his special interests is urban design. His keen sensibilities in this arena are dramatically apparent in several recent projects completed by WSA

Stephen W. Weatherhead, RA
Principal

Professional Registrations	Licensed Architect, State of Maine
Education	Syracuse University, Bachelor of Architecture Professional Degree, 1988 Syracuse University in Florence, Italy Architecture Study Abroad Program, 1986



Steve joined Winton Scott Architects in 1994 to take on the role of Project Architect for the renovations to Merrill Auditorium. Since that time, he has gained extensive design and management experience on a wide range of renovation and new construction projects undertaken by the firm. His work encompasses projects ranging from custom homes to large scale commercial and institutional projects as well as a large portion of the firm's municipal work which includes a multitude of projects completed for the City of Portland.

With over 28 years of experience in all phases of architectural practice from conceptual design through construction, Steve knows how to effectively manage the design team and lead an open process that has consistently produced successful building projects based on the specific needs of his clients. He has managed projects for WSA totaling over $100M in construction value that have utilized a full range of project delivery methods both in the private and public sectors.

PROFILE OF THE FIRM

Woodard & Curran is an integrated engineering, science, and operations company. Privately held and steadily growing, we serve public and private clients locally and nationwide.

Talented people are at the heart of our firm. Our company was founded in 1979 on a simple business concept: provide an enjoyable place to work with opportunity, integrity, and commitment, and we will attract talented people. It happened. At the heart of our company are people who are experts in their fields and passionate about what they do, showing a level of commitment and integrity that drive results for our clients. You experience this power every day in our actions, our solutions, and our promises kept.

Woodard & Curran serves clients locally and nationwide from offices throughout the U.S. Headquartered in Portland, Maine, the firm operates offices in the locations noted above, as well as treatment facilities in the states that appear in orange.

Commitment evident in personal approach

Our commitment is reflected in the personal attention, collaborative resources, and dedication to results that we devote to each project. We assign the right people with the right expertise to the job, and provide clients with easy accessibility to senior experts.

Our work is characterized by responsiveness, resourcefulness, and willingness to do what it takes to get the job done properly. Examples range from helping communities garner state and federal funding for wastewater treatment system improvement to managing a multi-vendor manufacturing project through a major snowstorm and getting production lines up and running. We are experts at navigating the complexities of environmental regulations and have been involved in transforming many brownfields sites into marketable properties. In defining moments like these, it is commitment that brings our clients results.

Operating with integrity

Our integrity impacts our decision-making at all junctures of our work — from the openness of our communication to the fairness of our prices to placing your interests above our pocketbook. We hire people who share our values of honesty, respect, and fairness and who want to do the right thing. They, in turn, treat everyone — our people, our clients, regulators, and stakeholders — respectfully and honestly.

Full-service firm with multidisciplined staff

Our integrity and commitment are matched only by the depth of our expertise. Our staff are specialists in their fields, offering in-depth understanding of cutting-edge technology, astute problem-solving, multidisciplinary engineering, and expert regulatory guidance. The firm has received numerous honors and awards, and we have ranked among *Engineering News-Record's* top 100 environmental firms every year since 2000.

Services to the private sector

Woodard & Curran provides a range of site/civil and environmental engineering, science, and operations support to companies in the real estate sector, as well as to hospitals, colleges and universities, and law firms, helping our clients realize their project vision.

BARRY SHEFF, PE
PRINCIPAL-IN-CHARGE

Professional Profile

Barry is a Senior Principal and Senior Project Manager with over 25 years' experience working with the public sector on infrastructure planning and implementation, and with the private sector on urban revitalization projects. He is responsible for design and project management, with expertise engaging and facilitating stakeholder processes. His project work has involved utility infrastructure with focus on stormwater and wastewater utility planning studies, evaluations, and engineering; green infrastructure; master development planning and site design; and environmental/land-use permitting at the local, state, and federal levels. Barry focuses his work on sustainable environmental design and is committed to collaborating with owners and stakeholders to develop practical solutions to complex problems. He has been involved in numerous projects with high-performance buildings and LEED certification. Barry has a track record of understanding client expectations, consistent budget controls and excellent communication skills that enable him to drive the success of small and large projects of varying complexities.

Related Experience

Maine Medical Center, Portland, ME – Parking Garage. Principal-in-Charge for the permitting and design of the new 2,000+ car parking garage in St. John Valley neighborhood of Portland. The project is the result of a partnership between a private land-owner and Maine Medical Center (MMC) as part of the hospital's major campus expansion. Woodard & Curran's work involves site options analysis, land-use and environmental permitting, site/civil engineering and utility infrastructure design for the multi-level parking structure to serve MMC employees. Focus areas of the project involve the coordination with employee shuttle services, and the need for accommodating employee commuting patterns and routes while reducing demand on the existing urban street network surrounding the hospital campus.

Patrons Oxford Insurance – Patrons Oxford Insurance Headquarters. Principal-in-Charge for the permitting and design of the new Patrons Oxford Insurance Headquarters in Portland, Maine. The project was the first development in the Portland Technology Park in Portland (designed by Woodard & Curran). The project involved close coordination with the design team and owner, and included the low impact design considerations for parking and site features, as well as integration into the Technology Park's stormwater management plan.

East Brown Cow Management Inc., South Portland, ME – Sable Oaks Office. Principal-in-Charge responsible for civil site design and land-use permitting of a 45,000-SF office building with associated parking lot, access drives, plazas, and landscaping. The project included design of stormwater treatment systems, erosion control, site amenities, and utilities. Permitting efforts involved the City of South Portland, Maine Department of Environmental Protection (DEP), Army Corps of Engineers, and Federal Aviation Administration given proximity to the Portland International Jetport.

Education

- Bachelors, Civil / Environmental Engineering, University of Vermont

Registrations

- Registered Professional Engineer - ME, #9708
- NCEES License - National, 60366
- Maine DOT Local Project Administration Tier 1 Certification

Professional Associations

- American Society of Civil Engineers
- American Public Works Association
- New England Water Environment Association (NEWEA)
- Order of the Engineer

East Brown Cow Management Inc., Portland, ME – Hyatt Place Hotel. Principal-in-Charge for this redevelopment project to convert an existing parking lot on a 20,000 SF urban parcel of land into an 80,000 SF hotel. We collaborated with the architect and owner's representative to provide local permitting and site / civil engineering design associated with the project. The project was complicated by private power distribution infrastructure that crossed the site and needed to be maintained, as well as the City's desire to have off-site roadway improvements incorporated into the project.

PDT Architects, Portland, ME – Adams School Workforce Housing. Project Manager for this urban redevelopment project, supporting AVESTA Housing and its design team. Located in the Munjoy Hill neighborhood of Portland, the project is a result of a public RFP for redevelopment proposals of this brownfield site, the home of a former elementary school. The project involved the demolition of the existing Adams School building and site amenities, and remediation of environmental contamination; and development of a 16-unit affordable ownership-housing complex, with public open space and playground area. Our work involved local and state environmental permitting, and site engineering and design associated with the placement of this project in a densely developed residential neighborhood. The engineering effort required an intensive balance of earthwork activities to control remediation costs and ensure adequate environmental protections for the residents and users of the open spaces.

The Watermark and Ocean Gateway Garage – Mixed Use Development. Project Manager for the environmental due diligence phases (Phase 1 environmental site assessment and soil/groundwater investigations), site design, and permitting for this private mixed use development on the Portland waterfront (adjacent to the Ocean Gateway facility) with boutique hotel, luxury condominiums, retail, commercial space, office building, 750-car parking garage, and additional surface parking lots. Site/civil work includes layout, grading, drainage, erosion and sedimentation control, and utility design. Permitting includes City Site Plan, Subdivision, Historic Preservation, Maine DEP Site Law, and Maine Historic Preservation permitting. The parking garage was constructed while the remaining portions of the project were unbuilt.

MaineDOT, Portland, ME – Ocean Gateway Multimodal Facility. Program and Project Manager of the permitting and design for implementing first phase of the Master Plan of the redevelopment of a 19.5-acre ship repair facility to a multi-use marine transportation facility on Portland's waterfront. The phase one facility encompassed the former Bath Iron Works site and the associated City-owned land-based infrastructure. Under Barry's responsible charge, Woodard & Curran prepared, submitted, and obtained land-use and environmental permits for the project, including local land-use and Board of Harbor Commissioners approvals; Maine Department of Public Safety Construction Permit; Maine Traffic Movement Permit; U.S. Army Corps of Engineers Department of the Army Permit; and Maine DEP Site Location of Development Permit and Natural Resources Protection Act. We also designed the site infrastructure (vehicle queuing, pick-up and drop-off, short- and long-term parking) to be flexible in its use. The project includes the design of City streets, a major regional trail connection, and the narrow gauge passenger railway. The design creates a new city block and the impetus for economic development. The design of utility infrastructure and blending the facility into an existing congested urban environment proved challenging, but in the end, met the City's future needs. Barry was responsible for working with a steering committee to develop and refine concepts working within available construction funding constraints, and for preparing Phase 1 improvement recommendations as a summary of the preliminary design efforts. As the Program Manager, Barry was responsible for managing the contract with the State of Maine and the 10-firm design team.

University of Southern Maine, Portland, ME – Community Education Center and Parking Garage. Project Manager/Engineer responsible for site and utility design of a 1200-car parking garage, 500-seat lecture hall, and 15,000-SF office classroom building. Coordinated the site survey; completed preliminary site evaluations; prepared grading and utility plans for surface parking areas, open space, and roadways; developed construction documents; completed stormwater design; coordinated with the City of Portland for roadway realignments and discontinuances; coordinated design plans with the project architect and landscape architect; and prepared technical specifications for construction documents. Coordinated with the regulatory agency; prepared local Demolition Permit applications; prepared Application for Maine DEP Site Law and City's Major Site Plan Applications under tight time frames. The project is LEED Gold certified.

City of Portland, ME – Bayside Adapts, Phase I. Principal-in-Charge of the team providing planning and engineering services to facilitate the City's first climate change adaptation planning effort, for the City's Bayside neighborhood. The focus of the project was to conduct a Sewer and Stormwater Data Gap Analysis, and public engagement process to help the community identify a socially responsible, technically sound and financially feasible adaptive strategy to protect the Bayside Neighborhood from the effect of rising tides, extreme rain events and storm surge. Our work involved coordination and contracting with a subconsultant, RPS ASA to evaluate and recommend sea level rise and storm surge scenarios appropriate for City of Portland's planning horizon.

BECKER
STRUCTURAL ENGINEERS

About Us

Becker Structural Engineers, Inc., was founded in 1995 and is a full service structural consulting firm with a staff of twenty-seven. We provide practical, cost-effective and innovative solutions on a wide range of challenging projects in three practice areas; buildings, parking structures and bridges.

We believe in competency and character as our defining values. We are pro-active and interactive in our approach. Our dedicated staff and our investment in technology allows us to deliver high quality service on multiple large and small projects simultaneously. We embrace an engineering approach to projects which combines classical engineering theory and practical experience, paired with the versatility and efficiency of Autodesk Revit to create structural models which interact and coordinate with architectural and mechanical models to define the comprehensive building system. This approach advances the design and coordination of our projects.

Our building design practice includes residential, commercial, education and public institutional buildings. We have substantial experience with contemporary building design which is complemented by an extensive background and expertise renovating and restoring historic structures. Our design capabilities are complemented by our construction phase services, which include construction reviews for general conformance and implementation and administration of the IBC Special Inspections Program. We believe a strong job site presence contributes to enhanced quality and improved construction efficiency. Working with the owner, architects, contractor and testing agencies our office provides a full range of construction monitoring capabilities.

Becker Structural Engineers have been the selected structural engineering consultant for municipalities, owners and developers throughout New England. Recent and relevant work includes on-going services under a **General Consulting Services for the City of Portland** and a **General A/E Services** agreement with the **Portland Housing Authority.** Significant buildings in Portland include the multi-story medical offices for **InterMed**, the **Hyatt Hotel** located on Fore St. and the rehabilitation of the **historic Twitchell-Champlain** building on Merill's Wharf which now serves as the law offices for Pierce Atwood**.** We strive to integrate ourselves in understanding the overall approach that each owner is seeking to obtain, with guidance on analysis and cost recommendations to fit within the sustainability of the program design.

BECKER
STRUCTURAL ENGINEERS

Paul B. Becker, P.E., SECB
President

As the founder of Becker Structural Engineers, Paul has over thirty-eight years of structural engineering experience in New England and the Mid-Atlantic States. His technical experience covers all aspects of the structural engineering profession including complex building systems using steel framing, cast in place, precast and post-tensioned concrete, deep foundation support systems, earth retaining structures, masonry and timber framing. He has served as lead design engineer and project manager, responsible for establishing and monitoring schedules, budgets and quality control on projects with construction costs of up to $75 million. As Principal in Charge of a project, he collaborates with the client and project team to establish the project scope, schedule and contracts and monitors the progress and quality of work.

5. NOISE

Mechanical systems located on the rooftops of the proposed buildings will be screened to mitigate noise impacts. Noise associated with the proposed development is not anticipated to negatively impact surrounding development in its urban setting.

6. VISUAL

Fore Street and Spring Street in the Portland Square area are urban, developed streets with only one or two significant parcels remaining to be developed. The proposed buildings will replace a visually unappealing surface parking lot and have been designed to work in concert with existing and proposed surrounding developments.

7. WILDLIFE & FISHERIES

The Site is fully developed and there are no known areas of significant natural features, including areas of significant wildlife habitats or wetlands. The attached Official Species List identifies the northern long-eared bat, which has been listed as a Federally Threatened Species, in association with the project area; however, there are no critical habitat areas located within the project area. Based on US Fish & Wildlife information, the northern long-eared bat typically lives in caves during the winter months, and in trees larger than three inches in diameter during the summer, with migration between these two habitats in the spring in the fall. Tree-clearing for this project will be minimal and limited to only removal and replacement of street trees and landscaping trees and vegetation; it is not anticipated that this project will have a negative impact on the northern long-eared bat species.

As described in Section 14, erosion and sedimentation control measures will be utilized during construction to ensure that the work will not result in release of sediment to natural resources. These measures will be in accordance to the MaineDEP Erosion Control Best Management Practices.

A letter was sent to the Maine Department of Inland Fisheries and Wildlife (MDIFW) on December 19, 2019, requesting information regarding any known threatened or endangered species or critical habitat relative to the project area. A copy of the response will be forwarded upon receipt.

Project Name: Portland Square Phase II

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies the threatened, endangered, candidate, and proposed species and designated or proposed critical habitat that may occur within the boundary of your proposed project or may be affected by your proposed project. This species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 et seq.).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC Web site at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seq.), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the Endangered Species Consultation Handbook at: http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

This species list also identifies candidate species under review for listing and those species that the Service considers species of concern. Candidate species have no protection under the Act but are included for consideration because they could be listed prior to completion of your project. Species of concern are those taxa whose conservation status is of concern to the Service (i.e., species previously known as Category 2 candidates), but for which further information is needed.

If a proposed project may affect only candidate species or species of concern, you are not required to prepare a Biological Assessment or biological evaluation or to consult with the Service. However, the Service recommends minimizing effects to these species to prevent future conflicts. Therefore, if early evaluation indicates that a project will affect a candidate species or species of concern, you may wish to request technical assistance from this office to identify appropriate minimization measures.

Please be aware that bald and golden eagles are not protected under the Endangered Species Act but are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.). Projects affecting these species may require development of an eagle conservation plan: http://www.fws.gov/windenergy/eagle_guidance.html Information on the location of bald eagle nests in Maine can be found on the Maine Field Office Web site: http://www.fws.gov/mainefieldoffice/Project%20review4.html

Additionally, wind energy projects should follow the wind energy guidelines: http://www.fws.gov/windenergy/ for minimizing impacts to migratory birds and bats. Projects may require development of an avian and bat protection plan.

Migratory birds are also a Service trust resource. Under the Migratory Bird Treaty Act, construction activities in grassland, wetland, stream, woodland, and other habitats that would result in the take of migratory birds, eggs, young, or active nests should be avoided. Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g.,

cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm and at: http://www.towerkill.com; and at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

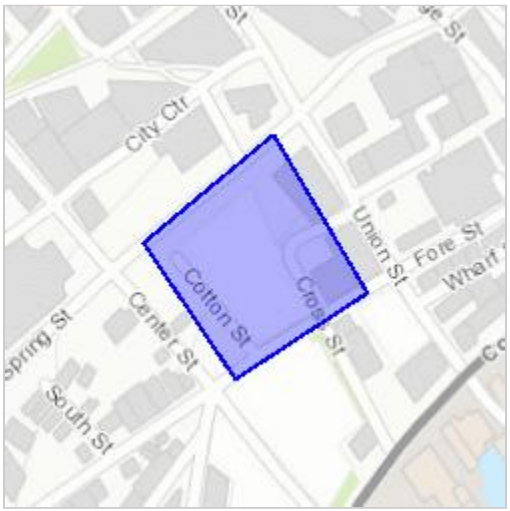
Project Summary

Consultation Code: 05E1ME00-2020-SLI-0004

Event Code: 05E1ME00-2020-E-00038



Project Name: Portland Square Phase II

Project Type: DEVELOPMENT

Project Description: Redevelopment of existing surface parking lot with a parking garage and mixed-use space.

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/place/43.65581794579938N70.25671779687991W

Counties: Cumberland, ME

Endangered Species Act Species

There is a total of 1 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

RE: Three Portland Square – Environmental Review Request

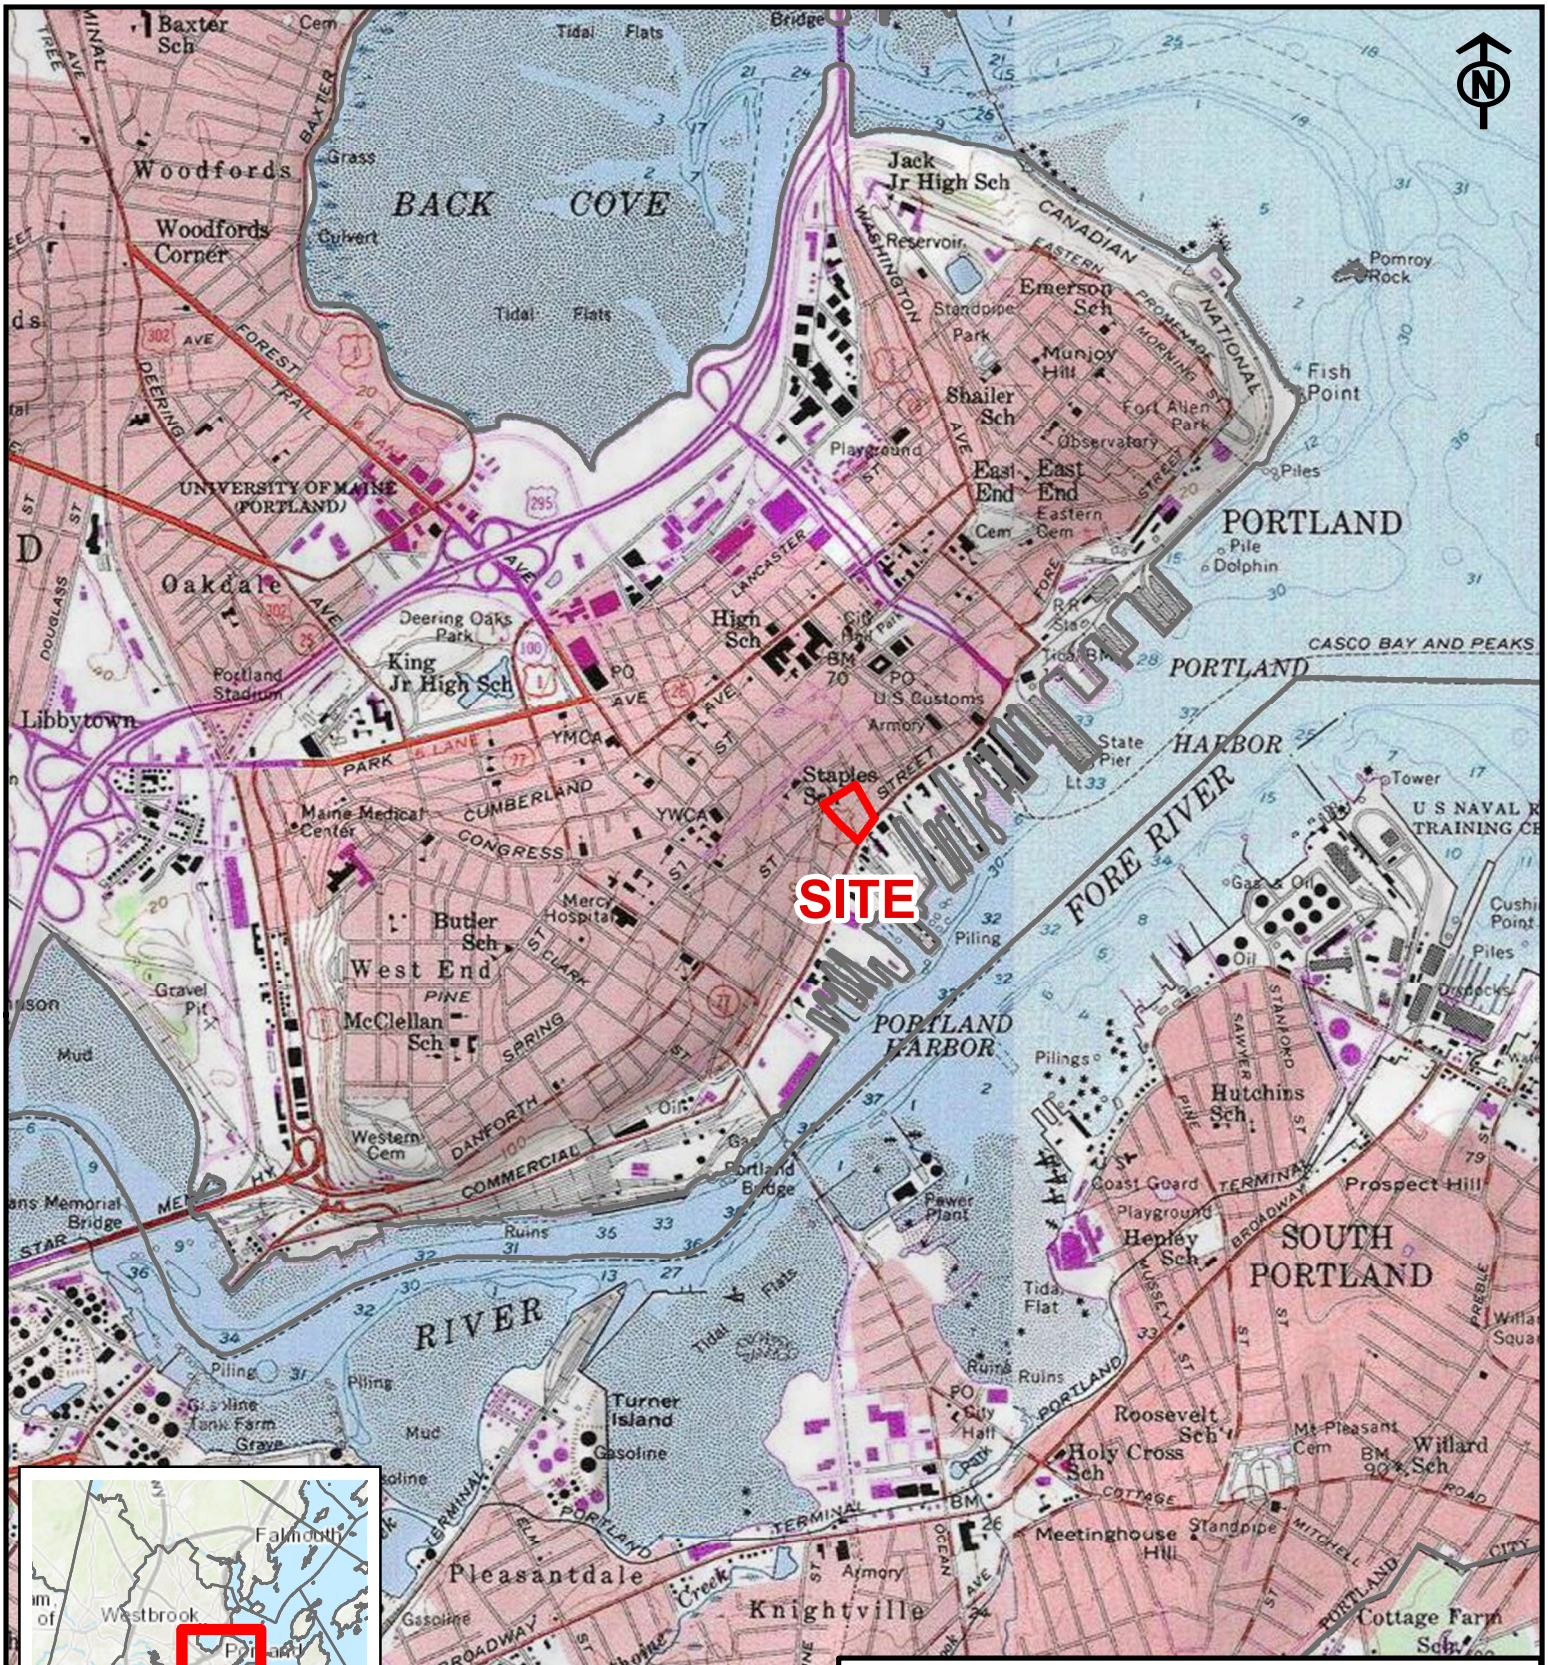
To Whom It May Concern:

North River IV, LLC is proposing to redevelop an approximately 2.3-acre property bounded by Spring Street, Cotton Street and Fore Street in Portland, Maine. The site is currently fully developed as a surface parking lot with perimeter landscaping features. The proposed project will include construction of an 8-story office building with ground-level retail, a 7-level parking structure, and a 4-story office building with ground level retail/restaurant, as well as the redevelopment of the adjacent Portland Square plaza, stairs, private access driveway and Cotton Street.

The proposed work will require a Maine Department of Environmental Protection Site Location of Development Permit Amendment, which requires coordination with the Maine Department of Inland Fisheries and Wildlife (MDIFW). On behalf of North River IV, LLC, we are requesting a review of the project area for any known threatened or endangered species or critical habitat. A Site Location Map and Site Plan have been attached for your reference.

We appreciate your review of this project. If you have any questions regarding this information or the proposed project, please do not hesitate to contact me at 207-558-3763 or lswett@woodardcurran.com. Thank you for your assistance.

Sincerely,



WOODARD & CURRAN

8. HISTORIC SITES

The proposed Three Portland Square project is not located within any City of Portland Historic Preservation Districts. The project is located adjacent to a historic landmark, the Tracy-Causer Building, which is located across Cotton Street from the site. Work has been done to avoid impacts to existing grades around this building. Appropriate consultation with the City of Portland Historic Preservation staff will be completed as required. A request was made to the Maine Historic Preservation Commission (MHPC) for information regarding any known historic properties relative to the project area on December 19, 2019. A copy of the response will be forwarded upon receipt.

Re: Three Portland Square – Project Review Request

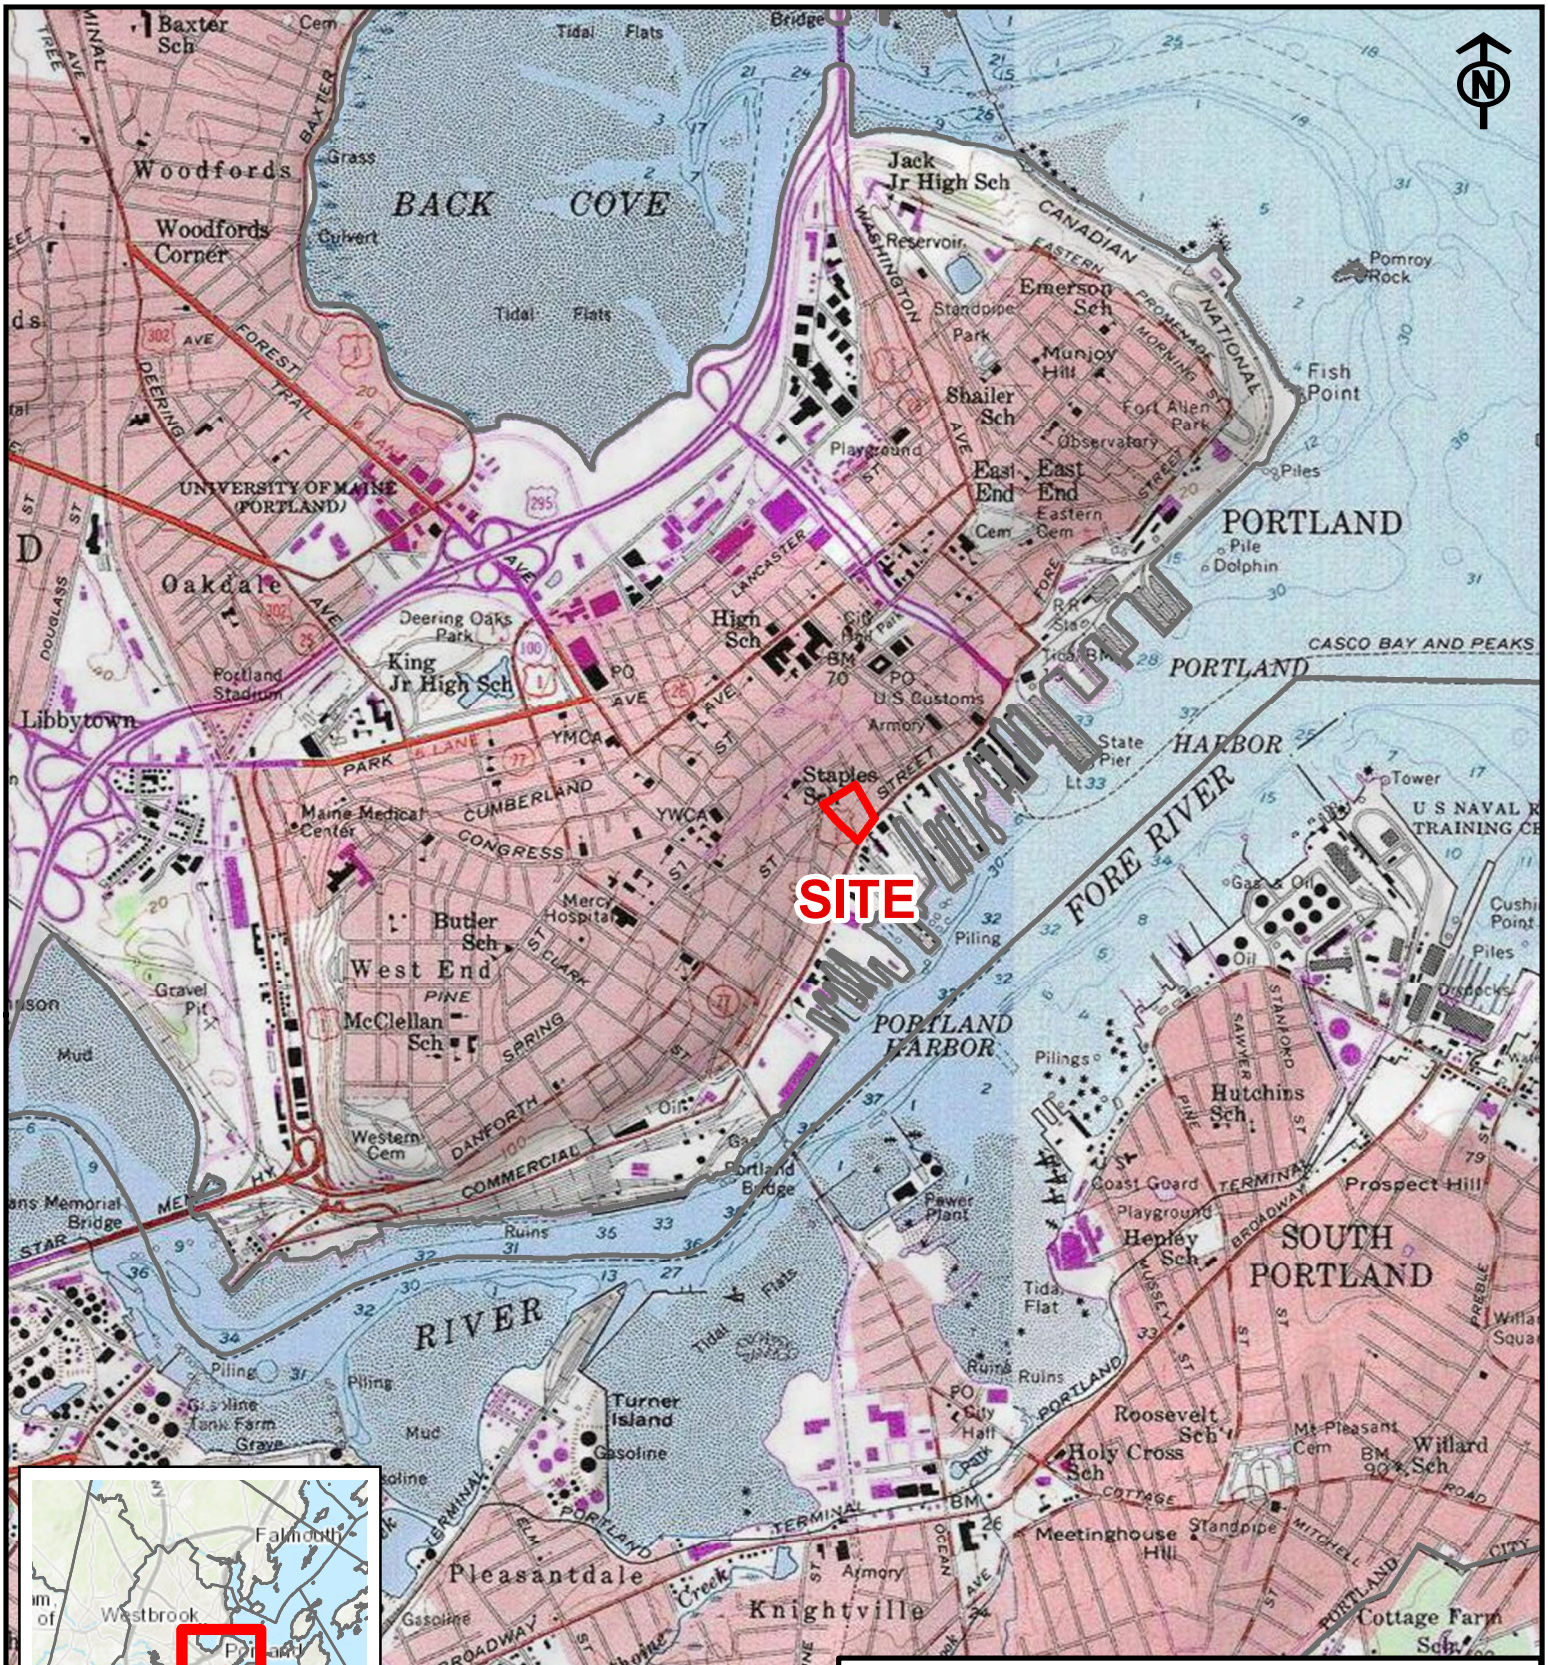
Dear Mr. Mohney:

North River IV, LLC is proposing to redevelop an approximately 2.3-acre property bounded by Spring Street, Cotton Street and Fore Street in Portland, Maine. The site is currently fully developed as a surface parking lot with perimeter landscaping features. The proposed project will include construction of an 8-story office building with ground-level retail, a 7-level parking structure, and a 4-story office building with ground level retail/restaurant, as well as the redevelopment of the adjacent Portland Square plaza, stairs, private access driveway and Cotton Street.

The proposed work will require a Maine Department of Environmental Protection Site Location of Development Permit Amendment, which requires coordination with the Maine Historic Preservation Commission. On behalf of North River IV, LLC, we are requesting a review of the project area for any known historic properties. The proposed project is not located within or adjacent to a City of Portland Historic Preservation District. A USGS topographic map has been attached for your reference.

We appreciate your review of this project. If you have any questions regarding this information or the proposed project, please do hesitate to contact me at 207-558-3763 or lswett@woodardcurran.com. Thank you for your assistance.

Sincerely,



WOODARD & CURRAN

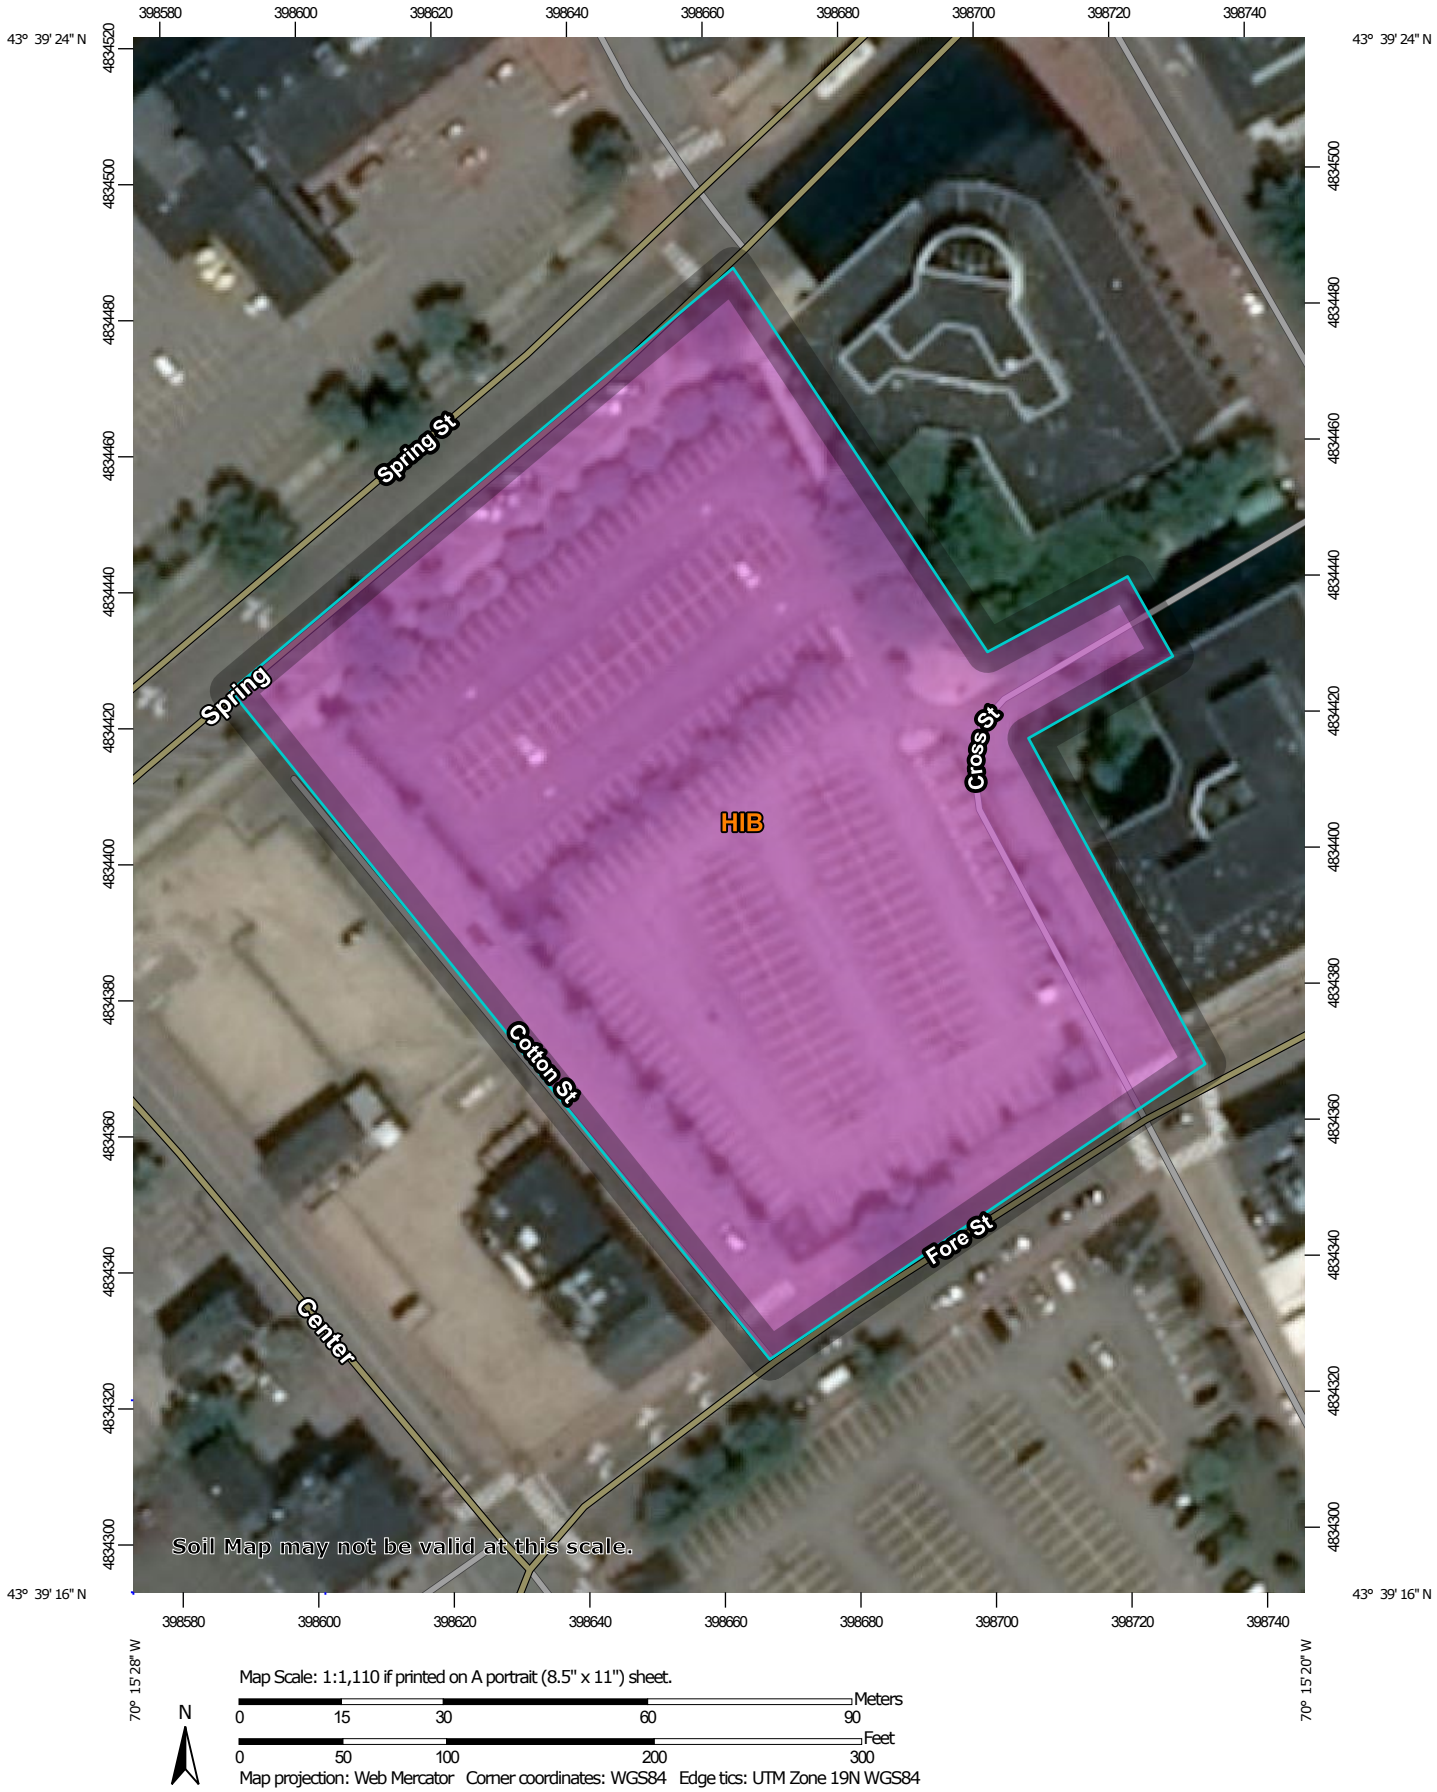
10. BUFFERS

This project is occurring entirely on previously developed land. The proposed buildings cover almost the entire site, as required per City of Portland Zoning setback requirements. Therefore, this section is not applicable.

11. SOILS

11.1 NARRATIVE

According to the Cumberland County Soil Survey, the Site contains of Hinckley Loamy Sand (HIB). This soil designation consists of gravely and sandy soil deposits.



Haley & Aldrich, Inc. performed a subsurface exploration and preliminary geotechnical engineering evaluation in December 2016, and issued the attached report entitled *Preliminary Geotechnical Evaluation – Portland Square Development.* Subsurface explorations identified the presence of 'man-placed fill soils' on site, overlying naturally-deposited marine soil, glacial till and bedrock. The subsurface explorations consisted of eighteen test borings over the Portland Square project area; nine of these test borings are within the project area of the proposed Three Portland Square development. The soils profile encountered during the test borings generally consisted of bituminous concrete overlying about 2- to 9-feet of man-placed fill, which was generally underlaid with 6- to 20-feet of marine deposit consisting of variable density clays, silts and sands, 0- to 7 feet of glacial till and weathered bedrock.

Additionally, groundwater levels were documented in each observation well and test boring. Groundwater was encountered from elevation 15.5 to 40.8.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cumberland County and Part of Oxford County, Maine
Survey Area Data: Version 16, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Data not available.

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
HIB	Hinckley loamy sand, 3 to 8 percent slopes	A	3.0	100.0%
Totals for Area of Interest			**3.0**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Tie-break Rule: Higher

12. STORMWATER

The attached Stormwater Management Plan describes the proposed stormwater management measures for the project, as shown on the design drawings attached to Section 1 of this Report. A USGS map and a soils map are attached to Section 1 and Section 11 of this Report, respectively. The Erosion and Sedimentation Control Plan for the proposed project is summarized in further detail in Section 14 of this Report.

12.1 LIST OF ATTACHMENTS

- Stormwater Management Plan (Bound Separately)

13. URBAN IMPAIRED STREAM

The proposed project is not located within the watershed of an Urban Impaired Stream; the Urban Impaired Stream standard does not apply.

14. BASIC STANDARDS

The overall goal of the Soil Erosion and Sedimentation Plan is to reduce the potential for erosion and sedimentation at the site and prevent any transportation of sedimentation down-gradient of the site. A variety of erosion control techniques will be implemented to achieve this goal. During construction, these include:

- Installation and maintenance of construction entrances at the travelled interface between stabilized and non-stabilized portions of the project site;
- Diversion barriers to keep up-gradient runoff from flowing through the active construction areas;
- Positive grades throughout the construction site to direct flow to sediment control barriers;
- Installation and maintenance of sediment barriers adjacent to and down-gradient of the construction site;
- Catch basin inlet protection devices;
- Preservation and maintenance of vegetated areas to the maximum extent possible;
- Temporary stabilization of disturbed vegetated areas to be exposed for more than seven days;
- Application of permanent seeding and mulching (or other permanent surface treatment as indicated on the drawings) applied as soon as areas achieve final grades;
- Controls for fugitive dust, debris, and other materials; and
- Inspection of all in-place measures after every significant rainfall until the site is permanently stabilized.

All measures will be implemented in accordance with the "Maine Erosion and Sedimentation Handbook for Construction: Best Management Practices". All temporary measures will be installed prior to any earthmoving operation and removed after the areas are permanently stabilized. All control measures will be maintained in an effective operating condition until the Site is permanently stabilized. Permanent erosion control measures will include vegetation and pavement. The Contractor will be responsible for implementing and maintaining all erosion and sediment control measures and conducting inspections in accordance with the attached *Stormwater Erosion & Sediment Control Inspection Report Form* (or equivalent).

Inspections shall be performed at least once a week, as well as before and after storm events. A person with knowledge of stormwater management and erosion and sediment control, including the standards and conditions in the permit, shall conduct the inspections and perform maintenance of the facilities. If maintenance or modifications are necessary, implementation will be completed within seven days and prior to any rainfall event. After construction, the responsible party for the owner will conduct inspections of the Site per the inspection and maintenance requirements outlined in Section 12 of this Report.

15. GROUNDWATER

As noted previously, a subsurface investigation has been completed, and groundwater levels were documented in each observation well and test boring. Groundwater was encountered from elevation 15.5' to 40.8'. Some construction practices such as deep foundations and dewatering activities will be required for this project. The final foundation and dewatering plan will be developed prior to construction.

16. WATER SUPPLY

The proposed development will be provided with both fire protection water service and domestic water service by the Portland Water District from mains located on Spring Street, Cotton Street and Fore Street. Proposed water service locations are shown on the Utility Plan included in the design drawings attached to Section 1 of this Report.

The project team met with representatives from Portland Water District on September 19, 2019 to review anticipated water demand and service connections for the proposed development. During this meeting, Portland Water District indicated the existing water mains on Fore Street and Cotton Street are insufficient to service the proposed development; therefore, replacement of segments of the Fore Street and Cotton Street water mains will be required. The project team will continue to coordinate the design with representatives from Portland Water District as the design progresses. A copy of the Ability to Serve Determination letter from Portland Water District will be provided upon receipt.

17. WASTEWATER DISPOSAL

Several sanitary sewer services to the buildings are proposed to connect to sewer infrastructure within Cotton Street (Office Tower), Fore Street (Fore Street Wrap) and Upper Cross Street (Parking Structure) to accommodate the various uses of the buildings. The proposed locations of the sanitary sewer services are shown on the Utility Plan included in the design drawings attached to Section 1 of this Report. Internal grease traps will be utilized if restaurant uses are proposed in the retail spaces. Drainage within covered parking areas will be collected by floor drains and directed to an oil water separator prior to discharge into the sewer main within Upper Cross Street.

A Wastewater Capacity Application will be submitted to the Portland Department of Public Works as part of the Level III Site Plan application process to request confirmation of ability to serve the proposed development. The ability to serve confirmation will be provided to the Planning Department directly by the Department of Public Works.

18. SOLID WASTE

Adequate provisions for recycling and solid waste disposal have been made. General solid waste, construction, demolition, and land-clearing debris will be managed in full accordance with all applicable laws and will not cause a deleterious effect on the environment.

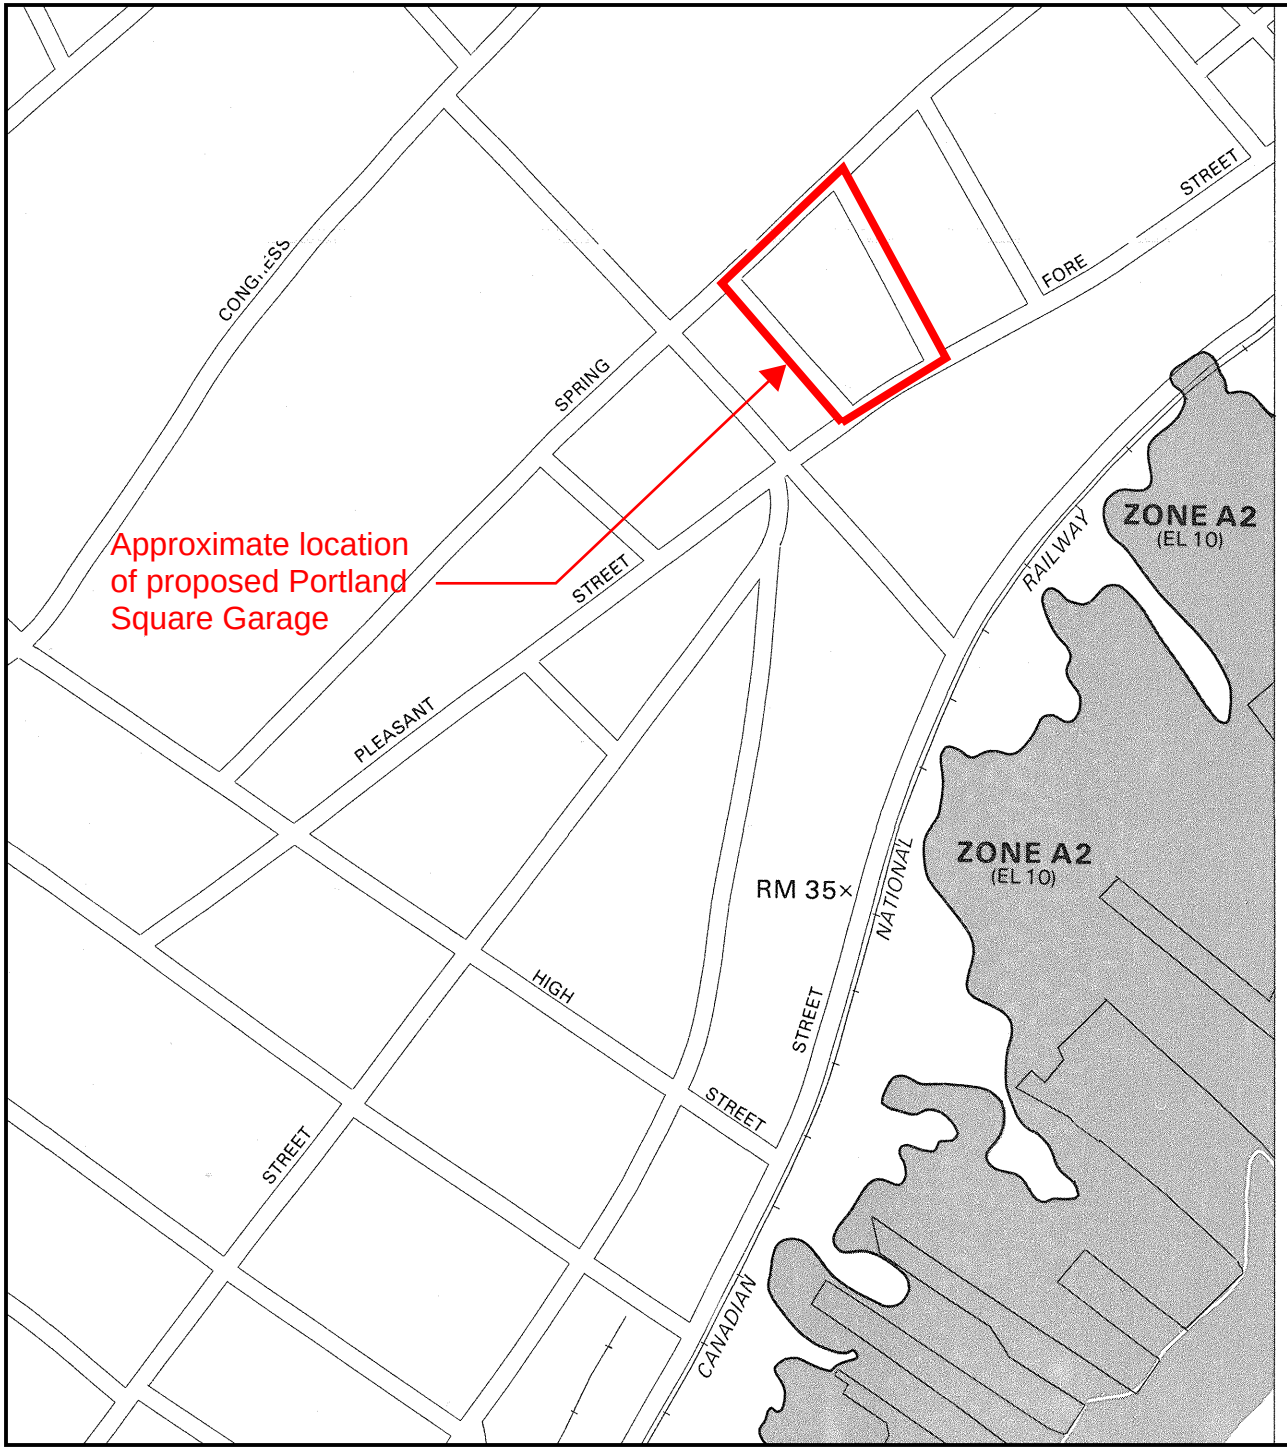
18.1 COMMERCIAL SOLID WASTE

All solid waste materials and recyclables from the proposed redevelopment project will be transported and disposed of, or recycled, in accordance with applicable laws and regulations. The proposed design includes service and loading area located between the office tower and parking structure. Access to this service and loading area will be provided via Upper Cross Street. Service will be scheduled to minimize impacts to business hours to the greatest extents practicable. A solid waste management plan with schedules for solid waste removal will be developed for the proposed building.

18.2 CONSTRUCTION & LAND CLEARING DEBRIS

As with any construction project, the proposed construction will generate construction waste and demolition debris (CDD). The contractor will be responsible for hauling the CDD or contracting with a waste management service to haul the CDD from the project site. The contractor will be fully responsible for handling, managing, and disposing of all waste generated by construction in accordance with Maine Solid Waste Management Regulations – 06-096 CMR 400-409. The contractor will be bound by contract to dispose of all materials in full accordance with all applicable local state and federal regulations. Actual waste volumes will be measured at the time of construction.

18.3 SPECIAL & HAZARDOUS WASTE



The proposed development is not anticipated to produce any hazardous waste. A previous site investigation on the Portland Square property identified the presence of typical urban fill, as is seen on redevelopment sites throughout the City. We anticipate that soils from the site may be classified as special waste and shall be handled and disposed of accordingly.

19. FLOODING

The proposed development is not located within a flood hazard zone, as shown on the FEMA Flood Insurance Rate Map attached to this Section. The proposed development will not cause or increase flooding or cause an unreasonable flood hazard to any adjacent structures. The 100-year flood plain is located off-site and is not within the viewport of the design drawings; therefore, the 100-year flood plain is not shown on the design drawings attached to Section 1 of this Report.

