1. Review and approve minutes from January 4, 2022.
 - a. January 4, 2022 Minutes
2. Applicator and Annual Reports
 - a. Applicator and Annual Report Questions
 - b. 2020 Annual Report
3. Discuss and Prepare for Applicator Forum
4. Portland Little League Ball Field Update
5. PFA sludge Information around Portland, ME
6. Set next meeting date
7. Adjournment

CITY OF PORTLAND, MAINE
Standing Pesticide Management Advisory Committee

Draft Minutes January 4, 2022

Members Present: Troy Moon, Karen Snyder, Priscilla Skerry, Avery Yale Kamila, Carol Laboissonniere, and Jesse O'Brien

Meeting called to order.

November 2nd Minutes

Remove the word draft at the top. Add the date and time.

Avery motions to approve the November minutes. Minutes approved unanimously.

Review Letter to Applicators

We will be adding language about signage and include a model sign. Will recommend applicators use a larger sign. Avery would like to emphasize putting the product on the sign.

In the list of what is reported on the letter, include "target pest". Karen wants to note that we need to include the link before sending it. Carol notes it may be difficult to change the size of the sign because they order from certain companies. Including wording that if these signs are completed correctly, the City will not need to call them.

Objectives for the Year

Karen put together a wishlist of objectives for the year for the committee.

1. Annual education events for applicators

Jesse recommends being in contact with applicators in Portland. Would recommend this be a zoom and not a regular meeting around the end of February/beginning of March. A small formal program to start over zoom and request feedback. Troy recommends picking a date for every year. Goal would be to go over lessons learned, signage requirements, ordinance education refresher. Avery would be interested to know of Amery? Approved products and their results. Applicators can share results with each other. Jesse and Troy will put together some kind of agenda for the 1 hour event. Troy recommends asking Jeff to come and talk about the Brown Tail Moth or invite Jean to talk. It would be best if we can note this event in the letter being sent out this week.

2. Events for the public

Having an annual event on earth day (April 22nd) would be possible. It will also be the one year anniversary of the compost program. This could be a combined event to talk about gardening, wild seeds project, composting drop offs, pollinators, managing lawns organically.

100 Resilient Yards project started by a member of the South Portland office. Goal is to reach 100 yards in Portland and South Portland to provide a complete educational

program and resources for homeowners. We are in the very early stages of this project but Erin will keep Karen informed on the progress of this project.

3. *Educational platforms for PMAC board members*

Should the PMAC meet with other city and town pesticide committees for a roundtable to review lessons learned with lawn care methods. Jeff could speak on the brown tail moths, Jean could speak to his experience. Avery would be interested to hear from Blue Hill because of their ordinance banning the sale. It could be marketed as "Portland Success Stories". This can be revisited next month.

4. *Committee Annual Report*

This is to be completed by the end of March and presented to the S&T Committee in April. Including the "target pest" in the report should make putting the report together easier. Need to remind Parks and Rec to file a report for Hadlock? Field. It is unclear if they use a third party applicator that may have also submitted a report. The report may be an opportunity to mention the success stories from the year. There is no set list of applicators that practice in Portland. Does it make sense to recommend an applicator license for Portland so we know who should be reporting. There is currently no way to know how many applicators should be reporting to the City. Jesse questions how this would be enforced.

5. *Communication Efforts*

Jesse notes that we have discussed having a social media presence in addition to the website and using it for outreach and education. Jesse will send the brown tail moth content as an example. The City office has instagram, facebook, and twitter pages where posts can be shared.

Karen recommends updating the website specifically with the 2020 applicator reports. Karen can send us content on how to identify safe pesticides?? and EPA number to be added to the website.

The next meeting will be January 31st at 6pm.

Meeting Adjourned.

Applicator and Annual Report Questions:

- How many applications received and being entered into data base?
- When will the report draft be ready to review?
- For 2021 Report, need to incorporate the compliance analysis that Avery did with the 2020 reports.
- Discuss proposed formatting revisions to the annual report.
- Follow up from Troy on the missing annual reports from Hadlock Field and Trobh Ice Arena since they had a pesticide sign in front of their building last year.
- Follow up from Troy on the Portland Click Violations.
 - Were the pesticide applicators or homeowners contacted?

City of Portland, ME
Pesticide Management Advisory Committee
Annual Report to the Sustainability and Transportation Committee
March 12, 2021

The City of Portland's Pesticide Ordinance requires the Pesticide Management Advisory Committee to provide a report to the Sustainability and Transportation Committee every year before March 31 in order to inform the City Council about the actions of the committee and to provide recommendations to the pesticide ordinance to enhance its environmental and public health benefits. This is the second annual report.