20. BLASTING

Some construction means and methods that may be used on this project will cause vibrations that could be transmitted through the ground to nearby buildings. Project specifications will be prepared that require the contractor to conduct pre-construction surveys prior to the start of potential vibration causing activities, the following will occur. The pre-construction survey(s) will be used to review and document existing building conditions. Site demolition and removals, installation/removal of temporary earth support systems, excavation, vibratory compaction and foundation construction will be completed on this project. If deemed necessary, ground vibrations will be monitored at nearby buildings and used to confirm that measured vibrations are below the maximum permissible that are required by the specifications.

The proposed buildings have been sited and designed to avoid impacts to bedrock. If bedrock is encountered during construction and blasting is required, the specifications will require that the contractor prepare and submit a blasting plan for review for compliance with all project-specific, local, state and federal requirements and regulations. A pre-construction meeting will be planned with abutting property owners to generally discuss construction means and methods that could cause vibrations.

21. AIR EMISSIONS

The project is not a commercial, industrial or institutional development that will require an air emissions license, so this section is not applicable.

22. ODORS

The proposed development will not involve any processes that emit significant odors; this section is not applicable.

23. WATER VAPOR

The proposed development will not use water for any processes that would emit water vapor; this section is not applicable.

24. SUNLIGHT

The proposed development will not block any access to sunlight for any structures utilizing solar energy; this section is not applicable.

25. PUBLIC NOTICE EVIDENCE

The City of Portland has Delegated Review Authority for the proposed project; it is our understanding that the Applicant is not required to complete their own Public Notice, and that the City will issue a Public Notice as part of their internal permit process.

Subject: Preliminary Geotechnical Evaluation
Portland Square Development
Portland, Maine

Ladies and Gentlemen:

This report presents the results of previous and recent subsurface exploration programs and preliminary geotechnical engineering evaluations including a discussion of how the subsurface conditions may impact the proposed development. This work was undertaken at your request and in accordance with our proposal, dated 20 September 2016, and your subsequent authorization.

Elevations

Elevations referenced herein are in feet and reference Portland City Datum (PCD). PCD relates to the National Geodetic Vertical Datum of 1929 (NGVD 29) as follows:

Elevation in ft (PCD) = Elevation in ft (NGVD 29) + 0.02 ft

Site Location, Existing Site Conditions and Historic Site Development

The Portland Square Development project is located on roughly two city blocks in downtown Portland that are generally bound by Commercial Street to the east, Center Street to the south, Spring Street to the west and Cross Street to the north as shown on Figure 1, Project Locus.

The Portland Square Parking Lot (Upper Lot) is generally bound by Spring Street to the west, Cotton Street to the south, Fore Street to the east and the One/Two Portland Square properties to the north. The site is currently being used as a commercial, at-grade (surface) parking facility. Existing site grades generally slope down from Center Street (west) to Fore Street (east) from approximately El. 52 to El. 28.

The Fore Street Parking Lot (Lower Lot) is generally bound by Fore Street to the west, Center Street to the south, Commercial Street to the east and Cross Street to the north. The existing Richardson Wharf Building is located in the northeast corner of the site adjacent to Commercial Street and is not part of the development project. Like the Upper Lot, the Lower Lot is currently being used as a commercial, surface parking facility. Existing site grades generally slope down from Fore Street (west) to Commercial Street (east) from approximately El. 28 to El. 10.

Based on our review of Historical Sanborn maps of the site (Upper and Lower Lots), it appears that each Lot contained multiple structures (buildings) between approximately 1886 and 1980. In general, the structures consisted of residential buildings or those that housed industrial, commercial or manufacturing facilities (e.g., blacksmith, machine, metal and wood shops) as well as ice houses and lumber yards. Each Lot became essentially vacant of above-grade structures between 1980 and 1986. Historical Sanborn Maps of the Lots are provided for informational purposes in Appendix D.

Based on our discussions with the project team and our review of preliminary master plans for the Upper and Lower Lots (see Appendix E) provided by Winton Scott Architects (WSA) dated August 2016 (Upper Lot) and June 2016 (Lower Lot), it is our understanding that the proposed site improvements generally include construction of an urban infill, mixed-use development consisting of a combination of commercial office, retail and residential space with multiple levels of parking (both at and below grade). It is also our understanding that the development will likely be constructed in multiple phases. Please note that the specific plan layout and finish floor slab levels of the proposed structures have not yet been finalized.

Our current understanding of the proposed development on the Upper Lot includes the following general elements:

- Office Building 1: 6-story tower on top of 5 levels of structured parking, 109,980 square feet (sf)
- Office Building 2: 6-story tower on top of 5 levels of structured parking, 100,400 sf

Below grade parking is currently planned beneath the footprint of Office Buildings 1 and 2. The elevation of the lowest parking level is currently planned at El. 29, approximately 23 ft below existing site grades along Center Street. Access to/from the below grade parking area is planned off Cotton Street. Ground floor retail/restaurant space is planned along Fore Street.

Our current understanding of the proposed development on the Lower Lot includes the following general elements:

- Building 3: 3-story tower above 4-levels of structured parking with some retail and residential space, 61,433 sf
- Buildings 4 and 5: 4-story residential towers above 1-level retail and 2- levels of structured parking
- Building 6: 6-story hotel

Below grade parking is currently planned beneath the footprint of the Buildings 3, 4, 5 and a portion of Building 6. The elevation of the lowest parking level (Ground Level) is currently planned at El. 6.42, approximately 22 to 26 ft below existing site grades adjacent to Fore Street. Access to/from Level 1 of the below grade parking area is planned off Cross Street as site grades at Cross Street on the north side of this portion of the site roughly match the proposed Level 1slab elevation (i.e., El. 16.92). The Ground Level parking area will be accessed by the ramp from Level 1 inside of the garage.

In addition to the proposed buildings summarized above, additional site improvements will likely include stormwater management, site roadways and supporting utility infrastructure needed to service the planned development. The details of these site improvements, including proposed site grading have not yet been developed.

Subsurface Exploration Programs

Multiple subsurface exploration programs have been undertaken at and adjacent to the site. Test borings were drilled by Haley & Aldrich in the vicinity of the site for design and construction of One and Two Portland Square, Canal Plaza and the Porteous Warehouse Development (bound by Commercial Street, York Street and Foundry Lane, located south of the Fore Street parking lot, across Center Street). In addition, test borings were drilled under the supervision/direction of Haley & Aldrich in 1985 and 1987 for preliminary geotechnical and phase I/II environmental site assessments completed on both the Upper Lot and Lower Lot sites. Additionally, and most recently, due diligence and preliminary phase geotechnical subsurface exploration programs for the subject project were completed by Haley & Aldrich in 2015 and 2016, respectively.

The approximate locations of relevant test borings are shown on Figures 2 and 3, Site and Subsurface Exploration Location Plans and test boring logs are provided in Appendix A.

2015 DUE DILIGENCE PHASE EXPLORATION PROGRAM

Haley & Aldrich completed a subsurface exploration program consisting of four test borings, designated HA15-1(OW) through HA15-4(OW), within the limits of the Upper and Lower Lots. “As-drilled” test boring locations were determined in the field by Haley & Aldrich by taping distances from existing site features upon the completion of drilling.

The test borings were drilled by New England Boring Contractors (NEBC) of Hermon, Maine during the period 10 to 12 August 2015. The test borings were advanced through overburden soils and terminated in/on bedrock at depths ranging from approximately 18 to 30 ft BGS using a Mobile Drill B-53 truck-mounted drill rig and 3-in. outside diameter (OD; NW size) steel casing.

Soil samples were generally collected continuously through man-placed fill soils and at standard, 5-ft intervals in naturally-deposited soils, by driving a 1-3/8-in. inside diameter (ID) split-spoon sampler with a 140-lb hammer dropped from a height of 30 in., as indicated on the test boring logs. The number of hammer blows required to advance the sampler through each 6-in. interval was recorded and is

provided on the logs. The uncorrected SPT N-value (N-uncorrected) is defined as the total number of blows required to advance the sampler through the middle 12 in. of the 24-in. sampling interval (24-in. long split-spoon sampler).

A photoionization detector (PID) was used in the field to screen for the presence of volatile organic compounds (VOCs) in the recovered man-placed fill soil samples. Elevated PID readings were recorded on individual test boring logs provided in Appendix A of this report.

Approximately 4.5 ft of bedrock was sampled in test boring HA15-1(OW) using a 2.0-in. (NQ-size) ID diamond-tipped core barrel.

Observation wells were installed in each of the completed boreholes to provide information on the static groundwater level at the sites. The observation wells consisted of 1-in. ID, machine-slotted PVC well screen and solid PVC riser pipe cut just below existing ground surface. Each observation well was outfitted with a flush-mounted steel roadway box. Observation well installation and groundwater monitoring reports are provided in Appendix B.

A Haley & Aldrich engineer was present on site to monitor the explorations and document the soil, rock, and groundwater conditions encountered in the explorations and prepare test boring logs. All soil and rock samples were collected and preserved in glass jars and wooden boxes. All soil and bedrock samples are available for review upon request. The available soil and bedrock samples are currently being stored at the Haley & Aldrich laboratory facility in Portland, Maine.

2016 PRELIMINARY PHASE EXPLORATION PROGRAM

Haley & Aldrich completed a preliminary subsurface exploration program consisting of 18 test borings, designated HA16-1 through HA16-18 within the limits of the Upper (HA16-1 through HA16-9) and Lower Lots (HA16-10 through HA16-18). “As-drilled” test boring locations were determined in the field by Haley & Aldrich by taping distances from existing site features upon the completion of drilling.

The test borings were drilled by New England Boring Contractors (NEBC) of Londonderry, New Hampshire under contract with Woodard & Curran (WC; project environmental consultant) during the period 3 to 17 October 2016. In general, the test borings were advanced through overburden soils and terminated in/on bedrock at depths ranging from approximately 15 to 43 ft below ground surface (BGS) using a Acker Drill AD-II truck-mounted drill rig and 4-in. outside diameter (OD; HW size) steel casing.

Soil samples were generally collected continuously through man-placed fill soils and at standard, 5-ft intervals in naturally-deposited soils, by driving a 1-3/8-in. inside diameter (ID) split-spoon sampler with a 140-lb hammer dropped from a height of 30 in., as indicated on the test boring logs. The number of hammer blows required to advance the sampler through each 6-in. interval was recorded and is provided on the logs. The uncorrected SPT N-value (N-uncorrected) is defined as the total number of blows required to advance the sampler through the middle 12 in. of the 24-in. sampling interval (24-in. long split-spoon sampler).

A photoionization detector (PID) was used by WC personnel in the field to screen for the presence of volatile organic compounds (VOCs) in the man-placed fill soil samples recovered from select test borings.

Approximately 5 to 7 ft of bedrock was sampled (cored) in each test boring except HA16-5, HA16-9, HA16-11, HA16-12 and HA16-16. Bedrock samples were collected using a 1.875-in. (NX-size) ID diamond-tipped core barrel.

A Haley & Aldrich geologist was present on site to monitor the explorations and document the soil, rock, and groundwater conditions encountered in the explorations and prepare test boring logs. All soil and rock samples were collected and preserved in glass jars and wooden boxes. All soil and bedrock samples are available for review upon request. The available soil and bedrock samples are currently being stored at the Haley & Aldrich laboratory facility in Portland, Maine.

Subsurface Conditions

The subsurface conditions encountered at the site consist of man-placed fill soils overlying multiple naturally-deposited geologic units. Additional details are provided on the test boring logs included in Appendix A. In addition, a summary of the soil units and thicknesses encountered within each test boring that was completed under the direction of Haley & Aldrich during the 2015 (due diligence phase) and 2016 (preliminary phase) subsurface exploration programs is provided on Table I. Please refer to subsurface profiles shown on Figures 4-6 for a graphical representation of the soil conditions across the sites (Upper and Lower Lots). A general description of soil, bedrock and groundwater conditions encountered in the due diligence and preliminary phase test borings are provided separately, below.

Please note that soil descriptions provided on the test boring logs do not represent actual field conditions other than at the specific test boring locations. Actual conditions encountered between test boring locations may vary from those described herein and shown in Table I and Figures 4-6.

Geologic Unit	Approximate Encountered Thickness (ft)	Generalized Description
Man-Placed Fill	2 to 24 (2 to 9 within Upper Lot and 12 to 24 within Lower Lot)	Loose to very dense poorly-graded SAND with variable amounts of silt (SP, SP-SM), silty SAND with variable amounts of gravel (SM), poorly-graded gravel with variable amounts of sand (GP), well graded SAND with variable amounts of silt and gravel (SW, SW-SM), well graded GRAVEL with sand (GW) and medium stiff to hard SILT (ML) with variable amounts of sand and gravel. Portions of the layer contained shell, organic, wood, concrete, brick, ceramic, glass, coal, slag, ash, rubber, and leather fragments. 1 to 5-ft thick layers of wood or concrete were encountered in test borings HA16-11, HA16-12 and HA16-16 through HA16-18. A strong petroleum-like odor was noted within the layer between approximately 3 and 12 ft BGS in test boring HA16-13. *(encountered in each test boring)*
Marine Deposit	0 to 20	very soft to hard SILT (ML) and CLAY (CL) with variable amounts of or interbedded with poorly-graded SAND (SP) or silty SAND with gravel (SM) and very loose to very dense silty SAND with variable amounts of gravel or lean clay (SM) and well graded GRAVEL with variable amounts of silt and sand (GW, GW-GM) (*encountered in each test boring except HA16-16 and HA16-18*)
Glacial Till	0 to 8	very dense well graded SAND with gravel (SW) (*encountered in test borings HA15-1(OW) through HA15-4(OW), HA16-1, HA16-8 and HA16-13*)
Bedrock	moderately hard to hard, fresh to highly weathered PHYLLITE and QUARTZITE. Up to 7 ft of weathered bedrock was encountered overlying more competent material at some test boring locations. Top of bedrock surface encountered in each test boring is shown on Figures 2 and 3 and graphically on Figures 4 and 5. *(sampled/cored in each test boring except HA15-1(OW) through HA15-4(OW), HA16-5, HA16-9, HA16-11, HA16-12 and HA16-16)*	

GROUNDWATER CONDITIONS

Observation wells were installed in each of the due diligence phase boreholes (i.e., HA15-1 through HA15-4). The observation wells were installed to provide information on the static groundwater level at the site and to determine whether the groundwater levels are affected by tidal fluctuations in nearby Fore River.

Beginning on 17 June 2016 downhole pressure transducers were installed in observation wells HA15-2(OW) and HA15-4(OW) and were programmed to record the groundwater level once every 15 minutes. The transducers were removed and data were downloaded on 6 December 2016. Observation well installation reports are provided in Appendix C and a graphical representation of the measured groundwater levels during the period 17 June to 6 December 2016 are provided for reference in Figure 8.

In addition, water levels were measured in the 1985, 1987 and 2016 boreholes upon the completion of drilling. It should be noted that the drilling means and methods used (HSAs; no water added during advancement of the boreholes) to drill the test borings likely did not significantly influence the static water levels. However, steel casing and drilling fluid (water) was used to drill the 2016 test borings. Therefore, it is our opinion that the measurements in the 1985 and 1987 test borings provide reasonable estimates of groundwater levels across the sites for this preliminary phase of the project.

The measured water levels in each observation well and test boring are summarized below. Static groundwater levels at each observation well and test boring location is also shown on Figures 2 and 3.

Site	Approximate Range in Ground Surface Elevation (ft, PCD)	Deepest Proposed Ground Floor Elevation (Approximate Bottom of Excavation)	Approximate Range in Water Level Elevation (ft, PCD)
Upper Lot	El. 52 (upper) to El. 28 (lower)	El. 29 (El. 26)	El. 40 (upper) to El. 16 (lower)
Lower Lot	El. 32 (upper) to El. 10 (lower)	El. 8.4 to El. 6.4 (upper) to El. 11 to El. 15 (lower) (El. 3.4 upper to El. 12 lower)	El. 16 to El. 18 (upper) to El. 4 to 5 (lower)

Based on the measured water levels summarized above and our understanding of the proposed FFEs for structures on the Upper and Lower Lots, we offer the following:

- Upper Lot:
  - Water levels could be 1 to 11 ft (approximate) above the FFE within the upper half of the site.
  - Water levels could be 5 to 13 ft (approximate) below the FFE within the lower half of the site.

- Lower Lot:
  - Water levels could be up to 12 ft (approximate) above the FFE within the upper half of the site.
  - Water levels could be in excess of 3 ft below the FFE within the lower half of the site.

Based on the water level readings measured in observation well HA15-4(OW) (adjacent to Commercial Street) it appears that the static water levels measured are not influenced by tidal fluctuations in the nearby Fore River.

In general, water levels may fluctuate with season, precipitation, local soil/bedrock conditions, excavation means and methods, temperature and tidal conditions. Therefore, water levels may vary from those summarized above, provided on the testing boring logs included in Appendix A and shown on Figures 2, 3 and 7.

Geotechnical Laboratory Testing

A geotechnical laboratory testing program was undertaken on representative soil samples collected during the 2016 subsurface exploration program to aid in soil classification and evaluation of reuse potential. The laboratory testing program consisted of 16 grain size analyses. All laboratory testing was performed in accordance with applicable American Society for Testing Materials (ASTM) testing procedures by GeoTesting Express of Acton, Massachusetts.

A summary of laboratory testing is summarized below and actual laboratory test results are provided in Appendix B.

Soil Unit	No. of Tests	Generalized Descriptions
Fill	6	clayey SAND with gravel, silty SAND with gravel, GRAVEL with silt and sand
Marine Deposit	10	CLAY with varying amounts of sand and gravel, sandy SILT, clayey SAND with gravel, silty SAND with varying amounts of gravel

Impacts of Subsurface Conditions on Proposed Development

Based on the subsurface conditions encountered in the 1985/1987 and 2015 and 2016 test borings completed by Haley & Aldrich and our current understanding of the project, we have the following general geotechnical "observations" regarding future development of the Upper (Portland Square) and Lower (Fore Street) Lots.

Please refer to Figures 4 and 5, Subsurface Profiles, for a graphical representation of the soil conditions across the site. Proposed building ground floor slab levels are shown on the profiles along with proposed finish floor elevations and anticipated bottom of excavation needed to construct the building foundation systems.

- Due to the historic presence of structures on each site, as shown on the historic Sanborn maps included in Appendix D, and layers of concrete and wood and miscellaneous debris encountered within the man-placed fill soils during our due diligence and preliminary phase subsurface investigations, it is likely that demolition debris and/or abandoned building foundations or other obstructions will be encountered during construction (excavation and foundation installation/construction). These potential obstructions may include, but are not limited to granite blocks, wood piles, concrete slabs, railroad rails, footings, pile caps, foundation walls and grade beams.

- Based on the elevation of the top of bedrock as compared to the planned finish floor elevation of the lowest floor slabs, we anticipate that up to approximately 13 ft of rock removal will be required in the upper portion of the Upper Lot to construct the building foundations and lowest level floor slab. We do not anticipate rock removal to be needed to construct the building foundations and lowest level floor slab in the lower portion of the Upper Lot or in the Lower Lot.

- Due to the proximity of the water table to the planned finish floor elevation of the lowest floor slab in the upper portion of both the Upper and Lower Lots, we anticipate that either a foundation drainage system or a membrane waterproofing system will be need to protect the below grade portions of the buildings from water infiltration and would be designed to resist hydrostatic pressures. The foundation drainage system would likely consist of a network of perimeter and underslab drains that ideally would connect by gravity to an existing or proposed storm drain system at the site. The membrane waterproofing system would likely be needed on the below grade portions of foundation walls and below slabs/mats. The feasibility of both options should be evaluated during the design phase of the project. The use of vapor barriers beneath the lowest level floor slab in residential and retail spaces will likely be needed.

- Due to the relatively shallow depth of the top of bedrock as compared to the planned finish floor elevation of the lowest floor slab, we estimate that structures occupying the upper one-half (approximate) of the Upper Lot could be supported by shallow, spread footing or mat foundations bearing on bedrock.

- Due to the presence and compressible nature of the man-placed fill and marine silt/clay soils present within some portions of the site, we estimate that structures occupying the lower one-half (approximate) of the Upper Lot and the entirety of the Lower Lot would likely need to be supported by deep foundations (i.e., driven piles or drilled shafts) or on shallow, spread footing foundations bearing in improved ground. Possible ground improvement technologies appropriate for the site and subsurface conditions are aggregate piers (APs), grouted aggregate piers (GAPs) and geo-concrete columns (GCCs). Additional evaluations are required to further explore the technical feasibility and cost of these systems. Depending on the magnitude of actual column loads, it may be possible to support some of the buildings on the lower portion of the Upper Lot on shallow footing or mat foundations. Detailed evaluations will be needed as well as interaction with the Structural Engineer to evaluate this.

- Considering that existing site grades will not be raised (except for Building 6), and in some cases lowered, we anticipate that the lowest level floor slab for most, if not all of the buildings could be designed and constructed as a soil-supported, slabs-on-grade.

- Based on the subsurface conditions present at the sites and the seismic requirements of the latest edition of the International Building Code (IBC), it is likely that buildings would have to be designed in accordance with a "Site Class D" classification. A more rigorous evaluation will be conducted during the design phase once the locations and FFE's of the buildings are finalized.

- Temporary support of excavation systems will be required to construct the below grade portions of the buildings on the upper portion of both the Upper and Lower Lots. Based on planned FFE's of the buildings and existing site grades we anticipate that a drilled-in soldier pile and lagging system with internal and/or external bracing will be the most cost effective system. Additional evaluations will be required during the design phase to determine the technical feasibility of different systems and their design requirements.

Please note that additional explorations and analyses should be conducted during future phases of the project to verify the accuracy of these observations as they relate to future site development plans.

Recommendations for Future Work

There are several items that require additional evaluation and consideration during the preliminary and final design, and contract document preparation phases of the project. These items are summarized below.

- Additional subsurface explorations within the Upper and Lower Lots may be required in order to:
  - Better define the top of bedrock surface for more accurate determination of quantities that will require removal during construction.

  - Determine the limits of where shallow foundations can be used to support the proposed structures and also to determine where building foundation bearing conditions and type will change.
  - Collect rock samples for laboratory testing and determination of engineering properties needed to design temporary lateral earth support systems and drilled shaft building foundations bearing in/on bedrock (especially if design column loads require the foundations to resist axial uplift and lateral forces)

- Evaluation of the use of ground improvement techniques and shallow, spread footing foundations in lieu of a deep foundation system across a portion of the proposed building footprints.

- Evaluations to determine final foundation support requirements for the buildings.

- Development of geotechnical specifications such as earthwork, rock removal/blasting (if used), temporary lateral earth support, dewatering, driven/drilled pile installation and testing (if used) and ground improvement (if used) will be required.

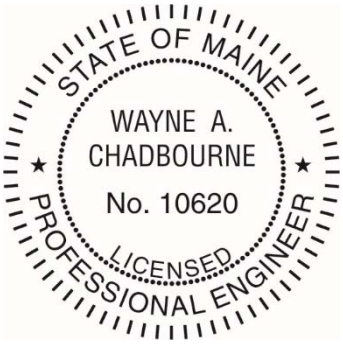
- Additional groundwater data is needed determine the most cost effective, technically feasible system to protect the below grade spaces.

- Evaluations to determine the most cost effective temporary support of excavation system for both the Upper and Lower Lots.

Limitations of Recommendations

This memorandum is prepared for the exclusive use of WSA relative to the Portland Square Development in Portland, Maine. There are no intended beneficiaries other than WSA. Haley & Aldrich shall owe no duty whatsoever to any other person or entity on account of the Agreement or the memorandum. Use of this memorandum by any person or entity other than of WSA for any purpose whatsoever is expressly forbidden unless such other person or entity obtains written authorization from WSA and from Haley & Aldrich. Use of this memorandum by such other person or entity without the written authorization WSA and Haley & Aldrich shall be at such other person's or entities sole risk, and shall be without legal exposure or liability to Haley & Aldrich.

Use of this memorandum by any person or entity, including by WSA, for a purpose other than relative to the Portland Square Development in Portland, Maine is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the memorandum is adequate for such other use. Use of this memorandum by any other person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entities sole risk, and shall be without legal exposure or liability to Haley & Aldrich.



The information provided herein is based, in part, upon the data obtained from the referenced subsurface explorations. The nature and extent of variations between explorations may not become evident until construction. If variations then appear, it may be necessary to reevaluate the recommendations of this memorandum.

Closure

We greatly appreciate the opportunity to provide preliminary level geotechnical engineering consulting services on this project and trust this meets your present needs. We look forward to our continued association with you through preliminary and final design, construction document preparation, and construction. Please do not hesitate to contact us if you require additional information or have questions regarding any of the information provided herein.

Sincerely yours,
HALEY & ALDRICH, INC.

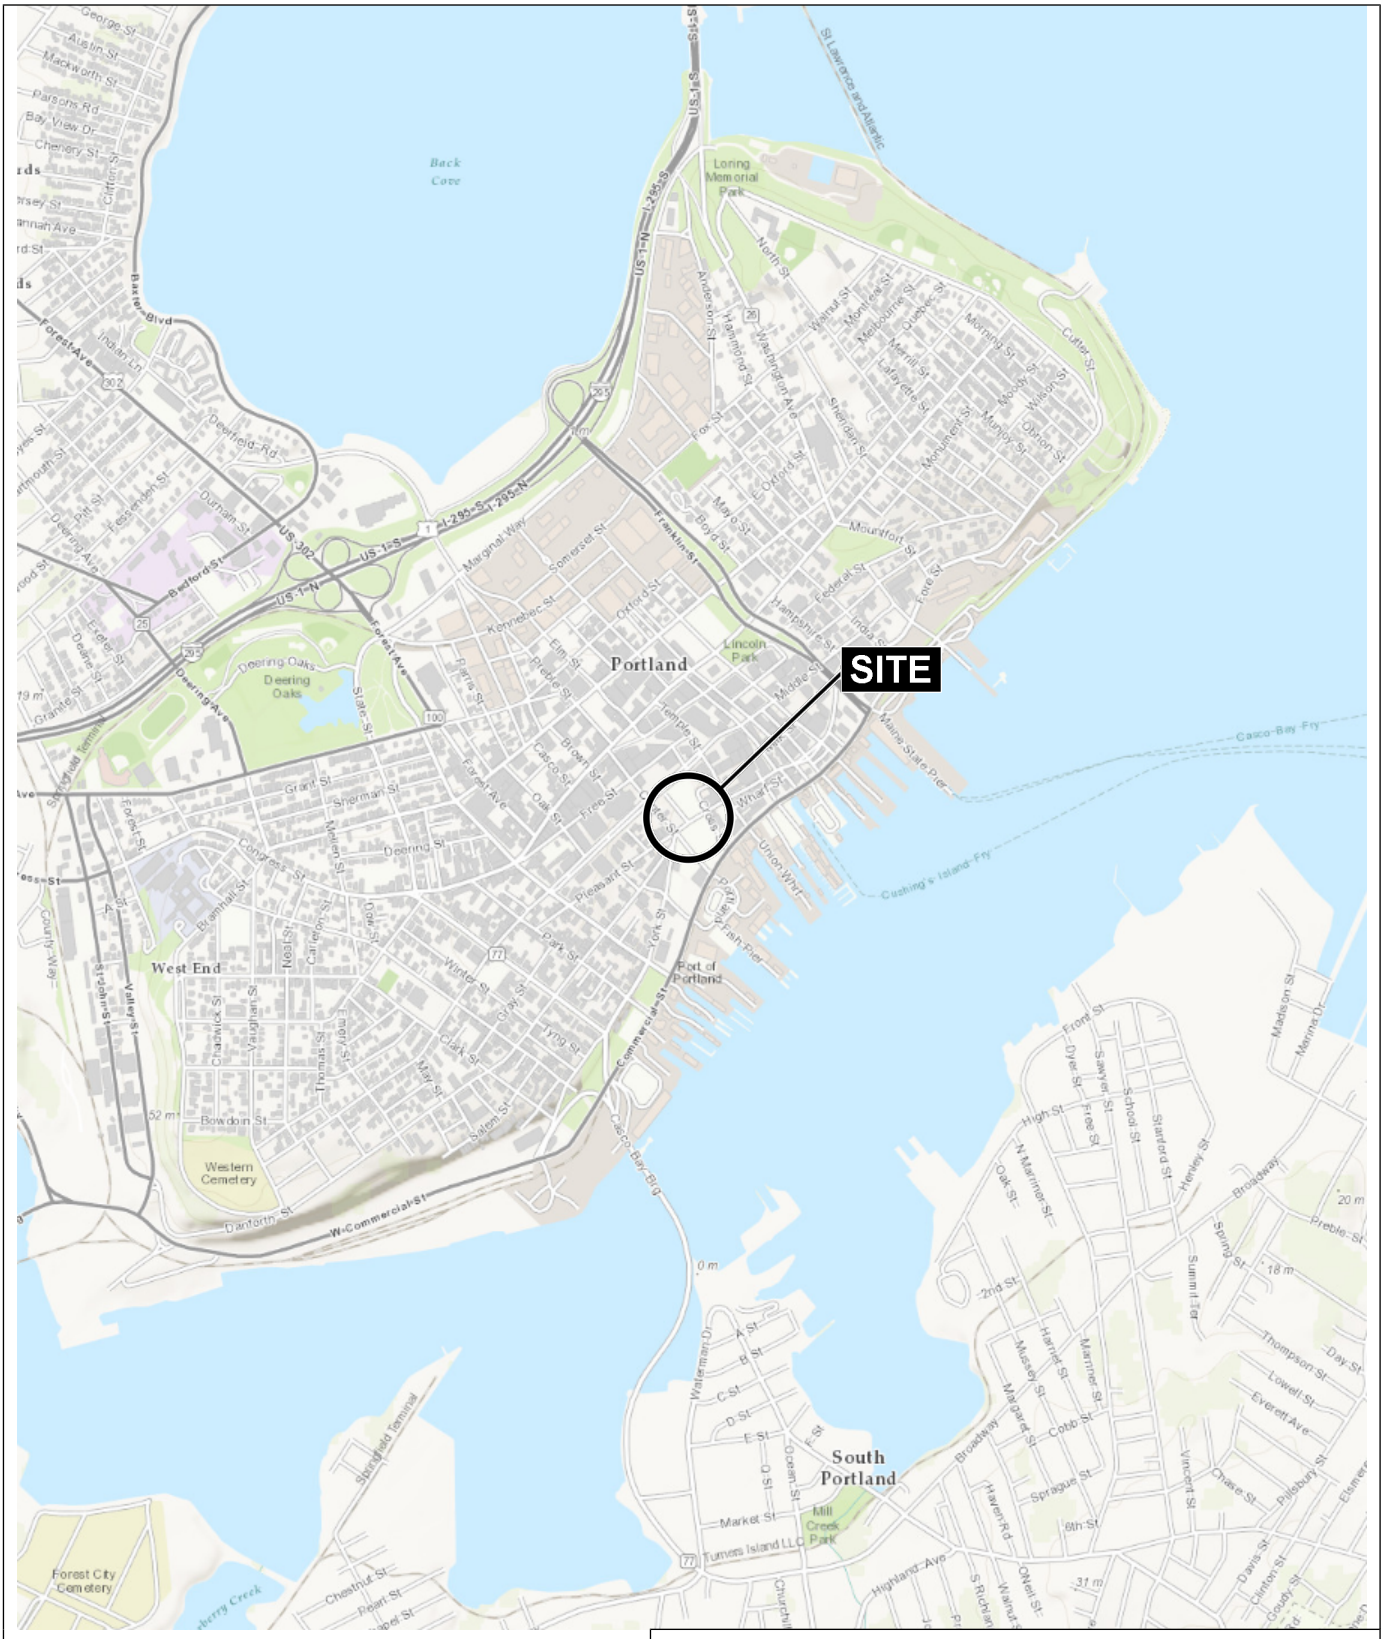
Notes:

[1] Test boring locations are shown on Figures 2 and 3, Site and Subsurface Exploration Location Plans.

[2] Ground surface elevations were determined by Haley & Aldrich, Inc. by interpolating between existing topographic contour information.

[3] Elevations are measured in feet and reference Portland City Datum.



[4] "NE" indicates stratum was not encountered in test boring.

[5] "--" indicates test boring was not drilled deep enough to determine presence of stratum.

[6] "> 2.0" indicates test boring was not drilled deep enough to determine full thickness of stratum, which is greater than the value shown.

[7] Top of bedrock in test borings HA15-1(OW) through HA15-4(OW), HA16-5, HA16-9 and HA16-16 determined based on drill action and observation of wash water contents, coring/sampling not conducted.

LEGEND:

DESIGNATION AND APPROXIMATE LOCATION OF TEST BORING DRILLED UNDER THE DIRECTION OF HALEY & ALDRICH, INC. IN 1985, 1987, 2015 AND 2016

APPROXIMATE GROUND SURFACE ELEVATION AT TEST BORING LOCATION DETERMINED BY INTERPOLATING BETWEEN ELEVATION CONTOURS

APPROXIMATE PERPENDICULAR OFFSET DISTANCE AND DIRECTION MEASURED FROM THE SUBSURFACE PROFILE LINE

STANDARD PENETRATION TEST (SPT) N-VALUE (BLOWS PER FOOT); WOR = WEIGHT OF RODS; WOH = WEIGHT OF HAMMER

PERCENT RECOVERY
PERCENT ROCK QUALITY DESIGNATION (RQD)

DENOTES SPLIT-SPOON OR AUGER REFUSAL ENCOUNTERED, JUDGED TO BE BEDROCK

GROUNDWATER LEVEL MEASURED IN COMPLETED BOREHOLE OR OBSERVATION WELL ON DATE SPECIFIED

DENOTES OBSERVATION WELL INSTALLED IN COMPLETED BOREHOLE

NOTES:

1. SEE FIGURES 2 AND 3 FOR LOCATION AND ORIENTATION OF SUBSURFACE PROFILES.
2. EXISTING GROUND SURFACE ELEVATIONS AT TEST BORING LOCATIONS ARE APPROXIMATE AND WERE DETERMINED BY INTERPOLATION USING TOPOGRAPHIC CONTOUR INFORMATION PROVIDED BY WINTON SCOTT ARCHITECTS IN THE ELECTRONIC AUTOCAD FILE ENTITLED, "S1.1 L2 AND L3.dwg," ON 4 AUGUST 2015.
3. EXISTING AND PROPOSED SITE FEATURES AND CONTOURS OF EXISTING GROUND SURFACE ELEVATIONS ARE TAKEN FROM THE ELECTRONIC AUTOCAD FILE ENTITLED, "S1.1 L2 AND L3.dwg," PROVIDED BY WINTON SCOTT ARCHITECTS ON 4 AUGUST 2015.
4. LINES REPRESENTING CHANGES IN STRATA SHOWN ON THE SUBSURFACE PROFILES ARE BASED ON LINEAR INTERPOLATION BETWEEN SUBSURFACE EXPLORATIONS. THESE INTERPRETED STRATA LINES DO NOT REPRESENT ACTUAL FIELD CONDITIONS OTHER THAN AT SPECIFIC EXPLORATION LOCATIONS.
5. LOCATIONS OF THE 1958, 1987, 2015 AND 2016 TEST BORINGS ARE APPROXIMATE AND WERE DETERMINED IN THE FIELD BY TAPING/PACING DISTANCES FROM EXISTING SITE FEATURES.
6. ELEVATIONS ARE IN FEET AND REFERENCE PORTLAND CITY DATUM.
7. REFER TO APPENDIX A FOR LOGS OF THE 1985, 1987, 2015 AND 2016 TEST BORINGS COMPLETED UNDER THE DIRECTION OF HALEY & ALDRICH, INC.

RE: Portland Square Development, Portland, ME (GTX-305581)

Dear Bryan:

Enclosed are the test results you requested for the above referenced project. GeoTesting Express, Inc. (GTX) received 16 samples from you on 11/4/2016. These samples were labeled as follows:

Boring	Sample	Depth
HA16-1	S1 + S2	1.0-5.0 ft
HA16-1	S3	5.0-7.0 ft
HA16-1	S4	10.0-12.0 ft
HA16-2	S4	9.0-11.0 ft
HA16-3	S2 + S3	3.0-7.0 ft
HA16-4	S1 + S2	1.0-3.5 ft
HA16-4	S3	5.0-7.0 ft
HA16-4	S4	10.0-12.0 ft
HA16-5	S4	10.0-12.0 ft
HA16-7	S2 + S3	3.0-7.0 ft
HA16-7	S5	15.0-17.0 ft
HA16-8	S5	15.0-17.0 ft
HA16-10	S2 + S3	3.0-7.0 ft
HA16-11	S2	3.0-4.9 ft
HA16-11	S5 + S6	10.5-14.5 ft
HA16-13	S2	3.0-5.0 ft

GTX performed the following test on each of these samples:

ASTM D422 - Grain Size Analysis - Sieve Only

A copy of your test request is attached.

The results presented in this report apply only to the items tested. This report shall not be reproduced except in full, without written approval from GeoTesting Express. The remainder of these samples will be retained for a period of sixty (60) days and will then be discarded unless otherwise notified by you. Please call me if you have any questions or require additional information. Thank you for allowing GeoTesting Express the opportunity of providing you with testing services. We look forward to working with you again in the future.

Respectfully yours,

Jonathan Campbell
Assistant Laboratory Manager

GeoTesting EXPRESS

WARRANTY and LIABILITY

GeoTesting Express (GTX) warrants that all tests it performs are run in general accordance with the specified test procedures and accepted industry practice. GTX will correct or repeat any test that does not comply with this warranty. GTX has no specific knowledge as to conditioning, origin, sampling procedure or intended use of the material.

GTX may report engineering parameters that require us to interpret the test data. Such parameters are determined using accepted engineering procedures. However, GTX does not warrant that these parameters accurately reflect the true engineering properties of the *in situ* material. Responsibility for interpretation and use of the test data and these parameters for engineering and/or construction purposes rests solely with the user and not with GTX or any of its employees.

GTX's liability will be limited to correcting or repeating a test which fails our warranty. GTX's liability for damages to the Purchaser of testing services for any cause whatsoever shall be limited to the amount GTX received for the testing services. GTX will not be liable for any damages, or for any lost benefits or other consequential damages resulting from the use of these test results, even if GTX has been advised of the possibility of such damages. GTX will not be responsible for any liability of the Purchaser to any third party.

Commonly Used Symbols

A	pore pressure parameter for $\Delta\sigma_1 - \Delta\sigma_3$
B	pore pressure parameter for $\Delta\sigma_3$
CAI	CERCHAR Abrasiveness Index
CIU	isotropically consolidated undrained triaxial shear test
CR	compression ratio for one dimensional consolidation
CSR	cyclic stress ratio
C_c	coefficient of curvature, $(D_{30})^2 / (D_{10} \times D_{60})$
C_u	coefficient of uniformity, D_{60}/D_{10}
C_c	compression index for one dimensional consolidation
C_α	coefficient of secondary compression
c_v	coefficient of consolidation
c	cohesion intercept for total stresses
c'	cohesion intercept for effective stresses
D	diameter of specimen
D	damping ratio
D_{10}	diameter at which 10% of soil is finer
D_{15}	diameter at which 15% of soil is finer
D_{30}	diameter at which 30% of soil is finer
D_{50}	diameter at which 50% of soil is finer
D_{60}	diameter at which 60% of soil is finer
D_{85}	diameter at which 85% of soil is finer
d_{50}	displacement for 50% consolidation
d_{90}	displacement for 90% consolidation
d_{100}	displacement for 100% consolidation
E	Young's modulus
e	void ratio
e_c	void ratio after consolidation
e_o	initial void ratio
G	shear modulus
G_s	specific gravity of soil particles
H	height of specimen
H_R	Rebound Hardness number
i	gradient
I_S	Uncorrected point load strength
$I_{S(50)}$	Size corrected point load strength index
H_A	Modified Taber Abrasion
H_T	Total hardness
K_o	lateral stress ratio for one dimensional strain
k	permeability
LI	Liquidity Index
m_v	coefficient of volume change
n	porosity
PI	plasticity index
P_c	preconsolidation pressure
p	$(\sigma_1 + \sigma_3) / 2$, $(\sigma_v + \sigma_h) / 2$
p'	$(\sigma'_1 + \sigma'_3) / 2$, $(\sigma'_v + \sigma'_h) / 2$
p'_c	p' at consolidation
Q	quantity of flow
q	$(\sigma_1 - \sigma_3) / 2$
q_f	q at failure
q_o, q_i	initial q
q_c	q at consolidation
S_r	Post cyclic undrained shear strength
T	temperature
t	time
U, UC	unconfined compression test
UU, Q	unconsolidated undrained triaxial test
u_a	pore gas pressure
u_e	excess pore water pressure
u, u_w	pore water pressure
V	total volume
V_g	volume of gas
V_s	volume of solids
V_s	shear wave velocity
V_v	volume of voids
V_w	volume of water
V_o	initial volume
v	velocity
W	total weight
W_s	weight of solids
W_w	weight of water
w	water content
w_c	water content at consolidation
w_f	final water content
w_l	liquid limit
w_n	natural water content
w_p	plastic limit
w_s	shrinkage limit
w_o, w_i	initial water content
α	slope of q_f versus p_f
α'	slope of q_f versus p_f'
γ_t	total unit weight
γ_d	dry unit weight
γ_s	unit weight of solids
γ_w	unit weight of water
ε	strain
ε_{vol}	volume strain
ε_h, ε_v	horizontal strain, vertical strain
μ	Poisson's ratio, also viscosity
σ	normal stress
σ'	effective normal stress
σ_c, σ'_c	consolidation stress in isotropic stress system
σ_h, σ'_h	horizontal normal stress
σ_v, σ'_v	vertical normal stress
σ'_{vc}	Effective vertical consolidation stress
σ_1	major principal stress
σ_2	intermediate principal stress
σ_3	minor principal stress
τ	shear stress
φ	friction angle based on total stresses
φ'	friction angle based on effective stresses
φ'_r	residual friction angle
φ_{ult}	φ for ultimate strength

Observation Well Installation and Groundwater Monitoring Reports

HALEY ALDRICH

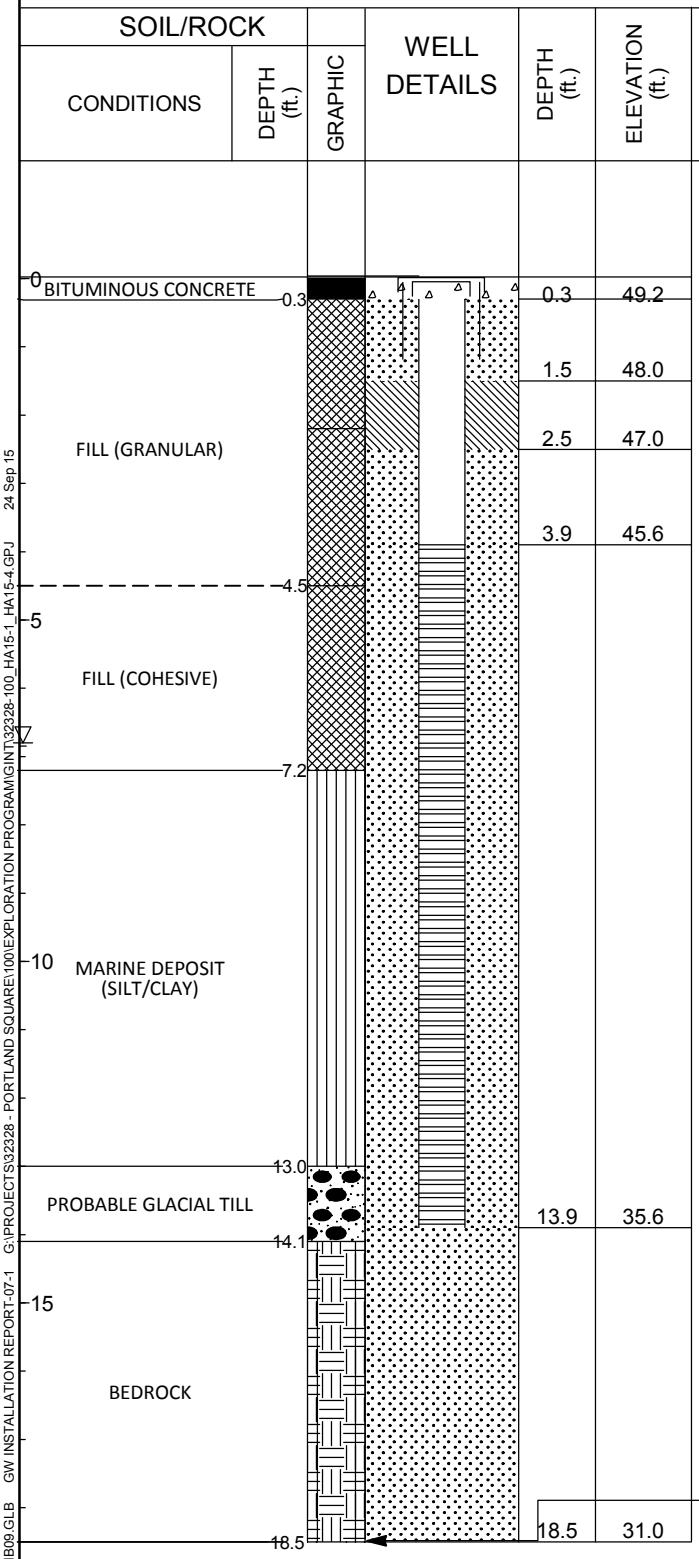
GROUNDWATER OBSERVATION WELL INSTALLATION REPORT



Well No. HA15-1(OW)
Boring No. HA15-1(OW)

Project	Portland Square Development
Location	Portland, Maine
Client	Winton Scott Architects
Contractor	New England Boring Contractors
Driller	C. Dupuis
Initial Water Level (depth bgs)	6.8 ft

Well Diagram: Riser Pipe; Screen; Filter Sand; Cuttings; Grout; Concrete; Bentonite Seal

File No. 32328-100
Date Installed 11 Aug 2015
H&A Rep. K. Russ
Location See Plan

Ground El. 49.5
Datum Portland City Datum

WELL CONSTRUCTION DETAILS

Type of protective cover	EMCO Hex. Bolt
Depth of Roadway Box below ground surface	0.0 ft
Depth of top of riser below ground surface	0.6 ft
Type of protective casing	Roadway Box
Length	0.8 ft
Inside diameter	6.0 in.
Depth of bottom of Roadway Box	0.8 ft
Type of riser pipe	Schedule 40 PVC
Inside diameter of riser pipe	1.0 in.
Depth of bottom of riser pipe	3.9 ft

Type of Seals	Top of Seal (ft)	Thickness (ft)
Cold Patch	0.0	0.3
Bentonite	1.5	1.0
	-	-
	-	-

Diameter of borehole	3.0 in.
Depth to top of well screen	3.9 ft
Type of screen	Machine slotted Sch 40 PVC
Screen gauge or size of openings	0.010 in.
Diameter of screen	1.0 in.
Type of Backfill around Screen	Filter Sand
Depth to bottom of well screen	13.9 ft
Bottom of silt trap	0.0 ft
Depth of bottom of borehole	18.5 ft

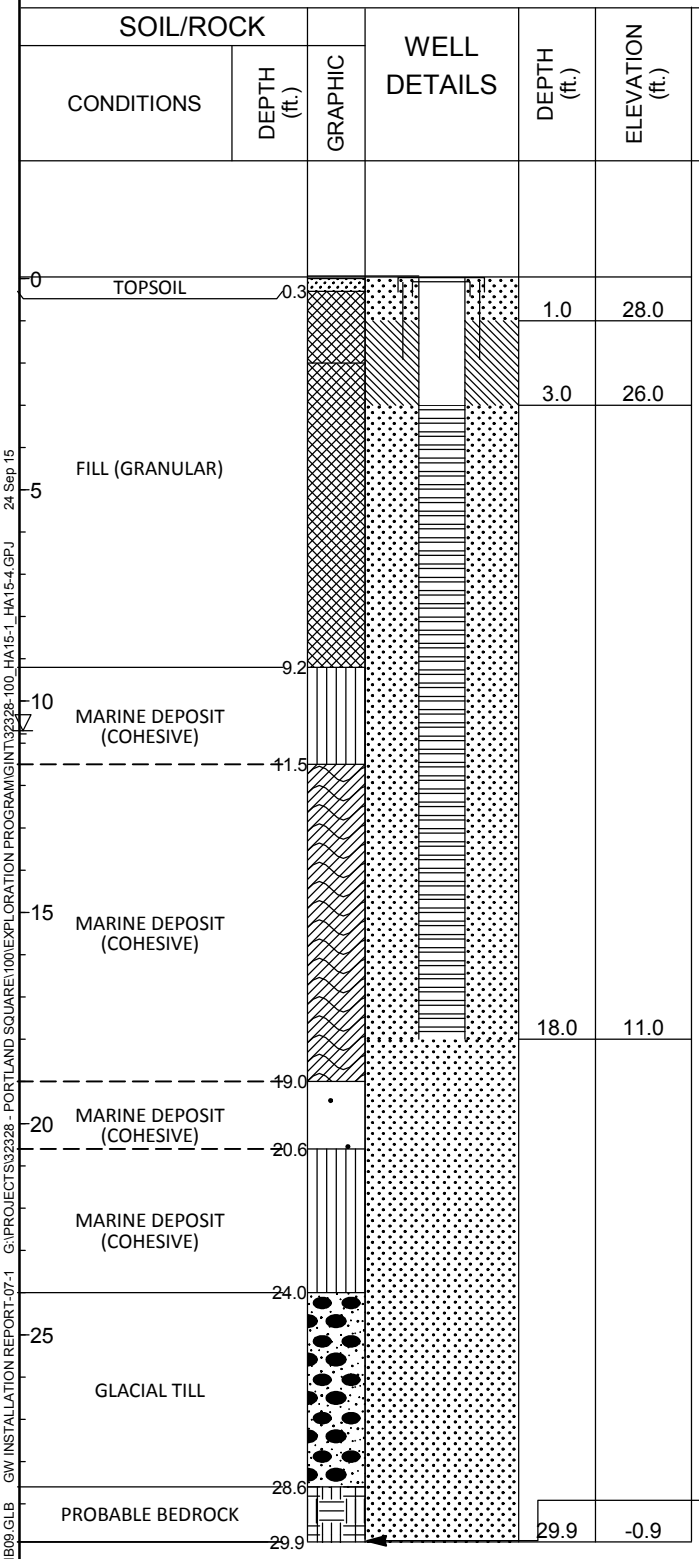
GROUNDWATER OBSERVATION WELL INSTALLATION REPORT



Well No. HA15-2(OW)
Boring No. HA15-2(OW)

Project	Portland Square Development
Location	Portland, Maine
Client	Winton Scott Architects
Contractor	New England Boring Contractors
Driller	C. Dupuis
Initial Water Level (depth bgs)	10.7 ft

Well Diagram: Riser Pipe, Screen, Filter Sand, Cuttings, Grout, Concrete, Bentonite Seal

File No. 32328-100
Date Installed 12 Aug 2015
H&A Rep. K. Russ
Location See Plan

Ground El. 29.0
Datum Portland City Datum

WELL CONSTRUCTION DETAILS

Type of protective cover	EMCO Hex. Bolt
Depth of Roadway Box below ground surface	0.0 ft
Depth of top of riser below ground surface	0.2 ft
Type of protective casing	Roadway Box
Length	0.8 ft
Inside diameter	6.0 in.
Depth of bottom of Roadway Box	0.8 ft
Type of riser pipe	Schedule 40 PVC
Inside diameter of riser pipe	1.0 in.
Depth of bottom of riser pipe	3.0 ft

Type of Seals	Top of Seal (ft)	Thickness (ft)
Bentonite	1.0	2.0
	-	-
	-	-
	-	-

Diameter of borehole	3.0 in.
Depth to top of well screen	3.0 ft
Type of screen	Machine slotted Sch 40 PVC
Screen gauge or size of openings	0.010 in.
Diameter of screen	1.0 in.
Type of Backfill around Screen	Filter Sand
Depth to bottom of well screen	18.0 ft
Bottom of silt trap	0.0 ft
Depth of bottom of borehole	29.9 ft

EDR Inquiry # 4348218.1

Contact: Dave Dearden

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Haley & Aldrich, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results
Certification # 0A61-488A-B3E4

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Haley & Aldrich, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

JUNE 30, 2016

Portland Water District
FROM SEBAGO LAKE TO CASCO BAY

January 14, 2020

Lauren Swett, PE
Woodard and Curran
41 Hutchins Drive
Portland, ME 04102

RE: 3-6 Portland Square, Capacity to Serve

Dear Lauren:

Based on the information provided to date, the Portland Water District can grant a conceptual level Capacity to Serve determination, in support of the Portland Square Master Development Plan, for the above referenced project with respect to water and sewer treatment capacity. This letter is not an approval of the project at this time nor shall it be used to demonstrate approval from the District for any reason beyond support of the Portland Square Master Development Plan. The development team will need to submit plans to PWD for review and approval at site plan application with the City of Portland for each phase of the project. PWD will issue a separate Ability to Serve determination letter for each phase of the project after plans have been reviewed and approved by the district. Only after receiving an Ability to Serve determination may the developer commence with water and wastewater improvements.

This Capacity to Serve determination shall be used to identify the condition of the existing water and wastewater system, and the steps to be taken by the development team, at their cost, to bring the existing infrastructure up to current standards to service the proposed development.

The District owns and operates water mains in Spring Street, Cotton Street, Fore Street and Cross Street immediately adjacent to the proposed project at 3-6 Portland Square. The existing 12-inch ductile iron water main (1972) in Spring Street has the capacity to serve the proposed development. The existing 6-inch cast iron water main (1888) in Cotton Street, and the existing 6-inch cast iron water main (1883) in Cross Street do not have the capacity to serve the proposed development and must be renewed by the developer; size to be determined by the District once domestic water and fire sprinkler demands are calculated. The existing 8-inch cast iron water main (1886) in Fore Street will need to be renewed by the development team with an 8-inch ductile iron water main, along the frontage of the property between Center Street and Cross Street; limits of renewal to be determined by PWD.

The sewer collection system adjacent to the site is owned and operated by the City of Portland. The East End Wastewater Treatment Facility has the capacity to serve the wastewater generated at this site. The type of wastewater generated is not expected to require treatment beyond what is typical for a similar use.

This Capacity to Serve determination is made based on information provided by the development team regarding the size, use, and proposed phasing of the project. As redevelopment continues on the peninsula, contemplated improvements associated with this project will be evaluated at each phase to ensure proper development of the water and wastewater systems.

As the project progresses, we advise you to submit any preliminary design plans to the MEANS Group for water and wastewater infrastructure for District review and approval. The District will work with you to ensure that your design meets our current standards.

Sincerely,
Portland Water District

Robert Bartels, PE
Senior Project Engineer

3 Portland Square
Neighborhood Meeting Certification

I, Patrick J. Carroll hereby certify that a neighborhood meeting was held on January 30, 2020 at One Portland Square, Lower Level at 5:30 pm.

I also certify that on January 15, 2020 invitations were mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes property owners within 500 feet of the proposed development or within 1000 feet of a proposed industrial subdivision or industrial zone change.

2. Residents on the "interested parties" list.

3. A digital copy of the notice was also provided to the Planning Division (jmy@portlandmaine.gov and ldobson@portlandmaine.gov) and the assigned planner to be forwarded to those on the interested citizen list who receive e-mail notices.

Signed,

February 7, 2020

Attached to this certification are:

1. Copy of the invitation sent
2. Sign-in sheet
3. Meeting minutes

CARROLL ASSOCIATES

Att. X

Neighborhood Meeting Invitation

January 13, 2020

Dear Neighbor:

Please join us for a neighborhood meeting to discuss our plans for **Three Portland Square**, the proposed development for a 2.26 Acre site located at Spring, Cotton, Cross, and Fore Streets in Portland. This project represents Phase 2 of the Proposed Portland Square Master Development Plan which is currently undergoing Review.

Meeting Location: 1 Portland Square, Café on lower level

Meeting Date: Thursday, January 30, 2020

Meeting Time: 5:30 pm

(The City code requires that property owners within 500 feet (1000 feet for proposed industrial subdivisions and industrial zone changes) of the proposed development and residents on an "interested parties list", be invited to participate in a neighborhood meeting. A sign-in sheet will be circulated and minutes of the meeting will be taken. Both the sign-in sheet and minutes will be submitted to the Planning Board.)

If you have any questions, please call my office at 207-772-1552.

Signed,

CARROLL ASSOCIATES

Patrick J. Carroll, Principal

Note:

Under Section 14-32(C) and 14-524(a)d of the City Code of Ordinances, an applicant for a Level III development, subdivision of over five lots/units, or zone change is required to hold a neighborhood meeting within 30 days of submitting a preliminary application or 21 days of submitting a final site plan application, if a preliminary plan was not submitted. The neighborhood meeting must be held at least seven days prior to the Planning Board public hearing on the proposal. Should you wish to offer additional comments on this proposed development, you may contact the Planning Division at 874-8721 or send written correspondence to the Planning and Urban Development Department, Planning Division, 4th Floor, 389 Congress Street Portland, ME 04101 or by email: to bab@portlandmaine.gov

Three Portland Square

01/30/2020
Neighborhood meeting minutes

Attendees: see attached sign-in sheet.

- Presentation from Pat Carroll, Steve Weatherhead, Larry Osmer:
- This meeting is required for site plan approval process
- Planning Board workshop 02/25, expected public hearing 2nd March meeting.
- Slide show (attached)
    - Neighborhood context
    - Project boundaries
    - Master Development Plan
    - Program & square footages of each building and use group
    - Overview typical floor plans
    - Cross-section
    - Site improvements / landscaping plan / site features and amenities
    - New plaza level at Spring Street between 1 & 3 Portland Square
    - Utility connections
    - Construction management plan
        - Construction traffic & access, loading & unloading
        - No shutdown of Cotton Street near Fore, sequencing of work on Cotton Street to avoid service disruption to Rivalries parking lot
    - Renderings and architectural expression
        - Height & setbacks
        - Materials & fenestration
        - Relation to neighborhood scale & context

- Questions from attendees:
    - Q: What is the project timeline? A: Aiming for site plan approval in February, construction permits summer 2020, occupancy 2022.
    - Q: Expecting excavation will require blasting? A: Small amount of ledge removal, not sure if will require blasting.
    - Q: Are you planning to build both buildings at the same time? A: Yes, aiming to fast track garage and open that a few months ahead of time to bring parking online ASAP.
    - Q: What is the plan for construction crew parking? A: Construction management plan discusses a mix of strategies, including parking in neighborhood garages and carpooling / van pooling.
    - Q: Why was parking count reduced from ~1,200 to ~850? A: This was a balance of parking and maximizing rentable square footage. Combination of cost estimating and pushback from lack of active uses on Spring Street led to current design. Suggest attending workshop 02/25. Refer to VHB parking study materials. Traffic Demand Management Plan encourages car pooling, using alternate modes of transportation, car charging stations, etc.
    - Q: How many spaces are currently on upper lot? A: 236
    - Q: Make sure you have exceptional lighting around the whole project. A: We are following new municipal lighting guidelines.

- Q: Was the alley requested by City? Seems like a dead space. A: Alley was required to maintain separations between building and maintain light to both adjacent buildings. We are working now to activate the alley with interesting lighting and street furniture.
- Q: Is there a solar component? A: We haven't gotten to that yet, we have talked about it.
- Q: Is Cross Street one way or two way? A: Two way going to Fore, one way going to Union.
- Q: How will work on Cotton Street affect the steps and elevations for the parking lot on the west side of Cotton Street? How to service 2 and 10 Cotton Street? Rivalries takes all deliveries through front door. A: Sequencing plan shows phased work on Cotton Street that maintains access on Cotton Street. Any disruption of Cotton Street would be temporary. Need to understand access needs on Cotton Street. During this time, this would be a business interruption for the tenants in these buildings. We will do our best to accommodate tenants and their deliveries.
- Where is service and loading entrance for 3PS? A: Upper Cross Street, near 1PS.

Re: 3 Portland Square Level III Site Plan Submittal – North River IV, LLC
Response to Planning Staff Comments

Dear Matt:

Thank you for coordinating the review of the proposed development of Phase 2 of the Portland Square Project located at 3 Portland Square in Portland, Maine. We received the January 21, 2020 memo from Wright-Pierce, the 3rd party peer reviewer for the City of Portland, and provide the following response and additional information.

Since our previous submission, adjustments have been made to the stormwater management system to avoid conflicts with the building footings. Additionally, design of the stormwater treatment system, and coordination with the manufactures of the system components have progressed. The following stormwater management documents are enclosed with this letter. They include modifications to the stormwater management system and changes to address comments from Wright-Pierce:

- C-201 Grading, Drainage and Erosion Control Plan
- C-304 Civil Details - 5
- Post-Development HydroCAD Model

Additionally, we received a response from the Maine Department of Inland Fisheries & Wildlife (MDIFW) confirming there are no locations of Endangered, Threatened, or Special Concern species within the project area. The MDIFW response letter is enclosed for your reference.

To support the Level III Site Plan process, we provide the following responses to the comments we received from Wright-Pierce dated January 21, 2020.

Basic Standard

Per the City's Technical Manual "Portland Stormwater Management Standards and Maine Dep Chapter 500 Stormwater Management", an Erosion & Sediment Control management plan, notes, and details per the Chapter 500 Rules must be provided to meet the Basic Standard.

- *Erosion and Sedimentation Control best practices were shown on the Erosion and Sedimentation Control Plan, and are indicated on the Grading and Drainage Plan. No further action necessary.*
  - Noted.
- *A written inspection, maintenance and housekeeping plan was provided. No further action necessary.*
  - Noted.

General Standard

The applicant has provided information regarding the size and scope of the project indicating the project is subject to the General Standard under the requirements of the Site Location of Development Act (SLODA). The project is being reviewed under the redevelopment guidelines and requirements.

The applicant has provided an impact analysis to compare pre-development and post-development land use pollutant rankings under MaineDEP redevelopment guidelines. This analysis indicated that the proposed development had a lower pollutant ranking than the existing site and is therefore required to treat 50% of the proposed site's disturbed surface area, with priority placed on the highest-ranked pollutant for the site.

- *Pollutant ranking for both the existing and proposed parking areas was noted as 5 in the narrative, and 4 in the calculations. Please confirm the correct value and update calculations as necessary.*
    - The narrative incorrectly referred to the parking area pollutant ranking. The calculations are correct. The parking areas are pollutant impact ranking 4 (medium use parking lot) for both the existing and proposed condition. Currently, the surface parking lot is used primarily during working hours and does not appear to have high turnover rates. Similarly, the proposed parking garage is being provided to service the surrounding office uses and is not anticipated to have a high turnover rate.
- *Calculations are provided for determining the amount of area requiring treatment. Please confirm the following items:*
    - *Total square feet of site required to receive treatment* – 50% of total redevelopment area of 2.31 acres = 50,307 SF
    - *Total square feet of proposed site receiving treatment* – 50,612 SF
    - *Total % of high-pollutant ranking surfaces receiving treatment*
        - Pollutant Ranking 5 – No areas exist on site
        - Pollutant Ranking 4 – 80.8% of 1.16 acres
        - Pollutant Ranking 3 – 13.2% of 0.61 acres
        - Pollutant Ranking 2 – 32.6% of 0.44 acres
        - Pollutant Ranking 1 – 0% of 0.10 acres
        - Pollutant Ranking 0 – No areas exist on site

          Note that all areas listed above have not changed, and are consistent with previously submitted stormwater calculations.
    - *Total percentage of non-roof impervious area receiving treatment* – 70.2%
- *Proprietary R-Tank systems and Jellyfish filters have been provided for runoff treatment. Please provide the following clarifications:*
    - *Inverts for pipe elevations for Jellyfish filters and R-Tank systems;*
        - The invert elevations for the R-Tank systems and the Peak Diversion StormFilter have been added to the Grading, Drainage and Erosion Control Plan (Sheet C-201).
    - *Filterra units are shown on the October 2019 plan set, which is the most recent grading plan available; updated plans and narrative with the December 2019 Stormwater Management Report did not have Filterra Units. Please confirm if Filterra units are still proposed.*
        - Filterra units are no longer proposed and have been removed from the plans. The current plans do not show any Filterra Units.

- *The applicant has indicated a maintenance agreement for stormwater treatment systems will be provided as the design progresses. An executed maintenance contract for the BMP system is required and may be included as a Condition of Approval.*
    - Noted.

Flooding Standard

The applicant has submitted calculations indicating the total surface flows to the separated storm drain at the intersection of Fore Street and Cross Street.

- *These calculations indicate runoff rates will be less in the proposed condition than in the existing condition in 24-hour, 2-year, 10-year, and 25- year interval storm events. No further action necessary.*
    - The stormwater management system on the site has been modified to avoid building footings. We have also revised our treatment device from a Jelly Fish to a Peak Diversion StormFilter. We have revised the detail sheet to reflect this change. This has also resulted in changes to invert elevations, which changed the post-development HydroCAD model. As shown below, there continues to be a net decrease in the post-development rate of runoff during all storms at the Site's study point. An updated HydroCAD model is attached.

Study Point		Peak Runoff Rate (cfs)		
		2-Year Storm	10-Year Storm	25-Year Storm
1	Pre-Development	5.44	8.96	11.79
	Post-Development	5.16	8.12	9.89

- *See comment 3d, below, for additional City requirements for connections to the existing system.*
    - Noted, see further response below.

Grading and Drainage

- *Catch basin details have been provided. Please confirm intent for 'Drain Basin – 24"' Sheet C-301 and '24" Diam. Catch Basin" Sheet C-302. Please confirm catch basins have 3-foot sumps.*
    - The 'Drain Basin – 24' detail has been removed from Sheet C-301. Catch basins to be provided within the City of Portland Right-of-Way will be standard catch basins with 3-foot sumps.
- *A catch basin at the corner of Cross Street and Fore Street is within the pedestrian tipdown ramp. Standard granite inlet details may not be appropriate for this application and additional detailing may be necessary.*
    - This catch basin has been shifted to be located outside of the tipdown.
- *Sheet C1-C3 for a project in the Boyd Street community were provided. These pages were not reviewed as we anticipate they were accidentally uploaded and part of another project. Please confirm if these plans are used for reference.*
    - Please disregard these plan sheets.

Utility Connections

- *Utility work within the Right-Of-Way is being reviewed by others.*
    - Noted.

- *Ability to serve letters have not been provided for all utilities impacted by the proposed project, but have been requested by the applicant for applicable utilities. The applicant has indicated that ability to serve letters will be submitted to Planning upon receipt.*
    - Woodard & Curran met with Brad Roland from Portland Public Works on Friday January 17, 2020 to discuss separated sewer and storm drain surrounding the site. The drainage plan is being updated per this discussion, and further utility coordination is ongoing relative to changes to infrastructure in Cotton Street.

      Ability to serve approval from Public Works for sewer and Portland Water District for public water will be provided when available.
- *It is understood that grease trap sizing is being reviewed by Department of Public Works. Applicant shall defer to comments from Department of Public Works on this item.*
    - Noted.
- *Connection to Existing Stormwater Systems: E-mail, or otherwise written, confirmation from the Department of Public Works accepting this connection is requested to confirm that this connection is appropriate under Land Use section 14- 526 (b) 3 a. (iv); and 14-526 (c) 3 a. This confirmation is typically provided similar to a capacity to serve letter, and can be a condition of approval.*
    - Noted. Further coordination is ongoing with the Department of Public Works on the proposed stormdrain modifications proposed for Cotton Street.
- *Applicant has stated utilities are being sized to coordinate with future phases of development. No further action necessary.*
    - Noted.

If you have any questions or require additional information, please do not hesitate to contact me at (207) 558-3763 or by email at lswett@woodardcurran.com.

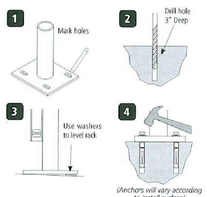
BACKFLOW PREVENTER
N.T.S.

Tools Needed for Installation

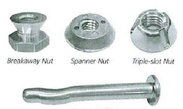
Tape Measure
Marker or Pencil
Masonry Drill Bit
Drill (Hammer drill recommended)
Hammer
Wrench 9/16"
Level
Washers (for leveling if necessary)



Recommended Base Materials:

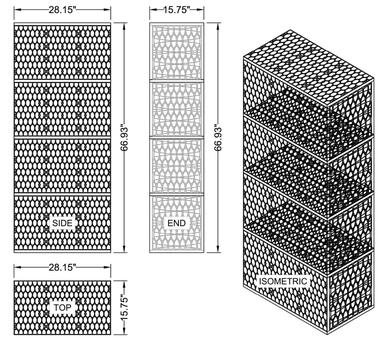
Solid concrete is the best base material for installation. Ask your Dero Rack representative which anchor is appropriate for your application to ensure the proper anchors are shipped with your rack. Be sure nothing is underneath the base material that could be damaged by drilling.

Installation:



3/8" anchors are shipped with the rack. Place the rack in the desired location. Use a marker or pencil to outline the holes of the flange onto the base material. Drill the holes in accordance with the specifications shipped with the anchors. Make sure the holes are at least 6" away from any cracks in the base material.

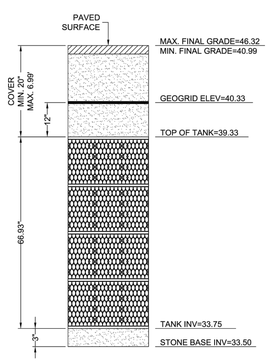
Tamper Resistant Fasteners



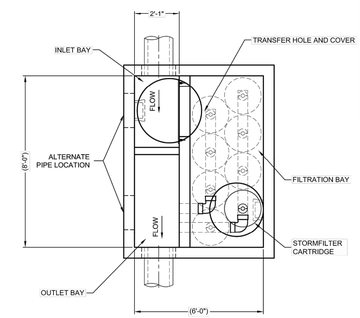
The concrete spike is a permanent anchor. The top of the wedge anchor can also be pounded sideways after installation so that it cannot be removed. Other tamper resistant fasteners are also available for purchase.

When using the special tamper resistant nuts, always set and first tighten the anchors. Once the rack is installed, replace two nuts from the bracket (opposite sides from each other) with the tamper resistant fastener. DO NOT OVERTIGHTEN the tamper resistant nut.

If you have any questions about installation or other features of the Bike Rack, please call us toll free at 1-800-298-4915



TYPICAL BIKE RACK DETAIL IN R.O.W.
N.T.S.



MODULE DATA

GEOMETRY:	**LOAD RATING:**
LENGTH = 28.15 IN. (715 MM)	33.4 PSI, (MODULE ONLY)
WIDTH = 15.75 IN. (400 MM)	HS20, (WITH ACF COVER SYSTEM)
HEIGHT = 66.93 IN. (1700 MM)	**MATERIAL:**
TANK VOLUME = 17.17 CF	100% RECYCLED POLYPROPYLENE
STORAGE VOLUME = 16.31 CF	**SMALL PLATES PER**
VOID INTERNAL VOLUME: 95%	**SEGMENT/TOTAL:**
VOID SURFACE AREA: 90%	5/20

PLAN

STORMFILTER DESIGN NOTES									
• THE 8' x 6' PEAK DIVERSION STORMFILTER TREATMENT CAPACITY VARIES BY CARTRIDGE COUNT AND LOCALLY APPROVED SURFACE AREA SPECIFIC FLOW RATE. PEAK CONVEYANCE CAPACITY TO BE DETERMINED BY ENGINEER OF RECORD. • THE PEAK DIVERSION STORMFILTER IS AVAILABLE IN A LEFT INLET (AS SHOWN) OR RIGHT INLET CONFIGURATION. • ALL PARTS AND INTERNAL ASSEMBLY PROVIDED BY CONTECH UNLESS OTHERWISE NOTED.									
CARTRIDGE SELECTION									
CARTRIDGE HEIGHT	27"			18"			LOW DROP		
RECOMMENDED HYDRAULIC DROP (H)	3.05'			2.3'			1.8'		
HEIGHT OF WEIR (W)	3.00'			2.25'			1.75'		
SPECIFIC FLOW RATE (gpm/sf)	2 gpm/sf	1.67* gpm/sf	1 gpm/sf	2 gpm/sf	1.67* gpm/sf	1 gpm/sf	2 gpm/sf	1.67* gpm/sf	1 gpm/sf
CARTRIDGE FLOW RATE (gpm)	22.5	18.79	11.25	15	12.53	7.5	10	8.35	5

* 1.67 gpm/sf SPECIFIC FLOW RATE IS APPROVED WITH PHOSPHOSORB® (PSORB) MEDIA ONLY

FRAME AND COVER
(DIAMETER VARIES)
N.T.S.

ELEVATION

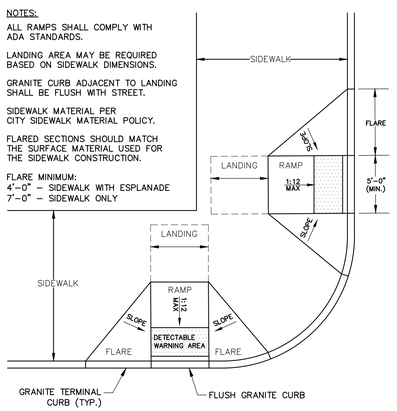
PERFORMANCE SPECIFICATION
FILTER CARTRIDGES SHALL BE MEDIA-FILLED, PASSIVE, SIPHON ACTUATED, RADIAL FLOW, AND SELF CLEANING. **RADIAL MEDIA DEPTH SHALL BE 7 INCHES.** FILTER MEDIA CONTACT TIME SHALL BE AT LEAST **36 SECONDS.**
SPECIFIC FLOW RATE SHALL BE **2 GPM/SF (MAXIMUM)**. SPECIFIC FLOW RATE IS THE MEASURE OF THE FLOW (GPM) DIVIDED BY THE MEDIA SURFACE CONTACT AREA (SF). MEDIA VOLUMETRIC FLOW RATE SHALL BE **6 GPM/CF OF MEDIA (MAXIMUM).**

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH REPRESENTATIVE. www.ContechES.com
4. STORMFILTER WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
5. STRUCTURE SHALL MEET AASHTO HS20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 5' AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE STORMFILTER STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL SECTIONS AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH OUTLET PIPE INVERT WITH OUTLET BAY FLOOR.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO PROTECT CARTRIDGES FROM CONSTRUCTION-RELATED EROSION RUNOFF.
F. CONTRACTOR TO REMOVE THE TRANSFER HOLE COVER WHEN THE SYSTEM IS BROUGHT ONLINE.

8'x6' PEAK DIVERSION STORMFILTER
N.T.S.

NOTES:
ALL RAMPS SHALL COMPLY WITH ADA STANDARDS.



LANDING AREA MAY BE REQUIRED BASED ON SIDEWALK DIMENSIONS.

GRANITE CURB ADJACENT TO LANDING SHALL BE FLUSH WITH STREET.

SIDEWALK MATERIAL PER CITY SIDEWALK MATERIAL POLICY.

FLARED SECTIONS SHOULD MATCH THE SURFACE MATERIAL USED FOR THE SIDEWALK CONSTRUCTION.

FLARE MINIMUM:
4'-0" - SIDEWALK WITH ESPLANADE
7'-0" - SIDEWALK ONLY

SIDEWALK RAMP AT INTERSECTION

ADA ACCESSIBLE CURB RAMPS
N.T.S.

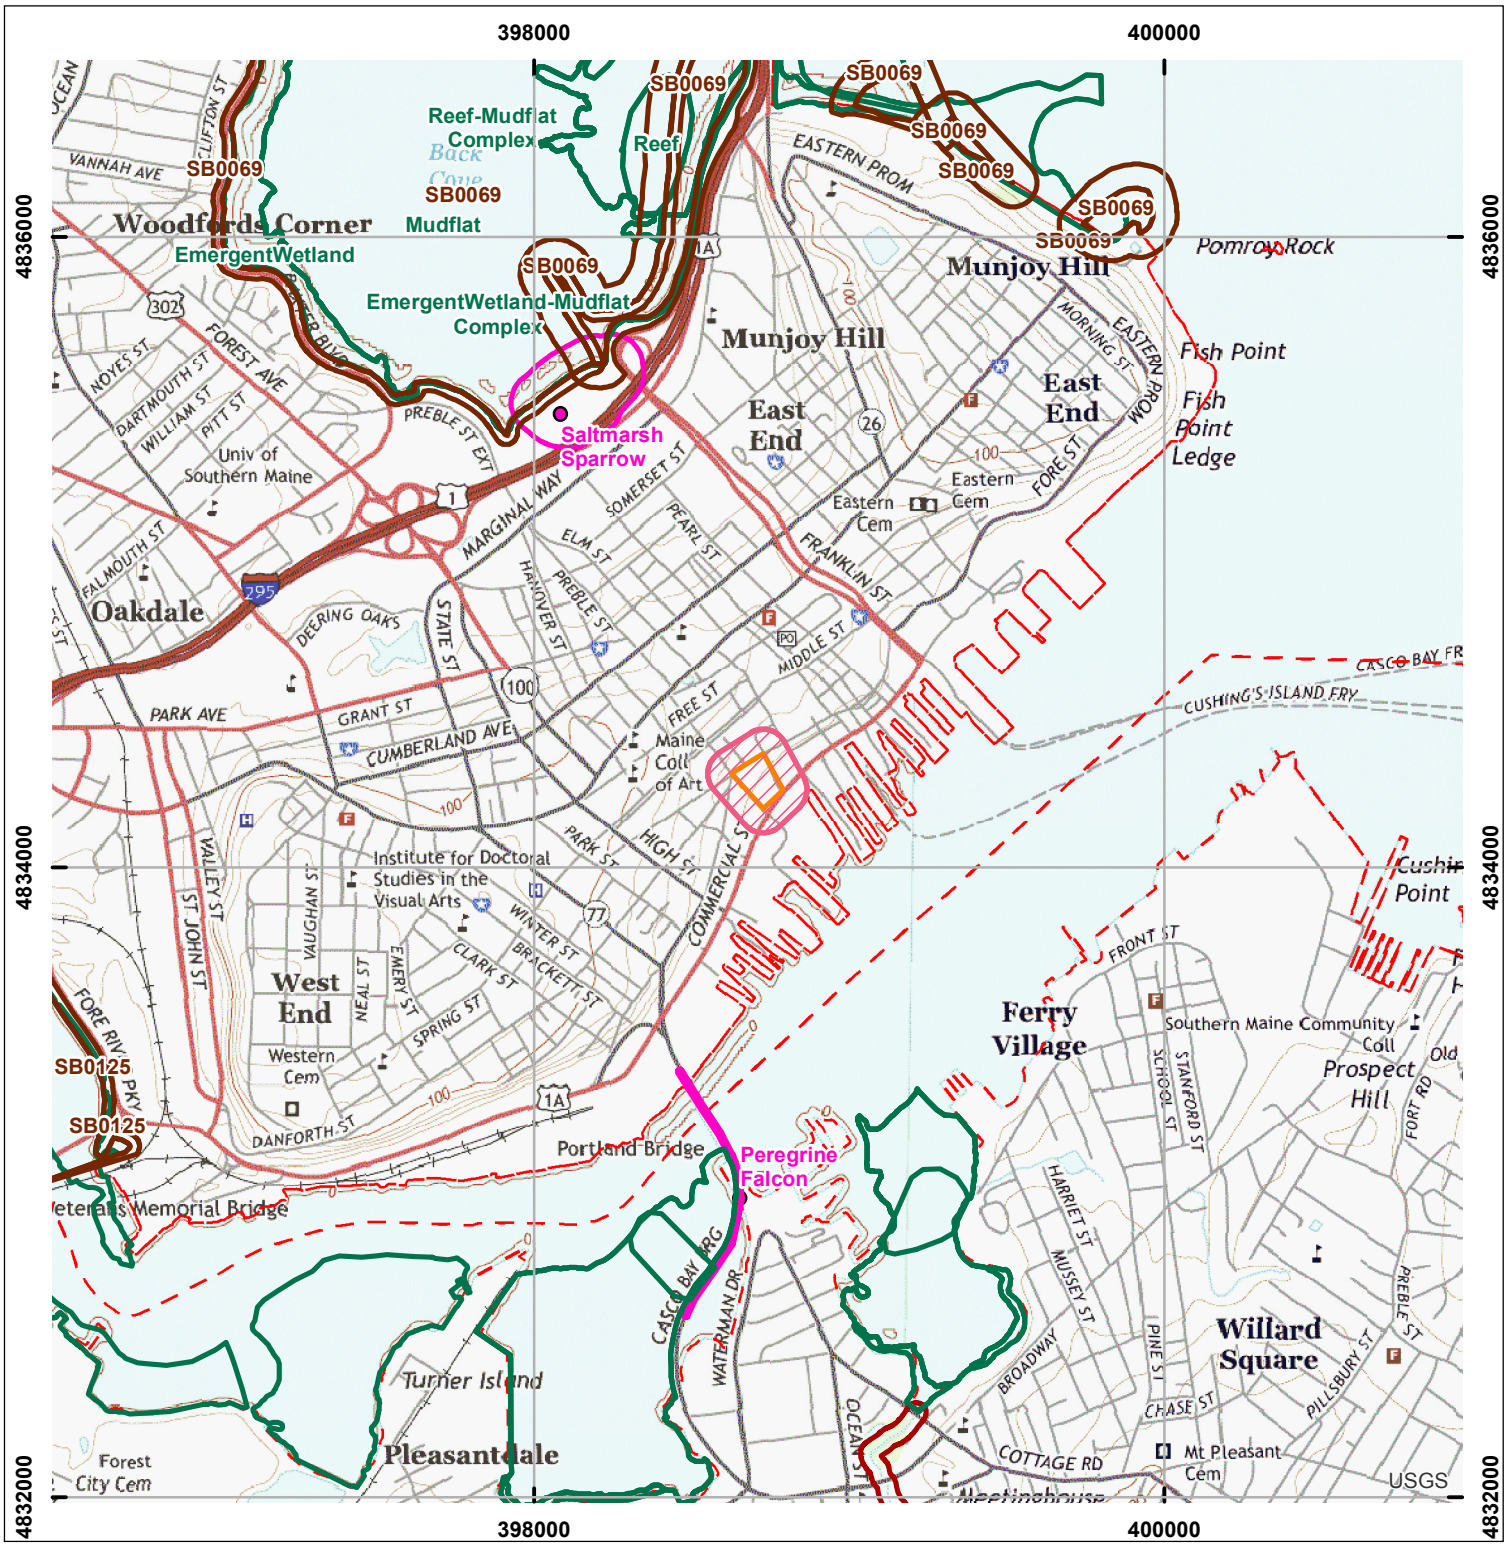
RE: Information Request –Redevelop Spring Cotton and Fore Street Project, Portland

Dear Lauren:

Per your request received on January 03, 2020, we have reviewed current Maine Department of Inland Fisheries and Wildlife (MDIFW) information for known locations of Endangered, Threatened, and Special Concern species; designated Essential and Significant Wildlife Habitats; and inland fisheries habitat concerns within the vicinity of the *Redevelop Spring Cotton and Fore Street* project in Portland.



Our information indicates no locations of Endangered, Threatened, or Special Concern species within the project area that would be affected by your project. Additionally, our Department has not mapped any Essential or Significant Wildlife Habitats or inland fisheries habitats that would be directly affected by your project.

This consultation review has been conducted specifically for known MDIFW jurisdictional features and should not be interpreted as a comprehensive review for the presence of other regulated features that may occur in this area. Prior to the start of any future site disturbance we recommend additional consultation with the municipality, and other state resource agencies including the Maine Natural Areas Program, Maine Department of Marine Resources, and Maine Department of Environmental Protection in order to avoid unintended protected resource disturbance.

Please feel free to contact my office if you have any questions regarding this information, or if I can be of any further assistance.

Best regards,

Becca Settele
Wildlife Biologist

RE: Three Portland Square, Level III Site Plan Application
Response to Staff Comments

Dear Matt,

We are in receipt of Review Staff Comments relating to the Portland Square Project and offer the following Responses:

Matt Grooms, Site Plan Review Comments dated 01/27/2020

Comment #1. *The applicant should provide information on where gates internal to the garage would be located, and assess how gate placement will impact vehicle queues and the potential for conflict between vehicles and pedestrians.*
Response: The parking garage gates are located at the entry/ exit of the two entrances typical of most garages in Portland. There is little vehicle queuing available between the travel lane and gate. G/P is assessing the amount of vehicle queuing available on Cotton and Cross Streets and will be submitting a memorandum addressing this under a separate cover.

Comment #2. *The project as shown meets all zoning dimensional requirements for the B-3 zone.*
Response. We agree.

Comment #3. *The project shall conform with the street and site lighting requirements of the City's Technical Manual. Reuse of existing cobrahead and town & country light fixtures is not permitted, and shall be replaced as necessary with either the downtown combo fixtures along Spring Street or Old Port Fixtures elsewhere within the development. Please see Sec. 10 of the City's Technical Manual for more information.*

Comment #4. *S8 light fixtures, proposed within the alley between the office building and parking garage, exceed the allowable lumen count. The lighting cut sheet provides a lesser lumen count, and so applicant should confirm that the amount listed in the memo is correct.*

Comment #5. *Roof mounted S9 light fixtures exceed permissible light trespass limits. If considering roof-top parking as a surface lot, then maximum foot candle limits are 4.0, with an average foot candle of 0.5.*
Response to Comments #2-5. See Response Letter and revised Site Lighting submittals from Bartlett Design.

Comment #6. *Site lighting exceeds allowable light trespass of 1.0 foot candles at the property line. Given the downtown location of this project and requirements of the B-3 zone related to building location, staff recommend that the applicant submit a formal waiver request to permit the current lighting scheme.*
Response. We will submit a Waiver Request for this Standard.

Comment #7. *City staff will coordinate with the applicant to plant additional street trees along Spring, Union and Fore Street along frontages for Portland Square One and Two.*
Response. We have been in contact with the City Arborist.. We have specific responses to his comments below.
Comment #8. *Regarding the on-street parking configuration along Spring Street, we are waiting for additional concrete guidance from City Management on a final recommendation. This will be forwarded as soon as it is received.*
Response. We understand the latest City position on the Spring Street design is to provide the parallel parking as proposed. We will continue to work through the details of that design with City Staff.

Jeff Tarling, Landscape Review Comments dated 01/21/2020

Comment #1. *Tree & Landscape topics for 3 Portland Square -First, the original Portland Square tree and landscape elements have been very successful. The groves of mature trees planted at large specimen sizes have created an important established feel to the site. Going forward, it is important to use these features, hopefully saving and protecting the mature trees, as a model for the future phases.*
Response: we agree and intend to preserve and protect much of what currently exists in the 1 Portland Square garden. Proposed improvements in this area will consist of protection of large mature trees, removal/ replacement of overgrown shrubs along the edges of the garden, allowing the garden to be fully integrated with the new proposed development.

Comment #2. *Street trees - we would like to suggest that the city street trees along the original Portland Square buildings and the proposed street trees have a fair chance of survival. No question that limited root zone, compaction and exposure to deicing salts have resulted in about a total loss of most of the street trees. The Ginkgo trees along Fore Street are struggling and likely to be removed later this year. We would recommend revisiting the best methods to grow and maintain Street trees in the current site plan review. The use of raised tree planters, structural soil or better yet, 'Silva Cels' to ensure that the new trees will survive longer. As shown, the Spring Street street tree element is perhaps the highest priority given the boulevard effect of the street and the existing canopy, shade trees. We would recommend large tree planters and the use of Sila Cels to create the needed soil volume to grow canopy trees. Regular raised granite tree planters could be the standard along Union and Fore Streets. Cotton Street is quite narrow and tree pits with tree grates likely the only option. We can work with the project team to revise the tree types if needed.*
Response: We are not proposing any sidewalk work along the Union and Fore Street frontages of One and Two Portland Square, and as such are not proposing to install raised planters or street trees in these locations. Along Spring and Fore Streets raised granite planters are proposed, the Spring Street planters are oversized to 5 ft x 25ft, which we believe should provide adequate soil volume for those trees. The Fore Street planters conform with the City Standard of 5 ft x 8 ft, and the tree grates along Cotton Street are proposed to be 4 ft x 6 ft due to the narrow sidewalk width.

We have researched the use of Silva-cells and believe they are cost prohibitive for this project, adding approximately $50-60,000 or more to the Site Development Cost. We believe they are appropriate in the right situation, but note they have not been installed on any City project that we are aware of in the past, primarily because of their high cost to the project..

Comment #3. *Cross Street Extension will play an even more important role for pedestrian circulation under the proposed master plan. We would like to see additional tree planting / landscape elements near the Four Portland Square edges.*
Response: We agree, and will be adding trees along the west side of Cross Street between Fore Street and the Garage pedestrian entrance.

Comment #4. *Overall the Portland Square Master Plan should improve street tree growing conditions along project edges. Future site plans should be consistent in treatment. Tree and landscapes should also recognize limitations to success - lack of adequate soil volume, deicing salts as major factors.*
Response. We agree with Jeff's objectives and believe the current Landscape Plan achieves those goals.

We continue to value the working relationship with City Staff and believe the level of communication has resulted in a better project for everyone. We look forward to our meeting on February12 and subsequent review with the Planning Board.

RE: Three Portland Square, Level III Site Plan Application

Dear Matt,

On behalf of North River IV, LLC, we are pleased to submit responses to the Staff Review comments we received last week regarding the ongoing review of the MDP and Level III Applications for the development of Three Portland Square property currently owned by North River IV. These comments follow our resubmission of plans and support documents on December 20, 2019, as well as a Staff Review meeting convened on January 22, 2020. The following items are attached to this Response Letter and are uploaded to the respective e-Plan site:

- Updated Traffic Demand Management Plan, from VHB, Inc. This update is based on informal comments from Bruce Hyman in an email to VHB dated January 22, 2020.
- Revised Electrical and Lighting Plans and details, from Bartlett Design. This is in response to Site Plan Review comments from Matt Grooms in an email dated January 27, 2020.
- Revised Architectural modeling and building elevations, by Winton Scott Architects, based on informal conversations with Caitlin Cameron, Urban Designer.
- Revised Stormwater and Utility Plans, by Woodard and Curran, based on a Review memo from Wright Pierce, peer reviewer dated January 21, 2020.
- Response to Review Comments from Jeff Tarling, City Arborist, by Carroll Associates.
- Uploading of documentation from the Neighborhood Meeting that was held on January 30, 2020.

Response to Traffic Comments by Tom Errico and Mike Trembley are still being formulated, and will be hopefully submitted prior to our Staff Meeting scheduled for February 12.

Attached and made part of this Application are documents, reports, plans, and images that describe the Three Portland Square responses in full detail. We believe the project provides many benefits to the City of Portland and welcome the opportunity to work closely with City Staff, Planning Board, and interested residents of Portland during its review and approval.

With Regards,

RESPONSE TO CITY REVIEW COMMENTS PERTAINING TO SITE LIGHTING

Site Plan Review Comments:

- The project shall conform with the street and site lighting requirements of the City's Technical Manual. Reuse of existing cobrahead and town & country light fixtures is not permitted, and shall be replaced as necessary with either the downtown combo fixtures along Spring Street or Old Port Fixtures elsewhere within the development. Please see Sec. 10 of the City's Technical Manual for more information.
  RESPONSE:
  The revised Level III Site Submission documents have been revised to provide street lighting that conforms to Section 10 of the City's Technical Manual.

- S8 light fixtures, proposed within the alley between the office building and parking garage, exceed the allowable lumen count. The lighting cut sheet provides a lesser lumen count, and so applicant should confirm that the amount listed in the memo is correct.
  RESPONSE:
  The revised Level III Site Submission documents have been revised to consistently indicate that the lumen rating for the Type S8 lights is 2,117 lumens.

- Roof mounted S9 light fixtures exceed permissible light trespass limits. If considering roof-top parking as a surface lot, then maximum foot candle limits are 4.0, with an average foot candle of 0.5.
  RESPONSE:
  The revised Level III Site Submission documents have been revised to provide lighting levels at the roof parking deck with an average of 0.5 footcandles, and a maximum of 1.9 footcandles.

- Site lighting exceeds allowable light trespass of 1.0 foot candles at the property line. Given the downtown location of this project and requirements of the B-3 zone related to building location, staff recommend that the applicant submit a formal waiver request to permit the current lighting scheme.
  RESPONSE:
  The suggested waiver will be included in the revised Level III site submission documents.

NOTES:

- CONSTRUCTION ENTRANCES MAY BE RELOCATED AS CONSTRUCTION PROGRESSES.
- WHEEL WASH PITS MAY ALSO BE USED, IF APPROVED.
- WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH CRUSHED STONE THAT DRAINS INTO AN APPROVED SEDIMENT TRAP OR SEDIMENT BASIN

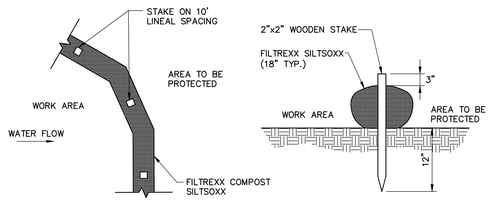
MAINTENANCE: INSPECT FOR EFFECTIVE REMOVAL OF SOIL FROM VEHICLES PRIOR TO LEAVING THE SITE. SWEEP ANY SOIL FROM ADJACENT ROADWAYS.

REMOVAL: AT LEAST ONE CONSTRUCTION ENTRANCE SHALL BE MAINTAINED UNTIL ALL AREAS OF THE SITE ARE STABILIZED.

STABILIZED CONSTRUCTION ENTRANCE DETAIL

N.T.S.

NOTES:



- INSTALL FABRIC ON UPHILL SIDE OF SUPPORT POSTS
- INSTALL SILT FENCE ACROSS SLOPES
- SILT FENCE SHALL NOT BE USED IN DRAINAGE WAYS

MAINTENANCE: INSPECT FOR TEARS IN THE FABRIC OR DAMAGE TO SUPPORTS. REPAIR AS NECESSARY. REMOVE ACCUMULATED SEDIMENT WHEN IT REACHES A DEPTH OF SIX-INCHES OR LESS.

REMOVAL: WHEN UPSLOPE AREAS ARE STABILIZED, THE STRUCTURE AND ANY ACCUMULATED SEDIMENT WILL BE REMOVED.

SEDIMENT BARRIER – SILTATION FENCE DETAIL CONTRACTOR OPTION

N.T.S.

PLAN VIEW SECTION

NOTE:

WHEN STAKING IS NOT POSSIBLE, HEAVY CONCRETE BLOCKS SHALL BE USED BEHIND THE SEDIMENT CONTROL TO HELP STABILIZE DURING RAINFALL/RUNOFF EVENTS.

SEDIMENTATION BARRIER – SILTSOXX CONTRACTOR OPTION

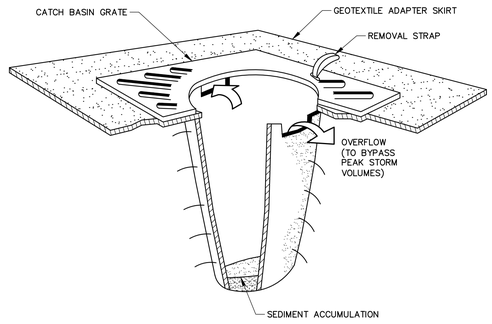
N.T.S.

EROSION AND SEDIMENT CONTROL NOTES

Temporary Erosion Control

Contractor shall prepare and submit a soil erosion and water pollution control plan to engineer in accordance with section 656.

Measure	Dates For Use	Timing, Activity, and Location
Sedimentation Barrier	ALL	Before soil disturbance, install downhill of areas to be disturbed and around material stockpiles.
Up-slope Diversion	ALL	Before soil disturbance, install uphill of areas to be disturbed and material stockpiles.
Catch Basin Protection	ALL	Before soil or pavement disturbance, install ACF Environmental, Inc. High Flow Siltsack, Siltsaver Inlet Filter. or equal, installed per manufacturer's requirements.
Dust Control	ALL	During dry weather, apply water and calcium chloride to control dust.
Temporary Seeding	April 15 to Oct. 1	Soil stockpiles that are not covered and disturbed areas that will not be disturbed again within 14 days. If grass growth provides less than 95% soil coverage by Nov. 1, apply mulch and anchor with erosion control blanket.
Mulch	April 15 to Sept. 15	On all areas of exposed soil prior to rain events or every 7 days, apply 100–150 lbs (2.5 bales) per 1,000 sq ft. by mechanical blower.
Winter Mulch	Sept. 16 to Oct. 31	On all areas of exposed soil prior to precipitation or every 7 days, apply 150 to 170 lbs. mulch (4 bales) per 1,000 sq. ft. by mechanical blower, Erosion control blanket may be used as a substitute for winter mulch.
	Nov. 1 to April 14	On all areas of exposed soil, apply 150 to 170 lbs. mulch (4 bales) per 1,000 sq. ft. and anchor with netting at the end of each working day. Erosion control blanket may be used as a substitute for winter mulch.
Inspections	Until site is permanently stabilized	Inspect the erosion and sedimentation control measures per inspections table below, and maintain and repair as necessary.



Permanent Erosion Control:

Measure	Dates For Use	Timing, Activity, and Location
Pavement – Base Course – Final Course	When no frost is in ground	Install only in areas shown on the plan, shortly after pavement base is brought to final grade. Install near completion of project.
Permanent Seeding	April 15 to Sept. 15	On final grade areas, within 7 days of grade preparation, prepare topsoil, followed by seed and mulch application.
Dormant Seeding	Sept. 16 to April 15	On final grade areas, with prepared topsoil. Apply seed at double the specified rate on bare soil, and follow with an application of winter mulch.
Ground Cover, Trees, Shrubs	April 15 to Nov. 1	Install with final landscaping.
Permanent Mulch	ALL	Install with final landscaping.

Inspections:

Regular inspections of all erosion and sedimentation controls shall be made at least weekly and prior to and following storm events. Minimum inspections shall be made as listed in the table below.

Inspected Item	Look For
Mulched Surfaces	Thin mulch or inadequate application. Wind movement.
Seeded Surfaces	Poor seed germination. Loss of mulch. Development of rivulets.
Sediment Barrier	Sediment build–up to one half the height of the barrier. Undermining of the barrier. Supporting stakes loose, toppled, or unmarked. Breaks in barrier.
Perimeter Diversion	Discharge is to stabilized area. Erosion or breaks in barrier. Supporting stakes loose, toppled or unmarked.
Catch Basin Protection	Sediment build–up and structure blockages. Slow flow/Ponding water. Breaks in fabric or voids in barrier.
Dewatering Filter	Breaks in fabric or supporting structure. Slow flow, indicating high sediment build–up.
Construction Entrance	Sedimentation of roadways. Off–site dust complaints.

NOTES:

CATCH BASIN PROTECTION TO BE "SILTSACK" (BY ACF ENVIRONMENTAL) OR "STREAM GUARD" (BY FOSS ENVIRONMENTAL SERVICES).

INSERT TO BE EMPTIED IN AN APPROVED MANNER WHEN IT IS 1/2 FULL OF SEDIMENT.

INSPECT INSERT AFTER ALL RAINFALL EVENTS, REPAIR AND MAINTAIN AS REQUIRED.

TEMPORARY INLET PROTECTION

N.T.S.

EROSION AND SEDIMENTATION CONTROL NOTES

TEMPORARY EROSION CONTROL MEASURES MAY INCLUDE THE USE OF STABILIZED CONSTRUCTION ENTRANCES, HYDRAULIC MULCH, HAY AND STRAW MULCH, EROSION CONTROL BLANKET, TURF REINFORCED MATTING, RIPRAP AND TEMPORARY SEEDING. TEMPORARY SEDIMENT CONTROL MEASURES INCLUDE THE USE OF SILT FENCE, EROSION CONTROL MIX BERMS, PLUNGE POOLS, CHECK DAMS, SEDIMENT TRAPS, CATCHBASIN SEDIMENT COLLECTION BAGS AND GEOTEXTILE FILTER BAGS. PERMANENT MEASURES INCLUDE THE USE OF RIPRAP AT EXPOSED STORMDRAIN AND CULVERT INLETS AND OUTLETS, ARMORED SWALES AND SLOPES AND PERMANENT VEGETATION.

GENERAL

A. THE PROJECT SHALL CONFORM WITH THE STANDARDS OF THE MAINE CONSTRUCTION GENERAL PERMIT, IF APPLICABLE.

B. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CONSTRUCTED AND MAINTAINED IN ACCORDANCE WITH THE MAINE EROSION AND SEDIMENT CONTROL BMPS HANDBOOK PUBLISHED BY THE MAINE DEP UNLESS OTHERWISE NOTED IN THESE PLANS.

C. ANY ADDITIONAL EROSION AND SEDIMENT CONTROL MEASURES DEEMED NECESSARY BY THE OWNER'S REPRESENTATIVE, DEPARTMENT OF ENVIRONMENTAL PROTECTION, AND/OR MUNICIPAL OFFICIALS SHALL BE INSTALLED BY THE CONTRACTOR.

D. THE CONTRACTOR IS RESPONSIBLE FOR ALL FINES RESULTING FROM EROSION OR SEDIMENTATION FROM THE SITE TO SURROUNDING PROPERTIES, WATER BODIES, OR WETLANDS AS A RESULT OF THIS PROJECT.

E. THE CONTRACTOR SHALL MINIMIZE DISTURBANCE TO THE SITE WHENEVER POSSIBLE WHILE ALLOWING PROPER SITE DEVELOPMENT.

F. CONSTRUCTION STAGING SHALL BE CONDUCTED IN A WAY TO MINIMIZE THE POTENTIAL FOR STORMWATER RUN–ON TO DISTURBED AREAS.

G. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REPAIR/REPLACEMENT/MAINTENANCE OF ALL EROSION CONTROL MEASURES UNTIL ALL DISTURBED AREAS ARE STABILIZED TO THE SATISFACTION OF THE ABOVE PERSONNEL. DESCRIPTIONS OF PERMANENT STABILIZATION FOR VARIOUS COVER TYPES FOLLOWS:

i. FOR SEEDED AREAS, PERMANENT STABILIZATION MEANS THAT 90% OF THE DISTURBED AREA IS COVERED WITH REASONABLY THICK UNIFORM STAND OF PERMANENT GRASS SPECIES, FREE FROM SIZABLE THIN OR BARE SPOTS.
ii. FOR SODDED AREAS, PERMANENT STABILIZATION MEANS THAT COMPLETE BINDING OF THE SOD ROOTS INTO THE UNDERLYING SOIL WITH NO SLUMPING OF THE SOD OR DIE OFF.
iii. FOR MULCHED AREAS, PERMANENT STABILIZATION MEANS TOTAL COVERAGE OF THE EXPOSED AREA WITH AN APPROVED MULCH MATERIAL.
iv. FOR AREAS STABILIZED WITH RIPRAP, PERMANENT STABILIZATION MEANS THAT SLOPES STABILIZED WITH RIPRAP HAVE AN APPROPRIATE BACKING OF A WELL–GRADED GRAVEL OR APPROVED GEOTEXTILE. STONE MUST BE SIZED APPROPRIATELY AND IN ACCORDANCE WITH SECTION E–6 OF THE MAINE EROSION AND SEDIMENT CONTROL BMP MANUAL.
v. FOR PAVED AREAS, PERMANENT STABILIZATION MEANS THE PLACEMENT OF THE ASPHALT BINDER COURSE.
vi. FOR OPEN CHANNELS, LEVEL SPREADERS, ENGINEERED BUFFERS OR OTHER DESIGNED STORMWATER CONVEYANCE STRUCTURE, PERMANENT STABILIZATION MEANS THE CHANNELIZED AREA(S) IS STABILIZED WITH MATURE VEGETATION AT LEAST THREE INCHES IN HEIGHT, WITH APPROVED RIPRAP, OR WITH OTHER NON–EROSIVE LINING CAPABLE OF WITHSTANDING THE ANTICIPATED FLOW VELOCITIES AND FLOW DEPTHS WITHOUT RELIANCE ON CHECK DAMS TO SLOW FLOW. THERE SHALL BE NO EVIDENCE OF SLUMPING, UNDERCUTTING OR DOWNCUTTING OF THE DESIGNED CHANNEL.

H. IF THE AREA WILL REMAIN UNWORKED FOR MORE THAN ONE YEAR OR HAS BEEN BROUGHT TO FINAL GRADE, AND WILL NOT BE BUILT ON, THEN IMMEDIATELY PROVIDE PERMANENT STABILIZATION USING VEGETATION THROUGH PLANTING, SEEDING, SOD OR THROUGH THE USE OF PERMANENT MULCH OR RIPRAP. IF USING VEGETATION FOR STABILIZATION, SELECT THE PROPER VEGETATION FOR THE LIGHT, MOISTURE, AND SOIL CONDITIONS. AMEND AREAS OF DISTURBED, OVERLY–COMPACTED SUBSOIL WITH TOPSOIL OR COMPOST AND LIGHTLY TILL 2–3" OF SOIL AMENDMENTS INTO THE TOP 8" OF SOIL.

I. PERMANENT SEEDING SPECIFICATION: IT IS RECOMMENDED THAT PERMANENT SEEDING BE COMPLETED BETWEEN APRIL 1 AND AUGUST 15 OF EACH YEAR. LATE SEASON SEEDING MAY BE DONE BETWEEN AUGUST 15 AND SEPTEMBER 15. AREAS NOT SEEDED OR WHICH DO NOT OBTAIN A SATISFACTORY GROWTH BY OCTOBER 1 SHALL BE SEEDED WITH AROOSTOCK WINTER RYE OR MULCHED AT SPECIFIED RATES. SEE WINTER SEEDING AND MULCHING SPECIFICATIONS FOR STABILIZATION AFTER NOVEMBER 1.

i. APPLY TOPSOIL TO A DEPTH OF 4 INCHES. IN COMPACTED AREAS TILL 2–3" OF COMPOST INTO UPPER 8" OF DISTURBED SOIL AND THEN APPLY 4 INCHES OF TOPSOIL.
ii. APPLY LIME AND FERTILIZER ACCORDING TO SOIL TESTS. IN LIEU OF SOIL TESTS, APPLY GROUND LIMESTONE AT A RATE OF 33 LBS PER 1000 SQUARE FEET AND GRANULAR, COMMERCIAL–GRADE FERTILIZER 10–10–10 AT A RATE OF 18 LBS PER 1000 SQUARE FEET.
iii. UNIFORMLY APPLY SEED MIXTURE AT THE RECOMMENDED SEEDING RATES AND DATES, APPLY HAY OR STRAW MULCH AT A RATE OF 2.5 BALES PER 1000 SQUARE FEET AND ANCHOR AS NECESSARY.

J. PROTECT ALL SEEDED AREAS WITH MULCH OR EROSION CONTROL BLANKET IN AREAS OF SHEET OR CONCENTRATED FLOWS. MULCH ALL AREAS SO THAT SOIL IS NOT VISIBLE THROUGH THE MULCH REGARDLESS OF THE APPLICATION RATE. SCHEDULE SEEDING OR SODDING TO AVOID FAILURE DUE TO SUMMER DROUGHT AND FALL FROST. NEWLY SEEDED AREAS SHOULD BE PROTECTED FROM VEHICLE TRAFFIC, PEDESTRIAN TRAFFIC AND CONCENTRATED RUNOFF UNTIL THE VEGETATION IS WELL ESTABLISHED. AREAS MUST BE REWORKED AND RESTABILIZED IF GERMINATION IS SPARSE OR SURFACE EROSION IS EVIDENT.

K. DITCH LININGS AND RIPRAP INLET AND OUTLET PROTECTION SHALL BE INSTALLED WITHIN 48 HOURS OF COMPLETING THE GRADING OF THAT SECTION OF DITCH OR INSTALLATION OF THE CULVERT.

L. EROSION CONTROL BLANKET SHALL BE INSTALLED ON ALL PERMANENT SLOPES STEEPER THAN 3:1, IN THE BASE OF DITCHES AND ANY DISTURBED AREAS WITHIN 100 FEET OF A PROTECTED NATURAL RESOURCE (WETLANDS AND WATER RESOURCES). EROSION CONTROL BLANKET SHALL BE NORTH AMERICAN GREEN S150BN OR APPROVED EQUAL. EROSION CONTROL BLANKET SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.

M. THE CONTRACTOR IS RESPONSIBLE FOR REMOVAL OF ALL TEMPORARY EROSION CONTROL MEASURE UPON STABILIZATION OF PROJECT AREA & COST SHALL BE INCIDENTAL TO CONTRACT.

WINTER CONDITIONS

A. WINTER CONSTRUCTION IS CONSTRUCTION ACTIVITY PERFORMED DURING THE PERIOD FROM NOVEMBER 1 THROUGH APRIL 1. IF AREAS WITHIN THE CONSTRUCTION AREA ARE NOT STABILIZED WITH TEMPORARY OR PERMANENT MEASURES OUTLINED ABOVE BY NOVEMBER 15 THEN THE SITE MUST BE PROTECTED WITH ADDITIONAL STABILIZATION MEASURES THAT ARE SPECIFIC TO WINTER CONDITIONS.

GOOD HOUSEKEEPING AND POLLUTION PREVENTION

A. SPILL PREVENTION CONTROLS MUST BE USED TO PREVENT POLLUTANTS FROM BEING DISCHARGED FROM MATERIALS ON SITE, INCLUDING STORAGE PRACTICES TO MINIMIZE EXPOSURE OF THE MATERIALS TO STORMWATER RUNOFF AND APPROPRIATE SPILL PREVENTION, CONTAINMENT AND RESPONSE PLANNING AND IMPLEMENTATION.

B. DURING CONSTRUCTION, PETROLEUM PRODUCTS AND OTHER HAZARDOUS MATERIALS WITH THE POTENTIAL TO CONTAMINATE GROUND OR SURFACE WATERS MAY NOT BE STORED OR HANDLED IN AREAS OF THE SITE DRAINING TO INFILTRATION AREAS. AN "INFILTRATION AREA" IS ANY ARE OF THE SITE THAT BY DESIGN, OR AS A RESULTS OF SOIL AND TOPOGRAPHY, ACCUMULATES RUNOFF THAT INFILTRATES IN THE SOIL. DIKES, BERMS, SUMPS AND OTHER FORMS OF TEMPORARY SECONDARY CONTAINMENT THAT PREVENT DISCHARGE TO GROUNDWATER MAY BE USED TO ISOLATE PORTIONS OF THE SITE FOR THE PURPOSES OF STORAGE AND HANDLING OF THESE MATERIALS.

C. LOCATE ALL MATERIAL STOCKPILES WITH CONSIDERATION FOR STORMWATER DRAINAGE PATTERNS AND INFRASTRUCTURE.

D. TAKE ALL REASONABLE MEASURES TO MINIMIZE DUST RESULTING FROM THE PROJECT. OIL MAY NOT BE USED FOR DUST CONTROL.

E. LOCATE ALL LITTER, CONSTRUCTION DEBRIS AND CONSTRUCTION CHEMICALS WITH CONSIDERATION FOR STORMWATER DRAINAGE PATTERNS AND INFRASTRUCTURE.

F. TRENCH OR FOUNDATION DE–WATERING MUST BE SPREAD THROUGH SUFFICIENT NATURAL BUFFERS THAT HAVE CAPACITY TO INFILTRATE THE PUMPED WATER OR SHOULD BE PUMPED TO DESIGNED CONSTRUCTION DEWATERING DEVICES AS DESCRIBED IN THE MAINE EROSION AND SEDIMENT CONTROL BMPS HANDBOOK.

G. SEDIMENTS AND SOIL MATERIALS SHOULD BE SWEPT FROM PAVED SURFACES AT THE END OF EACH WORKDAY OR PRIOR TO RAIN EVENTS, WHENEVER POSSIBLE.

INSPECTION AND MAINTENANCE

A. A PERSON WITH KNOWLEDGE OF EROSION AND STORMWATER CONTROLS, INCLUDING THE STANDARDS IN THE MAINE CONSTRUCTION GENERAL PERMIT, THE MAINE EROSION AND SEDIMENT CONTROL BMPS HANDBOOK OR ANY MUNICIPAL REQUIREMENTS MUST CONDUCT THE INSPECTION. THIS PERSON MUST BE IDENTIFIED IN THE INSPECTION LOG. IF ADDITIONAL BMPS OR MODIFICATIONS TO BMPS ARE NECESSARY, THE MODIFICATIONS MUST BE IMPLEMENTED WITH 7 CALENDAR DAYS OR PRIOR TO ANY PRECIPITATION EVENT. ALL MEASURES MUST BE MAINTAINED IN EFFECTIVE OPERATING CONDITION UNTIL AREAS ARE PERMANENTLY STABILIZED.

B. AN INSPECTION AND MAINTENANCE LOG MUST BE KEPT BY THE CONTRACTOR, SUMMARIZING THE SCOPE OF THE INSPECTION, DATE, AND MAJOR OBSERVATIONS RELATING TO THE OPERATION OF EROSION AND SEDIMENT CONTROL BMPS, MATERIAL STORAGE AREAS, AND VEHICLE ACCESS POINTS TO THE CONSTRUCTION AREA. THE INSPECTION LOG SHOULD BE DELIVERED TO THE PROPERTY OWNER OR RESPONSIBLE CONTRACTING ENTITY UPON COMPLETION OF THE PROJECT.

DEWATERING

A. ANY DEWATERING FLOW DIRECTED TO THE CITY'S COMBINED SEWER SYSTEM SHALL BE REVIEWED AND APPROVED BY THE DEPARTMENT OF PUBLIC SERVICES AND/OR THE PORTLAND WATER DISTRICT PRIOR TO COMMENCING DEWATERING ACTIVITIES.

GENERAL NOTES FOR MANHOLES AND CATCH BASINS

1. ALL CONCRETE SHALL BE CLASS "A" AND HAVE A MINIMUM ULTIMATE COMPRESSIVE STRENGTH OF 4000 LBS. PER SQ. INCH AT THE END OF 28 DAYS, UNLESS OTHERWISE NOTED.
2. PRECAST REINFORCED CONE BARREL MANUFACTURED PER ASTM SPEC. C–478.
3. ALL MANHOLES SHALL HAVE A BITUMINOUS WATERPROOFING APPLIED TO THE EXTERIOR SURFACE. IF CONSTRUCTED OF BRICK MASONRY, SURFACE SHALL BE PLASTERED WITH A SMOOTH MORTAR FINISH 3/8" THICK. AFTER THE MORTAR HAS SET, THE SURFACE SHALL BE WATERPROOFED AS REQUIRED BY SUPPLEMENTAL SPECIFICATIONS SECTION 604.
4. CASTINGS SHALL CONFORM TO ASTM DESIGNATION A48–CLASS 35. ALL PARTS OF CASTINGS, EXCEPT FINISHED SURFACE, SHALL RECEIVE A COAT OF COAL TAR PITCH VARNISH OR ASPHALTUM PAINT WHICH SHALL BE SMOOTH AND TOUGH BUT NOT BRITTLE.
5. MANHOLES MAY BE CONSTRUCTED OF MASONRY, PRECAST REINFORCED CONCRETE, OR CAST IN PLACE.
6. CONTRACTOR SHALL SUBMIT ANTIFLOATATION CALCULATIONS FOR ALL MANHOLE AND CATCH BASIN STRUCTURES.
7. ALL PRECAST MANHOLES AND CATCH BASINS SHALL BE IDENTIFIED BY STATION, OFFSET, AND STRUCTURE ID PAINTED ON THE SIDE OF THE STRUCTURE BY THE MANUFACTURER.
8. STORM AND SEWER MANHOLES SHALL HAVE SOLID COVERS WITH ONE DRILLED PICK HOLE.
9. EXISTING MANHOLES, CATCH BASINS, FRAMES, AND COVERS SHALL BE SALVAGED BY THE CONTRACTOR, AND SHALL REMAIN THE PROPERTY OF THE CITY OF PORTLAND.
10. WHEN THE FLOW CHANGES DIRECTION IN A MANHOLE, THE CHANNEL ALIGNMENT SHALL FOLLOW A SMOOTH RADIUS. CHANNELS SHALL BE FORMED TO ACCEPT ALL INLET PIPES.
11. ON STORM AND SEWER MANHOLES, THE SHELF AND CHANNEL SHALL BE FORMED BY BRICK SET IN CEMENT MORTAR OR BY FACTORY PRE–CAST CONCRETE. SUCH PRE–CAST CONCRETE SHALL BE EPOXY COATED AND THE SHELF SHALL HAVE A PERMANENT NON–SKID SURFACE.