PMAC 2020

- Jesse O'Brien , Chair
- Avery Yale Kamila , Waiver Committee
- Carol Laboissonnier
- Tim Lindsay
- Priscilla Skerry
- Karen Snyder
- Troy Moon, City Staff

Resident Complaints

The City of Portland relies on community-sourced reporting through the See-Click-Fix (SCF) platform to monitor compliance with the Pesticide Ordinance. In 2020, residents filed twelve (12) SCF reports about potential Pesticide Ordinance violations. These occurred April through September. Many of them note the lack of proper signage on applied lawns, specifically the lack of a chemical name and trade name as required by the ordinance.

The Sustainability Office sent information about the ordinance to the owners of the properties identified by the See-Click-Fix report. We also included information about proper signage in our annual letter to applicators reminding them of the ordinance's reporting requirements. We will continue to respond to resident reports and encourage residents to use the platform to share concerns they may have about compliance.

In the instance of the two complaints about applications on public property, the applications were allowed to control invasive species on public property. The Sustainability Office reminded the Parks, Recreation, and Facilities Department that their contractors are required to follow the signage requirements of the ordinance.

Summary of SCF reports files included as Appendix A

Applicator Report Data

The Pesticide Use Ordinance requires that licensed applicators submit an annual report outlining all pesticide treatments (both synthetic and organic) within the City of Portland. To notify applicators of this

requirement, we utilized the MELNA and State of Maine Board of Pesticide Control lists and sent notice via email to all licensed applicators in Cumberland County. Information about the report and a Google Form to submit a report were also added to the Sustainability Office web pages within the City's website. We received reports from 36 businesses, which is 14 more than was received last year. Businesses that submitted reports include:

- | | |
|--------------------------------------|--|
| 1. A-Man Landscaping and Sports Turf | 21. Mainely Ticks |
| 2. A1 Exterminators | 22. MD Weaver |
| 3. Advantage Pest Control, Inc. | 23. Modern Pest Services |
| 4. Ant Man Pest Control, Inc. | 24. Mosquito Squad of Southern Maine |
| 5. Ants Etc. Pest Service | 25. Naturalawn of America |
| 6. Ants Plus Pest Control | 26. Octagon Cleaning and Restoration |
| 7. Aqua Laboratories, Inc. | 27. Pest-End Inc. |
| 8. Big Blue Solutions | 28. Protect Pest Services |
| 9. Bouchard Cleaning & Restoration | 29. Rainbow International of Greater
Portland |
| 10. Buggy Pest Control | 30. Riverside Golf Course |
| 11. DBA Whitney Tree Service | 31. Seabreeze Property Services |
| 12. Disfecta | 32. SGS Turf Care |
| 13. EZ Pest Solutions | 33. Sterling Insect/Lawn Control |
| 14. Food and Drug and the Bug, LLC. | 34. Terminix |
| 15. Fox Pest Control | 35. TowerMRL, Inc. |
| 16. Green Pest Defense | 36. Turf Doctor Lawn & Pest Services |
| 17. Liberty Pest Control, Inc. | |
| 18. Lucas Tree Experts | |
| 19. Maine Pest Solutions | |
| 20. Mainely Grass | |

Staff were pleased that these companies submitted reports detailing their pesticide applications during the calendar year 2020. *We do not know how many pest management and landscaping companies operate in Portland so we do not know how many firms are required to submit reports.*

Based on the reports, 139 distinct products were used in Portland in 2020. In total, 2,222 lbs and 776 gallons of undiluted products were used.

Applications occurred on:

- 621 acres of ground
 - 216 private
 - 405 public (primarily Riverside Golf Course, which is exempt from the ordinance and makes applications in accordance with its participation in the Audubon Cooperative Sanctuary Program)
- 176 trees
- 1,107 buildings, structures, and/or rooms for insects or mold
- 539 buildings or structures for rodents

- Zenprox
- Zylam

The data reported demonstrates that applications are primarily related to the control of ants or other pests that consume wood and damage property, which are allowed activities. There was also a significant increase in applied pesticides across the board for tree, insecticide, and rodenticide applications, which may be a direct result of the increase in pesticide application reporting this year. There were also a select few applications that were noted as ornamental, though this was certainly the minority. Staff has not reviewed the reports to determine whether all of the applications are in compliance with the ordinance.

While this reporting year had considerably more participation, this may have also led to more confusion amongst new reporters. The following reporting issues should be addressed for the next reporting period to ensure more precise data: (1) the lack of consistent style for how to address the unit of measure for total area treated, (2) the lack of consistent description between the types of applications, and (3) the identification of pesticides as organic or synthetic.