PRECAST CONCRETE MANHOLE

GENERAL NOTES:

1. ALL WORK SHALL CONFORM TO THE CITY OF PORTLAND TECHNICAL MANUAL AND THE MAINE DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS, LATEST EDITION.
2. CONTRACTOR SHALL CONTACT DIGSAFE (1-888-DIGSAFE) AT LEAST 72 HOURS PRIOR TO EXCAVATION.
3. CONTRACTOR SHALL CONTACT THE CITY OF PORTLAND DEPARTMENT OF PUBLIC SERVICES AT LEAST 48 HOURS PRIOR TO CONSTRUCTION.
4. CONTRACTOR SHALL OBTAIN ALL PERMITS AND PAY ALL FEES REQUIRED FOR THE PERFORMANCE OF THE WORK.
5. CONTRACTOR SHALL PROVIDE ALL NECESSARY SAFETY MEASURES REQUIRED TO PROTECT THE PUBLIC AND WORKMEN DURING CONSTRUCTION.
6. CONTRACTOR SHALL PROTECT ALL EXISTING UTILITIES AND STRUCTURES NOT SCHEDULED FOR REMOVAL. ANY DAMAGE CAUSED BY CONSTRUCTION SHALL BE REPAIRED OR REPLACED AT THE CONTRACTOR'S EXPENSE.
7. CONTRACTOR SHALL MAINTAIN ACCESS TO ALL ADJACENT PROPERTIES AT ALL TIMES.
8. CONTRACTOR SHALL PROVIDE AS-BUILT PLANS TO THE OWNER AND THE CITY OF PORTLAND UPON COMPLETION OF THE WORK.

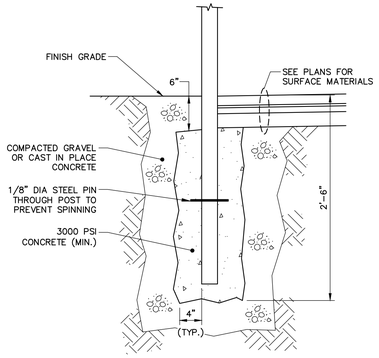
PLAN – COVER REMOVED

NOTES

ALL MONUMENTS SHALL BE A HARD AND DURABLE GRANITE, OF LIGHT COLOR, WITH A SMOOTH SPLIT APPEARANCE, AND FREE FROM SEAMS WHICH IMPAIR STRUCTURAL INTEGRITY.

ALL MONUMENTS, EXCEPT FOR IN DESIGNATED AREAS, MAY HAVE SPLIT OR SAWN SIDES. THE BOTTOM SURFACE SHALL BE 7" TO 9" SQUARE, MAY BE CUT ROUGH, AND SHALL BE PARALLEL WITH THE TOP SURFACE. THE TOP SURFACE SHALL BE SMOOTH, NOT PREMARKED, 6" SQUARE, AND MARKED BY A MAINE PROFESSIONAL LAND SURVEYOR AFTER BACKFILL AND COMPACTION.

ALL MONUMENTS SHALL BE A FULL 5'–3" IN LENGTH, PLUS OR MINUS ONE INCH, UNLESS THE CITY HAS PREAPPROVED AN ALTERNATIVE.



THE CONTRACTOR SHALL SET THE CENTER OF THE MONUMENT WITHIN 1" OF THE SURVEY POINT, OR THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVING IT AND SETTING ANOTHER MONUMENT.

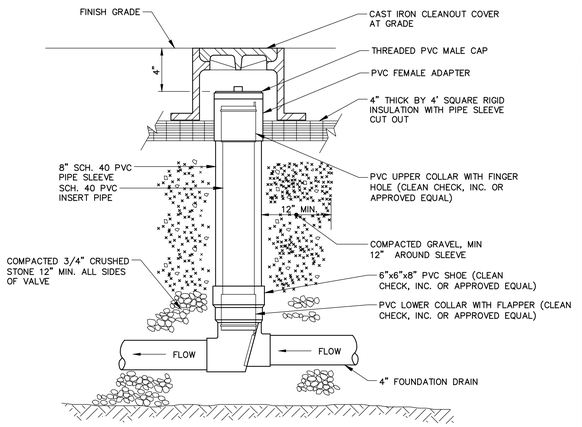
BRICKS TO BE USED:

NEW CONSTRUCTION:
4"x8" PINE HALL PATHWAY PAVER BRICK; MFG. BY PINE HALL BRICK CO., MADISON, NORTH CAROLINA. LACHANCE ITEM # 193623, PINE HALL PATHWAY PAVER BRICK.

REPAIR /MAINTENANCE TO EXISTING BRICK SIDEWALKS: VERMONT PAVER; SUPPLIED BY GAGNE AND SONS. SPECIFICATION NUMBER: "VERMONT BACKER BRICK", ITEM NUMBER # VBBB



BRICK DRIVEWAY APRON
N.T.S.

SECTION VIEW

NOTES:
1. ALL DETECTABLE WARNING PLATES SHALL BE UNCOATED CAST IRON. FOLLOW MANUFACTURER'S INSTRUCTIONS FOR INSTALLATION.
2. CAST IN PLACE CONCRETE SHALL MEET SPECIFICATIONS FOR MAINE D.O.T. CLASS A STRUCTURAL CONCRETE, MINIMUM COMPRESSIVE STRENGTH 4,000 PSI. THE EXPOSED CONCRETE BORDER SHALL RECEIVE A UNIFORM BROOM FINISH PERPENDICULAR TO THE FLOW OF PEDESTRIAN TRAFFIC.
3. TRUNCATED DOMES SHALL BE ALIGNED IN ROWS, PARALLEL AND PERPENDICULAR TO THE PREDOMINANT DIRECTION OF TRAVEL. TRUNCATED DOME BRICKS AND GRANITE PAVERS ARE NOT ALLOWED.
4. SIZE: THE DETECTABLE WARNING PLATES SHALL EXTEND 24 INCHES MINIMUM IN THE DIRECTION OF TRAVEL AND THE PLATE WIDTH + CONCRETE SHALL EXTEND THE WIDTH OF THE CURB RAMP, LANDING, OR BLENDED TRANSITION TO THE STREET.
5. ORIENTATION: THE DETECTABLE WARNING PANEL SHALL BE LOCATED SO THAT THE EDGE NEAREST THE CURB LINE IS 6 INCHES MINIMUM AND 8 INCHES MAXIMUM FROM THE CURB LINE. THE PANEL SHALL BE ORIENTED TO THE DIRECTION OF TRAVEL AS IDENTIFIED BY THE POINT OF EGRESS.

SIDEWALK RAMP DETECTABLE WARNING
N.T.S.

NOTES:
1. MATERIALS AND INSTALLATION PER MANUFACTURER'S INSTRUCTIONS.
2. SEE MECHANICAL PLANS FOR DETAIL OF BACK FLOW PREVENTOR LOCATED IN BELOW BUILDING PARKING LOT.

BACKFLOW PREVENTER
N.T.S.

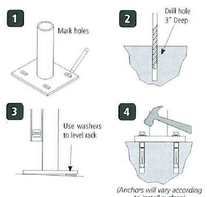
Tools Needed for Installation

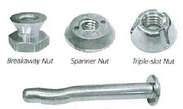
Tape Measure
Marker or Pencil
Masonry Drill Bit
Drill (Hammer drill recommended)
Hammer
Wrench 9/16"
Level
Washers (for leveling if necessary)



Recommended Base Materials:

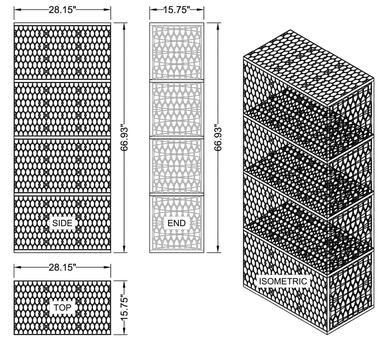
Solid concrete is the best base material for installation. Ask your Dero Rack representative which anchor is appropriate for your application to ensure the proper anchors are shipped with your rack. Be sure nothing is underneath the base material that could be damaged by drilling.

Installation:



3/8" anchors are shipped with the rack. Place the rack in the desired location. Use a marker or pencil to outline the holes of the flange onto the base material. Drill the holes in accordance with the specifications shipped with the anchors. Make sure the holes are at least 6" away from any cracks in the base material.

Tamper Resistant Fasteners



The concrete spike is a permanent anchor. The top of the wedge anchor can also be pounded sideways after installation so that it cannot be removed. Other tamper resistant fasteners are also available for purchase.

When using the special tamper resistant nuts, always set and first tighten the anchors. Once the rack is installed, replace two nuts from the bracket (opposite sides from each other) with the tamper resistant fastener. DO NOT OVERTIGHTEN the tamper resistant nut.

If you have any questions about installation or other features of the Bike Rack, please call us toll free at 1-800-298-4915

PERFORMANCE SPECIFICATION
FILTER CARTRIDGES SHALL BE MEDIA-FILLED, PASSIVE, SIPHON ACTUATED, RADIAL FLOW, AND SELF CLEANING. **RADIAL MEDIA DEPTH SHALL BE 7 INCHES.** FILTER MEDIA CONTACT TIME SHALL BE AT LEAST **36 SECONDS.**
SPECIFIC FLOW RATE SHALL BE **2 GPM/SF (MAXIMUM)**. SPECIFIC FLOW RATE IS THE MEASURE OF THE FLOW (GPM) DIVIDED BY THE MEDIA SURFACE CONTACT AREA (SF). MEDIA VOLUMETRIC FLOW RATE SHALL BE **6 GPM/CF OF MEDIA (MAXIMUM).**

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH REPRESENTATIVE. www.ContechES.com
4. STORMFILTER WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
5. STRUCTURE SHALL MEET AASHTO HS20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 5' AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE STORMFILTER STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL SECTIONS AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH OUTLET PIPE INVERT WITH OUTLET BAY FLOOR.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO PROTECT CARTRIDGES FROM CONSTRUCTION-RELATED EROSION RUNOFF.
F. CONTRACTOR TO REMOVE THE TRANSFER HOLE COVER WHEN THE SYSTEM IS BROUGHT ONLINE.

8'x6' PEAK DIVERSION STORMFILTER
N.T.S.

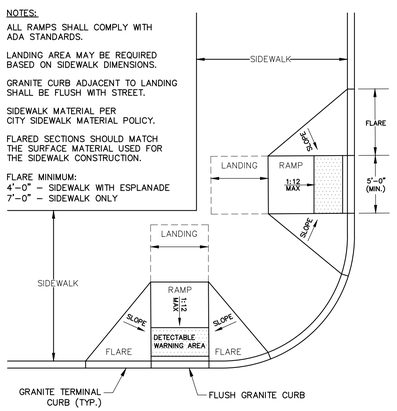
NOTES:
ALL RAMPS SHALL COMPLY WITH ADA STANDARDS.



LANDING AREA MAY BE REQUIRED BASED ON SIDEWALK DIMENSIONS.

GRANITE CURB ADJACENT TO LANDING SHALL BE FLUSH WITH STREET.

SIDEWALK MATERIAL PER CITY SIDEWALK MATERIAL POLICY.

FLARED SECTIONS SHOULD MATCH THE SURFACE MATERIAL USED FOR THE SIDEWALK CONSTRUCTION.

FLARE MINIMUM:
4'-0" - SIDEWALK WITH ESPLANADE
7'-0" - SIDEWALK ONLY

SIDEWALK RAMP AT INTERSECTION

ADA ACCESSIBLE CURB RAMPS

UTILITY NOTES

1. CONTRACTOR SHALL COORDINATE WITH CITY OF PORTLAND FOR INSPECTION OF SEWER AND STORMDRAIN UTILITY CONNECTIONS.
2. ALL NEW UTILITY SERVICES SHALL BE UNDERGROUND.
3. ALL WORK IN THE RIGHT OF WAY SHALL BE IN COMPLIANCE WITH CITY OF PORTLAND TECHNICAL STANDARDS.
4. ALL WATER UTILITIES SHALL COMPLY WITH PORTLAND WATER DISTRICT'S STANDARDS AND SPECIFICATIONS, (https://www.pwd.org/document-library). FINAL SIZING OF DOMESTIC AND FIRE SERVICES TO BE DETERMINED BY MECHANICAL AND SPRINKLER SYSTEM DESIGNERS.
8. ALL UTILITY INSTALLATIONS SHALL MEET THE REQUIREMENTS OF THE CITY OF PORTLAND, AS WELL AS ANY OTHER LOCAL, STATE, FEDERAL CODES; AND THE UTILITY OWNER'S REQUIREMENTS/STANDARDS.
6. CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND GRADES IN THE FIELD AND NOTIFY THE ENGINEER IMMEDIATELY OF ANY DISCREPANCIES.
7. UTILITY LOCATIONS ARE APPROXIMATE AND SHALL BE VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES OR CONFLICTS SHALL BE IMMEDIATELY REPORTED TO THE ARCHITECT/ENGINEER.

GRADING NOTES

1. ALL WALKWAYS, PEDESTRIAN AREAS, AND ACCESSIBLE PARKING AISLES SHALL CONFORM WITH THE APPROPRIATE ADA GUIDELINES. GRADING SHALL BE AS FOLLOWS:
2. WALKWAYS SHALL HAVE A MAXIMUM CROSS SLOPE (PERPENDICULAR TO THE DIRECTION OF TRAVEL)OF 2% AND A MAXIMUM RUNNING SLOPE(ALONG THE DIRECTION OF TRAVEL)OF 5%.
3. CURB RAMPS OR RAMPS WITH HANDRAILS MAY HAVE A RUNNING SLOPE OF UP TO 8.3% (1" PER FOOT); HOWEVER, THE MAXIMUM CROSS SLOPE IS STILL 2%.
4. LANDING AREAS, PATIO AREAS, ACCESSIBLE PARKING AISLES, AND AREAS WHERE PEDESTRIANS ARE TURNING SHALL HAVE A MAXIMUM SLOPE OF 2% IN ALL DIRECTIONS.
5. IF THE CONTRACTOR DETERMINES THAT ANY THE ABOVE STANDARDS ARE NOT COMPATIBLE WITH SITE CONDITIONS/PROPOSED GRADING THEY SHALL CONTACT THE ENGINEER/OWNER'S REP UPON DISCOVERY AND REQUEST GUIDANCE.
6. ANY WORK DONE OUTSIDE OF THESE GUIDELINES (WITHOUT FIRST REQUESTING GUIDANCE FROM THE ENGINEER/OWNER'S REP) SHALL BE REMOVED AND REPLACED AT NO ADDITIONAL COST TO THE OWNER.

EROSION AND SEDIMENTATION CONTROL NOTES

INSPECTION REQUIREMENTS

CONTRACTOR SHALL INSPECT ALL EROSION AND SEDIMENTATION CONTROL MEASURES ON A WEEKLY BASIS AND AFTER RAIN/STORM EVENTS AND SHALL KEEP A LOG OF THESE INSPECTIONS. ANY ISSUES IDENTIFIED SHALL BE ADDRESSED AS SOON AS POSSIBLE AND BEFORE ADDITIONAL PRECIPITATION.

EROSION CONTROL MEASURES AND SITE STABILIZATION

THE PRIMARY EMPHASIS OF THE EROSION & SEDIMENT CONTROL PLAN IS AS FOLLOWS:

- RAPID VEGETATION OF EXPOSED AREAS TO MINIMIZE THE PERIOD OF SOIL EXPOSURE.
- RAPID STABILIZATION OF DRAINAGE PATHS TO AVOID CHANNEL EROSION.
- THE USE OF ON-SITE MEASURES TO CAPTURE SEDIMENT (EROSION CONTROL BERM, STAKED HAY BALES ETC.)

THE FOLLOWING TEMPORARY AND PERMANENT EROSION AND SEDIMENT CONTROL DEVICES WILL BE IMPLEMENTED AS PART OF THE SITE DEVELOPMENT. THESE DEVICES SHALL BE INSTALLED AS INDICATED ON THE PLANS OR AS DESCRIBED WITHIN THIS REPORT. FOR FURTHER REFERENCE, SEE THE MAINE EROSION AND SEDIMENT CONTROL BMPS, (MOST RECENT REVISION).

TEMPORARY EROSION CONTROL MEASURES

THE FOLLOWING MEASURES ARE PLANNED AS TEMPORARY EROSION & SEDIMENTATION CONTROL MEASURES DURING CONSTRUCTION. THESE TEMPORARY EROSION CONTROL MEASURES SHOULD BE REMOVED WITHIN 30 DAYS AFTER PERMANENT STABILIZATION HAS BEEN ESTABLISHED.

1. CRUSHED STONE-STABILIZED CONSTRUCTION ENTRANCES SHALL BE PLACED AT SITE ENTRANCES.
2. WOOD WASTE COMPOST BERMS (EROSION CONTROL BERM) SHALL BE INSTALLED DOWNSTREAM OF ANY DISTURBED AREAS TO TRAP RUNOFF BORNE SEDIMENTS UNTIL THE TRIBUTARY AREAS ARE VEGETATED. THE EROSION CONTROL BERMS SHALL BE INSTALLED PER THE DETAILS PROVIDED AND INSPECTED REGULARLY, INCLUDING BEFORE AND AFTER A STORM EVENT OF 0.5 INCHES OR GREATER. REPAIRS SHALL BE MADE IF THERE ARE ANY SIGNS OF EROSION OR SEDIMENTATION BELOW THE FENCE OR BERM LINE. IF THERE ARE SIGNS OF UNDERCUTTING AT THE CENTER OR THE EDGES, OR IMPOUNDING OF LARGE VOLUMES OF WATER BEHIND FENCE OR BERM, THE BARRIER SHALL BE REPLACED WITH A STONE CHECK DAM.
3. STRAW, HAY MULCH AND HYDROSEEDING IS INTENDED TO PROVIDE COVER FOR BARE OR SEEDED AREAS UNTIL VEGETATION IS ESTABLISHED AND SHOULD BE APPLIED WITHIN 7 DAYS AT A RATE A 115 POUNDS PER 1000 SQUARE FEET. MULCH PLACED BETWEEN APRIL 15TH AND OCTOBER 15TH (ON SLOPES OF LESS THEN 15 PERCENT) SHALL BE ANCHORED BY APPLYING WATER. MULCH PLACED ON SLOPES OF EQUAL TO OR STEEPER THAN 15 PERCENT SHALL BE COVERED BY FABRIC NETTING AND ANCHORED WITH STAPLES IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATION. SLOPES STEEPER THAN 3:1 SHALL RECEIVE EROSION CONTROL BLANKETS OR RIP RAP.
4. USE STANDARD CONSERVATION SEED MIX OF 100% ANNUAL RYE GRASS OR FIELD BROMEGRASS. SEED APPLICATION RATE SHALL BE 40 LB/ACRE.
5. TEMPORARY STOCKPILES OF STUMPS, GRUBBINGS, OR COMMON EXCAVATION WILL BE PROTECTED AS FOLLOWS:

   STOCKPILES SHALL BE STABILIZED WITHIN SEVEN DAYS BY EITHER TEMPORARILY SEEDING THE STOCKPILE BY A HYDROSEED METHOD CONTAINING AN EMULSIFIED MULCH TACKIFIER OR BY COVERING THE STOCKPILE WITH MULCH, SUCH AS SHREDDED HAY, STRAW, OR EROSION CONTROL MIX.

   STOCKPILES SHALL BE SURROUNDED BY SEDIMENTATION BARRIER AT THE TIME OF FORMATION.
6. ALL DISTURBED AREAS THAT ARE WITHIN 75 FEET OF AN UNDISTURBED WETLAND SHALL RECEIVE MULCH OR EROSION CONTROL MESH FABRIC WITHIN 48 HOURS OF INITIAL DISTURBANCE OF SOIL. ALL AREAS WITHIN 75 FEET OF AN UNDISTURBED WETLAND SHALL BE MULCHED PRIOR TO ANY PREDICTED RAIN EVENT REGARDLESS OF THE 48 HOUR WINDOW. IN OTHER AREAS, THE TIME PERIOD MAY BE EXTENDED TO 7 DAYS.
7. STATE AND LOCAL ROADS SHALL BE SWEPT TO CONTROL MUD AND DUST AS NECESSARY. ADDITIONAL STONE SHALL BE ADDED TO THE STABILIZED CONSTRUCTION ENTRANCE TO MINIMIZE THE TRACKING OF MATERIAL OFF THE SITE AND ONTO THE SURROUNDING ROADWAYS.
8. STORMDRAIN CATCH BASIN INLET PROTECTION SHALL BE PROVIDED THROUGH THE USE OF STONE SEDIMENT BARRIERS OR APPROVED SEDIMENT BAGS (SUCH AS SILT SACK). INSTALLATION DETAILS ARE PROVIDED IN THE PLAN SET. THE BARRIERS SHALL BE INSPECTED AFTER EACH RAINFALL AND REPAIRS MADE AS NECESSARY. SEDIMENT SHALL BE REMOVED AND THE BARRIER RESTORED TO ITS ORIGINAL DIMENSIONS WHEN THE SEDIMENT HAS ACCUMULATED TO HALF THE DESIGN DEPTH OF THE BARRIER. THE BARRIER SHALL BE REMOVED WHEN THE TRIBUTARY DRAINAGE AREA HAS BEEN STABILIZED.
9. WATER AND/OR CALCIUM CHLORIDE SHALL BE FURNISHED AND APPLIED IN ACCORDANCE WITH MDOT SPECIFICATIONS--SECTION 637-DUST CONTROL.
10. LOAM AND SEED IS INTENDED TO SERVE AS THE PRIMARY PERMANENT VEGETATIVE MEASURE FOR ALL BARE AREAS NOT PROVIDED WITH OTHER EROSION CONTROL MEASURES, SUCH AS RIPRAP.
11. WATER FROM CONSTRUCTION TRENCH DEWATERING OR TEMPORARY STREAM DIVERSION SHALL PASS FIRST THROUGH A FILTER BAG OR SECONDARY CONTAINMENT STRUCTURE (E.G. HAY BALE LINED POOL) PRIOR TO DISCHARGE. THE DISCHARGE SITE SHALL BE SELECTED TO AVOID FLOODING, ICING, AND SEDIMENT DISCHARGES TO A PROTECTED RESOURCE. IN NO CASE SHALL THE FILTER BAG OR CONTAINMENT STRUCTURE BE LOCATED WITHIN 75 FEET OF A PROTECTED NATURAL RESOURCE.

PERMANENT EROSION CONTROL MEASURES

THE FOLLOWING PERMANENT EROSION CONTROL MEASURES HAVE BEEN DESIGNED AS PART OF THE EROSION/SEDIMENTATION CONTROL PLAN:

1. ALL AREAS DISTURBED DURING CONSTRUCTION, BUT NOT SUBJECT TO OTHER RESTORATION (PAVING, RIPRAP, ETC.) WILL BE LOAMED, LIMED, FERTILIZED, MULCHED, AND SEEDED.
2. PLEASE REFER TO THE TURF AND GRASSES SPECIFICATION (SECTION 329200) FOR SEED MIX AND APPLICATION RATE

IMPLEMENTATION SCHEDULE

THE FOLLOWING CONSTRUCTION SEQUENCE SHALL BE REQUIRED TO INSURE THE EFFECTIVENESS OF THE EROSION AND SEDIMENTATION CONTROL MEASURES ARE OPTIMIZED:

NOTE: FOR ALL GRADING ACTIVITIES, THE CONTRACTOR SHALL EXERCISE EXTREME CAUTION NOT TO OVEREXPOSE THE SITE BY LIMITING THE DISTURBED AREA. THE CONSTRUCTION OF BMPS SHOULD EITHER BE PERFORMED AFTER THE TRIBUTARY AREA IS STABILIZED OR TEMPORARY EROSION CONTROL MEASURES NEED TO BE IMPLEMENTED TO PROTECT THE BMPS FROM BEING CLOGGED WITH CONSTRUCTION SEDIMENT.

1. INSTALL CRUSHED STONE TO STABILIZED CONSTRUCTION ENTRANCES.
2. INSTALL PERIMETER EROSION CONTROL BERM.
3. CLEAR AND GRUB SITE WITHIN THE SPECIFIED CLEARING LIMITS.
4. COMMENCE EARTHWORK AND GRADING TO SUBGRADE.
5. COMMENCE CONSTRUCTION OF BUILDING FOUNDATION.
6. CONTINUE EARTHWORK AND GRADING TO SUBGRADE AS NECESSARY FOR CONSTRUCTION.
7. COMPLETE REMAINING EARTHWORK OPERATIONS.
8. COMPLETE INSTALLATION OF DRAINAGE INFRASTRUCTURE.
9. INSTALL SUBBASE AND BASE GRAVEL WITHIN PROPOSED PARKING EXPANSION.
10. LOAM, LIME, FERTILIZE, SEED AND MULCH DISTURBED AREAS.
11. ONCE THE SITE IS STABILIZED AND A 90% CATCH OF VEGETATION HAS BEEN OBTAINED, REMOVE ALL TEMPORARY EROSION CONTROL MEASURES.
12. TOUCH UP LOAM AND SEED.

NOTE: ALL BARE AREAS NOT SUBJECT TO FINAL PAVING, RIPRAP, OR GRAVEL; SHALL BE VEGETATED.

PRIOR TO CONSTRUCTION OF THE PROJECT, THE CONTRACTOR SHALL SUBMIT TO THE OWNER A SCHEDULE FOR THE COMPLETION OF THE WORK, WHICH WILL SATISFY THE ABOVE CONSTRUCTION SEQUENCE IN THE SPECIFIED ORDER, HOWEVER, SEVERAL SEPARATE ITEMS MAY BE CONSTRUCTED SIMULTANEOUSLY. WORK MUST ALSO BE SCHEDULED OR PHASED TO REDUCE THE EXTENT OF THE EXPOSED AREAS AS SPECIFIED BELOW. THE INTENT OF THIS SEQUENCE IS TO PROVIDE FOR EROSION CONTROL AND TO HAVE STRUCTURAL MEASURES SUCH AS EROSION CONTROL BERM AND CONSTRUCTION ENTRANCES IN PLACE BEFORE LARGE AREAS OF LAND ARE STRIPPED.

THE WORK SHALL BE CONDUCTED IN SECTIONS WHICH SHALL:

1. LIMIT THE AMOUNT OF EXPOSED AREA TO THOSE AREAS IN WHICH WORK IS EXPECTED TO BE UNDERTAKEN DURING THE PRECEDING 30 DAYS.
2. VEGETATE THE DISTURBED AREAS AS RAPIDLY AS POSSIBLE. ALL AREAS SHALL BE PERMANENTLY STABILIZED WITHIN SEVEN DAYS OF FINAL GRADING OR BEFORE A STORM EVENT; OR TEMPORARILY STABILIZED WITHIN 48 HOURS OF INITIAL DISTURBANCE OF SOIL FOR AREAS WITHIN 75 FEET OF AN UNDISTURBED WETLAND AND 7 DAYS FOR ALL OTHER AREAS.
3. INCORPORATE PLANNED INLETS AND DRAINAGE SYSTEM AS EARLY AS POSSIBLE INTO THE CONSTRUCTION PHASE.

WINTER STABILIZATION PLAN

THE WINTER CONSTRUCTION PERIOD IS FROM NOVEMBER 1 THROUGH APRIL 15. IF THE CONSTRUCTION SITE IS NOT STABILIZED WITH PAVEMENT, A ROAD GRAVEL BASE, 75% MATURE VEGETATION COVER OR RIPRAP BY NOVEMBER 15TH, THEN THE SITE SHALL BE PROTECTED WITH OVER-WINTER STABILIZATION.

WINTER EXCAVATION AND EARTHWORK SHALL BE COMPLETED SUCH THAT ANY AREA LEFT EXPOSED CAN BE CONTROLLED BY THE CONTRACTOR. EXPOSED AREAS SHALL BE LIMITED TO THOSE AREAS IN WHICH WORK IS EXPECTED TO COMMENCE AND COMPLETE IN THE NEXT FIFTEEN (15) DAYS AND THAT CAN BE MULCHED WITHIN ONE DAY PRIOR TO ANY SNOW EVENT.

ALL AREAS SHALL BE CONSIDERED TO BE BARE UNTIL THE SUBBASE GRAVEL IS INSTALLED WITHIN PAVEMENT/BUILDING AREAS OR THE AREAS HAVE BEEN LOAMED, SEEDED AND MULCHED. HAY AND STRAW MULCH RATE SHALL BE A MINIMUM OF 150 POUNDS PER 1,000 SQUARE FEET (3 TONS/ACRE) AND SHALL BE PROPERLY ANCHORED.

THE CONTRACTOR SHALL INSTALL ANY ADDED MEASURES, WHICH MAY BE NECESSARY TO CONTROL EROSION/SEDIMENTATION FROM THE SITE DEPENDENT UPON THE ACTUAL SITE AND WEATHER CONDITIONS. CONTINUATION OF EARTHWORK OPERATIONS ON ADDITIONAL AREAS SHALL NOT BEGIN UNTIL THE EXPOSED SOIL SURFACE ON THE AREA BEING WORKED HAS BEEN STABILIZED, IN ORDER TO MINIMIZE AREAS WITHOUT EROSION CONTROL PROTECTION.

1. SOIL STOCKPILES

   STOCKPILES OF SOIL OR SUBSOIL SHALL BE MULCHED FOR OVER WINTER PROTECTION WITH HAY OR STRAW AT TWICE THE NORMAL RATE OR AT 150 LBS/1,000 SF. (3 TONS PER ACRE) OR WITH A FOUR-INCH LAYER OF WOODWASTE EROSION CONTROL MIX. THIS SHALL BE DONE WITHIN 24 HOURS OF STOCKING AND RE-ESTABLISHED PRIOR TO ANY RAINFALL OR SNOWFALL. ANY SOIL STOCKPILE SHALL NOT BE PLACED (EVEN COVERED WITH HAY OR STRAW) WITHIN 100 FEET FROM ANY NATURAL RESOURCES.

1. SEDIMENT BARRIERS

   DURING FROZEN CONDITIONS, SEDIMENT BARRIERS SHALL CONSIST OF WOODWASTE FILTER BERMS AS FROZEN SOIL PREVENTS THE PROPER INSTALLATION OF HAY BALES AND SEDIMENT SILT FENCES.

2. MULCHING

   AN AREA SHALL BE CONSIDERED BARE UNTIL AREAS OF FUTURE LOAM AND SEED HAVE BEEN LOAMED, SEEDED AND MULCHED. HAY AND STRAW MULCH SHALL BE APPLIED AT A RATE OF 150 LB. PER 1,000 SQUARE FEET OR 3 TONS/ACRE (TWICE THE NORMAL ACCEPTED RATE OF 75-LBS./1,000 SF. OR 1.5 TONS/ACRE) AND SHALL BE PROPERLY ANCHORED. MULCH SHALL NOT BE SPREAD ON TOP OF SNOW. THE SNOW SHALL BE REMOVED DOWN TO A ONE-INCH DEPTH OR LESS PRIOR TO APPLICATION. AFTER EACH DAY OF FINAL GRADING, THE AREA SHALL BE PROPERLY STABILIZED WITH ANCHORED HAY OR STRAW OR EROSION CONTROL MATTING. AN AREA SHALL BE CONSIDERED TO HAVE BEEN STABILIZED WHEN EXPOSED SURFACES HAVE BEEN EITHER MULCHED WITH STRAW OR HAY AT A RATE OF 150 LB. PER 1,000 SQUARE FEET (3 TONS/ACRE) AND ADEQUATELY ANCHORED THAT GROUND SURFACE IS NOT VISIBLE THOUGH THE MULCH.

   BETWEEN THE DATES OF NOVEMBER 1ST AND APRIL 15TH ALL MULCH SHALL BE ANCHORED BY PEG LINE, MULCH NETTING, TRACKING, OR WOOD CELLULOSE FIBER. WHEN GROUND SURFACE IS NOT VISIBLE THROUGH THE MULCH THEN COVER IS SUFFICIENT. AFTER NOVEMBER 1ST, MULCH AND ANCHORING OF ALL BARE SOIL SHALL OCCUR AT THE END OF EACH FINAL GRADING WORKDAY.

3. MULCHING ON SLOPES AND DITCHES

   SLOPES SHALL NOT BE LEFT EXPOSED FOR ANY EXTENDED TIME OF WORK SUSPENSION UNLESS FULLY MULCHED AND ANCHORED WITH PEG AND NETTING OR WITH EROSION CONTROL BLANKETS. MULCHING SHALL BE APPLIED AT A RATE OF 230 LBS/1,000 S.F. ON ALL SLOPES GREATER THAN 8%.

   MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL DRAINAGE WAYS WITH A SLOPE GREATER THAN 3% FOR SLOPES EXPOSED TO DIRECT WINDS AND FOR ALL OTHER SLOPES GREATER THAN 8%. EROSION CONTROL BLANKETS SHALL BE USED IN LIEU OF MULCH IN ALL DRAINAGE WAYS WITH SLOPES GREATER THAN 8%. EROSION CONTROL MIX CAN BE USED TO SUBSTITUTE EROSION CONTROL BLANKETS ON ALL SLOPES EXCEPT DITCHES.

4. SEEDING

   BETWEEN THE DATES OF OCTOBER 15TH AND APRIL 1ST, LOAM OR SEED WILL NOT BE REQUIRED. DURING PERIODS OF ABOVE FREEZING TEMPERATURES, FINISHED AREAS SHALL BE FINE GRADED AND EITHER PROTECTED WITH MULCH OR TEMPORARILY SEEDED AND MULCHED UNTIL SUCH TIME AS THE FINAL TREATMENT CAN BE APPLIED. IF THE DATE IS AFTER NOVEMBER 1ST AND IF THE EXPOSED AREA HAS BEEN LOAMED, FINAL GRADED WITH A UNIFORM SURFACE, THEN THE AREA MAY BE DORMANT SEEDED AT A RATE OF THREE TIMES HIGHER THAN SPECIFIED FOR PERMANENT SEED AND THEN MULCHED. DORMANT SEEDING MAY BE SELECTED TO BE PLACED PRIOR TO THE PLACEMENT OF MULCH AND FABRIC NETTING ANCHORED WITH STAPLES. IF DORMANT SEEDING IS USED FOR THE SITE, ALL DISTURBED AREAS SHALL RECEIVE 4" OF LOAM AND SEED AT AN APPLICATION RATE OF 5 LBS/1000 SF. ALL AREAS SEEDED DURING THE WINTER SHALL BE INSPECTED IN THE SPRING FOR ADEQUATE CATCH. ALL AREAS INSUFFICIENTLY VEGETATED (LESS THAN 90% CATCH) SHALL BE REVEGETATED BY REPLACING LOAM, SEED AND MULCH. IF DORMANT SEEDING IS NOT USED FOR THE SITE, ALL DISTURBED AREAS SHALL BE REVEGETATED IN THE SPRING.

   ALJDF

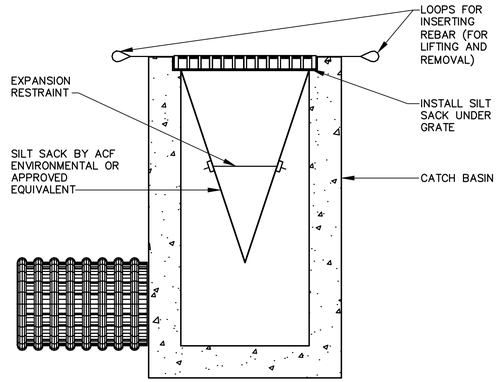
5. DEWATERING

   WATER FROM CONSTRUCTION TRENCH DEWATERING SHALL PASS FIRST THROUGH A FILTER BAG OR SECONDARY CONTAINMENT STRUCTURE (E.G. HAY BALE LINED POOL) PRIOR TO DISCHARGE. THE DISCHARGE SITE SHALL BE SELECTED TO AVOID FLOODING, ICING, AND SEDIMENT DISCHARGES TO A PROTECTED RESOURCE.

6. INSPECTION AND MONITORING

   MAINTENANCE MEASURES SHALL BE APPLIED AS NEEDED DURING THE ENTIRE CONSTRUCTION SEASON. AFTER EACH RAINFALL, SNOW STORM OR PERIOD OF THAWING AND RUNOFF, THE SITE CONTRACTOR SHALL PERFORM A VISUAL INSPECTION OF ALL INSTALLED EROSION CONTROL MEASURES AND PERFORM REPAIRS AS NEEDED TO INSURE THEIR CONTINUOUS FUNCTION. FOLLOWING THE TEMPORARY AND/OR FINAL SEEDING AND MULCHING, THE CONTRACTOR SHALL IN THE SPRING INSPECT AND REPAIR ANY DAMAGES AND/OR UNESTABLISHED SPOTS. ESTABLISHED VEGETATIVE COVER MEANS A MINIMUM OF 85% TO 90% OF AREAS VEGETATED WITH VIGOROUS GROWTH.

STANDARDS FOR TIMELY STABILIZATION OF CONSTRUCTION SITES DURING WINTER

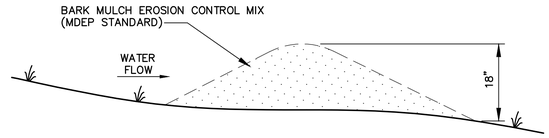


1. STANDARD FOR THE TIMELY STABILIZATION OF DISTURBED SOILS

BY SEPTEMBER 15TH THE APPLICANT SHALL SEED AND MULCH ALL DISTURBED SOILS ON AREAS HAVING A SLOPE LESS THAN 15%. IF THE APPLICANT FAILS TO STABILIZE THESE SOILS BY THIS DATE, THEN THE APPLICANT SHALL TAKE ONE OF THE FOLLOWING ACTIONS TO STABILIZE THE SOIL FOR LATE FALL AND WINTER.

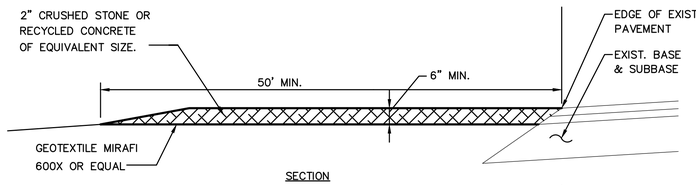
STABILIZE THE SOIL WITH TEMPORARY VEGETATION--BY OCTOBER 1ST THE APPLICANT SHALL SEED THE DISTURBED SOIL WITH WINTER RYE AT A SEEDING RATE OF THREE POUNDS PER 1000 SQUARE FEET, LIGHTLY MULCH THE SEEDED SOIL WITH HAY OR STRAW AT 75 POUNDS PER 1000 SQUARE FEET, AND ANCHOR THE MULCH WITH PLASTIC NETTING. THE APPLICANT SHALL MONITOR GROWTH OF THE RYE OVER THE NEXT 30 DAYS. IF THE RYE FAILS TO GROW AT LEAST THREE INCHES OR COVER AT LEAST 75% OF THE DISTURBED SOIL BEFORE NOVEMBER 15TH, THEN THE APPLICANT SHALL MULCH THE AREA FOR OVER-WINTER PROTECTION AS DESCRIBED ABOVE.

STABILIZE THE SOIL WITH SOD--THE APPLICANT SHALL STABILIZE THE DISTURBED SOIL WITH PROPERLY INSTALLED SOD BY OCTOBER 1ST. PROPER INSTALLATION INCLUDES THE APPLICANT PINNING THE SOD ONTO THE SOIL WITH WIRE PINS, ROLLING THE SOD TO GUARANTEE CONTACT BETWEEN THE SOD AND UNDERLYING SOIL, AND WATERING THE SOD TO PROMOTE ROOT GROWTH INTO THE DISTURBED SOIL.



STABILIZE THE SOIL WITH MULCH--BY NOVEMBER 15TH THE APPLICANT SHALL MULCH THE DISTURBED SOIL BY SPREADING HAY OR STRAW AT A RATE OF AT LEAST 150 POUNDS PER 1000 SQUARE FEET ON THE AREA SO THAT NO SOIL IS VISIBLE THROUGH THE MULCH. PRIOR TO APPLYING THE MULCH, THE APPLICANT SHALL REMOVE ANY SNOW ACCUMULATION ON THE DISTURBED AREA. IMMEDIATELY AFTER APPLYING THE MULCH, THE APPLICANT WILL ANCHOR THE MULCH WITH PLASTIC NETTING TO PREVENT WIND FROM MOVING THE MULCH OFF THE DISTURBED SOIL.

NOTES:
1. INSTALL SILTSACK PER MANUFACTURER'S RECOMMENDATIONS.
2. SILTSACKS SHALL BE CHECKED FOR SEDIMENT LEVEL AND OVERALL CONDITION IMMEDIATELY AFTER EVERY RAIN EVENT AND AT LEAST EVERY DAY DURING PROLONGED RAINFALL..
3. SEDIMENT SHALL BE REMOVED WHEN THE SEDIMENT HAS ACCUMULATED TO 1/2 THE DESIGN DEPTH OF THE SILTSACK. REMOVED SEDIMENT SHALL BE DEPOSITED IN A SUITABLE AREA AND IN SUCH A MANNER THAT WILL NOT ERODE.
4. SEDIMENT SHALL ONLY BE REMOVED BY REMOVING THE SILTSACKS FROM THE CATCH BASINS ACCORDING TO MANUFACTURER RECOMMENDATIONS.
6. CARE SHALL BE TAKEN TO AVOID SPILLING SEDIMENT WHILE REMOVING THE SILTSACK.
7. ANY DAMAGED SILTSACK SHALL BE REPLACED WITH A NEW SILTSACK.



INLET PROTECTION - SILT SACK

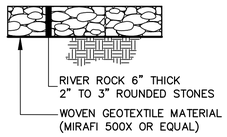
NOTES



1. RAIN GARDEN SHALL BE CONSTRUCTED AND STABILIZED PRIOR TO RECIEVING RUNNOFF.
2. SEE LANDSCAPE PLANS FOR RAIN GARDEN PLANTINGS
3. PERMANENT EROSION CONTROL AROUND ALL DISTURBED AREAS SHALL BE STABILIZED BY THE END OF EACH WORKDAY. STABILIZATION SHALL BE MAINTAINED ON A DAILY BASIS. SEED AND HAY MULCH SHALL BE APPLIED TO ALL EXPOSED SOIL AREAS AT THE END OF EACH WORKDAY.
4. CONSTRUCTION STAGING SHALL BE CONDUCTED IN A WAY TO MINIMIZE THE POTENTIAL FOR STORM WATER RUN-ON TO EXCAVATED AREAS. ALL STORM WATER "BASINS" AND DOWNSPOUTS SHALL BE CONSTRUCTED AND STABILIZED PRIOR TO CONSTRUCTION IN ORDER TO REDUCE POTENTIAL FOR STORM WATER RUN-ON.
5. THE CONTRACTOR SHALL BLEND ALL SPECIFIED SOIL FILTER MEDIA MATERIALS OFF-SITE AND PRIOR TO PLACEMENT.
6. THE CONTRACTOR SHALL LIMIT COMPACTION OF SUBGRADE OR RAIN GARDEN AREAS DURING EXCAVATION. SUBGRADE SURFACE SHALL BE MECHANICALLY RAKED WITH A TOOTHED-EXCAVATOR BUCKET TO PROMOTE THE INFILTRATION OF WATER INTO PARENT SOILS PRIOR TO PLACEMENT OF UNDERDRAIN BACKFILL.
7. SOIL FILTER MEDIA SHALL BE PLACED AND NOT COMPACTED PRIOR TO PLACEMENT OF MULCH. THE SOIL FILTER MEDIA SURFACE SHALL BE FLAT IN ORDER TO REDUCE THE POTENTIAL FOR CHANNELING WATER ACROSS THE SURFACE MEDIA.
8. SURFACE SOIL FILTER SHALL BE SUOUROUNDED WITH A MULCH BERM UNTIL THE SITE HAS BEEN PERMENALTLY STABILIZED
9. THE CONTRACTOR IS STRONGLY ADVISED TO REVIEW THE SPECIFICATIONS FOR THE SURFACE SOIL FILTER MEDIA BEFORE BIDDING, SECTION 312000 EARTHWORK. THIS MATERIAL HAS SPECIAL PERMEABILITY TESTING REQUIREMENTS AND IS VERY SENSITIVE TO CONTAMINATION FROM EXPOSED SOILS DURING CONSTRUCTION.

SITE PREPARATION NOTES

1. THE SITE SHALL BE GRUBBED AS SHOWN ON THE PLANS. EXISTING PAVEMENT SHALL BE REMOVED FROM THE SITE AND DISPOSED OF IN A LAWFUL MANNER.

2. KEEP ALL STREETS FREE OF DUST, MUD, AND DEBRIS. SURFACES MUST BE SWEPT CLEAN AT END OF EACH WORK DAY AND OTHER TIMES AS REQUIRED TO MINIMIZE TRACKING OF MUD AND CREATION OF DUST. INSTALL STABILIZED CONSTRUCTION ENTRANCE AT PRIMARY ACCESS ROUTE ONTO MAIN STREET AND MAINTAIN AS REQUIRED THROUGHOUT CONSTRUCTION.

3. CONTRACTOR SHALL INSTALL EROSION CONTROL MEASURES IN ACCORDANCE WITH THE EROSION AND SEDIMENTATION CONTROL NOTES AND DETAILS (SEE EROSION CONTROL PLAN)

PLANTING NOTES

1. CONTRACTOR SHALL BEGIN MAINTENANCE IMMEDIATELY AFTER PLANTING AND SHALL CONTINUE UNTIL FINAL ACCEPTANCE BY OWNER. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF WATERING AND MAINTENANCE.
2. CONTRACTOR SHALL SUPPLY PLANTS IN QUANTITIES SUFFICIENT TO COMPLETE WORK SHOWN ON THE PLAN. ANY DISCREPANCY BETWEEN THE QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED ON THE PLAN SHALL NOT ENTITLE THE CONTRACTOR TO ADDITIONAL RENUMERATION. ANY DISCREPANCIES SHALL BE CLARIFIED WITH THE LANDSCAPE ARCHITECT PRIOR TO ORDERING PLANT MATERIAL.
3. ALL MATERIALS SHALL CONFORM TO SPECIFICATIONS OF THE AMERICAN STANDARDS FOR NURSERY STOCK (LATEST EDITION) AS SET FORTH BY THE AMERICAN ASSOCIATION OF NURSERYMEN.
4. ALL PLANTS SHALL BEAR THE SAME RELATIONSHIP TO FINISH GRADE AS THE ORIGINAL GRADES BEFORE DIGGING.
5. THE LANDSCAPE CONTRACTOR SHALL GUARANTEE ALL PLANT MATERIALS FOR ONE (1) FULL YEAR FROM DATE OF SUBSTANTIAL COMPLETION.
6. ALL PLANT MATERIALS ARE SUBJECT TO THE APPROVAL OF THE LANDSCAPE ARCHITECT AT THE NURSERY AND AT THE SITE.
7. ALL PLANT BEDS SHALL MEET MINIMUM TOPSOIL REQUIREMENTS (SEE SPECIFICATIONS + NOTE #19 BELOW).
8. NO PLANT MATERIAL SHALL BE INSTALLED UNTIL GRUBBING, BED PREPARATION, AND FINISH GRADING HAS BEEN COMPLETED IN THE IMMEDIATE AREA.
9. ALL PLANTS BEDS AND TREE WELLS SHALL HAVE A MINIMUM OF 3" OF UNIFORMLY DISTRIBUTED, DARK, SHREDDED BARK MULCH. ALL SHRUBS BED SHALL BE CONTINUOUS (WITH PLANTING SOIL MIX AND BARK MULCH).
10. CONTRACTOR SHALL SUBMIT SOIL SAMPLE AND TEST OF TOPSOIL TO LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. SOIL ADMIXTURE SHALL BE ADDED TO EXISTING SOIL (BY CONTRACTOR) IF DEEMED NECESSARY BY SOIL TEST RESULTS.
11. ROUGH GRADING AND BED PREPARATION SHALL BE APPROVED BY LANDSCAPE ARCHITECT PRIOR TO PLANT INSTALLATION. CONTRACTOR SHALL NOTIFY LANDSCAPE ARCHITECT 48 HOURS PRIOR TO REQUIRED SITE VISIT.
12. ALL PLANTS SHALL BE BALLED AND WRAPPED OR CONTAINER GROWN AS SPECIFIED. ALL ROOT WRAPPING AND CONTAINER MATERIAL MADE OF SYNTHETICS OR PLASTICS SHALL BE REMOVED AT THE TIME OF PLANTING.
13. ALL BROAD LEAF EVERGREEN PLANTS SHALL BE SPRAYED WITH AN ANTI-DESSICANT AT THE BEGINNING OF THEIR FIRST WINTER.
14. ALL PLANTS SHALL BE INSTALLED AS PER DETAILS AND THE CONTRACT SPECIFICATIONS. THE LANDSCAPE CONTRACTOR SHALL REFER TO THE CONTRACT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
15. CONTRACTOR SHALL STAKE TREES.
16. THE LANDSCAPE CONTRACTOR SHALL PROVIDE TOPSOIL FILL AS PER THE CONTRACT SPECIFICATIONS + NOTE #19.
17. ALL PLANTS SHALL BE WATERED BY THE CONTRACTOR, AS NECESSARY TO INSURE HEALTH UNTIL FINAL ACCEPTANCE.
18. THE LANDSCAPE CONTRACTOR SHALL REFER TO THE PLANT LIST AND PLANTING SPECIFICATIONS FOR SEASONAL REQUIREMENTS AND OTHER RESTRICTIONS RELATED TO THE TIME AND SEASON OF PLANTING.
19. PLANTING SOIL MIX: 1 PART COMPOST, 8 PARTS TOPSOIL, 3 PARTS HUMUS.

    TOPSOIL: FERTILE, FRIABLE, NATURAL TOPSOIL OF LOAMY CHARACTER, WITHOUT ADMIXTURE OF SUBSOIL MATERIAL, FREE FROM CLAY, LUMPS, COARSE SANDS, STONES, PLANTS, ROOTS, STICKS, AND OTHER FOREIGN MATERIALS GREATER THAN 1" IN ANY DIMENSION, PH RANGE 5.0-7.0 , AND SHALL CONTAIN NOT LESS THAN 6% ORGANIC MATTER BY WEIGHT.

    SANDY LOAM OR LOAM SOIL AS DEFINED BY THE USDA SOIL CONSERVATION SERVICE, AND HAVE THE FOLLOWING MECHANICAL ANALYSIS:

TEXTURAL CLASS	% OF TOTAL WEIGHT	AVERAGE %
SAND (0.05- 2.0 MM)	45 TO 75%	60%
SILT (0.002- 0.05 MM)	15 TO 35%	25%
CLAY (< 0.002 MM)	5 TO 25%	15%

L5.0

1. ALL PROPOSED LIGHTING FIXTURES UTILIZE LED LAMPS.
   - TYPE S1a AND S1b: 56.0 WATTS 5,300 LUMENS
   - TYPE S2: 6.0 WATTS 21 LUMENS
   - TYPE S3a: 36.7 WATTS 3,047.3 LUMENS
   - TYPE S3c: 36.7 WATTS 3,047.3 LUMENS
   - TYPE S4: 50.0 WATTS 2,005.3 LUMENS
   - TYPE S5: 36.0 WATTS 336 LUMENS
   - TYPE S6: 20 WATTS 2,399 LUMENS
   - TYPE S8: 39 WATTS 2,117 LUMENS
2. EXTERIOR BUILDING MOUNTED LIGHTS WILL OPERATE FROM DUSK UNTIL DAWN, CONTROLLED BY PHOTOCELL.
3. ALL PROPOSED LIGHTS HAVE "CUT-OFF" OPTICS.

4. PROPOSED LIGHTING FIXTURES:
   - TYPE S1: HOLOPHANE # ESL2-P20S-30K-AS-CMC-TG3-S-P7-NL2X2-BHDF13-200CMC
     PD42-CA-RAL6012 / PD69-CA-RAL6012 / WLLF200S-CA-RAL6012
     PM-18-CSB-CA-RAL6012 / PM18CSB-CA-RAL6012
     (TYPE X-5F PER PORTLAND TECHNICAL MANUAL)
   - TYPE S1c: EXISTING POLE LIGHT TO REMAIN.
     (TYPE X-1 PER PORTLAND TECHNICAL MANUAL)
   - TYPE S2: BETA-CALCO # 820 7610/30/AG/DB RIH6503
   - TYPE S3a: ARCHITECTURAL AREA LIGHTING # RN-D-6-5-3K8-AS-DL-UNV-W-PC-MG
   - TYPE S3b: ARCHITECTURAL AREA LIGHTING # RN-D-3-5-3K8-AS-DL-UNV-W-PC-MG
   - TYPE S4: LANDSCAPE FORMS # AH-004L3-100F-30K-UV1-MW1
   - TYPE S5: LANDSCAPE FORMS # AG-400L4-035F-30K-UNV
   - TYPE S6: BEACON LIGHTING # SRT1-20-3K8-SC-UNV-GYS
   - TYPE S8: ECLIPSE # DK-Q-L-40W-4K-EBU-BK-SG
   - TYPE S10: HOLOPHANE # WAUE2-P20-30K-AS-BK-3-BK-6-P7-F-PCLL
     NYA-11-FTJ-17-P07-ABG-BK-R126A

E0.2

1. COORDINATE ALL ELECTRICAL UNDERGROUND UTILITY CONDUITS AND MANHOLES WITH OTHER UNDERGROUND UTILITIES AS SHOWN ON CIVIL UTILITY SITE PLANS.
2. WHERE CONDUITS ENTER BUILDING, SLOPE CONDUITS AWAY FROM BUILDING EXTERIOR WALL.
3. WHERE INDICATED, DISCONNECT AND REMOVE EXISTING STREET LIGHT AND LIGHTING POLE. CUT THE CONDUIT FLUSH WITH THE TOP OF THE CONCRETE FOUNDATION BASE AND COVER THE BASE WITH SIDEWALK BRICK OR CONCRETE TO MATCH EXISTING SIDEWALK. REMOVE THE EXISTING UNDERGROUND WIRING AND CONDUIT. DELIVER LIGHT POLE AND LUMINAIRE TO CITY.
4. WHERE INDICATED, ARRANGE WITH THE CENTRAL MAINE POWER COMPANY TO REMOVE THE EXISTING STREET LIGHT FROM A UTILITY POLE.
5. PROVIDE NEW UNDERGROUND SERVICE FOR TYPES S1 AND S10 LIGHTS CONSISTING OF (2)#6AWG, AND (1) #8GND, IN A 1–1/4 INCH CONDUIT. SERVICE CONDUITS SHALL BE CONCRETE ENCASED. PROVIDE DIRECT CONNECTION TO EXISTING CENTRAL MAINE POWER COMPANY SECONDARY OVERHEAD LINES.
6. WIRING FOR EXTERIOR BUILDING MOUNTED LIGHTING SHALL BE ROUTED CONCEALED WITHIN THE BUILDING.
7. WHERE INDICATED PROVIDE (2)–4–INCH UNDERGROUND CONDUITS FOR COMMUNICATIONS SERVICE CABLES, AND (2) 4–INCH UNDERGROUND CONDUITS FOR CABLE TELEVISION SERVICE CABLES. SERVICE CONDUITS SHALL BE CONCRETE ENCASED.
8. PROVIDE RIGID GALVANIZED STEEL SERVICE RISER CONDUITS AT UTILITY RISER POLES IN ACCORDANCE WITH THE SERVING UTILITY COMPANY STANDARDS.
9. WHERE INDICATED, PROVIDE (2) 5–INCH UNDERGROUND CONDUITS FOR NEW CMP PRIMARY SERVICE. SERVICE CONDUITS SHALL BE CONCRETE ENCASED.
10. COORDINATE MOUNTING HEIGHT OF BUILDING MOUNTED LIGHT FIXTURES WITH ARCHITECTURAL ELEVATIONS.
11. WHERE INDICATED, RELOCATE EXISTING LIGHTING POLE. PROVIDE NEW CONCRETE FOUNDATION BASE. EXTEND EXISTING UNDERGROUND CONDUIT AND WIRING AS REQUIRED TO NEW POLE LOCATION.

A1.10

BUILDING ENVELOPE SYSTEMS SUMMARY:

A — ARCHITECTURAL PRE-CAST CONCRETE CLADDING OVER CMU BACK UP WALL W/ AIR + WATER MEMBRANE & 2" RIGID INSULATION. 6" MTL STUDS WITH ROXUL INSULATION AT INTERIOR SIDE WITH GWB FINISH.

B — THERMALLY BROKEN ALUMINUM STOREFRONT SYSTEM W/ INSULATED LOW-E GLASS. 4" FACE FRAME DIMENSION AT PERIMETER, 2" AT DIVIDING MULLIONS .

C — BRICK VENEER W/ 1 1/2" CAVITY OVER 6" LIGHT GAUGE FRAMING WITH GYP SHEATHING, AIR + WATER MEMBRANE & 2" RIGID INSULATION. ROXUL INSULATION IN STUD CAVITY WTIH GWB FINISH. THERMALLY BROKEN HEAVY DUTY COMMERCIAL GRADE ALUMINUM WINDOWS W/ ALUMINUM SILL TRIM.

D — METAL, COMPOSITE, OR FRC PANELS OVER RAINSCREEN FRAMING SYSTEM OVER 8" LIGHT GAUGE FRAMING WITH GYP OR PLYWOOD SHEATHING , 2" RIGID INSULATION, AND AIR+WATER MEMBRANE. ROXUL INSULATION IN STUD CAVITY WTIH GWB FINISH. THERMALLY BROKEN HEAVY DUTY COMMERCIAL GRADE ALUMINUM WINDOWS W/ ALUMINUM SILL TRIM. VERTICAL FEATURE STRIPS/FINS ATTACHED TO SIDING IN RANDOM PATTERN AS SHOWN.

E — THERMALLY BROKEN CURTAINWALL FRAMING SYSTEM WITH INSULATED LOW E GLASS WITH METAL CLAD ROOF EDGE AND FACIA SYSTEM

F — FACADE SYSTEM SAME AS 'E' BUT INCLUDES ROOF DECK WITH PERIMETER RAILING SYSTEM - GLASS OR OTHER SYSTEM THAT PROVIDES MAXIMUM VISUAL OPENESS

G — STEEL FRAMED CANOPY STRUCTURE- PAINTED STEEL W SECTION SUPPORT COLUMNS AND EXPOSED PERIMETER BEAMS WITH INFILL FRAMING AS REQUIRED, MEMBRANE ROOFING, WOOD SLAT CEILING, RECESSED LIGHTING.

H — STEEL FRAMED CANOPY STRUCTURE- PAINTED STEEL W/ TEMPERED GLASS PANELS MOUNTED ON SS SPIDER FITTINGS. SUPPORTED FROM BUILDING STRUCTURE.

I — 4" GROUND FACE CMU BLOCK VENEER W/ 1 1/2" CAVITY OVER 6" LIGHT GAUGE FRAMING WITH GYP SHEATHING, AIR + WATER MEMBRANE & 2" RIGID INSULATION. ROXUL INSULATION IN STUD CAVITY WTIH GWB FINISH. THERMALLY BROKEN HEAVY DUTY COMMERCIAL GRADE ALUMINUM WINDOWS W/ ALUMINUM SILL TRIM.

J — ALUMINUM SLAT SCREENING SYSTEM FOR ROOF TOP MECHANICAL EQUIPMENT

A2.2

BUILDING ENVELOPE SYSTEMS SUMMARY:

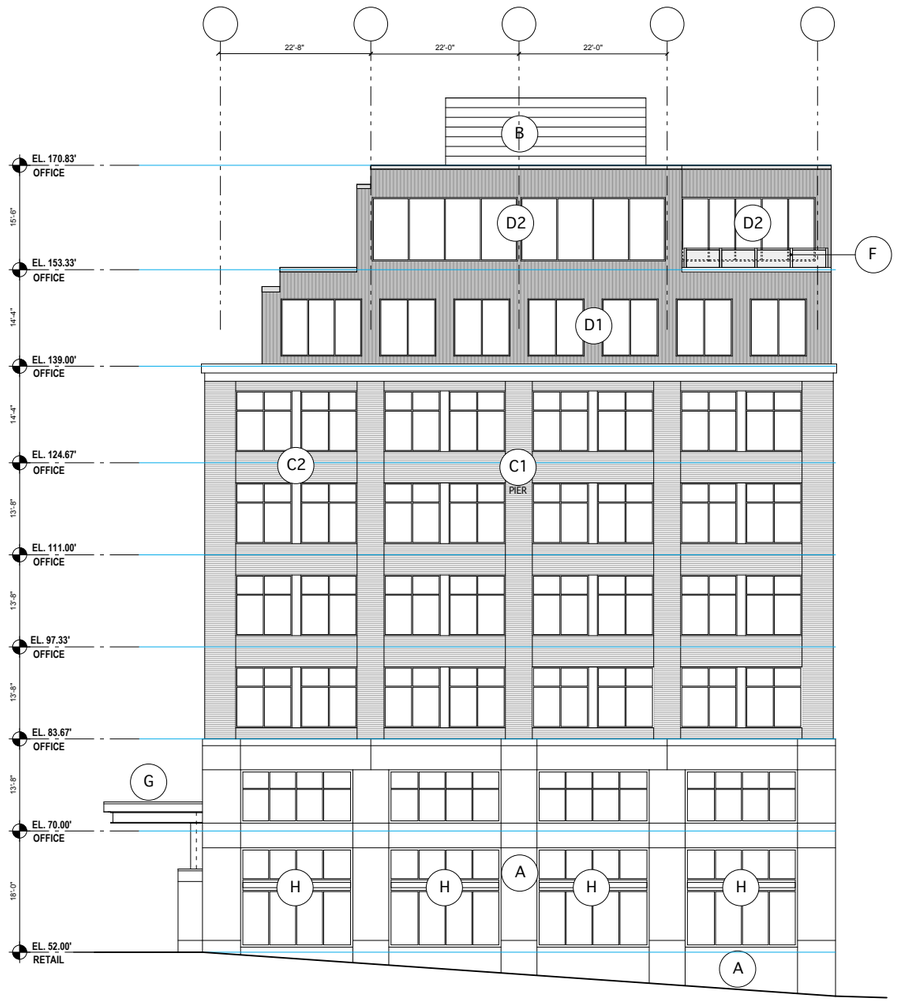
A ARCHITECTURAL PRE-CAST CONCRETE CLADDING W/ 3" CAVITY OVER 4" ROCKWOOL CAVITY ROCK W/4" THERMALLY BROKEN ZEE GIRTS AT 24" O.C. + AIR & VAPOR BARRIER OVER 5/8" GYPSUM SHEATHING OVER 8" MTL STUDS W/ 6" ROCKWOOL COMFORT ROCK + 5/8" GWB. STOREFRONT GLAZING.

B ALUMINUM SLAT SCREENING SYSTEM FOR ROOF TOP MECHANICAL EQUIPMENT

C1 BRICK VENEER W/ 3" CAVITY OVER 4" ROCKWOOL CAVITY ROCK W/4" THERMALLY BROKEN ZEE GIRTS AT 24" O.C. + AIR & VAPOR BARRIER OVER 5/8" GYPSUM SHEATHING OVER 8" MTL STUDS W/ 6" ROCKWOOL COMFORT ROCK + 5/8" GWB.

C2 BRICK VENEER W/ 1" CAVITY OVER 4" ROCKWOOL CAVITY ROCK W/4" THERMALLY BROKEN ZEE GIRTS AT 24" O.C. + AIR & VAPOR BARRIER OVER 5/8" GYPSUM SHEATHING OVER 8" MTL STUDS W/ 6" ROCKWOOL COMFORT ROCK + 5/8" GWB. COMMERCIAL GRADE ALUMINUM WINDOWS.

D1 COMPOSITE METAL PANELS OVER 7/8" FURRING CHANNEL OVER 4" ROCKWOOL CAVITY ROCK W/4" THERMALLY BROKEN ZEE GIRTS AT 24" O.C. + AIR & VAPOR BARRIER OVER 5/8" GYPSUM SHEATHING OVER 8" MTL STUDS W/ 6" ROCKWOOL COMFORT ROCK + 5/8" GWB. COMMERCIAL GRADE ALUMINUM WINDOWS.



D2 SAME AS D1, EXCEPT WINDOWS TO BE CURTAIN WALL GLAZING.

E 4" GROUND FACE CMU BLOCK VENEER W/ 1" CAVITY OVER 4" ROCKWOOL CAVITY ROCK W/4" THERMALLY BROKEN ZEE GIRTS AT 24" O.C. + AIR & VAPOR BARRIER OVER 5/8" GYPSUM SHEATHING OVER 8" MTL STUDS W/ 6" ROCKWOOL COMFORT ROCK + 5/8" GWB. COMMERCIAL GRADE ALUMINUM WINDOWS.

F ROOF DECK WITH PERIMETER RAILING SYSTEM - GLASS OR OTHER SYSTEM THAT PROVIDES MAXIMUM VISUAL OPENESS

G STEEL FRAMED CANOPY STRUCTURE- PAINTED STEEL W SECTION SUPPORT COLUMNS AND EXPOSED PERIMETER BEAMS WITH INFILL FRAMING AS REQUIRED, MEMBRANE ROOFING, WOOD SLAT CEILING, RECESSED LIGHTING.

H STEEL FRAMED CANOPY STRUCTURE- PAINTED STEEL W/ TEMPERED GLASS PANELS MOUNTED ON SS SPIDER FITTINGS. SUPPORTED FROM BUILDING STRUCTURE.

A2.2

BUILDING ENVELOPE SYSTEMS SUMMARY:

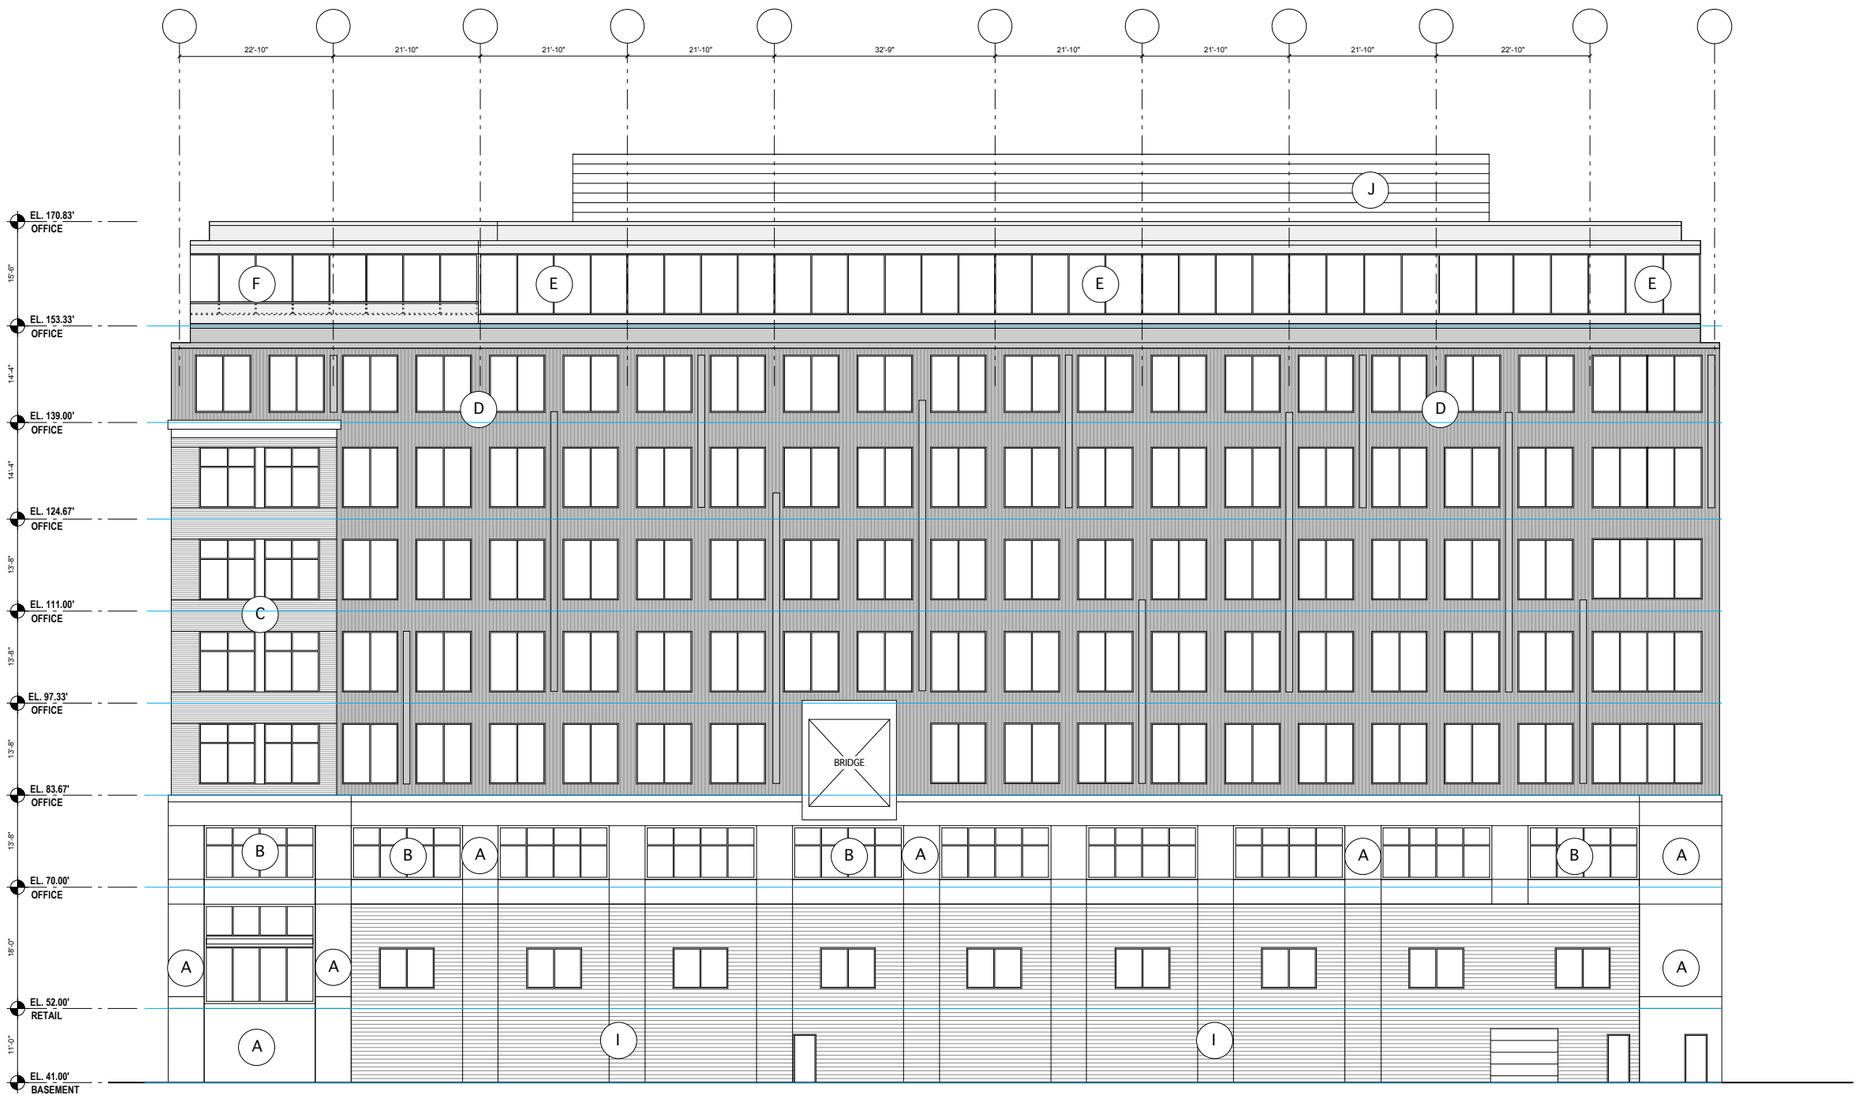
A. ARCHITECTURAL PRE-CAST CONCRETE CLADDING OVER CMU BACK UP WALL W/ AIR + WATER MEMBRANE & 2" RIGID INSULATION. 6" MTL STUDS WITH ROXUL INSULATION AT INTERIOR SIDE WITH GWB FINISH.

B. THERMALLY BROKEN ALUMINUM STOREFRONT SYSTEM W/ INSULATED LOW-E GLASS. 4" FACE FRAME DIMENSION AT PERIMETER, 2" AT DIVIDING MULLIONS .

C. BRICK VENEER W/ 1 1/2" CAVITY OVER 6" LIGHT GAUGE FRAMING WITH GYP SHEATHING, AIR + WATER MEMBRANE & 2" RIGID INSULATION. ROXUL INSULATION IN STUD CAVITY WTIH GWB FINISH. THERMALLY BROKEN HEAVY DUTY COMMERCIAL GRADE ALUMINUM WINDOWS W/ ALUMINUM SILL TRIM.

D. METAL, COMPOSITE, OR FRC PANELS OVER RAINSCREEN FRAMING SYSTEM OVER 8" LIGHT GAUGE FRAMING WITH GYP OR PLYWOOD SHEATHING , 2" RIGID INSULATION, AND AIR+WATER MEMBRANE. ROXUL INSULATION IN STUD CAVITY WTIH GWB FINISH. THERMALLY BROKEN HEAVY DUTY COMMERCIAL GRADE ALUMINUM WINDOWS W/ ALUMINUM SILL TRIM. VERTICAL FEATURE STRIPS/FINS ATTACHED TO SIDING IN RANDOM PATTERN AS SHOWN.

E. THERMALLY BROKEN CURTAINWALL FRAMING SYSTEM WITH INSULATED LOW E GLASS WITH METAL CLAD ROOF EDGE AND FACIA SYSTEM



F. FACADE SYSTEM SAME AS 'E' BUT INCLUDES ROOF DECK WITH PERIMETER RAILING SYSTEM - GLASS OR OTHER SYSTEM THAT PROVIDES MAXIMUM VISUAL OPENESS

G. STEEL FRAMED CANOPY STRUCTURE- PAINTED STEEL W SECTION SUPPORT COLUMNS AND EXPOSED PERIMETER BEAMS WITH INFILL FRAMING AS REQUIRED, MEMBRANE ROOFING, WOOD SLAT CEILING, RECESSED LIGHTING.

H. STEEL FRAMED CANOPY STRUCTURE- PAINTED STEEL W/ TEMPERED GLASS PANELS MOUNTED ON SS SPIDER FITTINGS. SUPPORTED FROM BUILDING STRUCTURE.

I. 4" GROUND FACE CMU BLOCK VENEER W/ 1 1/2" CAVITY OVER 6" LIGHT GAUGE FRAMING WITH GYP SHEATHING, AIR + WATER MEMBRANE & 2" RIGID INSULATION. ROXUL INSULATION IN STUD CAVITY WTIH GWB FINISH. THERMALLY BROKEN HEAVY DUTY COMMERCIAL GRADE ALUMINUM WINDOWS W/ ALUMINUM SILL TRIM.

Memorandum
Planning and Urban Development Department
Planning Division

To: Brandon Mazer, Chair and Members of the Portland Planning Board
From: Andrew Tufts, Planner
Date: February 21, 2020
Re: VA Clinic, 113 West Commercial St, JB Brown & Sons
Project #: PL-000927-2019 CBL: 060 A001
Meeting: February 24, 2020

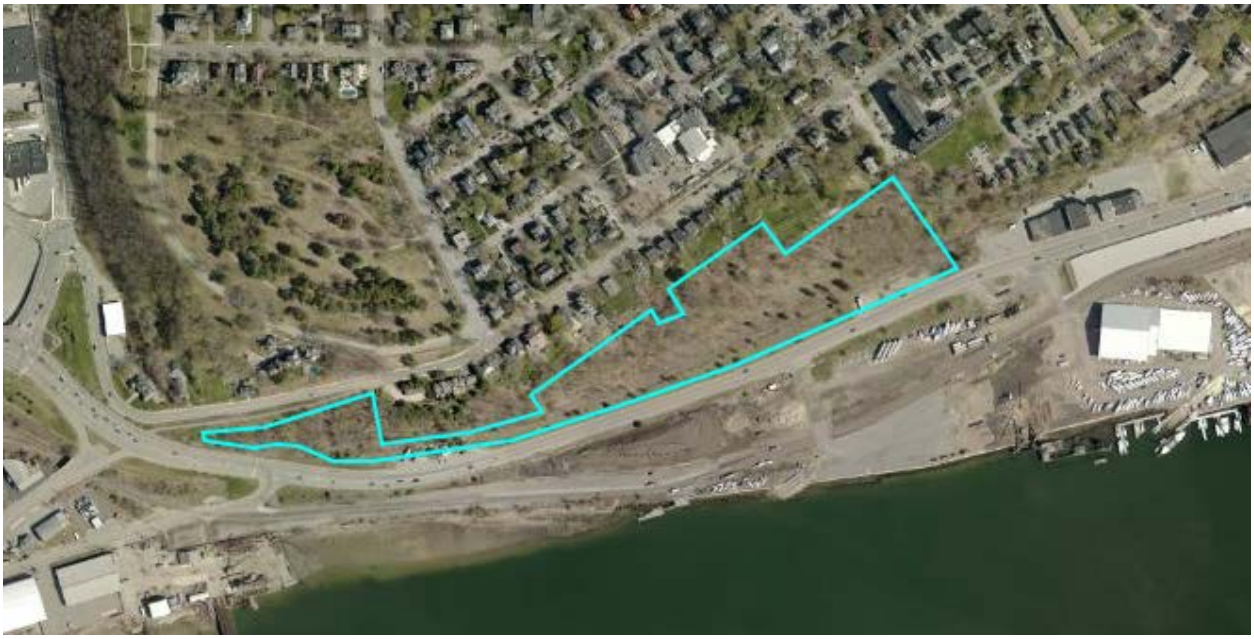

Figure 1: Parcel outline - Source: City of Portland Maine Parcel Viewer

I. INTRODUCTION

JB Brown & Sons, LLC, has submitted a Level III Site Plan application for the development of a Community Based Outpatient Clinic for the Department of Veteran Affairs. The property is a 366,067 square foot parcel (8.4 acres) along approximately 1,400 LF of street frontage on West Commercial Street. Approximately 4 acres of the site is zoned B-5b, Commercial, where the majority of the site work will occur. The remaining 4 acres, along the rear uphill portion of the site, is zoned R-4, Residential. A medical clinic is a Permitted use in the Commercial Zone.

The Planning & Urban Development Department sent 116 notices advertising this meeting to property owners within 500 feet of the site. A legal advertisement ran in the February 15th & February 16th editions of the Portland Press Herald.

Applicant: JB Brown & Sons, LLC

Consultants: Steve Bushey, P.E. (Gorril-Palmer, LLC (Engineer)) Greg Heppner, AIA (SmithGroup Architects) Nick Elliston (Titcomb Associates (Surveying))

II. REQUIRED REVIEWS

Waiver Requests	*Applicable Standards*
The applicant is requesting three site driveways along West Commercial Street due to the site conditions including length/street frontage and proposed driveway separation. Staff Comments: DPW continues to review and explore design considerations.	Technical Standard – Transportation Standards – Number of Driveways 1.7.2.8 No more than two (2) driveways shall be permitted for ingress and egress purposes to any commercial, industrial or residential (with 10 or more parking spaces) site.
The applicant is requesting a waiver of the required number of bicycle parking spaces as that would exceed well over 50 bike spaces which the applicant considers to be excessive for the clinic use. Staff Comments: Staff is supportive of starting with 20 bicycle spaces on the condition of potentially adding more based on TDM results.	Technical Standards – Transportation Standards –Bicycle Parking (14-526 (a) 4 b) b) Non-residential structures. Two (2) bicycle parking spaces for every ten (10) vehicle parking spaces for the first one hundred (100) required vehicle parking spaces, plus one (1) bicycle parking space for every twenty (20) required motor vehicle parking space over one hundred (100) required vehicle parking spaces.
Review	*Applicable Standards*
Site Plan	*Section 14-526*

III. PROJECT DATA

Existing Zoning	B-5b Commercial, R-4 Residential
Existing Use	*Vacant Lands, Surface Parking*
Proposed Use	*2-story Community Based Outpatient Clinic (CBOC)*
Parcel Size	366,067 SF

	Existing	*Proposed*	*Net Change*
Building Footprint	NA	34,155 SF	+ 34,155 SF
Building Floor Area	NA	62,170 SF	+ 62,170 SF
Impervious Surface Area	11,240 SF	168,273 SF	+ 157,033 SF
Parking Spaces	0	535	+ 535
Bicycle Parking Spaces	0	2	+ 2

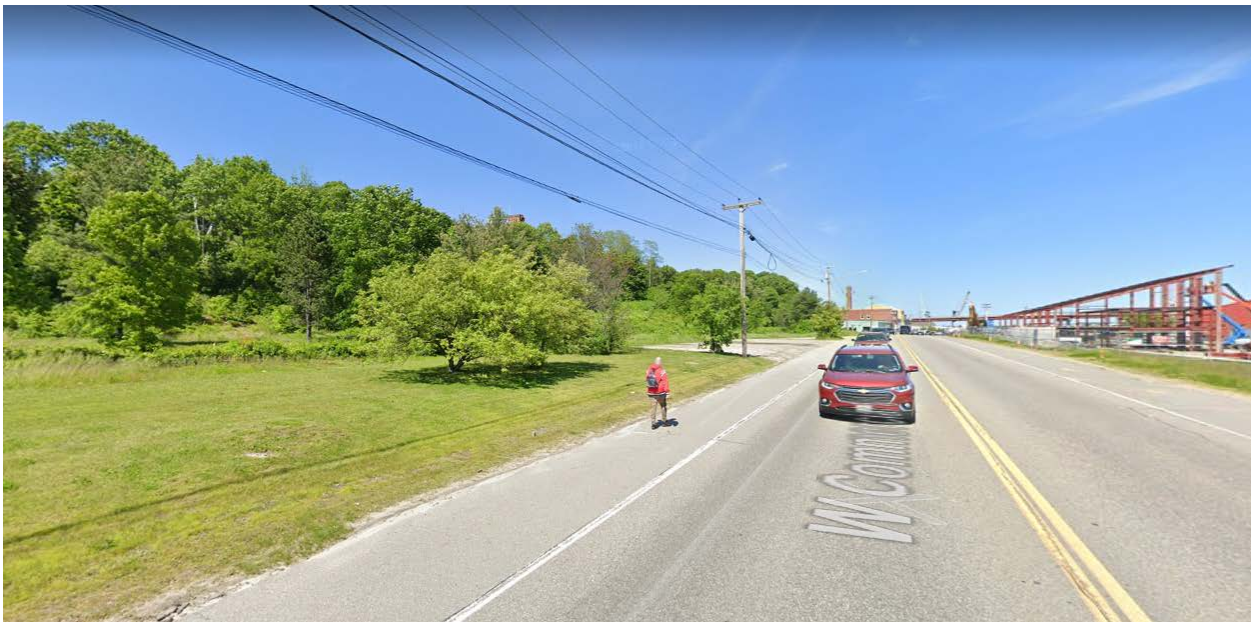

Figure 2: Existing conditions - Source: Google Maps

IV. EXISTING CONDITIONS

The development site is located on West Commercial Street along a gateway to Portland's waterfront. The parcel is approximately 8.4 acres in size, and includes topography consisting of ground elevations ranging from elevation 20' to elevation 25' from the ROW area back 160' or so. The rear portion of the site is a steep incline ending at approximately 100' in elevation. The site is primarily open space with intermittent vegetation in the lower portion adjacent to the street, and denser vegetation along the northern rear of the site. The applicant is the Department of Veteran Affairs, and the owner of the parcel is JB Brown & Sons, LLC. The site is bordered by the Star Match building to the east, a residential area uphill to the north, and directly opposite the Canal Landing Boat repair and maintenance facility that occupies approximately 17 acres on the south side of West Commercial Street. The nearest open space is Harbor View Memorial Park, an approximately 7-minute walk North-East, and the Western Promenade, an approximately 15-minute walk North-West. No sidewalks currently exist on site. The site is sparsely vegetated along West Commercial Street, with few street trees, due to overhead wires and large utility infrastructure below grade.

Drainage in West Commercial Street is limited to a few catch basins that are tied to the CSO system. These are located to the west end of the site, thus the ability to convey stormwater off the site will require careful consideration. The segment of West Commercial Street spanning the proposed developments frontage, has been subject to flooding in recent years. A recent storm in December of 2019, brought heavy amounts of rainfall causing approximately 12" inches of standing water in front of the site. Both the applicant and the City of Portland are analyzing the situation and continue to discuss appropriate stormwater management for the site.

Owen Haskell, Inc. completed a boundary and topographic survey of the site in June of 2019. An easement exists for an undeveloped portion of Emery Street, which was accepted as a city street in 1851.

Figure 3: Conceptual rendering – West Commercial Street looking north - Source: SmithGroup

V. PROPOSED DEVELOPMENT

The proposed development includes a two-story, 34,155 square-foot Outpatient Clinic (CBOC), as well as a three-level 35,800 square-foot parking garage. Three driveways are proposed along West Commercial Street. The main entrance is proposed between the two buildings, with the entrance made prominent by elevated architectural masses on corresponding corners of the CBOC and parking garage. A seating area and gathering plaza is adjacent to the CBOC entrance, allowing patients an area to sit outside in view of the meadow planting.

The parking garage would include 382 parking stalls. The first two levels would be reserved for patients, while the top would be designated for public use associated with the working waterfront and/or the adjacent Star Match property. Vehicles would enter the garage directly to the east of the entrance drive, and can exit either at the entrance or at the eastern side leading to West Commercial.

The western driveway provides access to a staff surface parking lot, which contains 152 spaces with its own entrance from West Commercial Street. A staff building entrance is adjacent to the staff parking lot. Service vehicles enter at the east end of the site (behind the garage) and are restricted to the drive lane behind the garage and CBOC. The ambulance dock, mobile imaging station, dumpsters and loading dock are located behind the Clinic, out of site from patients and visitors.

Emery Street, a paper street accepted by the City in 1851, runs North-South along the eastern edge of the proposed project where the eastern most driveway is proposed. City staff are working with the applicant on alternatives for the use of this paper street. More details on the use of the Emery Street paper street will be available by the time of the project's public hearing.

VI. PUBLIC COMMENT AND NEIGHBORHOOD MEETING

A neighborhood meeting was held on the evening of February 13, 2020 at 321 Commercial Street, Portland, Maine at 5:30PM for the proposed project. Approximately 12-14 members of the public attended. Attending

on behalf of the development team were Vin Veroneau and Bob Vallee from JB Brown & Sons (applicant), and Steve Bushey from Gorrill Palmer Engineers (civil engineer). Vin Veroneau provided an overview of the project using a PowerPoint presentation, while Steve Bushey was in attendance available to answer questions regarding site design and traffic. There were a number of questions from the public regarding lighting and potential light-trespass from the garage. One member of the public suggested the idea of incorporating potted plantings and landscape features to the top deck of the garage. A representative of Portland Trails was in attendance and there was some discussion of incorporating a pedestrian trail along the Emery Street paper street easement, connecting the uphill neighborhood to West Commercial Street. The meeting adjourned at roughly 6:45PM.

VII. RIGHT, TITLE, & INTEREST AND FINANCIAL & TECHNICAL CAPACITY

The owner of the property is JB Brown & Sons, LLC. The applicant provided a copy of the warranty deed, recorded at the Cumberland County Registry of Deeds in CCRD Book 29147 page 254, which demonstrates their right, title and interest in the property.

FDS JBB Portland LLC currently is entered into a Lease Agreement with the federal government for a 20-year period.

The applicant team cited their experience and qualifications to demonstrate capacity to design and construct the project.

IX. ZONING ANALYSIS

Dimensional requirements for this project are dictated by the B-2b community business zone.

Zoning Requirements	B-5b	Provided	+/-
Minimum Lot Size	None	8.4 AC	
Minimum Street Frontage	None	1,400 ft	
Front Yard	Minimum: 0 ft Maximum: 10 ft	Max.: < 10ft	
Minimum Side Yard	None	NA	
Minimum Rear Yard	10 ft	8.9 ft	
Maximum Lot Coverage	100%	<60%	
Maximum Structure Height	55 ft	42 ft	
Parking	155	540 382-space patients 152-space staff	**+ 385**
Bicycle Parking	42 spaces	2 spaces	**- 40**

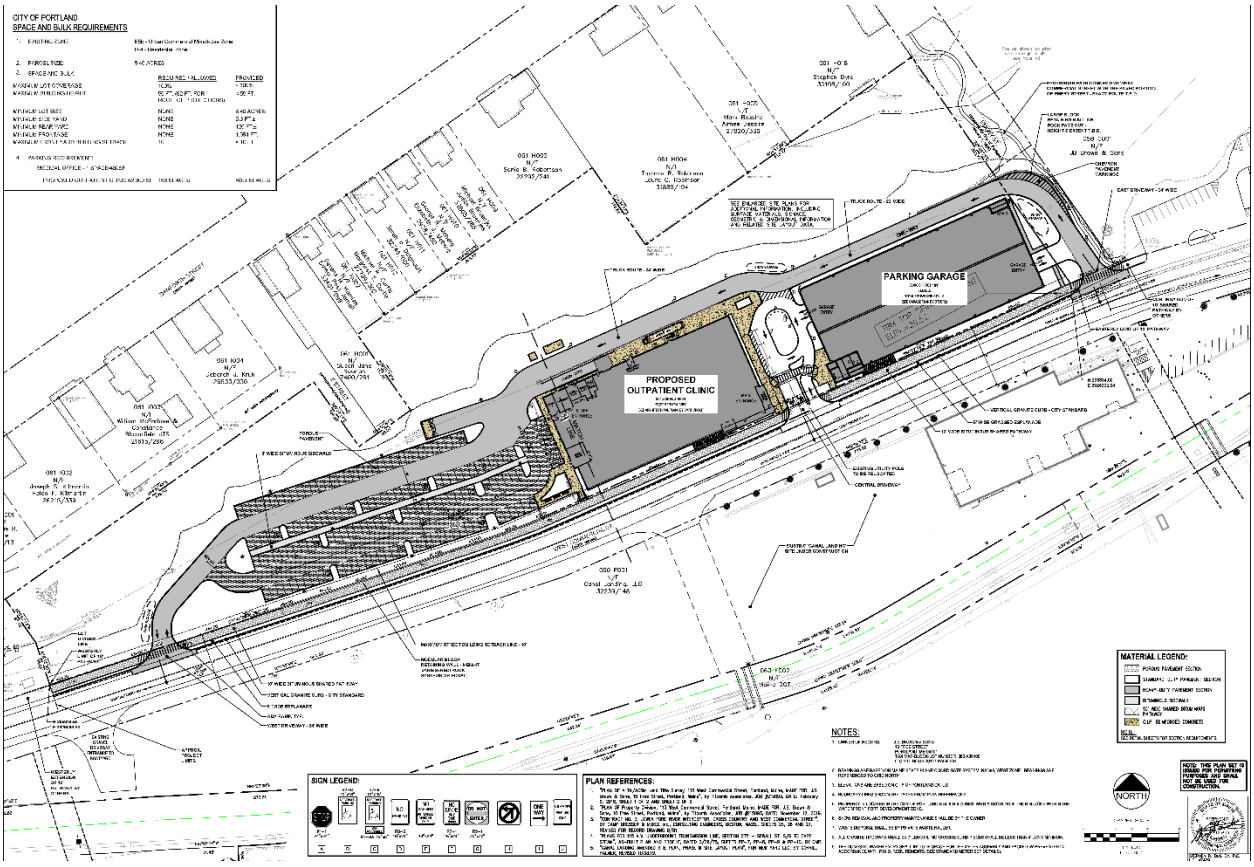

Figure 4: Site Plan - Source:Gorrill Palmer

IX. DEVELOPMENT REVIEW

A. SITE PLAN SUBMISSION REQUIREMENTS (Section 14-527)

The applicant has submitted a recording plat. The final plat will need to be revised to reflect any waivers and conditions of approval that relate to the subdivision plan. Any waivers granted must be recorded at the Registry of Deeds within two years of a Planning Board decision.

B. SITE PLAN STANDARDS (Section 14-526)

The proposed development has been reviewed by staff for conformance with the relevant review standards of Portland's site plan ordinance and applicable regulations. Staff comments are listed below.

1. *Transportation Standards*

   a. Impact on Surrounding Street Systems and Access and Circulation

   The site is located on West Commercial Street along a corridor that spans between the Veterans Memorial Bridge and the Casco Bay Bridge. West Commercial Street currently supports a significant amount of traffic. Vehicles would access the site and parking areas from three driveways creating three new curb cuts along West Commercial. One existing curb cut on the adjacent Star Match property would be closed, resulting in a net increase

of two curb cuts. The main public access to the site would be through the middle driveway which is made prominent by elevated architectural masses on corresponding corners of the CBOC and garage. A canopy is proposed at the CBOC's entrance with space for three cars to drop-off and pickup.

The entrance to the proposed garage is to the east of the main entrance. The garage has two vehicular exits, one at the main entrance drive for pick-ups, and another at its east end leading to West Commercial Street. Staff parking is located west of the clinic and has its own entrance from West Commercial Street.

The proposed project requires the applicant to receive approval for a Traffic Movement Permit (TMP). A TMP application was filed with the City on December 3, 2019 followed by a project scoping meeting conducted on Monday, December 30, 2019. The City's Traffic Consultant, at that time, identified a full traffic impact study would be required in support of the permit application. An initial traffic impact study has been submitted and is in review.

b. Sidewalks

West Commercial Street does not currently have a sidewalk along the site frontage. The project includes the development of a 10' wide multi-use pathway along the site frontage, to be developed in accordance with the West Commercial Street Multi-Modal Corridor Study. The pathway will be paved asphalt and will involve granite curb placement, an esplanade and the pathway. Linkage to the proposed VA Clinic development will be provided at several locations.

The current design shows the path ending at the edge of a city stormwater overflow basin. The applicant has expressed support for an easement that will allow the city to reroute the path around this obstruction, to be finalized in the course of the Site Plan review.

c. Public Transit Access

West Commercial Street does not currently fall within a METRO service route; therefore, service is not directly available at the site. METRO is currently undertaking an update to their systems and routes and service may be considered along West Commercial Street.

The implementation of the West Commercial Street multi-modal pathway into the site planning meets the objectives of previous City studies and planning.

d. Parking

The proposed project would provide 540 parking spaces on site. The development would include 152 surface parking spaces and 382 spaces within the parking garage. The City Code requires 155 spaces based on a ratio of 1 space/400 SF for a program of 62,300 SF. The proposed parking exceeds the required parking by greater than 10%.

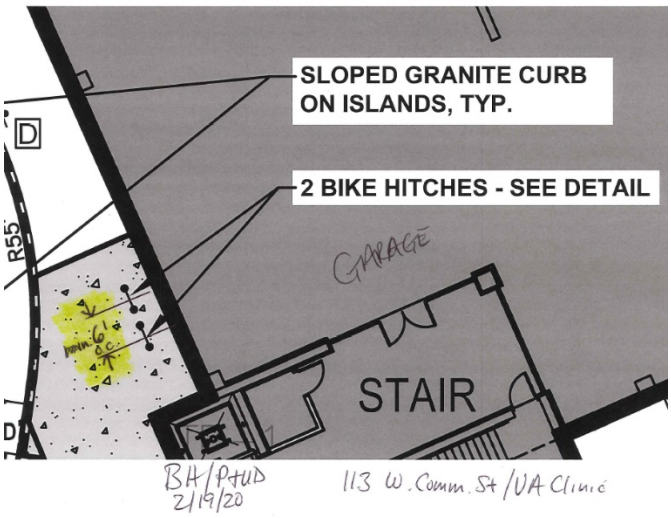
The tenant agreement with the VA requires that 400 spaces be provided for their programing. An additional 132 spaces will be provided in the parking garage and these will be available for use by tenants of the Star Match building.

A Transportation Demand Management Plan is required under site plan standards. The programming for internal VA traffic monitoring has not yet been determined, but the VA does employ a rideshare program. The applicant is requesting that the submission of a TDM plan be made a condition of approval tied to the issuance of a certificate of occupancy. This will allow the developer and government representatives an opportunity to coordinate the program for the site. Staff recommends that if submission of a TDM is made a condition of approval, that the applicant submit an overview of what the anticipated approaches to transportation demand management will be, prior to a full plan being submitted.

Parking aisles and dimensions on the proposed parking areas meet the applicable standards. This will include 9' x 18' stalls and 24' min. two-way drive aisles and 16' wide one-way drives.

All new surface parking shall be paved. Porous pavement is proposed for much of the surface parking field, allowing for greater stormwater infiltration onsite.

e. Bicycle Parking



The applicant is proposing up to 20 bicycle spaces, and is requesting a waiver from the required 42 spaces.

Bruce Hyman, City of Portland Transportation Program Manager, has the following comments:

- *In response to the bike parking proposed as part of the project. I've noted two groupings of two bike racks for a combined proposed bike parking of 8 spaces. Given the location of the future clinic adjacent to the West Commercial Street Shared Use Pathway, I would recommend a minimum of ten bike racks for a bike parking capacity of 20 bikes initially. In the forthcoming TDM Plan, I recommend it state that the parking utilization will be monitored and the parking supply increased as use/demand warrants.*

- *I would suggest 5 bike racks located at the employee entrance side of the clinic and 5 racks located at the patient/client entrance side of the building. There appears to be ample concrete surfaces at both locations upon which to mount surface mount Downtown Racks as noted on the Detail Sheet C-10.1. The Site Plan notes 'Bike Hitches' which are a different Dero bike rack and the detail and the plan note should be reconciled.*

- *I also note that the spacing of the racks shown in both locations is only 4′ when scaled off the plans. In the configuration shown (end-to-end), the racks are to be spaced a minimum of 6′ on center. This is the same configuration and spacing used at the WEX site. The 3′-4′ spacing used on the plans is when the racks are placed side-by-side, not as shown in the plans.*

2. Environmental Quality Standards

a. Preservation of Significant Natural Features

There are no known significant natural features on the site.

b. Landscaping and Landscape Preservation

A landscaping plan was submitted as part of the application. The proposed parking lots will contain landscaping that is consistent with the City's technical standards.

The site landscaping plan contains tree plantings along the front of the property, within the site and not within the Public right of way. The plans include the development of a 5' wide esplanade and the 10' wide pathway within the right of way. Unfortunately, the esplanade is generally located over the existing 115 KVA high voltage underground power transmission line and also below the overhead lines, thus the placement of trees in this zone is prohibited. To offset these restrictions, the plan includes the tree plantings on the site.

Jeff Tarling, City Arborist, has submitted comments to the applicant that may be found in the attachments within the comment's response letter.

c. Water Quality, Storm Water Management and Erosion Control

The existing site contains approximately 11,240 square feet of impervious surface. Redevelopment of the project site would result in an increase of approximately 157,0133 square feet of impervious area, to a total of 168,273 square feet.

Currently, this stretch of West Commercial Street is prone to flooding when there is a combination of high tides, snow melt, and storm events. The applicant is working with DPW to address and improve these conditions.

The applicant has outlined the existing conditions of stormwater infrastructure along West Commercial Street:

The exact conveyance route of the existing street system is unknown and the development team is coordinating with DPW on these existing conditions. The existing 48" Fore River interceptor sewer is located along the site frontage. An existing overflow control structure is located just west of the site and that structure contains a 24" overflow pipe to the Fore River. Similarly, there is a control structure along the Interceptor opposite the Emery Street right of way and that CSO structure regulates flows to multiple overflow pipes out to the Fore River. Each of these CSO systems remains active. The site is proximate to the Fore River tidal conditions and only the Canal Landing Boat Yard is between the site and the river.

The site's stormwater runoff will be collected by several means. The proposed clinic building roof will contain drains that will tie into a subsurface chamber storage system and below grade treatment device. These systems will provide both water quality treatment and flood control. Additionally, the surface parking will use porous pavement with catchment areas beneath.

The project is required to comply with stormwater management regulations in accordance with Maine DEP Chapter 500 and City of Portland Technical Manual Chapter 5 stormwater regulations. The project will also be required to meet the standards as required for a Site Location of Development permit.

Lauren Swett, Consulting Civil Engineer, has provided the following comments in regard to stormwater and erosion control:

- *Basic Standards: The Applicant is providing erosion and sedimentation controls in conformance with the Basic Standards.*

- *General Standards: The proposed stormwater management system achieves the required developed area treatment standard of 80% by treating 85.59% of the developed area. However, the overall treatment percentage for impervious areas fall below the 95% treatment standard, treating 93.16% of the new impervious area. The applicant proposes to increase the runoff treatment depth from the porous pavement section and employ a catch basin filter cartridge in the loading dock truck well in order to supplement the impervious area that cannot be treatment due to grade restrictions and existing utilities within the ROW. We are in agreement with this approach to providing treatment.*

- *Flooding Standards: The Applicant has requested a waiver from the flooding standard. The increase in flow at POI is significant, and is not at a level where we would typically allow for a waiver. The Applicant has noted that this is a location that currently sees offsite/street flooding, and that the project will only result in a small increase in the existing negative condition. The Applicant should provide additional on-site stormwater storage – the project should not increase stormwater flow to the City's infrastructure, and should not*

make a flooding condition offsite worse. We will continue to review the details of the stormwater design, but suggest that the Applicant consider their alternatives for meeting the Flooding Standard.

3. Public Infrastructure and Community Safety Standards

a. Public Safety and Fire Prevention

The site would provide access from three driveways for emergency vehicles. Fire hydrants would be located along West Commercial Street and would be within 25' of the front corner of the garage. The clinic would be fully sprinklered and the parking garage would contain standpipes for Fire Department use.

Mike Thompson, Division Chief of the Fire Prevention and Community Outreach Division, has reviewed the submitted plans and found them to be acceptable, noting the following points:

- *The site plan needs to be submitted to the City of Portland Public Works Engineering so the E911 Addressing Officer can assign an official street address to the project.*
- *The address of the parking garage shall be 101 W. Commercial Street*
- *The address of the office building shall be 141 W. Commercial Street*
- *The street address of each building shall be clearly marked on the front of the building, as approved by the fire department.*
- *Elevators shall be a minimum of 84"x24"*
- *Any canopy or archway shall provide a minimum clearance of 13'6".*

b. Availability and Adequate Capacity of Public Utilities

The Applicant is securing letters from the applicable utilities stating their ability to serve the site. The project will require new electrical, gas, sewer, and water services to the clinic and power and sewer to the garage. An ability to serve letter has been requested from the Portland Water District, and a Wastewater Capacity Application has been approved by Brad Roland, P.E., Senior Project Engineer, at the City of Portland.

All new electrical services to the site will be underground. All new utility infrastructure will meet the provisions of the Technical Manual. The Clinic will be served by new fire and domestic mains off the PWD 16" water main located in West Commercial Street. The building sewer will connect to the existing Fore River Interceptor sewer located along the front property line. Power will be from the existing overhead primary distribution system that CMP maintains on West Commercial Street.

4. Site Design Standards

a. Snow and Ice Loading

The buildings have been designed and located such that accumulated snow and ice will not fall onto adjacent properties or public ways. Snow will be removed from the parking lots and stockpiled within the site perimeter or if necessary, removed from the site.

b. View Corridors

The site is not located within any corridors identified in the Downtown Vision View Corridor Protection Plan.

c. Historic Resources

The development is not located within a designated historic district.

d. Exterior Lighting

All new exterior lighting at the site will be full cutoff with no light emitted above the horizontal plane, and in accordance with Section 12 of the Technical Manual. A photometric Lighting Plan has been prepared by Swaney Lighting Consultants to demonstrate illumination levels throughout the site will be consistent with City Standards.

Caitlin Cameron, City of Portland Urban Designer, reviewed the plans and a design review can be found in the attachments.

e. Noise and Vibration

All heating, ventilation, air conditioning equipment including air handlers and generators are designed to meet local, state, and federal emissions and noise requirements. Most of the HVAC equipment is mounted in the middle of the roofs to minimize visibility. Any additional ground mounted equipment for the buildings will be screened.

f. Signage and Wayfinding

All signage shall meet the requirements of the Manual on Uniform Traffic Devices (MUTCD) and Division 22 of the City Code. The proposed hotel and commercial signage can be seen on the architectural renderings.

g. Zoning Related Design Standards

N/A

h. Construction Management Plan

The construction management plan continues to be reviewed by city staff.

XII. NEXT STEPS

1. Address staff comments
2. Address additional comments of the Planning Board
3. Prepare final plan submission, including subdivision and site plan submittal requirements as included in 14-527(e) and (f) for review by the Planning Board
4. Hold Planning Board Hearing

Development in the vicinity of 113 West Commercial Street

joshua.broder@gmail.com <joshua.broder@gmail.com> Dec 30, 2019 1:10 PM
Posted in group: **Planning Board**

I'm writing in response to a notice I received of the FDS JBB Portland LLC development slated to become a VA clinic on Commercial Street.

I reside at 414 Danforth St, and will likely be able to see this development from my back yard.

I'm also an owner of a large office condo at 16 Middle Street, where my business Tilson, employs many veterans who will make use of this clinic.

I'm also a veteran who will most likely make use of the clinic.

I think this development is appropriate and should move forward. The peninsula is a great place for this kind of density and Commercial Street to the highway can support the traffic. I also think a larger on peninsula VA clinic supports a vibrant live and work community here in Portland as evidenced by it's utility to me as a resident and my employees who work on peninsula.

Respectfully submitted,

Josh

Re: Proposed VA Center - for Distribution to the Planning Board

constance bloomfield <constancebloomfield1@gmail.com> Jan 19, 2020 7:07 PM
Posted in group: **Planning and Urban Development**

Thank you for the opportunity to comment on the plans submitted thus far for the W. Commercial St. VA Facility.

COMMENTS ON W. COMMERCIAL ST. VA CLINIC - LEVEL III SITE PLAN REVIEW

SITE PLAN

The Planning Board should require site sections with building outlines at parking lot, clinic building, and parking garage. Such site sections are crucial for understanding this project in its context. Site sections should include the entire slope in order to determine where and to what extent "modest cutting into the slope" will occur. The slope is notoriously unstable; if cutting is absolutely necessary, uphill neighbors need to be assured that the developer assumes liability for its effect on uphill properties for many years in the future.

Site sections, including building outlines, will reveal what effect lighting, particularly on the top level of the parking lot or clinic roof will have on the neighboring residences on Danforth St. 90 degree cut-off lights may shine directly into these houses, depending on the height of the poles and the elevations of residences vis-a-vis the top of the garage.

Site plan should be coordinated with project recommendations from the West Commercial Multi-Modal Corridor: particularly widening of west Commercial St. immediately in front of project site and; construction of a landscaped median from Benny's to the Star Match Buildings. This project should not preclude implementation of the Study's recommendations in the future. For example, there seems to be no room for a curb cut on either side Commercial St. for bus loading and unloading. Nor does there seem to be adequate room for car and bus turn-around between the two buildings.

Developer should be encouraged to retain some fully-grown trees on the site of the staff parking lot and bordering Commercial St. – rather than treat the landscape as a scrape and asphalt project.

PROGRAM

This seems to be a much larger facility than the clinic operation it is replacing. If it is an expanded program and/or with a larger population base, the project description should address that.

The number of parking spaces is more than 2 ½ times the city's requirement for a building of this size and use. In fact the staff parking lot alone would meet the standard. This suggests that the parking structure will be serving a larger constituency and not solely serving the VA. If so, that should be stated at the outset, as it introduces other elements to consider. Is it a 24-hour facility; will there be shuttle buses to downtown; who will manage it? Will it be full of reserved spaces, that sit empty on weekends, etc? Any traffic analysis must deal with the VA use and any additional use anticipated by this large parking structure.

ENVIRONMENTAL CONSIDERATIONS

These buildings are designed for a mid-20th Century world, not a 21-century world with its energy and climate issues. The parking structure is not the only aspect that flaunts the needs of the future.

The building insulation and glazing as described, meets the minimal state requirements, anything less is illegal. No one should be praised for thermal breaks and double-glazing or 3 inches of rigid insulation. In terms of heat loss and gain the building components are significantly less than is easily accomplished in this day and age at no significant increase in construction cost and huge decreases in operating costs. In addition, the building has been designed with apparently no attention to its compass orientation. There is no built-in shading on the south and west facades. In summer the unshaded south-facing glass

entry ‘towers’ will be unbearably hot and will produce massive cooling loads. There must be other ways to establish a grand and dignified entry. And why is the clinic building’s rooftop not covered with solar collectors, or provided with a vegetated surface?

Exterior lighting standards should exceed Dark Skies standards. The number of lights should be limited and the shortest pole heights chosen to assure safety but not excessive lighting or light spread. Cut-offs should be less than 90 degrees for pole lights and building exterior lights. The staff parking lot lighting should be limited to hours of operation. The parking structure is described as having symbolically important back-lit panels – will it glow in all directions all night? That might be re-considered.

RE: 113 West Commercial Street, PL 000927-2019

Dear Andrew:

Since I cannot attend the Planning Board workshop related to this project, I am sending along some observations in the spirit of the conversation I had with you and James Rather a few weeks ago.

As you know, late last year our City Council declared a climate emergency and resolved to act aggressively in reducing Portland's climate emissions. Meeting this objective will necessarily require significant changes to ways in which we've become accustomed to constructing buildings and using land. To that end, and specifically as relates to the above-mentioned project in the West End, I note the following:

- The envisioned project has been "designed to respond to the challenges of the local climate" and to meet sustainability standards named under the terms of the solicitation process.
    - This seems to involve mostly energy efficiency measures, which are laudable. However:
- The building's rooftop is flat and the whole will be situated in an open area. Why are solar panels not included?
- Heating will apparently be by natural gas. What about heat pumps, the costs of which continue to decrease?
- The large windows will be glazed. What will be done to ensure that birds (the numbers of which have declined precipitously in recent years due largely to human encroachment on wildlife habitat) do not fly into those windows?
- A parking garage and a parking lot will take up considerable space. With Maine's poor public transportation system and this project attracting people statewide, the parking garage makes sense (solar panels could be put there too). But what about local staff who would park in the lot? What arrangements might be made to reduce individual vehicular traffic in exchange for incentives to take public transportation and/or a shuttle?
- A long-planned extension of Portland trails is situated in the roadway in front of the construction project. Mention is also made of emphasizing natural lighting and an open

feeling to the complex that would contribute to towards Veterans' healing. If the staff parking lot were reduced in size or eliminated, much more greenspace would be available. And how about putting the trail behind the property, in the treed area where the old rail line runs?

Given that construction on this project is slated to start soon, I expect that the design planning process is quite far advanced. Nonetheless, this is the very type of project the City should be demanding more from if we are serious about doing our part to reduce carbon emissions. This is the point my colleague on the Portland Climate Action Team, Martica Douglas, was making in her recent *Press Herald* Maine Voices article.

Portland's establishing stringent emissions-reducing standards for every single bit of construction that goes up should be a major policy focus of the Planning Board and of all related City departments from here on out. That might seem like an unrealistic thing to propose, but we're living in unprecedented ecological times. It would take vision and courage for City leaders to make and enforce this type of policy change. But, to echo President Kennedy's exhortation about putting men on the moon, making such a change is something we need to do not because it's easy but because it's hard.

And who knows? It's possible that Portland's taking a strong, more holistic stance on development might inspire an unexpected swell of investment interest and creative construction design.

Please feel free to share these comments with Planning Board members. I have copied a few other key people as well.

Sincerely,

Elizabeth C. Parsons
Member, Portland Climate Action Team

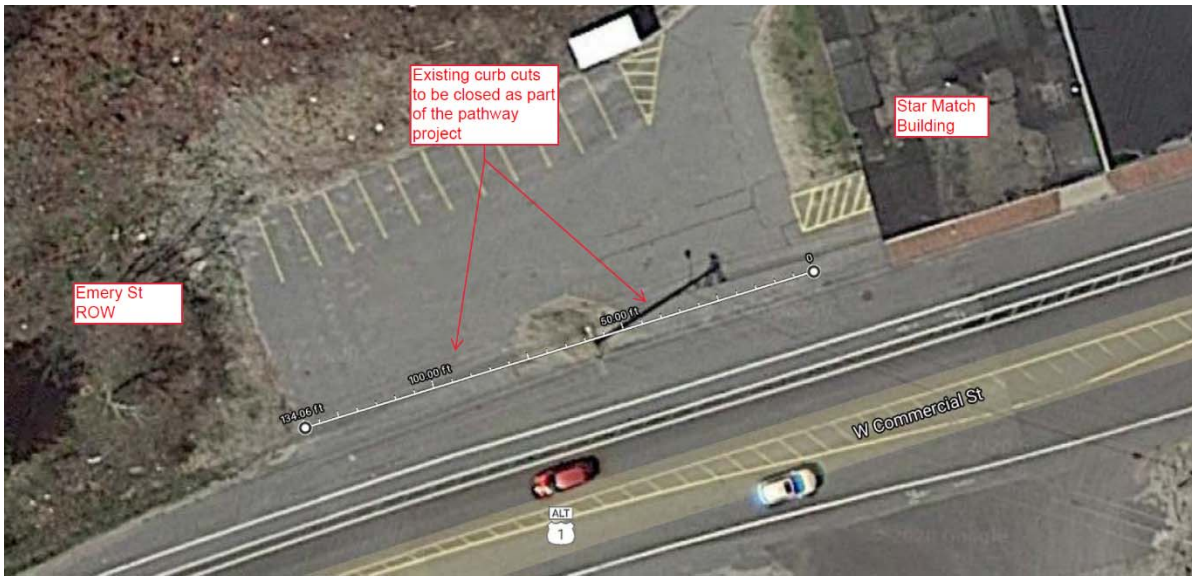
Letter of Response #1

Dear Andrew:

On behalf of **FDS JBB Portland LLC** (Applicant), our office is pleased to provide the following responses to various staff comments you provided on January 3, 2020. For ease of review we have repeated the staff comments and provide our responses as follows:

MIKE TREMBLAY, DPW P.E. SENIOR ENGINEER



Site Plan

Comment

The project site has three driveways. A maximum of two driveways is permitted per the technical manual (1.7.2.8). A waiver is required for three driveways. DPW does not support a waiver for a third driveway at this time, given the potential issues with the central driveway, discussed below; three driveways also present three new conflict points along a high-volume, high-speed roadway.