Education and Outreach Efforts

The pandemic limited the Sustainability Office's ability to engage in education and outreach in 2020 but staff was able to accomplish several things:

- The Sustainability Office created a postcard and mailed them to property owners near locations noted in SCF complaints.

- The Sustainability Office updated the webpage to include more information and tips about how to manage lawns and gardens organically.
- The Sustainability Director made a presentation to the Northeast Organic Farming Association about Portland's Pesticide Ordinance.
- Staff made several posts on social media promoting organic land practices.

We're hopeful that an easing of the pandemic and the recruitment of a new Sustainability Associate will allow us to increase efforts in this area in the upcoming months.

Waiver Requests

The PMAC received one request for a waiver in 2020. The applicant, Cheverus High School, wished to treat sod worm that was damaging the turf on the varsity athletic field. They felt that poor conditions on the field would endanger student athletes. The Waiver Committee denied the application (1-1, unanimous vote required to approve). The applicant appealed the ruling. The City Manager's designee approved the waiver but the applicant subsequently withdrew their request.

PMAC Recommendations

Portland's Pesticide Ordinance charges the Pesticide Management Advisory Committee (PMAC) with advising the Sustainability Coordinator and the Sustainability and Transportation Committee about pesticide use and providing recommended amendments to achieve full and successful implementation of the ordinance. In compliance with this charge the PMAC is pleased to make several recommendations this year.

1.) Provide further education to applicators about the Pesticide Ordinance's signage requirements

The SCF data shows that many applicators fail to include important information about their pesticide application on the signs they post in compliance with local and state requirements. Portland Pesticide Ordinance requires applicators to indicate the chemical and trade name of the product applied on the front of the sign. This provides the public with important information and reduces the need for concerned residents to ask staff to investigate the application. We should continue to remind applicators of this requirement and ask trade groups such as Maine Landscape and Nursery Association to share this information with their members as well.

2.) Coordinate with partners in South Portland and other communities to educate the public and the landcare industry about organic and chemical free land care practices

Our neighboring communities including South Portland, Falmouth, and Scarborough have adopted ordinances governing the use of synthetic fertilizers and/or pesticides. This

provides an opportunity to collaborate on education and outreach efforts to improve compliance with local policies and promote overall soil health. Working together will allow the pooling of resources and hopefully lead to more effective efforts than an individual community could achieve on their own. We have had success working with the Cumberland County Soil and Water Conservation in promoting their Yardscaping program. We should work more closely with our Stormwater Program because efforts to reduce inputs of fertilizers and pesticides help improve water quality by limiting run off.

3.) Amend the Pesticide Ordinance to include fertilizers

In 2016 the City Council created the Pesticide and Fertilizer Task Force to study whether the City of Portland should adopt an ordinance regulating the use of pesticides and fertilizers on public and private property in Portland. This group determined that issues surrounding the use of pesticides and fertilizers differed enough that they should be addressed separately. Because of this, they made recommendations about the regulation of pesticides and further recommended that a subsequent group take up the use of fertilizers. Since that time, the City of South Portland has done extensive research into fertilizers, the impact improper use of them has on the environment, and has adopted an ordinance to regulate their use. South Portland staff worked with community stakeholders and industry representatives to develop recommendations that the South Portland City Council reviewed and, after the addition of some amendments, adopted.

The PMAC fully supports South Portland's efforts in this area. Improper and excess use of fertilizers by homeowners and land care professionals results in excess nutrients entering local waterways stormwater discharges. In Casco Bay we see this resulting in algal blooms, lower oxygen content in coastal waters, and ocean acidification. In this regard, regulating pesticides aligns with the City's stormwater management goals and augments efforts to mitigate the effects of stormwater runoff on water quality. It would further demonstrate Portland's commitment to this effort to State and Federal regulators. For these reasons, the PMAC recommends that the City of Portland amend the Pesticide Ordinance to regulate the use and application of fertilizers on public and private property within City limits. This would help protect the health of soils, waterways, people, and wildlife. Such an ordinance should follow organic landcare practices as described by the Northeast Organic Farming Association and restrict unnecessary fertilizer applications.

The PMAC has carefully reviewed South Portland's ordinance and also studied several others from New England communities.

The following are items from the South Portland Fertilizer Ordinance the PMAC highly recommends be included in the Portland Pesticide Ordinance:

- Rebrand the Pesticide Ordinance as the Landcare Management Ordinance, which encompasses the Pesticide Ordinance and the Fertilizer Ordinance.

- Change the name of the PMAC to the LMAC (Landcare Management Advisory Committee), which is a more comprehensive, appropriate name and objective for the committee.
- Have the scope of the Portland Fertilizer Ordinance encompass property owners as well as commercial applicators.
- Have the scope of the Portland Fertilizer Ordinance encompass private property within City jurisdiction, as well as City-owned property.
- Include a section on new development/construction, which would require the breaking up of compacted soils.
- Include requirements for education and outreach by the LMAC.