Response

The applicant is proposing three driveways; however, we note that the most easterly driveway is positioned within the Emery Street Right-of Way, thus it could be considered as separate from the other two driveways from the site onto West Commercial Street. We also note that J.B. Brown & Sons owns the adjacent property containing the Star Match Building, just east of the Emery Street Right-of Way. J.B. Brown has committed to closing their existing curb opening just to the east of the Emery Street Right of Way as part of the development of the City sponsored 10' wide mixed-use pathway project. This curb cut measures over 135 feet wide. That small paved parking lot will simply be tied into the Emery Street Driveway.

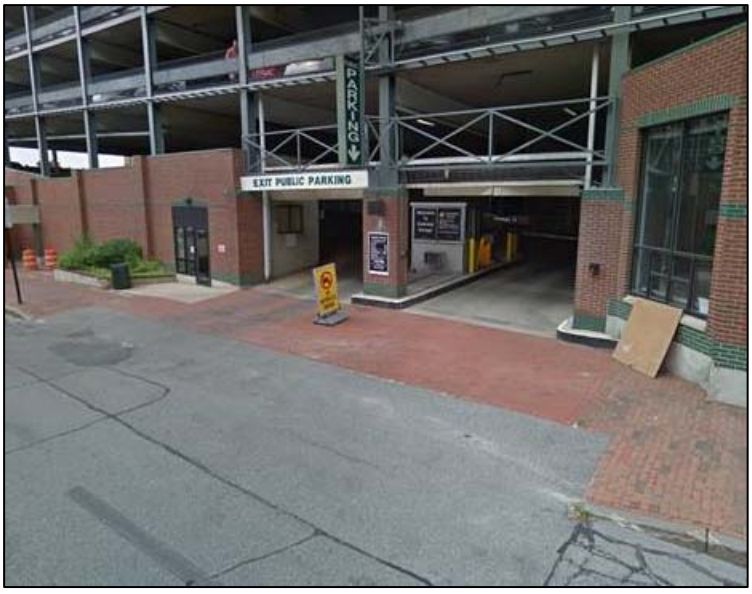
The net result will be only two new driveways along the West Commercial Street frontage, a distance of over 1,500 LF. By basis of comparison, we note that the development site is within the B-5b Zone where there is no minimum lot size or minimum frontage, thereby, an alternative development scenario consisting of multiple lots could arrive at substantially more driveway openings on West Commercial Street. We note that the driveways provide distinct access for the development as follows:

- The westerly driveway will primarily serve Clinic staff for access to their surface parking lot. The westerly driveway will also provide access for heavy vehicles including the solid waste hauler, large truck deliveries exiting the site and ambulance services.
- The central driveway is the primary site entrance for patients/visitors and it provides direct access to the main Clinic patient building entrance as well as to the parking garage.
- The easterly driveway will provide access to the parking garage as well as for a heavy vehicle entering circulation route around the rear of the site, which is particularly necessary for access to the loading dock. The easterly driveway within the Emery Street Right of Way will also serve for a linkage to the Star Match Building parking lot and it will allow two existing curb openings to be closed.

Comment

The central driveway, used for pick-up/drop-off and as a garage entrance, is problematic. There appears to be very little stacking space for vehicles if the three pickup/dropoff stalls are occupied, which may cause vehicles to spill into West Commercial Street. Additionally, as all patients and visitors using the garage must walk across this driveway, vehicles turning into the driveway may need to wait for pedestrians to cross at two different locations (the shared path and the crosswalk within the site), which may cause conflicts on West Commercial Street. DPW suggests that the central driveway be closed, and the pick-up/drop-off area made accessible solely from the 24-foot access drive behind the site. This gives vehicles ample space to queue for the pick-up/drop-off area if there is congestion in this area; the driver can then quickly enter the garage or exit via the access drive. The path would be continuous between the garage and clinic, with no vehicle conflicts, and no waiver for an additional driveway would be required. Some of the following comments may be addressed, or become moot, if this comment is incorporated.

Response:



We are not in agreement with the assessment of stacking space as well as the interaction of entering movement traffic and pedestrians crossing between the buildings and/or the mixed-use pathway. Much like many private driveways and urban property access settings there will be the need for entering and exiting vehicles to give way to pedestrians on sidewalks, etc. This is certainly true on the Peninsula, where, for example, at multiple parking garage entrances there is limited queuing capacity at a gate-controlled entrance. Take for example, entrances at the following:

Fore Street

Union Street

High Street Garage

In addition, we note that we are currently evaluating the implementation of either a two-way center left turn lane or dedicated left turn lanes within West Commercial Street, at each of the development driveways. This evaluation is made part of the Traffic Study currently underway by Traffic Solutions and which will be submitted

as part of the Traffic Movement Permit Application to the City. These lanes will provide storage capacity for left turning vehicles into the site, while also minimizing interruption to the thru-traffic movements along the street. Secondly, the available queue of vehicles within the site will be approximately 120' from the crosswalk between the buildings to the first 5-minute drop-off/pick-up parking stall adjacent the clinic. This storage space will provide adequate stacking while also providing an opportunity for vehicles to enter the parking garage, or, if necessary, to circumnavigate the site perimeter via the rear access drive.

Comment

All of the site driveways are wider than permitted by the technical manual (1.7.2.4). Driveways wider than 30 feet, measured at the property line, require a waiver. The western driveway measures about 35 feet at the property line; the central driveway measures about 41 feet, and the easternmost driveway measures about 34 feet wide. At the outer driveways, these widths reflect large curb radii, including a 40 foot curb radius at the western side of the western driveway. At the central driveway, the entering travel lane is 14 feet wide and the exiting right-turn lane is 13 feet wide; both of these widths seem excessive. Vehicle turning templates are requested to confirm that these driveway widths and curb radii are necessary. The Applicant should tighten dimensions where possible, and provide explanation for wider dimensions otherwise.

Response:

The accompanying diagrams show the movement of semitrailer trucks or an emergency vehicle entering/exiting the site. Each of the driveways have been designed to provide adequate maneuvering space for the semi-trailers or a fire truck. The site will be routinely visited by Mobile Imaging trailers (WB-63 equivalent) and also larger tractor trailer deliveries for materials to the Clinic. The latest plans have been updated to reduce the driveway widths as much as possible while also providing adequate curb radii for the assortment of vehicles expected to visit the site, including passenger vehicles up to heavy semitrailer trucks. These are summarized as follows:

- Westerly driveway – 30' wide with 25' radius each side;
- Central Driveway – One 14' wide entering lane; two exiting lanes at 13' for right turns and 11' for left turns. Curb radii will be 20'; and
- Easterly Driveway – 24' wide with 20' exiting radius and 25' entering radius.

Comment

The 24-foot access drive seems excessive for one-way traffic, even for heavy vehicles. Reducing this width would reduce impervious surface and potentially reduce the amount of regrading that is required behind the site. Alternately, this access drive could be utilized by staff and/or patients and visitors in order to be able to remove one of the site driveways, as discussed above.

Response:

The rear access drive behind the garage will be 20' wide to accommodate occasional larger truck access as well as emergency services vehicles. The drive aisle behind the Clinic will be 24' wide as it is a two-way directional drive that must accommodate semitrailer mobile imaging vehicles, emergency vehicles including ambulance service to the rear of the building, and general large trailer truck deliveries to the site.

Comment

The central driveway features a raised crosswalk; however, curb ramps are shown serving this crosswalk. These ramps may not be necessary if the crosswalk is fully raised.

Response:

The design of the raised sidewalk has been updated to reflect the differential height between the raised crosswalk which is 4" high and the sidewalks which are raised 6". There will be a slight ramp condition at the transition from the crosswalk to each sidewalk, but not a full-fledged ramp given the small differential in grade.

Comment:

The alignment of the intersection of the driveway serving the pickup/dropoff area with West Commercial Street is not acceptable. A crosswalk must be shown, the stop bar must be behind the pedestrian crossing area, and the median shall not intrude into the pedestrian crossing area. Additionally, a larger raised table, which begins at a sloped driveway apron at the site entrance, and continuing through the internal crosswalk, should be considered.

Response:

The latest site plans include updates to the pathway crossing at each of the driveways. These include crosswalk pavement markings and stop bars positioned behind the crosswalk markings.

Comment

The surface parking area includes a significant amount of landscaped islands. These islands would appear to potentially cause drainage issues, and will be an obstacle to snow clearance. The allocation of green space within the parking lot should be reconsidered.

Response:

The design includes the use of porous pavement over much of the parking lot area, thus there is not as much concern about drainage patterns and the interruption of sheet flow on the pavement that might be caused by the landscaped islands. We are aware of the impact to winter snow plowing operations caused by the islands; however, the ability to provide screening and shading effects to the parking lot are considered a net positive outcome in this proposed design. The landscape plan for the parking lot includes plantings in the island bump outs as well as a line of trees along the site frontage, all of which are intended to offset the inability to place street trees within the proposed esplanade, due to the underlying utilities in the esplanade. There will be an 8' wide divider island between the two parking bays and that island is intended as a sidewalk condition to allow the employees to walk to/from the building without need of walking in the drive aisles. This condition is improved by the placement of the planted bump out islands, rather than placing trees within the longitudinal divider island, in our opinion.

Comment

One small area for snow storage was identified near the entrance to the surface parking lot. Additional areas should be identified, as the surface parking area is 45,000+ SF.

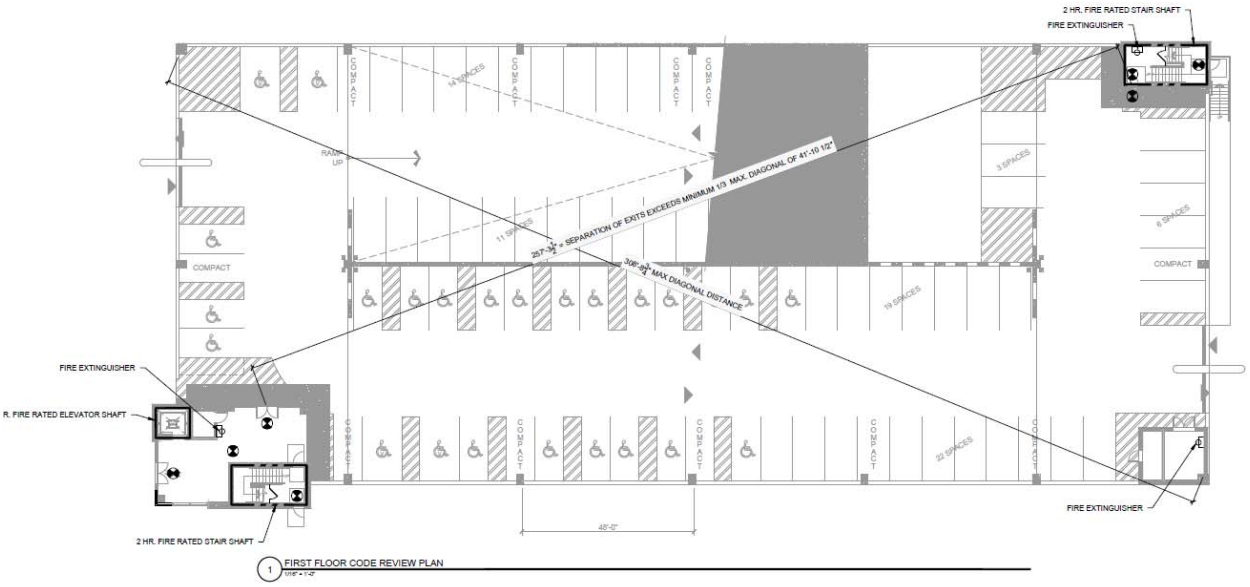
Response:

Several areas of snow storage have been identified on the site plan around the site perimeter. Removal of snow from the site may be occasionally required and the owner will contract with a local snow hauler to deal with high snowfall conditions, on an as needed basis.

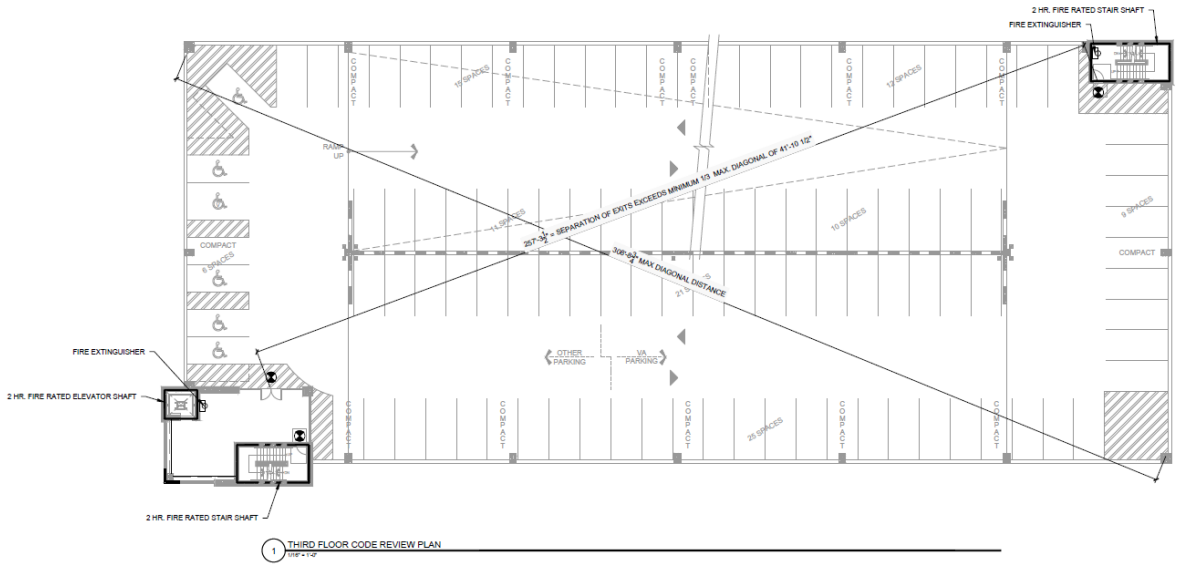
Comment

The location of the dumpsters and dumpster access driveway should be reconsidered. Garbage trucks would appear to have to make awkward turning movements to service these dumpsters, and the dumpster area necessitates a significant amount of regrading on an embankment that may otherwise be untouched by the project. The dumpsters are also located somewhat far from the clinic.

Response:



The solid waste enclosure has been shifted to a position closer to the loading dock area at the westerly rear corner of the Clinic. This location will provide improved access for staff as well as the trash removal equipment.



Comment

The parking layout of the parking garage should be provided. Per ADA parking requirements, "Hospital outpatient facilities need 10% of patient/visitor spaces to be accessible." As such, at least 39 accessible parking spaces in the garage are required to be accessible. Of these 39 spaces, 7 are required to be van-accessible.

Response:

The Government has requested 250 parking spaces out of the garage, thus the ADA count for the Clinic in the garage will be 25 spaces. The remaining 132± parking spaces in the garage will include 6 ADA spaces to satisfy the typical requirement for 1 ADA space/25 spaces. There will be a total of 31 ADA spaces in the garage. Updated interior garage layout is under preparation by Ryan Senatore Architecture and will be uploaded to ePlan when completed.

Comment

The 10-foot shared pathway must have a cross-slope of no more than 2.0% constructed. It is suggested that the pathway be designed to 1.5% cross-slope to allow for construction tolerance.

Response:

The pathway is currently depicted with a 1.5% or less cross-slope over its length.

Grading & Drainage

Comment

Spot grades are not provided on any of the grading and drainage plans. Spot grades should be included at critical grade break points, periodically along the front and back of sidewalk, at all grade break points at pedestrian ramps and tipdowns, at entrances and exits to buildings and garages, etc.

Response:

The latest grading and drainage plans include spot grading at critical points in the parking lot and around the site.

Comment

There is very little information on how the site will approach drainage. There is a significant slope at the back of the site which will contribute significant stormwater runoff to the impervious areas of the site. Surface parking lot drainage does not appear to be included. The drainage plan must be included in the site plan package for consideration before DPW will support this application.

Response:

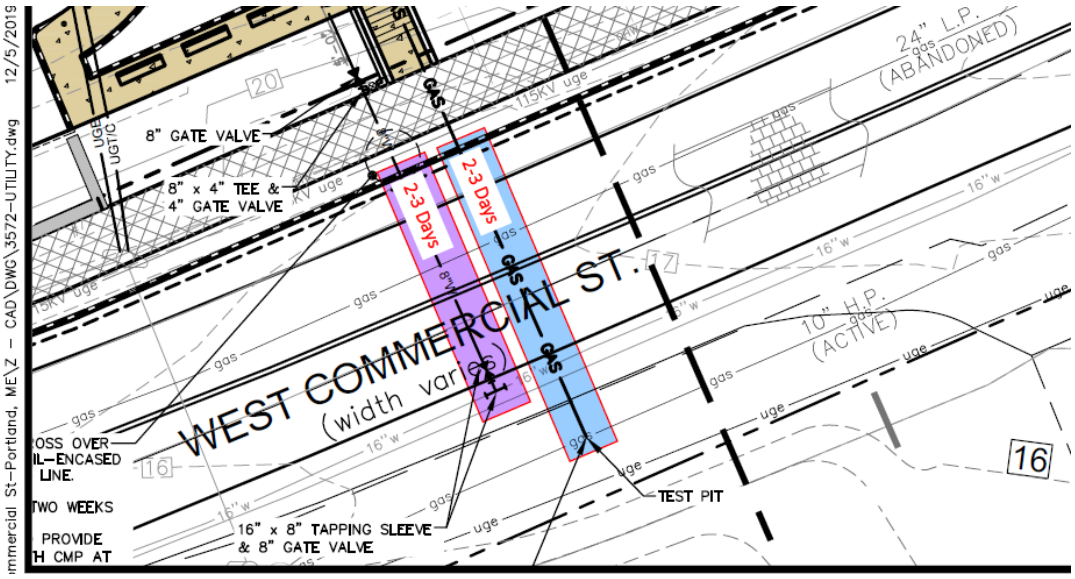
We have completed the grading and drainage plans and stormwater management plans, all of which have been uploaded to eplan for Staff and peer review. Key aspects of the design include:

- Porous Asphalt pavement in the staff parking lot will provide water quality treatment and quantity control storage.
- A subsurface sand filter with R-Tank® storage will be provided for water quality treatment of roof runoff.
- A Focal Point™ water quality treatment filter will be provided for a small area of the parking lot water quality treatment.
- A closed collection and conveyance pipe system will capture runoff from the undeveloped hillside and convey it to the existing street system.

Comment

This application proposes significant regrading at the back of the site. Slope stabilization and erosion control measures must be specified on the grading plan, in the details, and in writing. Slope stabilization shall be appropriate given the makeup of the soil in the embankments.

Response:



The Erosion and Sediment Control plan, narrative and details are part of the plan documents. Generally, the rear embankment slope will undergo a modest amount of regrading along the rear perimeter of the development. We have attempted to maintain these slope cuts to 2H:1V or shallower where possible although there are several areas at 1:1 for a short height. The Erosion control plans include the use of ArmorMax™ slope reinforcement on all slope steeper than 3:1.

Construction Management Plan

Comment

The locations of utility trenches and duration of work within West Commercial Street must be specified on the CM plan.

Response:

Landry French construction will be updating the CMP and an updated plan will be provided for staff review when completed. Each of the utility trenches in West Commercial Street is expected to require 2-3 days of effort. This includes the water services and the gas service extension. The existing paved road width exceeds 40' so the contractor is planning on maintaining two-way traffic throughout the duration of the work. They may also consider night work to minimize traffic control needs.

Comment

Gas service and water service would appear to require the diversion of West Commercial Street westbound traffic. The Applicant must provide a plan to accommodate traffic during this work.

Response:

The utility work in the street will require temporary traffic controls. Given the existing pavement width on the street at approximately 44', we believe there will be adequate area to allow for the maintenance of two-way traffic during the duration of work for the utility services. Similar circumstances have existed for other projects in the vicinity including the Canal Landing development and satisfactory measures for the maintenance of two-way traffic flow were able to be maintained. As a last resort the completion of the work during nighttime hours may be a possible alternative. The diversion of traffic may involve the use of temporary measures, including barrels, jersey barriers and the use of full-time traffic control personnel.

Comment

The Applicant states that current traffic and pedestrian patterns will be maintained; however, the CM plan shows a construction fence with Jersey barrier that would block the shoulder along West Commercial Street. This shoulder is used by pedestrians and bicyclists. The Applicant should clarify their proposed impact on the roadway, and include a pedestrian management plan if needed. Any construction site that forces pedestrians into vehicle traffic is not acceptable.

Response:

The intent will be not to disrupt pedestrian and bicyclist along West Commercial Street. The placement of any construction barriers will be performed to allow for continuation of two-way travel flow as well as pedestrians movements along the street. The Street has approximately 44' of paved width so we believe that the existing travel conditions should be maintainable while also achieving proper separation of the work zone from the traveling public for safety etc. The contractor will maintain the shoulder at all times except during utility trench work and they will place Jersey Barriers/fencing outside of the shoulder.

Comment

The Applicant should clarify the plan for contractor parking should on-site parking prove insufficient. No on-street parking along West Commercial Street is permitted.

Response:

It is understood that no parking on West Commercial Street will be allowed so the contractor will not use any on-street parking during the course of the work. There will be parking available either onsite or at the nearby Star Match building site.

Lauren Swett - Civil

Comment

In their online application, their numbers indicate that they are creating 3.6 acres of new impervious surface. Per the statute, Site Law applies to "structures" as follows: http://www.mainelegislature.org/legis/statutes/38/title38sec482.html
482. 6. B. "Buildings, parking lots, roads, paved areas, wharves or areas to be stripped or graded and not to be revegetated that cause a total project to occupy a ground area in excess of 3 acres. Stripped or graded areas that are not revegetated within a calendar year are included in calculating the 3-acre threshold." I do believe they will need to do a SLOD application, but it will be Delegated Review with the City.

Response:

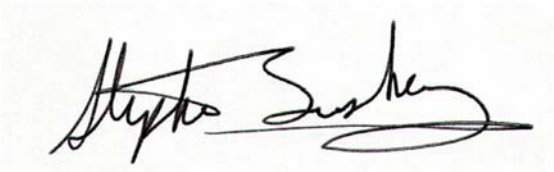
We agree that the project requires SLODA approval under the City's delegated authority.

Ben Pearson, P.E. DPW

Comment

It appears that the submitted Construction Management Plan does not include a dewatering plan. Likely used an older template than the current one (https://www.portlandmaine.gov/DocumentCenter/View/18030/General-Construction-Management- Template). If this plan moves forward, a dewatering plan is required. It is likely that they will need to pump groundwater from the site during construction and we want to know what their plans are.

Response:



Based on the findings of the geotechnical investigations groundwater is not expected to be encountered during the performance of work. The Erosion Control plan contains a note regarding dewatering, if required, restricting

all dewatering effluent to be managed and discharged onsite or thru the use of a frac tank. No dewatering effluent will be allowed to be discharged to the City systems.

If you have any questions regarding the materials being submitted, please contact this office.

Sincerely,

GORRILL-PALMER

RE: Comments for Proposed Development – Level III Site Plan Review

Project Name:	VA Community Based Outpatient Clinic	Project ID:	PL-000927-2019
Address:	113 West Commercial Street	CBL:	060 A001
Applicant:	Gorrill-Palmer, LLC		
Planner:	Andrew Tufts		

Dear Applicant,

Thank you for submitting a level III site plan application for the redevelopment of an undeveloped site into approximately 62,300 SF of building space for a community based outpatient clinic and parking capacity for 400 parking spaces.. The project is being reviewed subject to the following applicable Land Use Code provisions:

- R4 & B5b Districts

The proposed development is also subject to relevant standards in the City of Portland Technical Manual.

Current Review Comments

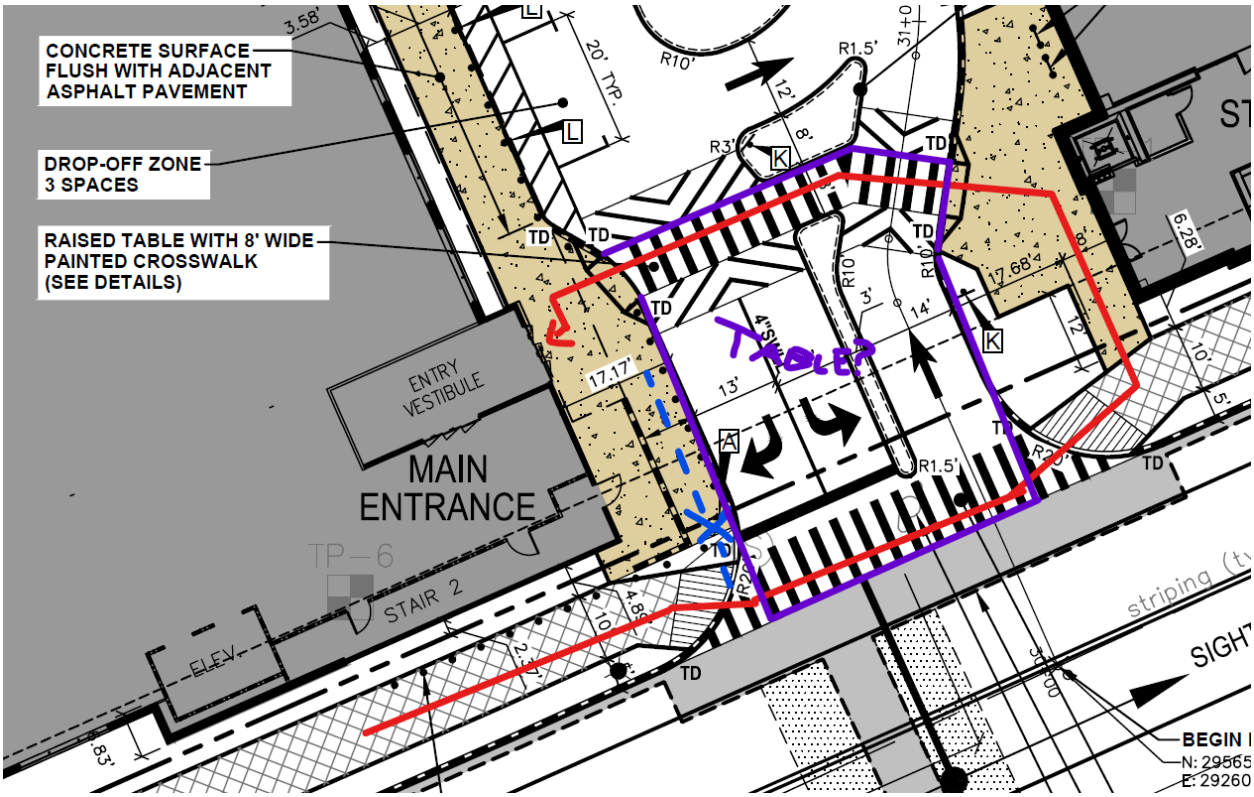
Mike Tremblay, DPW P.E. Senior Engineer

Site Plan

- Regarding the three proposed driveways, the Applicant's explanation that the easternmost driveway is on the Emery Street ROW and therefore could be considered a street and not a driveway is not valid, as the garage driveway onto Emery Street would still be considered a third driveway. DPW appreciates that the large curb cut east of the site frontage will be closed in association with this project; this should be reflected in the site plan. DPW is still evaluating whether to support the Applicant's request to waive the requirement that a site only be served by two driveways.

- The Applicant's explanation that the central driveway will operate similarly to public parking garages on Fore Street, Union Street, and High Street. These locations have driveways that serve the garage only. The central driveway at the Project site serves not only garage users but pick-up/drop-off activity. The design of the driveway suggests that, if more than three vehicles are waiting for a pick-up, it could "clog" the central driveway, as there is insufficient width for vehicles to maneuver around a potential fourth vehicle in the pick-up queue. It is unclear how often this backup would happen, but if it does, then waiting vehicles and vehicles exiting the garage could potentially queue back far enough to block the garage entrance, and into West Commercial Street. One potential solution is to mark the rear driveway as an alternate exit.

- The central driveway reads as the main entrance to the site, and appears to provide the primary accessible entrance to the site from Commercial Street. However, it appears that the accessible route into the clinic is potentially circuitous. See screenshot below. Visitors arriving on foot to the site from the west must cross the central driveway along the shared use path, then cross it again in the internal crosswalk, in order to access the entry vestibule (red solid line). The pedestrian access to the vestibule directly from West Commercial Street appears to be blocked by bollards, and additionally, within the flare for the curb ramp serving the shared use path (blue dashed line). The presumed pedestrian path is unrealistic and a barrier against arriving to the site on foot. The Applicant should redesign how the driveway interacts with the pedestrian realm, if the driveway remains in future iterations of the design. DPW suggests that the entire area between and including the two crosswalks in the central driveway be tabled/raised (purple area in screenshot), creating a raised crosswalk along the shared-use path, and signaling to motorists that they are entering a potential pedestrian area as soon as they enter the site. This solution provides priority for pedestrians and bicyclists on the shared use path, and eliminates the tipdown required along the path that is likely creating difficulties in terms of accessing the site from the southwestern crosswalk.



- The 24-foot rear driveway continues to be marked for one-way westbound traffic. In the response to comments letter dated 1/30/2020, the Applicant indicated that this would allow for two-way traffic between the surface parking lot and the east side of the clinic building. The plans should be clarified. Additionally, this access road could be used to access the pick-up/drop-off area, and parking garage, if the central driveway were eliminated.

- Along the western driveway, two lanes form after entering the site; one lane for the surface parking lot and one lane for the heavy-duty driveway. Splitting these lanes for such a short distance does not seem particularly necessary, and likely results in more impervious surface than required. The Applicant should clarify.

- DPW supports the use of porous pavement in the surface parking lot. The Applicant should be aware that this treatment requires regular maintenance, typically 2x per year, in order to be effective. This maintenance will be required in order to earn stormwater credits.

- DPW continues to seek review and comment on the layout of parking spaces within the parking garage. These plans should be uploaded once available.

- DPW is in ongoing discussions with the applicant with regard to stormwater management. Additional comment may be forthcoming with regard to drainage and flood management.

Construction Management Plan

- The locations of utility trenches and duration of work within West Commercial Street must be specified on the CM plan.

- Gas service and water service would appear to require the diversion of West Commercial Street westbound traffic. The Applicant must provide a plan to accommodate traffic during this work.

- The Applicant states that current traffic and pedestrian patterns will be maintained; however, the CM plan shows a construction fence with jersey barrier that would block the shoulder along West Commercial Street. This shoulder is used by pedestrians and bicyclists. The Applicant should clarify their proposed impact on the roadway, and include a pedestrian management plan if needed. Any construction site that forces pedestrians into vehicle traffic is not acceptable.

- The Applicant should clarify the plan for contractor parking should on-site parking prove insufficient. No on-street parking along West Commercial Street is permitted.

Lauren Swett - Civil

- As previously noted, the project will meet the area thresholds for Site Location of Development, but also meets the SLODA area thresholds for Delegated Review. An application that includes the application form as well as narrative that addresses all applicable Site Law standards should be provided. Many of these items are already addressed as part of the Level III Site Plan Application. The Applicant will be required to contact applicable review agencies including MHPC, MNAP, and MDIF&W. Paper copies are required to be submitted to the City for submission to the Maine DEP.

- The project will require new electrical, gas, sewer, and water services to the clinic and power and sewer to the garage, which are existing within West Commercial Street. The Applicant shall confirm with each of the respective utilities the ability to serve the project and provide the City with documentation from each utility. The Existing Conditions & Removal Plan also notes "Relocate Utility Pole (By Others) Requires Coordination with CMP"; the Applicant should provide clarification on the plans for the utility pole relocation.

- The project is required to comply with stormwater management regulations in accordance with Maine DEP Chapter 500 and City of Portland Technical Manual Chapter 5 stormwater regulations. The project will also be required to meet the standards as required for a Site Location of Development permit.

    - Basic Standards: The Applicant is providing erosion and sedimentation controls in conformance with the Basic Standards.
    - General Standards: The proposed stormwater management system achieves the required developed area treatment standard of 80% by treating 85.59% of the developed area. However, the overall treatment percentage for impervious areas fall below the 95% treatment standard, treating 93.16% of the new impervious area. The applicant proposes to increase the runoff treatment depth from the porous pavement section and employ a catch basin filter cartridge in the loading dock truck well in order to supplement the

impervious area that cannot be treatment due to grade restrictions and existing utilities within the ROW. We are in agreement with this approach to providing treatment.

- Flooding Standards: The Applicant has requested a waiver from the flooding standard. The increase in flow at POI is significant, and is not at a level where we would typically allow for a waiver. The Applicant has noted that this is a location that currently sees offsite/street flooding, and that the project will only result in a small increase in the existing negative condition. The Applicant should provide additional on-site stormwater storage – the project should not increase stormwater flow to the City's infrastructure, and should not make a flooding condition offsite worse. We will continue to review the details of the stormwater design, but suggest that the Applicant consider their alternatives for meeting the Flooding Standard.

Ben Pearson, P.E. DPW

It appears that the submitted Construction Management Plan does not include a dewatering plan. Likely used an older template than the current one (https://www.portlandmaine.gov/DocumentCenter/View/18030/General-Construction-Management-Template)

If this plan moves forward, a dewatering plan is required. It is likely that they will need to pump groundwater from the site during construction and we want to know what their plans are.

Jeff Tarling, City Arborist

In review of the tree & landscape plan for the proposed development at 113 West Commercial Street would like to offer the following review & comments:

a) Existing site conditions, tree saves, limit of clearing - Unfortunately, the proposed project does not include much in the way of 'tree saves' of the existing mature trees on the site and the clearing limit extends up the current slope towards the residential Danforth Street backyard edge. This is likely due to the grading needed to accommodate the building size and proposed surface parking.

After reviewing the 'Exist & Removals' sheet and the landscape plan for both the East & West side, I would recommend that the residential side of the project receive landscape buffering treatment mimicking the natural mix of vegetation currently on site. This would include native plant selections, that could include: plants like Red Oak, Bear Oak, Swamp White Oak, Grey Birch, River Birch, Pitch Pine, Red Cedar, along with native shrub types that would fit into the site conditions of dry gravel soils, full sun. This planting could use smaller plant sizes and grouped together in groves. The end result would be that the proposed project fit into the existing landscape if extensive site work wasn't needed... or close to what is existing. This recommendation would help buffer the project and improve the residential view towards the Fore River.

b) Street trees - West Commercial Street is a major connector arterial and gateway into Portland, thus street trees and landscape are important features. Overhead utility lines are existing along West Commercial Street bordering the project site. Street trees along this section of West Commercial Street need to have a lower growing height and or canopy shape and location as to avoid future conflict with these lines. We can work with the project team on both potential tree types and spacing.

c) Parking lot trees & landscape - The surface parking area will need to meet parking lot tree & landscape standards. These standards help projects meet both the buffering needed for surface lots and the environmental benefits of shading pavement reducing the urban 'heat island' effect. We can work with the project team on plant suggestions and spacing while recognizing space for snow storage. We have seen some impressive, sustainable landscape featuring low maintenance plantings of Sweet Fern, Bayberry for screening and tough trees like Honeylocust for the parking lot, as an example.

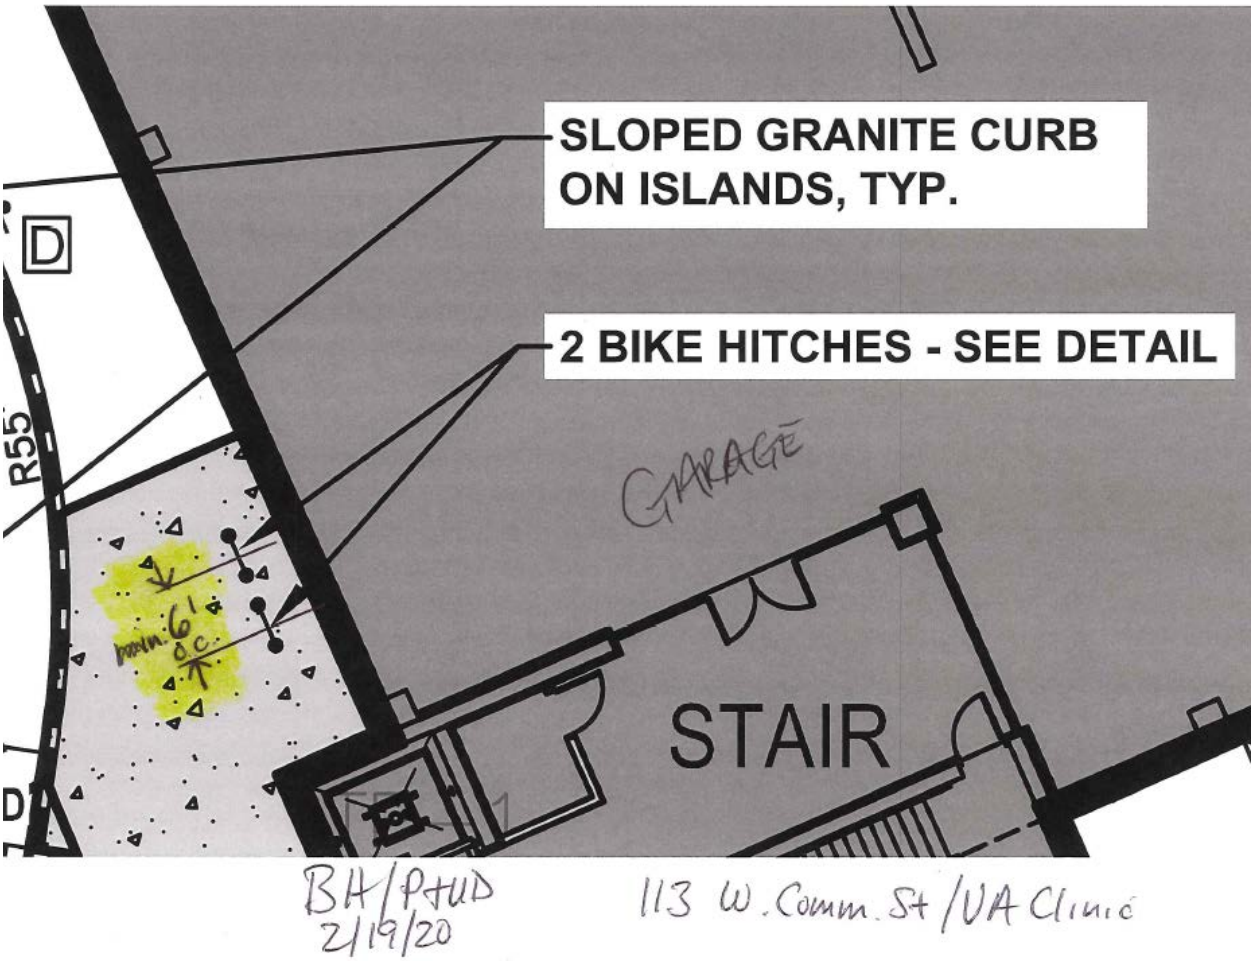
d) Invasive plants - In larger sites like West Commercial Street we try to look at the level of invasive plants and controlling them during the construction phase if possible. This helps reduce the spread of the plants after construction when they might have new 'opportunities' and helps keep them from spreading to nearby backyards. We would request the project take closer look at invasives and include a plan of action to reduce their spread.

https://www.maine.gov/dacf/mnap/features/invasive_plants/invsheets.htm

https://www.maine.gov/dacf/mnap/features/invasive_plants/invasives_gallery.htm

Overall the tree and landscape recommendations should help the project fit in knowing it is next to a residential area with important view sheds to the Fore River. Fortunately, the higher elevation of the existing residential area is favorable.

Fire – Chief Robert Thompson



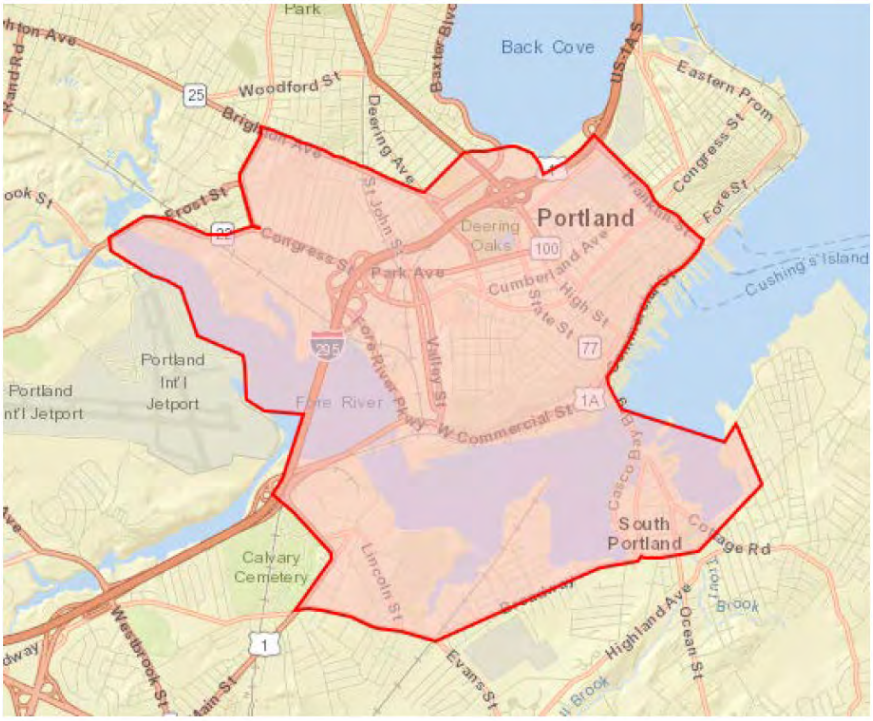
- This site plan needs to be submitted to City of Portland Public Works Engineering so the E911 A ddressing Officer can assign an official street address to the project.
- The address of the parking garage shall be 101 W. Commercial Street
- The address of the office building shall be 141 W. Commercial Street
- The street address of each building shall be clearly marked on the front of the building, as appr oved by the Fire Department
- Elevators shall be a minimum of 84″ x 24″
- Any canopy or archway shall provide a minimum clearance of 13′ 6″.

Transportation – Bruce Hyman

- In response to the bike parking proposed as part of the project. I've noted two groupings of two bike racks for a combined proposed bike parking of 8 spaces. Given the location of the future clinic adjacent to the West Commercial Street Shared Use Pathway, I would recommend a minimum of ten bike racks for a bike parking capacity of 20 bikes initially. In the forthcoming TDM Plan, I recommend it state that the parking utilization will be monitored and the parking supply increased as use/demand warrants.

- I would suggest 5 bike racks located at the employee entrance side of the clinic and 5 racks located at the patient/client entrance side of the building. There appears to be ample concrete surfaces at both locations upon which to mount surface mount Downtown Racks as noted on the Detail Sheet C-10.1. The Site Plan notes 'Bike Hitches' which are a different Dero bike rack and the detail and the plan note should be reconciled.

- I also note that the spacing of the racks shown in both locations is only 4' when scaled off the plans. In the configuration shown (end-to-end), the racks are to be spaced a minimum of 6' on center. This is the same configuration and spacing used at the WEX site. The 3'-4' spacing used on the plans is when the racks are placed side-by-side, not as shown in the plans.



GENERAL APPLICATION DOCUMENT

PROJECT DESCRIPTION

PROJECT OVERVIEW

In July 2018, the Department of Veterans Affairs issued a Request for Lease Proposal (RLP) No. 36C10F18R0566 seeking approximately 62,300 SF of building space for a Community Based Outpatient Clinic (CBOC) and parking capacity for 400 parking spaces within an area as identified on Figure 1.

The development team of FB Stonewater, JB Brown & Sons, Landry French Construction, Smith Group Architecture and Gorrill Palmer was assembled and submitted a Proposal to develop vacant property along West Commercial Street. The property, schematic plans and overall lease agreement terms were found to be acceptable to the VA and in September 2019, the developer and VA initiated actions to proceed with design and permitting of the VA Clinic at the West Commercial Street site.

DEVELOPMENT PROPOSAL

LOCATION

The proposed site for the CBOC is located on West Commercial Street in Portland, ME within the Area of Consideration as shown in the RLP. The site is 8.40 acres in size and is unencumbered by existing structures for preservation, reuse, or demolition. An abandoned rail spur exists on the site without any record of an easement found. The developable portion of the site has approximately 5.17 acres of land and 1,400 LF of street frontage on West Commercial Street. Approximately 4 acres of the developable site is Zoned B-5b, Commercial, which is where the CBOC will be located. The other 4 acres (on the uphill slope) is zoned R-4, Residential. A Medical Clinic is a permitted use in the Commercial Zone and this makes the CBOC a use-by-right without need to seek special permitting on the site.

The proposed CBOC site is near I-295 and I-95 (Maine Turnpike) providing convenient access from the north and south and Route 77 providing access from South Portland and Cape Elizabeth and points west. The site is also approximately one-half of a mile from the western edge of Portland's Historic downtown and Central Business District. Maine Medical Center, a 637-bed teaching hospital, is less than one-mile away to the north of the CBOC site and Mercy Hospital's Fore River Campus is located less than ½ mile from the site. The topography of the site includes a relatively level area (coinciding with the commercial zone) and a steeper area which is part of the residential zone. The site provides views south to the Fore River, South Portland

and Cape Elizabeth. West Commercial Street is a main entrance route to Portland and the CBOC's location and orientation will serve as a gateway to patients and travelers. As a result, the CBOC will visually communicate the VA's brand to the local public, establishing the VA as a recognized identity in the Portland community.

Important features that support the site selection by the VA include:

- Site is within the RLP's Area of Consideration;
- Zoned for Medical Clinic use;
- Conveniently accessed by major highways and downtown Portland; and
- Prominent site for VA branding.

SITE DESIGN

Clarity of site circulation is paramount for the success of the building, mitigating visitor anxiety at arrival and departure. The main public entrance to the 62,170 SF two-story (34,155 SF footprint) CBOC is located on West Commercial Street. The entrance is made prominent by elevated architectural masses on corresponding corners of the Clinic and a proposed 382-space precast concrete parking structure. A canopy is provided at the CBOC's entrance with space for three cars to drop-off and pickup. An outside seating gathering plaza is located adjacent to the entrance to allow family and patients a chance to spend time outside the CBOC in good weather.

The entrance to the 382-space patient garage is immediately to the east, directly off the entrance drive. The parking structure has three levels (two covered from weather) and is served by two passenger elevators in a weather tight vestibule. The garage pedestrian entrance is across from the CBOC's main entrance with well-marked crosswalks between them. The garage has two vehicular exits, one at the main entrance drive for quick pick-up and another at its east end leading to West Commercial

Staff parking is located on the west side of the Clinic and contains 152 spaces with its own entrance from West Commercial Street. A staff building entrance is located adjacent to the staff parking. Both the main

and staff entrances are separated from drive lanes by site bollards. Service vehicles enter at the east end of the site (behind the garage) and are restricted to the drive lane behind the garage and CBOC. The ambulance dock, mobile imaging station, dumpsters and loading dock are located behind the Clinic, out of site from patients and visitors. The CBOC and garage are located close to the street to limit the need for cutting into the hill behind the building and to control site costs. The basis for positioning of the buildings is primarily to allow patient/visitors access to the garage while being separated from the staff parking area. VA staff are to also enter the building separately from patients/visitors. Due to the long linear nature of the site, three access driveways are proposed. Each will have ample separation from nearby driveways including those on the opposite side of the street.

Service vehicles will exit the site onto West Commercial at the west end of the staff parking. Patient and service traffic are designed to avoid crossing each other on the site as much as possible. Development of this site requires modest cutting into the slope on its north side. Covered entries are provided at the mobile imaging pad, ambulance entry and a single loading dock at the rear of the building. The CBOC's main entrance is over 1,000' from the nearest main intersection (West Commercial Street and Beach Street).

Along the site frontage, the site design includes the development of a 10' wide paved pathway. This is consistent with the City's long-term goals as outlined in the West Commercial Street Multi-Modal Corridor Study. The City is pursuing development of the pathway from a point west of the site to a point east of the site. The development of the pathway along the site frontage will involve new curbing placement, a retaining wall to overcome topography and utility adjustments to the poles and to the existing sewer interceptor. The site lies within the Waterfront TIF District and it is expected that tax revenue attributable to the proposed development will be used to support the costs of this pathway.

Feature include:

- Prominent site entrance with segregated traffic patterns;
- Covered patient parking adjacent to the CBOC;
- Separate staff parking and entrance; and
- Discreetly located building service area.

BUILDING DESIGN

The primary concept for the buildings aims at creating a gateway through which patients and visitors enter the site, offering a clear means of access from West Commercial Street. This is achieved by raising the public lobbies and vertical circulation in the front corners of the Clinic and parking structure as a welcoming beacon. The design extends the public zones for each building across the frontage along West Commercial to take advantage of views to the Fore River and to create a positive environment for patients and family. Full-height glazing in the Clinic ensures that natural light will not only shower the public zones, but that it will also reach deep down clinical corridors to enrich the caregiver experience, as well.

The corner lobbies which create the gateway are designed with glass, not only to offer intelligibility to the users, but also to honor our veterans through the use of patriotic super-graphics on the backdrop of each lobby. The building communicates appreciation for the sacrifice of our service members, as well as give them

a respectful welcome at the front door. This motif is carried through the materiality of the building with a dual meaning for each material, one which speaks to the character of those for which the building serves, and the other to reference the local vernacular. Corrugated metal represents the unwavering strength of our service members and speaks to industrial military hangars and barracks, as well as referencing Portland's waterfront industry and shipping containers.

Along the parking structure, the corrugated metal is perforated and backlit, illustrating the underlying responsibility of the call to arms. In the same spirit, a randomized color variation in the brick represents the diverse cultural backgrounds of our veterans, while also nodding to Portland's traditional New England red brick. On the rear elevation, out of public view, a more cost-effective concrete masonry unit veneer is used.

BUILDING COMPONENTS

The Clinic is broken up into two major components: the frontage, which celebrates public functions, and the clinical box, designed for efficient team-based care. The building design climbs two stories with rooftop mechanical units, screened with a similar corrugated metal as the street-facing façade. The building envelope is designed to respond to the challenges of the local climate. Walls are designed to prevent moisture penetration and minimize heat loss and gain throughout the year. Exterior steel and metals are coated or galvanized to prevent corrosion, and the building envelope will minimize air leakage to and from occupied spaces and ensure condensation control with a continuous weather barrier. The brick, composite metal panel, and corrugated metal panel systems will layer onto 3" rigid insulation, air vapor barrier, exterior sheathing, and 8" cold-formed metal framing. The parking structure will be selectively clad in a randomized fashion with clip-mounted, perforated, and back-lit Kalzip metal panels.

All window glazing shall be low-E, insulated and laminated. Storefront doors shall be low-E, insulated and tinted. Window systems shall be double glazed and provided with a continuous thermal break between inner and outer sash. Windows in the clinical areas have been appropriately sized to allow natural light in and afford privacy to patients and staff. Frames shall be thermally broken. Windows in the security exam or holding rooms will be 7/16" thick laminated glass. The laminated glass will be placed on the interior of double-

glazed windows. The roof system will be designed according to the recommendations of the National Roofing Contractors Association (NRCA) Roofing and Waterproofing Manual. Low slope roof systems will be designed per FM global criteria, to local environmental conditions, utilizing sloped structural system. Roofing membrane system will be a layering of white EPDM roofing, coverboard, tapered insulation, vapor barrier, on metal decking. Roof walkways will be made of prefabricated roof walk pad with nonslip surfaces, on access routes to mechanical equipment that requires recurrent maintenance. Roof ladders, stair, and platforms will be provided as necessary to ensure the safety of maintenance workers.

Insulated galvanized metal doors or aluminum storefront doors will be provided, as appropriate. All doors will be a minimum of 3 feet wide in non-patient areas, and 3 feet 6 inches in patient areas. The main entrance doors will be automatic sliding doors of anodized aluminum construction with safety glazing. They will comply with the same energy efficiency requirements as the window systems. At the main entrance, staff entrance, and ambulance entrance, vestibules will provide an airlock. Other swinging exterior doors will be heavy duty, insulated, full-flush hollow steel construction. All exterior doors will be weather-stripped, self-closing, and outward opening. Latch guards and hinges with non-removable pins will deter tampering or unauthorized entry. Exterior details will be designed to preempt bird roosting.

Exterior structures that will be included in the overall campus design scheme include:

- Covered vehicle drop-off area at the main building entrance
- Staff-entry canopy
- Ambulance drop-off and canopy
- Mobile imaging pad and canopy
- Covered loading dock area

All covered walkways and service overhangs will be constructed of non-combustible materials and are integrated into the architectural style of the building. Walkways will be illuminated with integrated fixtures controlled by the site lighting system. Where required by the AHJ, walkways and overhangs will be fully sprinklered. Any service and equipment yards will be blocked from public view by screen walls that are architecturally compatible with the main building. The facility is designed to meet Federal and Local requirements for fire safety, physical security, accessibility, seismic, and sustainability standards per the terms of the solicitation for proposals and will be fully compatible with the VA's intended use.

Features include:

- Modern quality building with durable exterior materials;
- Articulated building elements for pleasing aesthetics and patient way finding;
- Covered and protected entrances; and
- Weather resistant and energy efficient envelope.

PLANNING & TENANT IMPROVEMENT

The VA space program is located on two floors in the CBOC. The program spaces have been laid-out with an emphasis on efficient and understandable layouts. The first floor is populated with Patient Aligned Care Team (PACT) spaces for ease of access to the greatest number of patients. Specialty clinics such as dental, eye, audiology, and mental health are located on the second level with ease of access by two-passenger elevators for redundancy. One freight elevator is also included. Each floor is organized by a light-filled lobby

and linear waiting area providing quick access to patient care areas. Floor plans are easily understandable with super graphics at clinic entrances and open patient corridors and secured staff circulation cores. All corridors are 6 feet in width and security measures will be included. Exterior windows are provided at the end of major circulation corridors for natural light and connection to the exterior. Minimum 9'-0" high ceilings will be provided throughout with 10' ceilings in larger spaces (>500SF).

Features include:

- Patient-centered design focused around team- based care;
- Efficient layouts for state-of-the-art treatment;
- Clear and consistent patient waiting and circulation patterns with abundant natural light; and
- Separation of open patient and secured staff circulation.

EXISTING CONDITIONS

The site is characterized as a relatively open space with limited vegetation of the lower flat area adjacent the street and a denser vegetative coverage along the steeper embankment at the rear of the site. A portion of the site frontage contains a granular lot area where vehicles, trailers, and equipment occasionally are parked. The site was formerly a rail yard and remnant tracks remain on the property.

- **Drainage** – Drainage in West Commercial Street is limited to just several catch basins that are tied to the CSO system. These are located to the west end of the site, thus the ability to convey stormwater off the site will require careful consideration.

- **Soils/Topography** – Preliminary investigations conducted by S.W. Cole Engineering and Summit Geoengineering indicate site soils consist of sand and gravel of thickness from 25' to 35' below grade with no initial evidence of shallow ledge, at least within the likely development area adjacent West Commercial Street. The top 2-foot layer of material does contain evidence of the site's historical rail use, including coal ash and brick fragments and this material will be properly buried onsite or removed for offsite disposal. This is relatively common on the Portland Peninsula. We are not aware of any wetland or natural resources on the site as evidenced by a wetlands review conducted by Rich Jordon PWS/CPESC, formerly of TRC, who found none of those features on the site. Depth to groundwater exceeds 10' thus, no impacts or constraints due to shallow groundwater are anticipated. The building foundations are planned as spread footings and deep foundations such as piles or other ground improvements are not anticipated for construction.

  The site topography consists of ground elevations varying from elevation 20.0' (NGVD29=City Datum) to elevation 25.0' within the flatter area from the ROW line back 160' or so. A steeper incline has the topography rising from elevation 25.0' up to elevation 95.0' or so at the rear of the property. The low sag in West Commercial Street is about elevation 14.85' and the crest in the street is about elevation 23.5'.

- **Surrounding Land Use** – The site is located along a gateway to the waterfront. AADT traffic volumes[1] along West Commercial Street are as follows:

  - AADT 16 US 1A Commercial Street Eastbound E/O Cassidy Point – 10,320
  - AADT 16 US 1A Commercial Street Westbound E/O Cassidy Point - 10,110

[1] *See 2017 Maine DOT Transportation Count Book*

The site is located directly opposite the relatively new Canal Landing Boat repair and maintenance facility that occupies about 17 acres on the south side of the street. That facility includes multiple large buildings and a recently completed travel lift basin along the site's privately-owned waterfront. The boat facility includes three driveway openings along West Commercial Street. West Commercial Street in front of most of the site consists of an 80' wide ROW and approximately 44' of pavement (containing two 14' wide travel lanes and 8' paved shoulders on each side).

North of the site there are residential properties along Danforth Street situated prominently well above due to a steep rise in topography. To the east is located commercial office property and to the west is a small seasonal restaurant. Southeast of the site is the Maine DOT International Marine Terminal that has been recently expanded for additional rail operations and support of Eimskip shipping terminal activity.

UTILITIES

- **Sanitary Sewer** – There is an existing 48" RCP Interceptor sewer located generally along the length of the site frontage of West Commercial Street. Tie-in to this sewer pipe will be required along with backflow prevention. The line is less than 10' off the front line and perhaps as little as 5' off the front line; it does not appear the pipe will result in conflict with any foundation construction, particularly for any building portion that is within the 10' maximum setback zone. Temporary sheeting and shoring during foundation installation may be required. There are also interceptor structures located on the far west end of the site that relate to the CSO and overflow lines to the river.

- **Water Supply** –There is an existing 16" supply main within West Commercial Street, running the length of the site. The main is located however mostly on the south side of the street, thus trenching across West Commercial Street will be required. This will involve multiple crossing of other utilities in the street that are of major consequence, including the 48" sanitary interceptor, an existing oil-encased 115 KVA underground electrical transmission line, and a 10" high pressure gas main. PWD records indicate water flows more than 1,200 GPM with pressures exceeding 100 psi, available in the vicinity.

- **Natural Gas** – A high pressure main is located within West Commercial Street. We believe that natural gas service will be readily available to the project, subject to confirmation by Unitil who is the supplier in the area.

- **Power** – Central Maine Power maintains overhead three phase electrical distribution along West Commercial Street in front of the site. There is an existing overhead system running the length of the site frontage. The location of the overhead lines will require careful review to assess setback from any proposed building walls and roofline, particularly if any portion of the building is located within the 10' maximum property line setback. CMP typically requires a 10' separation from their overhead lines to the building, and this may require even greater separation during construction. The new facility requires an underground 3-phase service extension to a new pad mount transformer(s).

  CMP also maintains an existing underground oil-encased 115 KVA transmission line that is located along the site frontage. The line is generally located 24" to 48" below grade. CMP also maintains an underground distribution bank on the south side West Commercial Street. Neither of these facilities are expected to be impacted by the development.

- **Communications** – Consolidated Communications (aka Fairpoint) and Spectrum provide telephone and cable services in the region and both have facilities on the existing overheads fronting the site. Other providers include Firstlight aka Oxford Networks, Maine Fiber, and the Portland Fire Department, all of whom may also have wires on the poles. High-speed data communications are also likely available at this location, subject to confirmation by one or more of these providers.

CONSTRUCTION SCHEDULE

The project is currently under design with a targeted construction start date for March 2020 and construction completion in early 2022.

A Construction Management Plan has been prepared by Landry French Construction and is appended to the Construction Management Plan section of this application.

GENERAL APPLICATION DOCUMENTS

RIGHT, TITLE & INTEREST

J.B. Brown & Sons currently owns the property as evidenced in the deed recorded in CCRD Book 29147 page 254 attached to this section. FDS JBB Portland LLC currently is entered into a Lease Agreement with the federal government for a 20-year period as evidenced by the attached redacted documents.

MAINE REAL ESTATE TAX PAID

RELEASE DEED

MAINE CENTRAL RAILROAD COMPANY, a corporation duly organized and existing under the laws of the State of Maine, with offices at 1700 Iron Horse Park, North Billerica, Middlesex County, Massachusetts (the "Grantor") in consideration of Seven Hundred Ninety Three Thousand and 00/100 ($793,000.00) Dollars paid to it by **J.B. BROWN & SONS,** with a mailing address of 36 Danforth Street, Portland, ME 04101 (the "Grantee") hereby grants to the Grantee all the Grantor's right, title and interest, without any warranties or covenants of title whatsoever, in a certain parcel of land, and the buildings, bridges, structures, crossings, fixtures and improvements thereon, if any, situated in Portland, County of Cumberland, State of Maine (the "Premises") described as follows:

SEE EXHIBIT "A" ATTACHED HERETO AND
MADE A PART HEREOF BY THIS REFERENCE.

This conveyance is subject to the following reservations, conditions, covenants and agreements:

1. This conveyance is made without granting any right of way, either by necessity or otherwise, over any remaining land or location of the Grantor.

2. ~~The Grantor hereby reserves an exclusive, permanent right of way and easement in, on, over, under, across and through the Premises for the purpose of accessing, constructing, installing, operating, maintaining, modifying, repairing, replacing, relocating and removing a telecommunications system or other system for transmission of intelligence or information by any means, whether now existing or hereafter devised, including such poles, pipes, wires, fibers, fiberoptic cables, repeater stations, attachments, appurtenances, structures or other equipment and property of any description necessary or useful for the same (the "Telecommunications Easement"). The Grantor further reserves the right to freely lease, license, mortgage, assign, pledge and otherwise alienate the Telecommunications Easement. The Grantee hereby covenants with the Grantor to recognize the Telecommunications Easement and, without the payment of any further consideration, to execute, acknowledge and deliver such instruments suitable for recording with the registry of deeds as the Grantor may reasonably~~

~~require to acknowledge title to the Telecommunications Easement in the Grantor. The Grantor covenants to reasonably repair and restore the surface of the easement area after any work.~~

3. ~~The Grantor excepts from this conveyance any and all railroad tracks, railroad track materials (including, but not limited to, ties, connections, switches and ballast) and/or related equipment of any description located in whole or in part within the Premises (the "Trackage") and this conveyance is subject to the right of the Grantor to enter the Premises from time to time and at any and all times within the ninety (90) day period commencing with and subsequent to the date of delivery of this deed, with such men, equipment and materials as, in the reasonable opinion of the Principal Engineering Officer of the Grantor, are necessary for the removal of the Trackage. Days during the months of December, January, February and March shall not be included in the aforesaid ninety (90) day period. If the Trackage is not removed from the Premises by the expiration of said ninety (90) day period, the Trackage shall be deemed abandoned by the Grantor and shall then become the property of the Grantee.~~

4. ~~The Grantor excepts from this conveyance any and all advertising signs and/or billboards located upon the Premises which are not owned by the Grantor. Furthermore, this conveyance is subject to the right of the owners of said signs and/or billboards to go upon the Premises and remove them within ninety (90) days from the date of delivery of this deed.~~

5. By the acceptance of this deed and as part consideration therefor, the Grantee hereby assumes any and all agreements, covenants, obligations and liabilities of the Grantor in respect to any underground facilities, drainage culverts, walls, crossings and/or other structures of any nature and description located in whole or in part within the Premises.

6. By the acceptance of this deed and as part consideration therefor, the Grantee agrees to irrevocably waives, gives up and renounces any and all claims or causes of action against the Grantor in respect of claims, suits and/or enforcement actions (including any administrative or judicial proceedings and any remedial, removal or response actions) ever asserted, threatened, instituted or requested by any person and/or governmental agency on account of: (a) any release of oil or hazardous materials or substances of any description on, upon or into the Premises in contravention of any ordinance, law or statute (including, but not limited to, the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (42 U.S.C. Section 9601, et seq., as amended); and (b) any and all damage to real or personal property, natural resources and/or harm or injury to persons alleged to have resulted from such release of oil or hazardous materials or substances.

7. ~~By the acceptance of this deed and as part consideration therefor, the Grantee hereby agrees to build and forever maintain fences (together with any necessary gates), suitable to the Principal Engineering Officer of the Grantor, along the boundaries of the Premises which are common to remaining land or location of the Grantor (the "Fences"), if Fences are ever required in the sole and reasonable opinion of said Principal Engineering Officer.~~

8. ~~This conveyance is subject to the following restriction for the benefit of other land or location of the Grantor, to wit: that from the date of delivery of this deed, the Grantor shall not be liable to the Grantee or any lessee or user of the Premises (or any part thereof) for any damage to any buildings or property upon them caused by fire, whether communicated directly or indirectly by or from locomotive engines of any description upon the railroad operated by the Grantor, or otherwise.~~

9. ~~By the acceptance of this deed and as part consideration therefor, the Grantee hereby agrees to make no use of the Premises which, in the sole and reasonable opinion of the Principal Engineering Officer of the Grantor, adversely affects, increases or decreases drainage to, from, upon or in any remaining land or location of the Grantor. The Grantee agrees to indemnify and save the Grantor harmless from and against any and all loss, cost, damage or expense including, but not limited to, the cost of defending all claims and/or suits for property damage, personal injury or death arising out of or in any way attributable to any breach of the foregoing covenant.~~

10. ~~The Grantor excepts from this conveyance any and all overhead, surface or underground signal and communication line facilities of the Grantor located within the limits of the Premises and this conveyance is subject to the Grantor's use of any such facilities in their present locations and entry upon the Premises from time to time to maintain, repair, replace, renew, relay or remove such facilities.~~

11. The strikeout sections in this Deed are intentionally deleted.

12. Whenever used in this deed, the term "Grantor" shall not only refer to the **MAINE CENTRAL RAILROAD COMPANY**, but also its successors, assigns and affiliates and the term "Grantee" shall not only refer to the above-named Grantee, but also the Grantee's successors, assigns and grantees, as the case may be.

13. The several exceptions, reservations, conditions, covenants and agreements contained in this deed shall be deemed to run with the land and be binding upon the Grantee forever. In addition to the acceptance and recording of this deed, the Grantee hereby signifies assent to the said several exceptions, reservations, conditions, covenants and agreements, by joining in its execution.

IN WITNESS WHEREOF, the said **MAINE CENTRAL RAILROAD COMPANY** has caused this release deed to be executed in its name and its corporate seal to be hereto affixed by David A. Fink, its President, thereunto duly authorized this 21st day of November, 2011.

Exhibit A

A certain lot or parcel of land, with the buildings thereon, situated on the northerly side of West Commercial Street, in the City of Portland, County of Cumberland, and State of Maine, bounded and described as follows:

Beginning at a point on the northerly sideline of West Commercial Street, on the westerly sideline of the former Emery Street now land of J. B. Brown and Sons;

Thence, S 66°06'27" W along the northerly sideline of said West Commercial Street 784.47 feet;

Thence, S 71°39'57" W along the northerly sideline of said West Commercial Street 731.36 feet;

Thence, S 80°52'21" W along the northerly sideline of said West Commercial street 437.92 feet to the West Commercial Street off-ramp;

Thence, along said off-ramp, the following courses and distances:

Northwesterly, along a curve to the right having a radius of 1023.32 feet, a delta of 7°02'02", and whose chord bears N 88°49'29" W, a distance of 125.55 feet, an arc length of 125.63 feet;

N 66°06'38" W a distance of 93.96 feet;

Northwesterly, along a curve to the left, having a radius of 194.00 feet, a delta of 38°27'00", and whose chord bears N 85°20'08" W, a distance of 127.76 feet, an arc length of 130.19 feet;

S 75°26'22" W a distance of 33.57 feet;

Thence, N 81°44'16" W along land now or formerly of the State of Maine 171.41 feet;

Thence, N 08°15'44" E along land of said State of Maine 22.46 feet to the southerly sideline of Danforth Street;

Thence along said Danforth Street the following courses and distances:

N 83°43'02" E a distance of 96.39 feet;

Northeasterly, along a curve to the left, having a radius of 1042.16 feet, a delta of 12°51'52", and whose chord bears N 77°17'06" E, a distance of 233.50 feet, an arc length of 233.99 feet;

N 70°51'10" E a distance of 187.93 feet;

Northeasterly, along a curve to the right, having a radius of 800.00 feet, a delta of 2°21'41", and whose chord bears N 72°02'04" E, a distance of 32.97 feet, an arc length of 32.97 feet to land now or formerly of South Rise Condominiums;

Thence along said South Rise Condominium land the following courses and distances:
S 11°41'22" E a distance of 168.00 feet;
N 81°56'51" E a distance of 271.00 feet;
N 77°01'13" E a distance of 96.62 feet;
N 75°17'24" E a distance of 51.37 feet to land now or formerly of Shaw;

Thence, N 72°46'26" E along land of said Shaw 94.47 feet;

Thence, N 35°07'51" W along land of said Shaw 69.73 feet to the southerly terminus of "K" Street;

Thence, along said "K" Street, along the southerly side of a 40 foot passageway and the terminus of "E" Street the following courses and distances:

N 55°46'28" E a distance of 17.74 feet;
N 55°46'28" E a distance of 58.47 feet;
N 54°19'46" E a distance of 397.81 feet to land now or formerly of the City of Portland;

Thence, S 35°05'23" E along land of said City of Portland 56.55 feet;

Thence, N 69°03'30" E along land of said City of Portland and land now or formerly of Noonan 85.21 feet;

Thence, N 34°36'51" W along land of said Noonan 92.60 feet to land now or formerly of McFarland;

Thence, N 54°37'05" E along land now or formerly of McFarland, Curtis, Dilworth, Moberg, McDonough and Robertson 367.27 feet to land now or formerly of Pollard & Lantos;

Thence, S 35°47'03" E along land of said Pollard & Lantos 119.22 feet;

Thence, N 54°52'09" E along land of said Pollard & Lantos, and land now or formerly of Bessire and Dyro 441.22 feet to the centerline of Emery Street;

Thence, S 35°05'32" E along the centerline of Emery Street, 153.86 feet;

Thence, N 55°14'50" E a distance of 30.00 feet to the easterly sideline of Emery Street;

Thence, S 35°05'32" E along said easterly sideline, 24.61 feet to the intersection of the easterly side of Emery Street at its intersection with the southerly sideline of Salem Street;

Thence, S 55°14'50" W along land now or formerly of J. B. Brown 60.00 feet;

Thence, S 35°05'22" E along land now or formerly of J. B. Brown 172.39 feet to West Commercial Street and the point of beginning, containing 10.65 acres, more or less. Also

conveying all right, title and interest of Maine Central Railroad Company in and to Emery Street lying within and adjacent to the land herein conveyed.

Reference, is made to a survey by Owen Haskell, Inc. dated October 13, 2011
Job # 2010-095P for a further description of the above described premises.

Reference is also made to the premises conveyed in that certain deed from the Portland Terminal Company to the Maine Central Railroad Company dated December 30, 1985 and recorded in the Cumberland County Registry of Deeds in Book 7026, Page 192.

GENERAL APPLICATION DOCUMENT

TECHNICAL CAPABILITY

The applicant has retained a highly qualified team of professionals to undertake planning, permitting and design tasks on this project. Services will be provided by the following companies and their respective team leaders:

Civil Engineer	Stephen Bushey, P.E. Gorrill-Palmer Consulting Engineers 707 Sable Oaks Drive South Portland, Maine 04106 (207) 772-2515 – Work sbushey@gorrillpalmer.com
Architect	**VA Clinic** SmithGroup 100 High Street, Suite 1800 Boston,MA 02110 (617)-502-3558 Attn: Greg Heppner, AIA, NCARB Greg.heppner@smithgroup.com **Garage** Ryan Senatore 500 Congress Street, Suite 2 Portland, Maine 04101 (207) 747-5159 ryan@senatorearchitecture.com
Surveyor	Nick Elliston Titcomb Associates 133 Gray Road Falmouth, ME 04105 (207) 797-9199 – Work Nelliston@titcombsurvey.com
Traffic Engineer	William Bray, P.E. Traffic Solutions 17 Mountview Drive Gorham, Maine 04038 (207) 400-6890 – Work trafficsolutions@maine.rr.com
Geotechnical Consultant	Bill Peterlien, P.E. Summit Geoengineering Services 145 Lisbon Street PO BOX 7216 Lewiston, Maine 04243 (207)576-3313 bpeterlein@summitgeoeng.com

Developer	Claiborne Williams FD Stonewater 1001 N. 19th Street, Suite 930 Arlington, VA 22209 (202) 669-8142 cwilliams@fdstonewater.com Vin Veroneau – President/CEO J.B. Brown & Sons 10 Free Street Portland, Maine 04101 (207) 774-5908 veroneau@jbbrown.com
Construction Manager	Kevin French Landry French Construction 160 Pleasant Hill Road Scarborough, Maine 04074 (207) 730-5563 kfrench@landryfrenchconstruction.com

The team of consultants retained has expertise and experience in the design of similar institutional projects. Resumes of key personnel for development team can be provided upon request.

GENERAL APPLICATON DOCUMENT

FINANCIAL CAPACITY

The Applicant, FBS JBB Portland, LLC has adequate financial resources to undertake this project as evidenced by the following:

- FB Stonewater is a boutique real estate brokerage, investment, development and asset management firm with national capabilities. They have completed over 1 million square feet of high-quality development projects for federal and commercial tenants while also managed over $500 million in real estate assets, totaling more than 5 million square feet. The firm has greater than 25 years of ownership and asset management and considered highly qualified to manage and support the proposed project. See http://fdstonewater.com/html/ for further background on the firm.

- JB Brown & Sons is a commercial property management and development company with perhaps the longest history of property ownership in the City. Long known for its stable ownership and conservative long-term outlook of real estate in the City, the firms partnering with FB Stonewater will provide a most capable team to meet the needs of the Veterans Administration. JB Brown & Sons has owned the development site since 2011. The property was original owned by JJB going back to the 1800's until Portland Terminal Co purchased in the early 1900s and conducted railroad activity on the site for nearly 100 years.

The estimated full cost of the project is projected to be $30 million. A copy of the Financial Capacity letter is included with this section.

Re: J.B. Brown & Sons - VA Building - West Commercial Street

Dear Planning Board Members:

I am writing to support the proposed Veteran's Administration project on West Commercial Street being developed by FDS JBB Portland JV, LLC.

J.B. Brown & Sons, a partner in the development company, is an experienced developer and commercial real estate owner and manager in the Greater Portland area. The company has completed a number of successful projects in recent years including the 25 High Street condominium project, the Portland Marriott Courtyard, and is currently under construction of the recently approved residential/retail building at 40 Free Street in Portland, to name a few. Financially, the company is stable with sufficient cash flow, liquidity, and balance sheet strength to finance the project. We provide financing for a number of the company's projects, and all loan obligations and deposit accounts with NBT Bank have been handled in a fully satisfactory manner.

We have reviewed the preliminary information for the proposed project, and based on the information we have, NBT Bank has provided preliminary terms for financing the project. Our interest remains subject to full credit underwriting by NBT's credit department and approval from NBT's loan committee. Based on the company's track record and financial strength, I have a high degree of confidence that NBT's loan committee will approve the loan request and provide a commitment to finance the project.

Please do not hesitate to contact me if you have further questions.

Respectfully,

Kimberly Twitchell
Regional President
NBT Bank

GENERAL APPLICATION DOCUMENT

WAIVER REQUESTS

The Accompanying Waiver Table provides a description of the applicable waiver requests and supporting evidence for these requests.

Standard to be Waived: Cite Ordinance or Technical Manual Standard	**Cite Standard Language:** Cite specific language of applicable Ordinance or Technical Manual Standard	**Waiver Being Sought:** Describe waiver being sought. Ex. – We are requesting a two-way parking lot drive aisle width of 20'.	**Justification for Waiver:** Address specific waiver criteria, if applicable, and document reasons for the waiver request.
Technical Standard – Transportation Standards – Number of Driveways 1.7.2.8	*No more than two (2) driveways shall be permitted for ingress and egress purposes to any commercial, industrial or residential (with 10 or more parking spaces) site.*	We are requesting three site driveways along West Commercial Street due to the site conditions including length/street frontage and proposed driveway separation.	The site conditions include narrow lot depth that restrict ease of onsite circulation. The staff parking lot requires a driveway connection as it is separate by distance to the parking garage. The parking garage is proposed to have two entrances (one on each end of the building) and the lot depth doesn't' allow for easy connectivity and consolidation of these access conditions.
Technical Standards – Transportation Standards –Bicycle Parking (14-526 (a) 4 b)	*(b) Non-residential structures. Two (2) bicycle parking spaces for every ten (10) vehicle parking spaces for the first one hundred (100) required vehicle parking spaces, plus one (1) bicycle parking space for every twenty (20) required motor vehicle parking space over one hundred (100) required vehicle parking spaces.*	The applicant is requesting a waiver of the required number of bicycle parking spaces as that would exceed well over 50 bike spaces which is considered excessive for the clinic use.	The proposed development is expected to generate a reduced demand for bicycle parking due to the services provided.

SITE DESIGN

The following statements are provided in accordance with the submission and Section 14-526 of the ordinance.

(d) Site Design Standards.

Massing, Ventilations and Wind Impact (14-526 (d) 1)

- *Wind and ventilation impacts on adjoining structures and/or adjacent public spaces. Wind study, if applicable.*
- *Bulk, location or height impacts on adjoining structures*
- *Identify and locate HVAC equipment and venting away from public spaces and residential properties*
- *Identify screening and manufacturing specifications for noise, if applicable*

1. *Massing, Ventilation and Wind Impact:*

   a. The project proposes construction of a new two-story VA Clinic building and a 3 level parking garage. The project will not result in any significant changes to the wind environment proximate to the site. There are no abutting structures or uses that might be impacted by the proposed buildings, as the site is somewhat isolated from nearby neighborhoods.

   b. The project will not result in any significant impacts to abutting properties and is consistent with the B-5b zone and other zoning/city standard considerations. The proposed Clinic and parking garage will be lower than the allowable building height in the zone and their unique positioning at the base of the West end bluff off Danforth Street overlooking the waterfront, will minimize any visual impacts to the residential areas nearby as well as fitting in well with the gateway that West Commercial Street provides.

   c. HVAC venting, if necessary, will be directed through building roof top mounted units and will not impact any adjacent public spaces or residential properties.

Shadows (14-526 (d) 2), if applicable

- Shadow analysis of impacts on publicly accessible open space (Technical Manual, Section 11)

2. *Shadows:*

   a. The buildings at the site will not cast significant shadows onto neighboring properties, or block access to direct sunlight for structures utilizing solar energy. The Site Layout Plan and Grading and Drainage Plan show the proposed site improvements and their relationships to property lines. The grading plan shows the relative elevations of the building with respect to elevations along the property lines.

Snow and Ice Loading (14-526 (d) 3)

- *Building design to prevent snow and ice from loading or falling onto adjacent properties or public ways.*

3. Snow and Ice Loading:

a. The buildings have been designed and located such that accumulated snow and ice will not fall onto adjacent properties or public ways. Snow will be removed from the parking lots and stockpiled within the site perimeter or if necessary removed from the site.

View Corridors (14-526 (d) 4), if applicable

- *Protection of designated view corridors (Portland Design Manual, Appendix 1)*

4. View Corridors:

a. The project entails construction of a two-story building and three level parking garage in manner that is compliant with the B-5b Zone. The site is considered a primary gateway entrance into the Old Port and the building will provide a great opportunity to enliven and bring increased vibrancy to this end of Commercial Street. The site does not block views from nearby properties. The site is not located within any corridors identified in the Downtown Vision View Corridor Protection Plan. The Boat Yard construction on the opposite side of the street introduces similarly sized buildings to the area.

Historic Resources (14-526 (d) 5), if applicable

- *Identify developments within Historic Districts or affecting Designated Landmarks*
- *Certificate of Appropriateness or other evidence*
- *Identify Developments within 100 feet of Historic Districts or affecting Designated Landmarks. Advisory HP review may be required*
- *Address preservation and documentation of Archaeological Resources*

5. Historic Resources:

a. The development is not located in a historic district, historic landscape district or City designated landmark.

b. The development is not located adjacent to or within 100 feet of a designated landmark, historic district, or historic landscape district.

c. There are no known remaining archaeological resources on the site.

Exterior Lighting (14-526 (d) 6)

- *Cut sheets of on-site light fixtures and any architectural or specialty lights (Technical Manual, Section 12)*
- *Engineered details for any lights proposed in street right-of-way (Technical Manual, Section 10)*

6. Exterior Lighting:

a. Site Lighting

(i) All new exterior lighting at the site will be full cutoff with no light emitted above the horizontal plane, and in accordance with Section 12 of the Technical Manual. A photometric Lighting Plan has been prepared by Swaney Lighting Consultants to demonstrate illumination levels throughout

the site will be consistent with City Standards. A copy of the cut sheets are included at the end of this section.

b. Architectural and Specialty Lighting

(i) Not applicable to the project.

c. Street Lighting

(i) There are existing area lights along drives West Commercial Street. Additional Trail/ Waterfront lighting will be positioned along the new 10' pathway in accordance with the Technical Manual.

Noise and Vibration (14-526 (d) 7)

- *Evidence of noise levels for equipment, such as equipment specifications, to demonstrate consistency with zoning requirements*

7. Noise and Vibration:

All heating, ventilation, air conditioning equipment including air handlers and generators are designed to meet local, state, and federal emissions and noise requirements. Most of the HVAC equipment is mounted in the middle of the roofs to minimize visibility. Any additional ground mounted equipment for the buildings will be screened. Equipment cut sheets can be provided upon request.

Signage and Wayfinding (14-526 (d) 8), if applicable

- *Signage plan showing the location, dimensions, height and setback of all existing and proposed signs. Signs in Historic Districts are reviewed by Historic Preservation staff*
- *Proposed commercial and directional signage on site*

8. Signage and Wayfinding:

a. All street and wayfinding signage shall meet the requirements of the Manual on Uniform Traffic Devices (MUTCD) and Division 22 of the City Code.

(i) The project is not located in a historic district or subject to Article IX.

(ii) Proposed wayfinding signage is identified in the Site plan.

(iii) All street and wayfinding signage shall meet the requirements of the Manual on Uniform Traffic Devices (MUTCD) and Division 22 of the City Code.

Zone Related Design Standards (14-526 (d) 9)

- Address Historic Preservation Design Review, if applicable
- Address any applicable design review standards by zone

- Address submission requirements from Design Manual, page 1, addressing neighborhood context
- Description of exterior materials, color, finish, and samples

9. Zoning Related Design Standards:

In accordance with part (c) of the Design Manual the following evidence of compliance is provided for each of the standards:

(c) B-5 and B5_b Urban Commercial Business Zones

(1) Standards

a. Shared Infrastructure – the development site does not specifically benefit from any substantial adjacent development given the site size and configuration, thus the opportunity to share infrastructure is limited. The objective of the parking garage positioning is to allow for shared use between the Clinic and tenants of the Star Match Building to the east. In fact, an additional parking deck is included in the design to allow for that shared parking capacity between the properties. The site development program is configured with three driveways that will also allow for shared use between the clinic and the parking garage, although shared vehicular access is not contemplated at this time.

b. The proposed buildings are positioned to comply with the maximum 10 foot building setback requirement from the street line thus satisfying this standard for proximity to the street.

c. The Clinic orientation prominently places the entry locations at the front of the building along with prominent window facades that will clearly communicate the VA mission and identify to the public. Tower elements on both the Clinic and garage building anchor and link each building and their entries to each other as well as to the street.

d. The surface parking lot for VA Clinic staff is located to the side of the building primarily due to the topographic limitations of the property. The parking garage is located in a manner to allow shared capacity with the Star Match Building to the east.

SPECIFICATIONS

Housing:

- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.

Lens Frame:

- One-piece low copper aluminum alloy die-cast is secured to housing with 6 screws.

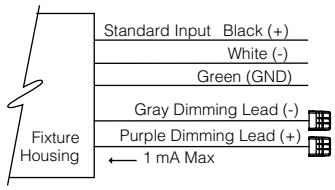
Backlight Control

- Optional Backlight Control on each LED module to completely control unwanted backlight.

Lens

One-piece flat glass lens slips secure with clips. Extra silicone gasketing is provided to retain a clear optical compartment.

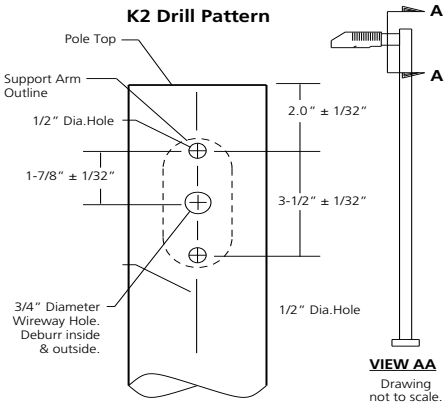
Optical Module:



- LEDs shall be mounted to a metal printed circuit board assembly (MCPCB).
- Optical lenses shall be clear injection molded PMMA acrylic.
- Each MCPCB and optic shall be sealed to the diecast housing and sealed with a continuous one piece injection molded silicone rubber gasket.
- Patent Pending design of optical array shall independently shield each LED optic across the length of the aperture.
- Optional fixture finish optical surfaces shall not exceed BUG ratings of the standard white finish and shall be greater than or equal to the delivered lumens of the optional matte black optical surface finish.

Electrical Components

- Standard programmable driver allows for programmable drive current settings.
- Electrical components are stategically located in the driver gear compartment with a molded silicon grommet seal to provide separation from the optical chamber.
- Maximum lightning surge current 20KA with thermally protected varistor technology. Surge suppression is series circuited preventing total fixture failure. ANSI/IEEE C62.41 Category C High.
- Open circuit fault will turn off the luminaire in order to protect the sensitive electronics and acts as a signal for maintenance.
- Programmable Driver is rated for -40°C starting.
- "Thermal Shield", primary side, thermister provides protection for the sustainable life of electronic components (350mA to 700mA).



Dimming:

- Dimming range from 100% to 10% through the use of the standard 0-10V interface on the programmable driver.
- Modular wiring harness in the service area provides user access to the dimming circuitry.
- Dimming circuitry compatible with 0-10V, user-defined control devices.
- Optional factory programmed dimming profile.

Support Arm:

- Die-cast, low copper aluminum alloy, with splice access cover.
- Die-cast pole adaptor and an internal reinforcing plate are provided with a wire strain relief.
- The arm adapter is square or circular cut for specified pole size and shape.
- For field wire connections, a terminal block is mounted in the arm cavity and accessible behind the splice access cover. The block accepts #14 to #8 wire sizes and is factory prewired to the electrical module's quick-disconnect plug inside the electrical compartment.

Optional Slip-Fitter:

- Internally accessible slip-fitter attaches to a 1-1/4" to 2-3/8" tenon and allows hands-free wiring and maintenance.

Optional Wall Mount:

- Optional, cast aluminum mounting plate attaches to a wall over a junction box and the speed mount is bolted to the cover plate. To complete the wiring, the luminaire assembly slides over the mounting plate.

Fusing:

SF for 120, 277, and 347 Line volts

DF for 208, 240, and 480 Line volts

Hight temperature fuse holders factory installed inside the fixture housing.

Fuse is included.

Finish:

Fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat.

Standard colors include (BL) Black, (DB) Dark Bronze, (GT) Graphite, (PS) Platinum Silver, (LG) Light Gray, (TT) Titanium, (WH) White, and (CC) Custom Color (Include RAL#).

Certifications and Listings:

- UL 1598 Standard for Luminaires.
- UL 8750 Standard for Safety for Light.
- ANSI C136.31-2010 3G Vibration tested and compliant.
- IDA approved, 3000K and warmer CCTs only
- IP66 Certified

CAUTION:

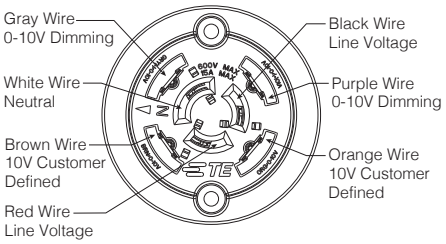
Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

WARRANTY:

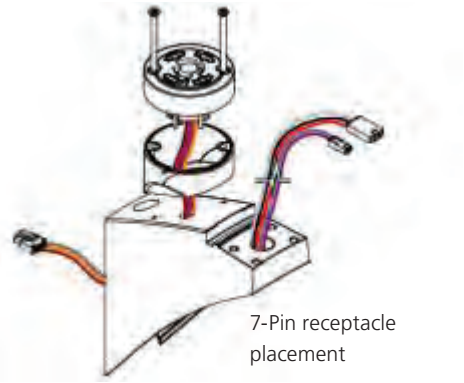
For full warranty see: http://www.hubbelllighting.com/resources/warranty

Kim Lighting reserves the right to change specifications without notice.

CONTROLS



Photocell Receptacle



7PR

Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:

1. Traditional on/off photoelectric control.
2. 5-pin wireless photoelectric control for added dimming feature.
3. 7-pin wireless photoelectric control for dimming and additional I/O connections for customer use.

7-Pin receptacle placement

Wireless Controls

- Optional universal voltage (120-277V) for dusk to dawn energy savings.Photocontrol is factory installed inside the housing with a fully gasketed sensor on the side wall. For multiple fixture mountings, one fixture is supplied with a photocell to operate the others.

- Occupancy Sensor shall be programmable anduse passive infrared (PIR) sensing technology that reacts to changes in infrared energy (moving body heat) within the coverage area. Careful consideration must be given to obstructions that may block the sensor's line of sight.

- Factory default settings for SCP option shall be:- High mode: 10V - Low mode: 1V - Ramp-uprate: disabled - Fade-down rate: disabled -Photocell: Off - Sensitivity: Full - Time Delay:Fade to low: 5 minutes - Time Delay: Fade to off: 1 hour

- The SCP enables any wall mounted luminaire,in excess of 75 watts, to meet California Title 24 requirements with integral 10KA surge protection for added reliability and serviceability.For more detail: http://www.aal.net/products/sensor_control_programmable

AstroDIM

AstroDIM provides multi-stage night-time power reduction based on an internal timer referenced to the power on/off time. There is no need for an external control infrastructure. The unit automatically performs a dimming profile based on the predefined scheduled reference to the midpoint, which is calculated based on the power on/off times.

SiteSync™[1]

SiteSync™ wireless control system for reduction in energy and maintenance cost while optimizing light quality 24/7. See ordering information or visit www.hubbelllighting.com/products/sitesync for more details.

[1]PRECOMMISSIONED SITESYNC ORDERING INFORMATION: When ordering a fixture with the SiteSync lighting control option, additional information will be required to complete the order. The SiteSync Commissioning Form or alternate schedule information must be completed. This form includes Project location, Group information, and Operating schedules. For more detailed information please visit www.HubbellLighting.com/products/sitesync or contact Hubbell Lighting tech support at (800) 345-4928.

SiteSync fixtures with occupancy sensor (SWPM) require the mounting height of the fixture for selection of the lens.

[2]Voltage, [3]Color, [4]Pole Diameter,

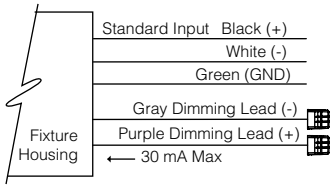
HUBBELL® Lighting

SPECIFICATIONS

Housing

- Optical housing is a one-piece, die-cast low copper (<0.6%) aluminum alloy with integral heat sink. The housing rotates against mounting arm housing to provide -5° to 10° of adjustment with degree markers cast into the housing. At 0 adjustment, lens is totally concealed from view above horizontal with fixture mounted in the downward position.
- Mounting arm housing is one-piece die-cast, low copper (<0.6%) aluminum alloy with provisions for tilt mechanism. Mounting arm fastens to the mounting plate with keyhole slots freeing both hands for securing and wiring. One stainless steel socket-head screw on the tilt mechanism frees the optical housing to rotate for aiming. Tightening the screws locks the housing and lens frame together with sealing provided by a silicone gasket. For visual aiming, adjustment may be accomplished with the fixture on.
- Lens Frame is a one-piece, die-cast low copper (<0.6%) aluminum alloy with integral cooling fins to dissipate driver thermal.
- Luminaire housing shall be free of any visible heat fins, hardware or fasteners.
- Bracketry and hardware shall be stainless steel.

Optical Array



- LEDs shall be mounted to a metal printed circuit board assembly (MCPCB).
- Optical lenses shall be clear injection molded PMMA acrylic.
- Secondary lens is impact resistant 1/8" tempered glass with anti-reflective coating.

Electronic Module

- Drivers shall be in direct contact with the die-cast aluminum lens frame across the entire surface area of the widest face for maximum thermal transfer.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components.
- Drivers shall have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments
- Luminaires shall have integral surge protection that shall be U.L. recognized and have a surge current rating of 10,000 Amps using the industry standard 8/20uSec wave and surge rating of 372J. Surge protection device shall be wired in series.
- Drivers shall be U.L recognized.
- Drivers shall not be compatible with current sourcing dimmers, consult factory for current list of known compatible dimming systems approved dimmers include Lutron Diva AVTV, Lutron Nova NFTV and NTFTV.

Dimming

- 10% to 100% dimming by the use of standard 0-10V interface driver.
- The thermal shield works in conjunction with the control system to assure that overheating will not harm the LEDs.
- The wiring harness is connected with the use of the Purple lead as the positive (+) and the Grey lead as the negative (-) to an available control signal (by others).

Specifications

- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and optical array shall have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Luminaires not configured with a control system shall be provided with 0-10 purple and gray dimming leads.

Controls

- Optional universal voltage (120-277V) button photocontrol for dusk to dawn energy savings. Photocontrol is factory installed inside the housing with a fully gasketed sensor on the side wall. For multiple fixture mountings, one fixture is supplied with a photocell to operate the others.
- Occupancy Sensor shall be programmable and use passive infrared (PIR) sensing technology that reacts to changes in infrared energy (moving body heat) within the coverage area. Careful consideration must be given to obstructions that may block the sensor's line of sight.
- Factory default settings for SCP option shall be: - High mode: 10V - Low mode: 1V - Ramp-up rate: disabled - Fade-down rate: disabled - Photocell: Off - Sensitivity: Full - Time Delay: Fade to low: 5 minutes - Time Delay: Fade to off: 1 hour
- The SCP enables any wall mounted luminaire, in excess of 30 watts, to meet California Title 24 requirements with integral 10KA surge protection for added reliability and serviceability. For more detail: http://www.aal.net/products/sensor_control_programmable
- SiteSync™ wireless control system for reduction in energy and maintenance cost while optimizing light quality 24/7. See ordering information or visit www. hubbelllighting.com/products/sitesync for more details.
- Hubbell Control Solutions' NX Distributed Intelligence™ lighting control platform utilizes a Distributed Network Architecture (DNA) that connects intelligent devices including luminaires, controllers, panels, occupancy sensors, photocells, wall switches and dimmers, creating a system with an unmatched level of reliability, scalability and simplicity

Options

- Integral battery backup provides emergency path of egress lighting for the required 90 minutes for 0°C ambient environments or -20°C with thermal jacket.
- Fusing:

SF for 120, 277 and 347 Line Volts
DF for 208, 240 and 480 Line Volts

High temperature fuse holders factory installed inside the fixture housing. Fuse is included.

Mounting and Installation

- JUNCTION BOX(By Others): Standard with steel, quick-mount junction box plate that mounts directly to 4" J-Box
- Mounting plate is stainless steel and features a one-piece EPDM gasket on back side of plate to firmly seal fixture to wall surface, forbidding entry of moisture and particulates.

Servicing

- Housing shall be able to hang freely in an open service position for inspection of primary wire connections. Once in service position, the housing shall be able to be removed for service by sliding the assembly to the left (for down mounting) or to the right (for up mounting) and disconnecting the wiring plugs.

Kim Lighting reserves the right to change specifications without notice.

SPECIFICATIONS

- Driver assembly shall be mounted to a prewired internal tray with quick disconnects for removal. Fusing SF for 120, 277, and 347 line volts DF for 208, 240, and 480 line volts high temperature fuse holders factory installed inside the fixture housing. Fuse is included.

Finish:

- Luminaire finish shall consist of a five stage pretreatment regimen with a polymer primer sealer, oven dry off, and top coated with a thermoset super TGIC polyester powder coat finish.
- Luminaire finish shall meet the AAMA 605.2 performance specification which includes passing a 3000 hour salt spray test for corrosion resistance.
- Standard colors include (BL) Black, (DB) Dark Bronze, (GT) Graphite, (LG) Light Gray, (PS) Platinum Silver, (TT) Titanium, (WH) White, and (CC) Custom Color (Include RAL#).

Certifications and Listings

- UL1598, UL 8750 and Canadian CSA Std. C22.2 no.250.
- IDA approved, down light only, 3000K and warmer CCTs only.
- 1.5G rated
- IP66 Compliant
- IK08 Certified

CAUTION:

- Fixtures must be grounded in accordance with national, state and/or local electrical codes, Failure to do so may result in serious personal injury.

WARRANTY:

- For full warranty see http://www.hubbelllighting.com/resources/warranty

Kim Lighting reserves the right to change specifications without notice.

BeveLED Block® Surface - BLSD5 Square Downlight

USAI® Lighting

SURFACE MOUNT

CONDUIT CUT OUT

usailighting.com/block

Keep ceiling height right where it is! Specifically designed to work with surface-mounted conduit and junction boxes, BeveLED BLOCK has a modern look that's perfect for lofts, offices, and open architectural spaces. Also available with solid-sides styling shown above, Block also creates a finished look when recessed conduit is possible.

FEATURES

- High performance architectural lighting solution for industrial or exposed concrete ceiling types where recessed lighting is not an option
- Convenient conduit cutouts provide access for surface-mounted conduit to pass through the luminaire
- Smooth, modular solid and keyhole slots are interchangeable and user configurable to allow for simple on site customization in the field.
- BeveLED BLOCK is available in a range of standard and custom colors to complement your project, whether an industrial or refined look is desired.
- Industry leading illumination and craftsmanship

BeveLED Block® Surface - BLSD5 Square Downlight

USAI® Lighting

BEVELED BLOCK SPECIFICATIONS

FIELD REPLACEABLE LED LIGHT ENGINE

is serviceable without tools. All USAI Lighting Classic White and Warm Glow Dimming light engines feature industry-leading color consistency

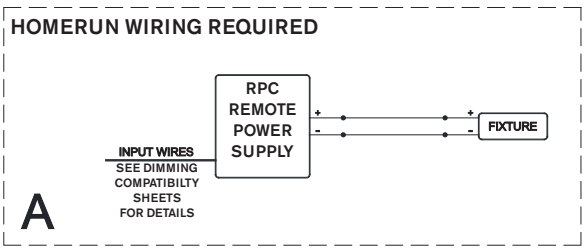
FIELD REPLACEABLE DRIVER

0-10V, 100%-10% solid state electronic constant current D2 dimming driver with a high power factor provided standard and sources 2mA. Other dimming drivers optionally available. D6 dimming drivers source 2mA. Driver complies with IEEE C62.41 surge protection. Some on-time delay may be experienced depending on control system used.

REMOTE LOCATION DRIVER

If a remote dimming driver is required, specify "RM" in the fixture part number and proceed to the RP table to complete the dimming driver specification. All remote power supplies must be clearly specified in the "RP" table, with one remote power supply required per fixture. Remote power supplies require enclosures by others that meet local codes and must be located in an accessible service panel within 100ft of the light fixture; see table below for coordination of enclosure sizes. All dimming drivers comply with IEEE C62.41 surge protection.

REMOTE LOCATION EMERGENCY



Remote emergency battery IOTA ILB-CP05 provides 5W to one fixture for 90 minutes. Remote power supplies with EM option require an enclosure by others with minimum size of 11"L x 6.75"W x 3.25"H that meets local codes. Emergency battery remote power supplies cannot be located any more than 50 feet from light fixture.

BeveLED Block® Surface - BLSD5 Square Downlight

USAI® Lighting

BEVELED BLOCK SPECIFICATIONS

FIXTURE WEIGHT
BeveLED Block weighs 5 lbs

BODY
5-13/16" x 5-13/16" square die cast aluminum body available in a variety of powder coated paint finishes. Custom colors also available (provide RAL #).

MOUNTING
CC: Conduit cutout mounting fixtures are designed to mount to surface-mounted 4"octagonal junction boxes with surface-mounted conduit connections. CC housings have 4 keyslots, one in each side, and ship with one conduit cutout key and three solid cover keys installed in the housing. 2 additional conduit cutout keys are shipped with the fixture, and the different key types are interchangeable in the field. Please see installation instructions for drawings and more details.
RB: Recessed ceiling 4" octagonal junction box mounting fixtures are designed to mount to a ceiling retaining a recessed 4"octagonal junction box. The sides are solid and have no cutouts, please see drawings and installation instructions for more details.
SJ: Surface mounted 4" octagonal junction box mounting fixtures are designed to mount to a surface-mounted junction box that has electrical supply coming from the plenum (no surface-mounted conduit). The sides are solid and have no cutouts, please see drawings and installation instructions for more details

WARRANTY
Based on IESNA LM80-2008, BeveLED Block has a 50,000 hour rated life at 70% lumen maintenance (L70). USAI Lighting Warranty covers replacement parts for 5 years from date of shipment.

LISTINGS
Dry/Damp/Wet for RB and SJ mounting. CC mounting style is dry/damp only. NRTL/CSA-US tested to UL standards. IBEW union made.

NOTES
- Ambient temperatures at fixture location should not exceed 40°C during normal operation.
- Consult factory for video capture applications.

PHOTOMETRICS
Consult factory or website for IES files. Tested in accordance with IESNA LM79. www.usailighting.com/block

DIMMING DRIVER COMPATIBILITY SELECTION GUIDE
D3 / DIML3

DIMMING DRIVER WIRING SCHEMES:

NOTES:
Wiring diagrams are examples of typical installations intended to illustrate the number of wires that must be run to fixture. These diagrams are not intended to specify all equipment necessary for a given dimming circuit. Refer to specific dimmer manufacturer's documentation for details.

IMPORTANT SAFETY INSTRUCTIONS - SAVE THESE INSTRUCTIONS

1. Keep these instructions in a safe place for future reference.
2. Only qualified electricians in accordance to local codes should install these fixtures.
3. De-energize the electrical circuit at the circuit breaker prior to installation process or servicing.
4. Make sure all connections are in accordance with the National Electrical Code and any local regulations.
5. Cap any wires not used separately (not together).

DIMMING DRIVER WIRING SCHEMES:

NOTES:
Wiring diagrams are examples of typical installations intended to illustrate the number of wires that must be run to fixture. These diagrams are not intended to specify all equipment necessary for a given dimming circuit. Refer to specific dimmer manufacturer's documentation for details.

IMPORTANT SAFETY INSTRUCTIONS - SAVE THESE INSTRUCTIONS

1. Keep these instructions in a safe place for future reference.
2. Only qualified electricians in accordance to local codes should install these fixtures.
3. De-energize the electrical circuit at the circuit breaker prior to installation process or servicing.
4. Make sure all connections are in accordance with the National Electrical Code and any local regulations.
5. Cap any wires not used separately (not together).

D7 / DIML7 and D7E Dimming Driver Wiring

D7 / DIML7 and D7E are linearly programmed dimming drivers.
D7 / DIML7 = EldoLED SOLOdrive DALI control dims from 100% to 0.1%
D7E = EldoLED ECOdrive DALI control dims from 100% to 1%

SRT2 EDGE-LIT

CEILING/SURFACE/GARAGE

DRIVE EDGE-LIT

FEATURES

- Edge-lit optical assembly delivers exceptional uniformity over the entire lens with indirect illumination that reduces glare and improves visual comfort
- Low profile housing intended for 8' - 20' mounting heights for surface, trunnion/yoke or pendant mounting
- Applications include parking garage, walkway or building canopies, corridors, tunnels, large stairwells and other interior applications
- Multiple optical distributions are available making the Beacon Edge-Lit luminaire both versatile and functional
- UL/cUL listed for wet locations, IP65 and 3G vibration rated
- Ambient temperatures of up to 40°C

CONTROL TECHNOLOGY

NX DISTRIBUTED™ INTELLIGENCE wiSCAPE™

SRT BROCHURE

SPECIFICATIONS

HOUSING

- Die-cast aluminum housing ensures long electrical component life and luminaire performance
- Corrosion resistant powder coat finish both protects and provides architectural appearance
- One piece molded silicone gasket ensures weather proof seal
- Thermally isolated driver mounted to dedicated bracket reduces operating temperatures and increases driver life and reliability

OPTICS

- Edge-lit acrylic light guide provides blended non-pixelated light for unprecedented visual comfort
- Choice of multiple light outputs with lumen range of 4,000–16,000
- Five distribution types: Type V Square, Type V Rectangular, Type V Concentrated, Type V Wide or Asymmetric (Type 3/4)
- Wide variety of CCT's and CRI's offered: 3000K (70CRI), 3000K (80CRI), 3500K (80CRI), 4000K (70CRI), 4000K (80CRI) or 5000K (70 CRI) CCT

ELECTRICAL

- 120V–277V 50/60Hz with 347V and 480V available
- 0-10V dimming drivers are RoHS compliant and IP66
- Surge protection – Standard 10kA with optional end of life LED indicator

INSTALLATION

- Standard quick mount plate over standard 4" square junction box or octagonal box and allows for simplified fixture installation.
- Standard luminaire accepts a rigid or free-swinging 3/4" NPT stem for pendant mount via wet location j-box (by others)
- Optional bird deterrent shroud available for field installation
- Optional trunnion/yoke mount available for field installation

OPTIONS/CONTROLS

- Standalone occupancy sensor available for on/off or dimming operation
- NX Distributed Intelligence™ available with in fixture wireless control module, features dimming and occupancy sensor
- wiSCAPE® available with in fixture wireless control module, features dimming and occupancy sensor
- UL924 device available for standalone and wireless control override during power interruptions
- Uplight option provides approximately 800 lumens and consumes only 8 additional watts
- Integral battery backup option available with and without heater. Rated for 0°C (without heater) and -30°C (with heater)
- Emergency lighting relay available for generator or central inverter supplied lighting
- Vandal resistant wire guard available as an option for factory installation or as an accessory for field installation

CERTIFICATIONS

- Listed to UL1598 for use in wet location, listed for -40°C to 40°C applications
- IDA approved with zero uplight for 3000K and warmer CCTs
- IP65

WARRANTY

- 5 year warranty
- See HLI Standard Warranty for additional information

Sensor Controls

SCP-8F	Remote control programmable line voltage sensor (8-12' recommended MH)
SCP-20F	Remote control programmable line voltage sensor (12-20' recommended MH)
SCP924-8F	Programmable sensor with UL924 dimming bypass module for controls override (8-12' recommended MH)[3]
SCP924-20F	Programmable sensor with UL924 dimming bypass module for controls override (12-20' recommended MH)[3]

Accessories (Order Separately)

☐	**SRT2-WG**	Wire Guard for SRT2 version
☐	**SRT-MB**	Mounting bracket for pre-installation
☐	**SRT2-BRD**	Bird deterrent shroud for SRT2 version, not available with uplight or trunnion mount
☐	**SRT2-TM**	Trunnion/Yoke accessory for SRT2 version
☐	**SCP-REMOTE**	Remote control for SCP option; order at least on per project to program and control

Notes:

1 Up to 85W light engines only
2 Must specify voltage, 120V or 277V for E and EH
3 Universal voltage only
4 100–140W light engines only
5 Standard wire lead length 24"
6 Specify when using external 0-10V dimming system

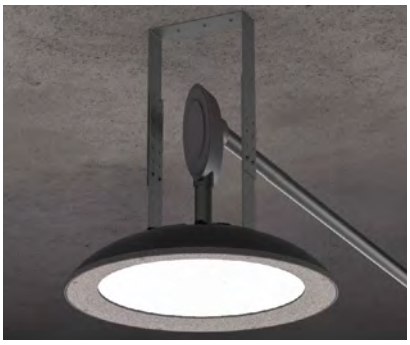
ADDITIONAL INFORMATION

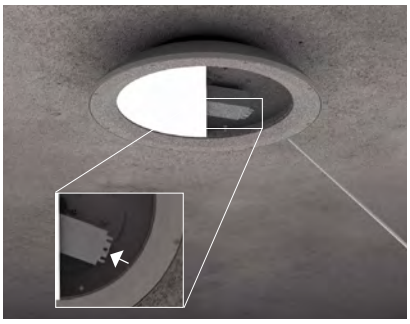
MOUNTING



Surface Mount

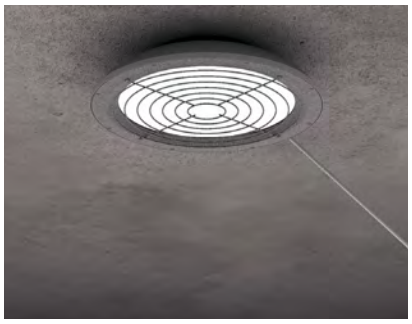
Mounting plate with “quick mount” hanger for one person simple installation.

Pendant Mount



Standard 3/4" threaded entry for pendant applications.

Trunnion/Yoke Mount



Multiple position trunnion mount adjusts 9" up and down for positioning in 1" increments.

ACCESSORIES AND SERVICES

Battery Backup

Integral battery backup option available on SRT2 version.

Wire Guard

An optional wire guard can be specified at the factory or as an accessory for field installation.

Bird Deterrent

An optional bird shroud deterrent can be specified at the factory or as an accessory for field installation.

SPECIFICATIONS

Housing:

- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.

Lens Frame:

- One-piece low copper aluminum alloy die-cast is secured to housing with 6 screws.

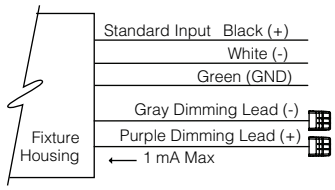
Backlight Control

- Optional Backlight Control on each LED module to completely control unwanted backlight.

Lens

One-piece flat glass lens slips secure with clips. Extra silicone gasketing is provided to retain a clear optical compartment.

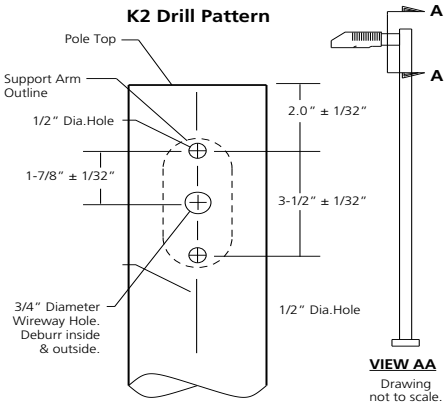
Optical Module:



- LEDs shall be mounted to a metal printed circuit board assembly (MCPCB).
- Optical lenses shall be clear injection molded PMMA acrylic.
- Each MCPCB and optic shall be sealed to the diecast housing and sealed with a continuous one piece injection molded silicone rubber gasket.
- Patent Pending design of optical array shall independently shield each LED optic across the length of the aperture.
- Optional fixture finish optical surfaces shall not exceed BUG ratings of the standard white finish and shall be greater than or equal to the delivered lumens of the optional matte black optical surface finish.

Electrical Components

- Standard programmable driver allows for programmable drive current settings.
- Electrical components are stategically located in the driver gear compartment with a molded silicon grommet seal to provide separation from the optical chamber.
- Maximum lightning surge current 20KA with thermally protected varistor technology. Surge suppression is series circuited preventing total fixture failure. ANSI/IEEE C62.41 Category C High.
- Open circuit fault will turn off the luminaire in order to protect the sensitive electronics and acts as a signal for maintenance.
- Programmable Driver is rated for -40°C starting.
- "Thermal Shield", primary side, thermister provides protection for the sustainable life of electronic components (350mA to 700mA).



Dimming:

- Dimming range from 100% to 10% through the use of the standard 0-10V interface on the programmable driver.
- Modular wiring harness in the service area provides user access to the dimming circuitry.
- Dimming circuitry compatible with 0-10V, user-defined control devices.
- Optional factory programmed dimming profile.

Support Arm:

- Die-cast, low copper aluminum alloy, with splice access cover.
- Die-cast pole adaptor and an internal reinforcing plate are provided with a wire strain relief.
- The arm adapter is square or circular cut for specified pole size and shape.
- For field wire connections, a terminal block is mounted in the arm cavity and accessible behind the splice access cover. The block accepts #14 to #8 wire sizes and is factory prewired to the electrical module's quick-disconnect plug inside the electrical compartment.

Optional Slip-Fitter:

- Internally accessible slip-fitter attaches to a 1-1/4" to 2-3/8" tenon and allows hands-free wiring and maintenance.

Optional Wall Mount:

- Optional, cast aluminum mounting plate attaches to a wall over a junction box and the speed mount is bolted to the cover plate. To complete the wiring, the luminaire assembly slides over the mounting plate.

Fusing:

SF for 120, 277, and 347 Line volts

DF for 208, 240, and 480 Line volts

Hight temperature fuse holders factory installed inside the fixture housing.

Fuse is included.

Finish:

Fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat.

Standard colors include (BL) Black, (DB) Dark Bronze, (GT) Graphite, (PS) Platinum Silver, (LG) Light Gray, (TT) Titanium, (WH) White, and (CC) Custom Color (Include RAL#).

Certifications and Listings:

- UL 1598 Standard for Luminaires.
- UL 8750 Standard for Safety for Light.
- ANSI C136.31-2010 3G Vibration tested and compliant.
- IDA approved, 3000K and warmer CCTs only
- IP66 Certified

CAUTION:

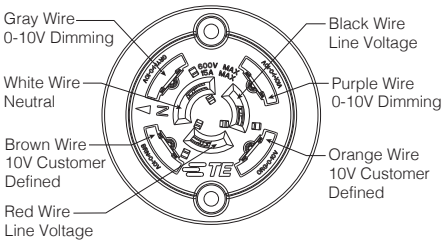
Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

WARRANTY:

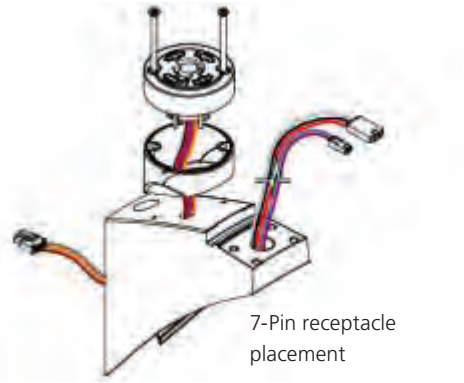
For full warranty see: http://www.hubbelllighting.com/resources/warranty

Kim Lighting reserves the right to change specifications without notice.

CONTROLS



Photocell Receptacle



7PR

Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:

1. Traditional on/off photoelectric control.
2. 5-pin wireless photoelectric control for added dimming feature.
3. 7-pin wireless photoelectric control for dimming and additional I/O connections for customer use.

7-Pin receptacle placement

Wireless Controls

- Optional universal voltage (120-277V) for dusk to dawn energy savings.Photocontrol is factory installed inside the housing with a fully gasketed sensor on the side wall. For multiple fixture mountings, one fixture is supplied with a photocell to operate the others.

- Occupancy Sensor shall be programmable anduse passive infrared (PIR) sensing technology that reacts to changes in infrared energy (moving body heat) within the coverage area. Careful consideration must be given to obstructions that may block the sensor's line of sight.