There are several deviations from the South Portland Fertilizer Ordinance that the PMAC recommends for the Portland Fertilizer Ordinance:

- The majority of the PMAC believes the Fertilizer Ordinance should mirror the Pesticide Ordinance in scope of application surfaces. For instance, the South Portland Fertilizer Ordinance only applies to turf; whereas, their Pesticide Ordinance applies more broadly. The majority of the PMAC believes the Portland Fertilizer Ordinance should apply broadly to require organic fertilizer for all soil conditions--including gardens, flower beds, and soil surrounding trees. As appropriate, certain requirements, such as pounds per square footage and incorporation depths, will need to be made site and application specific to apply only to turfs.
- A Portland ordinance should emphasize site-specific conditions for amending and rehabilitating soils at construction sites and follow NOFA organic landcare approaches. These should be enforced during site inspections and a certificate of occupancy should not be given unless the soils at the construction site contain adequate organic material and nutrients to grow healthy plants.
- The South Portland Fertilizer Ordinance added a provision that allows for the application of the synthetic pesticide acepryn on athletic fields to control grubs. Several members of the PMAC feel this would not be appropriate for Portland because Portland's ordinance prohibits pre-emptive applications and believe it would threaten the health of the soil and children. Other members believe that the Council should consider allowing limited use of acepryn because grubs are difficult to treat organically. Grub infestations can cause catastrophic damage to fields very quickly leading to unsafe conditions and significant costs to repair.
- Under the South Portland Fertilizer Ordinance, fertilizers may not be applied within 75 feet of a body of water, wetland, or other environmentally sensitive area. The PMAC suggests that a Portland Ordinance should mirror Maine's

shoreland zoning language with specific distance from shoreline application requirements for different bodies of water:

- *The shoreland zone is comprised of all land areas within 250 feet, horizontal distance, of the*
 - *normal high-water line of any great pond or river;*
 - *upland edge of a coastal wetland, including all areas affected by tidal action, and*
 - *upland edge of defined freshwater wetlands; and*
 - *all land areas within 75 feet, horizontal distance, of the normal high-water line of certain streams.*
- The City Council should expand the Portland Heritage Tree Ordinance to include the whole city, not just historic districts, and consider designating the LMAC to monitor implementation along with pesticides and fertilizers as part of a comprehensive organic landcare ordinance.
 - The Portland Landcare Management Ordinance should specifically emphasize (1) fertilizing in the first stages of life optimized based on type of plant, location, and application; (2) increasing green space and soil within the city; and (3) the protection of trees. Overall, a holistic approach should be emphasized over specific products.

The PMAC appreciates the opportunity to share its recommendations with the Sustainability and Transportation Committee and welcomes the opportunity to answer any questions.

Appendix A: 2020 Pesticide See-Click-Fix Reports

SCF#	Category	Address	Description
7706026	Pesticide Use	255 Western Promenade	A number of apparent seemingly needless pesticide applications on public property, perhaps in violation of the ordinance.
7936256	Pesticide Use	159 Oxford St	On 6/1/20, Ehrlich, a subsidiary of Rentokil, made pesticide applications around the Pearl Place and Unity Village apartments.
7985533	Pesticide Use	80 Roberts St	Yard that wraps around 80 Roberts St -- pesticide use that does
7985576	Pesticide Use	42 Chamberlain Ave	Almost all of the yards on the entire left side of Chamberlain Ave
7989346	Pesticide Use	8 Stone St	This pesticide application notification signs at Unity Village do not indicate "the chemical and trade name of the pesticide" applied,
8171940	Pesticide Use	141 William St	
8292121	Pesticide Use	Hanover St & Portland	According to building occupants, owner of 47 Portland Street had a landscaping vendor put some kind of herbicide in otherwise
8292142	Pesticide Use	Hanover St & Portland	According to building occupants, owner of 47 Portland Street had a landscaping vendor put some kind of herbicide in otherwise
8306243	Pesticide Use	12 Ellsworth St	The owner of 3 Crescent st was seen using Round-up weed killer on his property and public walk way.
8381598	Pesticide Use	51 Myrtle St	Sign does not list pesticide applied, which is a violation of the city's pesticide ordinance.
8398300	Pesticide Use	209 Pearl St	Pesticide application at whole foods market in Portland at pearl street entrance with sign fails to list pesticide used.
8507965	Parks	1 - 199 Percival St	Is there additional information available regarding the type of pesticides being used in Baxter Woods? Are these within the Pesticide