- Factory default settings for SCP option shall be:- High mode: 10V - Low mode: 1V - Ramp-uprate: disabled - Fade-down rate: disabled -Photocell: Off - Sensitivity: Full - Time Delay:Fade to low: 5 minutes - Time Delay: Fade to off: 1 hour

- The SCP enables any wall mounted luminaire,in excess of 75 watts, to meet California Title 24 requirements with integral 10KA surge protection for added reliability and serviceability.For more detail: http://www.aal.net/products/sensor_control_programmable

AstroDIM

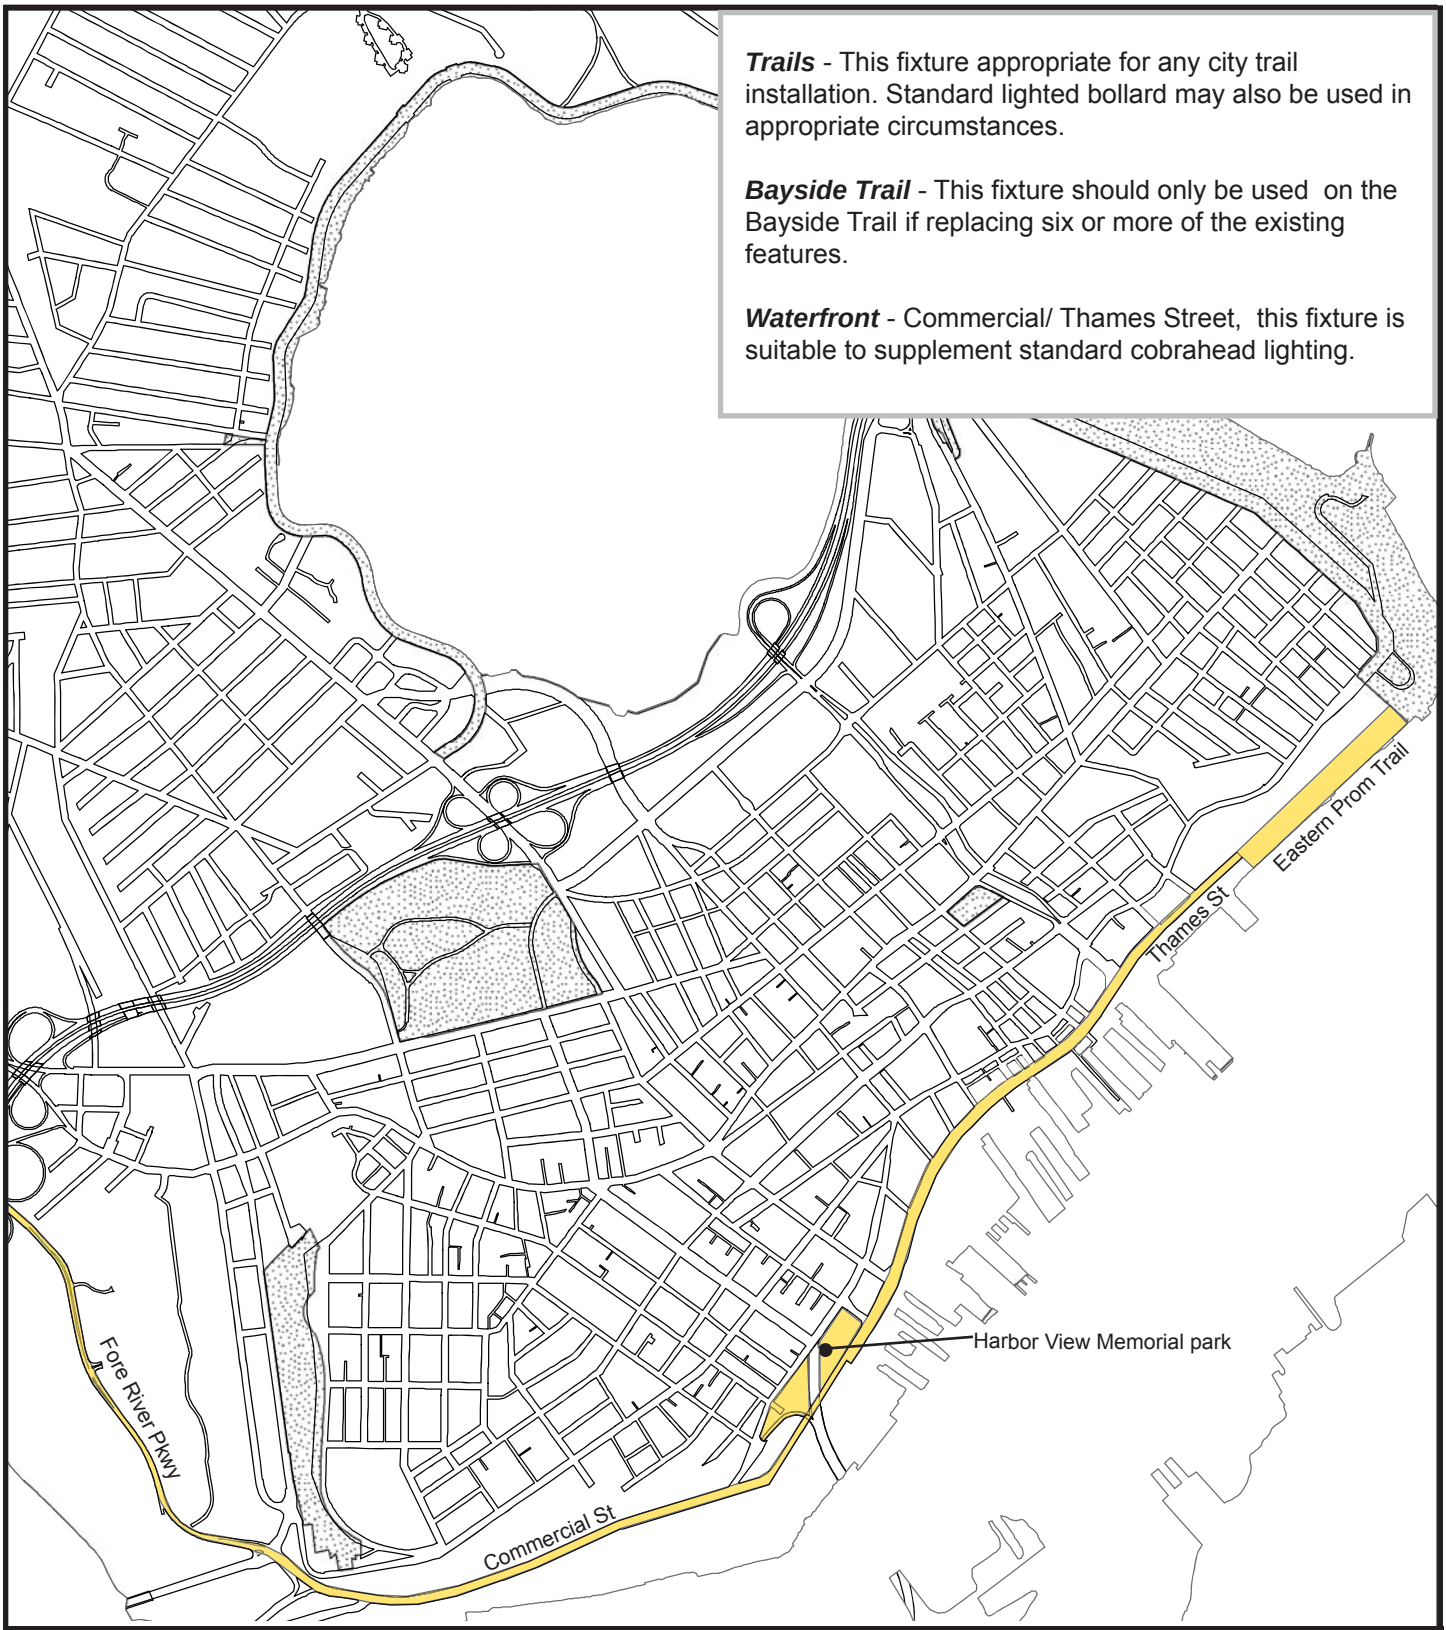
AstroDIM provides multi-stage night-time power reduction based on an internal timer referenced to the power on/off time. There is no need for an external control infrastructure. The unit automatically performs a dimming profile based on the predefined scheduled reference to the midpoint, which is calculated based on the power on/off times.

SiteSync™[1]

SiteSync™ wireless control system for reduction in energy and maintenance cost while optimizing light quality 24/7. See ordering information or visit www.hubbelllighting.com/products/sitesync for more details.

[1]PRECOMMISSIONED SITESYNC ORDERING INFORMATION: When ordering a fixture with the SiteSync lighting control option, additional information will be required to complete the order. The SiteSync Commissioning Form or alternate schedule information must be completed. This form includes Project location, Group information, and Operating schedules. For more detailed information please visit www.HubbellLighting.com/products/sitesync or contact Hubbell Lighting tech support at (800) 345-4928.

SiteSync fixtures with occupancy sensor (SWPM) require the mounting height of the fixture for selection of the lens.

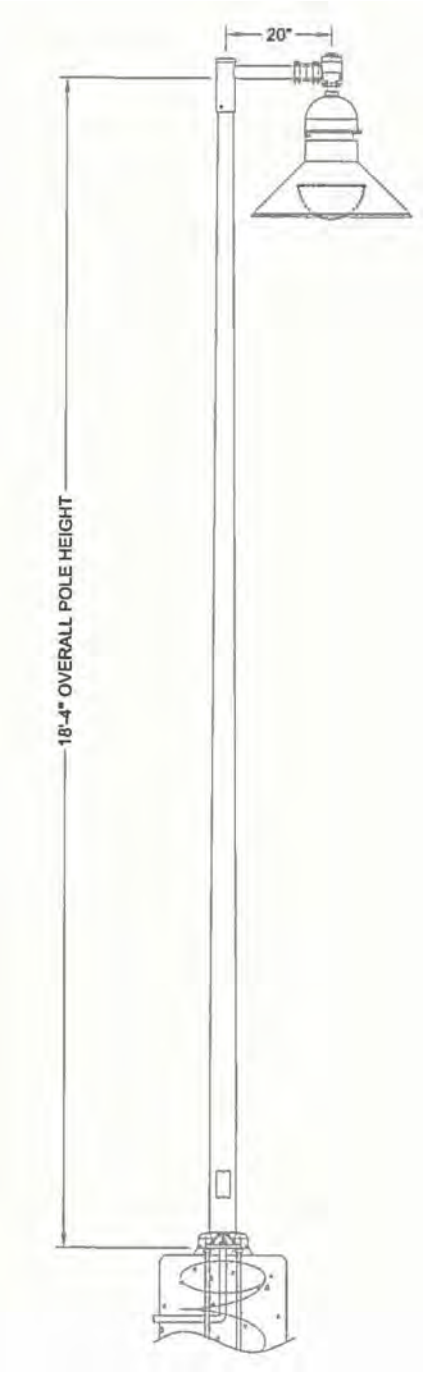


[2]Voltage, [3]Color, [4]Pole Diameter,

Kim Lighting reserves the right to change specifications without notice.

Trails - This fixture appropriate for any city trail installation. Standard lighted bollard may also be used in appropriate circumstances.

Bayside Trail - This fixture should only be used on the Bayside Trail if replacing six or more of the existing features.



Waterfront - Commercial/ Thames Street, this fixture is suitable to supplement standard cobrahead lighting.

Pendant mount
IES Type IV Distribution
Thermal resistant prismatic glass lens held in a formed aluminum door frame.
50 watts
Universal Voltage (120-277V)
Dimming driver with 7-pin photocontrol receptacle
LED 3000K color temperature

BRACKET ARM
Aluminum crossarm with a post-top fitting for a 2-3/8“ by 6” tenon.

SLIP FITTER
Holophane Glasswerks Slip Fitter
Model SG20/1-BK

2-3/8” O.D. with swivel cast fitter.

LIGHTING POLE
Holophane
Model: RTA1850E-PL-ND-BK-4

Aluminum pole shaft rated for a 90 mph wind load with a 1.3 gust factor.

Provide four hot-dipped galvanized steel L-type anchor bolts. Lighting pole shall be hot dipped galvanized prior to powder coat paint.

DIMENSIONS
Overall Height = 18’ 4”
Bracket Arm = 1’ 6“

FINISH
Black (standard) - polyester powder coat

APPLICATION
Trails: Appropriate for any city trail installation.
Waterfront (Commercial/Thames St): Supplemental pedestrian lighting to standard cobrahead lighting.

Spacing:
One side: 90’ - 125’ on center
Alternating sides: 175’ - 225’ ft on center

Follow established pattern. Single arm oriented over trail or street; Double-arm used in medians or similar.

I, Vincent P. Veroneau, hereby certify that a neighborhood meeting was held on February 13, 2020 at 321 Commercial Street, Portland, Maine at 5:30PM for the proposed project located at 113 West Commercial Street.

I also certify that on January 28, 2020, invitation mailed to the following:

1. All addresses on the mailing list provided by the Planning Division which includes property owners within 500 feet of the proposed development or within 1,000 feet of a subdivision within an industrial zone or industrial zone change.
2. Residents on the "interested parties" list.

Signed,

Vincent P. Veroneau
February 20, 2020

Attached to this certification are:

1. Copy of the invitation sent
2. Sign-in sheet
3. Meeting minutes

J.B. Brown & Sons
10 Free Street
Portland, ME 04101
207-774-5908 (phone)

January 29, 2020

Dear Neighbor:

Please join us for a neighborhood meeting to discuss our plans to construct a Veteran's Administration Health Clinic and structured parking garage located at 113 West Commercial Street, Portland, Maine.

Meeting Location: **Casco Bay Conference Room – 2nd floor, Courtyard by Marriott Hotel 321 Commercial Street, Portland, ME**

Meeting Date: **Thursday, February 13, 2020**

Meeting Time: **5:30pm**

The City code requires that property owners within 500 feet (1000 feet for proposed industrial subdivisions and industrial zone changes) of the proposed development and residents on an "interested parties list", be invited to participate in a neighborhood meeting. A sign-in sheet will be circulated and minutes of the meeting will be taken. Both the sign-in sheet and minutes will be submitted to the Planning Board.

If you have any questions, please call me at (207) 774-5908.

Sincerely,

Vincent P. Veroneau

Note:

Under Section 14-32(C) and 14-524(a)d of the City Code of Ordinances, an applicant for a Level III development, subdivision of over five lots/units, or zone change is required to hold a neighborhood meeting within 30 days of submitting a preliminary application or 21 days of submitting a final site plan application, if a preliminary plan was not submitted. The neighborhood meeting must be held at least seven days prior to the Planning Board public hearing on the proposal. Should you wish to offer additional comments on this proposed development, you may contact the Planning Division at 874-8721 or send written correspondence to the Planning and Urban Development Department, Planning Division, 4th Floor, 389 Congress Street Portland, ME 04101 or by email: jrather@portlandmaine.gov

Neighborhood Meeting Attendance

On February 13, 2020 the following members of the public met at the Courtyard by Marriott on 321 Commercial Street, Portland, Maine to discuss the development of a new 2-story 68,000sf medical clinic building, 150 surface parking spaces, and a 378 space structured parking garage on 8 acres of land located at 113 West Commercial Street, Portland, Maine.

MEETING MINUTES
VA CLINIC – FEBRUARY 13, 2020

On February 13, 2020, Vin Veroneau from J.B. Brown & Sons presented the project at a neighborhood meeting using a PowerPoint presentation, which provided information the project team members along with an overview of the medical office building and structured parking garage. Stephen Bushey, the civil engineer working on the project, was also in attendance and available to answer questions regarding the site design and traffic. After the presentation, there was an opportunity for attendees to ask questions with the following items covered:

Will the front beacon/stair towers at the front of the building be a light issue for the houses in the back and how long will they be on?

We do not anticipate light from the front lobbies to be an issue to the houses on Danforth Street.

Will there be lights on top level of the garage and will they turn off at night or be motion activated?

Yes. There will be lights on the top level of the garage. We will explore the option of motion detection to see if that will meet the life safety requirements.

Who will be managing the garage and will there be on-site parking operator?

J. B. Brown & Sons will be the property manager, but we do not anticipate an on-site garage operator.

What is the allocation of staff and patient parking?

Staff parking is 150 spaces on grade and 250 spaces in the garage for patients.

Will the parking garage be considered for tourist, visitor, or service industry parking and how much will the parking cost?

We do not have a current user for the additional parking spaces, but we anticipate potential use from fisherman and office users that are having difficulty finding and affording parking in the central business district. We do not have pricing set at this point, but it will be significantly less than the $150– $200 per month currently downtown.

Will the on grade parking have foliage?

Yes, the islands will have trees.

Would you consider adding landscaping/foliage to the top level of the garage, Possibly potted trees?

We have not considered foliage on the top level of the garage, but we are happy to research the possibility of adding some greenery on the top level. Possibly potted plants in the corners.

Where will snow removal be stored and will snow be kept on top level of the garage?

We have identified snow storage on-site and will remove snow off site as needed.

Is this a 24-hour facility and will there be security staff?

The VA operation is currently Monday through Friday roughly 7:30 AM to 6 PM. I am not sure of the VA's security staff, but we will have off hours security patrols as we do in our adjacent properties.

Will there be prescription drugs in the building?

I am not sure, but I assume they would have similar prescription drugs on the site as a typical primary provider would have, such as Intermed.

Is a path or a street getting put in between the garage and Star Match Building and is Emery Street an accepted Portland street?

There will be access to the garage and the Star Match building parking lot via the lower portion of Emery Street. We are designing a pedestrian walkway between W. Commercial St. and the upper portion of Emery Street. Emery Street is an accepted Portland street, but we are in discussions to discontinue the street with continued public access.

What kind of trail/walkway will be put between W. Commercial St. and lower Emery Street? Can it be more permanent than just timbers with stone dust?

We anticipate a trail/walkway of stone dust and granite/stone steps. Given the steep grade, we switchbacks will be incorporated but it will still be a relatively steep climb.

Will there be a trail in front of them medical building, when will it be built, and how big will it be?

There will be a 10-foot multi use path in front of the building that is constructed of pavement.

Was there a traffic study done? And will there be a traffic light?

Yes, there was a traffic study done and a traffic light is not warranted. A turning lane has been designed for the center of W. Commercial St.

Did the traffic study consider traffic bleeding over onto Danforth?

Yes. We had a traffic scoping meeting with the City and expanded our study area to include intersections away from the project and other developments planned in the area.

Do you plan on cutting into the tour of the hill at the back of the property? Will that cause a stability issue? How far will the cut be?

We anticipate some cut into the back hill, but are trying to limit that impact. A Geotech report was prepared and to the extent necessary, appropriate retaining walls will be installed at the back edge of the property and along W. Commercial St.

Is the patient load of this facility larger than the existing facility on commercial Street?

Yes, the facility is larger and has expanded uses beyond the services provided at the current facility.

Where is the trash located and when will it be picked up?

A trash receptacle corral is located at the back of the property. We will look to have the trash removed as close to normal business hours as possible.

Is VA leasing the clinic and are there property taxes associated with the site?

Yes, the VA has signed a 20-year lease on the property and property taxes will be paid on the facility.

Did the VA come to you asking for this land as it seems like an odd location for their facility?

No, the VA did not specifically come to us. We responded to a public request for proposal and were chosen based on our submission.

Have you considered installing solar panels?

We are exploring the possibilities of adding solar to the top of the garage, but have not determined whether that is a feasible option at this point.

What are the next steps and what is the construction timeline?

We have a planning board workshop scheduled for Tuesday, February 25. We expect that there will be a public hearing in early April with construction beginning in May in anticipation of a July 2021 occupancy by the VA.

The meeting adjourned at roughly 6:45pm.

Planning & Urban Development Department

LEVEL II and LEVEL III SITE PLAN
GENERAL DOCUMENT AND DRAWINGS CHECKLIST
Please submit each document as a separate PDF file
Please confirm by electronically checking the boxes to the left

** PLEASE FILL OUT AND UPLOAD SEPARATELY THE ZONING TABLE AND WAIVER TABLE AS NOTED BELOW **

GENERAL APPLICATION DOCUMENTS	
Yes ☑ NA ☐	**Project Description** • Cover Letter with detailed project description
Yes ☑ NA ☐	**Completed Checklist – Level II and Level III Site Plan** (this document)
Yes ☑ NA ☐	**Right, Title and Interest** • Deeds, leases, or purchase and sales agreements
Yes ☐ NA ☑	**Evidence of State or Federal Approvals** • Permits or letters of non-jurisdiction, if applicable
Yes ☑ NA ☐	**Zoning Assessment** • Table listing required and proposed uses and dimensional standards Zoning Assessment Table
Yes ☑ NA ☐	**Existing and/or Proposed Easements or Covenants, applicable.** • Evidence of existing easements and any proposed easements
Yes ☑ NA ☐	**Waiver Requests** • Written request for waiver describing request and reason Waiver Table
Yes ☑ NA ☐	**Financial Capability** • Letter or evidence from a financial institution or third party verifying financial capacity to undertake project
Yes ☑ NA ☐	**Technical Capability** • Evidence of technical capability of applicant and consultants – resumes and/or examples of past projects

LEVEL II AND LEVEL III SITE PLAN
STANDARDS AND SUBMISSION CHECKLIST

Provide assessment of compliance with standards and include supplemental documentation, as applicable
Please Submit each document as a separate PDF file

TRANSPORTATION

Yes	NA	
☑	☐	**Transportation Analysis- Traffic Impact (14-526 (a) 1)** • Provisions for pedestrian, bicycle, vehicle, and loading circulation and incremental volume of traffic impacts • Traffic Impact Study (Technical Manual, Section 1) if applicable
☑	☐	**Access and Circulation (14-526 (a) 2 a)** • Access and internal circulation, addressing ADA access • Access and egress impacts on traffic flows • Description and use of drive-up features, if applicable
☑	☐	**Loading and Servicing (14-526 (a) 2 b)** • Loading and servicing needs, route and travel way geometrics for deliveries • Turning templates for delivery vehicles, if applicable
☑	☐	**Sidewalks (14-526 (a) 2 c)** • Sidewalks and condition along street frontages and internal walkways • Engineered details for ADA ramps and public sidewalk details meeting sidewalk materials policy and ADA ramp construction details as applicable (Technical Manual, Section 1)
☐	☑	**Public Transit (14-526 (a) 3), if applicable** • Existing available transit services • Proposed site plan design details, such as easement, pad base, and shelter
☑	☐	**Off-Street Parking: Vehicle & Motorcycle/Scooter) (14-526 (a) 4 a and c)** • Expected parking demand, proposed parking supply, ADA parking, and applicable Zoning Requirements • Address Technical Manual standards (Section 1) for curb cut separation and parking lot layout and locate on site plan
☑	☐	**Bicycle Parking (14-526 (a) 4 b)** • Address bicycle parking requirements and identify locations on-site • Construction details for bike racks (Technical Manual, Section 1)
☑	☐	**Snow Storage (14-526 (a) 4 d)** • Management plan for snow removal and locate snow storage areas on plan
☑	☐	**Traffic Demand Management (TDM) (14-526 (a) 5), if applicable** • Develop TDM with Trip Reduction Targets and Strategies

ENVIRONMENTAL AND LANDSCAPE FEATURES	
Yes ☐ NA ☐	**Preservation of Significant Natural Features (14-526 (b) 1), if applicable** • Trees, plants, habitats listed on State or Federal list of endangered or threatened • High and moderate value waterfowl and wading habitat • Aquifers on Casco Bay Islands • Waterbodies (including wetlands, watercourses, significant vernal pools and floodplains) • Proposed preservation areas and protection measures • Documentation from environmental consultants, determinations from applicable state agencies
Yes ☑ NA ☐	**Landscaping and Landscape Preservation (14-526 (b) 2 a)** • Preservation of trees and preservation within required zoning setbacks (Technical Manual, Section 4) • Protection measures of existing vegetation during construction • Protection measures within Shoreland Zone, if applicable
Yes ☑ NA ☐	**Site Landscaping (14-526 (b) 2 b)** • Screening and buffering of service areas and between non-residential and residential uses • Planting plans with plant schedule and sizes (Technical Manual, Section 4)
Yes ☑ NA ☐	**Parking Lot Landscaping (14-526 (b) 2 b ii), if applicable** • Landscaped islands within parking areas (Technical Manual, Section 4)
Yes ☐ NA ☐	**Street Trees (14-526 (b) 2 b iii)** • Existing Heritage or Feature Trees on site and measures to preserve • Identify street trees on the plan meeting the site plan and Technical Manual standards (Section 4) or identify alternative measures, if applicable
ENVIRONMENTAL AND STORMWATER	
Yes ☑ NA ☐	**Water Quality, Stormwater Management and Erosion Control (14-526 (b)3 a)** • Stormwater report in compliance with Section 5 of Technical Manual and DEP Chapter 500 stormwater for basic, general and flooding standards, as applicable • Erosion control plan and measures • Evidence of compliance with Urban Impaired Stream Standards pursuant to DEP Chapter 500 stormwater, as applicable • Subsurface sanitary sewage disposal and groundwater protection

PUBLIC INFRASTRUCTURE AND SAFETY	
Yes ☑ NA ☐	**Consistency with City Master Plans (14-526 (c) 1)** • Identify consistency with master plans • Proposed easements, rights and improvements to connect or continue off-premises public infrastructure, as applicable
Yes ☑ NA ☐	**Public Safety and Fire Prevention (14-526 (c))** • Address Crime Prevention through Environmental Design (CPTED) (Technical Manual, Section 3) • Emergency vehicle access • Address consistency with public safety standards (Technical Manual, Section 3) • Submit a code summary referring NFPA 1 and all Fire Department standards (Technical Manual, Section 3) – Fire Checklist
Yes ☑ NA ☐	**Availability and Adequacy of Public Utilities (14-526 (c) 3) (Technical Manual, Sections 2 & 9)** • Electrical services, including providing underground services • Identify existing and proposed connections for public utilities and required public utility upgrades • Sewer line connections are required, if there is a main within 200 feet • Proposed solid waste management facilities on-site and management for the site • Written evidence of the ability to serve from utility companies, as applicable
SITE DESIGN	
Yes ☑ NA ☐	**Massing, Ventilations and Wind Impact (14-526 (d) 1)** • Wind and ventilation impacts on adjoining structures and/or adjacent public spaces. Wind study, if applicable • Bulk, location or height impacts on adjoining structures • Identify and locate HVAC equipment and venting away from public spaces and residential properties • Identify screening and manufacturing specifications for noise, if applicable
Yes ☐ NA ☑	**Shadows (14-526 (d) 2), if applicable** • Shadow analysis of impacts on publicly accessible open space (Technical Manual, Section 11)
Yes ☑ NA ☐	**Snow and Ice Loading (14-526 (d) 3)** • Building design to prevent snow and ice from loading or falling onto adjacent properties or public ways
Yes ☑ NA ☐	**View Corridors (14-526 (d) 4), if applicable** • Protection of designated view corridors (Portland Design Manual, Appen. 1)

Yes ☐ NA ☑	**Historic Resources (14-526 (d) 5), if applicable** • Identify developments within Historic Districts or affecting Designated Landmarks • Certificate of Appropriateness or other evidence • Identify Developments within 100 feet of Historic Districts or affecting Designated Landmarks. Advisory HP review may be required • Address preservation and documentation of Archaeological Resources
Yes ☑ NA ☐	**Exterior Lighting (14-526 (d) 6)** • Cut sheets of on-site light fixtures and any architectural or specialty lights (Technical Manual, Section 12) • Engineered details for any lights proposed in street right-of-way (Technical Manual, Section 10)
Yes ☑ NA ☐	**Noise and Vibration (14-526 (d) 7)** • Evidence of noise levels for equipment, such as equipment specifications, to demonstrate consistency with zoning requirements
Yes ☑ NA ☐	**Signage and Wayfinding (14-526 (d) 8), if applicable** • Signage plan showing the location, dimensions, height and setback of all existing and proposed signs. Signs in Historic Districts are reviewed by Historic Preservation staff • Proposed commercial and directional signage on site
Yes ☑ NA ☐	**Zone Related Design Standards (14-526 (d) 5)** • Address Historic Preservation Design Review, if applicable • Address any applicable design review standards by zone • Address submission requirements from Design Manual, page 1, addressing neighborhood context • Description of exterior materials, color, finish, and samples
Construction Management Plan	
Yes ☑ NA ☐	**Construction Management Plan** • Construction Management Document and Plan

LEVEL II AND LEVEL III SITE PLAN
DRAWINGS CHECKLIST

Please upload the following DRAWINGS with the listed details into e-Plan as separate pdfs

RECENT BOUNDARY SURVEY (stamped by Maine Licensed Surveyor)

- [x] Must be in compliance with Technical Manual, Section 13

SITE PLAN(s) (stamped by Maine Licensed Engineer) including:

Existing Conditions

- [x] Approximate location of structures on abutting property
- [x] Topography
- [ ] Locate water courses
- [ ] Delineate wetlands
- [x] Zone lines

Proposed Site Plan

- [x] Ground floor area, and grade elevations for all buildings

Access, Circulation, and Parking

- [x] Streets and intersections adjacent to site, any proposed geometric modifications
- [x] Location, dimensions and materials of all existing and proposed driveways, vehicle, bicycle, & pedestrian access ways with corresponding curb lines
- [x] Engineered specifications/ cross-sections for proposed driveways, sidewalks & paved areas
- [x] Location and dimensions of proposed loading areas
- [ ] Existing and proposed transit infrastructure with dimensions/ engineering specifications
- [x] Location of vehicle and bicycle parking with dimensions and engineering specifications

Site Considerations

- [x] Identify snow storage areas
- [x] Location of fire hydrants
- [x] Location of solid waste management facilities

UTILITY PLAN including:

- [x] Existing utilities on site and within public streets
- [x] Location, sizing and directional flows of all existing and proposed utilities
- [x] Location and dimensions of off-premises public or publicly accessible infrastructure adjacent to site
- [ ] Electric utility infrastructure

GRADING AND DRAINAGE PLAN including:

- [x] Existing grades and drainage
- [x] Proposed grades
- [x] Proposed stormwater management meeting Technical Manual (Section 5), standards
- [ ] Location and proposed alteration of a water course
- [ ] Preservation or alteration of wetlands

EROSION CONTROL

- [x] Must be in compliance with Technical Manual, Section 5

LANDSCAPE PLAN including:

- [x] Existing vegetation to be preserved and preservation measures
- [x] Proposed landscaping and buffers
- [x] Planting schedule

RECORDING PLAT, if applicable
☐ If Subdivision, must be in compliance with requirements of Section 14-496 (b)
ARCHITECTURAL PLANS AND RENDERINGS including:
☑ Exterior building elevations, color renderings, illustrations of all sides
☑ Location and dimensions of all existing and proposed HVAC and mechanical equipment, all proposed screening
☑ Provide context drawings, if applicable (Design Manual, page 1)
☑ Floor plans

TRANSPORTATION

The following statements are provided in accordance with the Section 14-526 of the ordinance.

TRANSPORTATION

(a) Transportation Standards

Transportation Analysis – Traffic Impact (14-526 (a) 1)

- *Provisions for pedestrian, bicycle, vehicle, and loading circulation and incremental volume of traffic impacts*
- *Traffic Impact Study (Technical Manual, Section 1) if applicable*

1. *Impact on Surrounding Street Systems:*

The surrounding street system consists of West Commercial Street and points west including the Veterans Bridge/Fore River Parkway. The signalized intersection at Cassidy Point is located approximately 1,100 feet west of the site. Approximately 1,000 feet east of the site includes the signalized Beach Street intersection and access to the Casco Bay Bridge and Commercial Street to the Portland waterfront and Old Port. The development site has approximately 1,400 feet of frontage along West Commercial Street. West Commercial Street contains a 75' to 80' wide right of way with approximately 40' of pavement for two travel lanes and paved shoulders on each side in front of the site. The Canal Landing Boat maintenance facility is located on the opposite side of the street from the development site and the Star Match Building complex, also owned by JB Brown & Sons is located east of the site.

The proposed use is considered consistent with the B-5b zoning district and the objectives identified in various City reports; therefore, we believe it results in no significant impact to the surrounding street system. The site traffic is expected to have a majority of its trip volume originating from the west and will therefore not significantly impact Commercial Street or points east of the site. There will be three primary driveways into the site from West Commercial Street and each will have sight distance in each direction exceeding 500 feet. All three driveways will be unsignalized. The easterly driveway will provide the primary access for staff/employee parking within the 153-space surface parking lot. The staff parking is located on the east side of the building to provide convenient access to the west end of the building, as staff entry is differentiated from patient/visitor access into the building.

The central driveway is the primary patient/visitor access route and it is located between the Clinic building and the garage, to allow for ease of patient access to the Clinic entrance as well as vehicular movement in/out of the garage. The parking garage will be primarily for clinic patient/visitor use and limited use by tenants in the Star Match building during normal business hours. The owner is discussing opportunities for overflow use by the City during off hour periods and storm events. The central driveway contains a single entrance lane and duel exiting lanes for right or left turning movements.

The easterly driveway is located east of the parking garage and will provide access for entering and exiting movement out of the garage. The driveway will also allow for emergency or heavy vehicle movement around the garage and to the rear access drive, thus allowing this infrequent traffic to avoid the central and westerly drives.

Traffic Impact Study

A Traffic Study is underway by Bill Bray of Traffic Solutions and this assessment will include trip generation and accident information for the site and surrounding area. The project will generate 325 AM and 288 PM peak hour trips and thus qualifies for a Traffic Movement Permit. The development team has completed the initial materials for a Scoping meeting and will be pursuing a concurrent review of a Traffic Movement Permit. A copy of the Traffic Movement Permit Application is included with this section.

Any further traffic assessment is subject to the City's peer review.

Access and Circulation (14-526 (a) 2 a)

- *Access and internal circulation, addressing ADA access*
- *Access and egress impacts on traffic flows*
- *Description and use of drive-up features, if applicable*

2. *Access and Circulation:*
   a. *Site Access and Circulation.*

      (i) Vehicular access to the site will be provided by three primary driveways. The applicant is requesting a waiver of Technical Standard 1.7.2.8 that limits the number of driveways to no more than two (2) for commercial sites, on the basis of the amount of site frontage exceeding 1,400 LF. The proposed driveways will be no less than 300 feet separation.

      (ii) We believe the primary points of access will not conflict with any existing turning movements on West Commercial Street. Each of the driveways may require dedicated left turn lanes for entering movements from the west. These lanes will not significantly overlap with left turning movements westbound into the Canal Landing Boat facility. The Boat yard has a similar configuration of three (3) driveways onto West Commercial Street, however the central and far westerly driveways are infrequently used and carry limited traffic volumes. The most easterly driveway into the boat yard will be located approximately 250 east of the proposed parking garage. The Canal Landing traffic volumes are also very low and are not expected to be impacted by the traffic associated with the Clinic/Garage development.

      (iii) Not applicable as there are no drive through features proposed.

Loading and Servicing (14-526 (a) 2 b)

- *Loading and servicing needs, route and travel way geometrics for deliveries*
- *Turning templates for delivery vehicles, if applicable*

2. *Access and Circulation:*
   b. *Loading and Servicing:*

      (i) Adequate provisions are made at the site for periodic loading from various size trucks to service the Clinic. A single bay loading dock is positioned at the rear of the building and delivery vehicles will enter the site from the easterly driveway and loop around the rear of the site to access the dock. Trucks will leave the site by maneuvering to the westerly driveway. Similarly, mobile imaging trailers will periodically visit the site and be temporarily parked at the rear of the Clinic. These trailers may need to circulate in a clockwise rotation around the garage which may require occasional travel in an opposite direction of the one-way pattern proposed. Based on the low frequency of this movement, it is considered to be not problematic and may require only very short duration (<5 minutes) assistance from Clinic personnel to assist with traffic control. Turning movement diagrams are contained at the end of this section.

Sidewalks (14-526 (a) 2 c)

- *Sidewalks and condition along street frontages and internal walkways*
- *Engineered details for ADA ramps and public sidewalk details meeting sidewalk materials policy and ADA ramp construction details as applicable (Technical Manual, Section 1)*

2. *Access and Circulation:*
   c. *Sidewalks:*

      (i) West Commercial Street does not currently have a sidewalk along the site frontage. The project includes the development of a 10' wide pathway along the site frontage, to be developed in accordance with the West Commercial Street Multi-modal Corridor Study. The pathway will be asphalt paved and will involve granite curb placement, an esplanade and the pathway. Linkage to the proposed VA Clinic development will be provided at several locations.

Public Transit (14-526 (a) 3), if applicable

- *Existing available transit services*
- *Proposed site plan design details, such as easement, pad base, and shelter*

3. *Public Transit Access.*

   a. West Commercial Street does not currently fall within a METRO service route, therefore transit service is not directly available at the site. We understand that METRO is currently undertaking an update to their systems and routes and service may be considered along West Commercial Street.

   b. The current development plans include no provisions for a bus shelter at this time, since there is no current service by the site.

   c. Transit service is not available at the site currently.

Off-Street Parking: Vehicle & Motorcycle/Scooter (14-526 (a) 4 a and c)

- *Expected parking demand, proposed parking supply, ADA parking, and applicable Zoning Requirements*
- *Address Technical Manual standards (Section 1) for curb cut separation and parking lot layout and locate on site plan*

4. Parking.

a. Location and Required Number of Vehicle Parking Spaces.

c. Motorcycles and Scooter Parking.

i. The development includes 152 surface parking spaces and 382 spaces within the parking garage. The tenant agreement with the VA requires that 400 spaces be provided for their programing. An additional 132 spaces will be provided in the parking garage and these will be available for use by tenants of the Star Match building. The City Code requires 155 spaces based on a ratio of 1 space/400 SF for a program of 62,300 SF.

ii. A Transportation Demand Management Plan has not been fully developed yet with the government but we have been advised that the VA does employ a rideshare program, so the applicant is requesting that the submission of a TDM plan be made a condition of approval tied to the issuance of a certificate of occupancy. This will allow the developer and government representatives an opportunity to coordinate the program for the site. We have been advised that VA will promote some TDM strategies including ridesharing and/or bicycle use as much as possible.

iii. The VA lease agreement requires the developer to provide 400 spaces.

iv. Parking aisles and dimensions on the existing parking lots meet the applicable standards. This will include 9' x 18' stalls and 24' min. two-way drive aisles and 16' wide one-way drives

v. All new surface parking shall be paved. Porous pavement is proposed for much of the surface parking field.

The site plan has been developed to allow safe passage and parking for motorcycles and scooters within the surface parking lots and parking garage.

Bicycle Parking (14-526 (a) 4 b)

- *Address bicycle parking requirements and identify locations on-site*
- *Construction details for bike racks (Technical Manual, Section 1)*

4. Parking.

b. Location and Required Number of Bicycle Parking Spaces.

The site plan contains multiple bike racks positioned on the site for use by staff and visitors. A capacity for up to 20 bikes will be provided on the site.

The applicant is requesting a waiver of the required number of bicycle parking spaces as that would exceed well over 35 bike spaces which is considered excessive for the Clinic use.

Snow Storage (14-526 (a) 4 d)

- *Management plan for snow removal and locate snow storage areas on plans*

4. Parking.
d. Snow Storage.

i. The site plans include multiple locations for the placement of snow.

ii. The applicant will provide snow removal on the pedestrian walks across the site and will remove snow as necessary to avoid displacement of any onsite parking.

Traffic Demand Management (TDM) (14-526 (a) 5), if applicable

- *Develop TDM with Trip Reduction Targets and Strategies*

5. Transportation Demand Management (TDM).

a. The applicant is currently reviewing the requirements of a TDM plan with the VA tenant representatives to determine what strategies may be employed on the development.

TRAFFIC MOVEMENT PERMIT APPLICATION

FOR PROPOSED

Department of Veterans Affairs

Community Based Outpatient Clinic

PREPARED FOR: J.B. Brown & Sons

PREPARED BY: William J. Bray, PE

December 2019

Provisionally Adopted 1/10/00

PERMIT APPLICATION – TRAFFIC
TRAFFIC MOVEMENT PERMIT, 23 M.R.S.A. § 704 – A

Please type or print:

This application is for:

Traffic 100-200 PCE's _____
Traffic 200 + PC-E's **X**

Name of Applicant: **FDS JBB Portland, LLC**

Address: **10 Free Street, Portland, Maine 04101** Telephone: **(207) 774-5908**

Name of local contact or agent: **William J. Bray, P.E., Traffic Solutions**

Address: **17 Mountview Drive, Gorham, Maine 04038**

Telephone: **(207) 400-6890**

Name and type of development: **Community Based Outpatient Clinic**

Location of development including road, street, or nearest route number: **113 West Commercial Street, Portland, Maine**

City: **Portland,** County: **Cumberland,** Tax Map **060** Block **A001** Lot **001**

Do you want a consolidated review with DEP pursuant to 23 M.R.S.A. § 704-A (7)? Yes ____ No **X**

Was this development started prior to obtaining a traffic permit? **No**

Is the project located in an area designated as a growth area (as defined in M.R.S.A. title 30 – A, chapter 187)?
Yes, **X** No _____

Is this project located within a compact area of an urban compact municipality? Yes: **X** No _____

Is this development or any portion of the site currently subject to state or municipal enforcement action? **No**

Existing DEP or MDOT permit number (if applicable): _____

Name(s) of DOT staff person(s) contacted concerning this application:

Name(s) of DOT staff person(s) present at the scoping meeting for 200+ applications: _____

NOTICE OF INTENT TO FILE

Please take notice that:

FDS JBB Portland, LLC

Is intending to file a Maine Department of Transportation Traffic Movement Permit application with the City of Portland under their delegated review authority pursuant to the provisions of 23 M.R.S.A. § 704–A on or about

December 6, 2019

The application is for:

A 62,170 square foot building with on-site parking capacity of 532 plus spaces. The Department of Veterans Affairs will lease the proposed site creating a Community Based Outpatient Clinic. The proposed project will generate a total of 229 trips during the weekday morning and 204 trips during the evening peak hours of the street.

At the following location: **113 West Commercial Street, Portland, Maine**

A request for a public hearing must be received by the City, in writing, no later than 20 days after the application is found by the City to be complete and is accepted for processing. Public comment on the application will be accepted throughout the processing of the application.

The application will be filed for public inspection at the City of Portland's Planning and Urban Development Office, during normal working hours. A copy of the application may also be seen at the municipal offices in:

Written public comments may be sent to the Department of Transportation, Traffic Engineering Division, 16 State House Station, Augusta, Maine 04333.

1/2000

CERTIFICATION

The traffic engineer responsible for preparing this application and/or attaching pertinent site and traffic information hereto, by signing below, certifies that the application for traffic approval is complete and accurate to the best of his/her knowledge.

Signature: _____ Re/Cert/Lic No.: 4907

Name (print): William Bray

Date: 12-1-2019

If the signature below is not the applicant's signature, attach letter of agent authorization signed by applicant.

"I certify under penalty of law that I have personally examined the information submitted in this document and all attachments thereto and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate, and complete. I authorize the Department to enter the property that is the subject of this application, at reasonable hours, including buildings, structures or conveyances on the property, to determine the accuracy of any information provided herein. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

SECTION 1

A. SITE PLAN

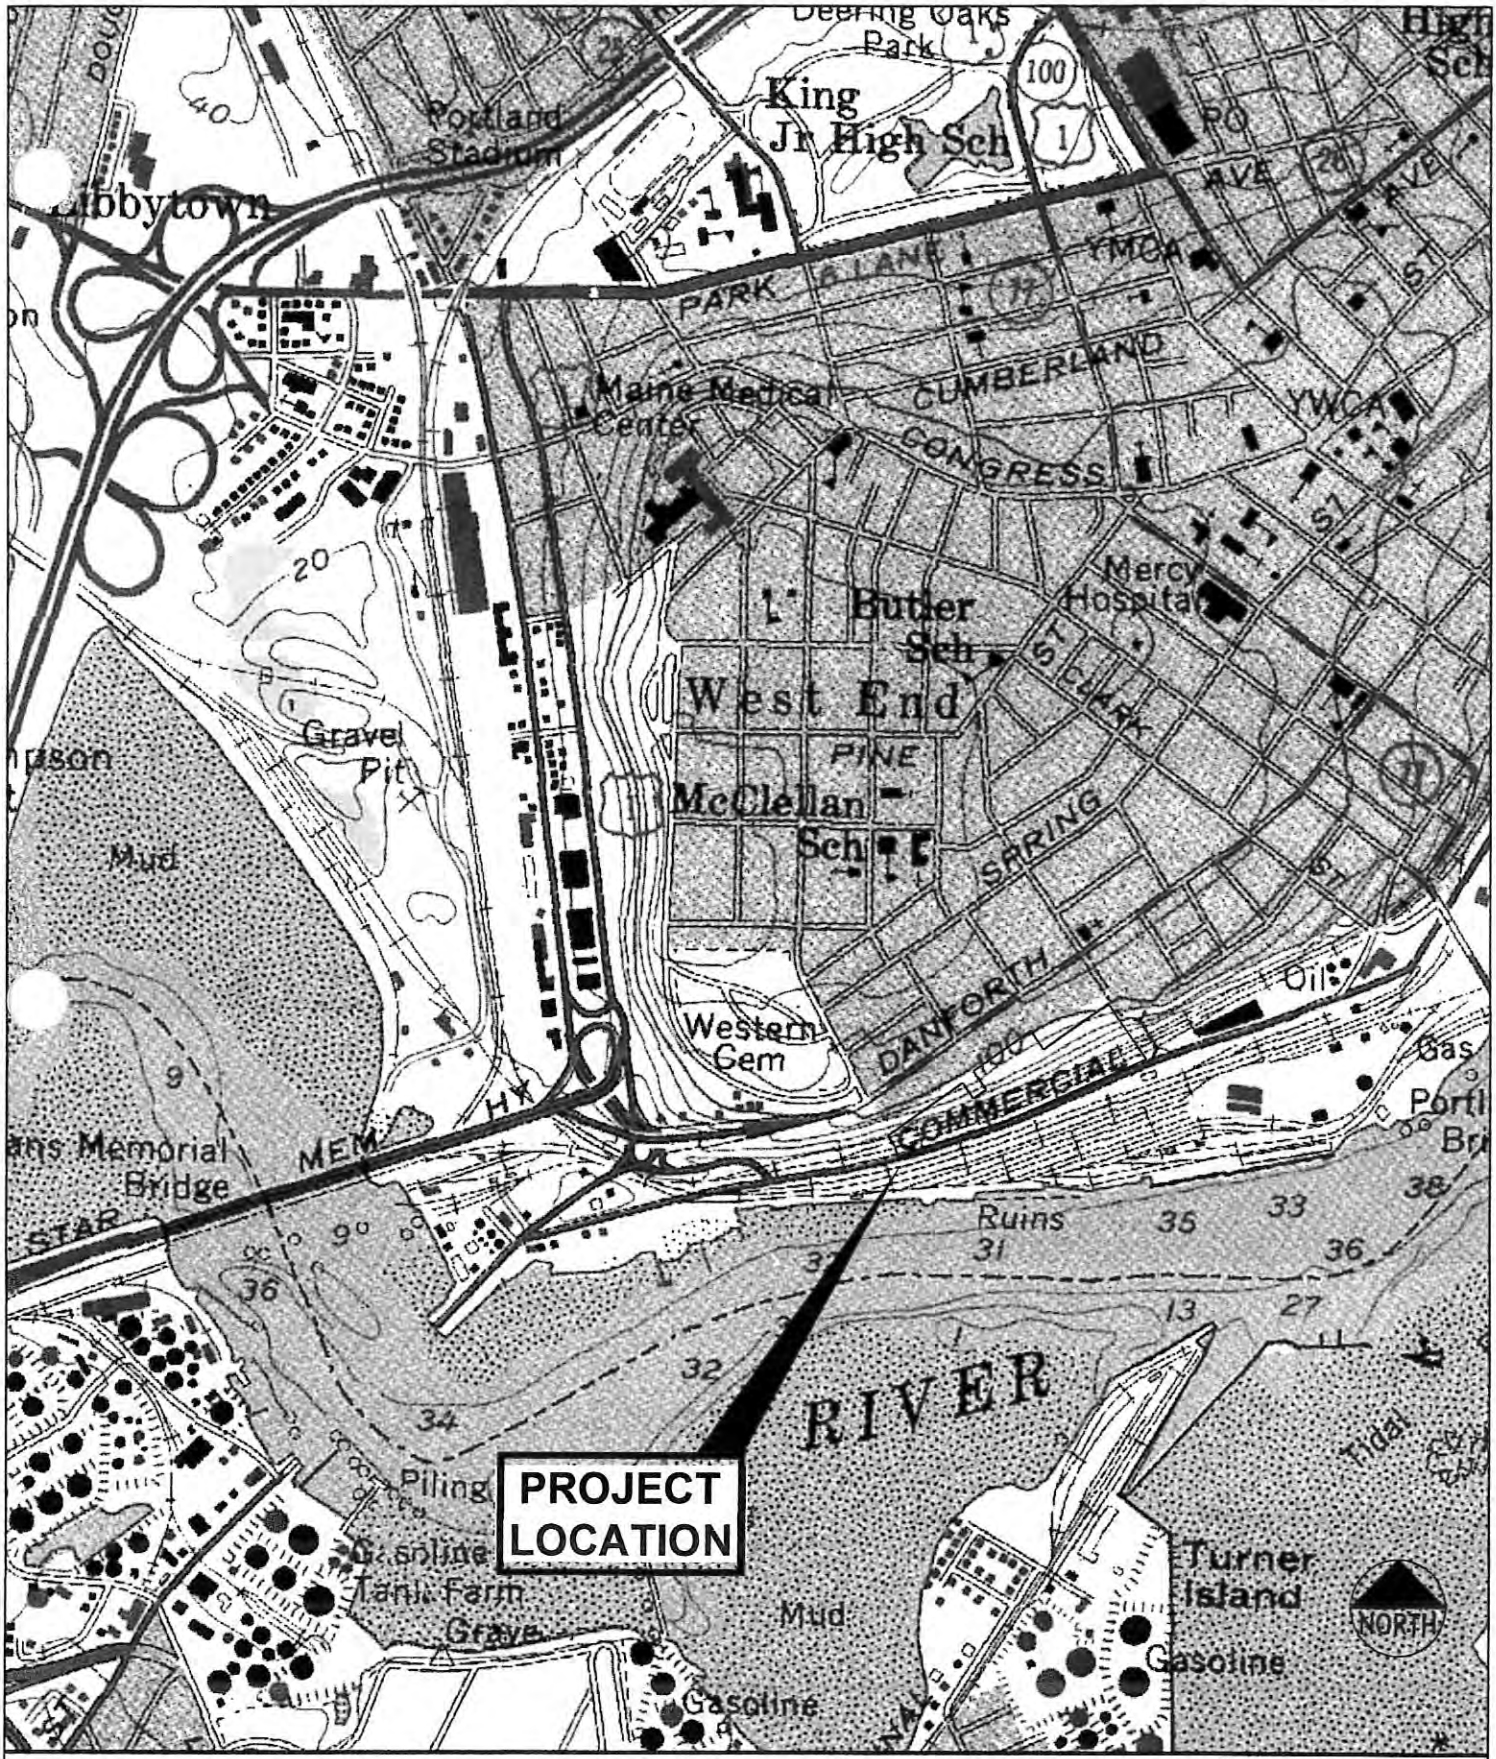
The Applicant is proposing to construct a 62,170 square foot two-story building on the 8.40-acre site located at 113 West Commercial Street. The Federal Department of Veterans Affairs (VA) will lease the proposed building creating a Community Based Outpatient Clinic. The proposed development includes a total of 532 on-site parking spaces with 150 surface parking spaces and 382 spaces within a three-level garage structure. The VA's lease agreement requires the applicant to provide a total of 400 on-site parking spaces to meet their programming needs. The remaining 132 parking spaces will be assigned to tenants within the adjacent Star Match building to accommodate both short and long-term parking requirements.

There will be three primary driveways into the site from West Commercial Street. All three driveways are proposed to be unsignalized. The westerly driveway will provide the primary access for staff/employees to the 150-space surface parking lot. Staff parking is located on the westside of the building to provide convenient access to the proposed building, as staff entry is differentiated from patient/visitor access into the building. The central driveway is the primary patient/visitor access route and it is located between the clinic building and the proposed site garage to allow for ease of patient access to the clinic building, as well as, vehicular movements in/out of the garage. The most easterly driveway is located east of the parking structure and will provide access for entering and exiting movements out of the garage. The driveway also provides for emergency and heavy vehicle movements around the garage and to the rear of the parking structure avoiding conflicts with other site uses through the westerly and central access driveways.

It is expected that each of the three driveways will require dedicated left-turn lanes for entry movements to the site from West Commercial Street. These lanes and the projected volumes of traffic through them are not expected significantly overlap with left-turn movements into the Canal Landing Boat facility. The Canal Landing site design also provides three points of access onto West Commercial Street with the central and far westerly driveways infrequently used and carrying limited traffic volumes. The most easterly driveway into the boat yard is located approximately 250-feet east of the proposed parking garage. The Canal Landing traffic volumes are very low and are not expected to conflict with traffic generated by the proposed Clinic site.

B. EXISTING AND PROPOSED SITE USES

The existing 8.40-acre parcel is unencumbered by existing structures for preservation, reuse or demolition. An abandoned rail spur exists on the site without any record easement found. The developable portion of the site has approximately 5.17 acres of land area with a total 1,400-feet of street frontage on West Commercial Street.



The Applicant is proposing to construct a 62,170 square foot two-story building on the 8.40-acre site located at 113 West Commercial Street. The Federal Department of Veterans Affairs (VA) will lease the proposed building creating a Community Based Outpatient Clinic. The proposed development includes a total of 532 on-site parking spaces with 150 surface parking spaces and 382 spaces within a three-level garage structure. The VA's lease agreement requires the applicant to provide a total of 400 on-site parking spaces to meet their programming needs. The remaining 132 parking spaces will be assigned to tenants within the adjacent Star Match building to accommodate both short and long-term parking requirements.

There will be three primary driveways into the site from West Commercial Street. All three driveways are proposed to be unsignalized. The westerly driveway will provide the primary access for staff/employees to the 150-space surface parking lot. Staff parking is located on the westside of the building to provide convenient access to the proposed building, as staff entry is differentiated from patient/visitor access into the building. The central driveway is the primary patient/visitor access route and it is located between the clinic building and the proposed site garage to allow for ease of patient access to the clinic building, as well as, vehicular movements in/out of the garage. The most easterly driveway is located east of the parking structure and will provide access for entering and exiting movements out of the garage. The driveway also provides for emergency and heavy vehicle movements around the garage and to the rear of the parking structure avoiding conflicts with other site es through the westerly and central access driveways.

It is expected that each of the three driveways will require dedicated left-turn lanes for entry movements to the site from West Commercial Street. These lanes and the projected volumes of traffic through them are not expected to significantly overlap with left-turn movements into the Canal Landing Boat facility. The Canal Landing site design also provides three points of access onto West Commercial Street with the central and far westerly driveways infrequently used and carrying limited traffic volumes. The most easterly driveway into the boat yard is located approximately 250-feet east of the proposed parking garage. The Canal Landing traffic volumes are very low and are not expected to conflict with traffic generated by the proposed Clinic site.

C. SITE AND VICINITY BOUNDARIES

D. PROPOSED USES IN THE GENERAL VICINITY OF THE PROPOSED DEVELOPMENT

Traffic generated by projects that have been approved by the Local Planning Board and/or the Maine Department of Transportation, yet are not opened, must be included in the estimate of pre-development traffic. Development projects listed in the recently completed September 2019 Traffic Impact Study for Portland Square Redevelopment will be included in the estimate of background traffic for the proposed Community Based Outpatient Clinic site. Trip generation estimates will be prepared for each listed project and included as background traffic in all future traffic analysis.

58 Fore Street
Portland Square Redevelopment

E. TRIP GENERATION

Site Trip Generation - Community Based Outpatient Clinic: Trip generation for the proposed Veterans Affairs Clinic project is based upon tables presented in the 10th edition(1) of the Institute of Transportation's Engineers "**TRIP GENERATION**" manual. The following trip rates were applied in that effort:

Land-Use Code 630 – Clinic [62,170 square foot building]

Weekday Street Peak Hour – AM Peak	= 3.69 trips/1,000sf
Weekday Street Peak Hour – PM Peak	= 3.28 trips/1,000sf
Weekday Peak Hour of Site – AM Peak	= 5.22 trips/1,000sf
Weekday Peak Hour of Site – PM Peak	= 4.64 trips/1,000sf

(1) **NOTE: MaineDOT requires the use of trip tables presented in the 7th edition of the ITE publication for estimating all trip generation for development projects requiring a Traffic Movement Permit. The earlier publication provides very minimal peak hour trip generation data for a clinic site; as a result, trip data in the 10th edition was applied. To confirm the appropriateness of the 10th edition trip rates, peak hour surveys were conducted at a local Veterans Administration site located at 655 U.S. Route 1 in the City of Saco. A summary of the local data is highlighted on the following page.**

Table 1, below, provides a summary of the trip generation for the proposed Community Based Outpatient Clinic project:

Table 1
Peak Hour Trip Generation Summary

Peak Hour Time Period	Peak Hour Trip Generation
AM Peak Hour (Street)	229 trips
PM Peak Hour (Street)	204 trips
AM Peak Hour (Generator)	325 trips
PM Peak Hour (Generator)	288 trips

As highlighted in the preceding Table 1, the proposed Veterans Administration's Community Based Outpatient Clinic (CBOC) development is expected to generate a total of **229** trips during the morning street peak hour and a slightly less volume of trips (**204** trips) in the evening peak hour of the street. Site trip projections for both the morning and afternoon peak hours of the clinic site are somewhat higher at 325 trips mid-morning, of a typical weekday and 288 trips mid-afternoon of the proposed site.
